through the Palate, are driven to the Mouth, Throat, Weſand or Stomach) but from the external parts of the Head, ſituate without the Skull. For ſeeing very many Veins derived from the external Jugulars do run thither, he ſayes they do there lay down their thin and wheyiſh Excrements, and ſeeing the Skin of the Head is thick and compact, and the Humours cannot eaſily breathe through the ſame, in proceſs of time they grow there to a quantity, and as he conceives from thence they flow through the ſurface of the Body, under the Skin, into the Joynts. But others do conceive, That the Head is the Fountain of the flood of Gouty Humors, but they conceive thoſe Humors flow from the inner parts of the Head, *viz.* From the Brain. Finally, others there be that give ſentence, that theſe faulty Humors do flow from the Bowels contained in the lower Belly, namely, from the Liver, Spleen, Womb and others, and alſo from the whole Body, through the Veins and Arteries into the Joynts. All which Opinions in my Judgment are partly true and partly falſe. We judge they are true, in that they ſay the humors which cauſe the Gout do flow from the Head by the inward and outward parts, and from the Bowels and the whole Body by the Veins and Arteries. And falſe we ſay they are, becauſe they ſay that only the internal parts of the Head, or only the external, or only the inferior Bowels do furniſh the Gouty Humor. For ſeeing the whole Body is paſſable to and fro by humors, all parts of the Body may ſend their ſuperfluities to the Joynts, if they be diſpoſed to receive them. Now that diſpoſition of the Joynts which makes them fit to receive a Fluxion of Humors (that I may take this occaſion to open the condition of a receiving part) is their weakneſs, either Native from the Parents, or ariſing from other Preternatural Cauſes, which we ſhall ſpeak of by and by. Seeing therefore it is eſtabliſhed by Phyſitians as a moſt ſure Maxim, That the ſtronger parts of the Body empty their Excrements into the weaker, we may avouch, That all the parts aforeſaid may diſcharge their Excrements upon the Joynts, if they being weakned, cannot ſufficiently reſiſt the ſame. And that the Opinions aforeſaid may be ſeverally refuted. *Fernelius* indeed doth clearly enough demonſtrate, That Humours collected without the Skull, do flow upon the ſurface of the Body, and under the Skin creep into the Joynts, ſeeing ſometimes the pain begins in the Head, goes thence into the Neck, thence to the Shoulders, and at length into the Joynts. But that the Humors do never flow from other places and parts into the Joynts, he no wayes proves, neither is any man able to prove after him. In like manner, they which ſay that ſuch Fluxions come only from the Brain, ſeem to contend againſt Senſe; Foraſmuch as thoſe parts which compaſs the Joynts about, do receive Veins and Arteries, by which blood is brought unto them to nouriſh them withal, why may not alſo the wheyiſh Humor collected in the greater Veſſels be carried unto the ſame parts by the ſame waies? *Galen* hath taught this preciſely, in his Comments upon the Aphor. 10. Sect. 3. where he ſhews, That in the Knobs and Pains of the Joynts, the profound parts of the Body are purged, the vitious humors being driven from the principal parts of the Body into the Circumference. This is ſeen by the Feaver which is oftentimes raiſed in the beginning of the Gout; for it is cauſed by wheyiſh Excrements contained in the Veins, put into a commotion and working, when Nature ſets her ſelf to expel the ſame, and ſeeing ſhe cannot drive it all forth, ſhe diſcharges the ſame into the weaker and Ignobler parts. Alſo the third Opinion, which *Sennertus* defends, is void of reaſon, and is herein faulty, becauſe it denies that Gouty defluxions do ever come from the Brain. For ſeeing all parts of the body both inward and outward, do receive Fluxions from the Brain, how can the Joynts be free from them? And if Humors cauſing a Catarrh do often flow by the Veins and Arteries, whence Rheumatick Feavers daily ariſe; and the Humors contained in the Veins and Arteries (as *Sennertus* himſelf affirms) do eaſily flow unto the Joynts, it is a clear demonſtration, That a Fluxion is made from the Brain into the Joynts. Alſo plentiful Piſſing declares that Humors flow from the Brain through the Veins, when the ſaid Piſſing is cauſed by ſome commotion of the brain by reaſon of long abiding in the Sun, or in a very cold Air; for then the Wheyiſh Humors contained in the brain are agitated by thoſe Procatarctick Cauſes, and driven into the Veins and Arteries, through which they flow unto the Kidney's and the Bladder, and thence comes ſo plentiful making of Water.

The next and immediate internal Cauſe of the Gout hath hitherto been ſufficiently expounded; now let us proceed to the external and Procatarctick Cauſes or occaſions thereof: which we may for clearneſs ſake diſtinguiſh into three Tribes or Ranks. The firſt Tribe is of them which afford matter convenient to breed the Gout. The Second is of thoſe which do weaken and looſen the Joynts. The Third is of them which promote the Flux of the Morbifick Humor into the Joynts.

To the firſt Tribe are referred all things which encreaſe raw and wheyiſh Humors, or any bad Humors whatſoever: ar meats of groſs ſubſtance hard to be digeſted, and ſuch as afford many Excrements, frequent Gluttony and Drunkenneſs; immoderate Carnal Embracements, which is the reaſon that Gout is called the Daughter of *Bacchus* and *Venus*; idleneſs and a ſedentary life, and intermiſſion of ſuch exerciſes as men have been formerly accuſtomed unto; long ſleep and unſeaſonable watching; intermiſſion of ſuch natural and artificial Evacuations as men have been accuſtomed unto; Fear, Sadneſs and continual Care.

To

To the second Tribe are referred vehement motion and Labour; frequent use of carnal conjunction, especially of that which is celebrated standing; Refrigeration and Humectation of the Joynts; frequent Bathing, Contusion, Luxation and Fracture of the Joynts.

To the third Tribe are referred, Cold Air squeezing out the Humors, and Heat melting, dissolving and agitating the said Humors, and opening the secret Passages; meats of a fervent and salt nature which attenuate the Humors; thin and strong Wine; Immoderate exercise, unbridled Lechery, vehement anger and other immoderate passions of the Mind.

SIGNS.] The Signs do either foretell the Gout at Hand, or declare the same to be present.

Signs of the Gout at hand; a Sense in the Joynts more exquisite and quick than ordinary, so that the lightest things will hurt them: As for example, the hard sitting of a new Shoe, Long walking, a small blow, or a light hitting against a stone, or some other hard thing. A Feaver commonly ushers in the Gout, which is caused by wheyish Humors and others contained in the Veins and Arteries, being disturbed and agitated, while Nature endeavours to expel them to those less noble Parts. But the nearer approach of the Gout, and its beginning as it were, is signified by a stupidity and sence of crawling Pismires in the Joynts, and a kind of unusual heat felt in them.

The Gout is known to be present by an actual pain tormenting the Joynts, which commonly is attended with redness and swelling; which if it appear not at the very first, yet is it seen presently after. The pain doth usually seize upon the great Toe, especially on the left foot, and oftentimes it spreads it self from thence into other Joynts. The Feaver which comes before the pain, doth sometimes continue; and sometimes it goes not before, but comes together with the pain.

The Signs of the Causes are likewise to be considered: For although the humor causing the Gout be principally wheyish, yet it is needful to know what other humors are mixed therewith, that we may fit our Medicines thereunto.

And in the first place, Choler abounding with the Wheyish humor, is known by a vehement and cutting pain, a small swelling, a reddish or palish colour, great heat, and the Feaver intense and persevering in its state or height; thin Urine, yellow and reddish; cold things help, and hot things hurt.

Signs of Flegm abounding with the Whey, are, a softish and somewhat loose swelling of the parts affected, which if a man press with his Finger, there remains a pit; the pain is not so great, Urines are thick and troubled; Cold things hurt, and hot things help; little or no heat is felt; the colour is white, little differing from the Natural colour of the part.

Signs of Melancholy abounding are, an obscure colour of the part like Lead, deep pain, a thin and watry Urine, a weariness of the whole Body, and the temper thereof inclining to Melancholy.

PROGNOSTICK.] As for the Prognostick, The Gout is no dangerous Disease, but very troublesom by the vehemency of pain, and of a very long continuance; so that for the most part it accompanies a man during his life, to his old age; yea, and it doth cause some to live long, because Nature at certain seasons drives unto the Joynts vitious Humors, which might cause other Diseases; and by so doing frees the nobler parts of the Body from bad humors.

Yet doth it often fall out in weak Bodies, or such as are decayed with Age, that when Nature can no longer expel such Humors as are collected in the inner parts of the Body, deadly Diseases do thereupon arise; as most sharp Feavers, Inflammations of the Bowels, Apoplexies, Convulsions, Phrenzies, Difficulty of Breathing, and inability to breath unless sitting upright, Pantings of the Heart, and other most grievous Infirmities.

Although a disposition rooted in the Bowels tending to breed Goutish humors, and Natural weakness of the Joynts cannot be perfectly taken away; yet may the Invasions of the Gout be very much retarded and kept off; so that some only by abstaining from Wine, others by usual Purges frequently repeated, have kept themselves for many years free from the Assaults of this Disease.

Hypocrates in the Second Book of Predictions, affirms, That many Gouty persons may be cured, distinguishing them from such as cannot be cured, in these words; *Touching the Gout, this I say; All that are aged, or have stony knots about their Joynts, or live miserably, being costive, cannot be cured by Art of Man that I know of. Such are well cured by a Dysentery, when it seizes upon them; and by other Fluxions of Humors to the inferior parts. But he that is young, and hath no stony knots about his Joynts, and lives accurately, being inclined to labour, and having a Belly well inclined to stool; this man having a Skilful Physitian may be cured.*

An hereditary Gout may well be accounted incurable.

If the Veins of Gouty persons do swell with black blood, their Gout leaves them; out of *Avicenna.* Because the Humors which were wont to flow into the Joynts, are derived to the external parts of the Skin.

If the Gout, being accustomed to return at certain seasons, shall not return, it portends grievous, and oftentimes deadly Diseases, unless the Morbifick matter by a diligent prevention shall be taken away,

away. For if through weakneſs of Nature, the matter which is gathered together within, ſhall not be expelled, it breeds the greateſt and moſt dangerous Diſeaſes imaginable.

Whoſoever they be that have the Gout, within the ſpace of Forty dayes the Inflammation is allayed, and they are freed. Hypocrates in the 49. Aphoriſm of the Fifth Book or Section. For in ſuch parts as have little Natural heat, the matter offending requires a long time before it can be diſcuſs'd. Howbeit this period of *Hypocrates* is not certain and perpetual: for ſome are healed ſooner, and ſome later; which depends upon the quantity, thickneſs, or rebellion of the Morbifick Cauſes; the ſtrength or weakneſs of the parts affected, and the obedience of the Patients in point of keeping the Diet, and uſing the Medicaments appointed for them.

CURE.] The Cure of all Gouts conſiſts herein, *viz.* That the Flux of Humors into the Joynts may be ſtayed, that which already is come in and abides in the Joynts may be removed, and that the Pain may be in the mean while (if it be ſharp) abated; all which may be performed by the following Medicaments.

And in the firſt place, letting of Blood will be very convenient, if there be no want of Blood in the Patient, and if flegm do not abound; becauſe the Blood is agitated by the motion of the Humors flowing into the Joynts, and does as it were boyl, and is by pain drawn into the part affected: wherefore it is neceſſary to draw the ſame back into that part of the Body which is oppoſite to the Part affected; and therefore if the right Arm be diſeaſed, a Vein muſt be opened in the left; if the right Foot be pained, a Vein muſt be opened in the right Arm; and if the left Foot, in the left Arm. And Blood is to be taken away at the firſt beginning of the Diſeaſe, and as much as needs muſt be taken at one time, if the Patient's ſtrength will bear it: if not, it muſt be done at ſeveral times, till the plenitude of Blood be ſufficiently diminiſhed.

One thing we muſt alwayes remember, That Copious Blood-letting in ſuch as can bear it eaſily, does exceedingly ſhorten the Diſeaſes, if it be done at the beginning of the Diſeaſe, at leaſt by Piecemeal, drawing now a little and then a little.

Alſo Purging muſt be uſed at the beginning of the Diſeaſe, as ſoon as may be: for ſo both that Humor which is influx and is ready to flow, will be drawn from the way to the Joynts, and be brought unto the Guts. But in this Purgation two things are worthy of Obſervation, being frequently noted by *Solenander*, a Famous Practitioner.

The firſt is, That this Purgation be not made by ſome mild lenitive Medicaments, whereby the Humors are rather ſtirred then Evacuated, and are precipitated into the Joynts; whereupon a more grievous pain and ſwelling is wont to follow ſuch Purges; but with ſome ſtrong purgative, which may force out the ſtirred humor and turn the cauſe thereof from the Joynts.

The other is, That the Medicaments being given, the Joynts above the Knees and Elbows, be Plaiſtered with ſome defenſative, by which the humor which is put in motion by the Medicine may be intercepted, ſo that it may not ſo much nor ſo forcibly fall down into the Joynts.

To which intent let an Oyntment be made of Bole, Pomegranate Rinds, Balauſtins, Roots of Biſtort and Tormentil, red Roſes with the white of an Egg, and Vinegar; which being ſpread upon ſnips of Cloath as broad as ones Hand, and indifferent long, let them be wrapped about the parts aforeſaid. If theſe Simples be not to be had at preſent, wet them only with Vinegar and Water, and let them lie on at leaſt a whole day. If the Fluxions be vehement, uſe a Liniment of Bole, Dragons Blood, the white of an Egg and Oyl of Roſes made with Oyl of unripe Olives: or at firſt uſe it without Oyl, adding a ſmall quantity of the Oyl aforeſaid, or of *Unguentum Comitiſſæ*, leſt growing dry and hard it cauſe pain.

And for to procure ſuch a Purgation as we have ſpoken of, let the Skilful Phyſitian preſcribe a Medicament fitted to the Nature of the Patient, and ſuch humours as are redundant in his Body: or ſome of thoſe Specifick Purgations which we ſhall propound in our Doctrine of Preſervation from the Gout.

Vomiting is likewiſe profitable in this Caſe, for ſuch as are eaſie to vomit; becauſe it brings out the evil humors by a ſhorter way, and ſo there is no ſuch fear leſt they ſhould ruſh into the part affected. But gentle Vomits are to be uſed, which do only evacuate thoſe parts which are near the Stomach. For if they be vehement, and draw humors out of the Veins, they may precipitate the ſaid humors unto the Joynts. Then after Vomitings, Purgation muſt be procured downwards; yea, and if one Purgation will not ſerve turn, it muſt be repeated.

After ſufficient Purgation, it will be very good to procure Sweat; for ſo the wheyiſh matter will be diſcumed by the habit of the Body. But, ſeeing when the Gout gives its firſt Onſet, there happens a kind of boyling and working of the Blood, and commonly there is a Feaver, hot Sudorificks will not be convenient, but only ſuch as are temperate; amongſt which *Sennertus* commends Harts-Horn, either crude or prepared without burning, either alone, or with *Carduus* Water; as likewiſe *Antimonium Diaphoreticum*. In an old Gout without a Feaver, a Decoction of *China*, *Sarſa-perilla* or Saxafras may be given, qualified with cooling Herbs, as Cichory, Endive, Sorrel and Borrage.

Or

Or after the Sweat wiped off, it may suffice to give the Patient Chicken-Broth, altered with the Herbs aforesaid.

Martinus Rulandus did use this following Sweating Medicine with happy success:

Take Tops of Centaury two handfuls; Asarum Roots two ounces: Boyl them in ten pints of Water to five pints, and strain the Liquor. Give the Patient eight ounces of this Liquor hot in the morning some dayes together; and let him sweat upon it.

But *Forestus* commends the Roots of the greater Burdock; because it cuts, discusseth and provokes both Sweat and Urine. And he reports, That a certain Gouty person that kept his bed, and could not stir a Limb, drank hot Beer in which the great Burdock Root had been boyled; after the drinking whereof, when the Physitians could do him no good with all their Medicines, he piss'd a great deal of white Matter like Milk, and was freed from his pains.

Herculles Saxoniæ puts a great many Loaves hot out of the Oven round about the Patient's Body, by which means Sweat is plentifully procured, and the pains removed.

Also a Decoction of Elder, Bay-leaves, Sage, Rosemary, and such like Herbs will do much good, the Patient receiving the Vapour of this Decoction in a sweating Tub, which will make the sweat to come lustily.

Also the Waters of Natural hot Baths do provoke sweat, and do readily discuss the Matter contained in the Joynts. And therefore when the sick are not able to go unto them, their Water is wont to be brought unto them and heated in a Caldron for them to bath in. *Erastus* in his 15. Counsel, prefers this above all others, for easing the pains, but he boyls so much Salt in the Water, as gives it an evidently brackish taste.

In the beginning of the Fluxion of Gouty Humors, in the spaces free from Purgations, such things must be given as stop the Flux, which have been propounded by me in the Cure of an hot Catarrh; especially Juleps of Waters, or Decoctions and Syrups which do cool and thicken.

Yea, and the truth is, We are sometimes compelled to use Narcotick or Stupefactive Medicaments; for they both stop the Flux of Humors, and they mitigate the rage of the pains. Of these sort of Medicines new Venice Treacle is most convenient, which may often be repeated without danger from half a dram to a dram. Unto which may profitably be added a little Bole-Armenick to stop the Flux of Humors. Howbeit, instead of Treacle, Laudanum, Opiatum, and other Narcoticks may conveniently be substituted.

After due Evacuations have been celebrated, and other things given inwardly which have respect to the Antecedent Cause, we must proceed unto local Applications, such as mitigate the pain, and discuss the Contingent Cause: Which are not presently to be used before the universal Remedies aforesaid have been first applied; for otherwise they are wont to do more hurt than good. For either the matter which Nature intended to drive into the Joynts, is driven back into the inner parts of the Body, whereby grievous Symptoms are raised; or it is forced into the Joynts, and the pain is exasperated; or the part is effeminated, and made lax, and so the fluxion is encreased.

Which Cautions being commonly neglected, and external things untimely and heedlesly applied; the Patients receive commonly more hurt than good thereby. And those external Medicines do either respect the pain alone, or the Cause likewise of the pain, *viz.* The humor which hath took its course into the part, and caused both the Pain and Swelling.

Such things as mitigate pain, are very necessary in this case, because the extremity thereof weakens the Patient, and draws the humors to the parts affected. Furthermore, by the use of Anodines, the parts are relaxed, and the humor which before did flow into the more deep parts about the Joynts, is diffused to the more ambient parts and external. Whence it is that the pains of the Gout are most vehement before the part swells; but after it is swollen they are mitigated. Now there are many Anodine or Pain-charming Medicaments propounded by Authors to be applied to those parts which are troubled with the Gout. But the chief are these which follow:

Luke-warm Milk applied to the part affected, by wetting Linnen Cloaths therein, and laying them on, doth asswage the pain; as also if the part be sprinkled and bedewed therewith, especially when it comes fresh from the Dugs; which *Amatus Lusitanus* doth very much commend, in the 41. Cure of his Sixth Century, in these words: *One mightily tormented with the Gout, caused a shee-Goat to be brought into his Chamber, and her Milk to be milked out upon his pained Joynt; by which he perceived the pains evidently lessened. And there is good reason for it: For Milk newly milked doth asswage, mitigate and lessen pains. It is a Medicine commonly used by the great Turk: and by those who seek Profit and Honour, highly to be prized.*

Of Milk likewise is made the Cataplasm of white Bread Crums boyled therein, adding the Yelks of Eggs, and a little Saffron.

Also the Leaves of Henbane or Violets are boyled in Milk, or in Vinegar and Water, and profitably laid upon the part affected.

Also a Cataplasm is made of the Pap of Marsh-mallow Roots mingled with milk.

Also

Alſo a Cataplaſm is made of the Pulp of Caſſia alone, or mingled with Oyl of Roſes, or the following Ingredients:

Take Crums of white Bread boyled in Milk, half a pound: Pulp of Caſſia three ounces. Make them into a Pultiſs. Or,

Take the Pulp of Caſſia four ounces: new Venice Treacle half an ounce: Barley and Oaten meal, of each three ounces: the Crum of white Bread four ounces: Cows Milk two or three pints. Boyl all into the form of a Pultiſs, which apply warm to the parts pained. If you ſhall add half an ounce, or an ounce of Vitriol calcined, and finely poudered, you will make it far more excellent.

In the beginning of the Gout, which ſeizes only the great Toe, lay on this following:

Take two whites of Eggs: a little Salt beaten to Pouder: a few drops of Vinegar of Roſes. Mix all, and apply it upon Tow, or courſe Flax to the part affected.

Other Cataplaſms are likewiſe made of greateſt efficacy, compounded on this manner:

Take Water of white Mullein, and of Fern Roots and Branch, of each half a pint: Calcined Vitriol exquiſitely poudered, one ounce an half: Meal four ounces: Saffron two drams. Make all into a Pultiſs.

Take Mallows, leaves and Roots, as much as you pleaſe, Boyl them in a new Earthen Veſſel, with equal parts of Wine and Vinegar, till a third part be conſumed; then add as much courſe Rye Bran as will make it into a Pultiſs; which being well wrought together and ſpread upon a Linnen Cloth, let it be applied to the parts pained, as hot as the Patient can endure it. *Solenander* doth exceedingly commend this Pultiſs.

Foreſtus relates that a Cataplaſm made of Duck-weed and Chamomel Flowers boyled in Milk, adding a little Barley Meal, will do Miracles.

Montagnana affirms this following to be moſt excellent in extream pains.

Take the Yelks of ten Eggs; heat them in a Frying Pan with half a pound of Oyl of Roſes. Let them boyl gently till they grow thick, adding two drams of Saffron; and lay it on hot.

In the beginning of the Flux, many lay on a Cataplaſm of Salt and Soot, wrought into a Body with whites of Eggs.

Or of two ounces of Chamomel Flowers: red Roſe Leaves one ounce and an half: Mullein flowers half an ounce: Pouder them, and boyl them in ſweet Milk to the ſtiffneſs of a Pultiſs, adding three or four Yelks of Eggs.

Or of Barley Meal, and Bean Meal, of each one handful: Flowers of Chamomel and Roſes, of each half a handful: Mullein Water, and Willow Water, or Plantane Water and Wine, of each as much as ſhall ſuffice. Incorporated all together in form of a Pultiſs.

Alſo divers Fomentations may be made to be applied to the places affected, after this manner:

Take of the Leaves of Mullein ſix pounds: red Wine a Quart. Beat the Leaves and ſteep them in the Wine for three daies. Diſtil them, and Bath and Foment the parts affected therewith warm, with Linnen Cloaths dipped therein. Or,

Take Flowers of Mullein as much as you pleaſe; fil a glaſs Bottle therewith, and ſtop the mouth, and ſet it in the Sun; for ſo they will turn to Liquor, which being applied to the part affected with Linnen mitigates the pain.

Sal ſaturni, that is, Salt of Lead diſſolved in ſubtil Spirit of Wine, eaſeth pains wonderfully.

Frog-ſpawn-Water ſtilled in *May*, applied to the parts pained, doth wonderfully aſſwage the pains, and tempers the Inflammation and redneſs of the part. Theſe following Simples may profitably be mingled therewith.

Take Frog-ſpawn-Water, Water of Tapſus Barbatus, or of Mullein, and of Fern, of each one pound and an half. Infuſe Lapis Tutiæ, and Litharge of Gold, of each two ounces: Vitriol Calcined, and Allum, of each one ounce. Foment the pained parts therewith warm.

An Infuſion of Litharge made in Vinegar, the Vinegar being a little Evaporated, till it grow ſweetiſh, doth much good to an hot Gout.

Oyl of Calves Feet is excellent to allay the pains of the Gout, and it is thus prepared:

Let the Calves Feet be beaten, and the Bones broken, then boyl them all to a Pap. Take the Oyl which ſwims on the top of the Water, mingle it with Aqua vitæ, and Salt, and therewith bath or anoint the parts pained.

Alſo Oyls and Fats are by many uſed. But ſeeing the Inflammation which befals thoſe Members which are troubled with the Gout, doth draw very near the Nature of an Eryſipelas, or red fiery ſwelling, oftentimes thoſe fat things may do more hurt then good; for by ſtopping the pores, they may keep in the Humor, and ſo encreaſe the pain.

According as *Sennertus* makes relation of a man troubled with the Gout, who found great good by very new Sheeps-milk Cheeſe laid upon the pained part: for as ſoon as the Cheeſe being heated by

the pained part, began to melt and shed its Butter, the pains were encreased. Yet in some Bodies, Oyl of Roses, and such like, may do good, especially mixed with other Medicaments; because according to the different Natures of Mens Bodies, several things do good to several persons. And therefore we must be furnished with a mighty company of Medicaments, that upon all occasions we may have change; because there is scarce any one so effectual, as to do good to all that are troubled. Take these following for an example or Pattern.

Take Crum of the whitest Manchet half a pound: Boyl it in new Milk to the consistence of a Pultis; then add the Mucilage of Marsh-mallow seeds two ounces: Meal of Lin-seed and Fenugreek seed, of each two drams: Flowers of Chamomel, and of Melilot poudered, of each one ounce: Saffron one dram: Oyl of Roses one ounce: Mix all into a Cataplasm.

Or to the Cataplasm of white Bread Crum before described, Oyl of Roses may be added.

Also Liniments and Oyntments are wont to be made to mitigate pain.

Take Yelks of Eggs two or three: dissolve them with Oyl of Roses, or Violets, or Wine, and apply them luke-warm.

Balsamum Saturni prepared with Oyl of Roses or Violets, allaies pain most effectually.

Take Cerus's two ounces: dissolve it in Endive Water and a little Vinegar, make thereof a Liquid Oyntment.

Of the said Cerus's is made a Plaister of great efficacy which may be laid on in the beginning of the Disease, even whiles the Tumor and Inflammation is present. Its composition is thus.

Take Common Oyl one pound, Wine a pint and an half: boyl them till half the Wine be consumed. Then add a pound of Cerus's finely Poudered and two drams of Camphire. Boyl them to the Consistence of an Emplaister. When there is great Inflammation, Vinegar must be used instead of Wine. Spread this Plaister upon Linnen Cloaths that it may the more commodiously be wrapped about the Parts affected.

A Living whelp laid to the pained Part, doth very much asswage the pain.

When the pain rages extreamly we may have recourse to Narcoticks; howbeit they must not lie long upon the Part, because they are adverse unto the natural heat and to the Nerves.

Take Henbane Leaves two handfuls: Nightshade and Housleek of each one handful: Garden Poppy-Head one pugil, Mandrake Roots one ounce: Chamomel Flowers and Violet Flowers of each one pugil, make a Decoction in Water or Milk with which let the part be bathed.

Beat the residue after the Liquor is strained out, and add of the Flower of Lin-Seed one ounce and an half. Wheat meal two ounces; Oyl of Chamomel three ounces: and make a Pultis. Or,

Take Spirit of Wine somewhat Yellow by infusion of Saffron four ounces: Camphire one scruple: Boyl them a little, then dissolve therein, one dram of Opium: With that Liquor let the pained Part be bathed: It is a safe and most effectual Medicine.

Green Tobacco Leaves beaten and laid on do ease the Gout, and are to said to be of a stupefactive Nature.

As for the Efficient Cause of the pain, to the Humor flowing into the part, repelling Medicaments must be opposed; and to that which is already in, deriving and resolving Medicaments must be applied.

Howbeit repelling Medicines are disallowed in this Case, especially alone and without the commixture of other things. For if they shall wholly stop the influx of the matter into the Parts affected, it is to be feared least they retiring to the Inward Parts, should cause dangerous Diseases, unless they happen to be translated to some other Joynt. Again the Humor which hath already flowed into the Part, is the more driven inward, by which means, the Pains become more violent. But yet, if in the beginning of the Gout there be a great afflux of Humors especially hot ones, which threatens sharp Pains to follow, it will be convenient in some measure to repress the same, by applying repellers, not alone, but mixed with such things as mitigate Pain, after universal and sufficient Evacuations. For then such things as do overmuch relax, do help forward the afflux of Humors. And therefore, we may add unto the foresaid Cataplasms and other remedies Plantane, Lettuce, Purslane, Housleek and such like as also a little Vinegar. As for Example.

Take Barley meal three ounces: Boyl it in Water and Vinegar, add two Yelks of Eggs, Saffron twenty grains: Make all into a Pultis. Or,

Take Red Roses an handful: Barley and Fenugreek meal of each one ounce: Red Sanders one dram and an half: Chamomel Flowers one pugil: when they are boyled and beaten, add two Yelks of Eggs, Vinegar four ounces: Oyl of Roses as much as shall suffice; make all into a Pultis.

Among Remedies which derive the Humor from the Part affected are Horse-Leeches, after a sufficient Evacuation applied therefore: for then they do much good, especially when the Veins in the part affected, do seem distended and swelling with Blood.

Now resolving Medicaments are wont to be used in divers forms as of Waters, Oyls, Unguents, Balsoms, Fomentations, Fumigations, Cataplasms, Plaisters and the like, compounded after this manner.

Take

Take Vitriol white and green, of each one ounce : Camphire two drams: Aqua vitæ and white Wine, of each one pint : Mix them and apply them with cloathes dipped in them. Or,

Slake Lime in Urine, purifie the Liquor and foment the pained place therewith. It is likewise good if it be done with Vinegar and Lime.

Martinus Rulandus in the Centuries of his Cures, doth mightily cry up his Gout quelling Water, but never describes the same. But *Libavius*, *Petreus* and others suppose it was thus made.

Take Fountain Water a pint, Aqua fortis half an ounce : Sublimate one dram : Boyl them a quarter of an hour. Wet linnen cloaths in this Liquor and apply them luke-warm to the part affected.

Quercetanus in his *Pharmacopæia* propounds these following.

Take Pickle of Salt, and the Urine of a Boy of each equal parts. Still them and Wet Linnen Cloathes in the Water and apply to the place affected, often changing the cloaths for fresh ones.

Take Green Elder leaves and flowers of each one pound: beat them and steep them in Aqua vitæ for two or three daies : still them in a Glass or Copper vessel, till they be dry.

Take Spirit of Wine rectified two pounds : of the finest Honey one pound. Distil them in Balneo Vaporoso : *So you shall still two Liquors ; The first is watrish ; The second much stronger, and Sulphureous, which you shall keep by it self. To the remaining materials add an ounce and an half of whole Oriental Saffron : Venice Turpentine two ounces : Castoreum six drams: Tartar calcined till it be white half a pound : dissolve Salt an ounce : Phlegm of Vitriol not separate from its spirit four ounces : Lie made of Vinetree-ashes two pound : steep them together twenty four hours. Then still them till they become dry : keep the Liquor which comes likewise by it self. To the Dregs remaining pour on the former Water which you kept : Steep them and still them. Lastly put all the distilled Waters together and distill them in* Balneo Vaporoso.

Quercetanus saies, That this Water is of wondrous efficacy, and that it was communicated unto him by a certain most famous German, as a special gift, affirming, that this was the very Water of *Rulandus*. And he averred that he had seen the rare effects thereof in easing the Pains of the Gout, if Linnen Cloathes being moderately warmed and dipped therein, be applied to the part affected.

The same *Quercetanus* in his Councel touching the Gout, doth brag that he reserves to himself his Gout-quelling Water, as a Master-peice for such an old Soldier as himself to boast of, which he saies is made of plain Fountain Water, wherein he doth divers times quench certain Metallick substances, which are wont to be taken inwardly when rightly prepared : whose spirits being impressed into the foresaid Water, do contribute thereunto the power of penetrating unto the Roots of the Disease, and of truly resolving the Tartarous, stony matters, with the Salts, which are combined in the Joynts, from whence such intollerable Pains do arise.

Peradventure this that follows it not unlike it, nor a whit inferior in Vertue.

Take Unslaked Lime four pound : Slake it in River water as much as you please, and let it stand in a Wine Cellar three daies, that the Salt may be better extracted out of the Chalk or Lime. Afterward let them boyl a little and strain the Liquor through an Hypocras Bag. In twenty pints of the strained Liquor, quench seven or nine times, first Plates of Steel red hot ; and then Plates of Copper red hot ; add thirdly to the quantity of ten ounces of Vitriol Calcined till it be white ; fourthly Antimony melted in a Crucible to half a pound ; fifthly Litharge or Ceruse heated in a Crucible, half a pound ; white Precipitate once washed and no more one ounce and an half. Brass burnt and finely Poudered, half an ounce : After the quenching of these minerals, let the water stand still in a wine Cellar, the space of ten daies. Afterward, boyl it a little, and strain it through an Hypocras Bag. In this water being hot, doubled cloaths must be dipt and frequently applied to the Gouty part.

Among Fomentations easie to make, that is commended, which is made of Salt Ammoniack seven times sublimed, and fitly dissolved in Wine or Water. Or of the Urine of a young man in good health, boyled till half be consumed and laid on with Rags.

Solenander Writes in his 24 Counsel, Section the 4. That a certain Gouty old man was wont to make himself these Medicines. When the swelling and pain was great and the place red, he took Salt, the Urin of a Boy and Vinegar. In these being mingled together, he Wet a Linnen cloath and squeesed it and laid it on, this he did divers times and so the Pain was much abated.

As we said before, that Anodine or Pain-quelling Oyls did little good in the Gout, the same must here be said of resolving Oyls because they close the pores of the Skin and so hinder the freedom of transpiration and encrease the heat, neither can they by reason of their clammy substance peirce into the innermost parts of the Joynt, so to temper and resolve the Salt, sharp and Tartarous Humors which lurk in them. Yet if the aforesaid Oyls shall be distilled in a Retort, they will become very fit for this use, because they will be very searching and no waies clammy, Among these the most excellent are Oyl of Cheiry, Saint Johns-wort and of the Yelks of Eggs, which being mixed together

and ſtilled by a retort, are very profitable to eaſe Pain and to diſcuſs the Cauſe thereof.

Alſo *Mathiolus* his Oyl of Scorpions ſtilled after the manner aforeſaid, is moſt excellent.

Oyl of Wax is likewiſe to the ſame purpoſe.

But Oyl of Mans Bones made after the ſame manner that Oyl of Tiles is made, is preferred before all others, and commended not only by the Chymiſts, but alſo by the Dogmatical Doctors, as *Crato*, *Platerus*, and others. The manner of making it is this: Mans Bones freſh and unburied are broken and burnt, and caſt into old Oyl: afterward, they being full of the Oyl, are beaten and caſt into a Retort, and ſo by the force of the fire, an Oyl is drawn out.

Where Mans Bones are not to be had, the Bones of other Animals may ſerve the turn.

This following will alſo be very good:

Take Maſtich, Frankincenſe, Mirrh, Ammoniacum, Opopanax, Bdellium, Mummy, of each two ounces: Vitriol one pound: Honey two pound: Tartar one ounce and an half: Spirit of Wine four pound. Diſtil out of all an Oyl, with which let the pained part be anointed with a feather.

To eaſe the pain, and to reſolve the Matter of the Gout, Liquor made of Snails is likewiſe commended, which is thus compounded:

Put an handful of Snails into an Hippocras Bag, and caſt upon them an handful of common Salt; upon the Salt, a handful of Dwarf-Elder, or Danewort ſeeds very finely poudered: And ſo one Lay after another of Snails, Salt, and Seeds, until you have made four or five Lay's of every one in particular. Let the Bag hang in a moiſt Celler; and after a few daies there will drop a ſlippery Liquor and fat; which ſet in the Sun for four daies, and then ſmear the place affected therewith.

A reſolving Unguent may be made after this manner:

Take Chamepitys, common Wormwood, and Roſemary tops, of each a handful: Chamomel flowers, Melilot flowers, and Roſe Leaves, of each one pugil: Oyl and Wine, of each half a pound: Let them boyl till the Wine be conſumed: the Liquor being ſtrained, add thereto as much Wax as ſhall ſuffice to make it into an Oyntment. Let the Part affected be anointed herewith warm; within twenty four hours the Part doth ſwel, and the pain ceaſeth.

Alſo divers Pultiſſes reſolving and eaſing pain, may be made. The principal are theſe:

Take Wheaten Bran a pound: Salt one ounce: Soap as much as ſhall ſuffice. Boyl all into a Cataplaſm, or Pultiß. Or,

Take Bean meal half a pound: Boyl it in a ſufficient quantity of Wine, adding thereto a little Aqua vitæ and Butter. Make it into a Pultiſs. Or,

The Leaves of Dwarf-Elder, or Tree-Elder being beaten may be applied; or they may be fryed with Butter in a Frying-Pan like a Pan-cake.

Briony Root bruiſed with Aqua vitæ, is alſo very effectual.

Alſo ſome commend Aron, Cuckoo-pintle, or Prieſts-pintle Roots, being mingled with Cow Dung.

This following is commended by *Solenander*, becauſe it reſolves without any great heating, eaſeth the pain, and ſtrengthens the Joynts. And it may be ſafely applied after the beginning of the fit, about the fift day of the Diſeaſe.

Take Pouder of red Roſes two ounces: Maſtich one ounce: Camphire half a dram: Barley meal half a pound. Boyl all in white Wine, evermore ſtirring the ſame, till it come to be thick, and lay it on warm.

Emplaiſters are likewiſe wont to be of great uſe in this Caſe. The chief are theſe which follow.

Take Frankincenſe, Mummy, Colophony, of each one ounce: Maſtich, Mirrh, white Coral, of each half an ounce: Mans Fat ſix drams: Gum Ammoniacum, Bdellium diſſolved in Vinegar, of each three drams: Turpentine half an ounce: Oyl of Foxes, and of Roſes, of each as much as ſhall ſuffice to make all into a Plaiſter.

Take Florentine Orris Roots, and Hermodactiles pondered, of each ſix drams: Emplaſtrum Oxycroceum, and de Mucilaginibus, *of each two ounces: Rozin of Pine one ounce. Melt them together, adding Oyl of Worms as much as ſhall ſuffice, and make thereof a Plaiſter.*

Emplaſtrum Diapalma, or *Diacalcitheos* is very much uſed, both alone, or with Camphire added thereunto, after this manner:

Take of the Rowl of Diapalma Plaiſter half a pound: Camphire two drams. Mix them together, and apply them to the parts affected.

Or in Form of a Cerecloth.

Take of the Rowl of Diacalcitheos Plaiſter half a pound: Plaiſter of Sulphur an ounce: Storax and Benzoin, of each half an ounce: Tacamahacca two ounces: Oyl of St. Johns wort, and Worms, of each one ounce: Liquid Storax an ounce and an half: New Wax, as much as ſhall ſuffice. Melt all together, dip your cloth therein, twice or thrice, make it ſmooth and dry, and keep it for your uſe.

But

But yet the ſame Plaiſter mingled with theſe things following, ought to be reckoned among the moſt excellent Medicines for the Gout.

Take Diacalcitheos Plaiſter diſſolved in harſh red Wine, and boyled till the Wine be conſumed, one pound: Myrtles, red Roſes, Maſtich, Tartar of red Wine poudered, of each two drams: Chamepitys, or Ground-pine, and right ſweet Chamomel poudered, of each half a dram. Make of all a Plaiſter, to be applied after the ſwelling is much abated.

And at laſt, in a very old and ſetled pain, eſpecially from a cold Cauſe, ſome lay Veſicatories to raiſe Bliſters upon the parts affected. *Sennertus* makes mention of them, but ſo as that Anodines be mixed with them. But the moſt wiſe *Varandæus* my Maſter did with happy ſucceſs uſe the common Veſicatory Plaiſter, which is kept in our Shops, ſimply, and by it ſelf without any mixture; wherewith he cured a great and rebellious Swelling upon the Knee, when other Phyſitians had in vain uſed many Purgations, Sudorifick Diet-Drink, and many External Medicines.

In the uſe of all the fore-recited Medicaments, this one thing is diligently to be noted, That we muſt take our hints from ſuch things as we find do help or harm the Patient: foraſmuch as the Natures of Men are divers, their complexions divers, and divers kinds of Excrements are bred in ſeveral Men, whence it is that the ſame Diſeaſes do extreamly differ in ſeveral perſons, therefore what profits one man, doth another no good at all; which often comes to paſs in curing the Gout. And for this Cauſe, every Practitioner muſt have an abundance of Medicines, that when one hath been applied in vain, he may uſe another and another, making alwaies choyce of ſuch as rational Method ſhall moſt approve of.

When the Gout becomes ſtony and knotty, it is extreamly hard to Cure, eſpecially if it be of long ſtanding. But new knobs may with Emollient and Reſolving Foments, Unguents, and Plaiſters, be diſſolved. The moſt Specifick or Appropriate, are theſe which follow.

Galen exceedingly commends a Plaiſter compounded of old ſtrong Cheeſe, made into a Plaiſter with the Decoction of a poudered Sows Piſtle or Leg.

Others boyl poudered Sows Legs, till they come to a ſlimy ſubſtance of Gelly. Afterwards they mingle therewith two parts of old Cheeſe, pouder of Water-creſſes one part, and ſo make a Plaiſter thereof. Or.

Take Juyce of Tobacco three ounces: yellow Wax two ounces: Rozin of the Line-tree an ounce and an half: Turpentine one ounce: Oyl of Chamomel as much as ſhall ſuffice. Make all into a ſoft Cerate or Plaiſter. Or,

Take of thoſe Eaſtern berries, which the French call Coques de Levant, *and Mirrh, of each half a pound. Pouder them, and mix them together with ſtrong Vinegar into the form of a Cataplaſm.*

Gum Ammoniacum diſſolved in Vinegar, doth powerfully ſoften.

Rulandus anoints thoſe hard Swellings in the morning, at noon, and in the Evening with Oyl or Balſom of Sulphur hot, and then he laies on a Plaiſter hot, of *Emplaſtrum Diaſulphuris.*

But this Plaiſter following is your rare Plaiſter, becauſe beſides eaſing the pain, it draws the gritty, ſtony ſubſtance out of the Joynts likewiſe.

Take Roman Vitriol one pound: Roch Allum half a pound: Salt four ounces. Calcine all theſe together in a Crucible or Earthen pot, letting it to ſteem ſo long till the ſpirits ſhall begin to go away: Which when you perceive by their ſmell to riſe, leave preſently your calcining, and let all cool, and then pouder them.

Take of this Pouder, and Barley meal, of each a like quantity: mingle them with wine Lees to the form of a Pultiß, which ſpread upon a rag as thick as a Knife, and apply to the place affected. When it is dried, diſſolve it again with Lees of Wine, and apply it again, until in the firſt place the pain be diſcuſſed; and in the next place, until all the ſtony ſubſtance be conſumed out of the knobbed and knotted Joynts. In the mean while it fals out often that the Skin will break, which need not affright us; for either afterwards the Ulcers cloſe of their own accord, or at leaſt by laying Wax upon them in manner of a Plaiſter, they are cloſed up, the Joynts having regained their motion with activity.

Finnally, If the Gout be very exceeding old, and perfectly knotted, by the preceding Cure a mitigation of pain is to be hoped, but the ſtony ſubſtances will hardly give way; therefore with a gentle Cauſtick the Skin is to be opened, and then the ſtones are to be taken away with a drawing Plaiſter of Gums.

The Cure of the Gout when preſent, is performed by the Remedies aforeſaid. But becauſe this Diſeaſe is wont to return by fits, eſpecially in the Spring and Fall, we muſt now ſhew the way to prevent the ſame. Which Prevention ought to aim at the hindering of any Gouty Matter, like to fal into the Joynts, from gathering in the Body; or if any be collected, that it may be carried away.

And

And finally that the Joynts may not be so disposed to receive the Humor which flows unto them. The collection of Matter will be hindered, by an excellent Diet, and by Medicines rectifying the distempers of the Bowels. The Matter collected will be carried away by Evacuating Medicaments. And the Joynts will not so easily receive if they be fortified with corroborating Medicaments.

As for the Matter of Diet, although in this Case it be of very great, yea greatest moment; yet the Nature of this work will not give me leave to describe the same.

I shall only speak of the Patients Drink so as to say, that Wine is extream hurtful to all Gouty Persons, and many have recovered only by abstaining therefrom. Yet if the Patient in regard of some other infirmity cannot wholly abstain from Wine, let him drink weak Wine, or well allaied with Water. *Hollerius* instead of Wine commends thin Metheglin, viz. Of forty or forty-eight parts of Water to one of Honey. Yet this suites not with such as abound with bitter choller and those that are dry and thirsty.

This following Diet drink suits all Natures, and hath done much good to very many persons.

Take Sarsaperilla Roots two ounces: Liquorish one ounce: Cinnamon and Annise Seeds half an ounce: Make all into a very fine Pouder. Of this Pouder mix one spoonful with so much small Beer or Ale as the Patient is wont to drink at a Meal. Brew them together out of one Pot into another three or four times. Then strain the Liquor for the Patients ordinary drink. Doing the like for every meal.

And as for Evacuations, Bleeding must be first practised especially in the Spring and Fal, in such as abound with Blood and whose Blood is wont to work and ferment or be very hot.

But Purgation is not only to be used Spring and Fal, but four times in a year, yea and every moneth in every Cacochimical Body that is which abounds much with evil Humors. To which purpose many forms of Purgations are handed to and fro, of a special property for this Disease. These that follow are the chief, which are so to be used by the discreet Physitian, as that he must make many changes, both in respect of the materials and the Dose, according to the various Constitutions of the Patients.

Take Senna cleansed, Turbith, Hermodactiles and Pouder of a Mans Skul that hath never been in the Earth of each one dram: Diagridium half a dram: Make all into a Pouder of which give one dram at a time, in Ground-pine Water, or in Broth. Or,

Take Sarsa perilla one ounce: Senna six drams: Turbith, Hermodactiles, Jalap, Mechoacan of each half an ounce; Agarick Trochiscated two drams: Diagridium and Cinnamon of each half a dram: Make all into a Pouder, Steep a dram thereof in white Wine all night, in the Morning let the Patient drink Pouder and Wine.

Electuarium Caryocostinum is by *Petrus Bayerus* exceedingly commended, and is approved by all Practitioners, and it is described in the *London Dispensatory* in Folio 111. and in that of *Bauderon*. It is given to half an ounce: But in hot Constitutions it may do harm.

Rhasis Commends his Pills so far as to say, that they can make such as are fain to Ride, to go on Foot again. Thus they are made.

Take Aloes of the best half an ounce: red Roses two scruples: Hermodactiles white and purged from their outmost Skin or shell, one dram and an half: Diagridium one dram: With Water of Ground-pine and Honey of Roses make all into a Mass of Pills. The Dose one dram.

These also are good which follow.

Take Aloes, Hermodactiles of each half an ounce: Ground-pine, or Chamepitys two drams: Chamædrys or Germander, Stœchados of each one dram: Saint Johns Wort Seeds, half a dram: With Venice Turpentine make a Mass of Pills, which because they Purge little may be given the oftener.

Also Evacuation by Vomit is very good for Prevention if the Patient can bear it well; which is declared by *Alsaharavius* a famous Physitian in these words. *A Vomit is better than a purge to root out such ill Humors of a gross Nature as are below the Knee even to the Foot; as in the Knee-Gout, Sciatica and such like.*

Now Vomiting may be procured every Moneth two daies together because the second day drives out the Reliques of the first. And some observed that vomiting is more successful than ordinary when the Moon is in a Sign that chews the Cud, such as the Bull and the Goat or Capricorn. It is good to Vomit after Supper the Patient having eaten divers Meats, Fat, sharp and Salt or Spice &c. and others in great Quantity, and afterward rubbing his Stomach and putting his Finger into his Throat. And if that will not do, he must take a Vomit, especially of Asarum and Broom boyled together and the Decoction drunk, which are otherwise good in the Cure of the Gout.

That Evacuation likewise which is made by sweat, purges the Blood from wheyish Excrements, and draws out the antecedent Cause of the Gout. To this purpose a Sudorifick Diet drink may be ordered for the Patient Spring and Fal, of a Decoction of Sarsaperilla, China, Saxafras, or of Guajacum, as the temper of the Patient shall advise.

But

But some late Physitians have brought into use, a Decoction which carrieth away the Matter meerly by invisible Transpiration through the Pores of the Skin, without any sweat at all, which hath done a world of good. Its Composition and use is thus:

Take Sarsaperilla, Crude Antimony, Nut-shels, of each six ounces: China Root one ounce: a little Brasil Wood: Water nine pints: Boyl them to four pints and an half. Let the Antimony and Nut-shels be poudered and tied in a cloth, which must be so hanged in the pot that it touch not the bottom. Let him take a good draught of the strained Liquor, in the mornings three hours before dinner; in the afternoon four hours after dinner, and three hours after Supper, for fifteen daies together. Bleeding and universal Purgation being premised.

Of the Grounds remaining in the strainer with like quantity of Water, may be made a Diet-Drink for ordinary use instead of Beer. Boyl the Water half away, and add Coriander and Liquoris as much as shall suffice to give it a good smack.

To prevent the Gout, and to root the same out of the Bowels, some Practitioners commend the use of the Gout-quellers given a whole year together, whereby they avouch many have been perfectly cured. Among many of their Receipts, this is the Principal.

Take Sarsaperilla four ounces: St. Johns-wort seeds, Ground pine, and Germander Leaves, of each three ounces: round Brithwort six drams: Angelica three drams: Cinnamon three drams: Cloves four scruples: Saffron two scruples. Let all be finely poudered and incorporated with Spanish Honey clarified as much as shall suffice. Make all into an Electuary, which let the Patient use a year together, taking every day in the Spring, Fall and Winter, one dram and an half; in the Summer only one dram. Let the Patient forbear to take it in the Dog daies. Let him wholly abstain from Wine and Lechery.

Peradventure the Decoction of Germander may be of the Nature of the Gout-quelling Medicament our Practitioners talk of; which was therefore commended to the Emperor *Charls* the Fifth exceedingly by the Physitians of *Genoa*: and *Solenander* doth testifie, That very many who drank this Medicine threescore daies together, were perfectly cured. The Composition of this Decoction is thus:

Take Germander gathered when it flowers, and well preserved, one handful: Ripe Wine not very strong, nor very small, three pints: boyl them in a double Vessel five hours. Let the Patient take a draught of the strained wine, and compose himself to sweat. This is to be done after the Patients have been purged.

And it is here to be noted touching those hot Medicines, that they are not only unprofitable for hot Constitutions, but they cause such Resolutions of Humors or Joynts, or other inconveniences, as can never be cured, and therefore they must be given with great Caution.

Peradventure this following Electuary may be used with more safety and success, which doth purge the Body by little and little from all superfluities without heating the same.

Take Senna half an ounce: Turbith, Hermodactils, of each six drams: Lignum Guajacum, Saxaphras, and Sarsaperilla, of each half an ounce: China Roots one ounce and an half: Nephritick Wood two ounces: the three Sanders, of each one ounce: Annis Seed two drams: Honey very well clarified fourteen ounces: make all into an Electuary. The Dose is one dram every day in the whole year, except the Dog-daies.

Among the common People, some hold it for a great preservative from the Gout, to swallow three Cloves of Garlick whole every morning for a moneth together. For they heat and strengthen the Stomach, without heating the Liver, or other Bowels; for they are voided forth with Excrements whole, but boyled and wrapped in clammy Flegm, which they bring from the Stomach and Gout.

In the Gout proceeding of Chollerick Humors, Waters of Medicinal Wels, which are Acid, Vitriolate, and cooling, such as that of *Tunbridg* in *Kent*, *Blackboys* not far from *Lewes* in *Sussex*, one in the Parish of *Sandherst* in *Kent*, do very much good. So that by the use of such Waters, some persons have been for a long time freed from the Gout.

To the same purpose *Hypocrates* commends in his Book of Diseases, the use of Asses Milk, which Experience shews hath done good to many Gouty persons.

And in a word, All things which are good against an hot distemper of the Liver, and to strengthen that Bowel, will be good in this Case, as they are described before in the Cure of the hot distemper of the Liver.

But if a wheyish Humor flowing from the Brain be Cause of this Disease, as most commonly fals out, the greatest care must be had of the Brain; viz. That its distemper may be corrected, and that the Humors bred therein may be derived and discussed: To which intents, Issues, Vesicatories, Medicines to be drawn up into the Nose, Masticatories, Pouders, Spiced Caps, will be very serviceable; and other Remedies propounded in the Cure of Diseases of the Brain.

The

The last Point of Prevention, is to strengthen the Joynts that they may not so easily receive the Humor flowing in, Yet it is to be noted, that strengthening Medicaments, are not only Vain but hurtful also, unless the antecedent Cause, and the Humor ready to flow into the Part, be carefully removed by the foresaid Medicaments. Otherwise those strengtheners, either are not able to hinder the influx of the Humors into the Joynt: or if they do hinder the same, the Humors retire to the more noble parts of the Body and raise much worse Diseases.

Among the principal strengtheners the pressings of Grapes, viz.their Seeds &c. are reckoned, which discuss the reliques of the Morbifick Matter by their actual heat, and by their astringency, do very much strengthen the Parts. *Duretus* upon *Hollerius* doth thus commend them. *But the use of Vine-Grape Kernels doth exceedingly profit in the time of Vintage If the pressings of the Grapes be brought out of the Wine Press into a Barn and being covered with Blankets do there grow hot. In them let the Patient thrust his Feet, Legs, Thighs, Arms, or his whole Body. I have tried it* (saith he) *an hundred times, there is no better thing under the Cope of Heaven:*

And *Solenander* in his Counsel 21. Sect. 4. Doth give the foresaid Medicine this commendation. *But among the best and safest remedies, (which do also strengthen the parts affected, and do cherish the innate heat) is this to be reckoned, and diligently once every year (for oftener it cannot) to be practiced, viz. That in Vintage time, the Feet and Hands affected, be whelmed in pressings of Grapes hot from the press, or made hot with warm Wine, every Morning for fifteen daies. And I could name a worthy Personage, to whom I have communicated this Medicament, and received from him a very considerable Gratuity therefore; who could not go at all, and by this Medicine and Gods Blessing, he was restored. And by how much the Grapes are riper, by so much the more good, will the pressing do in this Case.*

Sulphureous and Nitrous Baths such as the Balerucane in *France*, do not only discuss the Matter of the Gout, by provoking sweat, as was said before; but also by strengthening the Joynts, they do much conduce to the Prevention thereof; as also being used by way of Embrocation, that is the Head being wet therewith or it being pumped upon the Head, or Cotton wet therein be at last laid on and made fast. The mire of the said Baths applied to the weak parts, do likewise strengthen them.

Where the benefit of Natural Baths cannot be had, the Feet may be washed and other parts Fomented, with a Decoction of Nerve Herbs, some astringents being added thereto, as Balaustins, Mirtle, Cypress Nuts, Allum, and Salt, with Iron-quenched Water and red Wine.

Also Oyntments are commended, being frequently used, made after this manner.

Take Oyl of Mirtles or Roses two ounces: Salt two drams: Mix them and make a Liniment.

Or,

Take Oyl of unripe Olives, Oyl of Mastick one ounce: Salt fried in a pan two drams: Bole-Armenick three drams: Dragons Blood, Hypocistis, Frankincense, Mastich, of each one dram and an half: Let each Particular be first finely Pondered by it self, then with the Oyls mix them into the form of an Oyntment.

The Plaister called Emplastrum Diapalma is very good to strengthen the Joynts: and its useful in all Gouts whatever the Humor be which offends. And *Solenander* writes in his Counsel 25. Sect. 4. that he hath known some, who had wont to be often troubled with the Gout, and by the continual use of this Plaister, with frequent purges taken at certain distances of time, they were freed from those Pains for five years together. And this Plaister doth not daub and foul, doth not raise Itch or Pimples, nor is it troublesome by its smel or any other evil quality. And it is fitted to the shape of the member. When the Feet are troubled Shoes are made of thin Leather which being smeared with this Plaister are put upon the Feet. The like Leathers spread with this Plaister may be applied to the Wrists and other Parts. But the truth is, the same Plaister boyled in Wine and mingled with Pouder of Myrtles, Roses, Tartar, Chamepytis or Ground-pine and Chamomel, so as we described before in the Curation, is much better for the same uses. And we have seen Gouty persons, who continually wore such a Plaister upon their Feet and Wrists, with most happy success.

Chap. 2. *Of the Hip-Gout, or* Sciatica.

THe Pain of the Sciatica or Hip-Gout, doth herein chiefly differ from other sorts of the Gout, because in those the Pain possesses only the Joynts; but this is not only in the Hip, but it holds the top of the Buttock also, the Loyns and the *Os Sacrum* and reaches into the Thigh and Leg even to the very Foot. Which comes to pass by reason of Nerves arising out of the Loyns and *Os Sacrum*, which are carried unto the Hip, and are from thence derived and spread unto the Thigh, the Leg and Feet.

CAUSES.] The Cause of this Pain is the same which was propounded in other sorts of the Gout.

It

DIAGNOSTICK.] The Knowledg of this Diſeaſe is taken from the Part affected: from whence it alſo took its Name, for the Pain doth eſpecially affect the Region or part of the Huckle-bone, for it hath this property, that no Humor, nor Inflammation or change of the color appears as is wont to be in other ſigns of the Gout: becauſe the flowing Humors do inſinuate themſelves into more profound or deep parts, and into ſuch as are larger, and covered with much fleſh, and they are not diffuſed into the ſurface of the Body nor the very Skin as in other Gouts.

PROGNOSTICK.] This peculiar Prediction belongs to the Hip-Gout, that if it continue long it puts the Hip out of Joynt: for a wheyiſh and Flegmatick Humor doth inſinuate it ſelf into the hollow of the Joynt which is very large, and if it bide there long, its thinner part is diſcuſſed, the thicker remaining, which becomes ſnotty and ſoftens and looſens the bands which knit together the bones which belong unto that Joynt; ſo that the bone of the Hip fals from its Socket, whence follows Luxation, and thereupon limping or halting, and a Conſumption of the whole Thigh; becauſe the Bone being ſlipt out of its ſeat, doth preſs upon the Muſcles, Veins and Arteries, by which means motion is hindered and Blood and Spirits cannot conveniently flow into the inferior parts. The foreſaid Doctrine is confirmed by two Aphoriſmes of *Hypocrates* viz. The 59 of the 6 Section. Such whoſe Hips after long pains, ſlip out of Joynt and in again, they have Snotty Excrements in that Part. And the 60. Aphoriſm of the ſame Section; Such as being troubled with long Pains of the Sciatica, come to have their Hip disjoynted, their Thigh Conſumes and they halt except they be burnt.

CURE. The Cure of the Hip-pain hath many things common with the other ſorts of Gouts; yet in many things differs becauſe of the ſtructure and largneſs of the Joynt; therefore it is to be diſtinguiſhed from the former Gouts, and to be handled in this Chapter by it ſelf.

And in the firſt place a Clyſter or Gentle Purgative being premiſed, the Vein of the Arm on the ſame ſide muſt be opened for revulſion ſake: afterwards for derivation ſake, the Vena Poplitis muſt be opened about the Knee, or that Vein near the outward Anckle-bone, which is called the Sciatica Vein, becauſe of the great good which the opening thereof is wont to do in this Diſeaſe; which alone being opened doth often heal this Diſeaſe.

It is wont to be opened on the Leg of the ſame ſide the Gout is on, yet hath it done much good being opened on the contrary ſide, and hath been ſeen ſuddenly to take the Pain quite away.

Galen in his Book of Blood-letting, Section 18. *I remember* (ſaith he) *that I have Cured divers troubled with the Sciatica in one day, opening a Vein in their Thighs; viz. The Cauſe being not from cold, but fulneſs of thoſe Veins which are in the Hip; ſo that a Vein opened about the Ham or Knee, is more proper and commodious in ſuch caſes, than in the Ankles.*

Alſo Blood drawn out of the Hemorrhoids by Leeches, doth wonderfully help thoſe that are Hip-Gouty, becauſe the Blood contained in the Veins of the Hip is thereby drawn out: for there is the greateſt Conſent and fellow-feeling that can be between theſe parts by means of their Veins.

Strong Purgations are proper in this caſe; for lighter purges do rather precipitate the Humors into the Parts affected. And therefore the Arthritical Pouders are moſt convenient, Caryocoſtinum, Pils of Hermodactils and ſuch like. The Chimiſts do ſometimes ſucceſsfully uſe Mercurial and Antimonial purges in ſtrong Bodies.

Mercurius dulcis with Scammony or other purgatives given frequently, doth powerfully Eradicate the Humor cauſing this Hip-Gout.

Many prefer Vomiting Medicaments before purgatives, becauſe they Evacuate the Humors by a place more remote from the Part affected. *Rondeletius* prefers Aſarum before other Vomitories.

After ſufficient Purgation, we muſt proceed to local Medicaments. And as for repelling Medicines, they are no waies convenient, becauſe it is to be feared leaſt the Humors be ſo much the more fixed into the part affected; but at the beginning Reſolving things muſt be applied; firſt milder and leſs hot, leaſt they ſhould attract the Humors more into the part affected; after ſuch as are more vehement, in this manner.

Take Briony Roots two pounds: Dwarf-Elder Roots one pound: Juniper Berries half a pound: Leaves of Ground-pine, Mint, Marjerom, Sage, Roſemary, flowers of Chamomel and Melilot of each four handfuls: Make a Decoction for a Bath to ſit in, which let the Patient ſit in twice a day for two or three daies together. At the beginning the Decoction may be made of Water alone afterward in Water and white Wine.

With the ſame or like Decoction hot, may the Part pained be fomented frequently.

Alſo Bags may be prepared of Salt, Millet and Bran fried with rich Canary in a frying Pan and laid on Warm.

Or, Bags very effectual may be made only of Juniper Berries beaten and fried in a Pan as aforeſaid.

Alſo anointings will be convenient of Oyl of Chamomel, Oyl of Dill, Orris, Nard and Rue;

which by relaxing the exterior Parts, will draw the motion of the Humors to themwards, by which means the inner parts will be less affected.

Oyl of Scorpions of *Mathiolus* anointed on, will be very effectual.

To resolve more powerfully, The *Aqua Balsami Guidonis*, being anointed on, will be exceeding good.

Oyntment of Marsh-mallows doth loosen the external parts, and doth gently discuss the Morbifick Matter; therefore towards the beginning, the whole Thigh may be anointed therewith, and the Leg to the Foot by a flaming fire.

In the Progress of the Disease, this following being hotter and stronger, may be used.

Take Oyl of Worms, Tiles, Turpentine, of each two ounces: Oyl of Foxes one ounce: Gum Ammoniack, and Sagapenum dissolved in Aqua vitæ, of each six drams: Fat Castoreum three drams: Euphorbium two drams: Wax as much as shall suffice. Make all into an Oyntment.

Spanish Soap, or Castle Soap dissolved in Spirit of Wine, is most excellent, smeared on by the fires side.

Oyl of Tiles or Bricks alone, being anointed hot, after six Cupping-Glasses have been fastened upon the pained place, and about the same; and after the anointing, the place being covered with very hot Linnen Cloaths, hath in one day cured a very stubborn Sciatica.

Lacuna in his Comments upon *Dioscorides*, doth commend the following Oyntments as wonderful:

Take the Juyce of the Roots and Leaves of Dwarf Elder, or Danewort, of each one ounce: Oyl of Chamomel six ounces: Boyl them to the consumption of the Juyces. Then add Wax as much as shall suffice, and a few drops of Vinegar to make the vertue pierce. Make of all an Oyntment.

A Cataplasm of the Herb Iberis, wild Cresses, or Sciatica Cresses, is much commended by Authors, because this Herb is very effectual in the Cure of this Disease. It may be made after this manner.

Take of wild Cresses four handfuls: boyl them in Wine, and beat them, adding thereto Meal of Lupines, Vetches, and of Beans, of each three drams: Pouder of dried Rue, Chamomel flowers, and Costus Root, of each one dram: Oyl of Turpentine half an ounce: Oyl of Earth-worms as much as shall suffice. Make all into a Cataplasm.

Platerus witnesseth that it hath done much good, when green Sage hath been put on an hollow hot Tile, and often stirred lest it burn; and thus being half boyled and sprinkled with Vinegar, and a Cloth put about the Tile, and the same put under the Hips, the Vapor thereof hath been received into the part affected,

Also a Loaf very hot out of the Oven, cut in the middle, sprinkled with Aqua vitæ, and laid on, will be very helpful.

To draw the Morbifick Matter outwards, a Cupping-Glass is good, four times fastened upon the highest part of the pained place, which appertains to *Os Sacrum*, without Scarrification.

To the same intent, eight or ten Leeches fastened to the part affected do much help, which are allowed and approved of by *Paulus* and *Aurelianus*. And *Zacutus Lusitanus* saies that in ten hours space he therewith took away the pain of the Sciatica, which no other Remedies could help.

Plaisters are likewise frequently used, and in this Case may do much. But in the use of them, this is always to be observed, as it hath been said generally of the rest; that at the first mild ones be applied, which if they do little good, we may arise to more vehement. Which order we will likewise observe in our setting down the making of such Plaisters.

Take Pitch used in ships, two ounces: Brimstone poudered very fine three drams: Mastich two drams: Turpentine half an ounce. Mix them, and make of all a Plaister, adding as much Wax as shall be requisite.

Take Ship-Pitch two ounces: Gum-Ammoniack, Bdellium dissolved in Vinegar, of each one ounce: Live Brimstone, Turbith, Hermodactils, of each half an ounce: Castoreum one dram: Turpentine a little: Wax as much as shall suffice. Make of all a Plaister.

Take Gum-Ammoniack, and Sagapenum dissolved in Vinegar, and then thickened again, of each two ounces: Emplastrum Diachylon cum Gummis, *one ounce and an half. Melt all together. Then add Cinnabaris, Cinoper or Minium, and burned Brass, of each one ounce: Orpiment and Verdegreece, of each two drams. Make all into a Mass or Plaister. If it raise Bladders, lay a Linnen Cloth between the Plaister, and the part affected.*

If the Disease do pertinaciously continue, we must proceed to a Vesicatory, which doth draw out the Morbifick Matter, being applied to the part affected. Wherefore a Blistering Plaister must be

be laid on, either alone, or that it may work more gently, with ſome of the foreſaid, mingled in equal proportions, for ſo it may be endured upon the part a longer time. Or this following may be made freſh.

Take *Ship-Pitch, Wax, white Pitch, of each one ounce and an half: Colophonia, Frankincenſe, Maſtich, of each two drams: Euphorbium, Laudanum, Quick Sulphur, Opopanax, Ammoniacum, Bdellium, Galbanum, Sagapenum, of each half an ounce: Storax, and Benjamin, of each two drams: Cantharides three drams: Galangal, Cloves, of each two drams: Liquid Storax, as much as ſhall ſuffice. Make all into a Plaiſter.*

In an old Diſeaſe, an Iſſue in the Leg on the pained ſide doth drive the Matter away, and ſometimes cures the Diſeaſe. *Zechius* will have it made in the outſide of the Leg. And if there be ſuſpition of a Catarrh from the Brain, another muſt be made in the hinder part of the Head. For that hath ſometimes cured an old Sciatica when nothing elſe would do it. And then likewiſe other Remedies, correcting the Brains diſtemper, muſt not be neglected.

Zacutus Luſitanus tells of his making an Iſſue behind the Ears with wonderful ſucceſs, when the Humor came from the Head. Of this he makes a peculiar ſtory, Obſervat. 160. Book 2.

During the whole Courſe of the Cure, frequent Clyſters are to be injected, that part of the Morbifick Matter may be derived unto the Guts. Alſo to diſcuſs the next and immediate Cauſe of the pain, this following hath ſometimes been uſeful.

Take *Rich Canary half a pint: Walnut Oyl, and Oyl of Rue, of each three ounces: Oyl of Turpentine half an ounce. Mix all, and make thereof a Clyſter, to be caſt in ſo often as the pain ſhall require.*

And this following Clyſter doth wonderfully draw the Humors from the part affected, in regard of its Neighborhood to the Guts.

Take *Pulp of Coloquintida one dram: Lean Bran an handful: white Wine a pint and an half: boyl all to a pint. Of the ſtrained Liquor make a Clyſter, and let the Patient keep it an hour.*

The Hip-Gout is ſometimes bred of Choller, and hot Humors, which is known when the pain is very ſharp, and pricks, the pains are greater every other day, the party is lean, the Conſtitution of Body Chollerick, Age youthful, Country and Seaſon hot, the pain is encreaſed by heating things, Chollerick Diſeaſes have preceded, an hot Diet, and vehement Exerciſe: and then the Medicines muſt be fitted for Choller, and an hot diſtemper. Wherefore, Bleeding is good, Purgations of Choller, ſometimes Lenitive, ſometimes ſtrongly purging with Diagridium, that the Morbifick Matter may be brought forth; cooling Juleps, Emollient Clyſters, cooling Milk, Bathing, and other Remedies propounded in an hot diſtemper of the Liver. Always being careful to avoid things Opening, and to chuſe rather ſuch as do incraſſate or thicken, ſuch as we propounded for a thin and hot Rheum.

The Pain being extream, ſome Narcoticks may be given, eſpecially Syrup of Poppies, whereby the pain is allaied, and the flux of Humors ſtopped, by the Humors being thickned.

But *Laudanum Opiatum* is far more powerful, given to the quantity of three or four grains; which alſo diſſolved in a Clyſter of Broth or Milk, uſing a Purging Clyſter before it, doth often take away the pain in a moment.

The external Medicaments muſt be gentler, as Oyl of Lillies, Violets, Chamomel, and ſweet Almonds: Pultiſſes of Lettuce, Night-ſhade, Endive, Barley meal, with the foreſaid Oyls; and towards the declining of the Diſeaſe, Fomentations, Liniments, Milder Plaiſters, and leſs Heating.

The Matter Cauſing the Sciatica comes ſometimes to maturity, ſo as to make an Impoſtume. Which *Hypocrates* ſhews in the third Book of his Epidemicks in the Hiſtory of *Eupolemus*, who had ſuch an Impoſtume, which killed him with a Conſumption. If the Impoſthume be opened, there remains a filthy ill conditioned Ulcer, which likewiſe pines the Patient away. Yet *Zacutus Luſitanus* glories, that he had often cured the Sciatica with an Ulcer, in Obſ. 126. Book 1. Which Obſervation ought to be read and diligently meditated upon.

Chap. 3. *Of Rheumatick Pains of the whole Body.*

AFter Gouty Diſeaſes properly ſo called, it is worth our while to treat of the Rheumatick diſeaſe, becauſe of the likeneſs between theſe diſeaſes, which verily is ſo great, that the generality of Phyſitians, which know not the Nature of this Rheumatiſm, are wont to call it the univerſal Gout. For in both diſeaſes the Joynts are pained: but therein is the difference; In that in the Gout, only the Joynts are pained; But in this *Rheumatiſmus* or Rheumatick Malady, not only the Joynts, but alſo the whole Body, viz. The middle ſpaces between the Joynts, Namely, the

Muscles and their Membranes, and especially the Skins which cover the Bones, and the whole habit of the Body; yea verily, and sometimes the inward parts of the Body, as the Stomach, Womb, Lungs, are troubled with this Rheumatick Disease.

And although the Greeks call a Catarrh by the name of *Rheuma*; yet this Rheumatism we speak of, differs from a Catarrh, being indeed contained under the general term of Flux of Rheum, yet of a different Nature from that kind of Flux which is commonly called a Catarrh, which comes onely from the Brain, and troubles no more than one or two parts; whereas this Disease we treat of, comes from the internal Bowels by the Veins and Arteries, and is shed into the whole body.

This is no new Disease, yet is it not sufficiently described by the Antients. We have a rude Draught thereof in *Hypocrates*, in his Book, *de locis in Homine*: and in *Galen*, Book 1. of the difference of Feavers; and the first *de compositione Med. secundum Genera*. But the most notable and cleer place of all, explaining this Disease, is in the first Book of the Differences of Feavers, in ch. 7. the words are these: *Understand thou, That the Rheumatick Disease so called, is caused by some such way as this*; viz. *The whole Body being weak, and the principal Parts thereof, though they have but little blood, yet finding themselves burdened, they thrust out the same and expel it to the fleshy parts of the Skin.* Whereby it appears that the true Nature of this Rheumatick Disease according to *Galens* Doctrine, consists herein; That the whole Body is so weak, that when any principal part is burdened with blood, although it be in no very great quantity, it transmits the same to the fleshy parts and habit of the Body.

But that is not simply to be understood which is said by *Galen*, That the principal parts being burdened with blood, do thrust the same unto the fleshy parts of the Body. For so Inflammations and Swellings would arise in those parts. Whereas Experience shews, that in this Disease called *Rheumatismus*, for the most part there appears no swelling, no Inflammation, no change of color in the parts pained.

CAUSES.] The next and immediate Cause therefore of this Disease is a wheyish Humor, which by reason of its thinness doth not swel the parts, and because of the substance thereof, not apt to turn into Matter or Quittor, it never makes any Inposthume, but only a certain Inflammatory disposition, arising from the fervor of the wheyish Humor.

Now the Primary Original of this Disease ought to be ascribed to the Liver, which being affected with an hot distemper, and being weakned, breeds not blood convenient for to nourish, and affects the whole Body with the like weakness, whereby it becomes exceedingly disposed to receive all superfluities. And from the same distemper and weakness of the Liver, great quantities of evil Humors do arise, which being long detained in the Veins and Arteries, they become vitiously corrupted, and are there dissolved and turned into the Nature of Whey, and Blood-watry Liquors, and as an heavy burden, are by Nature cast off into the Ignoble Parts, she being not strong enough to drive them out of the whole Body. Now these wheyish and blood-watry Humors being very sharp, do prick and cut (as it were) those parts unto which they are carried, from whence pains and torments do arise. And although we conceive the Liver to be the primary Cause, and Original of this Disease, yet it is apparent that these Humors do sometimes flow immediately from the Brain, because the pains do often begin in the Neck, and afterwards do descend unto the Shoulders and Arms. But the first Generation of these sharp Humors was in the over-heated Liver, which being translated from thence into the Brain, do from thence afterward fall down into the inferior parts.

And although these humors are expelled by the Veins in manner of a Crisis, yet is not their motion so sudden, but is performed by little and little; viz. When those evil Humors and corrupted, do boyl or work in the Veins, and are afterward leisurely by the Veins expelled and vomited as it were; for which cause this motion is wont fitly to be called, the Vomiting of the Veins.

That a serous or wheyish Humor is the principal Cause of these pains, many Reasons do convince. First, because ordinarily they cause no swelling nor change of color in the part affected; howbeit sometimes when the Humor doth much abound, it raiseth the part into a little, and very red Swelling, which nevertheless is easily discussed. Secondly, because these pains are exceeding moveable, and do seize now this, now that part of the body, and are suddenly gone from one part into another, the former part being quickly well, and free from all pain; which sudden mutations cannot come but from an Humor very apt to move, and exceeding thin. Thirdly, Because this Disease is often terminated by Sweating. Fourthly, Because there appear many tokens of abundant Serosities in such as are troubled with this Disease; Thin and abundant Urines beyond the Quantity of what they drink, and abundance of Wheyish Humors appearing in the blood that is taken from them.

And although a wheyish Humor by the principal, and most frequent Cause of these Rheumatick Pains, yet probable it is, that wind doth sometimes concur in the production of these pains. Which we may conjecture by the quick passage of the pain from one place to another, and because there is no weight or heaviness felt in the parts pained. This is the Opinion of *Avicenna*, who seems to describe this Disease, and to assign windy Vapors for the Cause thereof: Fen 1. Book, 3. Tract. 2. Chap. 7.

Chap. 7. in theſe words. *In pain Cauſed by winds, the extenſion of the part is encreaſed and the heavineſs diminiſhed, ſometimes it is with pricking, and ſometimes with Corroſion; and in a flatuous Pain there is no heavineſs. And ſometimes there is a Change of the Pain from one place eo another.* Theſe are the words of Avicenna: unto which he joyns theſe following, which ſeem to come nearer the deſcription of this Diſeaſe we treat of. *And the wind is ſometimes in the Coats and Filres of the Members, as in the Collick from wind; or in the Coats of the Muſcles and under the membranes, and upon the Bones, or in the Circumference of the Muſcles, between the ſoft fleſh and the Skin, or lurking in the Member it ſelf.*

And if any ſhall object, that Diſeaſes ariſing from wind do not endure ſo long, becauſe windy Vapors are ſoon diſcuſſed. We ſhall anſwer, that a wind conteined in the parts pained is eaſily diſcuſſed, whence comes often change of pains from one part to another; but there is a ſeminary in the Veins from whence winds may perpetually ariſe, and afterwards be carried to the parts aforeſaid. Now this Seminary of winds is a thick, viſcid Humor and Flegmatick, which the Blood taken from them doth often teſtifie to be redundant in ſuch as are troubled with theſe pains; it being frequently thick and clammy like Glew, in appearance like crude and putrid flegm.

DIAGNOSTICK.] The knowledge of this Diſeaſe may eaſily be learned out of what hath been ſaid: yet ſhall we diſcourſe thereof a little more fully. Firſt therefore, the parts affected with theſe pains, viz. The Muſcles and their Membranes, and the Membranes which infold the bones, do diſtinguiſh this Diſeaſe from all other. For although the pains of the Letchers Pox, do poſſeſs both the Joynts and the ſpaces between the Joynts, and ſpecially the membranes covering the bones; yet they differ herein, becauſe they do not ſo univerſally infect the whole Body, neither are ſo continual night and day, for they vex the party only in the nights and very little in the day time; neither do they hinder the Patients from their buſineſs commonly; whereas this Rheumatick Pain, doth Nail them to their Beds, ſo as they can hardly ſtir themſelves; neither can thoſe that look to them, once ſo much as move them without great trouble and encreaſe of their Torments. And finally other ſigns of the Whores Pox have preceded or are preſent, as Gonorrhæa, the Whores Boil, Putrifaction of the Privities and ſuch like.

Other Symptoms alſo there are accompanying this diſeaſe, which help much to the knowledg thereof. For if you lay your hand upon the part pained, you feel a kind of ſharpneſs with Heat and commonly there is a Feaver joyned therewith, but it is very ſmall; and ſometimes there is none at all. The blood which is taken away is evidently corrupted, thick and clammy like glew, and after many times bleeding, it is full of wheyiſh moiſture, and ſo changed, that it hath not the appearance of blood. When the pain is quite gone or intermits, there remains no weakneſs in the part, as is uſual in the Gout Purging Medicaments at the beginning do no good, nor things outwardly applied to the part affected; they do rather augment the Diſeaſe and the Pain: but when the Diſeaſe begins to decline, both are profitable.

PROGNOSTICK.] As for the Prognoſtick, this Diſeaſe is ſeldom or never deadly, but is very troubleſome to the Patient by its length: for it continues two or three months, if it be without a Feaver; Nay verily, ſometimes if it be not rightly cured, it continues for a year or years. *Franciſcus Portus* who in an elegant verſe written Poems of Phyſick, ſpeaking of this Diſeaſe relates that he was troubled with this Diſeaſe for two years ſpace, which at length he overcame by the earneſt Endeavours of ſix Phyſitians of *Paris* the moſt famous in their times, viz. *Baſſnus, Belly-Quercus, Sanjacobœmus, Seguinus* and *Hollerius.*

If this *Rheumatiſm* do begin with a Feaver, it is wont to be the ſhorter, but it torments the Patient with more direful and cruel pains: and then it finiſheth within twenty or forty days, or at leaſt, it is much leſſened.

This Rheumatick Pain coming upon the Neck of other Diſeaſes as an Apoplexy or Convulſion, doth make the Caſe leſs Dangerous, the Morbifick matter being tranſlated from the internal Parts to the habit of the Body.

Sweats happening in the Declination of the Diſeaſe are good.

Thick and abundant Urines in the Declination, do bring an end to the Diſeaſe.

CURE.] For the Cure of this Diſeaſe the Morbifick matter muſt be revelled, mitigated and Evacuated, the diſtemper of the Bowels muſt be corrected, and the ſtrength of all the Parts both the ſending and receiving muſt be maintained.

All which may be done by theſe following Remedies:

Take *Leaves of Mallows, Violets, Beetes, Lettuce, Borrage, of each one Handful. Annis Seeds two drams: Boyl all to twelve ounces, in the ſtrained Liquor diſſolve Honey of Violets and Sweet Butter of each two ounces: Make thereof a Cliſter. Give it at a convenient hour, and repeat it every day, or every other day during the whole Courſe of the Diſeaſe.*

When the Cliſter is come away open a Vein in either Arm and take away eight or nine ounces of Blood. It matters not on which Arm the Vein be at firſt opened, becauſe Blood-letting muſt be often

often repeated and the Veins of both Arms divers times opened. Blood must therefore be drawn every day from the beginning of the disease till the disease come to remit and the pains to lessen, neither matters it though the Patient be let blood ten or twelve times one after another in so many days, because it is a peculiar property of this Disease, that the Patients strength is not diminished by frequent bleeding, as in other Diseases it is wont to fall out: My manner therefore is in these Diseases when I appoint Bleeding so often, least the friends and attendants or the Patient should be affrighted with so frequent Blood-letting, to add this restriction, that Blood-letting be continued every day, till either the Pains be diminished or the Patient much weakned. And seeing no weakness follows the continual use of this Evacuation the Patients do willingly undergo the same, and are easily perswaded to repeat the same. Now the condition of the Blood it is which makes this easie bearance, which in this Disease comes always away very much corrupted. Experience shews how profitable this frequent Blood-letting is; for by the constant continuance thereof, the Disease which is wont (as was said in the Prognostick) to be long, is often mastered in a short time. And experience shews that large bleeding at the Nose, if it happen to one that hath this Disease, it perfectly Cures that party, *Hypocrates* seems to hint at this in Aphor. 74. Sect. 4. *Those who are likely to have an Imposthume about their Joynts, are freed from that danger, if they void much thick and white Urin, such as in painful Feavers, some begin to make upon the fourth day: and if withal their Nose Bleeds, the Disease will very soon break,* For the falling down of Humors into the Joynts tending to an Impostume, hath some Analogy with this Rheumatick Disease we treat of. Also the same *Hypocrates* seems to propound a certain adumbration of this Disease in the second of his Predictories, and ascribes the cause thereof to the suppression of some usual Hemorrhage or Bleeding, in these words: *They who have pains and swellings about their Joynts, which are allayed not as the Gout uses to be, in such you shall find their bowels long, and a white setling in their Urin, &c.* Afterward he adds; now this Disease betides those who in their Child-Hood and in their youth have been accustomed to Bleed at Nose, which custome hath left them.

Whiles these bleedings are Practised, Clisters (as was before said) must be given every day or every other day; also Juleps must be given, which have power to correct the distemper of the Bowels, and to mitigate the Acrimony and agitation of the Humors. To this intent Red Poppy water is very profitable in this Disease, it is to be given alone Morning and Evening six ounces at a time, with Syrup of Lemons and Pomegranates in form of a Julep; howbeit it is no less effectual alone without the Syrup.

For ordinary drink let the Patient use a Ptisan drink of Barley, Grass and Liquoris; or of the Decoction of Sorrel Roots, or of the Tincture of Roses: abstaining from Wine which is the great *Vehiculum* or Spreader of all Flowing Humors.

Purgation in the beginning, Augment, and State of this Disease doth no good at all; Nay verily it doth hurt, for it sets the Humors on running, and encreases the Pains; as it is wont to fall out in all Inflammatory dispositions. But in the Declination it is necessary and frequently to be Celebrated, and that with gentle Medicaments, that the evil Humors abounding in the whole Body may be Evacuated by degrees. To which purpose this following potion may be prescribed:

Take *Senna and Tamarinds of each half an ounce: Annis Seed and Cream of Tartar, of each one dram: Sorrel Leaves half a handful. Boyl all to three ounces: In the strained Liquor dissolve Manna and Syrup of Roses of each one ounce. Make a potion, to be iterated divers times, as the Physitian shall think fit.*

If the form of a Bole be more desirable, it may be thus made:

Take *Cassia new drawn six drams: Catholicum doubled three drams: Rhubarb in Powder and Cream of Tartar of each one dram: with Sugar make a Bolus.*

If you would purge more effectually add to the potion or the Bole a scruple of Jallap.

If these Purgations shall not suffice to eradicate this Disease (which is often very rebellious) we must proceed to stronger Purgatives, as *Electuarium Diaphœnicon, Diaprunum Solutivum,* and such like, provided there be no Feaver. I have always cured this Disease (when the foresaid Medicaments could not do it) with *Mercurius Dulcis* six times sublimed, being given divers times to the Quantity of a scruple with ten grains of Scammony or Rosin of Jallap. An example of which kind of Cure is to be seen in my observations, viz. in Obs. 41. Cent. 3. One only Clister of Vomiting Wine Cured this Disease in a certain Gentle-woman, as you have it in Obs. 22. of the same Century.

Touching Sweat-Drivers, the same is to be said which was said of purges; viz. that they in the beginning, Augment and State, do no good; Nay do very much harm; which the common sort of Practitioners find by experience, who being deluded with the likeness of a true Catarrh, and wearied with the stubbornness of the Disease, do flie to Sudorificks, by which the Disease is doubled and the Pains encreased. But in the Declination, after due Purgations, no Feaver being present, they may do much good, and they may be made of a Decoction of China, or Sarsa-Perilla; or sweat

may

may be procured in a Laconick Bath with Spirit of Wine or ſome appropriate Decoction.

After ſufficient Evacuations; yea rather while they are celebrated, we muſt be careful to ſtrengthen the whole body and the principal parts thereof; which Indication *Galen* in 1. of the Difference of Feavers Chap. 6. where he expounds the Nature of this Diſeaſe, ſaies, is to be perferred before all others, in theſe words. *Juſtly therefore the Aim of a Phyſitian in curing theſe kind of Pătients, is not Evacuation, but Roboration of the whole Body.* Which is not to be underſtood, as if no Evacuation were fit in theſe Caſes (for the ſame *Galen* begins the Cure of this Diſeaſe by Blood-letting) but that we muſt make more and more often uſe of ſtrengtheners, and leſs and ſeldomer uſe of Evacuations. Yet ſure enough it is, that the Parts cannot be ſtrengthened, unleſs the ſuperfluity of Excrements, by which they are burthened be purged out.

Now theſe ſtrengtheners we ſpeak of, muſt be of a cooling Vertue; ſeeing (as was ſaid) the over hot diſtemper of the Liver gives beginning to this Diſeaſe. There is great plenty of ſuch Medicaments in Authors: of theſe I ſhall propound four, which I account moſt effectual and leaſt ingrateful to the Patient.

The Firſt is the Tincture of Corals, two ounces of which the ſick may take in a morning, two hours before Meat, every day on which no other Medicaments are adminiſtred.

But becauſe the Tincture of Corals cannot long be kept, it is reduced into Syrup for longer keeping, with Sugar, of which two ſpoonfuls may be taken in the morning: but the Efficacy thereof is much leſs, than of the ſimple Tincture.

The Second, is the Conſerve of the fruit which grows upon the Roſe-briar or the Eglantine Briar, which is moſt pleaſing to the taſte, cools the Liver, and by a gentle aſtriction Corroborates the ſame. The Patient may take thereof the Quantity of a Cheſnut, Morning and Evening.

The Third is the Electuary of *Triaſantalon* with a four-fold proportion of Rhubarb, made into Lozenges; two drams whereof the Patient may take every day and drink a little ordinary drink thereupon.

The Fourth is a Tincture of Roſes, a Cup whereof the Patient muſt drink, once, twice, thrice a day far from Meals. It is thus made,

Take Red Roſe leaves dried one ounce: Water, Blood warm three Pints: ſpirit of Sulphur or Vitriol one dram and an half: Infuſe them ſix hours: To the ſtrained Liquor add white Sugar half a pound: keep it in a Glaſs for Uſe.

The aforeſaid Remedies or ſome of them muſt be uſed in Courſe one after another, leaſt Nature be too much accuſtomed to one, and ſo the leſs altered thereby.

When the Diſeaſe is Cured the Patient muſt be cautious for a time leaſt nevv matter being collected a Relapſe ſhould happen. The Prevention therefore hereof, will chiefly conſiſt in a ſtate or periodical Purgation, to be iterated once or tvvice every moneth; vvhich may fitly be done by this Magiſterial Syrup followving, vvhich vvill do more good by altering and ſtrengthening the Liver than by purging.

Take Juyces newly preſt and cleared by ſettling, out of Endive, Cichory, Agrimony, Fumitory, Hops, and Bugloſs three pints: Juyce of Apples that are Odoriferous, as Pearmaines and Pipins, two pints: Senna ſix drams: Epithymum two ounces: Rhubarb elect, and Agarick newly trochiſcated of each one ounce: Mace and Cloves of each half a dram: Infuſe and boyl all according to Art, till there remain fifteen ounces of the Liquor, wherein diſſolve of white Sugar the ſame Quantity and make a Syrup perfectly boyled. Of which let the Patient take two ounces once or twice in a moneth, with Chicken or Veal Broth, qualified with the Leaves of Borrage and Ceterach and Agrimony.

Alſo ſpring and fal 'tvvill be good to open a Vein.

Furthermore, to temper the fervency of the Liver, a Bath of Luke-vvarm Water vvill be good, vvhich muſt be frequently repeated, the vvhole Summer through: or for more Conveniency a Tub to ſit in may ſuffice.

To the ſame intent Conſerve of Bramble-Roſe or Eglantine Roſe-Berries vvill be good, or an Electuary of the ſame vertue, and Lozenges made of the Species *Diatrion Santalon*, being frequently uſed.

Hereunto muſt be added a good Diet of Meats affording good Juyce and eaſily digeſted, as Partridges, Capons, Chickens and Pullets; eſpecially broths and the Juyces of fleſh preſſed forth, and ſuch like, all vvhich muſt be taken is no great Quantity, that they may be more eaſily digeſted.

The End of the Sixteenth Book.

THE Seventeenth BOOK OF THE PRACTICE OF PHYSICK.

Of FEAVERS.

The PREFACE.

WE find by many Authors great Volumes written touching the Theory or Cure of Feavers; in which, innumerable Controversies, and difficult Disputations are handled. Which as they are in the Schools very useful, Yea, and necessary; so are they tedious to most Physitians, who having left the Universities, do give themselves unto the Practice of Physick: For they desire a short and clear Explitation of the Theory of Diseases, which may suffice to declare their Nature, Causes, and Signs, both Diagnostick and Prognostick, with their right Method of Curing, which is the only thing they regard. It being my endeavor in this whole Work to satisfie their desires, I have banished all Controversies, briefly expounding the decision of Questions only which seem most necessary for a Practitioner. This we have likewise done in our Doctrine of Feavers; and letting pass all tedious Controversies, which are continually handled in the Schools, usque ad Nauseam; *we have declared only such things as principally regard Practice. And this Book for better Methods sake I have distributed into three* Sections, *following that General Division of Feavers, into Simple, Putrid, and Pestilential. So that the first Section of this Book shall treat of Simple Feavers: The second of Putrid: And the third of Pestilential.*

SECT. I.

Of Simple Feavers

The PREFACE.

THat which we call a Simple Feaver, is subdivided into three sorts; of which, one is called Ephemera; *another* Synochus simplex, *or* Imputris; *and another* Hectica. *And therefore we shall divide this Section into three Chapters: The first of* Febris Ephemera: *The second of* Synochus simplex: *The third of* Febris Hectica. *Wherein we shall declare their Nature and Cure.*

CHAP.

Chap. 1. *Of the Feaver* Ephemera.

CAUSES.] THis Feaver is commonly bred of external Cauſes, and of vehement Motions of Body and Mind, as Anger, Cares, Labor, Pain, Watching, and Faſting, by which the Spirits are inflamed; alſo by Sleep and Sorrow, by which the hot Humors and Vapors are kept within the Body. Alſo by being heated with the Sun, Fire, or Stove, by which means, hot Air being drawn in with the Breath, and received by the Pores of the Body, it doth inflame the Spirits. Alſo by Surfetting, Drunkenneſs, and eſpecially by over large taking in of Meats and Drinks, that are of an hot Nature, as Peppered Meats, and ſtrong Wines, by which more Vapors are raiſed than can exhale. Alſo by Retention of hot Excrements, and that not only of the Dung and Urine, but eſpecially of thoſe Sooty Vapors which are wont to paſs through the Pores of the Skin, if thoſe Pores be ſhut up with cold, and Alluminous Bath, and ſuch like Cauſes.

Alſo this Ephemera Feaver is bred of internal Cauſes, as from a Bubo, and other Swellings of the Thighs or Arms, eſpecially whiles they break; from an hot fiery Swelling of the Extremities of the Body, when hot Matter ſhut up together in one certain place, doth offend the Heart, not by its putrifaction, but heat alone. Alſo by ſome ſmall Obſtruction of the Veſſels, by which means the ſooty exhalations being retained do cauſe a Feaver; as is wont to happen in the Diſtillations, when they ariſe in hot Natures, and a thick habit of Body.

DIAGNOSTICK.] This Feaver is known, both when ſome of the Cauſes ſpecified have gone before; and alſo by a ſwift, frequent, and great Pulſe: breathing frequent and great, Head-ach and heat; there is neither cold nor ſhaking, no ſence of wearineſs, nor want of Appetite. Yet may there be ſometimes a ſhivering or ſhaking fit, Namely, when the Feaver is occaſioned by the heat of the Sun, or by cold. Feeling the Patients Hand we find a mild and gentle heat; the Urine is concoct, like that of one in health, unleſs by ſome Obſtruction or Crudity it be changed. It is commonly terminated in the ſpace of twenty four hours, with an eaſie gentle Sweat; yet it reacheth ſometimes unto the third day, which if it paſs it degenerates into a ſimple Synochus, a Putrid, or an Hectick Feaver.

CURE.] For the Cure of this Feaver, the Ancients did chiefly uſe a Bath of luke-warm Water, which they did alſo frequently uſe in their Health. But ſeeing it is in theſe times out of uſe, neither is it practiſed in the Cure of theſe Feavers. Neither is it counted ſafe, in regard of a Plethorick or Cacochymical Conſtitution of Body, Putrifaction, or flux of Rheum, which may be in ſuch Bodies, or may be feared will happen.

But this Feaver is better cured by a Cooling and Moiſtening Diet; as Barley Cream, Cooling Broths, Small Drink and Sugar, common Ptiſan Drink, or Fountain Water with Syrup of Lemons, or Maiden-hair mixed therewith.

But the Cure admits ſome variation, according to the Nature of the Cauſe. So if it ſpring from the Heat of the Sun or Air, a cooling Diet is good, and the Patient muſt be conveied into a cool lodging; and Vinegar of Roſes muſt be applied to his Forehead, to the Temples and former part of the Head it ſelf, if there be pain, as commonly there is when the Feaver comes from the heat of the Sun.

If it come from being in the Cold, eſpecially if the Patient being hot with exerciſe went preſently into the Cold, Sweat muſt be provoked, eſpecially towards the end of the Fit.

If it come from the Skins thickneſs and cloſing up of the pores, the ſame Cure muſt be uſed; and to both theſe Cauſes, ſmall Wine very well allaied with Water may be convenient, becauſe it opens the pores, and helps to ſweat.

If the Diſeaſe was cauſed by Labor, the Patient muſt reſt and be nouriſhed more liberally with Meat of eaſie Digeſtion. If from wearineſs, the Patient muſt be artificially rubbed. Tranquillity of mind, and chearfulneſs muſt be oppoſed to Anger; and Choller muſt be tempered with Meat and Drink of a cooling Nature. To Sadneſs, Recreation of the Mind is a Remedy, and the uſe of thin ſmal Wine. If the Feaver was cauſed by watching, let the Patient ſleep by application of things convenient: If by faſting, let the Patient Eat cooling Meats of good Juyce: If by over Eating or Drinking, let the Patient abſtain from Meat and Drink, not omitting ſuch things as ſtrengthen the Stomach, both inwardly given, and outwardly applied: alſo with an Emollient and Laxative Clyſter, part of the Crudities is to be taken away. If Putrifaction be feared, a Vomit may be procured, or a Purge given. If the Feaver ariſe of Obſtructions, we muſt conſider whether the Patient be Plethorick or Cacochymical, viz. Whether the whole Maſs of blood be over great, or only ſome bad Humors abound in the blood. If the Patient be too full of blood, letting-blood muſt be adviſed; if evil Humors only abound, a Purge muſt be preſcribed. And if the Obſtruction will not eaſily be removed, this Feaver changeth into ſome of the other ſorts of Feavers, whoſe Cures ſhall be deſcribed in their proper places.

Chap. 2. *Of the Feaver* Synochus Simplex.

CAUSES.] THe Causes of the Feaver *Ephemera* aforesaid, if they light upon a Plethorick Body, and thick Skinned, they cause the Feaver *Synochus simplex.* Yet may this Feaver arise only from abundance of Blood stuffing the Veins, and yielding many Vapors more than can breath through the pores of the Skin.

DIAGNOSTICK.] This Feaver is known by a thick and swelling habit of Body, the colour of the Body and Face is ruddy; the Head is pained with a stretching or distending kind of pain; the Patient is sleepy, hath a beating in the Temples, is unquiet, hath a straitness in the Chest with difficulty of breathing; the Pulse is great, even, frequent, ful; the Veins strut with blood, whence a stretching kind of wearinesss doth proceed; the Urine is thick, little differing in colour from a Natural Urine, only somewhat redder; the heat is to ones hand mild, tempered with a steamy Vapor; the Feaver holds an even progress, for either it holds one and the same tenor, or it lessens by degrees, or it encreaseth equally, never remitting or ceasing. Whence there are reckoned three Differences of this Feaver: For that which continually encreaseth, is called *Epacmastica*; That which continually decreaseth, is called *Paracmastica*; That which keeps one and the same tenor, is called *Homotenos*, or *Acmastica.* It lasts till the fourth day, and sometimes till the seventh; and then it is terminated by bleeding, or sweating; and if it be further prolonged, it degenerates into *Synochus Putrida.*

CURE.] The Cure of this Feaver is performed, by blood-letting, by cooling, and by opening the pores of the Skin. *Galen* in the ninth Book of his Method, Chap. 4. Cures this Feaver by two Remedies only; viz. Letting of Blood till the Patient faint away; and by giving a great quantity of Water to the Patient to drink.

Blood-letting is absolutely necessary in this Disease, because it is bred by fulness of blood; and a Vein must presently be opened at what hour soever the Physitian is called, unless the Patients Stomach be full of Meat, the digestion whereof must be expected for certain hours. And although blood must be plentifully drawn, and *Galen* reports in the fore-cited place, That he cured the most of such as had this Feaver, suddenly, by letting them bleed till they fainted away; which bleeding was attended by a loosness, vomiting of Choller, and plentiful Sweat. Yet in these daies of ours, that same large blood-letting is out of date; which is not without danger, seeing *Galen* himself relates in his Book of Curing by Phlebotomy, Chap. 12. That it befell three Physitians, while they were practising this large Blood-letting that instead of fainting away, their Patients died out-right. It is better therefore at several times to take away so much blood, as the Nature of the Disease doth necessarily require.

Before blood-letting, if the Patient be Costive, or the Guts abound with Crudities, an Emollient and Laxative Clyster must be given.

As for the point of cold Water, *Galen* orders it to be given in so great quantity, that the Patient grow pale, tremble, and be cold all over; and so he saies, it extinguisheth the fiery heat, it strengthens the solid parts, and drives out unprofitable Humors by stool, by Urine, and by sweat. But he saies there must be many Cautions in the use thereof; viz. That it be given in the Vigor of the Feaver, the signs of Concoction appearing; that the Patient have been used to drink cold Water in time of health, have strong bowels, and full of Juyce, a fleshy and well-set Body; have a constant and vigorous strength, be not full of thick and clammy Humors, have no Tumors in any Bowel, nor Stomach, Throat, or Sinews weak. Otherwise if these conditions be wanting, it is to be feared least the Patient fal into shortness of breath, Dropsie, Trembling, Convulsion, Lethargy, or some other grievous Disease.

This kind. of Medicine is likewise grown out of date in our times, seeing it is hard to observe all those conditions, and so many dangers as attend the undue use thereof. For it is better to use other more safe Medicines which cool the whole Body, and the Blood; as Juleps, and opening Emulsions, Epithems, Liniments, and a Diet altogether cooling. Juleps are made of the Decoction of Barley, or Sorrel, or Cichory; or with Water of Cichory, Endive, Sorrel, Lettuce, adding Syrup of Juyce of Cichory, Lemons, Pomegranates, Vinegar, &c. Whereunto also for the greater cooling and opening, may be added some drops of Vitriol, or Sulphur. If the distilled Waters seem too crude or raw, let them boyl with a little Species Triasantalon, or Diamargaritum frigidum.

Emulsions may be made after this manner:

Take sweet Almonds blanched and steeped in Rose Water, one ounce: the four greater cold seeds, and seeds of white Poppy, of each two drams. Beat them in a Marble Mortar, powring on by little and little, a pint and an half of Barley Water. In the strained Liquor dissolve Sugar of Roses three ounces. Make an Emulsion of Almond Milk for three Doses. Which will be convenient, and is to be perferred before Juleps, if there be want of Rest.

Epithems

Epithems to be laid upon the Region of the Heart and Liver may be thus made:

Take *Water of Roſes, Bugloſs, and Lettuce, of each three ounces: Vinegar of Roſes one ounce: Powder of the Electuary Diamargaritum frigidum one dram and an half: Camphire ſix grains. Make an Epithem, lay it upon the Region of the Heart.*

Take *Water of Endive, Cichory, Sorrel, of each four ounces: Vinegar of Roſes an ounce and an half: the three Sanders two drams and an half. Make an Epithem for the Region of the Liver.*

A cooling Oyntment may be anointed upon the Liver and Loyns, of Vinegar of Roſes, *Unguentum Roſatum*, *Unguentum Refrigerans Galeni*, or *Ceratum Santalinum* waſhed in Vinegar, tempered with water.

If the Diſeaſe ſeem to lengthen, after bleeding we muſt purge, leſt the wheyiſh and Chollerick Excrements putrifie, and thereby a putrid Feaver ariſe. But we muſt uſe ſuch Medicines as purge without heating and agitation of Humors, as Caſſia, Manna, Syrup of Roſes, Tamarinds, Catholicon, and ſuch like.

Add hereunto a convenient Diet, viz. cooling, moiſtening, and thin, of Broths made with cooling Herbs, Prunes, ſharp Apples boyled, and Panadaes.

Let the Patients Drink be a Decoction of Barley Water boyled, and water with Bread boyled in it, or mixed with Syrups of Maiden-hair, or of Pomegranates.

Chap. 3 *Of an Hectick Feaver.*

AN Hectick Feaver occupies the ſolid Parts of the Body, which conſtitute the Habit thereof, and are commonly called Spermatical, or fleſhy; in regard of which parts it is more fixed and rooted than other Feavers which are in the Spirits or Humors. For which cauſe it is alſo termed Habitual, becauſe it is become Habitual, and can hardly be removed from its ſubject.

There are many Diviſions of this Feaver. For firſt of all, there is a Primary Hectick, which begins of it ſelf; and another Secondary, which follows other Feavers. Secondly, an Hectick Feaver is ſimple and ſolitary, or joyned with a putrid Feaver. Thirdly, ſome Hecticks begin at the Heart; others from other parts, as the Lungs, Liver, Spleen, Kidneys, Womb, and other Parts inflamed, ulcerated, corrupted, or poſſeſſed with ſome other grievous Diſeaſe. And this Feaver though it have its habitual ſeat in the Heart, and the whole Body; yet is it commonly termed Symptomatical, becauſe of its firſt Original which it hath from other parts.

Galen makes three degrees of an Hectick Feaver. The firſt is the very beginning of an Hectick, in which the Body is hardly extenuated; yet the moſt Humidity of the Body is inflamed, conſumes, and dries. The Second comprehends the Augment, and therein is an evident extenuation of the Body, the fleſhy and fat ſubſtance of the Body periſhing. The Third contains the ſtate of the Diſeaſe, and its laſt age; for it never comes to a declination, becauſe therein, viz. in that degree it is incurable: for then the fibrous and membranous ſubſtance of the Body is conſumed, and the whole Body is ſo extenuated, that the Face of the Patient is like that deſcribed by *Hypocrates*, nothing but Skin and Bone. This laſt degree is called *Maraſmus*, or rather *Hectica Maraſmodes*; becauſe in a true *Maraſmus*, cold is joyned with dryneſs.

CAUSES.] The Cauſes of an Hectick Feaver are divided into an Internal, and External. To the External are referred, what ever Cauſes may occaſion any of the other Feavers, if the Action of Heating be continual and vehement, or the Patients Body be apt to entertain this kind of Feaver, Such are, the heat of the Sun, or of the Fire, vehement exerciſe, Meats and Drinks that are heating, immoderate Evacuations, as in a looſneſs and Bloody-flux, vehement paſſions of Mind; and finally, faſting in a Chollerick Body that is hot and dry of Conſtitution; ſeeing *Galen* affirms, that thoſe Phyſicians that were wont to enjoyn their Patients to faſt three days together, did bring Chollerick Conſtitutions by that means into burning and Hectick Feavers.

The Internal Cauſes are, burning and Peſtilential Feavers, which do ſpeedily conſume the moiſture of the Heart; alſo a long ſlack Feaver. Alſo ſome peculiar Diſeaſe of any of the bowels, as an Inflammation or Ulcer; or putrifaction of ſome Humor contained therein; or finally, the corruption of the Member it ſelf, which are wont to cauſe a lingring Feaver, and an Hectick.

Of theſe infirmities peculiarly poſſeſſing ſome certain Members of the Body, and cauſing an Hectick we have Examples manifeſt enough. For, as for what concerns Inflammations, *Galen* ſaith he ſaw a woman that by reaſon of an Inflammation in her Midrif, fell into an Hectick Feaver. And we dayly obſerve in the Conſumption of the Lungs, or *Phthiſis*, a complicated Hectick Feaver. The putrifaction or Humors contained in ſome bowel, fals out in great obſtructions, or cold ſwellings, The Corruption of ſome Member is often ſeen in the Lungs; ſometimes in the Liver, in ſuch men as are given to Wine, and who uſe much hot Spices; for a certain filthy corrupt blood is bred in

their Liver, by which the substance thereof is corrupted. *Fernelius* says, he sometimes met with this kind of Feaver, and that it is a sign thereof, when the Patients extreamly covet Wine; but abominate all kind of Flesh.

DIAGNOSTICK.] A Simple Hectick Feaver is known, because it is continual, without any fits always a like, neither encreasing nor decreasing, save that it is somwhat augmented, an hour two or three after Meat. The heat under the short Ribs, is at first laying on the hand mild, afterward sharp, biting and dry. The Pulse, is little, frequent and quick; the sick perceive not any Feaver, they are lazy, and loath to stir, and when they stir it is with pain, because their strength is in a languishing condition. Their Arteries are hotter than the Parts circumjacent, which may be perceived by the touch after the Patient hath washed in cold Water. The Urine is like that of one in health both in point of color and sediment. In the progress of the Disease Oyly substance Swims on the top, and the sediment is like to Meal, which is a sign that the substance of the Body doth melt.

More particularly, we may know not only the several degrees of an Hectick, but foresee it before it comes after this manner.

An Hectick Feaver at hand, is known, if the causes have preceded; viz. If there have been a burning Feaver, in a body naturally hot, dry, and of a thin contexture, in an hot season of weather, it is to be feared, the Patient will fall into an Hectick, and such remedies as may prevent the same are to be used.

The first degree of an Hectick Feaver if it be Joyned with a putrid Feaver, is very hardly known: if it be alone, not very easily. In the first day, there are all the signs of *Febris Ephemera*. In the second, the dryness is augmented, not the heat. On the third day it repeats not, it is not evidently augmented nor diminished. And at length one hour or two after Meat, the heat seems somwhat encreased.

In the second degree, the Patient perceives no Feaverishness, only some alterations after meals. There is a manifest dryness, a smaller and swifter Pulse, with a certain hardness.

The signs of the third degree are most manifest; the eyes are hollow, dry and have dry Excrements in them, the bones evidently stick out, the lively color of the Face is extinguished: the whole Skin is dry, the Midrif vehemently contracted, so that the Patients seem to have no Guts. Their Pulse is perceived under the stomach, in all extenuated persons.

And because a putrid Feaver is many times coupled with an Hectick, they are both exactly to be distinguished, because it is of great moment in regard of the Cure, which in this case is very much differing. Now this coupling may be known by Comparing the signs of an Hectick propounded, with the signs of a putrid Feaver, which shall be hereafter described in their proper place.

PROGNOSTICK.] The first degree of an Hectick Feaver is easily Cured, the third is incurable; the second is of a middle Nature, and look how much the nearer it approaches to the first or third by so much is it easier or harder to be Cured. An Hectick Feaver happens most commonly from the eighteenth yeer to the thirty fifth, for in that Age the heat is most intense, and soonest consumes the Body. But they who before this Age or a little after are taken with an Hectick Feaver, do more easily escape and are sometimes cured perfectly; or by a palliative Cure their life is protracted a long time, especially if they be Women.

CURE.] For the Cure of this Disease, we must first consider whether it depend upon any Disease of some particular part or not: for then the Cure must be directed to that Disease: as also if it be single or combined or complicated with a putrid Feaver. And in this case the putrid Feaver is first to be Cured by bleeding, Purging, and by opening Medicaments and such as hinder putrifaction: the Hectick Feaver in the mean while not being neglected. But if the Hectick Feaver be single and alone the cure must be effected only with cooling, moistening and restorative things: the manner of which must be taken from Diet and Medicine.

Diet here, as in all Chronick Diseases, can do much; Nay in this Disease it can do more than all Medicines. Therefore the Patients Diet must be by the Physitian exactly ordered, viz. That it may be directed so as to cool and moisten the whole Body. If therefore the Air where the Patient is, be moderately cold or temperate, let him use the same; if not, let it be corrected, so as that it may incline to cold and moist. For this Reason *Galen* in the 10. of his Method Chap. 8. in the Summer when the Air is hot, orders the sick to abide in a Room under the Ground, that is very cold and blown through with the Wind, open towards the North. By which Remedy alone, we have seen a man extreamly consumed, restored within a moneth. Again the heat of the Air in the Patients Chamber must be altered, by cold Water being powred out of one Vessel into another, by the very noise whereof Sleep is caused; also by moistening the Pavement often with cold Water Sprinkled thereupon, or by cooling Hearbs, oftentimes fresh strowed therein: and by forbidding any number of people to come in, which among other things, doth likewise heat the Chamber. And *Galen* gives order that when the Air is coldest it should be received by the sick, Namely, by drawing it in by the mouth, because it exceedingly cools the heat of the Heart; but it is not good for the Body of the sick, least it stop the pores of the Skin and hinder the breathing forth of Excrements.

Excrements. But *Galen* affirms that the breathing in of the cool Air doth the Patients more good, than they can receive hurt, by the ſtopping of their pores, if that ſhould happen: but that may be hindered by warm cloathing of the Body. Yet it is to be obſerved, that if the Hectick Feaver ariſe from an Ulcer in the Lungs; that the cold Air is not good in that reſpect, but rather temperate, a little inclining to heat, and dry. For which Cauſe *Galen* ſent thoſe that had Conſumptions of their Lungs to the Mount Tabias where the Air was more dry than ordinary.

The Meats of the Patient muſt be cooling and moiſtening and quickly nouriſhing, as Chicken-Broths and Broths of Hens, Capons, Veal, Kid, Wether Mutton; Yelks of Eggs, with French Barley, Lettuce, Purſlane, Endive, Borrage, Sorrel; The fleſh of Calves, Kids, Pigs, Pheaſants, Partriches, Young Hares and ſuch like. Panadaes, Barly Cream, Water-Gruel, Rice-Pottage, with Sugar and a few Almonds, or rather with the greater cooling Seeds. Boyled Meats are fitter than Roaſted which are ſooner Inflamed and turned to Choller; the boyled do more moiſten. But if the Patient be more diligent with Roaſt-Meats; they muſt be very moderately Roaſted, and tempered afterwards with Juyce of Lemmons, Citrons, Oranges, or of unripe Grapes, without Salt.

Fiſhes may be Eaten, becauſe they cool and moiſten, but ſuch as are taken out of ſtony places are to be preferred, and ſuch as have a tender friable fleſh, haunting the Sea or Pure Waters.

Among fruits, Apples are commended becauſe they breed cold Blood. Alſo Pears are convenient, Damask Prunes, and French Prunes boyled in Sugar; alſo Raiſins cleanſed, which being prepared after this following manner, do nouriſh the Body without heating.

Take *Raiſins of the Sun cleanſed one pound: Let them be tempered in Endive, Bugloſs and Roſe-Water, and very diligently waſhed, that the Laxative power may be taken away. Afterward let them be lightly boyled in the ſame Waters, adding a little Sugar, wherewith let them be preſerved for uſe: let the Patients take of them in the mornings and always after Meat.*

And becauſe Perſons that are Hectical, have the Feaveriſh heat fixed in the ſolid Parts of their Bodies, by which the Nutriment is eaſily and ſuddainly conſumed and diſſipated; therefore Practitioners are wont to preſcribe unto them, Meats ſolid and of a clammy ſubſtance, as the Feet of Living Creatures. The fleſh of Snails, Crabs, Tortoiſes, and of Frogs. For ſeeing their ſorts of fleſh are moiſt and clammy they eaſily adhere unto ſuch Parts of the Body as want nouriſhment neither are they eaſily conſumed by the Feaveriſh heat: and ſo they hinder the drying up of the ſolid Parts of the Body. Yet ſome do reject theſe Meats, becauſe hard of digeſtion and troubleſome to the Stomach. But this difference is thus reconciled, In the beginning of an Hectick, while the digeſtive faculty is yet ſtrong, theſe thick and clammy nutriments are convenient: but in a confirmed Hectick they are not to be given becauſe hard to digeſt. Add hereunto, that they may be ſo prepared and qualified, as that they may eaſily be digeſted; as by being boyled to a Jelly, or giving only what is ſtrained out of them being beaten into a maſh. Among other things the land Tortoiſes are mightily praiſed for an Hectick, not only for a ſingle Hectick, but when Joyned with a Conſumption; and they are prepared divers ways. For either they are boyled in Water till they are diſſolved then caſting away the ſhels, the fleſh is ſeparated from the bones and boyled again with Cichory, Sorrel, Borrage, French barley, and Prunes in a ſingle Hectick: but in an Hectick of the Lungs it is Boyled with Bramble Leaves, Purſlane, and Plantane. Let the Patient drink the broth and eat the fleſh twenty days together. Or the juyce is preſſed out of the Fleſh being beaten. Or little Loaves are made of the Fleſh of the Tortoiſes boyled in Barley Water, with ſweet Almonds, Pine Kernels, the cooling Seeds and Sugar. Which are lightly baked in an Oven and are given the Patient at Dinner and Supper. They may be thus made.

Take *of the Fleſh of Land-Tortoiſes Boyled in Barley-Water four ounces: ſweet Almonds ſteeped in Roſe-water ſix ounces: Pine-Kernels ſo ſteeped two ounces, of the four greater cold Seeds, of each one ounce: Annis Seed not Poudered, but lightly baked in an Oven one dram and an half: Cinnamon two drams: Sugar diſſolved in Roſe-water, to the quantity of all the reſt. Make thereof little Morſels.*

Inſtead of Tortoiſes the Fleſh of a Capon is uſed and of a Partridg, and March-Pane is made thereof, good to reſtore Hectick Perſons, after this manner.

Take *Pulp of a Capon and Boyled Partridg of each three ounces, ſweet Almonds ſteeped in Roſe Water four ounces: Pine-Kernels one ounce and an half: Seeds of white Poppy two drams: Gum Arabick and Tragacanth of each one dram and an half: Pearled Sugar Cakes two ounces: with a little Roſe-water make a March-pane, and gild it with Gold.*

To ſuch as have weak Stomachs, Jellies, broths, and reſtorative ſtilled Waters are given. A Jelly may be made after this manner.

Take *a choiſe Capon, a Knuckle of Veal, or a Wethers Thigh, two Calves Feet, or ſix Wethers Feet. Boyl all in Fountain Water, till it be ſufficiently waſted. Strain and ſqueeſe out the Juyce and Broth and take off the Fat. In the ſtrained Liquor diſſolve a pound of white Sugar, ſix whites of Eggs, a little Saffron or Cinnamon. Stir them together, let them Boyl lightly, and*

ſtrain

strain them through an Hippocras bag twice or thrice. At length put it into Porrengers, or other Vessels in which it will become a Jelly. If the taste of Saffron or Cinnamon be displeasing, or you desire to have your Jelly more cooling, add instead thereof the Juyce of a Lemmon, or of one Citron.

Restorative Broths may be made divers ways; this is far the best of all, which follows:

Take *a well fleshed Capon; pul, draw, and cut him in pieces, and take away the Fat and Skin: add, if you please, some Veal, or Weather Mutton cut into bits, and freed from the Fat. Put them into a stone Vessel well glazed; in which, about the middle, there must be a grate of Wood, or other materials, on which the pieces aforesaid must be so layed that they may not come at the bottom. Then cover the Pipkin with its cover, and close it up well with paste, and let it stand boyling in* Balneo Mariæ *five hours. There will drop into the bottom a cleer transparent liquor; of which three or four spoonfuls may be given in Broth, or by it self, three or four times in a day.*

Such distillations of Flesh by Descent are very convenient for Hectical Persons; but those that are made by Ascent, although they refresh the Spirits, yet do they very little nourish; neither do they restore the solid substance of the Body.

Let the Patients Drink be Barley Water, either by it self, or with Syrup of Vinegar, or Pomegranates mingled therewith, or Water in which a piece of Bread hath been boyled, sweetned with a little Sugar. But if the Patients Stomach be very weak, Wine well allaied with Water may be allowed, which helps the concoction and distribution of Nourishment. *Galen*, Meth. 10. ch. 5. 6. gives cold Water, with which he boasts he had saved many from the Marasmus. Howbeit, great Caution is to be used in the giving thereof; for when the body is very much pined away, it is to be feared lest the small heat of the Patient should be wholly extinguished. And therefore it is only good when an Hectick is feared, or in the beginning thereof, and to such as are accustomed thereunto, and while the Body is yet sufficiently full of blood.

Motion of the Body is not good, but the Patient must be enjoyned to rest; howbeit before Meat, if strength will bear it, some light exercise will be good; or instead thereof, a few light frictions or rubbings may serve turn, especially presently after sleep, beginning at the inferior parts of the Body; for they provoke the Humors outward. And the Patient must be rubbed no longer than till a light redness begin to appear upon the Skin; for to rub longer would dry the Body. Carnal Embracements must be above all things avoided, which do very much consume the substance of the Body.

Let the Patient sleep, neither very long, nor very little. For long sleep encreaseth the heat of the Bowels, by the retiring of the Natural warmth inwards: too short sleep dries the body more. But there is less inconvenience from sleeping a little over largely, than too scantily, because sleep doth exceedingly moisten, which in this Feaver is very much to be desired. Let the Patient sleep in a soft bed, and that a Flock-bed, not a Feather-bed, and large enough. Let the Patients Linnen be often changed, which must be sprinkled with Rose-water before they be put on.

If there be Costiveness, the Belly must be provoked with a Suppository, or a Clyster of Chicken Broth, with Barley, Mallows, and Violet Leaves boyled in it; adding Cassia, Honey of Roses, Butter, and the Yelks of Eggs.

Finally, The Mind must be preserved in peace and cheerfulness, avoiding vehement Perturbations, as Anger, Sadness, Fear.

As for point of Medicaments fit for Hectick Persons, they are Internal or External. Among Internal, in the first place Purgers must be considered; and because addition is more necessary than detraction in this Disease, Purgers can hardly be convenient, unless a putrid Feaver be joyned with the Hectick. Yet if the first Region of the body seem filled with Excrements, because of Crudities arising from a weak Stomach, Purgation may safely be used with Cassia, Manna, or Syrup of Roses. Nay verily, if strength be not deficient, the Infusion of Rhubarb may be given, with a Decoction of Prunes, Tamarinds, Myrobalans, Bugloss and Violets.

But Altering Medicines may be reduced into the form of Juleps, broths, and Emulsions, after this manner:

Take *Waters of Endive, Lettuce, Sorrel, of each four ounces: Syrup of Violets, Water Lillies, Apples, of each one ounce. Mix all into a Julep for three Doses, to be taken at several times in one day and to be continued for divers days together.* Or,

Take *whole Barley one pugil: Leaves of Endive, Cichory, Lettuce, Pimpernel, of each one handful: Flowers of Borrage, Bugloss, Violets, and Water-Lillies, of each one one pugil: Damask Prunes three pair: Boyl all to a pint and an half. In the strained Liquor, dissolve simple Syrup of Cichory, and of Water-Lillies, of each two ounces. Make of all a Julep for four Doses.*

Of the same Simples with a Chicken or a Pullet, may be made a broth for the same use. Or,

Take *Roots of China one dram and an half: Entire Barley two pugils: the four greater cold Seeds half an ounce. Beat all together, and therewith fill the Belly of a Capon, or young Pullet, and make Broth; to which add Sugar of Roses half an ounce. Let the Patient take of this broth a long time together. It restores flesh and fattens.*

Take

Take ſweet Almonds blanched and infuſed in cold Water one ounce: the four greater cold Seeds, and of white Poppy ſeeds, of each one dram. Beat all together in a marble mortar, powring on by little and little a pint of Barley Water. In the ſtrained Liquor diſſolve Sugar Cakes made with Pearl four ounces: Make hereof an Almond Milk for three Doſes.

If we be minded more powerfully to cool, we muſt add to every Doſe of the Julep or Emulſion, two ſcruples or one dram of Sal prunellæ.

In the uſe of Refrigerating things, this is to be obſerved, That we uſe not the more powerfull all of a ſudden, or frequently; for they might extinguiſh a weak heat. But it is better to cool by little and little, than ſuddenly. And moiſteners are alwaies ſafer than Coolers, becauſe they exerciſe their Operations ſlowly.

While the aforeſaid Remedies are uſing, we muſt be careful to ſtrengthen the Bowels, by a convenient Opiate, which may be made after this manner:

Take Conſerve of the flowers of Borrage, Bugloſs, and Violets, of each one ounce: Conſerve of the flowers of Water-lilly half an ounce: Pouder of the Electuary Diamargaritum frigidum *four ſcruples: Shavings of Ivory, Bones found in hearts of Stags, of each half a dram: Pearls prepared, and Coral prepared, of each one ſcruple: three Leaves of Beaten Gold: With Syrup of Apples, make of all an Electuary.*

In extream Conſumption of the Fleſh, nouriſhing Clyſters are frequently to be injected, of the Broth of a Chicken, or Weathers Head, with Sugar and the Yelks of Eggs. But their Quantity muſt be ſmall; or elſe compreſſing the Guts, they will provoke the expulſive Faculty to drive them out.

But among other Medicines moſt convenient for Hectical Perſons, Milk is a principal one, it being endued with all the qualities which can be deſired in this Diſeaſe, Namely, of cooling and moiſtening; it nouriſheth much, and is eaſily diſtributed into all parts of the Body. In the uſe whereof, the ſame Cautions muſt be obſerved, which are ſet down in the Cure of a Conſumption.

Among external Remedies, a Bath of freſh Water is principal, for it powerfully cools and moiſtens, and relaxeth the external Parts that they may more readily receive Nouriſhment. Among the Ancients the uſe of Baths was moſt frequent, and there were four parts of the bathing place: In the firſt ſomewhat warm, they put off their Cloaths: In the ſecond there was a bathing Veſſel of hot Water: In the third a bathing Veſſel of cold Water: In the fourth the Sweatineſs and Moiſture was dried off. *Galen* in 10. Meth. Chap. 19. doth thus moderate the uſe of theſe parts of the Bath; That the Patients ſhould be brought into the firſt part of the Bath, which was heated with the vapor of the Bath, that the pores of their Bodies might be opened; then being anointed with freſh ſweet Oyl, they were to be plunged in the hot Water to moiſten their Bodies; and then they were of a ſudden to be thrown into the cold Water, quickly to be taken out again, and to be dried and anointed with Oyl, that the pores being cloſed, the moiſture received from the hot Bath, might be retained. But inaſmuch as the Induſtrious Diligence of the Ancients in the uſe of bathing, is long ſince out of uſe; our Practitioners have likewiſe left this Method of bathing Hectical perſons, which they judg unſafe, ſeeing it is to be feared, leſt by the ſudden receiving of the cold Water, the Patients Body ſhould be hurt, and the Patient not be able to endure the ſudden ſence of contrary qualities. So that our Practitioners do more adviſedly, and more compendiouſly, whiles they convey the Patients into a bath of Water moderately hot in the morning, after a ſtool procured by Nature, or by Art, and two or three hours after they have eaten ſome Broth, or Milk, or the Yelks of Eggs; wherein they abide ſo long, till it grow luke-warm of it ſelf, and at laſt cold. For ſeeing *Galen* conceives the uſe of a cold bath after an hot to be ſo neceſſary, that without it the hot bath doth no good: the uſe of a cold bath is ſupplied, if the Patients ſtay ſo long in the bath till of it ſelf it grow luke-warm, and cold. But this Caution is to be obſerved, That whereas a three-fold quality may be had in the ſame bath, the Patient muſt abide in the hot a little while, in the luke-warm longer, in the cold leaſt of all.

And although the Ancients were wont to make their baths of ſimple Water; yet is it good to make them more moiſtening by boyling therein Emollient and moiſtening Herbs, as Mallows, Marſh-mallows, Violet Leaves, &c. or with barley and beaten Almonds, eſpecially in the Summer, becauſe a bath of Decoction of Herbs is ſooner corrupted. After bathing, the ſick is ſoftly to be wiped with hot Cloaths: than to be anointed with Oyl of Violets, ſweet Almonds, with freſh Butter; and after ſome time of reſt, let the Patient eat ſome broth, or other food.

A Bath of Water and Oyl is exceedingly cried up by *Zacutus Luſitanus*, in the 35. Obſervation of his third Book of wonderful Cures; wherewith he ſaies a yong woman was Cured, whom a bath of ſimple Water and Goats Milk could not help. The reaſon of which great good, he renders to be this; Becauſe a bath made of freſh Water, with ſtore of Oyl in it, doth ſoften the diſtended ſtiff parts, doth moiſten the dry and withered; and by opening the pores obſtructed, and through dryneſs contracted, it draws the Nouriſhment to the outmoſt, and moſt diſtant parts of the body.

When

When the Patient cannot use baths, apply an Epithem to the Heart and Liver, in this manner compounded.

Take Waters of Roses, Water-lillies, and Purslain, of each three ounces : Juyce of Pome-Granates an ounce : Pouder of Diamargaritum frigidum *two drams : Bones out of the Stags Heart one scruple : Camphire four grains : Make an Epithem for the Heart.*

Take Waters of Endive, Lettuce, Cichory, of each three ounces : Vinegar of Roses one ounce : the three Sanders, of each two scruples : Burnt Ivory one scruple. Make an Epithem to be applied to the Liver.

Also the Region of the Liver may be anointed with Oyntment of Roses, or *Ceratum Santalinum*. But Oyls and Unguents, must be sparingly used, because they may sometimes encrease the Feaver.

Among the Symptomes which are wont to come upon this Disease, the chief is a Loosness, which is wont to bring the Patients to their death. This is to be bridled with a Decoction of French-barley toasted, for their ordinary drink, Syrup of Quinces, dried Roses, Chalybeat Milk, Rice boyled in Milk, and such like.

SECT. II.

Of Putrid Feavers.

The PREFACE.

Putrid Feavers are divided into Continual, or intermitting. The continual Putrid Feavers are generated when a putrid Vapor, or a preternatural heat, which ariseth from putrified Humors, doth perpetually afflict the Heart, and stirs up therein a continual heat; from whence likewise is perpetually diffused a Feaverish heat into the whole Body. But the intermitting Feavers are caused, when the said Vapors are carried unto the Heart, only at certain distances of time. Continual Feavers are again divided into Essential, and Primary, or Symptomatical. Those are called Essential and Primary, which spring from a putrifaction inflamed in the common Veins and not in any particular part of the Body. Those are Symptomatical that arise from the putrifaction or suppuration of some particular part inflamed; out of which part by communion of the Vessels, a putrid vapor may continually be carried unto the Heart: Such Feavers are seen in the Pleurisie, Inflammation of the Lungs, Inflammation of the Liver, and in the Inflammation of other internal Parts. Again, the Primary continual Feavers are two-fold; for some are without any Exacerbation or Fits, and remission, but continue alike from the beginning to the end, and are called Sunoch, *or* Continentes. *But others have manifest Exacerbations or fits, and remissions, and are called* Sunecheis, *or* Continuæ, *by the name of the kind. And these again from the difference of their Exacerbations or fits and remissions, are divided into three sorts. For some are called continual Tertians, which have their Exacerbations or fits every third day; others continual Quotidians that are exasperated every day; others continual Quartans, that are exasperated every fourth day. The intermitting Feavers or Agues, are likewise divided into Tertians, Quotidians, and Quartans, according as their Fits are wont to return every third, every fourth, or every day. There are other Differences of Feavers likewise, which are either Accidental, or arise from the Composition of those aforesaid; all which we shall Particularly and briefly Explain.*

Chap. I. *Of continual Putrid Feavers.*

ALthough there are divers sorts of a continual putrid Feaver, yet have I determined to describe the Cure of them all together, because in a manner the same Remedies are suitable to all, of which some differ only in more or less, and are accordingly to be varied : which depends more upon the Judgment of a Physitian, and his Dexterity attained by Practice, than upon particular Precepts. Yet shall I as near as I can, observe what is peculiar to every sort of Feaver, in its peculiar place.

DIFFERENCE, and *CAUSES.*]

Feavers Putrid, Continual, and Primary, or Essential, are wont to be bred of the putrifaction of Humors, which are contained in the Veins and greater Arteries : And according to the various Nature of putrifying Humors, several Species do arise.

Synochus

Synochus Putrida is distinguished with no fits or excerbations, but its whole time is taken up as it were with one fit, which reaches from the beginning to the end of the Disease, and of this as of a simple Feaver there are made three differences. The first whereof is, that which continues all alike, during from the beginning to the end. The second is, that which encreases by degrees. The third is, that which decreases by little and little. The first is named *Acmastica* or *Homotonos*, and happens when in the whole course of the Disease, the manner of putrifaction is one and the same. The second is called *Epacmastica*, when more putrifies than is dissipated. The third is called *Paracmastica*, when less putrifies than is dissipated. Yet although these kind of Feavers do perpetually increase or decrease, or keep the same Tenor: yet doth not this hinder, but that they have four times, if they determinate in health; but some have them longer, others shorter, if they be considered according to the vehemency of the *Symptomes*. So that which is called *Homotonos*, hath a very brief beginning and Augmentation, but a long state. The Epacmastick hath a long augment; the Paracmastick a long declination, but the other times do quickly pass away. Yet we must know, that the times of putrid Feavers are two waies considered; either with respect to the Symptoms, or with respect of coction and crudity, which two in other Feavers do commonly coincide or happen at one and the same time: But in these continent Feavers called *Synochoi*, it is not so. For their times ought not so much to be defined by the increase and decrease of the Symptomes, as by the signs of Concoction or non-concoction which appear chiefly in the Urines.

Now *Galen* propounds two sorts of this continent Feaver called *Synochus*: one springing from Blood putrifying, of which he treats in the second of this Method, Chap. 7. and 9. as also in the 9. of his Method, Chap. 3. and 5. another arising of Choller putrifying in the greater Vessels of the kind of burning Feavers, which he explains in his second of the Differences of Feavers, and the second of Crises, Chap. 6. The first is called *Synochus Sanguinea*; and the other *Synochus Biliosa*. For although the whole mass of Humors contained in the Veins do go under the name of Blood, yet do we acknowledge four Parts thereof, which the more temperate is specially called Blood; the hotter part Choller, the rawer and colder Flegm; and the thicker and more dreggy Melancholy. So then, if that more temperate Part, which is more especially called Blood, do surmount the rest in quantity, and the whole mass putrifie, that Feaver is caused which we term *Synochus Sanguinea*. But if the thinner and hotter part of the Blood, which is of the nature of yellow Choller do exceed the rest, and putrifie, that Feaver is caused, which we term *Synochus Biliosa*.

Syncchus Putrida is ingendred by the same causes which are wont to produce the simple *Synochus*. And so not only the shutting the pores of the Skin, but the Obstruction of the Vessels also, by reason of much Blood, and thick and clammy Humors is wont to cause this Feaver. For seeing by such like Obstructions, the Transpiration of Fuliginous Vapors is hindered, putrifaction is bred in the Blood redounding within the Veins.

A continual Tertian, which every third day doth more afflict the Patient than ordinary, takes its Rise from bad and Cholerick Blood putrifying in the *Vena Cava*. And the Causes thereof are all such things as multiply this Humor in the Body, as an hot and dry distemper of the Liver, Meat hot and dry, Youthful Age, Fasting, or very spare Diet; vehement and frequent Exercise, hot and dry constitution of the Air, over great Watchings, and such like.

A continual Quotidian (which the Barbarous Writers term *Latica* or lurking, because it hath a certain hidden and concealed heat) is produced by flegmatick blood putrifying within the Veins; and therefore it hath its exacerbations and fits every day. It is wont to assail flegmatick bodies, as of Infants, and Children, and old Men; as also of such as are of a fat and corpulent constitution given to idleness and cramming of Belly-chear, and inhabiting moist places. This kind of Feaver happens but seldom, because flegm is hardly putrified.

A continual Quartan, is that which is exasperated every fourth day, being caused of Melancholy Blood putrifying in the branches of *Vena Cava*. And all things may Cause this Feaver, which are apt to breed Melancholy Blood, and to Cause the same to putrifie. Howbeit this kind of Feaver is most rarely observed.

The accidental differences of Feavers are taken from their evil Symptomes, which are wont to be complicated with the Essential, and from them they are named. Among these are wont to be reckoned *Febris Ardens*, that is, the burning Feaver, *Colliquans* the *Melter* or dissolving Feaver; the shivering Feaver *Horrifica*, *Assodes* the tumbling, tossing and vomiting Feaver; *Eldoes* the sweating Feaver, *Syncopalis* the swooning Feaver, *Epiala* the Feaver which makes the Patient hot and cold at one and the same time.

Causus or *Febris Ardens*, the burning Feaver is properly that which is perpetually accompanied with these two Symptomes, *viz.* an ardent burning heat, and an unquenchable thirst though the Patient drink never so much, *Galen* 3. Epidem. Com. 3. Text 34. It is divided by the same *Galen* in Com. 4. *de Vict*: Rat: in *acutis*, Text 13. into a Legitimate or Bastard burning Feaver. The Legitimate or exquisite burning Feaver, is that which hath the two Symptomes

aforesaid, alwaies and evidently conjoyned therewith. The Bastard, in which those Symptomes are less vehement, the thirst less Urgent, and the Body not so burning. The Legitimate is caused by a Cholerick Humor putrifying within the large Vessels near the heart; the Bastard is caused by Choller mingled with Flegm, or Salt Flegm putrifying in the Vessels aforesaid. Whence it appears, that a Legitimate burning Feaver is no other but a continual Tertian Feaver, whose Matter is more sharp and plentiful than ordinary and contained in the larger Vessels which are near the Heart; whereas the Matter causing a simple continual Tertian is in Vessels Remoter from the Heart. Again there are two sorts of an exquisite burning Feaver, the one from the beginning to the end hath one only accession or fit, which we before named *Synochus Biliosa*, and it is likewise called *Synochus Ardens*; which is caused, when the Humor putrifying doth occupy all the Vessels which are most near the Heart: the other is named *Ardens Periodica*, and contains in it self divers fits or accessions, it is caused by the same Choller contained in the Vessels near the Heart, but not in all, or not so near as in *Synochus Ardens*. So that a continual Tertian, *Synochus Ardens*, and *Ardens Periodica* do differ one from another, only as the Choller causing them is more or less sharp, plentiful, and near the Heart.

Febris Colliquans; the melting Feaver is of the kind of burning Feavers, which in regard of the exceeding heat doth suddainly melt the fat Flesh and substance of the solid Parts, and sometimes the Blood contained in the Veins, and dissolve the same by insensible Transpiration, Sweats, Urines or Stools. It is wont to be caused by a thin, sharp and Cholerick Matter, which is vehemently inflamed; and *Galen* teaches, that often times there is adjoyned thereunto a malignant and pestilential quality, Comment. in 3. *Epid. Sect.* 3. *Sent.* 57.

Horrifica Febris, in Greek *Phricodes*, is that Feaver in which the Patient doth often undergo shaking fits, it is caused by a mingled Matter, *viz.* partly Cholerick and partly Flegmatick or wheyish, which being unequally moved, is wont to excite those Horrors or Shakings; either because the thin, sharp and wheyish Matter doth twitch and nip as it were the sensible and membranous parts; or the inflamed Choller doth putrifie and put in motion the crude Humors; or because Nature doth in vain seek to shake of the crude undigested Humor whereupon the Heat being driven Back to the Centre, the Extream parts of the Body are cold; and afterwards, when the same blazes out again, they grow hot.

Assodes Febris, the Feaver so called is a kind of burning Feaver, in which the sick do tumble and toss, and are exceeding unquiet, much oppressed with the Disease, being for the most Part subject to Stomach sicknesses and vomiting, because it is wont to arise from the vexation of the Stomach by sharp and Cholerick Humors, biting the Orifice or Coats thereof.

The Feaver *Eldoes*, is that in which the Patient perpetually Sweats; and it is caused by a mighty Putrifaction or Malignity of Humors, dissolving the substance of the Body.

The Feaver *Syncopalis* is that in which the Patient often Swoons and Faints away. *Avicenna* makes two sorts thereof, one of thin, sharp and venemous Choller: another of much Flegm, or abundance of crude Humors. The former is called *Synocopalis Minuta*, because it arises from a little quantity of Humor, but thin and malignant. The latter *Avicenna* doth call *Syncopalis Humorosa, vel Repletionalis*, because of the great quantity of crude and flegmatick Humors abounding therein, and there is also joyned a weakness of the mouth of the stomach, by which means especially the sick persons come to Swoon so often.

That Feaver is by *Galen* termed *Epiala*. 2. *de diff. Feb. cap.* 2. *& Lib. de inæquali intemperie, cap.* 8. in which at the same time through the whole Body in the smallest particles thereof there is felt both cold and heat. For albeit one and the same part cannot be the subject of contrary qualities: yet is that which hath been said of this Feaver to be understood of the smallest particles in respect of sense, but not indeed and in truth. *Galen* shews, that this Feaver is caused two waies; the one is by means of Glassy Flegm mingled with bitter Choller, and so diffused into the whole body. For Choller causes a sence of heat, and the Flegm a sence of cold: The other is by means of Glassy Flegm alone, but partly putrified, and partly void of putrifaction. For inasmuch as Glassy Flegm is extream cold and clammy, it doth not readily putrify, nor all at once, but onely by piecemeal; so that one portion thereof being putrified, the other remains unputrified. That part of the said flegm thereof which is not putrified, being shed among the sensitive parts, causes a sence of cold, by reason of the extream coldness thereof; and that which is putrified causes a sence of heat. And so the whole body at one and the same time feels both cold and heat. *Platerus* also hath invented away how this Feaver may be bred, *viz.* when intermitting Feavers or Agues do one fall upon the Neck of another the same day in the same Patient, so that the cold fit of the latter Ague begins ere the hot fit of the former be ended; or else when intermitting Feavers coincide with those which are continual, so that the heat of the continual Feaver, and the cold of the intermitting happen at one and the same time.

There are likewise other accidental differences of continual Feavers, which because they are wont to

to be reckoned among the Symptomatick Feavers, they ſhall be diſcuſſed forthwith in the Deſcription of the ſaid Symptomatick Feavers.

Now although the Cure of Symptomatick Feavers depend upon the Cure of thoſe Diſeaſes in particular, from whence they ariſe, yet muſt we declare their Nature, leaſt they come to be confounded with Eſſential or Primary Feavers.

Thoſe therefore are called Symptomatical Feavers, which ariſe from the Inflammation and putrifaction of Humors contained in ſome of the Bowels. Of which kind are thoſe Feavers which accompany the Pleuriſie, Inflammation of the Lungs, Frenzy, Quinzy, Inflammation of the Liver, and other Inflammations, Ulcers or Impoſtumes of the internal Parts.

And it is diligently to be obſerved, as a thing of great moment in Practice, and by few taken notice of, that all Feavers perpetually which are joyned with Inflammations of the parts of the Body, are not Symptomatical; But that ſome of them are eſſential, and the foreſaid Inflammations do follow upon them. For it often falls out, that Blood corrupted or filled with evil Humors, after it hath raiſed a Feaver, comes to be agitated by Nature, and as hurtful to her, is expelled to the weaker parts, or to ſuch as are moſt convenient to receive them: whereupon an Inflammation is cauſed in thoſe parts which doth not cauſe the Feaver, but is rather a Conſequent thereof. So we may often ſee in the Courſe of our Practice, the Patients ſick of a continual Feaver for a day or two, before Pain in the ſide and other Signs of a Pleuriſie appears. So many on the third or fourth day fall into a Phrenſie; ſo all Gouty Perſons in a manner, before they are troubled with Pain, ſwelling and Inflammation of their Joynts, are wont to have a continual Feaver for a day or two. So they which have the Roſe or Saint *Anthonie*'s Fire, have a Feaver ſometime before the ſwelling break forth. The ſame thing appears by the Urine, which in ſuch Inflammations as theſe, do ſhew manifeſt ſigns of putrifaction in the Veins. For in the beginning they appear crude and undigeſted, and in the progreſs, they ſhew tokens of concoction daily encreaſing. Alſo Blood is often taken away very corrupt: Which things would not happen if ſuch Feavers were only Symptomatical, ſimply depending upon thoſe Inflammations.

And theſe Feavers whether they be Symptomatical or primary, and attended by Inflammations of the Parts, have their accidental differences. For if the Inflammation be of Blood, the Feaver is called *Phlegmonodes*: if it be of Choller, *Typhodes*. And peculiarly an *Eryſipelas* or Cholerick Inflammation of the Stomach and Guts brings the Feavers called *Lypiria*, in which the outward Parts are very cold, and the inward Parts burn. For the inward burning doth draw the Blood and Spirits to the part inflamed; whereby the heat is ſo encreaſed, that the inward parts ſeem to be burned with unquenchable thirſt; but the outward are cold, being deſtitute of heat and ſpirit.

Lenta Febris, the ſlow or lingring Feaver is wont alſo to be reckoned amongſt Symptomatical Feavers, which ariſe from ſome hidden Obſtruction and Putrifaction, ſticking ſo cloſe to ſome Bowel, and ſo impacted, that the ſubſtance of the Bowel is for the moſt part Vitiated. And when a portion of the putrid Humor is ſhed into the Veins, and mixed with the Blood, it ſtirrs up a ſlow Feaver, and ſo mild, that it troubles the Patient with no grievous ſymptome, yea, and the Patient is ſcarce ſenſible of any Feaver. Yet ſome notes of putrifaction appear in the Pulſe and Urine: And ſometimes this *Febris Lenta* is bred of the putrifaction and corruption of ſome of the Bowels; becauſe by the Veins inſerted into that Bowel, putrid and hot Vapors do breath unto the Heart. Such a kind of Feaver is often bred in the Conſumption of the Lungs, which degenerates into an Hectick. It is alſo ſometimes cauſed, when the ſubſtance of the Liver or Spleen corrupts: or when putrifaction ſettles upon the Meſentery, the Caul or the Pancrea, or other parts; or alſo ſometimes when the Child or After-Birth are corrupted in the Womb. And hence not only ſlow Feavers, but ſometimes alſo acute ones do ariſe, according to the different Nature of the putrifactions: And finally, to this kind of ſlow Feavers thoſe are to be referred, which are found in Cachectical perſons, and in Maids which have the Green-Sickneſs; which *Fernelius* conceives do ariſe from a light putrifaction of wheyiſh flegm ſhed abroad in the Body.

Beſides theſe forenamed differences of continual Feavers, which are moſt frequent, and are commonly ſet down by Authors; there are alſo ſome other ariſing from peculiar and extraordinary Cauſes, which ſometimes we meet with in our Practiſe. The Caſe of a certain Infant may ſerve for example, propounded by *Zechius* in his 46. Counſel. The Infant was ſcarce two years old, and had a continual Feaver, with moſt greivous Symptomes, *viz.* Unquietneſs, Convulſions and continual ſtomach-ſickneſs enclining to Vomit; and it was conjectured, that there was ſome Malignity adjoyned, becauſe ſuch greivous Symptomes did not anſwer to that Feaver. For all the external Parts were cold, though the inner Parts were burned with heat, as appeared by the heat about the Breaſt, and under the ſhort Ribs, and alſo from the dryneſs and blackneſs of the Tongue. The Cauſe of which was blood putrifying contained in the ſtomach: For this Infant being tongue-tied, was lately cut by a Chirurgeon, in which work ſome Veins or other were opened, which ſhed ſome Blood into the ſtomach, which putrifying there, by ſending forth hot, putrid, and as it were Poyſonous Vapors into the Heart and Brain, was the Cauſe of all the Symptomes aforeſaid. But how this

this cause was found out and removed, it is worth the while here to recite out of the Story of *Zechius*. *So often* (quoth he) *as I diligently consider with my self, how hard a thing it is to understand internal Diseases, and their causes; I come easily to be of the mind, That* Hypocrates *in his second Book of Vulgar Diseases,* Sect. 4. *did not without greatest premeditation leave in writing; that in the Curing of all hidden Diseases, the Physician must diligently enquire the first assault of the Disease; that is to say, the first occasion of the Patients illness. For of that for the most part depends the knowledge both of the Cause and Cure. See an example hereof; This Disease of the Gentlemans Child was very acute, and the Cause very hard to find, had not I diligently asked of the Parents touching the conditions of the Child and the Nurse; who told me, that two daies before its being first ill, a certain Chirurgeon had cut the Membrane, whereby the Tongue of it was fastened to the parts beneath it. And when I again asked them, if presently after this was done, they had caused the Child to be held forward, or if any blood had come out of its mouth; they said no, it was neither so held, neither came any blood from the mouth of it. Whereupon I presently conjectured, that blood was fallen from the place cut into the Stomach, and there putrified, and was the cause of the Disease, and Symptomes aforesaid. Neither did my Opinion deceive me; for I having given it Oyl of sweet Almonds to make it vomit, it uttered a considerable quantity of clotted blood and matterish. Also it voided with a Clyster many clodders of blood. And presently, by the blessing of God Almighty, the Feaver was abated, and all Symptomes began to cease. Whereupon it fell greedily and lustily on sucking its Nurse, and all the following Night it slept quietly, and was afterward perfectly well.*

DIAGNOSTICK.] The Diagnostick Signs of putrid continual Feavers do some of them shew the continuity, others the putrifaction, and the rest the peculiar differences of them.

The continuity is easily known, in that the Feaver is continual, and hath no intermission.

The putrifaction is signified by a sharper heat than ordinary, and more biting, and by a sharp and biting Sooty vapor, produced by the exhalation of putrid Humors. The pulse is not only great and frequent, and oftentimes unequal; but it hath this peculiar property, That the Systole is quicker than the Diastole; because the Expulsion of Sooty Excrements is more necessary than refrigeration. The Urins are in the beginning crude, or very little digested: The Exacerbations or fits keep their certain times, which yet is not to be understood of the Feaver Synochus. A cold shaking fit at the beginning of the Disease: Hereunto are added various Symptomes, commonly accompanying putrid Feavers, as Illness of Stomach, Vomiting, Heaviness of the Body, Pain of the Head, Raving, Giddiness of the Head, Hiccoughs, Anxiety, Heart-burning, Thirst, Roughness and Blackness of the Tongue, stretching of the parts under the short Ribs, and the rest. Before which preceded weariness without labour, pursiness, troubled sleeps, watchings, tension of the parts under the short Ribs, difficult breathing, pain and pulsation of the Head, Stomach-sickness, want of Appetite, plenty of stinking Excrements, frequent yawning and retchings, or some of these.

But the peculiar Differences of continual putrid Feavers, may be discerned by these Signs following.

A continual putrid Feaver, called *Synochus putrida*, hath the same signs which were propounded in *Synocho simplici*, but more vehement; for the heat is more sharp, the watchings, Head-ach, thirst, disquiet, and other Symptomes are more vehement; also the pulse is unequal, so that the Systole appears greater than the Diastole, the Urines are crude, red and thick.

The Signs of a Feaver from Choller, are burning pain, a pulse mighty frequent and swift, a sharp Urine, fiery, in the beginning alwaies crude, without Sediment; Stomach-sickness, Cholerick vomitings and Stools Cholerick, much Anxiety, mighty thirst, bitterness of the mouth, dryness and blackness of the Tongue, Watching, Raving, and an ulcerous kind of weariness foregoing, paleness of Face, or a citrine Colour, youthful Age, temperature hot and dry, Summer season, hot and dry Diet, Cholerick Evacuations suppressed. And a continual Tertian is distinguished from a *Synochus biliosa*, or continent Feaver springing of Choller, because it hath Exacerbations or fits every third day, but the *Synochus biliosa* keeps still one and the same tenor.

The Signs of a continual Quotidian are, Heat at first rather vaporous than biting, afterwards somewhat sharp, but unequal, because of the thickness of the Humor which is difficultly dissolved; the Urines are at first white, watry, troubled; afterward somewhat red and thick; the Pulse is seldomer, slower, and less than in the rest of these Feavers, thirst little or none, seldom sweat, unless there be salt flegm; the Face of the Patient is somewhat bloat or blown up, Lax, Flaggy, and as it were Lead coloured; Drowzineſs, want of Appetite, Flegmatick Excretions, a cold and moist Temperament, old Age, Winter Season, Cold and Moist Diet, Evacuations suppreſt, and a daily Excretion of the Disease.

A continual Quartan is known by these Signs: The Heat is less sharp than in Feavers of Choller, yet sharper than in Feavers of Flegm; likewise Thirst greater than in a Quotidian, and lesser than in a Tertian; a Pulse in the beginning slow, Rare, Languishing; afterward stronger, frequenter, and very

very unequal. The Urine in the beginning thin, afterwards various; the Body dry and lean, of a tawny or ſwarthy colour, Temperament cold and dry, Age inclining, Autumn of the Year, or very changeable weather; a life intangled with many Cares and Studies, ſuppreſſion of the Hemorrhoids, ſwelling of the Spleen, and Exacerbation or vehemency more than ordinary of the Feaver every fourth day.

The Signs of a *Cauſus* or burning Feaver proper to that Diſeaſe were propounded before, *viz.* a burning heat of the Body, and an unquenchable Thirſt. Yet it is to be marked, if any Cough ariſe, that the Patients Thirſt is thereby diminiſhed, *viz.* by ſuch moiſture as is drawn by the Cough out of the adjacent parts; howbeit, the Cough is never wholly taken away while the Feaver laſts. The other Signs are all ſuch as we have before ſhewed, and do ſignifie a Feaver from Choller. Yet the ſigns which ſignifie a baſtard burning Feaver, are much more remiſs than the aforeſaid.

A melting Feaver is known by a ſudden Conſumption of the Body, and growing lean; the Eyes are hollow, the Temples are fallen, Noſe ſharp, Stools red, fat, ſtinking, clammy, corpulent, ſincere, cholerick and frothy; the Urins fat and Oyly.

The Shivering Feaver, and the tambling and toſſing Feavers are to be known, by what is ſaid of them in their Deſcriptions.

In the Feaver called *Elodes*, the Skin is ever moiſt with a clammy moiſture, and the heat to feel to, is not very ſharp. Malignity is diſtinguiſhed from the largeneſs of putrifaction; becauſe in Caſe of malignity, the Urines are in a manner Natural, or appear not much different from the Natural; or ſomewhat ſwims in the Urines like a Spiders Web, when the fat melts; or if with the Urine there comes away ſomewhat like Vetches or Barley, which ſignifie a melting of the fleſh; or finally, abundance of Urine coming divers daies together, when the blood and humors are melted. Add hereunto an extream decay of ſtrength; a ſmall contracted Pulſe, not very frequent. In great putrifaction the Urines are thick and troubled, the Pulſe great, ſoft and frequent.

Syncopalis Febris, viz. the Swooning Feaver is known by fainting fits, and ſwoonings frequently befalling the ſick. And that ſort called *Minuta*, is diſtinguiſhed from that called *Humoroſa*, becauſe in the former are ſeen the ſigns of a Cholerick, in the latter of a Flegmatick Feaver, as they were lately ſet down.

The Feaver *Epiala* is known only hereby, That at the ſame time heat and cold is felt in the whole Body.

Finally, Symptomatick Feavers, and ſuch as are called *Comitatæ*, are known by what hath been ſaid of them in their Hiſtories or Deſcriptions.

PROGNOSTICK.] Now in every of theſe ſorts of continual putrid Feavers, the Prognoſtick Signs are to be deſcribed, by which their events may be preſaged.

And firſt for *Synochus Putrida*, ſeeing it is of the kind of acute Feavers, it is not without danger. Yet if ſigns of Concoction do evidently appear upon the fourth day, and no error be committed, it will terminate tovvards health the ſeventh day. But if the Signs of Concoction appear later, it may reach unto the eleventh or fourteenth day. But if no ſigns of Concoction appear, and the ſick have a round ſvvollen face like a Globe, it ſignifies the Diſeaſe will be long. By how much the Urin is redder at the beginning, other ſigns correſponding by ſo much ſafer it is, and ſignifies the Diſeaſe will ſoon come to an end, if there appear therein ſigns of Concoction; but with ſigns of Crudity it threatens death, eſpecially if the Party be weak: White Urine is the vvorſt of all, and commonly portends death. Among the Differences of *Synochus*, *Paracmaſtica* is more ſecure, *Acmaſtica* more dangerous, *Epacmaſtica* moſt dangerous of all. Furthermore, an exquiſite *Synochus* and benign rightly cured is ſafe; a Baſtard, one that hath malignity in it, with cruel Symptomes and ſtrength decayed, is dangerous.

Cholerick Feavers, inaſmuch as they are acute, are alſo dangerous; and that more or leſs, according to the more or leſs diſtemper, vehemence of the Symptomes, and validity of the Patients ſtrength. The diſtemper is meaſured not only abſolutely by the degree of Heat it ſelf; but alſo comparatively, with reference to the Natural Conſtitution of the ſick Party; ſo that look how much the heat is encreaſed above the Natural temper of the Patient, ſo much the greater is the danger. So a burning Feaver in an old Man, or in Winter, is for the moſt part deadly. The vehemence of Symptomes is conſidered in actions Animal, Vital and Natural; in Excrements, qualities changed, and proper adjuncts; whoſe enumeration requires a work by it ſelf, according as we have expounded them in the third Section of our *Semiotica*, or Doctrine of Signs, out of *Hypocrates* his Aphoriſms, Prognoſticks, Predictions, and his Coic Prænotions, which may eaſily be transferred to this place. And finally, the ſtrength of the Patient muſt be compared with the vehemence of the Symptomes; For if the ſtrength be luſty, and likely to hold out againſt the Cruelty of the Adverſaries, there is good hope; if not, we may juſtly fear the Patients death.

A continual Quotidian is wont to be long, by reaſon of the thickneſs and contumacy of the Humor: but if divers Evacuations happen in its courſe, it is wont to be the ſhorter. We muſt meaſure the danger

danger thereof, by comparing the vehemence of the Symptomes with the Patients strength. And the chief care ought to be, least it degenerate into a Cachexy or Dropsie, by reason of the Obstructions of the Liver and Spleen, which happen in these long Feavers.

A Primary continual Quartan is most rare, yet sometimes an intermittent Feaver or Ague degenerates thereinto, and then for the most part deadly.

The Melting, Shaking, Tumbling, Sweating and Swooning Feavers seeing they borrow their Names from such bad Symptomes as they are attended with; they are in regard of such Symptomes extream dangerous, and for the most part deadly.

Finally, the Prognostick of Symptomatick Feavers is to be gathered from the excellency of the parts affected, vehemence of the Symptomes, and Validity of the Patients strength.

CURE.] Now in the Cure of all Putrid Feavers, we must take our Hints or Indications from the Feaver, from its Cause, and from the Patients strength. The two former indicate their own ablation or removal; the third, its own Preservation. Which must be done by assistance of those ordinary Medicinal Utensils, *viz.* Diet, Manual Operation and Medicaments.

The Diet in all Cholerick Feavers ought to be cooling and moistening, in flegmatick and melancholick more warming and attenuating. Let therefore the Air be cold and moist, which being drawn in by the Lungs unto the Heart, doth exceedingly temper the burning heat thereof. Yet must not the Patient be laid bare to the cold Air, because transpiration, which is exceeding needful, would by that means be hindered, and the sooty Vapors and Sweats would be driven back again into the Body. Howbeit the Sick must be covered only with light and soft Coverings, and not loaded with over many Blankets or Rugs; also the Feather-bed must be taken away and a Flock-bed put in place, upon which also in the extremity of Summer, a covering of Leather will conveniently be laid on. Let the Bed be wide, that the Sick may change place therein: Let the Patients Linnen shirts be often changed, contrary to the Vulgar Opinion; provided they be not newly washed, nor smell of Soap, and that the Time of the Crisis be not at hand, in which nothing is to be stirred, least the motion of Nature be hindred and disturbed. The Sun-beams are to be kept out of the Patients Chamber, and store of Company is to be avoided. Water is often to be poured out of one Vessel into another in the sick persons Chamber: The Pavement of the Chamber is to be sprinkled with Water, Vinegar and Rose-Water mingled; or with cooling Herbs and Flowers, as Vine Leaves, Willow Leaves, Leaves of Water-Lillies, Flags, Roses, and Flowers of Violets, and of Water-Lillies, which must be kept at hand in good Quantities in a cool place, and be often fresh sprinkled and strowed about the Patients Chamber; for when these Herbs and Flowers are dried, they heat the Chamber. If the Chamber be cold, as in Winter, it must be a little tempered with a Fire, avoiding Smoak: Howbeit in flegmatick Feavers, the Air must be moderately hot and dry.

As for point of Nourishment, the Diet ought to be thin and spare in acute Feavers. And therein the Antients were so severely diligent, as to place the greatest part of the Cure in ordering the Diet, enjoyning such as were sick of a most acute Feaver, to keep a most thin and slender Diet; and giving them nothing but a Ptisan drink of Barley Water, as most convenient for persons in a Feaver; seeing it cools and moistens, withall extenuating and opening and hindering no Evacuation. And they had two kinds of Ptisans. One simply so called, or whole Ptisan not strained; the other was strained, which we call Barley Cream. Barley cleansed of the Husks boyled in fair Water to a Consistency or Pottage, is the whole Ptisan; this being strained with pressing, is called Cream or Juyce of Barley.

But in our Times, at least our Country, by the refractorines of Women [who fear nothing but that the sick Person shall be starved, as all their care in a manner is to cram their Children with meat like Pudding bags, how empty their Brains of Wit, or their Hearts of Grace and Wisdome, matters not] and the Indulgence of Physicians [who the best of them smell too strong of the Mountebank] it is grown into a fashion in all Feavers, yea the most acute and violent, to allow the sick at all times broths of the flesh of Hens, Chickens, Capons, Mutton; and that for the most part they give every third, or at most every fourth hour. And in the Summer the flesh of a Pullet, Kid or Lamb is added to the former Diet. And sometimes again Broths are made of nothing but a Chick with cooling Herbs; as Lettuce, Endive, Sorrel and Purslain. Or to ordinary Broths, is added Juyce of Oranges, Lemons or Pomegranates, when the heat of the Feaver is very great, or the putrifaction very intense.

Moreover in Feavers not so very acute Panadaes are given twice or thrice in a day made of washed bread and broth. Also Barley broths are sometimes used of the Ptisan of the Ancients being strained, with the broth of the flesh aforesaid and Sugar; or without broth, adding sweet Almonds. But these for the most part do oppress the stomach, and therefore the use of simple Broths and Panadaes seems more convenient. Howbeit very profitable it is to boyl a little Barley with flesh, and thereof to make Broths.

In

In long Feavers, a fuller Diet is fitting, of the flesh of Chickens, Veal, Hens and Pullets, Capons, Partriges, Mutton, or of the Juyce pressed out of them, Jellies made with them, and such like.

Concerning the time of giving the Patients meat, this is principally to be observed, that they never eat in the time of the Exacerbation or Fit, but in the time of the abatement of the Feaver. But if the Exacerbation be very long, let the Patient eat in the declination thereof.

For drink, the Ptisan of the later Physicians, made of the Decoction of Barley with Liquoris, is usually given in all Feavers. To which, if the Feavers be very burning, may be added a little Lettuce, Sorrel, Tamarinds, but more ordinarily are added the Roots of Grass or Sorrel, which makes the Water look of an Elegant, Colour like Wine, but in long Feavers may be added sweet Fennel Roots, Parsly Roots, Annis Seeds, Coriander Seed or Cinnamon, as oft as the stomach through weakness is offended with drinking.

Take of the ordinary Ptisan-drink of Barley and Liquoris two pints, Spirit of Sulphur as much as shall suffice for to make it pleasantly tart. Harts-Horn burnt till it be white one ounce: Let the Patient use it for ordinary drink, shaking the Vessel before it be poured forth.

Also Water that hath had a piece of Bread boyled in it either by it self, or sweetned with Sugar is good; or mingled with a little Vinegar, or Water alone boyled to take away the Crudity, wherewith sometimes a little Sugar is mixed; and sometimes a little of the Juyce of Lemons, Pomegranates, Barberies, Cherries, or of their Syrups; or as much spirit of Sulphur or Vitriol as may serve for a grateful Acidity; or a little *Sal Prunellæ*, if need be of potent refrigeration.

Water is commended, wherein are steeped Tamarinds, Barberies or Prunes.

A Decoction of French Prunes is very pleasing to the taste.

Or Barley is boyled with Tamarinds, and towards the end, the Broth is aromatized with yellow Sanders and Cinnamon. Which Drink doth not only quench Thirst, but loosen the Belly, and cools and strengthens the Liver.

Take Sugar eight ounces, Sal Prunellæ one ounce: Make it into a Powder, to be taken with the Patients ordinary drink. Whereunto if thirst be extream, the spirit of vitriol may be added.

Touching spirit of Vitriol and of Sulphur, this is diligently to be observed, that in putrid Feavers the use thereof is great, because they have a mighty cooling, opening and putrifaction-quelling faculty; prohibit the Inflammation of the Humors, and quench Thirst. Howbeit in the Pleurisy, Inflammation of the Lungs, Spitting of Blood, Consumption of the Lungs, and other Diseases thereof (unless they spring from thick flegm, stopping the Vessels thereof) Inflammation of the Stomach, Dysentery or Bloody-flux, Pissing of Blood, Ulcers of the Kidneys and Bladder, they do very much hurt, and therefore we must abstain from them.

In Feavers arising from very thin and hot Choller, or joyned with a sharp thin distillation, sharp things are not convenient; but rather such as gently thicken, as Syrup of Violets, of dried red Roses, with Barley-Water, or Bread-boyled-Water, or simple Water boyled, or small Beer mixed therewith.

Where thick and clammy Humors abound, the Syrup of Vinegar will be very profitable in stead of those last named.

Also sometimes Conserve of Roses, Violets, or Borrage is wont to be mingled with clear Water boyled with Barley-Water, and to be strained through an Hippocras Bag for ordinary Drink, unto which some drops of spirit of Vitriol may profitably be added. Or a Tincture of Roses is made after this manner, most delightful in colour and in taste.

Take Red Roses one ounce, Bloodwarm Water three pints; Spirit of Sulphur or Vitriol one dram and an half: Let them stand infusing cold for three or four hours. To the straining add white Sugar four ounces, Rose-Water half a pint: Make thereof a clear Julep for ordinary Drink.

Also Julepus Alexandrinus is very good, and extream pleasant. It is thus made:

Take Fountain-Water one pint, Rose-Water, Juyce of Lemons and white Sugar, of each four ounces: boyl them over a light fire till you have taken away the Scum.

As for other things pertaining to Diet, Sleep is extream good, and watchings bad. Yet over much Sleep doth overwhelm the natural heat, and hinder the evacuation of Excrements. Rest is necessary in acute Feavers; but in long Feavers, light and gentle exercise is good. Also we must endeavor that nothing be retained which ought naturally to be expelled; howbeit all immoderate Evacuations which exhaust the strength are to be stopped, and all vehement Perturbations of mind must be turned out of Doors.

Among manual Operations, Blood-letting holds the chiefest place; for it doth not only diminish plenitude, whether it be a simple fulness so as to stretch the Vessels, or onely a fulness with reference to the strength of the Patient; whether it be in the whole Body, or in some part; but also revels the influx of Humors causing Obstructions, cools the whole Body, and makes it perspirable, keeps back putrifaction, and furthers the concoction of putrifying Humors. Presently therefore, and at the beginning

beginning of the Disease, blood must be drawn (unless weakness hinder, as in the Swooning Feaver, and other like Cases) and that after the Belly hath been loosened with a Clyster or a Suppository: How much blood should be taken, is gathered from the Patients strength, from the greatness of the Plethora, Custom of the Patient to bleed or not to bleed, and other Circumstances. The Ancients in the *Synochus Putrida*, and the burning Feaver, did let blood till the Patient fainted away. But it is much more safe (as we have said in the Cure of a simple Synochus) to take away at several times so much as shall be sufficient, then suddenly to put the Patient in danger of death. *Avicenna* in a burning Feaver, and in a continual Tertian, doth forbid letting blood, unless the Urine be thick and red. For he fears lest Choller should be the more inflamed, which he saith is bridled by Blood. But the wiser Physicians do explode this Opinion for his, seeing these kind of Feavers are often terminated even by Nature her self, by bleeding at the Nose; and they do sometimes cause Frenzies, and other Inflammations: and finally, because Blood-letting doth potently refrigerate; doth rather stop than further the Ebullition, or boyling and working of the Blood, and Choller comes away as well as Blood when a Vein is opened; so that in that mass of Blood which is in the greater Veins remaining, there is the same proportion of Blood to Choller which there was before. Nay verily, when a Vein is opened, if the sick Party be any thing lusty, and the Blood flow amaine, only the putrid Blood which is offensive to Nature is voided, the purer remaining in the Veins, which few Authors have taken notice of, although it be in the course of Practice every where observable: For if the Blood flow out of the Vein drop by drop, it is the purest Blood, because it comes out of the Vein by its own proper motion; but if it spring out with a forceable stream, it appears foul and corrupted, Nature expelling the worser part of the Mass of Blood. Howbeit Blood is more sparingly to be taken from such as are of a very Cholerick Constitution in the middle of Summers Heat and the Dog-Daies, than in other Natures and times; but in Flegmatick and Melancholick Feavers, Blood must be taken away in lesser quantity: and moreover, great regard is to be had to Coindicants and Contraindicants; forasmuch as Quotidian Feavers do for the most part happen unto Children, or old Persons in cold Countries, and cold Seasons of the year; which considerations do lessen the quantity of Blood which otherwise the Disease, or its Cause require, should be taken away. When the Feaver is caused by over much labour, Blood must be taken away more sparingly: If a Feaver happen by over great use of Carnal Embracements, blood-letting is pernicious.

Concerning the time of Blood-letting, it is to be noted, That a Vein must not be opened presently after the Patient hath eaten; but after Digestion is past, and after the Patient hath been at stool. Again, Blood is to be let when the Feaver is most remiss, and not in the vigor thereof, for then Nature is not able to bear both the violence of the Disease, and the loss of Blood. As for the repetition of Blood-letting, if the same be necessary to cause Evacuation, it must be repeated the same day; if for Revulsions sake on another day. For where Evacuation is necessary, especially in acute Diseases, the Body must be suddenly changed into another condition; also it often happens that a Disease is quickly past its first time or beginning, so afterward we cannot so conveniently open a Vein, but in Revulsion we have respect to the motion of the Humors, which is then best ordered, when it is done at divers times, some space being interposed, whereby Nature becomes accustomed to a contrary motion. For in the space between bleedings, the Blood which was shed into the parts regurgitates into the Veins, and by another Blood-letting is profitably drawn forth. We understand that Blood-letting must be iterated, if that Blood which was first drawn forth were very much corrupted; and there is reason to think, that there is yet a great quantity thereof abiding in the Veins.

Yea verily, Although the Blood at first seem pure and uncorrupted, yet must we not desist from taking the same away, but continue so doing untill it appear more impure and corrupted. And truly that precept delivered by *Hypocrates*, in his 4. *de Victus Ra. in Morbis acutis*, in the Cure of a *Pleurisie*, may very profitably be observed in acute Feavers, *viz.* That Blood-letting be so long continued, till the blood change colour; so that if at first corrupt blood come away, we must let it run till it appear more pure; and on the other side, if at the first the Blood appear laudable, we must suffer it to flow, till that which is impure and corruped be come away.

Yet is there some diversity to be observed in both Cases; For if at first good Blood come away, Blood ought to be again taken from the same Vein; that putrid Blood residing in the innermost parts of the Body, may the sooner be drawn forth. But if at first corrupt Blood be taken away, Blood is next time to be taken out of the other Arm, and afterwards out of the former again, and so in course as oft as need shall require.

But if the Symptomes declare, that the Putrifaction is in the inner branch of the *Vena Cava* descendent; as heat and pain in the Loins, redness and thickness of the Urine: after two or three Blood-lettings in the Arms, it will be convenient to draw Blood out of the *Vena Saphena* two or three several times.

If

If in the latter Blood-lettings, ſome part of the Blood ſeem laudable, and not ſo putrid as before; it's a ſign that Nature doth repair and reſtore new good blood inſtead of the corrupt blood which hath been taken away. Contrarily, If the more is taken away, the worſe it comes, its a ſign the Diſeaſe grows worſe, and that Putrifaction is encreaſed; whence there is reaſon to fear a ſtupefaction of the Internal Parts.

The Vein in the bending of the Arm, or the Baſilica, or the Mediana, is for the moſt part to be opened in the right Arm moſt commonly, ſometimes in the left, *viz.* when more diſtention is felt under the ſhort Ribs on the left, than on the right ſide. Yet ſometimes a Vein is profitably opened in the Foot, if Revulſion be neceſſary, and the Patient weak, the Matter of the Diſeaſe being in the Head, and the ſick perſon moleſted with Head-ach, and want of reſt.

Frictions are ſeldom uſed in putrid Feavers, unleſs it be in the Swooning Feavers; the Cure of which we ſhall ſet down in the Cure of the Symptomes of Putrid Feavers, towards the end of the next Chapter.

But Cupping-Glaſſes are more frequently uſed, as being the Subſtitutes of Blood-letting, in whoſe ſtead they ſerve, when Weakneſſe or Age of the Patient will not permit a Vein to be opened.

Medicinal Remedies are comprehended under a double kind; whereof ſome are Evacuative, others Alterative. Under the Evacuative, we comprehend Purgatives, Vomitories, Sudorificks and Diureticks. Under the Alterative, we comprehend Coolers, Attenuaters, Cutters, Openers and Strengtheners. Of all which we ſhall ſet down the Compoſition and uſe in order, according to the uſual Method of Practice.

And that we may begin with Purgatives, its a great Queſtion among Authors, Whether or no they ought to be uſed in the beginning of Feavers? Which Controverſie, omitting all Circumlocutions, is thus determined. In reſpect of the Matter immediately producing a continual putrid Feaver, which is contained in the greater Veins, Purgation is not convenient in the beginning; unleſs the ſaid matter do heave and work, being ſo ſtirred by Nature, provoked by the ill quality thereof, and endeavouring to expel it, that thereby it becomes more diſpoſed for expulſion, and there be danger by the aforeſaid working thereof, leſt it ruſh into ſome noble part; howbeit this ſeldom happening, for the moſt part the Concoction thereof is to be expected, before we undertake to evacuate the ſame by Purging Medicines. But in reſpect of the matter contained in the firſt Region, if it be very much, and do encreaſe the Feaver, oppreſs Nature, and divert her from concocting of that which is in the Veins; Purgatives may be given the next day after blood-letting, but they muſt be gentle, ſuch as evacuate only the firſt Region. Now that naughty Humors and Excrementitious do abound in the firſt Region, that is to ſay, in the Stomach, Guts, Meſentery, or about the Midrif, may be known by Stomach-ſickneſs, Bitterneſs of the mouth, Thirſt, Pain of the Stomach, or ſome other part contained in the lower Belly, Looſneſs of the Belly, and other Symptomes; in regard of which Purgation is ſometimes to be practiſed before blood-letting. Now the Medicines for this intent, muſt be Caſſia, Manna, Tamarinds, *Catholicum*, *Electuarium lenitivum*, *Diaprunum ſimplex*, *Syrupus Roſaceus*, *de Cichorio cum Rhabarbaro*; which may divers wayes be compounded after this manner.

Take Caſſia newly drawn one ounce; Tamarinds half an ounce. With Sugar make it into a Bolus. Or,

Take Catholicum ſix drams; Elect. lenitive, or Diaprunes ſimple half an ounce; Cream of Tartar one dram. Make all into a Bolus. Or,

Take Leaves of Endive, Cichory, Sorrel, of each half a handful: Tamarinds half an ounce; boyl all to three ounces. In the ſtrained Liquor, diſſolve Catholicum half an ounce: Manna and Syrup of Roſes, of each an ounce. Mix all into a Potion.

If you deſire your Medicine a little ſtronger, you may add a dram or four ſcruples of Rhubarb infuſed in Endive or Cichory Water with yellow Sanders. Yea, and ſometimes if the Feaver be not very ſtrong, two or three drams of Senna may be added to the Decoction.

Some reject Rhubarb, becauſe it heats; alſo Manna and Syrup of Roſes, becauſe being ſweet, they are ſoon turned into Choller. But with cooling Waters or Decoctions, Rhubarb being infuſed, or Manna, and ſuch like diſſolved, can do no hurt; eſpecially if to the ſaid Decoctions, Tamarinds be added, which are much commended to this intent, or if the Pulp thereof be given diſſolved in the Potion.

Some in Cholerick Feavers do uſe the Whey of Goats Milk, and that very pertinently; for it tempers the heat of the Feaver, evacuates Choller, and ſtrengthens the Bowels. In a Cup of Whey they ſteep all night one dram, or one dram and an half of Rhubarb, or they add two or three ounces of Syrup of Roſes, and ſo give it in the morning; and afterward they give the Patient a quart of Whey more to drink, that all the Whey may not be infected with the taſt of the medicament.

That kind of Purgation which is practised in the beginning of putrid Feavers, the Vulgar Physicians call Minorative purgation; and that which is practised when the Morbifick matter is concocted, they call Eradicative purgation: which is also convenient in the beginning (as was said) in the Judgment of *Hypocrates*, if the matter be turgent. Now this same Turgescence and boyling as it were of the matter is known hereby, because the Patient perceives in divers Parts light Pains, which soon go away and shift suddenly from place to place; and hath divers colours of the Face and other Parts, so that sometimes there is a redness, and then again a paleness in some part of the Face. And in a word, the Patient is exceedingly tormented with anxiety and unquietness, continually tumbling and tossing.

Howbeit that Rule of *Hypocrates* touching the use of Purgation, when the Morbifick matter doth ferment and work in the Patients body, is not observed in ordinary Practice: but when the Humors appear in their fermentation and motion, we do more safely apply our selves to Blood-letting; and by that means we do more readily prevent the rushing of the stirred Humors into any noble part, which being agitated by the Purgation, may more easily flow into the said parts.

Sometime also in the beginning of these Feavers, Vomit is to be procured, *viz.* when the Patient is much vexed with illness of stomach, and with vomiting; for then Nature endeavors to evacuate the Morbifick matter upwards, and the Physician ought to assist her endeavors. And many times it falls out, that great quantity of matter is contained in the Stomach and parts thereabout, which must be evacuated as soon as possible may be by Vomit; seeing no concoction can be expected of such Excrementitious matter in so great a quantity; and what ever the Patient Eats or Drinks is changed into such a like Humor, and encreases the matter which is cause of the Disease. For *Fernelius* hath well observed in his third Book, of the Method of Healing, Chap. 3. That all Superfluity of Humors in the Stomach, Spleen, Pancreas, Mesentery, and the Cavity of the Liver is conveniently emptied out by a Vomit, which sometimes will not be removed with Medicines that work downwards, though divers times administred. And it comes often to pass, that the matter being Vomited up, the Feaver is taken away at the first, which otherwise would have proved long, in case that matter had been transmitted into the more inner Parts of the Body, and very well mixed with the Blood.

Now of the three degrees which we reckon of Vomitories, the mildest is to be chosen; as Barley Water luke-warm with Oyl of Almonds or Common Oyl, or with a little quantity of white Wine Vinegar. Also Syrup of Vinegar, or Oxymel simple with Chicken broath, or a Decoction of Dill-Seed, Rhadish or Orach, whereunto also Oyl may be added. All which are to be given to the quantity of a pint or more; for in a less quantity they abide in the Stomach. And seeing these weaker sorts of Vomits are of little efficacy, we may sometimes apply our selves to those of the middle Rank, which shall be propounded hereafter in the Cure of a Tertian Ague.

And not only in the beginning of the Disease before Blood-letting, but also the whole Course thereof, Clysters must be given every day, or every other day, if the Belly be not of it self very free, made of a Decoction of Emollient and refrigerating things, such as French Barley, Prunes, Mallows, Violet Leaves, Mercury Leaves, Beares-Foot, Orach, Lettuce, Endive, Housleek, Water-Lillies: dissolving therein *Catholicum*, *Cassia*, Diaprunum simple, Red Sugar, Honey of Violets, and Honey of Mercury; Oyl of Water-Lillies, Violets, &c. But in a violent hot Feaver, it is better not to add the Oyls, because they are easily enflamed.

Observe in the first place, that not above three or four blades of Housleek must go into one Clyster, because it cools most potently; and being taken in greater quantity, may hurt the Guts.

Observe Secondly, that in all Feavers of Choller, Clysters are not to be injected actually hot, but only Blood-warm.

In Feavers that spring from Flegm, Decoctions for Clysters are made of the Emollient Herbs with Annis Seeds, Seeds of Fennel and of Carthamus; flowers of Chamomel and Melilot; dissolving therein Hiera Picra, Diaphœnicum, Honey of Roses, Honey of Mercury, Oyl of Chamomel, Dill, or Common Oyl.

And because, as we noted before, absolute and perfect Purgation, which they call Eradicative, is not to be attempted till the Morbifick Cause be ripened and digested; the Physitian from the beginning of the Disease, after the first Blood-letting, and when the passages neareſt the stomach are cleansed, ought to use such medicaments as prepare crude Humors for digestion and Evacuation, and withal temper the Feaverish Heat, hinder Putrifaction, and open Obstructions; such as are Juleps, Broths, Emulsions, and other things which shall be hereafter described.

Juleps are compounded in a Cholerick matter offending, of Syrups of Lemons, Pomegranates, Sowr-Grapes, Vinegar simple, of the Juyce of Sorrel, of Cichory simple, with Waters of Endive, Sorrel, Grass and Cichory,

Or better, of the Decoction of the Roots of Sorrel and Cichory, of the Leaves of Sorrel, Maiden-Hair,

Hair, Garden Endive, Dandelion, the four cold Seeds, Tamarinds, with the Syrups aforesaid.

And sometimes that we may cool more effectually, a dram of *Sal Prunella* is added, for every Dose of the Julep, or so much spirit of Vitriol or Sulphur, as shall suffice for a moderate sharpness.

Sowr things are never to be omitted in Feavers springing from Choller, because bitter things are sweetened by sowr and acid things: which if they are sowr in an high degree, as spirit of Vitriol and of Sulphur, they deface the bitterness even of Aloes and Coloquintida. Now yellow Choller being plundred of its bitterness, is dead and Harmless.

Juleps also of great Vertue, may be made of Juyces, and which are very grateful to the tast, after this manner.

Take Juyce of Apples that smell sweet, newly drawn out and setled four ounces; Juyces of Lemons three ounces, Rose-Water two ounces, Juyce of Pomegranates one ounce: finest Sugar half a pound: Make of all a clear Julep for three Doses.

If very thin Choller and sharp be in motion, and cause either a Looseness, or some other greivous fluxion; Juleps must be compounded which thicken, of Waters of Lettuce, Purslain, Plantane, flowers of Water-Lilly, Red Poppy and Violets, with the Syrups aforesaid.

Yet we must observe, that Syrup of Violets, and other of the sweeter sort of Syrups are not to be given alone; both because they looseu the stomach, as also because ere they can pass into the Veins, they are turned into an hot Vapor, which doth afterward cause thirst to encrease. And therefore there must evermore some quantity of sharp Syrup be mixed with the sweet Syrups aforesaid, that they may more easily pierce into the Veins, and better resist the Heat of the Feaver.

In the Progress of the Feaver, when Coction begins to appear to the aforesaid Decoctions must be added Roots of Asparagus and Liquoris; Leaves of Agrimony, Pimpernel, Liverwort and Maiden-Hair.

In Flegmatick and Cronick Feavers, things more cutting, attenuating and opening are prescribed, beginning with the more weak, such as are Syrup of Vinegar, of Maiden-Hair, Syrupus Bizantinus, with a Decoction of Agrimony, Maiden-hair, Betony, Liquoris, Raisins. And in the progress of the Feaver, unto the former we add Syrup of the opening Roots, Vinegar compound, of Hyssop, Oxymel simple and compound. And to the Decoction, we add the five opening Roots, Leaves of Hyssop, Carduus Benedictus and (if the matter be very impact, Clammy and Ropy) of Germander and Centaury. Whereunto if Salt of Tartar and Spirit of Vitriol be added, they work more happily.

In Feavers springing from Melancholy, such things are added which do moisten, as Syrup of Violets, of Buglos, of Borrage and Apples towards the beginning: and afterwards of Fumitory, of Epithymum, of the five opening Roots, Oxymel of Squils: with a Decoction, first of Buglos, Borrage, Ceterach or Wall-fern, Maiden-Hair, Fumitory, Hops; and afterward Dodder, Scordium, Centaury, Bark of Capers, of the Ash-tree, and of Tamarisk.

And finally in bastard Feavers, which arise from the mixture of different evil Humors, the Medicines aforesaid must be mixed together; yet so that such as respect the most predominant Humor be put in the greatest quantity.

For the more nice and dainty sort of Patients, Medicinal Broths are prescribed instead of Juleps: and also that the Sick may not grow weary of the same kind of Medicine too long used; and these broths are made of such of the Roots and Herbs aforesaid as are most pleasant to the tast with a Chick, or part of an Hen or Capon: unto which sometimes may be added one dram of Sal prunella, or some drops of Spirit of Vitriol, when we would have it more cooling than ordinary.

Howbeit in slow and long lasting Feavers, caused by rebellious Obstructions hard to be cleared; Germander though bitter and Cichory, Endive and Dandelyon though bitter, may be boyled in Broths; and *Montanus* in his Counsels, doth cry up Cichory and Germander boyled in Broths as an admirable Remedy for such as have a long Feaver with Obstructions.

If Feavers arise from flegm, a Decoction of Chamomel is excellent. *Zacutus Lusitanus*, Observat. 26. in the third Book of his *Praxis admirandæ*.

Also Emulsions or Almond-Milks are very good in putrid Feavers, and are commonly more pleasing than Juleps. They are most in use, when the Feaver is joyned with a dry distemper of the Bowels, or a thin Catarrh, or an Inflammation of the Lungs and parts serving to breath withall; or for variety, least the Patient should be over tired with continual use of Juleps. Now the Composition of these Emulsions hath been described in the foregoing Cures.

Cold Water given in great quantity in continual putrid Feavers, was wont to be in use among the antients, and is commended by very many latter Physicians. But as we said the use hereof was dangerous in the simple *Synochus*; so in this Case, we think the discreet Physician shall do best to forbear the same for the Reasons we delivered in our Chapter of the simple *Synochus*.

Yet will it be sometimes good in extream heat of a Feaver, to give a good draught of cold Water

to ten or twelve ounces, with a few drops of Spirit of Vitriol; For hereby sometimes the same effects are wrought, which *Galen* attributes to cold Water being drunk, the quantity of three or four pints at a time; When as notwithstanding there are none of those dangers to be feared, which *Galen* himself confesseth did sometimes happen upon the preposterous drinking down of so great a quantity of cold Water as he adviseth. For the Spirit of Vitriol causeth that the Water breeds no Obstructions, but rather opens the same, quickly piercing and passing through the Bowels, not biding in the Hypochondria as plain and single cold Water is wont to do; but is very like the acid Mineral Fountains and Wells, which though they are drunk in great quantity, do not lie heavy in the parts about the short Ribs, but are quickly pissed forth, and very good against Obstructions.

To strengthen Nature, which in every violent Feaver is much dejected, Electuaries are good, and strengthening Conserves and Preserves, compounded of Conserve of Roots of Bugloss, Leaves of Sorrel, Wood-Sorrel, Stalks of Lettuce, Flowers of Bugloss, Borrage, Violet, Cichory and Roses, Pulp of Citrons. Whereunto are added the Powders of Coral, Pearls, Ivory, Harts-horn, *Diamargaritum frigidum, Diatria santalon, Diarrhodon Abbatis, Confectio Alkermes, & de Hyacintho*; which are commonly after this manner compounded.

Take Conserve of Flowers of Borrage, Bugloss, Roses, of each an ounce: Confectio Alkermes one dram and an half: Powder of Diamargaritum frigidum, Ivory, Coral prepared, and Pearls prepared, of each ten grains: Sugar of Roses the weight of all the rest, three Leaves of beaten Gold. Make of all an Electuary covered over with Gold, of which let the Patients take often by it self out of a spoon, drinking a little of their ordinary Drink after it, or mingle some of it with their ordinary Drink, and with their Broths.

Take Conserve of Cichory, Sorrel, Lettuce, and of the sharp Pulp of a Citron, of each half an ounce: Powder of yellow Sanders, and of Pearls prepared, of each one scruple: Spirit of Vitriol half a scruple. With Syrup of Violets make all into an Electuary.

Take Conserve of the Flowers of Bugloss, Roses and Violets, of each one ounce: Waters of Endive, Sorrel and Borrage, of each three ounces. Mix them together, let them stand over the warm Embers and heat; then strain the Liquor though a searse; then add Confectio Alkermes two drams; Powder of the Electuary Diamargaritum frigidum half a dram: Coral prepared, Pearls prepared, and Shavings of Ivory, of each one scruple; Syrup of Lemons and Pomegranates, of each three ounces. Mix all, give one spoonful at a time.

For the more dainty and nice sort of People, in great debility of Natural strength, this following Julep very pleasant to the tast may be compounded:

Take Waters of Sorrel, Orange flowers and Roses, of each one ounce and an half: Syrup of Lemons and Pomegranates, of each one ounce: Confectio Alkermes one dram; mix them. Let the Patient take hereof frequently in a spoon.

Altering Medicines having been used for some daies together, and such as prepare bad Humors; when the Feaver begins to decline, we must set our selves to purge out the said Humors, when the signs of Concoction do appear, avoiding the Critical daies. And this must be done with Medicines, a little stronger than those which were given at the beginning; of which sort are Senna, Rhubarb, Agarick, Catholicum duplex, and such like; whose Matter and Dose must by the skilful Physician be accommodated to the Humors offending, and the Nature of the Patient. And some Physicians are so bold as to proceed to Scammoniate Medicaments, as *Diaprunum solutivum, Diaphanicon, Electuarium de succo Rosarum & Diacarthamum.* Which notwithstanding are very seldom to be used in continual Feavers, because Scammony is wont very much to inflame the Humors, and to cause vehement thirst; and that especially in burning Feavers, in which Scammoniate Medicaments are very hurtful. Yea verily, and Rhubarb it self, although a gentle and most excellent Medicament, is by some suspected as not safe in very Cholerick Feavers, because of its notable heating and drying faculty. Howbeit the hurtful faculty thereof may in great part be corrected, by infusing the same in Cooling Waters, and by mingling therewith a Decoction of Tamarinds and cooling Herbs; and by adding thereto Cassia, Syrup of Roses, Syrup of Cichory with Rhubarb, and such like.

If the Feaver do still continue, Purgation must be ever and anon repeated, using between whiles preparatives and digestives, till the whole seminary of evil humors be taken away. For otherwise, if we cease Purging before the Feaver be perfectly abated and gone; the Patient will be in danger of a Relapse, yet this Rule needs some restriction. For if after many Purgations, a lingring Feaver continues, which doth by little and little pine the Patients, and seem to cast them into a Consumption; it will be the best course to leave Purging, and seek to conquer the Feaver only by Alteratives and Diet. For it sometimes falls out, when there is some evil disposition of the Bowels, causing a protraction of the Feaver, that so long as Medicaments are given, so long the Disease continues, because that Nature is weakened. Which afterwards (Purgation being omitted) gathers strength, concocts the cause of the Disease, and being concocted, expels the same.

But

But if a lingring Feaver arise from Obstructions, as is often seen in Children, frequent and very gentle Purging, which draws away Humors by little and little, is wont to remove the Disease; especially if the Purgation be compounded with Rhubarb, which both opens obstructions, and strengthens the Bowels. The Commendations whereof celebrated by *Montanus* in his tenth Counsel of Feavers, is worthy to be set down in this place. He setting down the Cure of a Boy that had a lingring Feaver arising from Obstructions: *Among other things, I shall commend* (saith he) *one which I have by long Experience found never to fail,* viz. *That he take every day the Infusion of Rhubarb in Endive Water. For I never knew Feaver from Obstructions, which was not cured by this Medicament, provided it were constantly taken without weariness, or giving over. For I have sometimes seen most gross Humors impacted into the narrow passages of the Body, and such Obstructions, as by reason of the weakness of Natural heat could hardly be removed, cured by Rhubarb. My Course therefore hath been to take one pint of Endive Water, and therein to infuse a dram of Rhubarb tied in a thin piece of Linnen. Of which Infusion, having lightly pressed out the Rhubarb, I give four ounces in the morning; and this is the Dose for Children. Neither do I cease giving this Medicament, untill I see the Feaver and Obstructions wholly gone. For they will doubtless be cured, if all other things be rightly ordered, and suitable to the Cure*: So far *Montanus*. But we are wont ordinarily to use a Diet-Drink made of Rhubarb, which to such Children as are troubled with a lingring Feaver and Obstructions, I am wont to give for their ordinary Drinks with good success. It is thus made, half a dram or a dram of Rhubarb (according as the Child can endure the tast thereof) grosly powdered and tied in a Rag, is infused in two or three pints of small Beer or Ale an whole day cold: Of this the Child drinks for a moneth together, or longer if the stubbornness of the Disease require the same. Whereunto, if the Feaver be very remiss, and the Child flegmatick, a little Wine, or stronger Beer or Ale may sometimes be added, to qualifie the unpleasing tast of the Rhubarb.

After Purgation of the Morbifick Matter, Nature is for the most part accustomed in the declination of the Disease, to purge away the reliques of the Matter offending by Urine, which we may discern, because the Urines are then more thick, or more plentiful than ordinary; which endeavor of Nature must be assisted by Diuretick Medicaments, which are most temperate, such as are Emulsions, and the Openers formerly set down in Juleps or Broths; whereunto, if the Feaver be very gentle, some Roots of Fennel and Parsly, or Leaves of Wormwood may be added, and that especially in Feavers of Flegm, and continual Quotidians.

But if Nature do expel the Reliques of the morbifick matter to the habit of the Body, Sudorificks are to be used; not to those hot ones, which are more properly called Sudorificks; but others more temperate, which are the same in a manner with the Diureticks, and being of an attenuating faculty do dispose the Humors in such sort, as Nature may more easily expel them by what place or way so ever she is most enclined. Howbeit, to these may be added, Carduus Water, Spirit of Vitriol, and other things which shall be more fully described, when we shall treat of malignant Feavers.

Besides inward medicaments, divers things are also outwardly applied, to temper the Feaverish heat, to confirm the strength of the principal parts, or to open the Pores of the Skin, and draw out the smoaky vapors, and Feaverish heat, *viz.* Epithems, Liniments, and other things to be applied unto the Region of the Heart, Liver, and other parts. Which are invented to mitigate the heat, and are not to be applied save in the state or declination of the Disease, when the heat diffuseth it self to exterior parts; not in the beginning or augment, while it resides yet about the Bowels; nor yet when the Crisis is at hand.

An Epithem to be applied to the Region of the heart may be thus compounded.

Take the Waters of Buglos, Sorrel, Water-Lillies, of each three ounces; Vinegar of Roses, or juyce of Lemons one ounce: the Powders of Diamargaritum frigidum and Triasantalon, of each one dram: Camphire and Saffron, of each five grains; mix all. Make hereof an Epithem to be applied warm with Scarlet Cloth.

For the more strengthening, and to make it smell the sweeter, add three ounces of Orange flower water, and one dram of Confection of Alkermes.

Where we desire yet more potently to strengthen, solid Epithems are applied unto the heart, made after this or the like manner:

Take Conserves of Buglos and Roses, of each one ounce: Confection of Alkermes two drams, Powder of Diamargaritum frigidum one dram and an half. With Juyce of Lemons or Rose-water make a solid Epithem, to be applied after the liquid one aforesaid.

Or one yet more Cordial, may in the form of a liniment be thus made:

Take Confection of Alkermes, and de Hyacintho, of each three drams: Powder of Triasantalon and Diamargaritum frigidum, of each two drams. With Water of Roses, make all into the form of a Liniment or Oyntment, wherewith smear the region of the Heart.

Also

Also to strengthen and drive out the Sooty Vapours and the Feaverish heat, young Pigeons are very good, being split through the Back bone, and applied to the Region of the Heart, which likewise are oftentimes sprinkled with Cordial Powders, as Diamargaritum frigidum and Triasantalon. Or before they be applied, the Region of the Heart is smeared with *Confectio Alkermes*, and the Cordial Liniment aforesaid.

Also to the Liver, Epithems are wont to be applied, which are made commonly after this manner.

Take Water of Endive, Cichory, Sorrel and Roses of each three ounces: Lettuce Water two ounces, Vinegar of Roses half an ounce, Powder of the Electuary Triasantalon one dram and an half, Spodium half a dram, Camphire ten grains: Make of all an Epithem.

For to cool more powerfully, an Epithem may sometimes be made of Juyces after this manner.

Take Juyce of Cichory and Endive, of each half a pound; Juyce of Lettuce and Vinegar, of Roses, of each two ounces: Powder Triasantalon two drams; Mix all, and make thereof an Epithem.

Now it is very profitable to apply cooling Epithems not only to the Liver, but to the whole Region of the Hypochondria; for they do not onely further Coction, but also help the distemper of the Bowels, and hinder the principal parts from a deadly Consumption.

The Region of the Liver may likewise be anointed with this following Oyntment, which also may be applied to the Reins and Loins.

Take Oyntment of Roses one ounce and an half, Ceratum Santalinum one ounce, Juyce of Endive one ounce and an half: Oyl of Roses, and Wax as much as shall suffice to make a Liniment. Whereunto add a little Vinegar of Roses at the time of anointing.

Also cooling things are profitably applied to the stones, because of the great consent between them and the principal parts of the Body; they therefore being cooled, the heat of the whole Body is in great measure extinguished. To which purpose such an Epithem as this following may be made.

Take Waters of Water-Lilly, Plantane, Roses and Cichory, of each three ounces; Vinegar of Roses one ounce and half, White wine two ounces. Mix all, and dip a Cloth therein cold, and wrap the same about the Stones.

Also the cooling of the hands and feet doth great good, because of the Consent they have with the whole Body by reason of the Arteries, Veins and Nerves which end in those parts.

Neither need we fear least it should hinder the voidance of Excrements by the pores, because they are few that come that way; so that there comes more good than hurt by the cooling of those parts.

The Patients may therefore hold in their hands balls of Marble, Ivory, Brass or Lead. Or they may hold their hands in cold Water, with a little Wine and Vinegar mingled therewith. To the soals of their Feet may be applied the Leaves of Lettuce, of Water-Lilly wet in Water and Vinegar. Or to wash both Hands and Feet, the following Decoction may be provided.

Take Leaves of Lettuce, Violets, House-Leek, Purslain, Vine Leaves and Willow-Leaves, of each one handful. Heads or Leaves of Poppy (if the Patient rest not) an handful, Vinegar one ounce, white Wine two ounces, Fountain Water as much as shall suffice; make of all a Decoction. Hereunto may be added, if you please, a little quantity of Lie for to strengthen the Joynts. Herewith let the Hands and Arms, the Legs and Thighs of the Patient be washed warm twice in a day, or once at bed-time.

We are furthermore to note, that the Antients frequently used baths of fresh Water to cure putrid Feavers, as we may see in *Galen* in his Book *de Marcore*, *Cap.* 7. and in the 11. of his Method, *Cap.* 6. and 20. and in his 1. to *Glauc.* *Cap.* 9. and those Baths were either cold in a vehement Feaver, such as is an exquisite burning Feaver; or Blood-warm in the declination of Feavers, when the signs of Concoction appeared. But in this Age of ours, these kinds of Baths cannot be used without danger, and they are convenient only in one Case, *viz.* when the Feavers become very lasting, and possessing a Body hot, and dry, and lean, seem likely to turn to an Hectick.

And one thing yet more I shall add for a Conclusion of all, that if the Feaver terminate with some Crisis, the reliques of the Morbifick matter must be taken away with a Purge; especially if the Crisis were by way of Sweat or bleeding. For by those Evacuations only the thinner portion of the matter is voided forth, but the thicker being left behind is afresh inflamed, and brings the Patient into a Relapse. Only therefore that Critical Evacuation which is wont to proceed by way of Stool, is secure from a Relapse. Yet must we not so confide therein, as to abstain usually from all Purgation. For the Parts about the Midriff are yet foul, and do corrupt the nutriment which comes into those Quarters, from whence proceeds either a relapse into the former, or some new Disease. Therefore it is by far the best way (as some latter Physicians have observed) by repeating once and again a gentle Purge so to cleanse away all the remainders of the morbifick Cause, that all fear of a Relapse, and all occasion of another Disease may be taken away.

Chap.

Chap. 2. *Of the Symptomes which accompany Putrid Feavers.*

ALL Authors in a manner who have writ of Feavers, have deſcribed thoſe Symptomes which either accompany or follow upon them, with their Cures at the end of their work, that ſo they might be beſt accommodated to all kinds of Feavers. Which Counſel of theirs, though I ſhall not diſallow, yet I have thought it much more commodious for the ſervice of Practitioners, to joyn them immediately after the Doctrine of putrid Feavers, ſeeing in thoſe kind of Feavers they are wont to be moſt vehement and frequent, and require peculiar Remedies.

So that although very many Symptomes are wont to be Cured by the Remedies aforeſaid, accommodated to the Cauſe and the Diſeaſe: yet very many there are more offenſive than the Diſeaſe it ſelf, which are here briefly to be deſcribed.

Head-ach, want of Sleep and Ravings, are Cured in a manner with the ſelf ſame Remedies, *viz.* Revellers, Repellers, Derivers, Reſolvers and Anodines. Revellers are emollient Clyſters, and ſuch as are Laxative, Gentle Purgations, Blood-letting, Cupping-Glaſſes, and waſhing the Feet. Repellers are frontals, Vinegar of Roſes, Unguents or Liniments; Derivers are opening of the forehead Vein and Veſicatories. Reſolvers are certain Oyls, and certain live Creatures applied to the Head, which likewiſe are Anodines. And while the foreſaid Remedies are uſed, Juleps are given and Emulſions to temper and qualifie hot and ſharp Humors. After all theſe come Narcotick Medicines, which are not to be uſed, but upon extream neceſſity, when other things will do no good. The matter of all which Medicaments is ſet down in our Chapters of the Phrenſy and Head-ach, proceeding from an hot Cauſe. But in the adminiſtration of the ſaid Medicaments, one thing muſt be diligently noted, that they be not to be uſed when the Criſis of the Feaver is near: for they would then diſturb the motion of Nature, and hinder the Criſis. Which is to be underſtood as of all the reſt, ſo more eſpecially of the Narcoticks.

Againſt want of Sleep and Ravings, a Cataplaſm laid to the Soals of the Feet will be very good, being made of freſh gourds beaten, the Leaves of the larger Houſe-Leek, of Lettuce, and ſuch like. As alſo to waſh the Feet with a Decoction of refrigerating Herbs. For by this means the Coldneſs is communicated through the Nerves unto the Brain.

Convulſions in Feavers, eſpecially Malignant ones do ſometimes happen, by reaſon of Malignant Vapors which vex and fret the Skins which cover the Brain called Meninges. Againſt which convulſion fits we muſt uſe revelling Clyſters and Cupping-Glaſſes; alſo often give in Juleps or Broths Epileptick Powders, and finally anoint the Patients Back-bone with Oyl of Chamomel, Violets, Sweet Almonds, and of the Indian Nut.

When profound ſleep happens to ſuch as are in Feavers, the ſame Remedies are given which have been deſcribed in the Cure of ſleepy Diſeaſes; onely obſerving this one thing, that we give no very hot Medicine inward.

The thirſt of Perſons Feaveriſh is chiefly allaied with refrigerating and moiſtening drinks. But if thirſt be ſo violent, that moderate drinking cannot aſſwage it (and to drink over much doth much hurt, and oft times endangers the Patients Life) we muſt by other means deceive and aſſwage the ſame.

Firſt therefore, let the Patients draw in the cold Air, and abide in Silence, not ſpeaking a word, let them keep their mouths cloſe, and breath through their Noſtrils, and give themſelves to ſleep.

Let them waſh their mouths with Barley Water Blood-warm, or with Water where hath been boyled Jujubes, Sebeſtens, Prunes, Lettuce, Purſlain, and ſuch like.

Let them hold in their Mouths a piece of Liquoris ſcraped and ſteeped in Vinegar and Water, or let them waſh their Mouths with Barley Water either ſimple, or with a little Vinegar in it, or a little juyce of Lemons, Pomegranates, or a little ſpirit of Vitriol.

Or let them hold in their mouths the Kernels of Pomegranates, or a ſlice of a Citron, or a Lemon, or an Orange ſteeped in Roſe-Water with Sugar; or ſtalks of Lettuce, Endive or Purſlain; Leaves of Sorrel, Bits of a Gourd, Cucumer or Melon firſt ſteeped in cold Water; Or Acid Cherries, or red Currance, or Reſ-berries, or Tamarinds, or a piece of Chryſtal, or the ſtones of ſharp Prunes upon which a little of the Pap hangs, and ſuch like.

Alſo Sugar diſſolved in Roſe-Water, with a little ſpirit of Vitriol, and dried again, is very good to quench thirſt.

If thirſt cannot be taken away with theſe lighter things, they muſt be permitted to drink nor in the beginnings of the Exacerbations, or fits, nor in the Augment, but very ſparingly, but in the vigor, and eſpecially when it is towards declining: for then large allowance of drink doth carry the heat outwards,

wards, and sometimes moves sweat; especially in the fits of Agues, in the declination of which, it is many times good for the Patient to drink unto satiety. Several Materials convenient to make Drinks in these kind of Feavers, are set down in the foregoing Chapter.

But if thirst be caused by a Cholerick Humor contained in the Stomach, the said Humor must be voided by Vomit or Stool. Vomit may be procured, if the Patient be Stomach-sick, with an ounce and an half of Syrup of Vinegar Simple, with five ounces of Barley Water, or of the Decoction of Rhadishes. If that will not do, purge the Patient with a Bolus of one ounce of the pulp of Cassia, and three drams of the Pulp of Tamarinds, or with two ounces of Manna, dissolved in a Decoction of Prunes or Tamarinds, or of the following Potion may be given.

Take Cassia new drawn six drams; Musilage of the seeds of Flea-bane half an ounce: the Decoction of Barley, Prunes and Tamarinds four ounces: Syrup of Roses one ounce. Mix all into a Potion.

The Heat, Dryness and Roughness of the Tongue and Throat, is cured by divers Remedies applied to those parts, and contained in the mouth, compounded after this manner:

Take of the Musilage of Quince seeds one ounce; the seeds of Mallows half an ounce, Powder of Diatragacanthum frigidum and Sugar Candy, of each one dram; white Sugar as much as shall suffice. Make of all a Lohoch. Or,

Take of Musilage of Fleabane seeds, or Quince seeds extracted with Rose Water, or Lettuce Water half an ounce: Syrup of Violets, Lemons or Pomegranates an ounce and half; mix them. Let the Patients take now and then a little, and hold it in their mouths. Or,

Take Cucumer seeds half an ounce, Quince seeds two drams, Gum Tragacanth one dram and an half: Beat the seeds, and dissolve the Gums in the white of an Egg. Mix all, and make thereof little Cakes for the Patients to hold in their mouths. Or,

Take Seeds of Fleabane and of Quinces, of each one dram and half: Gum Tragacanth half a dram, Sugar Candy three drams. With Musilage of Gum Tragacanth, make all into little Cakes. Or with a thin Rag make Nodules, which shall be steeped in Rose Water, and held in the Patients Mouth.

If the roughness be very hard to remove, make a Gargarism of the Decoction of Barly, Roots of Marsh-mallows, Leaves of Lettuce, Purslain, Violet flowers, adding thereto Honey of Roses, Syrup of Violets, or Sugar Candy, or Oxymel simple, and such like.

If filth cleaves to the Tongue, as it most times happens, it must be oftentimes wiped with a rough Cloth dipped in a mixture of Water and Vinegar. Whereunto also sometimes may be added, the Juyce of Housleek and Sal prunella.

If the heat be more vehement, with great blackness of the Tongue, more refrigerating Medicines must be mixt with the moistening ones after this manner;

Take Juyce of Lettuce, Housleek and Lemons, of each one ounce: Musilage of Quince seeds and Sugar Candy, of each half an ounce: white Sugar as much as shall suffice. Make all into a Lohoch. Or,

Take Green Housleek one handful, Vinegar of Roses three ounces, Barley Water one pint: Boyl all till the third part be wasted away. In the strained Liquor, dissolve of Sal prunella one dram and an half. Allum a scruple, Syrup of Violets and Mulberries, of each one ounce: Make of all a Gargarism. Or Sal prunella alone may be dissolved in Housleek Water, and the Tongue and Throat washed therewith, which is very good; also some Potion thereof may be swallowed to cool the mouth of the Stomach, when it is likewise inflamed.

Also outwardly let the Neck and Throat be anointed with Oyl of Violets and fresh Butter, washed in Rose Water, with which the Throat being as it were scorched and parched, may be moistened.

For Cooling, the Oyntment of Roses, and *Galen*'s cooling Oyntment may be used, with others of like Nature. But the Leaves of Lettuce and Purslain being bruised and enclosed between two Linnen Cloths, and so applied to the Neck and Throat, are much more effectual. Also those kind of Bugs which we call Sows, may be bruised and laid on in the same manner.

In great heat of the Breast, such as is wont to happen in Feavers, the whole Breast must be anointed with Oyl of Violets, Water-lillies, and of sweet Almonds. Yea, and if the Heat be very vehement, Fomentations ought to be applied to the said part made of a Decoction of French Barley, Lettuce, Water-Lillies, Borrage, Violets, and such like; after which, irrigations ought to be used of the Oyls aforesaid: Seeing that, according to the Prescript of *Galen* and *Avicenna*, in such like Feavers, great care is to be had of the breast, as of the Furnace of Heat. Now these kind of Remedies, according to the Rule of *Trallianus*, are seldom to be cold, because they drive the heat inward; nor luke-warm, because they relax; but such things ought to be applied to to the Breast, as are actually hot, and potentially cold.

Pain

Pain in the Loins is cauſed in Feavers by hot and plentiful Blood boyling and working in the *Vena Cava*, and it muſt be eaſed by Emollient Clyſters and Cooling, and Emulſions made of the Cold Seeds, adding Sal Prunella; and by anointing the Loins with *Galen*'s Cooling Oyntment, with Juyce of the larger Houſleek and Camphire, or *Unguentum Populeon*, or Oyl of Roſes, Lillies and Poppies; or with an Epithem made of Plantane Water, Roſe Water, Vinegar of Roſes, and Camphire; or with a Mixture of Roſe Water, Oyl of Roſes and Vinegar: all which are to be applied actually cold in the Summer, and a little leſs than blood-warm at other Seaſons of the Year.

Diſquietneſs, and tumblings and toſſings, which are wont to happen in the Feaver *Aſſodes*, and in the Fits of a Tertian Ague, are beſt cured by purging away the Cholerick Humor which vexes and frets upon the Stomach, and other ſenſible parts, and that by Vomit or Stool, according as Nature ſeems more or leſs to affect the one or other way; alſo it may be drawn downwards by Clyſters, and preſently all Art is to be uſed to make the Patient reſt, and cold Drink is given, as alſo cooling Juleps, whereunto ſometimes Syrup of Poppies, or a little Laudanum may profitably be added.

Swooning Fits are wont to happen in thoſe kind of Feavers which are commonly called *Febris Syncopalis*, or Swooning Feavers, of which there are two kinds, as was ſaid before; and the one is called *Minuta*, the other *Humoroſa*. The Cure of which Feavers, much differing from the Cure of other Putrid Feavers, we have reſerved unto this place, in regard of the ſaid Symptome of Swooning.

The *Minuta Syncopalis*, which is bred of Cholerick Humors, ſharp and venemous, muſt be cured after this manner. Let the Air be cold and moiſt, and a little aſtringent, that diſſipation of the ſubſtance of the Body may be thereby prevented. Let the Patients Diet be thin, cooling and reſtorative, of the Broth of Chickens boyled with Sorrel, Purſlain, &c. To which may be added Roſe-Water, Juyce of Pomegranates, and a little Sugar. Bread ſteeped in the Juyce of Pomegranates, or of Oranges may be given, if a more liberal Diet is to be granted, as alſo Cream of Barley or Panadaes, with Juyce of Lemons or Pomegranates. Alſo Reſtorative Broths of preſſed Fleſh, with the foreſaid Juyces: To the ſtronger ſort are given the Yelks of Eggs, with Juyce of ſowr Grapes, the Stones of Cocks, the Fleſh of Pullets, Hens, Partridges qualified with the aforeſaid Juyces.

Let the Patients drink with their Meat, if they have no Inflammation of any Bowel, thin Wine not very old, yet new and windy; or Beer that is indifferent ſtrong, not new, or very ſtale. When they eat not, or otherwiſe if there be Inflammation, let their Drink be Barley Water, or Water in which a piece of a Loaf hath been boyled, with Syrup of Pomegranates, Lemons, Citrons, Julep of Roſes, &c.

Sleep is good out of the Paroxyſm, but in the ſame it hurts. And finally, ſpecial Care muſt be taken that nothing provoke the Patient to Anger, Sadneſs, and the like Paſſions.

In the Paroxyſm, Reſolution of the Spirits muſt be prevented by blowing cool Air with Fans upon the Patients, and by ſprinkling them with ſweet ſmelling Waters. Their Face muſt be ſprinkled with cold Water of Roſes, and Vinegar mingled. With which the Stones of Men, and the Dugs of Women muſt be bathed cold.

If Heat and Spirits will not be revoked from the Heart to the outward Parts of the Body, it is to be revelled and forced back by binding of the extream Parts, and by nipping and pinching them; alſo pluck the Patients often by the Noſe, pluck them by their Hair, and call upon them often by their Chriſtian Name. Give of the Crum of Wine-bread ſteeped in the Juyce of Pomegranates, or thin fragrant Wine tempred with Roſe-Water; and when neceſſity urges, ſome Cinnamon-Water mingled with Roſe-Water. In the mean ſpace, Reſtorative Broths are not to be omitted, wherewith Confectio Alkermes, and ſuch like may be mingled. Alſo Cordial Potions are often to be given out of a Spoon made after this manner.

Take Water of Roſes two ounces, Orange flower Water one ounce, Cinnamon Water half an ounce, Confectio Alkermes one dram, Pearls prepared, and Coral prepared, of each half a ſcruple: Sugar-Cakes made with Pearls ſix drams: Mix all, and make thereof a Julep or Cordial Potion. To theſe may be added, the Electuaries, and Conſerves and Preſerves, deſcribed in the foregoing Chapter.

Alſo the inner ſide of a Loaf hot out of the Oven, ſprinkled with Roſe-Water and Vinegar, may be applied to the Patients Noſtrils and Mouth.

To the Heart, cooling and ſtrengthening Epithems may be applied.

To ſtraiten the Pores, and prevent the Evaporation of the Patients ſtrength and Spirits, wrap them in Linnen ſprinkled with powder of Roſes, Balauſtins and Sanders; or let their ſhifts be ſprinkled with Roſe-Water, and a little Vinegar.

Let their whole Body, eſpecially the Back be anointed with this following Liniment.

Take Oyl made of unripe Olives one ounce and an half; Mirtles, Quinces, and Muſilage of Seeds

Seeds of Fleabane, of each six drams: Gum Arabick dissolved in Rose-Water two drams, white Wax as much as shall suffice; make all into a Liniment.

A special regard is to be had of the stomach, because the Humor offending is chiefly there collected. Now the Region thereof must be anointed with Oyl of Roses and Quinces, and then also may be laid on a Toast of Bread wet in Juyce of Quinces and unripe Pomegranates. Or if it be afflicted with great heat, foment the Stomach blood-warm with a Decoction of Purslain and Roses, or with Juyce of Night-shade, Purslain, Sowr Grapes, adding thereto Oyl of Roses and Quinces.

The Swooning Fits being removed, and the Patient strengthened, we must bend our minds to remove the Feaver and its Cause. Which may be done by Alteratives and Evacuators, proper fot burning Feavers, which we have described in their proper place, *viz.* where the Cure of burning Feavers is set down.

The Cure of the second sort of Swooning Feavers, which is called *Febris Syncopalis Humorosa*, which is caused by abundance of Flegmatick aud crude Humors, is in a manner contrary to the Cure of the *Minuta* newly described. For the Air ought to be temperate, inclining to heat, light, pure and dry. Meats of good Juyce easily digested, prepared with Hyssop, Fennel, and such like Herbs. Let their Drink be thin, and not very strong: Let their sleep and watchings be moderate.

But Frictions or artificial Rubbings of the Body, and by *Galen* much extolled in this Case. In the 12 Method, Cap. 3. They must be used from the beginning of the Disease, with Course Cloaths, beginning above, and so Rubbing downwards; first on the Thighs and Legs, afterward on the Arms, Shoulders and Back. Let the Cloaths with which the Frictions are performed be first smoaked with Storax, *Lignum Aloes*, Frankincense, Cloves, &c. When after friction, the Limbs are lustily warm, anoint them with Oyl of Dill, of Chamomel, of Orris, of Castus, and others of a resolving Faculty. Such Frictions as these are highly commended, because they call the natural Heat and Spirits together, with the Humor offending, which did Choak the natural strength into the outward Parts.

In the fit the Sick party must be rowzed, by pulling the Nose, Rubbing the Ears, plucking off of Hairs, Loud calling, &c. Also sweet Smelling things must be applied to the Mouth and Nostrils; as Cinnamon and Orange flower Water, Vinegar wherein Cloves have been steeped, inside of a white Loaf dipt in *Hippocras* alone, or Cinnamon Water, or the following cordial Water.

Take Waters of Bawm, Rose-Mary and Orange flowers, of each one ounce; Cinnamon-Water half an ounce; Confectio Alkermes one dram, Syrup of preserved Citron Peels and of Gilly-flowers, of each one ounce: Mix all into a Potion or Julep, which the Patient must often take of, by a spoonful at a time. Also Electuaries may be made after this manner.

Take Conserve of flowers of Bugloss, Rosemary, and of Citron Peels preserved, of each half an ounce: preserved Nutmeg three drams, Confectio Alkermes two drams, Species of Diamlra and Diamoschu dulce, of each one scruple: With the Syrup of preserved Citron Peels, make all into an Electuary.

Unto the Heart, Epithems may be applied and young Pigeons to the Stomach and Stones; Fomentations may be applied, and other things administred, which have been propounded in case of decay of strength.

While these things are in doing, frictions must ever and anon be repeated, which must in this Disease never be omitted.

When the Patient hath a little gathered strength, the Morbifick Matter is to be drawn out by Clysters and Purgations (in which *Hiera cum Agarico*, in regard of the stomach, is very profitable) which ought to be gentle and frequent, yet so as fitting Preparatives be administred between Purge and Purge.

Want of Appetite is common in a Manner to all Feavers: for when the Stomach is inflamed, thirst is encreased, but Appetite of eating diminished. Yet sometimes Appetite is so dejected, that the Patients can hardly sup a little Broth: Which loathing of Meat is caused by Vicious Humors collected into the stomach, or soaked into the coats thereof; or of corrupt and malignant Vapors which infest the stomach. It ought to be Cured by evacuation of the Morbifick Matter, by Vomit or Stool, and first with an infusion of Rhubarb and Tamarinds. But in the declination, if the Feaver be not strong, with *Hiera Picra* dissolved in a Decoction of Barley, Vetches, Wormwood, and other detergent things. Afterwards we must use Clysters, which occasionally do revel from the stomach. Also acid and refrigerating things are frequently to be given, as Syrup of Lemons, Pomegranates, some Cherries, &c. given alone or with cold Water. In the declination, or when the Feaver ceases, Syrup of Roman Wormwood may profitably be given, either alone or mixed with acid Juyces or Syrups. Let Meats that are grateful, be presented to the Sick: For as *Hypocrates* teaches in *Aphor.* 38. *Sect.* 2. The pleasanter Meat and Drink, though somewhat the worse, is to be preferred before that which is bitter, and not so pleasant. Also let them eat but little and seldom, for much

and

and frequent eating cauſes want of Appetite even in thoſe which are well. And let their Meats be ſauced (provided they have no cough) with Juyce of unripe Grapes, Vinegar of Roſes and Juyce of Lemons. If the ſick do ſo abhor all Meats, that they can take nothing at all, let them have nouriſhing Clyſters given them twice or thrice in a day; the excrements being firſt avoided by a cleanſing Clyſter. When the Feaver is wholly allaied and gone, if want of Appetite do remain, let the Sick perſon moderately exerciſe, and uſe Capers, Saxifrage, Olives; let him change place, and go into a colder Air. And finally, if theſe helps ſuffice not, let the Patient uſe Wormwood Wine, and Pils of *Hiera Picra*, which do powerfully cleanſe away ſuch Humors as are faſt ſticking in the Coats of the Stomach.

Hiccupings and Vomitings which betide perſons in Feavers, are oppoſed by divers Medicaments, the materials whereof are to be ſought for in our cures of thoſe Infirmities of Vomiting and Hiccuping, and to be judicially accommodated to ſuch perſons as in Feavers are troubled with thoſe Symptomes. But eſpecially care is to be taken that a critical Vomiting be by no means ſtopped; Hiccoughing ſometimes proceeds from immoderate uſe of refrigerating things, as *Lemnius* witneſſes, whoſe words *Schenkius* doth thus relate, *Hiccoughing in Feavers doth ſometimes follow an over-abundant uſe of Refrigerating Juleps; and I have ſeen many ſo affected by the unadviſed Raſhneſs of Phyſicians, which Symptomes contrary to the expectation of all Men, I Cured by giving the Patient Wine to drink.*

A Looſneſs befalling one that hath a Putrid Feaver, if it be critical (that is, proceeding from the Conqueſt of Nature over the Morbifick Matter, and tending to expel the whole or part thereof it muſt not be ſtopped; neither muſt a Symptomatick Looſneſs be preſently ſtopped at the very firſt, if it do not very much weaken the Patient, leaſt the Vitious Humor do flow back again to ſome principal Parts. When it is ſeaſonable to ſtop it, it muſt be done with a gentle aſtringent Purge, with cleanſing and Corroborating Clyſters; by Medicines taken in, and outwardly applied, which do thicken, ſtrengthen and bind. All which may be taken out of our Cure of a Diarrhæa or Looſneſs: beginning with the gentler, and proceeding if need be to the more ſtrong by Degrees.

Sweats if they be not Critical (that is cauſed by Nature expelling the Humor offenſive) but Symptomatical [that is, cauſed by the vehemency of the Diſeaſe diſſolving the Body, and hunting the Humors through the Skin] and do very much weaken the Patient, they muſt be ſuppreſſed by cooling the Air, with ſprinkling cold Water, and the leaves of the Willow and Vine-tree upon the Pavement; and if need be, by opening the Windows; the Body being cooled and ayred by little and little, the Cloaths being light upon the Patient, and a Flock-bed being put inſtead of a Feather-bed: alſo by often ſprinkling the Patients Face with Water and Vinegar mingled together, and finally by the uſe of cooling Aſtringent Medicaments; ſuch as are cooling Epithems applied to the Heart, Liver, and whole Belly, and often changed. Oyntments made of Oyl of Roſes, of Mirtles, of Muſilages, and Aſtringent Powders are to be anointed upon the whole Body; but eſpecially upon the Back-bone Powders of Roſes, Balauſtins, Pomegranate rinds, Myrtle, Maſtich, Terra Samia, &c. muſt be ſprinkled upon the Neck, Throat, under the Arm-pits, and in the Groins. Or let the Patient be wrapped in a Linnen Cloth, ſprinkled with a mixture of Vinegar and Water, and the aforeſaid powders ſtrewed thereon; being in the mean time careful that no Inflammation or Tumor be in the parts about the ſhort Ribs: for then we muſt abſtain from Aſtringent things, at leaſt ſuch as are ſtrong. The Sweat muſt not be wiped of, but ſuffered to dry about the Pores of the Skin, ſo to ſtop them that more may not follow.

Alſo we muſt give in at the mouth, Medicaments that thicken and ſtrengthen, as Barley-Water boiled with Lettuce and cooling Seeds, Reſtorative Broths, with Juyce of Pomegranates, ſowr Grapes, Powders of Corals, Pearls, ſhavings of Ivory, Sanders or Balauſtins. Juleps of the Waters of Roſes, Lettuce, Purſlain, with Syrup of Pomegranates, dryed Roſes or Quinces. Conſerved Electuaries, of Conſerve of Roſes, Corals, Pearls, Terra Sigillata, Powders of Diamargaritum Frigidum, and ſuch like.

AN APPENDIX.

In the Cure of moſt acute and pernicious Feavers, one thing is diligently to be noted, that ſuch Feavers ſeldom happen without ſome inward and peculiar diſorder, and commonly Inflammations of ſome of the inward Bowels, as Liver, Spleen, &c. So that we muſt evermore be careful of the parts under the ſhort Ribs, of the Head, the Breaſt, the Womb, Reins and Bladder; that by all means poſſible we may hunt out which of thoſe is much out of order, and as much as may be reſtore the ſame to its Natural Conſtitution.

Chap. 3. *Of the Tertian Ague.*

AN Ague, or Intermittent Tertian Feaver, is caused by an Excrementitious Cholerick Humor, contained in the first Region of the Body, and there putrifying.

DIFFERENCES. A Tertian Ague is either Legitimate and Exquisite, or Illegitimate and Bastard.

A Legitimate or Exquisite Tertian Ague is terminated in twelve hours, and is caused by the putrifaction of Natural Choller. But a bastard Tertian hath fits that last above twelve hours. But if it exceed twenty four hours, it is termed *Tertiana extensa*, a stretched Tertian. And it is caused either by Preternatural Choller putrifying, or by Natural Choller mingled with other Humors, especially with flegm.

Also Tertian Agues are Simple, or Double, or Triple. A Simple Tertian is that whose Fits come every other day: A Double Tertian is that whose Fits come every day. And although herein it differ not from a Quotidian or every day Ague, yet they are known one from the other by their proper Signs; shewing the abundance of Flegm or Choller in the Patient; of which Signs in their place. Sometimes notwithstanding in a double Tertian there are two fits in one day, the other day remaining free; and this some latter Physicians do call two Tertians, and make it differ from a double Tertian. Which Distinction notwithstanding is of small moment: A Triple Tertian is when there are three fits in the compass of two daies. This is a most rare, and seldom seen sort of Feavers: Yet *Galen* propounds one single Example thereof, and I saw another in the year 1637. in a certain Gentleman, who once in sixteen hours had a fit of a Tertian Ague. And all the fits did every one of them terminate in the space of ten or twelve hours by sweat. Now these divers Paroxisms are made by a different matter putrifying in different places, so that each one hath as it were its peculiar Chimney where it is first kindled.

Now the Humors causing Tertian Agues, are collected chiefly in the first Region of the Body, *viz.* In the Liver, the Bladder of Gaul, the Stomach, the Mesentery, the Pancreas, or in the Veins of those Parts.

CAUSES. Their Causes, are all such things which ingender Excrementitious Choller, *viz.* An hot and dry distemper of the Spleen, youthful Age, Hot Constitution of the Air, Watchings, Cares, Anger, Fastings, use of hot Meats, over much Exercise. To these are added, for the breeding a bastard Tertian, such Causes as engender Flegm and Melancholy. Hereupon, such as have hot Livers, and by Glutinous and bad Diet do breed many Crudities, are subject to bastard Tertians by reason of the mixture of Choller with crude Humors. And hence also it is, that in Summer time crude Humors breed through weakness of the Natural Heat, by eating of Fruits, and over-much drinking, being mixed with Choller, do breed bastard Tertians.

SIGNS. The Signs to know an Exquisite Tertian by, are these: That this Feaver alwaies begins with great shaking Fits, whereas in a Quotidian Feaver or Ague, there is only a light shivering or coldness. After the cold shaking Fit, follows great Heat, sharp and biting, Intollerable Thirst, great and frequent Breathing, want of Sleep, Head-ach, and sometimes Ravings. After the shaking fit, sometimes there follows a vomiting of Cholerick Humors, or a purging by Stool. The Urine is sometimes Yellow, Yellowish-Red or Red. The Fits last not above twelve hours, and they are terminated by Sweat: Also the Causes fore cited, breeding Choller, have preceded.

In a bastard Tertian, all the foregoing Signs are more remiss than they are in an Exquisite one, but more intense than in a Quotidian Ague. And according as there is more or less flegm mingled with the Choller, the Fits come nearer to those of an Exquisite Tertian, or of a Quotidian; both in respect of the vehemency of the Symptoms, and the length of the Fit it self. So that the Paroxisms of a bastard Tertian may be lengthened out to sixteen, eighteen, or more hours. Although they may be sometimes shorter, because of the paucity of the Matter, and be terminated within the space of eight, ten or twelve hours.

PROGNOSTICK. The Prognostick of this Disease is taken out of *Hypocrates*, in *Sect.* 4. *Aph.* 59. *Exquisite or exact Tertian Agues last but for seven fits at most.* And in *Aphor.* 43. of the same Section, *all Intermitting Feavers are void of danger.* Which is to be understood only of such Tertians as are void of all malignity. For there are Malignant and Pestilent Tertians, which though they have evident Intermissions; yet do they often kill the Patient. Furthermore, many things fall upon the Neck of a Tertian, which may breed danger, although the Feaver of it self be not dangerous.

Haly writes, and common Experience shews, That if such as are sick of a Tertian Ague, have Ulcers, Scabs, or Pustules breaking out in their Lips, it is a token the Ague will leave them. For it is a kind of Critical Evacuation in those parts.

A Looseness

A Looſneſs befalling one that hath a Tertian Ague, the matter being digeſted, ends the Diſeaſe. And this is the way by which alone Nature doth perfectly expel the Cauſe of theſe Feavers: For ſeeing the Original Cauſe of theſe Feavers is contained in the Gaul-Bladder, or the Liver, or the Meſentery, or other parts in the firſt Region of the Body; although that which ſteams and vapors therefrom in every fit, do get into the habit of the Body, and is purged away either by Sweats, or by inſenſible Tranſpiration, or by Puſhes and Pimples; yet the groſs parts, and ſedings of the Humor abide in their place, which unleſs by the benefit of Nature or Medicaments, it be purged away by ſtool, it is wont to be the Cauſe either of a long Ague, or of Obſtructions, or of a Relapſe, or of other ſtubborn Diſeaſes.

Agues are wont to be of ſmall durance, and little danger, if the habit of the whole Body be good, if the Bowels be well affected, if it be Spring or Summer, if the Patient eat little, and drink ſparingly. And contrariwiſe, they are wont to be long, and more rebellious, if there be an evil diſpoſition of the Liver or Spleen, if the Patient abound with flegmatick Humors or Melancholick, if the Winter or Autumn be in their full force, if the Patients do eat much, or by much drinking do oppreſs their Natural Heat.

CURE. The Cure, as in other Feavers, is to be directed to the Feaver, its Cauſe and ſtrength of the Patient. The Feavers calls for Coolers, the Cauſe requires Coolers likewiſe, and withall ſuch things as digeſt and purge the Humor offending; the Patients ſtrength calls for things that corroborate and vigorate the ſame.

And in the firſt place, a cooling Diet muſt be appointed, and which moiſtens; it muſt be the very ſame in an exquiſite Tertian, which we before preſcribed in our Cure of Continual Feavers. But in a baſtard and ſingle Tertian, a fuller Diet ſomewhat is to be enjoyned, eſpecially if the Diſeaſe prove to be long; for then ſolid Meats are to be given on the wel-day, and five or ſix hours before the fit. But in a double Tertian, as in an exquiſite Tertian, the Sick muſt be nouriſhed only with Broth, and other ſupping things.

This is a moſt pleaſant Drink out of *Foreſtus*, for thoſe which have a third day Ague.

Take Fountain-Water two pints, Cinnamon half an ounce, Sugar three ounces: Let all be ſtrained cold and raw through an Hippocras Bag.

The Patient muſt not eat when the Fit is coming, according to that ſaying of *Hypocrates*, in *Aphor.* 11. *Sect.* 1. For Nature (as *Galen* ſhews in his Commentary on that place) by Concocting of newly eaten Meat, is called away from Concoction of the Morbifick Humors. Add hereunto, That in the fit of an Ague, the whole body is filled with a filthy vapor which doth mar, and for the moſt part corrupt that meat which is eaten near the fit. But if the fit prove ſo long, or the Patients body ſo hot and dry; ſo lean and thinly woven together with wide pores, that it is ſoon diſſolved and diſſipated, and cannot hold out to the end of the Fit; the Patient in ſuch a caſe may be allowed to eat in the Fit, and it will be better to eat when the Fit is in the ſtate or height than at any other time. Howbeit, in the beginning alſo, and in the augmentation, neceſſity compelling, Meat may be given. For ſo *Galen* in the tenth of his Method, Chap. 5. was compelled to give Meat even in the beginning of the Fits unto ſuch as had this kind of Ague, being of a hot and dry temperature, unto whom faſting is extreamly hurtful, leſt they ſhould fall into ſwooning Fits. And in imitation of him, *Amatus Luſitanus* in the 68. Cure, of the fourth Century, to one that was full of and vomited pure Choller, and by that means fell into ſwooning Fits, he gave bread dipt in water, and ſprinkled with juyce of ſowr Grapes in the beginning of the Ague-fit; by which means he hindered the aforeſaid Symptomes.

There is one thing yet further to be obſerved both in this and all other Agues, That the Patient do neither eat, drink nor ſleep before the Fit. But it will be good that the Patient go to ſtool by means of a Clyſter, provided the ſame be adminiſtred before the beginning of the Fit.

Having therefore ordered a convenient Diet, we muſt forthwith proceed to evacuate the Morbifick Matter, which ſeeing it ſticks in the firſt Paſſages, it muſt be voided not only by Clyſter, but by Purges and Vomitories.

Clyſters in an exquiſite Tertian, muſt be made of an Emollient and Cooling Decoction, with Caſſia, Catholicum, Diaprunum ſimple and purgative. But in a baſtard Tertian, let the Decoction be of Emollient and Cutting ſimples, diſſolving therein Diaphœnicon, honey of Roſes, &c.

Purgative Medicaments in an exquiſite Tertian, muſt be the ſame which have been propounded in continual Feavers. But in a baſtard Tertian, there muſt be added Agarick, Senna, Catholicum, Diaphœnicon, and others, ſuch as the judicious Phyſician ſhall conceive moſt ſuitable to the conſtitution of the ſick. And in every ſort of Agues, Cream of Tartar may profitably be added to the Medicaments, becauſe it opens Obſtructions, is potently cleanſing, and yet cools withall. Purging Medicines are to be given on the day of Intermiſſion, and that in the morning, as commonly is uſed; if the time of Intermiſſion fall within thoſe hours: if not, the middle ſpace between the two fits muſt be choſen. And at an hour of the day or night, we may give a Purge, provided it be far from the Fit, and the Stomach have digeſted what was laſt eaten.

But

But in a double Tertian, 'tis an hard matter to choose a convenient time to give a Purge, because many times, not above three or four hours do fall between two fits. Yea, and sometimes the fits are so long, that the one begins before the other be ended, which makes them be called *Febres Subintrantes*, encroaching or intruding Feavers. For then the speedinesse of the occasion, or opportune time requires the uttermost diligence of the Physician. Now the more commodious hour of giving the Medicine, is thus to be chosen. In a double Tertian not encroaching, the Medicament must be given in the end of the Fit, at such a distance from the following Fit, that the working of the Physick may be over ere the other Fit come. But in an encroaching Ague, when the latter Fit interferes with the former, the Medicament must be given in the beginning of the declination, as soon as it begins never so little to remit. And in both Cases the Patient must drink Broth three hours after the Medicament is taken, yet so, as that there must be remaining three hours for the Broth-taking before the next Fit begin. So that the Medicament is to be given at least six hours before the next Fit.

As for Vomits, What was said of them in the Cure of Continual Feavers, may be here very commodiously applied; because the abundance of evil Humors contained in the Stomach, Mesentery and Cavity of the Liver, which is wont to cause these Feavers, is brought away by vomit; which sometimes cannot be moved by purging Medicines given again and again, as *Fernelius* hath well observed. And therefore, If in the beginning of the Fit, the Patient be vexed with vomitings, the Physician shall do well to follow that motion of Nature. And seeing the gentlest sorts of vomits will not ordinarily serve the turn, we must proceed to the middle sort, such as is especially *Asarum*, of the powder whereof, half a dram, two scruples or one dram is given in Broth, or some other convenient liquor. Others give the Decoction thereof, which is made of three drams of Asarum Roots boiled in Chicken Broth, or in Barley Broth made with Raisins. The Chymists do give white vitriol prepared, and Salt of vitriol, and also *Aqua Benedicta*, which is made of *Crocus Metallorum*. Which, as other medicaments made of Antimony, as they do sometimes happily rid away such morbifick matter as is lodged in the first passages about the Stomach and Mesentery, &c. So do they require a prudent and skilful Physician to minister them; otherwise they are like a sharp Knife in the hand of an Infant, or like a Sword in the hand of a mad-man.

The first passages of the Body, or the first Region thereof being purged at least with one Purge, a Vein is to be opened in the wel-day. Yea verily, and if the Patient be Plethorick, the Urines red and thick, the Cure is well begun by Blood-letting, for the Purge will afterwards work the better.

If the Blood appear very Hot, Adust or Putrid, Blood-letting must be repeated; which yet is left to the judgment of the Physician, according as he finds the Patients constitution.

After Purgation and Phlebotomy, we must endeavor to prepare the humors by Juleps, such as were set down in the Cure of Continual Feavers; the matter whereof must be varied, according as Flegm or Melancholy is mingled with Choller, as was observed in the place aforesaid.

In the mean time, whilst the Medicines aforesaid are making, the Feaverish heat is to be allaid with cooling Epithems applied to the Heart and Liver, such as were propounded in Continual Feavers, with this Caution, that they be never laid on, but in the height of the Hot-Fit, or rather when it first begins to abate.

To the Liver also and the Loins, Oyntment of Roses, or the cooling Oyntment of *Galen* may be applied.

Also Emollient and cooling Clysters will be very good at the end of the Fit, as well as in the beginning.

The matter being prepared certain daies by the use of Juleps, Purgation must be again used with Senna, Rhubarb, Catholicum, Syrup of Roses; adding thereto Agarick, if Flegm abound. And if the Patient be strong, we may add *Diaprunum Solutivum*, *Electuarium de Succo Rosarum*, or *Diaphœnicon*.

The Body being again purged after the use of Juleps, if the Fits return and seem longer than they were before, it is a sign that gross Humors, and such as stick fast in the Body, do nourish the Feaver, and breed Obstructions: In regard of which, cleansing, opening and cutting things are to be used. The principal of which is Wormwood, which is exceedingly commended by *Galen*, in his first Book, *ad Glauconem*, Chap. 9. and Centaury, which in regard of the rare vertues it has in curing Agues, is called *Febrifuga*, that is to say, Ague queller. But because these Herbs are hot, they may be qualified by the Commixture of cooling things, after this manner.

Take Roots of Grass, Cichory, Asparagus, of each one ounce: Leaves of Agrimony, Sorrel, Cichory, Endive, of each one handful: vulgar Wormwood and Centaury, of each an handful: boil all to a pint. In the strained Liquor, dissolve three ounces of Syrup of Lemons. Make all into a Julep for to be taken at three times in the morning.

The Juleps being finished, a Purgation must be again administred or a vomitory, if Nature affect to discharge her self that way. For then, the signs of Concoction appearing, these Feavers are sometimes

ſometimes happily Cured by Vomiting. And *Galen* in his firſt Book add *Glauconem*, Chap. 10. Writes that many are Cured of this kind of Ague only by a Vomit, yea verily and daily experience ſhews, that *Aqua Benedicta* doth eradicate theſe Feavers or Agues for the moſt part, unleſs ſome contumacious Obſtructions of the Bowels do hinder. Many Experiments hereof are propounded by *Martinus Rulandus* in the Centuries of his Cures. But it is, as was ſaid before, a vehement medicament, and not to be given without extream Caution. Some give an ounce of *Aqua Benedicta* with the Infuſion of half an ounce of Senna, and ſo it works more by Stool than by Vomit.

Others uſe Cambogia, others *Mercurius Dulcis* with Scammony. Which medicaments, ſeeing they do potently Evacuate, do often pluck theſe kind of Feavers away by the Roots, bnt they are to be given only to ſuch as are ſtrong of Conſtitution.

To theſe medicaments exquiſite Tertians and Baſtard ones too are wont to give place. But if the Agues do yet ſtubbornly reſiſt (as it oftentimes falls out) ſolemn Purgation muſt be made with an Apozem to be taken three daies, made of the materials of the foreſaid Juleps, adding thereto Senna, Rhubarb, Agarick, Syrup of Roſes, of Cichory with Rhubarb, and ſuch like. Yea verily, and although the Ague be gone before the uſe of this Apozem, if a Voluntary Looſneſs do not befall the Patient: For the ſolution of an Ague by Sweat or inſenſible Tranſpiration, as not to be truſted unto, gives ſuſpition of a Relapſe; becauſe by them the thinner part only of the Humor is Evacuated, the thicker being left behind: which can no other waies be Evacuated, ſave by Stool.

Before the Apozem aforeſaid be uſed, if there be a Diſtenſion in the parts under the ſhort Ribs, let this following Emollient, attenuating and ſtrengthing fomentation be applied.

Take Roots of Marſh-Mallows, Graſs and Aſparagus, of each one ounce: Roots of Enula Campana, and the middle Bark of Tamarisk, of each half an ounce: Leaves of Mallows, Violets, Agrimony, Maiden-Hair and Wormwood, of each an handful: Linſeed and Fænugreek Seed, of each one ounce: Flowers of Chamomel, Melilot, Roſes, of each a pugil: Boyl all in three parts of Water, and one of white Wine, put in towards the concluſion, with two ounces of Vinegar: with this Decoction foment the Parts under the ſhort Ribs Morning and Evening, for two daies before the uſe of the Apozem.

After Fomentation, anoint the ſaid parts with this following Oyntment.

Take Oyl of Lillies, Sweet Almonds and Tamarisk, of each one ounce: Oyntment of Marſh-Mallows two ounces, and a little Wax. Make all into a Liniment.

If after all theſe Remedies, the ſtubborn Ague do yet lengthen the time, and keep its ground: and the Patients Face appear ſwoln and paliſh, alſo their Legs ſwell towards night: they are to be plied with ſuch Mecicines as are commonly preſcribed for Obſtructions of the Liver. Among the reſt, *Montanus* doth very much commend the Decoction of Cichory and Germander in Broth; which he ſaies is admirable in long Feavers that are cauſed by Obſtructions.

Yet it is to be noted, that the length of a Tertian Ague is ſometimes cauſed by an hot and dry diſtemper of the Liver, which perpetually produces a Cholerick Humor, the Cauſe of new Fits. Which is often obſerved in many, which being of a dry and meagre conſtitution of Body, and wholly Cholerick, have had a Tertian Ague three or four moneths together, eſpecially in the more hot ſeaſon of the year, without any tenſion of their Bowels, or any abundance of Humors. To ſuch as theſe, ſtrong Purgers and ſtrong Aperitives or Heaters do hurt. But ſuch as theſe are to be plied with a cooling and moiſtening Diet, with Juleps and Broths of the ſame Nature. And the ſuperfluous Humors are to be purged away by little and little with Emollient and Refrigerating Clyſters, with Caſſia, Tamarinds, Catholicon and Syrup of Roſes. But in this caſe eſpecially great miracles are performed by a Bath of Blood-warm Water, which doth extinguiſh the hot and dry diſtemper which is imprinted upon the Bowels. Let the Patient uſe theſe Baths on the wel-day, but without ſweating.

Sometimes alſo the Length of Tertian Agues ariſes from the evil diſpoſition of ſome of the Bowels, eſpecially of the Liver and Meſentery; which cannot be Cured by purgations, though never ſo oft repeated, becauſe that evil Quality remaining ſtill in the Liver cauſes new morbifick matter daily to breed, which produces new Fits. Which evil diſpoſition or quality of the Bowels is taken away by Diureticks, Sudorificks, and other reſolving medicaments.

With which faculties theſe following ſimples are endued, *viz.* Wormwood, Centaury, Carduus, Roots of Dictamnus, of Pimpernel, Tormentil, &c. Of which are made Decoctions, Powders, and ſuch like, which muſt be given for divers daies together before the Fit.

A dram of Venice Treacle is ordinarily given with white Wine before the Fit, three times one after another.

Some give a Walnut preſerved in Sugar or Honey after the ſame manner.

When the heat of Venice Treacle is feared, it is at firſt given by it ſelf, and a draught of Plantane-

Water

Water is given after it. My Master *Varandæus* did often use this as a Specifick Medicine.

A Cup of *Hippocras* given before the Fit will work the same effect, with which pleasant Medicine many have been Cured.

Yet must it carefully be observed, that these Remedies must not be given till the Patient hath been diligently Purged.

Zechius frequently used these following Pils, which are most effectual for opening Obstructions, strengthening the Liver, and taking away the distempers of the Bowels.

Take Troches of Rhubarb, of Eupatorium and of Wormwood, of each half a dram: Powder of Diarrhodon Abbatis one scruple, with Syrup of Wormwood make a Mass of Pils. Of which let the Patient take one dram in the morning three daies together, drinking after them a draught of Broth made with Cichory and Maiden-Hair.

Montanus was wont to give many daies together a scruple of Troches of Rhubarb or of Wormwood, with Broth in which Barley, Parsly Roots, Cichory and Borrage have been boyled.

Let the region of the Liver be anointed morning and evening before Meals, with a Liniment made of two ounces of *Ceratum Santalinum*, juyce of Cichory half an ounce, juyce of Wormwood two drams, and a little Vinegar of Roses.

In like manner let the region of the Stomach be anointed with this Liniment.

Take Nard Oyl, Oyl of Wormwood and Quinces, of each half an ounce: Gallia Moschata *one scruple, white Wax as much as shall be requisite. Make all into a Liniment.*

Besides the Medicaments hitherto propounded, which respect a regular and Methodical Cure; there are many other specifick and Empirick Medicaments, both internal and external; both commended by Practitioners, and frequently used by the common People; out of the almost infinite number, whereof I shall here set down such as are the choicest. And among these Medicines, may be reckoned such things as were before propounded, to amend the evil quality of the Liver and Mesentery which is wont to make long Agues: whereunto, these things following may profitably be added.

And in the first place, Spirit of Sulphur in a legitimate Tertian, or one very near Legitimate, after bleeding and purging being given with Purslain Water in the vigor of the Fit, doth powerfully extinguish the heat of the Feaver; and if the Humor be thin, drives the same out by sweat, that there remains no matter for a new Fit, and so is the Disease sometimes pluckt up by the roots. It is given from half a scruple to a scruple, with four ounces of Purslain Water.

And sometime the said Spirit is mingled with Salt of Wormwood, which is also of great Efficacy in the Cure of Agues, the Consumption is thus.

Take Salt of Wormwood half a dram, Spirit of Sulphur a scruple, Carduus water four ounces; mix them. Let the Patient take it when the Fit approaches, and be covered with many Clothes.

Some affirm, that the juyce of Plantane Clarified and drunk to the quantity of four ounces an hour before the Fit, doth Cure a Tertian Ague. Some give it with Vinegar and Saffron after this manner.

Take of the juyce of Plantane four ounces, Vinegar of Roses half an ounce, Saffron three grains; Mix them, and give the Patient to drink two hours before the Fit.

Manardus prefers a Decoction of Chamomel, or the distilled Water thereof, to the quantity of four ounces, two hours before the Fit.

A Medicine commonly used, and often successful, is a little Potion made of Rose-Water, Plantane-Water and Aqua Vitæ, of each a spoonful, given before the Fit.

These following are outwardly applied.

Take Leaves of Hyssop and Tansie cut small, of each a pugil: Mirrh two drams; Mace, Nutmegs, Cloves and Cinnamon, of each half a dram: Venice Turpentine and Juyce of Tansie, of each one ounce: Mix all, and spread them upon a Rose-Cake fryed in a frying-pan with Canary Wine, which being covered with a Linnen Cloth, must be applied hot to the Region of the stomach, an hour before the Fit. Or,

Take Wormwood and green Mint, of each a pound: Crust of Bread toasted and steeped in Vinegar half a pound; pulp of Quinces, or Conserve of Quinces made with Honey two ounces: Mastich half an ounce, Mace and Nutmeg, of each two drams: Let all be beaten, and lustily wrought together with Oyl of Quinces. Make hereof a Cataplasm to be applied before the Fit. It provokes sweat, and takes away the Pains of the Stomach. Or,

Take Nutmeg, Cloves, Cinnamon, of each three drams: Mirrh and Ginger, of each two drams; make all into a Powder; mix it with Liquid Pitch, and make thereof a Plaister for the Stomach.

Also this following Cataplasm may profitably be applied to the Liver.

Take white Sanders and Red, of each one dram: Barley meal two drams, Aloes half an ounce; Flowers of Violets and Roses dried, of each one dram: With Juyce of Wormwood and Vinegar

Vinegar make a Cataplasm, to be applied to the Region of the Liver one hour before the Fit.

Neither are those Medicines wholly to be rejected which the common people are wont to apply unto the Wrists of such as have Agues. For not only the Opinion of People is hereby satisfied, who conceive that many are cured with these Remedies; but somewhat they may effect, by communicating their vertues unto the Heart by those notable Arteries which are scituate in the Wrists. The chief of which kind of medicines are these that follow:

Take Leaves of Plantane, Celandine the great, of each one handful; Cobwebs, Nettle Seeds, Soot from the Chimney, and common Salt, of each one dram: the strongest Vinegar as much as shall suffice. Make of all a Cataplasm to be applied to the Wrists a little before the fit, and to be repeated fresh three or four times.

Mous-Ear beaten with Salt and Vinegar, is by some accounted of great efficacy, being applied to the Wrists before the fit.

Of some, the smallest sort of Housleek or Mous-ear is commended, being used after the same manner.

Others commend the Leaves of Shepherds-purse beaten with Salt and Vinegar.

Platerus applies unto the Wrists the inner Bark of the Nut-tree steeped in Vinegar; which he saith had been by him used with success.

Finally, Others apply such things as are apt to blister the Skin, as Garlick, Onions, Crow-foot, and the like; which are less safe than the former, and very troublesom to the Patient.

Chap. 4. *Of a Quotidian Feaver.*

A Quotidian Ague is so called, because its Fits do return every day. Wherein it agrees with a double tertian, and a triple Quartan, but is distinguished from them by signs proper to its self. This Feaver is most rarely seen, so that among six hundred Patients that have Agues which come every day, scarce one of them is troubled with a Quotidian or every-day-Ague.

CAUSES.] This Ague is caused by flegm putrifying in the first Region of the Body: And therefore all such things as multiply flegm in the Body, may cause this Ague, such as are a cold and moist distemper of the Bowels, old Age, Childs Age, an idle life, Autumn Season, Meats cold and moist, long Sleeps and such like.

DIAGNOSTICK.] The Diagnostick Signs are such as testifie flegm to abound in the Body; as greatness of bulk, softness and fatness, white colour or pale, dull sence, profound sleep, and dreams of Waters. Also this Feaver for the most part comes in the night, and that without shaking, only with a coldness or light shivering, because the Morbifick matter being benign, and not much an enemy to Nature, doth less provoke her; and therefore the heat is not suddenly drawn inward as in a Tertian Ague, but retires by little and little. The time of Coldness being over, Heat is slowly and unequally kindled, so that the Patient feels sometimes heat, and then cold, and then heat again. Also the heat is mild, and not at all scorching, and thirst little. The Urines are at first white, thin and undigested; and in the process they appear more thick, and better coloured. The Pulse is small, seldom and slow. The Parts about the short Ribs do swell, and are commonly puffed up, and distended. The fits do commonly last twelve hours, and do not end but so as to leave some Feavourish heat behind them; because this Feaver is like a fire of green Wood, which is both long in kindling, and leaves much smoke behind it. Sometimes the fit is extended to twenty four hours, and it seems to be a continual Feaver.

Now these Signs are very variable, and appear more intense or remiss, according as the flegm is either simple, or mingled with other Humors; and likewise according to the different kind of the flegm which putrifies. So that according to *Galen* in his Book of Plenitude, Cap. 11. Salt flegm makes the Patients thirsty; acid or sowr flegm makes them hungry; sweet flegm makes them sleepy; tastless flegm makes them without appetite to meat: and likewise Feavers which are caused by acid or Glassie flegm, are wont to come with a shaking fit.

This Feaver is wont to be perpetually long, because of the thickness and contumacy of the Morbifick matter, and lasts forty daies, and sometimes three or four moneths. Neither is it without danger, seeing it may degenerate into a Cachexy, Dropsie, Lethargy, and other grievous Diseases. The longer or shorter durance of this Feaver is known by the signs of this Crudity and Concoction, and also by the Evacuation, which for the most part Nature endeavours by Vomit, Stool or Sweat: For those Evacuations appearing shew the Disease shorter: but if Nature endeavour no Evacuation, the Disease will prove the longer.

PROGNOSTICK.] A Quotidian Ague that comes in the day time, is less dangerous than that which comes a nights, as *Hypocrates* doth teach us in 3. *Epidem.* Sect 5. *T.* 64. He calls the former a Diurnal, the latter a Nocturnal. The reason of which Prognostick is, because

that the Diurnal have longer fits; for reaching unto night, in which the pores of the Skin are closed, the putrid vapors are kept within, not having freedom to breath forth, by which means the fits are lengthened, and as *Hypocrates* himself saith, do very often bring the Patient into a Consumption. Add hereunto, That seeing the Intermission happens in the night, we are forced to give the Patient meat in the night, which is unseasonable, and hinders the Patient from sleeping; by which means great weakness is caused, and the Patient is much hurt, and the Functions of the Body quite put out of frame.

CURE.] The Cure must be in a manner the same with that which was propounded for a bastard and lingring Tertian, yet so as that among such things as prepare the Humors, and open Obstructions, we make choyce of such, which have a greater power to attenuate and cut the Humors. Also in this Feaver a special care is to be had of the Stomach, which for the most part is grievously afflicted; and therefore must be recreated with strengthening Medicaments, both given in, and outwardly applied. The Cataplasm of Mint and Wormwood, propounded in the Cure of a Tertian Ague, is very good in this case.

Zacutus Lusitanus propounds two Medicines; with which he glories that he had vanquished most stubborn quotidian Agues. The one is a Decoction of Chamomel, made after this manner:

Take Flowers of Chamomel three pugils; Tops of Roman Wormwood two pugils. Boyl all in three pints of Water to a pint and an half. Add to the strainings four ounces of Sugar. Let the Patient drink five or six ounces every morning.

The other is a Decoction of China and Guajacum drunk twenty five daies together; which though Physitians are afraid to use in such Feavers as these, because of the over-great heating and drying Faculty; yet is it mightily commended by such as have writ whole Books of the Spices and Drugs of *India*. Yet we must remember, that *Zacutus Lusitanus* practiced Physick in a Country cold and moist where these Medicines may more safely be used. And therefore in other Countries that are hotter, they must not be given save unto very Flegmatick and Cachectical Bodies.

Chap. 5. *Of a Quartan Ague.*

A Quartan Ague is that which hath its Fits returning every fourth day, and it is caused by Melancholy putrifying in the first Region of the Body.

DIFFERENCES.] Now Melancholy is of two sorts; Natural, and Preternatural. The Natural is bred of the thicker and more earthy part of our Nourishment, being cold and dry. The Preternatural is caused by adustion of Choler, and is therefore hot and dry. Hence arise two sorts of Quartan Agues; for that which is bred of Natural Melancholy, is called a legitimate quartan; that which is bred of Preternatural Melancholy, is called a bastard quartan. Howbeit, the bastard quartan may also come of Natural Melancholy, being mingled with some portion of Choler.

Again, A quartan Ague is either Single, Double or Triple. A Single quartan is when one Fit alone comes every fourth day. A Double is when two Fits happen upon two daies one immediately after the other, and the third day is free. A Triple quartan is when the Fits come every day, as they do in a Quotidian, and in a double Tertian. Now these Double and Triple Quartans come of Melancholy putrifying in divers parts of the Body.

SIGNS. The Signs to know this Ague by, are first, such things as argue that Melancholy abounds in the Patient. Unto which must be added the coming of the Fit upon the fourth day, which is the peculiar sign. Also the form of the Fit differing from the Fits of other Agues, doth discover this Disease. For it begins with yawning and stretchings, together with heaviness of the whole Body; after which follows Cold, and then shivering and shaking, in which the Patients seem to have their Bones broken. Also the heat is kindled by little and little in a cold and thick matter. The Pulse is seldom and slower than in other Feavers. The Urines are at first white, thin and watry; but in the progress they are more coloured, and thicker. Now these signs appear in a legitimate Quartan. But in a bastard Quartan, the vehemence of the Symptoms being greater, doth argue the Humour to be thinner and hotter. But a bastard Quartan is not distinguished from a legitimate herein alone, in that in a bastard Quartan, the heat, thirst, watchings and other Symptoms are more vehement; but in that the legitimate begins of it self, without any Feaver foregoing; but a bastard quartan succeeds other Feavers and Agues, by reason of the adustion of the Humor which caused those Diseases, by means of which adustion, it degenerates into Preternatural Melancholy.

A Double Quartan is easily known by the Course of the Fits. And a Triple Quartan is distinguished from a Double Tertian, and a Quotidian, not only by the Signs of Melancholy abounding, and by the form of the Fits; but also because it was first a Single or a Double Quartan, before it came to be a Triple Quartan. For very rarely, or never doth a Quartan Ague begin with a Triple; but a Simple or Double Quartan degenerates into a Triple.

As

PROGNOSTICK.] As for what concerns the Prognoſtick; this kind of Ague is wont to be longeſt of all others; and that which begins in the Fall of the Leaf, continues all Winter commonly, and goeth not away till the Spring come. Yea, and ſome Quartans continue a year or years. Summer Quartans are the ſhorteſt. In all of them we muſt have a continual eye to the ſigns of Concoction, which ſignifie the ſolution of the diſeaſe to be at hand; and with theſe, for the Patient to make black Urine is a good token.

A Legitimate Quartan is longer than a baſtard Quartan, becauſe the former proceeds from a thicker, the latter from a thinner humor.

This kind of Ague is wont to be very ſafe from danger, eſpecially the legitimate, being accompanied with no grievous affection of any of the Bowels. But the baſtard Quartan is more dangerous; and if the Liver, Spleen, or any other part be grievouſly damnified, it degenerates into a Dropſie.

Aged perſons above ſixty years, being taken with a Quartan Ague, do for the moſt part die of it: becauſe their natural heat is too weak to overcome ſo contumacious an humor.

An intermitting Quartan, being changed into a continual, is for the moſt part deadly. Becauſe that Feaver whoſe motion was outward, is changed into one whoſe motion is inward. Which moſtly falls out in the Winter, the cold meeting with the humors which were but outward, and beating them back into the innermoſt Cloſets of the Body. The which alſo comes to paſs by unſeaſonable uſe of ſharp and vehement purges. For thereby of ſimple Quartans, Double, Triple and Continual are generated.

A Quartan Ague coming upon one that hath the Falling-Sickneſs, cures the ſame, according to *Hypocrates* in the 70. Aphoriſm of the 5. Section, *Thoſe that have Quartan Agues are not much troubled with Convulſions: And if having firſt Convulſions, a Quartan Ague followes, they are freed from their Convulſions.* Now the reaſon which *Galen* in his Comment gives hereof; is becauſe the thick matter which cauſed the Convulſion, is by the long heat of this Ague, attenuated and digeſted. Alſo by the ſhaking of the Body in the cold Fits, the ſaid humor is more eaſily ejected. We muſt alſo add, That the evil Humors lurking in the Brain and other parts, as alſo in the Veins, is transferred to the *Hypochondria* and more ignoble parts, where the Melancholy Quartanary Humors are ſeated, and ſo leaves the parts aforeſaid.

A Bloody Flux coming upon a quartan Ague, tends to health, according to *Hypocrates* in the 48. Aphoriſm of the ſixth Section, *To ſuch as are Splenetick a Dyſentery is good.* Now in a quartan Ague, commonly the Spleen is miſaffected, and a melancholy humor is common to a quartan Ague and a miſaffected Spleen: but this muſt be underſtood of a ſhort Dyſentery, for a long one is wont to be mortal; as we have it in the 43 Aphoriſm of the ſaid Section, *Such as being troubled with the Spleen have a Flux of the Belly with pain, if it turn into a long Dyſentery or Bloody Flux, they fall either into a Dropſie or a Lientery, and die.*

To bleed at the Noſe in a quartan Ague is a very bad ſign. Becauſe the humor which cauſes a quartan is too thick and too cold to be voided that way; and becauſe ſuch bleeding is ſymptomatical, and if it continue, will breed a Dropſie; it muſt preſently be ſtopped by opening the *Baſilica* Vein, out of which the putrid Blood may flow, becauſe the pure Blood comes from the Noſe.

CURE.] The Quartan Ague hath a double Cure according to the two kinds thereof. For the remedies uſed in a baſtard quartan, muſt be far different from thoſe which are uſed in a Legitimate one.

And that we may begin with a Legitimate Quartan, we muſt preſently ſet our ſelves to vanquiſh the cauſe thereof, not regarding the Feaver. And ſeeing the cauſe thereof is an Humour cold and dry, thick and earthly; we muſt uſe Medicaments that do heat, moiſten and attenuate. Alſo the Peccant Humour muſt be at ſeaſonable times evacuated, which notwithſtanding will require a long time to do; becauſe of the extream contumacy of the Humour and length of the Diſeaſe. But before theſe Medicines be uſed, we muſt appoint the Patient a convenient Diet. Let the Patient therefore uſe meats of good juyce, eaſie to digeſt, of thin ſubſtance, and moderately heating and moiſtening; as fleſh of young Animals and Mountain Birds, new Eggs ſoft boyled, Fiſhes that are taken in ſtony Rivers. In the ſtate of the diſeaſe we may allow the Patient Salt Fiſh, Capers and Olives, *Galen* 1. *ad Glauco.* Grants likewiſe Pepper and Muſtard. Among Herbs, Borrage is commended and Bugloſs, Pimpernel and Spinach, Fennel and Parſly Roots, but eſpecially Turneps, which muſt be firſt boyled in Water, and afterwards in fat Broth, which is very good for ſuch as have the Quartan. *Crato* in his Councels Collected by *Scholtzius*, Brags that he had Cured many of the Quartan Ague, by the ſecond Broth of Turneps ſeaſoned with Butter and Sugar. Of Fruits, Apples and ſtewed Prunes, Raiſins of the Sun, fat Figs, Almonds,

monds, Dates, Pine-kernels are good. And finally, to Spice their Meats, let them use Cinnamon, Nutmeg and Saffron.

Let the Patient abstain from Meats which are thick of substance and clammy, and are long in passing through; such as the Flesh of Swine, Beef, Deer, Hares and Water-fowl, from Pease and Beans, Coleworts, Course Branny Bread, Cheese, Nuts, Walnuts and Chesnuts; from Flesh much Salted, or dryed in the Smoak; from Fruits, Raw Herbs, from Vinegar, Verjuyce, because they are thought as all other sowr things to ferment Melancholy and make it work.

Let their drink be small Ale or Beer of moderate strength and meanly hopped, neither new nor hard, Pure and well Clarified white Wine or Clarret that is not strong, with Water in which the Bark of Tamarisk or the Leaves of Agrimony have been steeped, or a Decoction of *Sarsaperilla*, or Barley Water that hath Steel quenched in it.

Let them eat sparingly, no more then may barely preserve strength; for too large feeding breeds Crudities which makes the Disease of long continuance. But above all, they must be very spare in drinking, because nothing makes this Disease more rebellious and hard to Cure then over much drink and moist things, for they fill and swell the Spleen. *Crato* forbids all use of drink in the Fit, which to forbear doth much, as he sayes, help the Cure. On the Fit-day, the Patient must eat six hours before the Fit comes. And afterward nothing must be taken till the Fit be over. Long sleep is good, because it moistens, but it must be forborn in the beginning of the Fit. On the dayes of Intermission light exercise before meat, is good; or in place thereof, frictions of the whole Body, after the Patient hath been at Stool. If the Patient be costive, a Clyster or Suppository must be given. Finally, let the Patient be as cheerful as may be and avoid sadness.

The Patient's Diet being thus ordered; first a gentle Purgation must be administred, by a Clyster and a purging Medicament. The Clyster may be thus made;

Take Roots of Buglos two ounces; of the four Emollient Herbs, Mercury and Beets, of each one handful; Fat Damask Prunes five pair; of the four larger cold Seeds and Annis Seed, of each two drams; Epithymum three drams. Boyl all to a pint and an half: in the strained Liquor dissolve Catholicum one ounce; Oyl of Violets and Chamomel, of each one ounce and an half; Red Sugar one ounce. Make of all a Clyster, which must be given the day before the following Potion, at a seasonable time.

Take Senna half an ounce; Annis seed a dram; Leaves of Borrage and Fumitory, of each one handful; Liquoris three drams. Boyl all to three ounces: in the strained Liquor dissolve Manna and Syrup of Roses, of each one ounce. Make all into a Potion.

Galen in 1. *ad Glauco. Ch.* 11. Bids us give only gentle and benign Medicaments in the beginning of this Ague, otherwise, it is to be feared, that if we use stronger Medicaments of a simple Quartan, we shall make a Double, a Triple or a Continual Feaver.

After the first Purge aforesaid, Blood must be drawn from the *Basilica Vena* of the left Arm. Yet, if the Liver be affected, it may be drawn from the right Arm. And their Opinion is Ridiculous, who say that we must expect Concoction before we let Blood, because then the Blood will be more thin and apt to flow: for it is better digested and prepared, if first some Quantity thereof be taken away. Neither must we give ear to them which say, That Blood-letting is not to be allowed of in a Quartan Ague, unless redundancy of Blood do shew it self by the Swelling of the Veins and by other signs. For there is evermore at the beginning a *Plethora ad Vires*, viz. Such a fulness of Blood as the Strength of the Patient cannot manage, unless a Quartan do follow some other long Feaver. But that Precept of *Galen* formerly mentioned in 1. *ad Glauconem*, is worthy of all Commendation, which sayes, that if the Blood which first comes away be black and impure, that then the greater quantity is to be taken away: but if it be Red and Pure, little must be taken, and the Patient must not be let Blood any more. The well-dayes are fittest both for bleeding and purging. Yet some let Blood upon the Fit day, five or six hours before the Fit; which is not amiss, because the Humors beginning then to be moved, are more easily drawn out. *Zacutus Lusitanus* sayes, That it is very good to let Blood when the Moon is in the Full. For then, by reason of the Moons influence, that Earthly Melancholick Humor doth boyl and become more fluid and apt to come away with bleeding. And he doth Testifie that many have by bleeding at that time been helped, and some perfectly cured, who could not by any other means receive help. But *Botallus*, contrary to the mind of *Galen* and all other Physitians, doth aver, That frequent Blood-letting doth cure the Quartan Ague, yea, when it threatens a Dropsie; and he endeavours to confirm his Opinion by Reasons and Examples. Which notwithstanding is to be rejected as a Paradox, seeing the Refrigeration of the whole Body caused by much bleeding, makes the Morbifick matter more thick and contumacious.

The Flux of the Hemorrhoids is very good in Quartan Agues, and many are thereby Cured. For seeing the Hemorrhoid Veins are Branches of the Meseraick Veins, in which the matter of this Disease is contained, when they are opened they Evacuate the immediate causes of this Disease. If therefore

therefore a Flux of the Hemorrhoids happens in such as have been accustomed thereunto, it must not be stopped. If it be too sparing, it must be furthered. As also if Nature seem to incline that way (which is known by itching of the Fundament, and by some drops of Blood coming that way) the Blood must be made to come by application of Leeches.

But in such as have not been used to have their Hemorrhoid Veins opened, after bleeding in the Arm, it is good to let them blood in the Ankle Vein; by which oftentimes the Ague ceases: or at least that bleeding, with other Remedies, will hasten the Cure; especially in Women whose Courses are stopt, or flow not sufficiently.

The opening of the Vein between the little Finger and the Ring Finger, called *Vena Salvatella*, is approved by the Antients, and many later Physitians, who said it cures the Quartan Ague. But very many others reject this Conceit, as being founded upon no reason, because the foresaid Vein is a Branch issuing from the Arm Veins. Yet being commended by others with many Experiments, I conceive it ought not wholly to be neglected. Some hold, It ought to be opened in the Conjunction of the Moon with the Sun; others, when the Moon inclines two hours before the Fit, at three several times, in three immediately succeeding Fits, which in some persons happened very well.

After these first Evacuations, we must bend our study to concoct and prepare the Humours, with certain Juleps, compounded after this, or some such manner:

Take Roots of Asparagus, Bruscus, Cichory, Bugloss steeped in white Wine, of each one ounce; Bark of Tamarisk half an ounce; Leaves of Borrage, Bugloss, Ceterach, Maiden-hair, Fumitory, Germander, Ground-pine, of each one handful; Liquoris one ounce; the three Cordial flowers, of each one pugil. Boyl all to a pint and an half. In the strained Liquor dissolve Syrupus Bizantinus, *and Syrup of Maiden-hair, of each two ounces. Make thereof a Julep to be taken at four times, four mornings together. Which must also be continued may dayes, for the matter being contumacious, requires long preparation. Or if the Patient be nice, and squeezy, Broths must be made of part of the aforesaid Simples, chusing such as are most grateful to the taste, whereunto, as also to the Juleps, Cream of Tartar may profitably be added.*

With these Preparative Medicaments, between whiles, Purgatives must be given; so that every third or fourth day the Patient must take a Purge, with this Caution, That as long as the Matter is very crude, we use mild Purgatives: and when Concoction begins to go well forwards, we must then give such Purgers as are a little stronger. Now the materials for these Purgations are very well known, so that we need not reckon them up.

It is sometimes good to prescribe an Apozem both Purgative and Preparative, for four or five Doses, that a good part of the Morbifick matter may be cleansed away. Which Apozeme may be made of the Materials of the foresaid Juleps, adding Purgatives thereunto. But if the thickness and contumacy of the Humors, with the cold distemper of the Bowels, do seem to threaten that the Disease will be long, and bring a Dropsie, we must then fly to such Medicaments as do powerfully cut and divide the said Humors; of which this following Apozeme may be compounded:

Take of the five opening Roots steeped in white Wine, of each one ounce; Enula Campana, Gentian, Aristolochia, and Asarum Roots, of each half an ounce; Leaves of Germander, Agrimony, Hops, Borrage, Ceterach, Wormwood and Centaury, of each one handful; Liquoris and Raisins stoned, of each one ounce; Senna one ounce and an half; Epithymum one ounce; Agarick newly Trochiscated three ounces; Ginger and Cloves, of each one dram. Boyl all to a pint and an half. In the strained Liquor dissolve Syrup of Cichory with Rhubarb five ounces; Troches of Capers and Salt of Wormwood, and of Tamarisk, of each one dram. Make of all an Apozeme for five Doses to be taken in the morning.

In this Chronick and lasting Disease, an obstinate Perseverance is necessary, that the perpetual vicissitude of Medicines may concoct and purge away the Cause thereof. For this is in a manner the only Cause why many that have Quartan Agues remain uncured, because after the use of a few Medicines they grow weary, and wholly reject and disdain all the rest.

For a continual Use thereof, certain Purgatives are always to be in a readiness. Which may be made in the form of a Magistral Syrup, or of Pills, or in any other form.

A Magistral Syrup may be made of the Materials of the Apozeme aforesaid, adding a triple quantity of the Purgative Ingredients.

Pills for frequent use may be thus compounded:

Take Aloes diligently steeped with the Juyce of Wormwood, half an ounce; Gum Ammoniack dissolved in Vinegar, and afterward thickned, two drams: choyce Mirrh a dram and an half: Gummy Turbith and Agarick newly made into Cakes, of each two drams: Diagridium one dram: Salt of Wormwood and Tamarisk, of each two scruples: Saffron half a scruple. With Oxymel simple, make all into a Mass of Pill-stuff. Let the Dose be half a dram, or two scruples, twice in a Week.

If

If the Patient be of an hot Constitution, these following Pills may be used.

Take Polypody of the Oak half an ounce; Roots of Asarum, and seeds of Broom, of each one dram: Cristal of Tartar one dram and an half: Flowers of Bugloss and Borrage, of each half a pugil. Boyl all in a sufficient quantity of Water; of the Liquor strained and very well clarified, take half a pint: Juyce of odoriferous Apples very well clarified, four ounces. Infuse therein Senna one ounce: Turbith and Agarick, of each three drams: Mace, Cloves, Cinnamon and Epithymum, of each one dram. Let them digest together three dayes in Balneo Mariæ, *then strain and press them out. And add yet of Extract of Aloes made with Endive and Sorrel Water one ounce: Mirrh dissolved in Wine over the fire and strained, two drams: Salt of Tartar one dram. Let all evaporate and thicken over a gentle fire, adding towards the conclusion of the Pouders of* Diarrhœdon Abbatis, *and* Lætificans Galeni, *of each one scruple: Salt of Wormwood and Tamarisk, of each half a dram: Extract of Saffron half a scruple. Make a mass of Pill-stuff for the use aforesaid.*

Also a Purging Medicament very familiar, and most easie to prepare, but very profitable, may be made of three ounces of the Decoction of Wormwood, wherein two drams of Senna hath been infused, which must be taken now and then.

These Purging Medicines are wont to be given the day before the Fit, becaûse the Patients are then stronger than at other times. Yet many contend that they ought to be given before the Fit, because the matter being agitated by the fit, is made more apt for Expulsion. This Opinion they underprop with the Authority of *Hypocrates* in his Book *de Affectionibus*, who would have a Medicine Purging downwards to be given at the beginning of the Fit. And although in *Galens* Judgment, that is none of *Hypocrates* his Writings, but of his Son in Law *Polypus*; yet they conceive it ought not therefore to be of no Authority, seeing *Polypus* also was a very Learned Man, and frequent Experience confirms this Opinion; as the said Experience is set down by *Arculanus*, *Genitilus*, *Amatus Lusitanus*, and others, who have ordered that the Purging Medicament should be given four hours before the Fit. Which Practice notwithstanding hath need of much wariness and prudence in the Physitian, seeing the shaking fit intercepts the evacuation, and in the Ague Fit the Humors are moved with a motion quite contrary to that wherewith the Purge doth move them; by which means great disturbances may fall out in the Patients Body. Wherefore this course is not to be followed but in strong Bodies.

The Consent of Physitians is greater and more general touching the giving of Vomits in the beginning of the Ague-Fits, becáuse Nature is at that time more prone to that kind of Evacuation. Neither is it to be doubted, That a Vomiting caused in the beginning of the Fit, and at the same time often repeated, doth make the Disease gentler and shorter. The Materials of Vomitories are set down in our Cure of a Tertian. But in a Quartan Ague, *Asarum* is preferred before the rest, one dram being given in pouder, in white Wine, and three or four times repeated.

In the Intervals of purging, Clysters must frequently be given, which do accustom Nature to expel the hurtful Humors into the Guts, and do by little and little bring away some of the Morbifick matter contained in the Meseraick Veins.

The Disease continuing (as for the most part it is long and lasting) we must sometimes rest, and abstain from Physick a moneth, or thereabouts, that Nature in the mean time may gather strength being wearied with continual use of Medicaments, and may set her self to concoct the Morbifick matter. And afterward we must return to our Preparatives and Purgatives.

Howbeit, in a long Ague, we must not alwayes use the same medicaments, lest Nature be overmuch used thereunto, and the Patient become weary of them. Also becauſe from more gentle Aperitives and Purgatives, we must pass on to such as are stronger. Various sorts of Purgatives have been already propounded. And these following Aperitives besides the Apozems aforesaid, and the Juleps, may be used in the progress of the Disease, when the Signs of Digestion begin to appear.

Take white Wine three pints; Enula Campane Roots three ounces: Bark of Caper Roots half an ounce: Tops of common Wormwood dried one ounce. Infuse them three dayes in Balneo Mariæ: *Keep all together without straining, and give of this Wine to the Patient two or three ounces in the morning, two hours before meat.* And these following Pills may be used either alone, or with the said Wine:

Take Roots of Gentian two drams; round Birthwort Roots one dram and an half; Mugwort one dram: Briony dried three drams: Mirrh and Saffron, of each one dram: Asarum Roots two drams: Aloes one ounce: With Oxymel of Squills make all into a Mass of Pill-stuff. Let a dram be given every day by themselves, or a little before the taking of the Wine aforesaid.

To these Pills, Steel prepared may profitably be added, if the Patient be able to walk after the taking of them. For the use of Steel in all Chronick Feavers is very profitable, because it potently opens Contumacious Obstructions, which are wont to foster those Diseases.

Or,

Or to open and ſtrengthen at once, the following Electuary may profitably be preſcribed:

Take Conſerve of Elecampane Roots, Conſerve of Wormwood, and Maiden-hair, of each one ounce; Preſerved Citron Peels half an ounce; Confectio Alkermes three drams; Preſerved Myrobalans, two: Pouder of Diarrhodon Abbatis two drams; Salt of Wormwood and Tamarisk, of each one dram; Saffron two ſcruples. With Syrup of preſerved Citrons, make all into an Opiate: of which let the Patient take the quantity of a Cheſtnut every morning two hours before meat. Or if in the morning the Patient take ſome other Medicine, then may the Electuary be taken two hours before Supper.

To the ſame intent is commended as a moſt excellent Remedy, the Extract of Germander mixt with Salt of *Tamarisk* made into Pills.

Add hereunto, Diſcuſſers and Diaphoreticks, which are very uſeful to diſcuſs the reliques of the declining Diſeaſe, when ſigns of Concoction appear. For they do not only diſcuſs the ſaid reliques, but they do likewiſe correct that diſtemper which is bred by ſo long a Diſeaſe, and amend the ill habit of the Body, and ſtrengthen the Stomach, Liver, and other Bowels, weakned by the length of the Diſeaſe. Among theſe Medicaments, Venice Treacle challengeth the firſt place, being by older and later Phyſitians commended to this Uſe. It is given one hour before the Fit, one dram in weight, with Wine, or in a Decoction of Germander. Or if its heat be feared, it may be given with a Decoction of Agrimony, or with the Juyce or Water of *Plantane*. This Medicine muſt be repeated before divers Fits one after another. It may alſo be given in the mornings for ſome dayes together on the well-daies. But a little before the Fit it operates happily, becauſe it hinders the encreaſe of cold, and doth more commodiouſly diſcuſs the Humor, which is the cauſe of the Fit, now beginning to work in the Veins, and by this means it diminiſheth the Fit; and if the Morbifick matter be little, take it quite away. Here, notwithſtanding, great Caution is to be uſed, leſt Treacle or other ſuch hot Medicines ſhould be given when the humors are yet crude, for they diſſolve the putrid humors, from whence ariſeth a confuſion in the Body, and an encreaſe of the Ague-Fits; ſo that a ſingle Quartan comes to degenerate into a Double and Triple, yea, into a Continual Feaver. As it happened to *Enedemus* the Peripatetick, as *Galen* relates in *Lib. de Præcog. ad Poſth. Cap.* 2. & 3. in whom a ſingle Quartan, the Phyſitians of *Rome* having given him Treacle unſeaſonably, was changed into a Triple. Howbeit, afterwards when the ſign of Concoction appeared, *Galen* gave him of the ſame Treacle, and cured him.

Among other Diaphoreticks, ſome commend the Roots of China and Sarſaperilla, whoſe firſt and ſecond Decoction being given twenty daies together, doth ſometimes cure contumacious Quartans. But they work more effectually, if with the Primary Decoction, Purgatives be mingled.

Other Remedies are alſo given before the Fit, which are accounted ſpecifical, and appropriate to this Ague, and being given towards the declination, they do very often keep back the Fits, and cure the Quartan. The chief of this ſort, are theſe which follow:

Take green Leaves of Plantane one handful; Green Sorrel half a handful; Vinegar and Treacle, of each three ounces. Diſtil them, and let the Patient take of the diſtilled Liquor three ounces, half an hour before the Fit. Or,

Take Sugar-Candy three drams; Ginger two drams; Camphire one dram. Make all into a Pouder. Give one dram in warm Water.

Ten Grains of Saffron in Pouder, given with white Wine before the Fit, doth much weaken the ſame.

Seed of wild Rue given before the Fit in White Wine, cures.

Heurnius aſſures us, That with the following Troches many have been cured, even in Winter, with once taking.

Take Seeds of Rue, Parſley, Mirrh and new Andromachus Treacle, of each one dram; Opium half a ſcruple: Make all up into little Cakes or Troches. And let the Patient take one of thoſe Cakes in Water, before the Fit. Narcoticks do indeed much abate the Fits, but unleſs the greateſt part of the Morbifick Humor have been before abated, and the Obſtructions much leſſened, they may do hurt, becauſe they may retain the vitious Humors in the Body, and breed Obſtructions and other worſe Diſeaſes. But given in a ſmall quantity, and mingled with things which open and cut, as in theſe Troches, they can do leſs hurt.

Alſo to reſtrain the Fit, gentle Purgers are profitably given an hour before it comes, which do revel the humors, more by ſoliciting and provoking Nature, than by their purging. To which intent, ſuch as theſe which follow are preſcribed.

Take Senna, Polipody of the Oak, Thyme, Epithymum, of each one dram; Borrage flowers a pugil. Make a Decoction to three ounces. Give it an hour before the Fit. Or,

Take Senna three drams; Turbith one dram; Cinnamon half a dram; Saffron and Ginger,

of each ten grains: Sugar, the weight of all the rest. Make of all a Pouder, divide it into three parts. Give the Patient one part before the fit, in white Wine.

Quercetanus in his Dispensatory doth exceedingly commend *Camillus* his Pills of Sagapenum; of which he gives only one at the beginning of the Fit for divers dayes together; and a little after he anoints their Back-bone with a Liniment composed of Treacle, *Aqua vitæ*, Oyl of Bays, or of Spike. And two or three hours after the Pills are taken, he gives Broth with opening Roots, Borrage, Bugloss, Thyme, and an odoriferous Apple boyled in it.

Now these anointings of the Back-bone are very good to mitigate the cold fit, and must often be used, although the foresaid Pills are not used. For they are frequently useful, when the shaking fits are vehement and importunate. And these Anointings are made, not only with the foresaid, but with very many other Medicaments; as with Oyl of Dill, Chamomel, Orris, Costus, Rue, the Peppers and other hot things, with *Aqua vitæ*, Treacle, Cloves, Castoreum, Mustard seed, Pepper, and other things mixed therewith. Now these Liniments are more effectual, if the Back-bone be anointed therewith by the fire-side, an hour before the coming of the fit; and the sick party be presently thereupon conveyed to a hot Bed, and hot Tiles sprinkled with odoriferous Wine, and wrapped in Linnen Cloths, be applied to the Soals of the Feet, and Palms of the Patient's Hands.

While the aforesaid Medicaments are used, a special care must be had of the Spleen, because that part is alwayes affected in this Disease: And therefore those Medicaments which ordinarily are prescribed for Obstruction of the Spleen, *viz.* Fomentations, Liniments and Plaisters may be long used.

Yea verily, and sometimes a Bath of luke-warm Water, after many Evacuations have been celebrated, is good, not only to mollifie the Spleen, but also to moisten the whole body, and to further the Coction of the Morbifick matter. The Bath may be used on the dayes of intermission, giving diligent heed that it be no other than luke-warm. For if it should be hotter, it is to be feared lest the Humors being thereby dissolved, should run on a sudden into divers parts of the Body, and breed dangerous, very dangerous Imposthumes.

Finally, Such things as are wont to be laid to the Wrists, are not to be neglected, seeing Authors of good account do make some reckoning of them. For *Rondeletius* affirms, That he hath used this following Medicament, with great success.

Take Leaves of Elder, Sage, Doves-foot, Rue, of each half a handful; Marigolds a third part: a handful of Salt, and a little Wine. Beat all together, and apply to the Wrists before the Fit. Crato *applies the Roots of Nettles being beaten and moistened or steeped in Vinegar, to the Arteries of the Wrists, and of the Feet. And* Sennertus *relates, That a certain Citizen having had a Quartan Ague the whole Autumn and Winter, and at last being afflicted with most sharp pains in his left shoulder, by by the perswasion of a certain Woman, he applied Crowfoot to his Wrist, which raised a Push, and freed him both from his pain and Feaver.*

A Bastard Quartan is cured with the same Medicines in a manner, which have been propounded for the Cure of a Tertian; adding to the Decoction of Juleps and Apozems, such things as do peculiarly regard Melancholy adust. Whereunto may be added all the more temperate, and less heating Medicaments, which have hitherto been propounded for a Legitimate Quartan.

In the beginning therefore it is good to use Borrage, Bugloss, Fumitory, Hops, Sorrel, Cichory, Ceterach, *Scolopendria*, Agrimony and Odoriferous Apples: Whose Decoctions, distilled Waters, and sometimes their clarified Juyces may be prescribed in the form of a Julep, an Apozeme or Magistral Syrup.

But in the Progress of the Disease, it will be good to add unto the Simples aforesaid, the Bark of Caper Roots, of Tamarisk, Enula Campana, Polypodie, and Wormwood.

While the Patient useth these Preparatives, Purgatives are frequently to be interposed; which are to be given the day before the Fit, and to be repeated twice a Week. To which intent various forms may be prescribed. But for such as are Delicate, a Laxative Ptisan, *Syrupus de Pomis Saporis*, or the Broth of a Chicken qualified with Borrage, Bugloss, Pimpernel, and three drams or half an ounce of Senna, may profitably be given.

Blood-letting in the beginning must not be omitted, and so much quantity of blood must be taken away as shall correspond unto the Quantity and Quality of blood, and to the Age and Constitution of the Patient.

If the Disease prove long, when the fervor of the blood is abated, Vomits may profitably be administred; especially to such Patients as are troubled with Stomach-sickness and Vomitings in the beginning of their Fits. Among Vomitories good for a Quartan, *Asarum* (as was said before) is the principal, being given to the quantity of a dram in white Wine, and divers times repeated, if the Disease shall not after once or twice giving, be discussed.

Hereunto

Hereunto add Fomentations and Liniments applied to the parts under the ſhort Ribs, to correct the evil diſpoſition of the Bowels (which continually affords new matter for the Fits) and to ſoften and make thin the faſt, ſetled and impacted Humors: which may be preſcribed after this manner:

Take Roots of Marſh-mallows, of Lillies, of Enula Campana, Barks of Caper Roots, and the middle rind of Tamarisk, of each one ounce; Leaves of Mallows, of Marſh-mallows, of Pellitory of the Wall, of Borrage, Bugloſs, Pimpernel, Wormwood, of each one handful; Linſeed and Parſly ſeed, of each half an ounce; Flowers of Chamomel, Melilot and Dill, of each one pugil: make a Decoction in three parts of Water, and one of white Wine added towards the end. With which Decoction foment the Hypochondria, twice a day, far from meals.

Take Oyntment of Marſh-Mallows, one ounce and an half; Oyl of Lillies, Chamomel, Roſes and Wormwood, of each half an ounce: make all into a Liniment, which muſt be uſed after the Fomentation.

Or Oyls alone may profitably be applied to the ſame parts, laid on with Wooll.

And finally, a Bath of warm Water either alone or with Emollient and qualifying things boyled therein, or of Barley and Almonds as is uſual, will be very convenient to cure this Diſeaſe. For it corrects the diſtemper of the Bowels, rectifies the heat and dryneſs of black Choler, mollifies that which is hard, opens the paſſages and widens them, and digeſts crude Humors. Wherefore the frequent uſe thereof will be moſt convenient, uſing the caution before ſpecified.

Now the operation thereof will be exceedingly advanced, if preparative Medicaments and ſuch as open obſtructions be given to the Patient, upon entrance into the Bath. Among which the chief is a Decoction of Wormwood and *Enula Campana*, which is exceeding good to digeſt all contumacious humors, provided the over great heat of the Bowels do not diſſwade the uſe thereof. In which caſe it may be tempered by the mixture of other things fore recited.

And while theſe things are doing, gentle Purgations muſt be repeated, as we adviſed before. And when the Diſeaſe doth indeed decline, thoſe ſpecified Medicaments propounded in the Legitimate Quartan, may here alſo be brought into uſe.

In the whole courſe of the Diſeaſe, we muſt be careful of the Breaſt, leaſt a Conſumption betide the ſame, for the Humor offending in this Diſeaſe is of a corroding quality.

Chap. 6. *Of Compounded or Complicated Feavers, and particularly of a Semi-Tertian.*

DIFFERENCE, and *CAUSES.*]

Galen in his Second Book *de Criſib.* cap.7. and 9. and in his Second Book *de Differ. Feb.* cap.7. and *Avicen. Fen.* 1. *Lib.*4. *Tract.*4. Cap.16. Do propound many Compoſitions of Feavers: Namely, when putrid Feavers are compounded with non-putrid; as when an Hectick is joyned with a putrid; or of a putrid with a putrid, which is done many wayes, *viz.* Either continual Feavers being complicated with continual or intermittent with intermittent, or continual with intermittent.

The Compoſition of two continual Feavers, is a thing controverted among Authors, and a man ſhall hardly obſerve it in the courſe of his Practice.

An intermitting Feaver or Ague is complicated with another intermittent, either of the ſame kind, or different: compound intermittents of the ſame kind are a double and triple Tertian, and a double or triple Quartan, which have been expounded in their proper places. Of ſeveral kinds are when a Tertian is compounded with a Quotidian or Quartan; which alſo is very rarely ſeen in Practice.

Intermittents are complicated with Continuals two ways, *viz.* An intermittent Tertian with a continual Quotidian, or a Quotidian intermittent with a continual Tertian. And each of theſe is termed a Semi-Tertian, conſtituting Species or ſorts thereof.

Yet that is properly and truly a Semi-Tertian which is made of an intermitting Tertian and a continual Quotidian; and conſequently is cauſed from Choler putrifying without, and Flegm putrifying within the Veſſels. By *Hypocrates* and *Galen* in 1. *Epidem.* it is named *Horrifica*, or the ſhaking Ague, becauſe it cauſes the Patient to ſhake, not only at the firſt coming of the Fit, but in the whole courſe of the Diſeaſe, and eſpecially in the beginning and augment, two Fits being met and joyned in one, *viz.* Of the Tertian and Quotidian Ague, with many Reduplications, which are nothing elſe but unequal ſhaking and ſhivering motions, returning divers times in one and the ſame Ague Fit, by reaſon of the mutual fight of the two Feavers; in which, if Flegm overcome, there will follow ſhiverings, and coldneſs of the extream parts. And then again, when Choler doth van-

quiſh, the Body becomes warm, and the Feaver ſeems to tend towards the Vigor; when as Flegm again getting the better, they are again brought into a cold and ſhivering condition; and this Contention is wont to laſt till the Feaver comes to its height. Hence it is that thoſe ſhaking fits come only every other day, *viz.* When the fit of the Tertian Ague is upon the Patient, being joyned with the Quotidian.

But while the Quotidian alone is preſent, there is wont to be no ſhivering Fit. Yet we muſt take notice, That there are ſome Malignant Feavers, which without a commixtion of a Tertian and Quotidian, without that ſame fight of Choler and Flegm, do ſhake the Patient; in which the Shiverings come from ſharp Vapors and Malignant, which do ariſe out of the corrupt Matter of Malignant Feavers, and do beat upon and pull the ſenſitive parts, and nip or twitch them as it were.

Now this Semi-Tertian properly ſo called, is either exquiſite, wherein an equal portion of putrifying Choler and Flegm is redundant, ſuch as hath been novv deſcribed; or it is a baſtard Semi-Tertian, which is again two-fold: For either it hath Choler abounding, or Flegm. In the former there are more Symptoms of a Tertian; in the later of a Quotidian. And ſo if Choler abound, the whole Feaver is more horrid, and ſometimes it hath a ſhaking Fit accompanying the ſame; alſo it proves more fervent, and ſome portion of Choler is voided forth by Vomit, Stool or Sweat. But when Flegm prevails, a more vehement Cold doth poſſeſs the extream parts of the Body, and there are few ſhiverings; and the Pulſe is more and longer degreſſed, and the fit is longer before it grow towards its height, and remain in its conſiſtency a long time; yet doth it cauſe no great thirſt nor burning.

DIAGNOSTICK.] This Feaver is known by what hath been ſaid thereof, being continual, and cold, with many reduplications, and very great Symptoms: Becauſe it comes every other day with a ſhaking cold fit; but upon the even days it comes only with a coldneſs in the extream parts of the Body. The Urines are crude, thin, and without colour; ſometimes troubled, with no Sediment, or that which bodes no good. The Pulſe is frequent and unequal. The Differences are known by the ſigns of more or leſs of Choler and Flegm, propounded.

PROGNOSTICK.] As for the Prognoſtick of this Feaver, it is a dangerous Diſeaſe, and therein the Stomach and Nervous parts are very much affected. And it is attended with dryneſs of the Tongue, Thirſt, Swooning, Watching, and ſometimes with Ravings, and dead Sleeps. *Hypocrates* reckons it among acute Diſeaſes becauſe of the Choler; and among Chronick Diſeaſes becauſe of the Flegm, in 1. Epidem. And *Avicenna* ſaith, That it laſts ſometimes ſeven moneths, and ſometimes ends in Chronick diſeaſes, and an Hectick.

CURE.] The Cure of this Feaver is to be taken from what hath been formerly ſaid of the Cure of a Tertian, and a Quotidian; and ſeeing it is continual, it muſt be handled with the ſame Method which was ſet dovvn in the firſt Chapter of this Section, as common to all putrid continual Feavers. So that when Choler chiefly bears ſway, we muſt uſe moſt of thoſe Simples which reſpect Choler; and when as Flegm prevails, we muſt principally uſe ſuch things as do prepare and purge that Humour. And Finally, When both Humors are equal, the Remedies proper to each muſt be uſed in equal proportion likewiſe.

SECT.

SECT. III.

Of Peſtilential Feavers.

The PREFACE.

ALL Authors (very neer) who have writ of Feavers, do diſtinguiſh a Peſtilential Feaver from a Malignant, and do treat of each of them ſeverally in divers Chapters; ſo hat by the name of a Peſtilential Feaver they do underſtand the true Peſtilence or Plague; nd by a Malignant Feaver they mean that which is commonly called the ſpotted Feaver: or ſuch a Feaver which though it be Epidemical and Contagious, yet it is not ſo dangerous but that more live than die of it: whereas the true eſſence of the Plague conſiſts in this that more die thereof than recover. But for as much as theſe Feavers differ one from another only according to the greater or leſſer degree of Maligaity, and muſt be cured with the ſame Medicaments; we thought it more convenient to include all theſe kind of Feavers in one Chapter, and to handle them all under the name of Peſtilential Feavers. And Conſequently this laſt Section ſhall conſiſt of two Chapters, the firſt of which ſhall treat of the Peſtilential Feaver; and the latter of the Meaſles and ſmall Pox, For ſeeing a Malignant Feaver does alwayes attend them, all Authors do juſtly treat of them in this place.

Chap. I. *Of a Peſtilential Feaver.*

THat Feaver is termed Peſtilential, which does afflict Nature not only by a bare diſtemper, or by heat ariſing from putrifaction, but alſo with a Malignant and venemous quality. This is wont to be for the moſt part Popular and Epidemical; ſo that many are at the ſame time ſick thereof: yet ſometimes it is Sporadick or ſingle, afflicting but here and there one, which ariſes from evil Humors that have attained a venemous quality.

It is likewiſe Contagious, ſo that it may be taught not only by means of the common Cauſe, *viz.* Corruption of the Air or Diet; but alſo by Converſing with thoſe that are ſick.

It is alſo commonly called a Malignant Feaver: whereas many Diſeaſes are termed Malignant by reaſon of their evil and cruel Symptoms in which no venemous quality is found, in which alone the eſſence of a Peſtilential Diſeaſe conſiſts.

In what Feaver ſoever therefore, this ſame venemous quality is found, whether it be a diary, an Hectick, or putrid Feaver, it is rightly termed Peſtilential: although a diary and Hectick are much controverted, touching which conſult Authors.

Now this ſame venemous quality ariſeth from the corruption of Humors, which conſiſts not in a bare change of the temperament, or in ordinary putrifaction, ſuch as is found in putrid Feavers; but in a deſtruction of the whole Nature and Eſſential ſubſtance of the ſame Humors. As Wine when it is turned an inſipid taſtleſs Liquor, is totally and eſſentially corrupted; but when it becomes Vinegar, it is ſaid ſimply to purifie.

And a Peſtilential Feaver differs from the Plague as a *Species* or ſort differs from the *Genus* or kind becauſe there may be a Peſtilence without a Feaver, as *Hypocrates* hath taught us in his third Epidem. in many places; as alſo *Galen* in his Expoſition of the ſaid Book, and in his ninth book, *de Medic. Facultatib. Cap. de Terra Samia.* And this is ſuitable to Reaſon; foraſmuch as the venemous quality is not neceſſarily attended to putrifaction, which is the Cauſe of a Feaver. For that ſame venemous quality may be produced in the Humors, by a perfect corruption of their ſubſtance, and introduction of a new form, of which that venemous quality depends. And certain it is, that ſo oft as a new form is introduced, the former is corrupted; unto which mutations there are requiſite preparatory alterations, but not putrifaction, ſo that Humors may undergo ſuch a corruption without putrifaction; but becauſe the Humors of our Body are very liable to putrifaction, they can rarely undergo ſo great a corruption, without the Intervention of Putrifaction likewiſe; wherefore thoſe Peſtilences are very rare, which are not accompanied with a Feaver: Yea verily and by an intenſe, profound and ſordid (as they are wont to ſay) putrifaction, ſuch a corruption as that

of the Plague is wont to be raised. So, many Feavers, which at first were not Pestilential, if by the Ignorance of the Physitian or negligence, the disobedience of the sick, or the fierceness of external causes, they have been mis-handled, the putrifaction becoming more intense, they turn in the end to Malignant and Pestilential Feavers. And that corruption does often precede Patrifaction that is collected from such as are infected with the Plague by contagion; in whom a Malignant, and venemous quality is first transfus'd, and therewith the Humors are corrupted, which corruption is followed by putrifaction, whence it comes to pass that such as have the Pestilence have sometimes no Feaver for the first days of their illness; but afterwards the Feaver begins to shew it self when putrifaction is bred: some such things we see in a part that is affected with a Gangrene, which is first corrupted and afterwards putrified,

CAUSES.] A Pestilential Feaver is caused, when the Humors being corrupted and having attained a venemous quality, do come to putrifie: And so it affects the Heart by those two means, *viz.* By a putrid heat and Malignant quality.

Now this corruption of Humors, is not always after one sort, but sometimes it is more intense and sometimes it is less according to its divers degrees, the venemous quality arising therefrom is more or less pernicious; from whence proceeds the greater or less Malignity of Feavers. And hence arose that common distinction of Pestilential Feavers among Physitians, into a Pestilential Feaver simply and properly so called and into a Malignant Feaver; calling that a Pestilential Feaver properly so termed wherein is the true Plague; having this peculiar note or Character, that more die than live and recover; and calling that simply a malignant Feaver which being less pernicious, more live than die of it.

DIFFERENCES.

The differences of a Pestilential Feaver are taken either from the matter wherein that venemous quality is produced; or from the place wherein the said matter is contained: and so they follow the difference of putrid Feavers, which in respect of the matter of putrifying are divided into the Feaver *Synochos*, *Tertiana*, *Quartana* and *Quotidiana*, according as the matter putrifying is Blood, Choler, Melancholy, or Flegm. And in respect of the place wherein the Humors putrifie, they are divided into continual and intermittent: according as the aforesaid Humors are lodged within or without the Veins: even so Pestilential Feavers, some are termed Synochi, others Tertians, Quartans or Quotidians; some continual, others intermittent: although *Hypocrates* hath said in the 43. Aphorism of the 4. Section. That intermitting Feavers are void of danger however they intermit, which only is to be understood of such as are void of all Maligniy; for we see almost every year (in our Country at least) Tertian intermittent Feavers, which being extreamly Malignant, do at the third or fourth fit kill the Patients: others which bring them into great danger, especially by the cruelty of the Sympomes.

There are other Differences of a Pestilential Feaver taken from the intensness of their degree or Remisness; namely, as some are greater, other lesser, some partake of greater Malignity, some of lesser. They are said to be simply greater or lesser according as the Putrifaction is greater or less, or as the preternatural Heat arising therefrom, is more intense or remiss; more Malignant or benigne according to the greater or less intension of the venemous quality, Hence it comes to pass, that sometimes a Pestilential Feaver hath extream putrifaction and Malignancy at the highest; and then it is wont to be most fierce, and therein in regard of the Malignancy the vital faculty is exceedingly afflicted; and in regard of the extream putrifaction the other faculties are likewise hurt, and cruel Symptomes follow thereupon. But sometimes in this Feaver the Putrifaction is very high, and the Malignant quality remiss; and then the Feaver is troublesom by reason of the putrifaction; but the vital faculty is less afflicted: Contrarily sometimes Putrifaction is little, but the Malignant quality intense: and then the Feaver in regard of Putrifaction shews no such bad Symptoms and seems remiss; yet the strength of the Patient is more then ordinarily weakned. For sometimes the putrifaction is so remiss that it is in a manner none at all; but the Malignant quality is in a very high degree: and then we have a Feaver, which seems neither to the Patient nor by-standers any thing troublesom: but it seems at first sight mild, as mild can be, when as indeed and in truth it is very mortal; for when the Malignant quality is increased, the Patients strength is dejected, and the Heart wholly overwhelmed: and this kind of Feaver doth not commonly deceive the Patients and by-standers, but sometimes the Physitians themselves are thereby cheated; while; there being no sign present either of crudity or pravity of Humors, the Pulse being in a manner in its Natural State, and the heat of the Body at first appearance seeming mild and gentle, it leads unto destruction. Some such thing is likewise wont to happen in the first difference, *viz.* When it is joyned with the highest degree of Malignity: for putrifaction being by convenient Medicaments subdued, and the signs of recovery appearing; death notwithstanding sometimes ensues by reason the Malignant quality did remain uncorrected.

And Finally, the differences of a Pestilent Feaver are taken from its adjuncts, and they are very many

many and moſt evident, for there is no evil Symptom, nor kind of deadly Diſeaſe which is not ſometimes joyned with this Feaver. The Symptomes are Head-ach, Watchings, Ravings, Dead ſleeps, Thirſt, Stomach-ſickneſs and Vomiting, want of Appetite, Swooning, Fainting, Hiccoughing, Unquietneſs, Looſneſs, Sweats and ſuch like, which are common alſo to other kind of Feavers.

But there is one Symptome proper and peculiar to a peſtilential Feaver, which doth not happen in other Feavers; *viz.* Purple Specks or Spots on the whole Body, but eſpecially in the Loins, the breaſt and back, like unto Flea-bitings for the moſt part; which the Italian Phyſitians name *Peticulæ* or *Petechiæ*; and theſe Feavers which have theſe Symptoms are commonly named *Purpuratæ* or *Petechiales*, Purple or Spotted Feavers. For theſe Purple Spots do not appear in all Peſtilential Feavers; but when they appear, they are a moſt certain Sign of a Peſtilential Feaver: Now we call them Purple Spots, becauſe they are for the moſt part of a Purple colour. Yet they are many times of a violet colour, Green, Blewiſh or Black, and then they are far worſe, and do ſignifie greater Malignity. And although theſe Spots are for the moſt part like Flea-bitings: yet they appear ſomewhat greater: So as to repreſent thoſe black and blew marks which remain after whipping, and then they are worſe. And ſometimes they are very large, and poſſeſs whole Members, and a great part of the Body, *viz.* the Arms, Thighs and Back, and then the parts appear tainted with redneſs; which in few hours oftentimes vaniſheth away, and then returns again, as it were by Fits, whileſt the Feaver undergoes its Fits or Exacerbations, wherein the blood boiling doth ſend forth its thinner Exhalations to the ſurface of the Skin, by which the Skin is not ſwelled; but only infected with a red color. Oftentimes notwithſtanding, by theſe Ebullitions the Skin is in divers parts puffed up with a certain redneſs: and makes certain broad and ſoft Tumors in the Skin, which in a few hours vaniſh away, and are commonly called Ebullitions of the blood. In theſe and the aforeſaid, there is always ſome Malignity, but ſo light, that it threatens no danger; unleſs in the progres of the Diſeaſe it prove more intenſe. Now the Spots aforeſaid like Flea-bitings do differ from thoſe Puſhes, which are wont alſo ſomtimes to appear in theſe Feavers, and are mentioned by *Hypocrates* in *Epidemeis*, which have an Head, and are a kind of Tumors, which come ſometimes to Suppuration or Exulceration. But the Purple Spots, have (as was ſaid) no eminence or Head, and were unknown to the Antients, being deſcribed only by latter Phyſitians of after ages.

As to thoſe Diſeaſes which are joyned to a Peſtilential Feaver, we may affirm what hath been ſaid of the Symptoms, *viz.* that many deadly Diſeaſes are joyned with theſe Feavers; Namely, Phrenſies, Quinzies, Pleuriſies, Inflammations of the Lungs, Inflammations of the Liver, bloody Fluxes, and very many more. But the chief Diſeaſes which ſhew themſelves in a Peſtilential Feaver, are two, *viz.* a Peſtilent Bubo and a Carbuncle, which declare the venemous quality to be in the higheſt degree, and are not found in the true Peſtilence, and are wont commonly to accompany the ſame: So that the common People call them by the very name of the Peſtilence.

The Cauſes of Peſtilential Feavers, are ſome Internal, others External: and the Internal are ſome Immediate, others Mediate.

The Immediate Cauſe of this Diſeaſe, as we hinted before, is a corruption of the Humors, joyned with Putrifaction, From the Corruption they acquire an evil and venemous quality, and from Putrifaction the Feaver is bred.

The Mediate Cauſes are a Plethory, Cacochymy and Obſtructions. Now we underſtand ſuch a Plethory, or fulneſs of Blood; not as diſtends the Veſſels, but ſuch at leaſt as the ſtrength of the Patient cannot maſter, which not being regulated by Nature, doth eaſily undergo Corruption, and Putrifaction. Now a Cacochymy, or abundance of evil Humors, is eaſily corrupted and putrified. Finally, Obſtructions are apt to breed all kind of Feavers: foraſmuch as Humors being cloſe ſhut up in an hot and moiſt place, wanting free tranſpiration, do eaſily putrifie. The Internal Mediate Cauſes, are by Authors commonly called *Morboſus Apparatus*, a ſickly Diſpoſition of the Body; and the efficacy thereof is ſo great, that it alone is ſometimes ſufficient to produce a gentle peſtilential Feaver, ſuch as is commonly called a Malignant Feaver ſimply or a Purple Feaver, without the Intervention of any External or common Cauſe. For we oft-times ſee, when the year is not Peſtilential, and there is no Epidemical ſickneſs abroad, ſome perſons through the evil Condition of their Humors, fall into ſuch Feavers, which are accompanied with many Symptoms of Malignancy; Yea, and with Purple ſpots.

Concerning the point of Obſtruction, we muſt obſerve, that it doth neceſſarily concur as the principal Cauſe in Malignant Feavers, which proceed from Internal Cauſes and are not Epidemical: but that Epidemical Feavers, which proceed from a common Cauſe; *viz.* A Peſtilent conſtitution of the Air, or are gotten by Contagion, have not neceſſarily any Obſtructions for their Cauſe. For the venemous quality is received only by breathing in the corrupt Air, or only by Infection from others, by which venemous Quality the Humors of the Body, declining from their own proper Nature, do of their own accord putrifie. For even as Fruits that will not keep, and other things apt

to corrupt, though they have never so much freedom of the Air, yet cannot be preserved from corruption: even so the Humors, when they have conceived that pernitious Quality, are apt to Corruption: so that though there be no Obstruction present, they necessarily fall into Putrifaction, and a Feaver. Howbeit, Putrifaction being by this means brought into the Humors, when Nature doth no longer rule them, they are wont for the most part to breed Obstructions, whereby the Feaver is augmented; so that in these Feavers Obstructions may Concur, which though in the beginning they were not the Cause of the Feaver, yet do they follow the same, being cherished by the Causes of the Feaver, and being infected with Pestilential Venom.

The External Causes of Pestilential Feavers, are the six Non-Natural things, which as they are necessary, so do they necessarily alter our Bodies: and when they are far departed from their Natural condition, they breed in us Malignant and venemous qualities. Among these, the Air holds the cheif place: which as it is a most common Cause, so Diseases that are common do for the most part proceed from some fault thereof.

Now the Air becomes vitious and hurtful to men, for the most part by a threefold means. First If it be not blown through with wholesom Winds. Secondly, If it be polluted with the Infection of putrid and stinking Exhalations. Thirdly, If by an excess or prepostorons condition of the first qualities, it doth so alter Men, that thereby evil and Malignant putrifactions of the Humors be ingendered.

The First is evident enough. For if the Air be not blown through, and stirred with Winds, it is easily corrupted, Whence *Hypocrates* in the 3. Epidem, Describing a most grievous Pestilential constitution, saith; This year had no Winds.

And the Second is most effectual and frequent, *viz.* When Putrid, Filthy, and malignant Vapors are mingled with the Air, and do infect the same, which is wont to arise from divers things, *viz.* Lakes, Pools, Fish-ponds, and other quiet and still Waters, or such as are full of mud, or wherein Flax, or Hemp have been steeped. Or from the stink of Privies, Dung-hils, and nasty Allies. Or from the unburied bodies of such as have been slain in battle. Or out of Dens or Caves (wherein the Air having been long shut up, hath gained a filthy putrifaction) being opened by an Earth-quake, or some other Casualty.

But the third Reason, which consists in the Excess, Inequality or Prepostorous condition of the first Qualities, may happen divers ways, and especially when there is a great excess of heat and moisture. For those qualities, when they are extraneous and adventitious, and encreased above their Natural condition, they are the principles of putrifactions. Hence a Southern Wind lasting long in the Seasons of the year, according to *Hypocrates* in Epidem. was the principal cause of all Pestilential Feavers there described.

But a dry Constitution of the Air, though in the Opinion of *Hypocrates*, it is more wholsom than a moist; yet because all excess of qualities, is hurtful to our Nature; certain it is that a very dry Constitution of the Air, more than ordinary, doth produce Pestilential Feavers; especially if it be joyned with excessive heat. A clear example whereof we have in *Livy* in the first Book of his History Decad. 4. *viz.* How by over great dryness a Pestilence happened at *Rome*, because there had been little or no Rain that year: neither was there scarcity of Water from Heaven alone: but the Earth was scarce able to continue her Springs. Now this dry Constitution doth therefore Cause the Pestilence, because the Humors being above measure burnt and dried up, degenerate into the matter of biles, Carbuncles, and consequently of a Pestilential Feaver; and being very much thickned, they produce grievous Obstructions; whereby in a matter otherwise well disposed thereunto, Malignant putrifaction is easily bred. Add hereunto, That this immoderate driness of the Air, doth corrupt the Corn, hindring it from attaining its due maturity. For it brings the Corn sooner out of the Earth, and it gives it at first plentiful nourishment, and afterward Scanty, whereby the Corn is unequally digested, being Burnt without, but within quite Raw; like Flesh scorched with an over violent Fire: and so it proves a Cause of indigestion, and divers Crudities.

It is proved also from *Hypocrates*, That immoderate cold doth produce a Pestilence 1. Epidem. Sect. 3. Tempest. 1. where he saith. *In the Country of* Thasus, *a little before the appearance of Arcturus* (a Star or Constellation) *and whilest He appears, the North Wind blowing, there are many and great Rains.* In which places he fetches the Cause of a Pestilential Season, from over great Coldness. Also we may read in *Livy* Lib. 5. Decad. 1. That a Pestilential Season was caused by vehement Cold; in these Words. *The year was remarkable for a Cold and Snowy Winter, so that the Wayes were stopped up, and the River* Tyber *was unnavigable. So sad a Winter was followed by a grievous and Pestilential Summer, Mortal to all kind of Living-Creatures; whether it were occasioned, by the sudden change of the Air from one extream to another, or by some other means.* And the reason of this Accident is at hand, *viz.* That by reason the Pores of the Skin are closed up by the extream Cold, so that the Vapors cannot steam forth so as naturally they should, there follows the greater putrifaction, and more grievous poison; whereupon follows more dange-

rous

rous Feavers, than in the Summer, in which the condition of the Air, although in ſome ſorts it gives beginning to the Diſeaſe, yet doth it make the Pores and paſſages wider. Through which that which is putrified does exhale and the natural and preternatural evaporations doe readily breath ont.

Inequality of the Seaſon is wont alſo to be the Cauſe of this kind of Feavers; *viz.* when it is ſometimes Hot, ſometimes Cold; ſometimes wet, ſometimes dry in a ſhort time; or when theſe various ſeaſons do endure longer one after another. As when after long vehement Hot weather, a freezing cold claps in, or after long rains, an extream drought ſteals upon us, or contrarywiſe. Or when after a prepoſterous faſhion, it is hot in Winter and cold in Summer. Now theſe inequalities of Seaſons may help the production of Peſtilential Feavers; becauſe in them, the humors are exceedingly diſturbed, by which means they arrive unto an evil condition, far from their natural ſtate and fit to produce malignant Diſeaſes eſpecially in thoſe bodies which during the Courſe of the Seaſons aforeſaid, by diſorderly Courſe of Diet and living, have contracted either a Plethory, a Cacochymy or ſome notable obſtructions.

To this kind of Cauſes may be added the malignant Influence of the Conſtellations, which by changing the Air, are wont diverſly to affecte the Bodies of Living Creatures. Such they ſay are, the Conjunction of the ſuperior Planets *Saturn*, *Jupiter* and *Mars*, in Humane Signs, ſuch as *Virgo* and *Gemini*, and eſpecially when *Mars* is Lord. Which do bring Diſeaſes no otherwiſe then by change of the Air, ſo far as to corrupt the Nature and ſubſtance thereof. And that change is wrought two wayes; and is by the manifeſt qualities, as when by the Influence of the Stars the air is ſo long and ſo far changed by exceſs of the firſt qualities of Heat, Moiſture, Cold and Drineſs, that at length it's proper Subſtance becomes vitiated. The other is by occult qualities, when by the ſecret power of the Stars, without any notable exceſs of the firſt qualities, the ſubſtance of the air is ſo changed, that it receives a certain degree of corruption contrary to our Life. Touching the firſt, no mans doubts, ſeeing it is clear by Common Conſent of Phyloſophers that inferior Bodies are governed by the Heavenly Conſtellations. And as the alterations of the Air, which happen in the four ſeaſons of the year, do ariſe from the yearly motion of the Sun: ſo the great diverſity of yeaws, whereby one proves very moiſt, another exceeding dry the Sun holding every year the ſame Courſe of the Zodiack, can depend on nothing but the varions aſpects of Conſtellations. The other way becauſe it is occult, is not ſo freely granted by all. Howbeit by common Conſent of Aſtrologers, it is held for certain, that the Stars do act upon the inferior Bodies in a three-fold manner, *viz.* by their Motion, Light and Influence. The light and heat do alter theſe Sublunary Bodies according to the firſt qualities and eſpecially Heat. But the Influences do induce both the firſt qualities (for example the cold which *Saturn* cauſes, cannot depend upon his Motion nor his Light) and alſo the hidden and occult ones. For ſeeing Peſtilential Diſeaſes do oftentimes happen, no great mutation being made in the Air in regard of the firſt qualities; but when they rage, the Air appears exceeding pure, and purer ſometimes, than it is wont to do when there is no peſtilence ſtirring; neither have very hot and moiſt ſeaſons preceded, from which great putrifactions are wont to ariſe, it is to be conjectured, that theſe Peſtilential Diſeaſes do ariſe from ſome malignant Influence of the Stars. Add hereunto, that Peſtilences are wont to rage even in the depth of Winter, which no remarkeable alteration of the firſt qualities hath preceded. For in ſuch a Caſe, theſe Diſeaſes are to be attributed to the hidden power of the Stars which have (as Aſtrologers teach) a power of corrupting the Air, no extraordinary mutation of the firſt qualities being made therein. And this is that divine principle in Diſeaſes, which *Hypocrates* acknowledged, and according to the Expoſition of *Galen* is in the Air, but is produced by the Celeſtial Bodies and hidden cauſes. It is alſo hinted at by the ſame *Hypocrates*, in the ſecond Epidem. Sect. the firſt. When he ſayes. *The time and the Diſeaſes do anſwer one another unleſs ſome innovation happen in the Superior Powers.*

Neither does that hinder which is brought as the opinion of *Plato* out of his Epinomis, that the Courſe of the Heavens and Heavenly Bodies have always good influence here below. and from them nothing but preſervation and benefit flow. And *Ariſtotle* in the ninth of his *Metaphiſicks* Chap. 10. Sayes that in thoſe Bodies which are eternal and æthereal, neither error nor corruption is found. And *Averroes* ſayes in his 1. *De Cælo.* cap. 24. The Heavenly Bodies do contain the Elements, preſerve them, and univerſally are unto them inſtead of a form, whence it's collected, they cannot infect them with a poyſonous and Malignant quality. Add hereunto that if Peſtilential Diſeaſes ſhould be raiſed by influence of the Stars, they would at one and the ſame time infect the whole World almoſt, ſeeing thoſe influxes are univerſal cauſes, and by the circulation of the Heavenly Bodies do affect all the quarters of the World. But theſe Diſeaſes do peculiarly invade ſome one Region only. And Finally if the

Stars

Stars were said to be malefick and of an evil disposition, God the Author of them would be accounted the cause of Mischief, which is full of Impiety. These Objections, I say, do not a whit prejudice the truth propounded, which may thus be answered. All created substances are considered two ways; either as they are things in being and do concur to the compleating and perfection of the Universe, and in that respect, they are all good: for *to be* and *to be good* are one and the same, neither hath the High God blessed for ever created any thing which ought to be termed evil, simply considered or as they are considered in regard of their operations, and then they may be termed evil forasmuch as they may damnifie some other things by reason of the antipathy and inbred Enmity of Nature. And although almost innumerable contrarieties of Nature are found in the world, yet must they all be termed good in respect to God their maker, and in regard of the Universe, whose perfection consists chiefly in variety. Furthermore the operations of things created, may be termed evil two ways absolutely or simply considered in themselves, or in respect of somewhat else; They are absolutely evil when at all times, in all places and upon all occasions they do perpetually evil; and in this sense no Creature can be found which is evil; in respect of some other thing, the operations of things may be termed evil, when they hurt one and do another good; and so there is nothing in the whole universe so hurtful, but that it hath some other ways its uses and benefits, for which it was created: So all Poysons, although most hurtful to men or other Animals, yet conveniently used they do a great deal of good to them. And in the Art of Phisick there is scarce so deadly a Poyson found, but that out it, by Skill of Art, an healthful medicine may be drawn, And finally the actions of Stars upon these inferior Bodies are considered two ways, either in respect of the whole sublunary world containing the Elements and all mixed things: and so the action of the Heavens and Stars is simple, benign, ingendering, conserving, vivifying all things, and doing all other good offices which tend to uphold the univers; and in this sence most true it is, that these inferior Bodies are cherished and sustained by the influence of the Heaven and Heavenly Bodies; or they are considered in respect of the proper nature of this or that Element, or this or that living creature: and then it is no absurdity to say that there are some influences hurtful to some Element or living Creature in such or such a part so and so affected which depends not of any fault of the Stars (for they are of a most perfect Nature) but rather of the imperfection of sublunary things which cannot suffer any considerable mutation without the corruption of their proper substance: now these divers natures and qualities of the Stars, produced in sublunary Bodies by their divers concourse and influence were ordained by the great Architect of this universe, for the Conservation of the whole world which being made up of so divers and so contrary Natures, had need of as great variety in the influence of the Stars, that all things might be preseved, as it were in an even balance. Out of which diversity of influences notwithstanding, it could hardly come to pass but that some parcel of things so different should sometimes suffer, not in any whole kind or sort (which should tend to the destruction of the universe) but only in some individuals that were less able to resist and for the most part misaffected, and only in some part of the Air more disposed to receive Malignant influence. From whence we may conclude, that these corruptions do chiefly depend upon the defect of the sublunary Bodies, Forasmuch as many places are in the world, where the Air is so perfectly constituted and the inhabitants so evenly tempered, that let never so malignant Influences of Stars showr upon them, yet are they never infected with the Pestilence.

To the same kind of Causes must we refer the defects and Eclipses of the Sun and Moon, unusual Meteors and especially Blazing Stars: which are never wont to appear but that Epidemical and Pestilential sicknesses, and Divers changes in the World do follow, as is Confirmed by the experiments of many Hystories: whence that usually Cited verse of *Claudian* is become as a Proverb.

In Cælo nunquam Spectatam impune Cometam.

A blazing Star does not appear,
But some Beholders plagued are.

A most evident witness whereof was that hairy Comet which appeared *Anno*, 1618. Towards the East on the 27. of *November*, and was afterwards seen near upon the whole Moneth of *December*, moving and shining. It's thicker and more solid part being turned towards the Sun, did behold the East, and did far exceed *Venus*, both in the clearness of its shining, and in its largeness, thickly compacted and conglobated together. The remaining part, being more thin, and less enlightened by the *Sun*, because of its thinness did move like a fairly spread beard and stretched towards the West. This Comet first appeared under the sign of *Libra* neer the *Equinoctial Line*; but by a private and peculiar motion of its own, it was carried from thence, through the feet of *Virgo*, the middle of *Bootes* and the tail of the greater *Bear*. And at length, its light decreasing by little and little and the matter whereof it consisted being dissipated, it vanished between the great *Bear* and the *Dragon*.

It

It was carried with the common motion of the Stars from Eaſt to Weſt, but it ſeemed to be moved ſomewhat ſwifter than the Stars, for in the firſt Daies of its Apparition, it was wont to riſe a little before five in the morning; and afterwards it roſe about four a Clock and before four, and ſo ſooner and ſooner, till it prevented the Midnight, and Bed-time. And we have reaſon to believe, that this Comet was the Prognoſtick and forerunner of Malignant and Peſtilential Diſeaſes, and alſo of thoſe Wars, wherewith whole *Europe* in a manner, hath ſince that time been laid Waſt.

And although the Air be chiefe among the Mediate Cauſes of Malignant and Peſtilential Feavers: yet ſure enough other non-natural things do concur to their Generation, as I ſhall particularly and briefly declare.

The next to Air and Aliments, becauſe bad Diet Cauſeth a ſickly diſpoſition of the Body, which is an internal efficient, and *Cauſa ſine qua non*, of Malignant and Peſtilential Feavers. Whereupon *Galen* in his Book *De Cibis boni & mali Succi*, and in the 1. *de Differ. Feb. Chap.* 3. Does demonſtrate, that from bad and corrupt Diet Peſtilential Diſeaſes do ariſe. Now meats are ſaid to be evil and the Cauſes of thoſe Diſeaſes in many reſpects.

And in the firſt place, when the Fruits of the Earth and of Trees, by reaſon of a bad conſtitution of the year, viz. Over moiſt or over dry, or corrupted by miſts, or ſome tempeſtuous weather, or ſome Malignant influence of the Stars do, being eaten, produce bad Juyces in the Body.

Secondly, When there is great Famine and Scarcity of Corn: From whence came that Proverb *Ho loimos meta limon*, the Plague follows Famine. For then the poor common People are forced to fill their Bellies with ſuch meats as are cheap and bad, whence ariſes abundance of bad Humors. And which is much worſe, when a plenty preſently follows Famine, they do then ſuddenly cram themſelves with much meat, which by the languiſhing heat of their internal parts cannot be well digeſted, and thereupon thoſe meates come to participate of a Malignant putrifaction.

Thirdly, When Aliments, which in their own Nature are good, do by ſome way or other, gain putrifaction or ſome evil quality, ſuch are Wheat, Barley, Beans and Peaſe, and other kind of grain, which being either over long kept, or ill laid up in a moiſt place, or otherwiſe miſaffected, do come to be muſty, or have ſome other putrifactive quality: Such is fleſh over long kept, or ſtinking or ſuch as is of beaſts that were not killed, but died of ſome Diſeaſe: as *Julius Obſequens* relates, that in the Iſle called *Lipara* when the Sea was made hot with the fires which by means of an Earth-quake were forcibly vomited out of the Mount of *Ætna* and had boyled the Fiſhes caſting them upon the ſhoar: the Inhabitants eating greedily of thoſe Fiſhes, a ſore Peſtilence followed.

Neither is there power in drinks, when putrid and corrupted Wines, Beer or other Liquors are drunk; or when Water is drunk out of putrid and muddy Lakes, or otherwayes infected. As good Hiſtories do teſtifie that numerous Armies have been deſtroyed by Peſtilential diſeaſes, with drinking ſuch Waters.

Theſe non-natural things mentioned, *viz.* Air and Meats and Drinks have the greateſt force to engender Malignant Feavers. But the four remaining, *viz.* things voided or retained, Motion and Reſt, Sleep and waking, with Paſſions of the Mind, are of leſs efficacy, and do only concur as adjuvant Cauſes, or ſuch as diſpoſe the Body to conceive a Malignant putrifaction; as in our expoſition of them ſhall preſently appear.

The retention of Courſes in Women, or of ſome other accuſtomed Evacuation in Men, as of the Hemorrhoids, Bleeding at Noſe and Looſneſs, which betids ſome perſons, at certain ſeaſons; when they happen in a Peſtilential year, they are wont to produce a Malignant diſeaſe. For thoſe things which are wont to be avoided as ſuperfluous and burdenſome to Nature, if they be retained in the Body, they do eaſily conceive putrifaction. So likewiſe over great Evacuations either of Blood or other Humors, do much weaken the Body, and do cauſe that Natural heat being weakned, it is ſoon infected by the vitious and Peſtilential Impurities of the Air.

As for motion and reſt, certain it is, that over much Idleneſs is a Cauſe, that Natural heat is not ſufficiently Eventilated, and conſequently the Humors conceive putrifaction: ſo over great exerciſe does very much open the pores, and diſſolves the heat; whereupon the Body becoming weak and more apt to take impreſſion, does eaſily receive the Infection.

And too much ſleep makes many Excrements and fills the body with Humidities, which eaſily putrifie, but too much watching does engender Crudities, and they eaſily putrifie, becauſe Natural heat cannot well maſter them: and becauſe by them, many obſtructions are cauſed, by which Tranſpiration is prohibited, and at length putrifaction engendered.

And Finally, paſſions of the Mind, are wont vehemently to exagitate the Body and to diſturb the Humors: and ſo they much diſpoſe the Body to receive infection; and eſpecially fear and ſadneſs; which drawing the vital Spirits inward do as it were choak and ſmother them, whereby the vigor of the Heart is ſo broken, that it cannot ſufficiently reſiſt the venom and firſt aſſaults of Peſtilential ſickneſſes, yea verily and the Humors being ſtirred in the Veins and vehemently diſturbed, are thruſt out of their Natural conſtitution, and do conceive a Malignant putrifaction. Inſomuch that

ſome

some have conceived, that Pestilential Diseases are bred in Camps and at Sieges of Towns, not so much through bad Diet and stink of dead Carcases, as through Terror, Fear, Anxiety and dread of Death, which do exagitate the Humors, and put them into a tumultuary Combustion and Fluctuation.

The Signs of a pestilential Feaver do some of them foretel the disease when it is coming; others declare it to be present; and others witness where it has bin. All which must be set down, because the first tend to preservation, the second to Cure, and the third sort to be a Caveat to such as are not yet infected.

The Signs which foreshow a pestilential Feaver, are taken from three things *viz.* From the Disposition of the Body, from the presence of Causes, and from some intermediate dispositions. Those bodies are disposed to receive pestilential Infection, which have collected evil Juyces through bad diet, and by a preposterous use of the six non-natural things aforesaid. Or such as being plethorick do gorge themselves and inordinately and unseasonably repleniish themselves. Furthermore some that are neither plethorick nor cacochymical, do dispose their bodies to the reception of this disease, while they torment their minds with most troublesome passions, or give themselves immoderately to carnal embracements; for from these two Causes, the pestilential Feaver is very ordinarily produced, forasmuch as by them corruption is easily introduced even amongst good humors. For Passions of the Mind do distract and draw away the spirits, from their proper operations and overmuch Carnal embracement does weaken all the powers of the body, but the Spirits being distracted, and the vertues weakened, the Humors change their Nature, and grow corrupt.

Finally, those whose principal Members are weak, or some waies tainted, either from the womb, or by bad diet or any other external Cause; which have an hot and moist temperature; which have a very thin or very compacted habit of body, are all disposed to pestilential Feavers, for hot and moist bodies are subject to putrifaction, thin bodies are liable to all injuries, compacted constitutions have no free transpiration.

The presence of such Causes as can breed a pestilential Feaver do portend the same: and consequently ill seasons and unnatural temper of the year, Dearth and Scarcity of Victuals, VVars and other Causes, reckoned up before, when they appear, they declare the Plague to be approaching.

Those intermediate dispositions are, when such a disposition of body and the Causes aforesaid being present, we see a Man more sad than ordinary, an unexplicable fear in him without good ground or cause, the Colour of the face changed; is not rightly disposed in point of diet; is disturbed with bad dreames; infested with weariness which comes without labour, thirst, watchings, stomach sickness; it is easily conjectured, that man will have the Pestilence: for all these things do declare, that the humors do attain another nature, and do corrupt, from whence comes a pestilential Feaver.

Such things as declare the Pestilence to be present are exactly to be propounded and therefore all the Heads of Signs must be run over, out of which this Disease may be known, which Heads of Signs, are taken from the three kinds of Symptomes, because the Symptomes are the Effects of Diseases, and Causes can no way so conveniently be known as by their effects. And therefore, some signs are taken from the Actions hurt, some from Excrements voided, and others from qualities changed unto which Head a fourth must be added taken from supervenient Infirmities. To the right understanding of which these things following must be premised.

First, we must know that the same signs in a manner do shew a pestilential Feaver properly so called, and a Feaver simply malignant, and that the signs of the one and the other doe differ only according to more or less; so that in the pestilential Feaver the Symptomes are more, and in the malignant Feavers less; yet there are some adjuncts more proper to the one than the other, which we shall declare in their proper place.

Secondly, we must note, that there is no true, proper and Pathognomonick sign of these Feavers *viz.* Such an one as wherever that sign is, there is the pestilence, and where that sign is not there is no pestilence; no, not the Bubo or swelling in the Groin nor the Carbuncle; seeing that many have them not, though they have the plague, and many have Buboes and Carbuncles that have no malignitie in them, neither are those purple spots any such pathognomonick sign, although a malignant Feaver is from them termed the spotted Feaver, forasmuch as many have a malignant Feaver without any such spots, and those spots do sometimes appear on women that want their courses, and in some Children by reason of a light ebullition of Blood, without any Feaver, which I have often seen in both. Howbeit by a Concurrency and collection of all signs and tokens these Feavers may certainly be known.

Thirdly, we must mark, that all the signs which shall be propounded, are not found in all sick persons of these Feavers; but only a part of them, which notwithstanding will be sufficient punctually to discover the kind of the disease. For acording to the variety of of patients bodies

and

and the intention or remiſneſs of the Diſeaſe,now theſe kind of Symptoms,and anon thoſe,do chiefly ſhew themſelves.

Finally, It muſt be known, that the ſigns of a Peſtilential and Malignant Feaver (although they are alſo found in other Feavers) yet are made in ſome ſort Pathognomonick in this Feaver in a two-fold reſpect. Firſt, Becauſe in theſe Feavers, they are ſo conditioned as in other Feavers they are not. For the Head-ach, Ilneſs at the Stomach, Vomiting, the manner of the Heat and other ſigns, when they accompany Peſtilential Feavers, they have a peculiar Malignant condition whereby they differ from themſelves when they accompany other ordinary Feavers; which is well known to them that are but indifferently exerciſed in the Practice of Phyſick. Secondly,becauſe the Symptoms do not obſerve the ſame proportion among themſelves in theſe Feavers, which they do in ordinary ones. So that the heat being gentle to the touch, the pulſe not much changed, do ſhew a ſmall Feaver: yet with them is joyned mighty Head-ach, watchings and ſometimes ravings, and other Symptoms which are wont to accompany a burning Feaver. Theſe things being thus premiſed, we ſhall deſcribe the order of ſigns, beginning from the action hindered.

Becauſe therefore the Heart is chiefly afflicted in theſe Diſeaſes, by the malignant and venemous quality thereof, therefore its action, *viz.* The Pulſe, is diverſly changed, according to the variety of times and the divers condition of the Diſeaſe. For ſometimes at the firſt, it is in a manner Natural, and very like the pulſe of perſons in health, as *Galen* ſhews in the 3. de preſag. cap.4. but in the progreſs and augmentation of the Diſeaſe, it is little, weak and unequal. Alſo the frequentneſs of the pulſe is always more than the increaſe of heat can require, becauſe the Heart being provoked by the malignant quality, doth in that regard diſturb it ſelf more than the neceſſity of eventilation doth require. Likewiſe the ſigns of this Feaver are.

Cardialgia, Heart burning or pain of the mouth of the Stomach, which *Hypocrates* condemns as a ſign of malignity 1. Progn. in theſe words, Pain of the Mouth of the Stomach, with diſtention of the Hypochondria and Head-ach, are ſigns of Malignity.

Sometimes great thirſt, exceeding the meaſure of the Patients heat and ſometimes want of thirſt, with a vehement Feaver, and dryneſs of the Tongue, for both are ſigns of Malignity.

Great want of appetite, which makes many abhor all kinds of meat, as much as if they were the moſt loathſom Medicines. Now this is wont to ariſe from malignant Vapors which vex the Stomach.

Stomach Sickneſs and Vomiting ariſing from the ſame Cauſe, eſpecially when it happens in the beginning of the Diſeaſe, and is ſo divers that ſome preſently vomit what they Eat; others vomit as ſoon as they have taken broth, but they vomit not the broth which they took, but divers kinds of Humors; ſome keep any kind of Meat, but Vomit their Drinks, Juleps, Emulſions and whatever drinking matter is given them, preſently; great thirſt notwithſtanding remaining, with dryneſs and blackneſs of the Tongue.

A frequent and inordinate ſhivering, which comes divers times in a day, ſpringing from ſharp and biting exhalations of an adverſe quality to our Natures, which are carried unto the ſenſitive parts: which kind of ſhivering does rarely happen in other putrid Feavers, becauſe the Vapors in them have not the like Malignity. In Malignant intermitting Tertians, ſometimes a ſign of malignity is taken from the ſhaking and the cold. For it ſometimes happens, that in the beginning of the fit, with a light coldneſs or ſhivering, the heat doth ſo much retire inwards, that the Fleſh of the Patient is very cold and the face is like that of a dead perſon, and the pulſe ſo little as if it did not beat at all. After which follows an heat,which neither in the Augment nor in the ſtate,doth to the touch feel great or ſharp; yea and the fleſh of the Patient is either lukewarm to feel to,or coldiſh,even to the declination. The pulſe, when the heat comes, doth more appear, yet it is ſmall, unequal, frequent and very weak: and many other Symptoms of a Peſtilential Feaver are preſent, which may ſufficiently prove, that there are intermitting Malignant Feavers as well as continual; as was hinted before.

Wearyneſs of the whole Body, Heavineſs, and a breaking as it were of the Members appear in the beginning of the Diſeaſe, by reaſon of the foreſaid Vapors, diſperſed through the vvhole Body.

Pains of the Head,Watchings and Ravings,vvhich all come from the ſame cauſes, *viz.* from ſharp and venemous Vapors; vvhich vvhen they lodge themſelves in the Membranes of the Brain, they cauſe Head-ach and in as much as they heat and dry the very ſubſtance of the brain, if the alteration be but ſmall, they cauſe watchings, if great they cauſe Ravings. And to theſe Symptoms, beſides Heat and Dryneſs, the venemous quality contributes much, becauſe in the vulgar Feavers ſuch Symptoms do not happen, unleſs the diſtemper be much more than ordinary. And pains in this Feaver, have a peculiar property to be very diverſe, and to ſhift places. For ſometimes only the fore part of the Head, other whiles the hinder part,now the Forehead, anon the Eyebrows are cut aſunder as it were with pain,and ſometimes other parts as the Shoulder-blades,the Sides,the Back,&c.

Sometimes it is fixed in one part, otherwhiles it changeth place and vexes this, now that part of the Body.

In some Patients drousie and sleepy dispositions happen, *viz.* In such as have their brains full of Flegmatick Excrements: which Flegmatick Excrements, are dissolved by hot Vapors ascending from the inferior parts and do hinder the functions of the Brain.

The Urine in these Pestilential Feavers, is sometimes like the Urine of sound persons, Namely when the Humors do more offend through a Malignant quality, than by putrifaction; and sometimes it continues so for the first days; afterwards it becomes thick and troubled. Sometimes in the state of the Disease, it appears concoct, though the sick are in a perishing condition. Sometimes, it is thin and crude, having no sediment, or such a sediment as is more like an excrement than a sediment. But most commonly it appears thick and troubled, and of an high colour; and hath thick, red, disturbed and scattered sediment. And finally all evil dispositions of Urines, do happen in this Disease, according to divers alterations of the putrifying and corrupted Humors.

Chollerick Fluxes of the Belly, which either come of themselves or through some like occasions by some gentle Clyster or Medicament; which bring many to their end. So *Hypocrates* relates in 3. Epidem. In a Pestilential Constitution there described, that many died of the Looseness and Bloody-flux: For the Humors being made more furious by the Malignant quality which is in them, do exceedingly provoke Nature, so that she endeavours to drive them out the neerest way: Now in these Stools, there is wont to be a mighty stink, by reason of the extream corruption of the Humors.

An abundance of Worms is wont to be voided in this Disease, especially at the beginning: For the great Putrifaction doth very much dispose the Humors to breed Worms.

Frequent Sweats, Small, Short and unprofitable, do break forth in the beginning of the Disease.

The heat is mild and gentle to feel to, so that they scarce seem to have a Feaver, Whereupon *Galen 9. Simp. cap. de Bolo Armen. et Avic. Fen. 4 lib. 1 cap. de Febre Pestilenti* does teach that Pestilential Feavers have oft-times a mild and gentle heat; and the reason is, because these Diseases are rather caused by a Malignant and Venemous quality, than of an ordinary distemper and Putrifaction.

Redness of the Eyes is often seen in Pestilential Feavers, because the Membranes of the Brain are in a sort inflamed by sharp Vapors ascending into the Head, which they easily communicate to the *Tunica adnata* or Skin of the Eyes so called, which is propagated from the same Membranes.

Finally, Purple spots like Flea-bitings, called by latter Physitians *Peticulæ* or *Petechiæ*, are the proper and peculiar Signs of a Malignant Feaver. For they are found in no other kind of Feaver; forasmuch as they do arise from a vitious quality of the Blood or other Humors, joyned with Malignity. Yet there do appear in other Diseases, spots very like unto those aforesaid, but springing from a far different Cause; *viz.* From the over thinness of the Blood, which being exagitated by the heat or the expulsive faculty, does sprout forth of the Capillary Veins into the Skin. These spots, are wont for the most part to appear in such as have some Flux of Blood, because the Blood in such is more thin and watery: and also in Splenetick persons, in such as have the Jaundice and old obstructions of the Bowels, and (in a word) in all such, who by reason of the weakness of their Bowels, do breed watry blood and are apt to fall into a Cachexy. For in such persons, the Blood being made thinner than ordinary, sometimes flows out at the Nose, sometimes at some other part, and sometimes it comes out of the Capillary Veins into the Skin; where being retained, it looseth its own colour, and becomes either blewish or black or light red, and causes great variety of spots; which notwithstanding are very far different from the spots of Pestilential Feavers, and do argue nothing but the watry thinness of the Blood and weakness of the Liver. Now those spots which come out in Pestilential Feavers do arise from Humors putrifying and infected with an evil quality. Furthermore, those spots do break out sometimes critically and sometimes Symptomatically. Critically, when as Nature having either in part or in whole overcome the putrifaction and corrected the bad quality, does drive the corrupt Humor to the external parts; And then the Disease is evermore abated. Symptomatically when that Nature pricked forward by the quantity or evil quality of the Morbifick matter does transmit a portion thereof unto the Skin, before it be concocted, or the evil quality thereof amended. And from thence the Patient receives no ease, but rather, Nature having unprofitably wrestled with the Disease, it is a token rather that she is conquered than Conquers.

The Colours of these spots are divers and do show the Diversity of the Humors by which they are bred. For the red spots are bred of the purer sort of Blood, and the black from the chollerick blood more or less adust. As for the store of these spots, sometimes they appear in greater numbers and sometimes in less. They begin to appear sometimes on the fourth, fifth, seventh or ninth or some other critical day, if their coming out portend any good; sometimes on other days, when there

is

is little good to be hoped for thereby. Sometimes they are ſeen in all parts of the body, but moſt frequently in the Loins, breaſt and Neck.

Now the Diſeaſes which come upon a peſtilential Feaver, for the moſt part are ſomething coming out like Pox called *Exanthemata*; Puſhes and Ulcers of the Mouth; Carbuncles; Riſings in the Groyn and behind the Ears.

The *Exanthemata* aforeſaid, differ from the purple ſpots, becauſe in the ſpots there is only the colour changed, but here is a certain riſing in theſe *Exanthemata* to an head. Sometimes they are like warts, and ſometimes leſs, reſembling millet ſeed. Sometimes they are red being cauſed by blood, ſometimes white, proceeding of flegm or Seroſities; yellow from choller; purple from aduſt Choller; blewiſh or black, by reaſon of great burning Mortification. Some break out Symptomatically, others Critically, others in a middle way. Some dry away, others come to matter, others grow to be Ulcerous.

To theſe may be referred puſhes appearing in the Mouth which have all differences of the foreſaid *Exanthemata*, and are ſometimes ſo malignant, that the ſick can hardly endure to eat and drink. In Children they often Cauſe Death becauſe they will not endure the pain of eating and drinking. Theſe puſhes do ſometimes degenerate into Ulcers, which breed very great trouble to the patients, hindering the motion of their tongue and eſpecially their ſwallowing.

But ſometimes Ulcers are bred in the Mouth immediately without any puſtules or puſhes foregoing which the *Greeks* call *Aphthæ*: of which there are many ſecrets. For ſome are ſuperficial, others profound; ſome clean, others foul; ſome benign, others malignant; ſome with a Cruſt, others without. And the Cruſt is ſometimes white, ſometimes yellow, ſometimes blewiſh or black. Thoſe which are deep, filthy and malignant and that have a black Cruſt, are the moſt dangerous.

Carbuncles and Buboes, are wont to riſe in divers parts of the body, but eſpecially where the Glandules are; becauſe the expulſive faculty being provoked by a malignant quality does expel the pernicious matter from the internal parts eſpecially the more noble ones to the external: ſo that from the Brain ſhe ſends it to the Glandules or kernels behind the Ears; from the Heart, to the Arm-pits; from the Liver to the Groyns; whence ſwellings under the Ears called *Parotides*, and thoſe in the Groyn called *Bubones*, do ariſe. Which kinds of tumors do chiefly appear in a true peſtilent al Feaver, eſpecially thoſe in the Groyn, which therefore the common people call the Peſt or Plague. But Carbuncles and *Parotides* or riſings behind the Ears, do alſo break out in malignant Feavers, but in ſuch as are at the top of malignity, and come very neer the Nature of true Peſtilential Feavers.

Signs commemorative are chiefly in requeſt when Phyſitians are called to view the Corps of the dead, at ſuch times as there is a Plague abroad, or ſome ſuſpition thereof, that it may be known whether the party died of the plague or not.

And firſt of all, in ſuch dead bodies there do ſometimes appear thoſe ſpots of which we ſpeak before and ſometimes marks or ſtripes, as it were after whipping: for theſe are the tokens of a Peſtilential diſeaſe and venemous, ſeeing thoſe that are poyſoned have alſo theſe ſigns. And thoſe ſpots do eſpecially denote the Peſtilence, when they are of a lead colour or black. Alſo thoſe *Exanthemata* ſpoken of before, do ſhew the ſame, eſpecially if they have a bad colour; but much more the Buboes, *Parotides* and Carbuncles whereunto may be added ſuch things as have appeared in the Courſe of the diſeaſe; for the recounting of them will make a certain demonſtration.

The Prognoſtick of Peſtilential Feavers is ſo uncertain, that nothing can be certainly affirmed touching their Event, untill certain tokens appear either that Nature or the diſeaſe hath gotten victory; which is not wont to happen, unleſs about the end of the ſtate or the Beginning of the Declination. Where the diſcreet Phyſitian ought to delay and ſuſpend his Judgement touching the Iſſue of the diſeaſe in the beginning and the Augment.

We muſt nevertheleſs propound the chief tokens out of which we may draw a great Conjecture, whether the diſeaſe will end in Death or Health, by help whereof we may foreſee, what is to be hoped or feared, yet not being over confident; ſo Experience hath taught us, that many have eſcaped, with moſt mortal ſigns; and others have periſhed under all the tokens of Recovery. But we ſhall paſs over all ſuch prognoſtick ſigns which are common to all acute diſeaſes, of which *Hypocrates* hath diſcourſed largely in his Prognoſticks, Coicks, Predictions, Prorrheticks and Epidemicks and likewiſe in his Aphoriſms, which may have a place likewiſe in this diſeaſe. But we will propound only ſuch as are proper in a ſpecial manner to peſtilential Feavers, from which a more certain Prediction may be drawn.

Now theſe may be drawn from the ſame Fountains from whence we drew the Diagnoſticks.

Firſt therefore, in theſe Feavers, if the pulſe keep a tenor and equality be the Feaver never ſo great, it gives alwayes ſome matter of hopes. Contrarily an inordinate, unequal and contracted pulſe, is dangerous, eſpecially if it appear weak from the beginning, But thoſe Differences of pulſes are not ſo dangerous in malignant Feavers, as in ordinary ones. For although an intermitting

ting pulse in a young man, be so deadly a sign that *Galen* testifies, though he had seen many old folks and children escape having an intermittent Pulse, but never any young man, yet in malignant Feavers I have known not a few young men, which had an intermitting pulse divers days and yet escaped. Pulses like those of Persons in Health are very dangerous: for they signifie that Nature out of weakness abstains from the Concoction of Humors. For where by an evil and pernicious quality, the strength is exceedingly weakened, Nature being weak, does not set her self to digest the matter, not medling with the Humor which hath caused the Disease: so that no endeavour of coction being used, no labour follows and there is either no Feaver, or a very little one. We have an example hereof in external Tumors, in which so long as the part is almost overwhelmed by the plenty or ill condition of the matter, there is neither Pain nor Feaver; but when as Nature begins to fight against the matter, and to turn it into quittor, then the Feaver is much encreased. Even so in Malignant Feavers, the Patients seem sometimes freed from their Feaver, whereas they grow worse and draw towards death: as we may see in *Hypocrates*, 3. Epidem. Sect. Ægr. 2. Where *Hermocrates* from the twentieth day to the twenty fourth seemed to have no Feaver, and yet on the twenty sixth day he died.

Raving is very common in this Feaver, neither is it to be feared if it be lessened by sleep, and especially if it vanish away with a plentiful sweat, for 'tis a sign that the matter is drawn from the brain, into the habit of the Body. But a persevering dotage is pernicious because it's a token that it degenerates into a true Phrenzy.

The contractions and hoppings of the Members, which do often happen in this Feaver, are Convulsive motions and very pernicious, and that the more if joyned with raving, for they signifie the brain to be extreamly hurt.

Trembling motions of the hands and tongue are wont to be deadly, and are by *Hypocrates* much condemned in the 1. Prognost. For they shew great weakness, and that Nature is overcome by the Disease.

Deafness though in the beginnings of occult Diseases it being exceeding dangerous, according to the Doctrine of *Hypocrates*; yet if it appear in the State of a Disease it portends health, especially in Malignant Feavers. And I have observed a thousand times, that such as being sick of Pestilential Feavers, were taken deaf in the State of the Disease did all escape, though the other Symptoms were never so dangerous; for it is a token that the brain, being sufficiently strong, does thrust the Humors from the internal to the external parts.

Sneezing, according to *Hypocrates* even in deadly Diseases (provided the Lungs be in good Case) does give hope of recovery. But in Malignant Feavers, be Symptoms otherwise never so dangerous, they promise recovery.

Frequent Heart-burnings or Hiccoughs, do portend danger, and signifie that the Stomach is grievously afflicted by the venemous quality.

Extream averseness to meat is very dangerous, for it signifies the Stomach to be mastered by the malignant quality of the Humor, and that its temper is wholly overthrown, so that it refuseth and abominates laudable nourishment, which it most familiarly affected in time of Health.

Suppression of all Evacuations in the beginning and augment of the Disease, is counted a good sign. For it shews that the morbifick matter is not so malignant, as to provoke Nature to excretion before the due time; but that Nature does yet conquer, and will in due time expel the matter, provided there be no sign that the Humor will settle in the Head, Belly, or any principal part. But in the State of the Disease for nothing to be Evacuated, but for worser signs to appear in some principal Members is bad. For it's a sign the Disease will either last long, or give little hope of life. For the matter which in divers days could not be overcome, does bring some great damage to the same member, as a Phrenzy, Lethargy, and others which arise after the eleventh or fourteenth day, which can very hardly be cured by all Medicines imaginable.

Blood that is drawn by Phlebotomy, if it appear no ways faulty, but pure and according to Nature, 'tis a dangerous token. For it is a plain argument that there is more of a venemous quality, than of putrifaction; or that putrifaction may lurk in the Veins next the Heart, which cannot be drawn away by Phlebotomy.

From Urines in a Pestilential Feaver, there is scarce any, or a very uncertain prediction to be made. For not only the confused, troubled, thinner and thicker Urines are bad, as in others Feavers: but also that Urine which is like the Urine of a healthy person. Yea verily, and many have died, after the Urines have shewed signs of Concoction, and then became crude again.

Howbeit, Concocted Urines, and which have a laudable *Enæorema* continuing many days, and dayly more uniting it self, and descending by little and little into the bottom of the Urinal, doth perpetually promise certain recovery, even in Malignant Feavers. For it cannot be, that a lusty and strong natural Faculty, which discovers it self plainly in these Urines, should not rise against the Malignant Quality, and at length overcome the same. And therefore I have oftentimes with great

great confidence foretold a good event from the ſigns of Concoction perſevering in the Urines in ſuch as have had Malignant Feavers, attended with moſt grievous Symptoms, ſo that all the By-ſtanders were in great fear of their Lives.

A Fat and Oyly Urine, black or livid, with a black or blewiſh ſettling, doth certainly betoken death.

Very much Urine being made, and no abatement of the Feaver thereupon, is dangerous, becauſe it ſignifies a melting of the Body.

Sweats in this Feaver, although they come well conditioned, and in the Critical day, do ſeldom perfectly judge the Diſeaſe. And ſometimes the Feaver is abated by Sweat on the firſt day; and then the Symptoms grow high, and after many Sweats the Patient dies. For plentiful Sweats, not diminiſhing the Diſeaſe, do ariſe from the melting of the whole Body. Neither muſt we therefore beleive, that Critical Sweats do never any good in theſe Feavers. For by how much leſs Venom there is in the Diſeaſe, they do ſo much the more good; as it happens in ordinary Feavers. And we find by Obſervation, that 'tis far the better for the Patients to Sweat often at the beginning of the Diſeaſe (provided they be not worſe after their Sweats) for 'tis a ſign that Nature doth attenuate the matter by little and little, and expel the ſame by Sweat.

Looſneſs of the Belly is a very uncertain ſign. For oftentimes a Looſneſs at the beginning of the Diſeaſe hath been good, which yet experience ſhews, is ſometimes a deadly token. Again after ſome Coction, we have ſeen the Patient killed by a looſneſs, and ſometimes by the ſame recovered; Yet we muſt thus diſtinguiſh. When a venemous quality hath the maſtery, the more the matter goes away by Stool at the beginning of the Diſeaſe, the leſs danger. But when the Diſeaſe ariſes moſt part from putrifaction of the Humors, they are worſe that are looſe at the beginning of the Diſeaſe.

Purple ſpots, when they are many and large, and of a benign colour, and break out Critically, they foretel that Nature will Conquer. But if they be few, ſmall, and of a bad colour, and are Symptomatically put forth, they ſignifie that Nature is worſted. And further, If they go in again, its the worſt ſign of all; for it ſhews the Morbifick matters reflux into the inward parts.

Exanthemata, or wheals appearing in divers parts of the Body, are effects of greater malignity than Purple Spots and conſequently portend greater danger.

Carbuncles and Buboes, or riſings in the Groin and ſome other parts, do witneſs greateſt malignity, and threaten moſt danger: ſeeing they are wont to follow thoſe Feavers whoſe peculiar Character it is, that more die of them than recover.

Carbuncles and Buboes, by how much they are further from the Heart, grow faſter and come quicker to ripen, by ſo much the leſs dangerous are they. But if Tumors encreaſe ſuddenly with bad Symptoms 'tis ill. Carbuncles very great, of a filthy colour, with an eating Ulcer, or which turn into a Gangrene, are deadly; as alſo thoſe which are neer the Heart, or riſe upon the Throat. Experience hath taught that many Carbuncles are more dangerous than few; and contrarily many Buboes or other riſings are more ſafe, than few. *Parotides* (or riſings behind the Ears) in malignant and Purple Feavers, are in the Augment and ſtate deadly. But if they appear when the Diſeaſe doth never ſo little decline and come to Suppuration, they are a good token.

CURE.]

The Cure of a Peſtilential Feaver is divided into two parts. The Firſt contains the preſervation of thoſe that have it not; The Second contains the healing of thoſe that have it.

The preſervation from the Peſt conſiſts chiefly in taking away of thoſe Cauſes, which make Bodies fit to receive the Peſtilence, and breed it in them. And they are Internal or External; the Internal are a Diſpoſition of the Body apt thereto, a Plethory, a Cacochimy and Obſtructions. The External are eſpecially, a vitiated Air, and a wandring Contagion. Bodies diſpoſed to this Diſeaſe, are ſuch as either Naturally or Accidentlly, are more moiſt then they ought to be; Weak, Lax, and Rare, denſe and compact. Moiſt Bodies muſt be dryed; dry muſt be preſerved in that temper; the former muſt avoid full Diet, much drinking and all moiſt nouriſhments; ſuch as are eſpecially Fruits that will not keep, Herbs, Fiſhes, Meats made of milk; the South Air, ſuch as comes from lakes, and eſpecially the Air of the night, Idleneſs, long Sleep, eſpecially Sleeping after Dinners, Bathings and whatever elſe can moiſten the Body.

Let weak Bodies be ſtrengthened with a reſtorative diet and with ſtrengthening Medicaments. Thoſe of a rare, lax and thin conſtitution, need the ſame wayes of prevention with the moiſt. But the denſe and compacted conſtitution, becauſe it is moſt of all diſpoſed to a Peſtilential Diſeaſe muſt more carefully be freed from a Plethory, Cacochymy and from obſtruction; which cauſes, ſeeing in all Bodies they may breed this kind of Feaver, as Internal Cauſes, we muſt perpetually ſtudy their removal.

A Plethory requires Plebotomy provided nothing do adviſe the contrary, as a very cold or hot ſeaſon of the year, and a Peſtilential Conſtitution of the Air in which a Vein muſt not be open-

ed

ned, unless a *Plethora ad vasa* do manifestly urge the same; or some usual Evacuations of Blood by Courses, Hemorrhoids, or Nose-bleeding, have been stopped. For the blood being exhaust, the Air which is breathed in, will more easily imprint it's Pestilential quality, and in case the Disease hapen, the Patient will the hardlier escape, for being weakned by Blood-letting even as they who drink poyson after Blood-letting, it penetrates the more and they are with more difficulty recovered. Also when we fear poyson, we let not the Patient Blood, so *Galen Lil. 7. de diff. Feb. Cap. 4.* Where he propounds a preservation from a Pestilential Feaver, he prescribes indeed Purgation and opening of obstructions; but he makes no mention of Phlebotomy.

To Cacochymy we must oppose purging, such as is proper for the Humors offending, convenient preparation being premised if it seem necessary: with this caution, that benign Medicaments be only used, abstaining from such as have a Malignant and deadly quality, with which it will be good to mix some Bezoarticks and such things as are Alexipharmical.

Obstructions are caused by the multitude of Humors, their thickness and clamminess. The multitude will be helped by such things as Evacuate, the thickness by such as attenuate; the clamminess by things that are absterstive or cleansing.

In respect of External Causes, Precaution must be made first by correcting the excesses of the Air, *viz.* By cooling that which is too hot, as we taught in continual Feavers; by drying that which is over moist, with Fires both in Streets and in private Houses, and that as much as may be, made with sweet Woods as Juniper, Bayes, Rosemary and such like. Secondly, By removing all the causes above recited which do infect the Air. Thirdly, By consuming and dissipating the infections in the Air: Which may be done by kindling of Fires, as we said in correcting the moisture of the Air, and the perfumes of sweet smelling and Alexipharmical materials. Also by vehement agitation of the Air, to which end the frequent discharging of great Guns will be very effectual.

But if the Air shall be very much infected, so as therefrom a Feaver truely Pestilential shall arise, the best kind of preservative is to change the Air, and they that are forced to continue, or to converse in places infected and among the sick, have need of many other cautions and they must often use Antidotes. All which are at large set down by such Authors as have treated expresly of the Plague, and from thence the Reader must fetch them; because my design is but briefly to touch such things as are reqnisite to the Cure of the true Pestilence; because few Physitians of any note dare hazard themselves in the Cure of the true Plague: And contrarily seeing both in *England* and in *France*, and whole Europe over: all Physitians in a manner have imployed themselves in the Cure of spotted and Malignant Feavers; I have thought it most worth my pains to direct this Cure to that kind of Pestilential Feaver, which is simply called Malignant and the Spotted or Purple Feaver. Yet so that it may serve for the Cure of the true Plague; seeing as we said at the beginning, the same Medicines and the same Indications will serve for both.

The Cure therefore of those which are actually sick must be directed unto the Feaver, the Putrifaction and the malignant quality. The Feaver must be opposed with Coolers and moisteners, the Putrifaction with Evacuaters and Alterers. The Malignant quality with Antidotes. All which intentions must be satisfied by a three-fold Medicinal Means after the manner following.

The same Diet must be appointed in this Feaver which was appointed in the continual Feavers. Only this one thing must be observed, that sharp things must be oftener used in Drinks and Broths as being very fit to resist Putrifaction and the Malignant quality. Also touching drink this must be observed, that the use of Wine and strong Drink is sometimes good in this Feaver, because they (and especially Wine) are very cordial and contrary to the Malignant quality. Yet many times they do much hurt and encrease the heat of the Feaver. Wherefore the prudence of a Physitian, is in this case very necessary, that he may contemplate the Nature of the Disease and constitution of the Patient: for by this means he shall know whether the use of Wine or strong drink be safe or no. For if the Feaver be very small, but the venemous quality very intense, and the Body of the Patient abound with Flegm, Wine well allaied with Water may be safely given and to good purpose. But on the other side in an high Feaver and a Chollerick constitution, to give Wine and strong Drink is pernicious. This I have learned by a multitude of Experiments and especially in the year 1623. When the Purple Feaver was rife at *Montpelier* after the City had been besieged. Which Feaver was so Malignant, that a third part at least of those which had it died, and it differed from the true Plague only in the point of a Bubo: forasmuch as not only whelkes and *Exanthemata*, Red, Blewish and Black, but also Carbuncles and swellings behind the Ears did often appear. For to such sick persons whose pulse was not very quick and like the pulse of a sound person, their Tongue

Tongue moiſt & they without thirſt, I have given Wine with good ſucceſs; and I was enclined to continue the uſe thereof, by reaſon of the good the Patients found thereby, and becauſe by the uſe thereof the Feaver was not at all augmented, neither did any thirſt or dryneſs of the Tongue ariſe thereby: But in ſuch whoſe Feaver was more ſtrong with thirſt, dryneſs, roughneſs or blackneſs of the Tongue, I wholly forbad Wine, and kept them perpetually to the uſe of cooling and tart drinks. But it is to be remembred that in the firſt days of the Diſeaſe Wine muſt never be given, leaſt the crude matter be too much agitated, but only about the ſtate, when the ſigns of Maligniity do begin more and more to ſhew themſelves. Howbeit *Zacutus Luſitanus* in the 93. Obſ. Lib. 1. of his wonderful Cures and Caſes, relates that in a Peſtilential Feaver, the Patient being extream thirſty, with a dry and black Tongue and paſt hope, he gave Wine with a moſt happy ſucceſs, ſo that the Patient was cured therewith alone. But here that ſaying of *Cornelius Celſus* is to the purpoſe, Thoſe which *Reaſon* could not, have many times been cured with *Raſhneſs*.

Diet being ordered, the Cure muſt be begun by Blood-letting, a Clyſter being premiſed: for bleeding is very convenient, both in regard of the greatneſs of the Diſeaſe, the hot diſtemper and the putrifaction. But in defining the quantity of blood which is to be taken away, prudence is neceſſary, when in regard of the Malignant quality, it does no good but hurt; for thereby the vital faculty is exceedingly weakned, and thoſe which are let blood after being poyſoned, are haſtned to their Death. Therefore if a malignant and venemous quality be more than the Putrifaction, which may eaſily be known by the proper ſigns aforeſaid, little blood muſt be taken away but if putrifaction be more conſiderable than the venemous quality, blood muſt be taken in a greater quantity. And conſequently, if by reaſon of a ſickly Conſtitution of body, and of Putrid Humors contained in the Veins, the malignant Feaver hath been produced chiefly; blood-letting may ſafely be repeated, once, twice or thrice until the Burthen of vitious Humors contained in the Veins be diſcharged. And that eſpecially if Inflammation of any of the Bowels be feared, which many times happens in Malignant Feavers. Now bleeding muſt be uſed betimes and at the beginning of the Diſeaſe, for if the Diſeaſe ſhall have taken progreſs and the malignity be diffuſed into the whole Maſs of Blood; bleeding does not only no good, but very much weakens Nature; ſo that very many Authors hold, that blood muſt not be let after the fourth day is paſt. And truely, foraſmuch as malignant Feavers do at ſeveral times differ much one from another, in regard of the different degree of Malignity; when they begin to be rife once, diligent obſervation muſt be made, what good the Patients receive by blood-letting. For ſome Feavers being of the kind of *Synochi*, in which there is great putrifaction and little maligniity, are much leſſened by Phlebotomy. And others whoſe Nature conſiſts very near wholly in malignity do become more pernicious by Blood-letting. This appears in the true Peſt, in which by the experiment of many approved Authors, it is aſſured, that all which were let blood died. So *Wierus* relates in an Epidemical Catarrh which wandred all Europe over in the year, 1580. in which all in a manner recovered, ſo that ſcarce one thouſand died; yet all that were let blood died thereof. Now we muſt diligently obſerve that which *Galen* hath taught us in the 14. Method Chap. 10. that in the Cure of Carbuncles it is good to take blood till the Patient faint away, that the boyling blood which cauſes the Carbuncle may be plentifully Evacuated. When as the ſame *Galen Lib. de Curar. per. venæ, S.* Cap. 14. Commands that in Phlegmonous Tumors blood be taken away, till the colour change, unleſs the Patients be weak, or the Phlegmone malignant. Whereby is intimated, that *Galen* admits Copious Blood-letting in a ſimple Carbuncle that is void of malignity but not in a malignant and Peſtilent one; which agrees to an hair with the former precept propounded by us.

As Concerning the times and intervals of Blood-letting wherein it is to be iterated, this is to be noted: that if the Diſeaſe proceed ſlowly, the Blood-lettings muſt not be haſtened: for the Patients ſtrength is too ſoon weakened; ſo that it cannot hold out, till the Morbifick matter be expelled. According therefore as the Diſeaſe is moved; ſo the Phyſitians ought ſooner or later to let the Patients blood.

And there is a great Controverſie, whether when Purple ſpots or wheals appear, Phlebotomy is to be uſed. For ſome account it to be an hainous Crime to let blood when the *Exanthemata* appear, becauſe at that time the Humors are moved from the Centre to the Circumference, which motion muſt be by all means furthered; and by Blood-letting the Humors are put into a clean contrary motion, and the blood is drawn from the Circumference to the Centre, when as the inner parts being emptied, it muſt needs be that the blood contained in the outward parts, ſhould run inwards again; which *Galen* plainly teacheth in his 9. *De ſanit. Tuend. Cap.* 10. *viz.* That the Blood when a Vein is opened, does flow back from the whole bulk of the Body into the internal parts. And the ſame *Galen* in his Comment upon the 9. *Epidem.* Does conjecture that *Simon* of whom *Hypocrates* ſpake having broad puſhes came out, had no good from his vomit, becauſe ſuch Juyces were thereby to be Evacuated, which took their Courſe to the Skin. Howbeit, by the more ſound Advice of Doctors it's concluded, that the Purple ſpots appearing in the beginning of the Diſeaſe and on thoſe

days

days in which a vein is wont to be opened, if blood were not sufficiently taken away before, it must even then be drawn in a moderate quantity; Neither is there any danger to be feared by so doing; seeing the same Eruption of the wheals, which comes in the beginning of the Disease, is not critical but Symptomatical only, arising from an exceeding Ebullition of blood, and from the frevency of Malignant and putrifying Humors; and therefore the Motion of Nature cannot be hindered, when there is none to hinder. For in Case the Patients Body being Plethorick, the Urine thick and red, you shall not let blood because of the *Exanthemata* or wheals breaking forth; Nature will scarce be able to Master such a quantity of Humors, and it is to be feared least they should rush into some internal part of the Body and breed therein a pernicious Inflammation, Howbeit, blood at such a time must be sparingly taken away, not so as the Veins may be emptied, which might cause a retraction of the evil Humors inward again; but only so as to take away their over great abundance, which being taken away, the Veins draw no new blood, but only fall a little together as it were and become a little loosened so as to purse themselves the better, and consequently to be the better able to rule the remaining blood. And so is the motion and expulsion of Nature furthered which she endeavours towards the surface of the Body, for she being eased of part of her load wherewith she was oppressed, does more easily cast off the remainder, and drive the same out. Which we do every where behold in our Practice, whiles the very same day oftentimes, in which a Vein is opened, yea verily sometimes, a few hours after, plentiful sweats, critical and healthy do break forth. And in truth, though Nature were so strong that she could sufficiently rule all the redundant blood, seeing that in Plethorick Bodies the blood is wont to be thick and by these Eruptions into the Skin, the thinner part of the blood only is Evacuated, the thicker abiding in the Veins does more and more putrifie, and makes the Diseases much more dangerous. But I hold the most advised Course to be, a little after the Blood-letting, to fasten many Cupping-glasses, that the motion of the Humors to the outward parts, may be hereby the more assisted; of the Administration of which Cupping-glasses, we shall speak by and by. Now it must be diligently noted, as we said before, that we observe the time in which the *Exanthemata* do begin to appear. For if it be in the beginning of the Disease and before the fourth day, in which time their breaking forth cannot be critical, and no help comes to the Patient thereby; but the Symptoms do rather grow more vehement, in which regard blood-letting ought by no means to be hindered. But if they break forth after the fourth day and that in great quantity, so that the sick party is thereby bettered, and the Symptoms lessened; it is much better to abstain from Blood-letting, and to fix many Cupping-glasses with Scarrification, that the motion of the Humors outwards may thereby be well futhered.

What we have hitherto said of blood-letting, is to be understood of opening a Vein in the Arm, which does quickly diminish the blood. Howbeit sometimes, 'tis very profitable to open the inferior Veins, *viz.* If the Patient be weak, and cannot suffer reiteration of the former Phlebotomy. But this is especially good in Women; for it is as *Oribasius* says Lib. 7. Chap. 10. proper to Women and very efficatious, because it imitates the manner of their Natural Evacuations. Yea verily and when they want their courses that kind of bleeding is proper for Women, because naturally they have much blood in these Veins which are nigh the Womb. Also it is good for such, in whom we fear a translation of the matter into the brain, which is often wont to happen in these Feavers and to cause a Phrensie. Which may be perceived easily (as we said in the Prognostick) by the Urines thin, white, and void of Colour; and when the Urines are so, it will be very good to open the inferior Veins. Also *Oribasius* relates in the forecited place that he was taken with a Pestilential Feaver, and having two pound of Blood drawn from his inferior Veins, he recovered: and all that used the like bleeding, were recovered.

The opening of the Hemorrhoid Veins by Horse-leeches works the same effect. For seeing by this means the blood is drawn out by little and little, there follows little abatement of strength. Yet is the blood revelled from the inmost bowels, where is wont to be the Heat and the Matter which foments the Disease. And this is special good for Melancholick persons, because in such, Nature is wont to Evacuate Earthy blood, by these ways.

After sufficient Blood-letting, Revulsions must be Celebrated by Cupping-Glasses, both dry and with Scarrification. Dry ones, when we would only revel: but Scarrified ones when the redundancy of blood is not wholly taken away by Blood-letting, which the Patients strength could no longer bear. For, blood is drawn by Cupping with much less expence of strength and besides the venemous spirits lurking within, are thereby drawn to the Surface of the Body. But Authors agree not touching the places where Cupping-glasses are to be applied: for some and especially all Italian Physitians very neer do hold they ought to be applied to the inferior parts, *viz.* to the Thighs and Buttocks and no where else, that the venemous matter may be drawn from the Heart to the most distant parts: but that they are not good to be fastened to the Shoulder-blades or the Back, because they draw hurtful Humors from other parts towards the Heart. Others are of a contrary opinion, that Cupping-glasses are best to be applied to the Shoulders and Back, *viz.* that poysonsom Humors and Vapors may be drawn from the Centre to the Circumference which motion is most suitable to the

Motion

motion of Nature in this Diſeaſe: But I am of opinion, that Cupping-Glaſſes ſhould be faſtened to each and every of the places aforeſaid; and that it is good to ſet them firſt upon the lower parts, that ſome portion of malignity may be drawn back unto the more remote parts: but becauſe the Glaſſes fixed in thoſe parts cannot ſufficiently draw back the venemous Humors and Vapors from the Heart, and its neighboring parts; it is good to faſten them likewiſe to ſuch parts as are near the Heart, *viz.* To the Shoulders and Back. For by this means the motion of Nature is very much furthered, ſeeing that experience doth teach, that the Eruption of the ſpots is commonly in thoſe parts which by frequent fixing of Cups is much furthered. Which *Mercatus* hath moſt Elegantly delivered in theſe words. *Howbeit in the mean time, while the Body is plied with other Medicaments, ſmall Cupping-Glaſſes muſt either many at once, or a few frequently be applyed. And if the venome of the Diſeaſe or the weakneſs of the Patient be much, they may be fixed without any, or with very little Scarrification. In which kind of uſe, and upon that occaſion, it is the beſt courſe to Scarrifie thoſe which are ſet upon the Back over againſt the Heart, which experience hath taught to be of ſuch moment, that Anxieties and Inequality of the Pulſe, and other grievous accidents have thereupon ceaſed. Therefore we muſt not ceaſe applying of them, untill the venemous accidents are mitigated or wholly taken away.*

But the Reaſon urged by thoſe of the former opinion, is of ſmall moment for the fear leſt ill Humors ſhould be drawn from other parts unto the Heart. For this Reaſon might peradventure be of ſome force, if they ſhould be uſed at the beginning of the Diſeaſe, the whole Body being full of Humors. But after an univerſal Evacuation ſufficiently procured by Blood-letting, they can cauſe no ſuch danger; which is made manifeſt by a clear example drawn from a pleuriſie, in whoſe beginning, if the pained ſide ſhould be Cupt, doubtleſs it would bring the Humors more and more to the grieved Part. But when after often Blood-letting, a Cupping-Glaſs is fixed upon the pained ſide, it doth not onely draw nothing from other parts to the place affected, but that Humor which is fixed and wedged into the part, is thereby powerfully drawn out, ſo that oft times the Diſeaſe is thereby perfectly Cured. Although in this Diſeaſe, there is more danger of drawing Humors to the Part affected, becauſe it is in a manner external, and near the Cupping-Glaſs.

Zacutus Luſitanus in *Obſerv.* 13. *Lib.* 5. *Praxeos admirandæ*, doth very much commend Cups with Scarrification, faſtened near the Groins and Arm-pits. For by ſuch Cupping-Glaſſes ſo fixed, the vitious Humor is drawn to the ignoble parts, and to thoſe common Emunctories unto which Nature is wont to expel the ſame.

Among Revulſive Remedies, Frictions may very well be reckoned, being often exerciſed upon the extream parts of the Body with a courſe Cloth. But that Friction is moſt commended, which is made upon the whole Body with the Liniment of *Aetius*, which is thus compounded.

Take Oyl of ſweet Almonds and Fountain-Water, of each three ounces: Sal Nitre two drams; Boyl them together till the Water be conſumed, and with this Oyl warmed, let the Patients Body be rubbed all over with the Hands being dipped therein. *Aetius* doth preſcribe Oyl of Savin, but becauſe it is too hot: Oyl of ſweet Almonds was by *Baptiſta Montanus* fitly ſubſtituted in its place. This Oyntment doth open the pores of the Skin, that Nature may more fitly expel the venemous Vapors thereby.

Veſicatories do likewiſe powerfully draw out evil and venemous Juyces, and ſerve for Revulſion being applied in divers parts of the Body: Commonly they are applyed to the hinder part of the Neck; for they both draw out the matter, aud drive it from the Head, and ſerve well to Cure ſuch ſleepy Symptomes as are uſual in theſe Diſeaſes. But where great malignity doth poſſeſs the whole Body, and grievous Symptomes afflict the Patients, one veſicatory will not ſuffice, but more muſt be laid on: I am wont when the Diſeaſe is very violent to lay them on in five places, *viz.* The Neck, both the Arms on the inſide between the bending of the Arm and the Shoulder, and to both the Thighs in the ſpace between the Groyn and the Knee, with happy ſucceſs.

The great profit of this Remedy we may learn from *Galen*, who in *Lib.* 5. *Method. Cap.* 12. Relates, That of a Peſtilentiall Feaver all recovered, who happened to have exulcerations in divers parts of their Bodies; becauſe the Morbifick matter was Evacuated by thoſe Ulcers. And becauſe the uſe of theſe Veſicatories does often cauſe the Strangury (for the Cantharides doe by a peculiar property affect the Bladder) it will be good when they are applyed, to give the Patient an Emulſion, that may temper the Acrimony of the Urine. This Symptome may likewiſe be prevented by mingling the powdered Seeds of Ameos with the veſicant Plaiſter, which Seeds have the faculty to keep the Cantharides from hurting the Bladder.

Amongst Revulsive Medicines may likewise be mustered the Cataplasm of Rhadishes commended by *Crato*: The Rhadish (saith he) because it powerfully draws the malignity of matter, it is good to apply the gross powder or scrapings thereof to the Feet, having first cleansed them with Salt and Vinegar. And the following Cataplasm may be better for the same purpose.

Take scrapings of a Rhadish and the two Briony Roots, of each two ounces, seeds of Garden-Cresses one ounce, Grains of Paradise half an ounce, Sea-Salt three drams: Mix all, and sprinkle them with the strongest Vinegar, and make them up into a body, with a sufficient quantity of soft Sope, till it become like a Cateplasm, and apply it warm with tow to the soals of the Feet, when the Patient is disposed to sleep. To this Cataplasm may profitably be added Leaves of Rue, Nettle, Sage, Scordium, Pigeons dung, Juyce of Rue and Vinegar.

A Cataplasm of Snails beaten hath the like Efficacy, and powerfully draws unto the neither parts hurtful Humors and Vapors, as *Galen* highly commends the same, for powerfully attracting and discussing the waters of Hydropick Persons.

These revulsory Remedies have place during the whole Course of the Disease after universal Evacuations, *viz.* Phlebotomy and Purgation: of the use whereof we are now to speak, that so we may pass from Chirurgery to Pharmaceutick Remedies.

Now it is much controverted among Practitioners, whether we ought to purge in the beginning of malignant Feavers. Many reject purging at that time, not only because of that well known precept of *Hypocrates*, that concocted Humors are to be purged, but crude Humors not: but also because in this Disease the malignant Humors are too much exasperated by purgations, and diffuse their malignant quality the more abroad, and by sharply provoking of Nature, they produce pernicious Fluxes, whereas otherwise of themselves in their Feavers, melting fluxes do often arise, and bring the Patients to their long home. But otherwise contend, that sometimes there is such plenty of evil and venemous Humors in the first passages, that unless they be first removed by purging, or very much lessened, they infect the rest of the Humors, so that Nature cannot master them, however assisted by Antidotes and Corroborating Medicaments.

We conceive this Controversie may be thus composed, *viz.* that in the beginning of this Disease we must abstain from Purgations for the Reasons fore alledged; and that the sink of putrid Humors which lies in the first passages (which, the truth is) do very much hinder the Cure; be drawn away rather by frequent Clysters, than purging Medicaments. Howbeit, if there be so great a quantity of ill Humors in the first Region, that it seems impossible sufficiently to evacuate the same by Clysters (which chiefly happens, when evil Humors abound in the Stomach, and then there is great loathing of Meat, bitterness in the Mouth, Stomach, sickness and vomiting) or when there are many worms, it is very good in such a Case to draw away the matter by a purging Medicament, that the Morbifick matter contained in the Veins may afterward be the more easily subdued. Which matter it is that cannot be purged before concoction, and of that must the saying of *Hypocrates* be understood, that only concocted Humors must be purged. But the matter contained in the first region, and that mass of Excrements may be drawn away without any preparation or concoction premised, and is ordinarily purged out only by Clysters as we said before. Now those Medicaments which we give to purge the first Region, must be chosen from amongst the most benigne and gentle Purgations, avoiding the most vehement, yea and the middle sort too; so that we may safely use Cassia, Manna, Tamarinds, Syrup of Roses and Cichory compound. And it is scarce lawful to arise to Senna and Rhubarb, or at least to mix them with the others in a small quantity, when a great abundance of evil Humors do afflict the Patient. The former of these Medicaments were propounded in our Cure of continual Putrid Feavers, and how we should purge in the beginning of them.

But Clysters are to be used not only in the beginning of the Disease, to free the first Region from Excrements; but they are to be given in the whole Course of the Disease, if the Patient be not loosbellied, and that every or every other day. For by those the daily Excrements are brought out, and some portion of the Morbifick matter is also by little and little drawn away, likewise the Humors mounting upwards, are brought down to the places more suitable to the intent of Nature. Now these Clysters must be composed of an Emollient and refrigerating Decoction, adding gentle Laxatives; for sharp ones and Scammoniated, do over much Irritate Nature to excretion, and often produce pernicious Fluxes.

And the truth is, 'tis best in the vigor of the Disease to put no purgers into the Clysters, least a loosness be caused, which is very incident to this Disease, so that they are rather to be of the Nature of an internal Fomentation, then of a Laxative Medicine.

But if in the Course of the Disease, the Belly seem to be loose; we must not therefore abstain from Clysters, but we must use such as do moderately deterg and refrigerate, and in Juleps we must dissolve Syrup of Pomegranates with powder of Coral prepared.

While the foresaid Medicines are using, we must endeavor to correct the Feaverish heat, Putrifaction and Malignant quality, with these following Medicaments.

And

And firſt of all the altering Juleps which were propounded in the Cure of continual putrid Feavers will be very convenient, of the Decoction chiefly of the Roots of Sorrel, Cichory, Graſs, Bugloſs, Sharp-pointed Dock; the Leaves of Endive, Cichory, Sorrel, Pimpernel, Maiden-hair and Tamarinds. Whereunto muſt be added ſuch things as by a Specifick property do fight againſt the venemous quality, commonly called Alexipharmaca or Antidotes, as Roots of Cinque-foyl, Tormentil, white Thiſtle, leaves of Scordium, Carduus, Scabious, Scorzonera, Meadow-ſweet, Flowers of Marygolds, *Vetonica Rubra*, bits of Lemons, or Citrons, and their Seeds, Skins of Odoriferous Apples, Shavings of Harts-horn, &c. with the Syrups of Lemons, Pomegranates, Vinegar, of the juyce of Sorrel, &c. and we muſt frequently mix tart things with them, ſuch as juyce of Citrons, or of Lemons, Spirit of Sulphur, or of Vitriol; for they do mightily reſiſt the putrifaction and the venemous quality.

Touching the Pome-Citron, *Hathenæus* Reports, That once in *Ægypt* certain condemned men were expoſed to Death by biting of Beaſts, and they were bitten indeed by the Aſpes, but had no harm thereby; becauſe as they were led to execution, a Woman of out pitty gave them ſome Pome-Citrons to refreſh them, and quench their thirſt: which having eaten, they received no hurt by the biting of thoſe venemous Beaſts. Now all parts of the Pome-Citron have an Antidotary quality; and therefore it is profitably cut in pieces Rind and all, and boyled with Roots and Herbs aforeſaid to make Juleps; and it is likewiſe to good purpoſe ſteeped in ſmall drink, which the Patient ordinarily uſes, unto which it gives a fragrant ſmell from its Rind, and tartneſs from its pulp: howbeit the Juyce only hath a cooling faculty.

The acid Spirits of Sulphur and Vitriol are highly extolled, eſpecially by Chymiſts, and their rare vertues approved by long experience have cauſed that long ſince they have been entertained by Galeniſts, and ordinarily preſcribed. And that it may appear how highly the Chymiſt eſteems of them, let it ſuffice to cite the words of *Mindererus* alone in his 18. Book *De Peſtilentia*, where treating of Spirit of Vitriol and Sulphur, and of other Medicaments made of Sulphur: *There is* (ſaies he) *no Putrifaction, whoſe Neck they break not, no infection which they do not overcome, no pravity of Humors but they can conquer. Verily* (to deal clearly) *if I ſhould be forbidden or hindered from the uſe of Vitriolated Medicaments, I ſhould never come to Cure the Plague, or alwaies without my weapons.*

To the ſame Juleps may ſometimes be added Sal Prunellæ, becauſe it powerfully cools, and extinguiſhes the Feaveriſh heat; and it hath beſides a kind of Diaphoretick faculty, by means whereof it is excellently fitted for Malignant Feavers.

In place of Juleps for the more delicate ſort of Patients, may be ſubſtituted ſometimes medicated Broths, made with the Leaves of Borrage, Sorrel, Pimpernel, and other Herbs that are not offenſive to the Palate, with Skins of fragrant Apples, with the pulp and juyce of Citrons and a Chicken; and to them Sal Prunellæ may ſometimes be added, for to cool more effectually.

Alſo Emulſions may be made of ſweet Almonds, and the greater cold Seeds, with the Decoctions of the Juleps. And for the greater quelling of the venemous quality, to the aforeſaid Seeds may be added Seeds of Citrons, or Navew or Turnep, and of Carduus Benedictus. And to commend the taſt, the aforeſaid Syrups may be mingled therewith.

Now in the whole Courſe of the Diſeaſe, Antidotes muſt be uſed, not only mingled in Juleps, Broths and Emulſions, as was ſaid before, and ſhall be further declared: But alſo contrived into other forms. And becauſe all are not to be uſed indifferently, nor at all times of the Diſeaſe; that their right Uſe may be well diſtinguiſhed, they muſt be ſorted into four Tribes. The firſt contains thoſe, which beſides the Specifical quality by which they reſiſt Poyſon, are cold and dry, and moderately aſtringent; and conſequently they hinder putrifaction, ſtrengthen the Heart, Bridle the Venome, that it cannot be ſo eaſily ſpread into the whole Body, and hinder the diſſolution of the parts thereof by a kind of Compreſſion; as Bole-Armenick, Terra Sigillata, Coral, Cinque-foyl Roots, and the Roots of Tormentil. The Second Tribe contains ſuch as by their coldneſs, and the tenuity of their ſubſtance, do reſiſt Putrifaction, and reſtrain the venemous quality; as juyce of Lemons, Spirit of Sulphur and of Vitriol, as all acid things, and Vinegar it ſelf. The Third comprehends hot and Diaphoretick Medicaments, which expel venemous Humors and Vapors from the Heart, and bring them from the Centre to the Circumference; as Angelica, Zedoary, Dictamnus, Meadow-ſweet, Scordium, Carduus, Scabious, Treacle, Methridate, Treacle-water. The Fourth contains ſuch as by a Specifical vertue, without any exceſs of the firſt qualities, do oppugn the venemous Quality; as Bezoar-ſtone, Harts-horn, Unicorns-Horn, Troches of Vipers, and ſuch like.

The Medicines of the Firſt, Second and Fourth Tribe, do beſt agree in the beginning and the Augment; and thoſe of the Third Tribe in the ſtate and Declination. Now theſe Medicaments muſt be exceedingly varied, and diverſly mixed, according to the different degree of Malignity or Putrifaction; according to the various Intention or Remiſſion of the Feaver; and according to the divers temperaments, Sex and Age of the Patient; and according to other Circumſtances, the

determination whereof depends wholly upon the Judgment and Prudence of the Physician, and cannot be determined by any certain Rules; Only one thing I shall advise you of, which is very well known, *viz.* That when there is a vehement burning of the Feaver, we must chiefly use Refrigerating and cooling things; but the hot and Diaphoretick must not be medled with, which notwithstanding will be very proper, when the Feaver is more remiss, and the malignant Quality is that which most offends. Of these Tribes thereof, divers Medicaments may be compounded according to the Judgment of the Physician. But least young Practitioners should be wholly destitute of some forms, I shall add a few, in imitation whereof, they may devise a thousand others, as the occasion of Practise shall require.

Take Roots of Sorrel, Bugloss and Tormentil, of each one ounce: Leaves of Endive, Cichory, Sorrel, Pimpernel, of each one handful: Tamarinds one ounce; Boyl all to a pint. In the strained Liquor, dissolve Syrups of Pomegranates and Lemons, of each one ounce and half. Make of all a Julep to be taken at thrice, adding to every dose a dram of Confection of Hyacinths, Bezoar-stone six grains.

This form of a Julep may do well in the beginning of the Feaver: But if the Feaver be very high, and the Patient be of a Cholerick Constitution, a dram of Sal Prunella may be added to every dose, or as much spirit of Vitriol or Sulphur as may suffice to make it moderately tart, or both of them together. But in a Feaver not very high may be added to the decoction, Roots of the White-Thistle and of Cinque-foyl, Leaves of Scordium and Scabious.

Take sweet Almonds blanched one ounce, Seeds of Melones, Gourds, Navew, Citrons and Carduus, of each two drams: beat them together in a Marble Mortar, pouring on by little and little a pint and half of the aforesaid Decoction; Syrup of Lemons three ounces, Sal Prunella three drams. Make an Emulsion for three Doses, to be taken twice or thrice in a day.

In the whole course of the Disease, let the Patients use in their Broths the Confection of Hyacinths, or the following powder, which is not unpleasant.

Take of prepared Coral, Pearls prepared, shavings of Ivory, Harts-horn and Bezoar, of each one scruple. Mix them, make of all a Powder, of which give half a scruple in every Mess of Broth.

The Innovators of this Age, who endeavor to banish Gemms, Pearls, Coral, and all cordial things from the use of Physick and Cure all Feavers, even those that are Malignant with Blood-letting and meer refrigerating Apozemes, may be convinced with this one Experiment, at least touching Coral and Pearls: which being powdered, if they be infused in Vinegar, Juyce of Lemons, Spirit of Vitriol, or *Aqua fortis*; they take away all the Acrimony of those Liquors. Whence we may gather, that the same Medicaments taken into our Bodies do sweeten and mollifie the Acrimony and Malignant quality of Humors, and reduce them to a moderation. They which have tasted the solutions of Pearls and Corals made in juyce of Lemons or distilled Vinegar, do know the truth hereof very well.

Where the malignant and venemous quality is very rife, *Alexipharmaca* or Poyson-quellers are to be given in Juleps, Broths, the ordinary drink of the Patients, and in all they take in, that by a perpetual and incessant Conflict, the troublesome Enemy may be opposed.

Bezoar-Stone is given alone to the quantity of five or six grains, with water of Mead-sweet, Scorzonera, Carduus, or such like; not only to oppose the malignant quality, but also to help the Diaphoretick motion; for this stone is reputed for a sweating Medicament, which notwithstanding many approved Authors doubt of, because they could never see any sensible effect, by the giving thereof. And truly (to speak out my mind) there can no great Confidence be put in this stone; because although we may allow to the true genuine Bezoar-stone, those faculties which are hereunto ascribed; yet because the great price thereof Causes that many Traders take a world of pains to Sophisticate the same, we can now a daies hardly get any but counterfeit. A clear testimony whereof is, that the Writers of the Indian Histories do aver, that Bezoar-stone is very scarce, and of great price among the Indians themselves; when we have plenty of them, and cheap enough.

More credit should of right be given to that same Root, which the Spaniards have in this Age of ours brought out of *India*, which they call *Contra yerva*, which signifies the poyson-pelting or Antidotary Herb, because the powder thereof is a present remedy against Poysons, and drives them out of the Body by sweat, or insensible transpiration. And they Conceive that Plant to be the Common ordinary food of those Beasts in which the Bezoar-stone is found, and that the stone hath its vertue primarily from thence. A scruple or half a dram of this Root powdered may be given in Carduus water, or other Medicaments.

Mindererus cries up this following Powder.

Take Sugar-Candy three drams, White-Ginger two drams, Camphire one dram: Make all into Powder, the Dose one dram in some convenient Liquor. But the Author doth advise, that in great pains of the Head or Stomach, Camphire is warily to be used; which yet he highly commends

in

in Peſtilential Diſeaſes, and avouches that ſeaſonably given, it doth more good than the moſt precious Bezoardick Medicaments. I conceive the Powder is too hot, becauſe of the Ginger; and I have Compoſed this following in imitation thereof, which I have uſed with happy ſucceſs.

Take Mineral Bezoar three drams, Sal Prunella two drams, Camphire one dram. Make of all a Powder, Give one dram at a time in Carduus Water, or ſome other convenient Liquor.

Powders may likewiſe be made of the fragments of precious Stones, whoſe vertues many deride, and others as much admire; ſo that from the times of the Arabian Phyſicians to our daies, many compoſitions are prepared of them in the ſhops, as *Electuarium de Gemmis, & Confectio de Hyacintho.* But in Peſtilential and Venemous Diſeaſes, many have extolled the great vertue of the Smaragd, amongſt the reſt *Avenzoar*, *Mindererus*, and *Zacutus Luſitanus*. *Avenzoar* 2. *Teiſir. Tract.* 1. *Cap.* 5. That himſelf being Poyſoned, was thereby Cured. *Mindererus*, *Lib. de Peſtilentia*, *Cap.* 15. Relates, that a Woman in a Peſtilential Feaver, who abhorred all Phyſick, he gave the following Powder, which ſhe might eaſily ſwallow, having neither Taſt nor Smell; which when ſhe had taken, the combuſtions of cruel Symptoms being allaied and the Diſeaſe turning to health, ſhe was Cured.

Take of the Smaragd Stone prepared, Eaſt-India Bezoar, of each ſix grains: Hyacinth prepared three grains, mix them. Make of all a Powder for one Doſe.

And *Zacutus Luſitanus* Relates, That a Portugal Gentleman having through Poyſon fallen into a looſneſs and a Conſumption, from which no Abſterſives, Aſtringents or Antidoes could free him; he was cured onely by the Smaragd, the Powder whereof to the quantity of twelve grains he took every other day in Conſerve of Quinces, and when he had taken it five times, he was Cured of his Looſneſs.

The Phyſicians of *Mountpelier* do uſe in this Feaver, as a moſt profitable Antidote, no waies heating, the Troches of Vipers, which are uſually prepared as an ingredient into Andromachus Treacle, which they give from one ſcruple to half a dram in Cordial Waters or Juleps.

But the fleſh of Vipers were better being dried, which hath no Venemous quality (as people imagine) but is rather a potent Antidote, which is much abated by boiling; for it is boiled in Water to make the Troches, ſo that we ſee greater effects wrought only by the Heart and Liver of Vipers being dried, without any other preparation.

The Alexipharmick Medicaments of the third Tribe, *viz.* The Diaphoreticks and Sweaters muſt be given only in the State or Declination of the Diſeaſe, as was ſaid before. Which is to be underſtood, when they are given in a Feaver ſimply Malignant or ſpotted: for in the true Plague, they muſt be uſed at the very beginning, that the Venemous quality which would quickly kill the Patient may be ſuddenly and potently oppoſed, and the Malignant Vapors diſcuſſed. Yea verily, and in ſimple Malignant Feavers, if the venemous quality ſeem to be greater than the Putrifraction, they are likewiſe to be given at the beginning in ſmall quantity; making choyce of ſuch as are leaſt hot, mixing them with Juleps, and other cooling Medicines formerly preſcribed.

Now of theſe Diaphoretick Medicaments, there are divers degrees, for ſome are more hot, as Angelica, Zedoary, Dictamnum, Treacle, Methidrate, Treacle-water; which are never to be given when the heat of the Feaver is at the higheſt, but only when the ſame is much abated, and then the ſigns of Malignity do very much prevail. But others are leſs hot, as Scabious, Carduus, Mead-ſweet, Scordium, which may ſafely be given, though the Feaver be in it's height. And theſe diſtinctions are carefully to be obſerved in Practice: And as for the formes of particular Medicaments, every Phyſician can vary them, according to the different degree of the Feaveriſh heat, and of the Malignity. But I ſhall here deſcribe ſuch as are moſt effectual.

Take Water of Mead-ſweet and Carduus, of each two ounces; Juyce of Lemons one ounce, old Treacle half a dram, two ſcruples or one dram, according as the fear of heating the Patient is more or leſs. Mix all into a potion; Give it warm, and cover the Patient ſomewhat more than ordinary. If there be great vehemency of Symptoms, new Treacle will be more convenient, becauſe of the vigor of the Opium, by means of which the vehemency of the Symptoms will be allaied, and the boyling of the Humors will be reſtrained: Yea, and ſometimes when it ſeems unconvenient to uſe Treacle, as in the beginning of the Diſeaſe eſpecially: *Laudanum Opiatum* given to two grains, and mingled with Antidotes, do much good. For by the Narcotick and Congealing power thereof thoſe fervent Spirits ſo vexatious to the Heart, are as it were fixed, and the Morbifick matter (which is moſt Pernicious while it is in motion) is thereby ſtopped, and remains in a manner unmoveable; whence it comes to paſſe, that Nature not being provoked by the Malignant Humors and Spirits, recollecting her ſtrength, doth more eaſily apply unto her ſelf the vertue of Antidotes.

Aqua

Aqua Theriacalis seems fit to be preferred before Treacle it self. For seeing it is exceeding thin and spirituous, it doth more easily and suddenly pierce into, and pass through the whole Body, and cause sweat. And because there are many descriptions of Treacle-water, their Dose ought to differ according as they are compounded of Simples more or less heating: I shall in this place propound the chief.

And first of all, the Treacle-Water of Bauderon is most excellent, because it is exceeding temperate. For there goes no other Liquor thereinto than Vinegar and Juyce of Lemons, by which the hot Ingredients are very much tempered, and therefore it may be given from half an ounce to an ounce in Sudorifick Decoctions or Waters. And although this is less heating than any of the rest prescribed by divers other Authors; yet have I invented another, easily made, which is more cooling, and does no less oppose the Feaver than the Malignant quality, and may consequently be used in the whole course of the Disease or any period thereof. Its Composition is as followeth.

Take twelve fresh and juycy Lemons, take away the Bark or Rind, and the seeds, and press out the juyce, and add thereunto the said Rinds and Seeds; and three pints of juyce of Scordium, juyce of Sorrel, of Goats Rue, of Scabious and Carduus, of each one pint: Shavings of Harts-horn four ounces, Old Venice Treacle six ounces. Let the Rinds of the Lemons be cut into thin chips, let the seeds be beaten, and such Herbs as have little juyce, let them in the beating be moistened with the juyce of Lemons, and let all be distilled in Balneo Mariæ. Of the Water give one ounce by it self, or mixed with other Liquors.

The hotter sort of Treacle-waters are made with White-Wine, or with Spirit of Wine; which must be warily given, and in lesser quantity; yet they pierce more than the other, and move sweat, and are chiefly used in the true Pestilence; Howbeit in some Cases they may by the prudent Physician be used. Among the many Descriptions of such Treacle-Waters, I will propound in this place two of the most excellent.

Take Roots of Angelica, White-Thistle, Gentian, Tormentil, Zedoary, Harts-horn, of each one ounce: of the three Sanders, of each half an ounce: Treacle three ounces, Camphire a scruple. Beat all, and steep them three daies together in two Pints of strong White-wine in a warm place: Then distill them in Balneo Mariæ, *and keep the water for use; the Dose is from two drams to half an ounce in Refrigerating Juleps, adding spirit of Vitriol to correct the Inflammation thereof.*

Take Spirit of Wine, very well rectified one pint and an half: Old Treacle eight ounces, Elect Mirrh four ounces: Oriental Saffron one ounce: Camphire half an ounce: Infuse all for twenty four hours in Balneo Mariæ, *afterward still them in the same Bath, and you shall have a very effectual Water.*

The Chymists do exceedingly cry up their *Bezoardica Mineralia*, because they are Sudorifick or Diaphoretick at least, and yet do not at all heat: which they endeavor to prove by their having no tast, in which regard they are easily taken, even by the most nice Patients that loath unpleasant Medicaments. They also commend their Medicine, which is called by them *Mixtura Simplex*, or *Mixtura Spiritualis*, made of Treacle-Water Camphorated, spirit of Vitriol and of Tartar; and they mingle a dram hereof in Juleps and Antidotary Potions.

A Physician that undertakes the Cure of Malignant Feavers ought to have divers Antidotes in a readiness, and to change them ever and anon, least Nature be too much accustomed to one and the same, and slight the vertue thereof. Also the Nature of the venemous quality is not alwaies one and the same, but very divers according to the diversity of the Patients Bodies. So that what hath helpt one, will do another no good; so that when he hath for some time used one Antidote, he must try another and another.

While the foresaid Diaphoreticks are using, if we have a mind at any time to help their Operation, that they may more powerfully bring out the poyson into the surface of the Body, some external helps may be used, *viz.* Cupping-Glasses, both dry and with Scarrification, many and often set on, and Vesicatories, of which we spoke before, which are most convenient in the state of the Disease, and at what time Sudorifick Medicines are given: as also Oyl of Scorpions of *Matthiolus*, which is much commended by all Practitioners; for it calls forth the poyson residing in the profound parts of the Body unto the external parts. And therefore the Emunctories of the Body, as the Groins and Arm-pits, with the Pulses of the Temples, Hands and Feet ought frequently to be anointed with this Oyl warm, *viz.* thrice or four times in a day, or else every third hour. Where this Oyl is not to be had, a Liniment may be made of Treacle dissolved in Juyce of Lemons, adding a little Saffron and Camphire.

If at any time Nature be oppressed with the malignity of the Poyson, and overcome, and seem not to act, but as it were to submit her self with hands bound to the mercy of the Humor. The strongest Diaphoreticks are then to be given in a large Dose, that the daunted mettle of the heart may be as it were spurred up, and then the strongest sorts of Treacle-Waters and Bezoardicks which have greatest force to penetrate must be used, and the addition of Camphire will much help their penetration; and outwardly, at such a time this following Fomentation will wonderfully assist the operation of

such

ſuch things as are taken in, and will help to drive out the malignant Vapors. For by this Method many have bin reduced from the Gates of death.

Take Roots of Angelica and Gentian, of each two ounces: Leaves of Bawm, Origanum, Scordium, of each two handful: Seeds of Carduus Benedictus one ounce, Flowers of Chamomel two pugils. Make a Decoction of all in water, adding towards the end a little White-wine, wherewith foment the Feet, Groins, Arm-pits, and ſides warm with ſponges.

If dryneſs of Tongue, Thirſt, and other ſigns do ſhew that the Feaver doth prevail as much as the malignant quality, we muſt abſtain from the fomentation, and inſtead thereof, let a Hen cut down through the Back, or the Lungs or Caul of a Wether new killed, be applied to the Patients Belly.

In the whole Courſe of the Cure, the greateſt Care of all muſt be to preſerve the Patients ſtrength which is much dejected by the Venemous quality. It is beſt kept up, firſt by convenient Broths made with a Capon, unto which, when neceſſity urges, may be added the diſtilled Broths of Fleſh, and eſpecially the *Aqua Caponis* which is made in *Balneo Mariæ per Deſcenſum*, as the common manner is now to make it. Confection of Hyacinths given in Broths, doth repair the ſtrength, and doth opugn the malignant quality. In the ſame Broths, Gelly of Harts-horn doth ſatisfie both Indications. If the ſtrength of the Patient be very much decaied; we may make bold with *Confectio Alkermes*, provided the Heat of the Feaver be not very violent. And finally, wine is the moſt cordial thing in the world, of the uſe whereof in this Diſeaſe I ſpeak before, treating of the Patients Diet, The only ſmell of Wine doth much refreſh the Patients ſtrength, and much more a toaſt dipped in Canary and Roſe-water, and ſo held to the Noſe.

And in this Caſe alſo *Confectio Alkermes* and *de Hyacintho* are wont to be put into Alxipharmical Potions. Or in extream dejection of ſtrength, Potions mearly cordial may be thus made.

Take Orange-flower water and Roſe-water, of each one ounce and an half: Confectio Alkermes one dram, Syrup of Apples one ounce, Juyce of Lemons three drams; Make all into a potion. If the Feaver be not intenſe, Cinnamon-water may be given to the quantity of one dram or three drams; and ſometimes Amber Greaſe may be added to the quantity of five Grains or ſeven. Neither in extream weakneſs of the Patients muſt we ſo much fear thoſe hot Cordials, that we ſhould refuſe to ſave the Patient from preſent death, for fear of augmenting the Heat of the Feaver; for we muſt alwaies regard that which is moſt preſſing, and when the Patient hath a little recovered ſtrength, if the hot Cordials have made ſome increaſe of Heat, it may afterward be tempred by potent coolers, as Sal Prunellæ, and Spirit of Vitriol, mixed in Juleps and ordinary Drink. This Method being obſerved the diſcreet Phyſitian, in his adminiſtration both of Strengtheners and of hot Antidotes and Sweaters, will prove happily Succeſsful.

After theſe things, muſt follow the Application of Epithems and Living Creatures to the Region of the Heart; fomentation of the Genitals with Confectio Alkermes diſſolved in Wine; Bags to be laied upon the Stomach, and other both internal and external Medicaments, largely by me deſcribed in my Chapter of Weakneſs, or decay of Strength.

As for Epithems, there is Caution to be uſed in their application: Becauſe very many Authors do wholly reject the uſe of them, becauſe they are wont to be compounded of refrigerating and repelling things, *viz.* of the Waters of cooling Herbs and Vinegar, by which the venemous quality is beaten back to the Heart, and the tranſpiration thereof, which ought alwaies to be promoted, is hindered. But this reaſon cannot hinder the uſe of Epithems, ſeeing we may compound them of Cordial and Diaphoretick waters that have no repelling nor aſtringent quality in them, and without Vinegar (which ſome do yet allow) adding Cordials thereunto; and by theſe things mingled together, Epithems may be made, not only which ſtrengthen the Heart, but alſo open the pores of the Skin, that through them the malignant Vapors may more eaſily tranſpire. Of ſuch Epithems, this may be an example.

Take Waters of Scabious and Carduus, of each four ounces: Orange-flower water two ounces, Confectio Alkermes two drams, Powder of Diamargaritum Frigidum one dram, Saffron and Camphire, of each ſix Grains. Make an Epitheme, and apply it warm to the Region of the Heart frequently.

Take Confectio Alkermes half an ounce, Powder of Triaſantalon and Diamargaritum Frigidum, of each one dram and half, a little Orange-flower water. Make of all a Liniment, to be applied to the part aforeſaid, after the uſe of the foreſaid Epitheme.

Neither muſt we here omit ſuch Epithems as are to be applied to the parts under the ſhort Ribs, becauſe of the reaſons of their uſe propounded in the Cure of Putrid Feavers, from whence the Materials muſt alſo be fetcht.

At length when as the Malignant and Venemous quality is maſtered by the Remedies aforeſaid,

said, and the Feaver abated, and the Disease begins to decline, and the signs of Concoction do manifestly appear; purgation must be used, which by the experienced Physician may be accommodated to the strength and constitution of the Patient. I shall here, for the sake of Beginners propound only one example.

Take Senna half an ounce, Annis seed one dram, Leaves of Scabious and Scordium, of each half an handful; Liquoris three drams: Boyl all to three ounces. In the strained Liquor, dissolve the infusion of four scruples of Rhubarb made in Bugloss water with yellow Sanders: Manna and Syrup of Roses, of each one ounce. Make all into a Potion.

And for the most part one purge is not sufficient in the declination of the Disease when the Patient begins to recover health; but purgation must oftentimes be repeated twice or three times at convenient distances, that the evil humors may be perfectly rooted out. Otherwise there will be danger of a Relapse, or at least the Patient will be long in recovering perfect health. Because though nature be strong enough to master the reliques of the Morbifick matter, yet can she not do it but in a long time, and in the mean space the body is long in recovering its former strength.

For the perfect Compleating of this Cure, it remains only that we speak something of the Correction of such Symptoms as happen in this Disease. Now their Cure is very near the same which hath been propounded in the second Section of this Treatise, Chap. 2. where we delivered the Cure of such Symptoms as attend putrid Feavers. And the Symptoms of this Feaver are the same in a manner with those of putrid Feavers, the difference being only in degrees of more or less; and therefore the same Remedies will suite with both. Howbeit I shall here set down such things as have been frequently tried in the taming of such Symptoms as attend Malignant and Pestilential Feavers, and which have proved most successful. And we shall withall declare the Cure of such Diseases as do Supervene upon these Feavers.

And first of all, In Pains of the Head, want of Sleep and Raving, at the beginning Revellers of all sorts must be used, as opening of the inferior Veins and of the Hæmorrhoids; Emollient Clysters, Frictions of the nether parts, Cupping-Glasses, first set upon the Calves of the Legs, afterwards upon the Back and Shoulders, both dry and with Scarrification; and Vesicatories, which in a simple Delirium or Dotage arising from a Cholerick matter, must be applied to the Arms and Thighs. But if with the Raving there be joyned a dulness and sleepiness, a Vesicatory must be applied also to the Neck; and then Repellers must be applied unto the Forehead and *Oxyrrhodines*; of which it is to be noted, that they are not so good in Malignant as in meer putrid Feavers; because the venemous Vapors must by all means be expelled, and at no hand be kept within the body. And therefore first gentle repellers must be applied, and if the vehemence of the foresaid Symptoms shall compel to fly to the stronger, we must not use them long together.

Among Repellers of the gentler sort is reckoned that common frontal of the Flowers of Water-Lilly, Violets and Roses, the greater cold Seeds and Chermes-Berries, Bedewed with the Vapor of Vinegar; And if that will not suffice, let this following be laid on.

Take Unguentum Populeon one ounce, Conserve of Roses and Violets, of each half an ounce: Oyl of Roses six ounces, Vinegar of Roses two drams. Mix them all, and receive them in two, and put them between two Cloaths, and apply them to the Forehead.

Mean while the Emulsions of the four greater cool Seeds may be used, from which cool and gentle Vapors are wont to be carried unto the Brain, which are wont to mitigate the foresaid Symptomes. Which if they suffice not, Narcoticks may be added, which do wonderfully hinder the ascent of sharp and malignant Vapors unto the Brain, and procure Sleep. Yet they must be given in a small quantity, as half an ounce of Syrup of Poppies; or if necessity compel, two grains of Laudanum opiatum with Conserve of Roses may well be given; or they may be dissolved in some Julep, or in stead thereof new Treacle may be given to the quantity of half a dram. Howbeit these Narcoticks are seldom to be given, and in small quantity, because they Concentre the Poyson, howbeit they are by some accounted Sudorificks.

After Repellers have been used a day or two, we must come to derivers, among which is reckoned a vesicatory applied to the Neck of which before, whereunto must be added Blood-letting from the forehead Vein to the quantity of five or six ounces: which is very successful, provided Blood was before sufficiently taken from the Veins of the Arm. Also Horse-leeches may be fastened behind the Ears: Which is a good Remedy, but less effectual than the former, because by leeches the thinner part only of Blood is drawn away; whereas by the forehead Vein sometimes in a Phrensie more corrupt Blood is drawn than by the Vein of the Arm. At length, in the state of a Phrensy, or at the beginning of the declination Resolvers are to be applied, especially living Creatures and their Parts, as the Lungs of a Wether which is better than young Pigeons or Whelps, because it doth softly encompass the whole Head. Now these Animals do partly resolve evil humors contained in the Brain, and partly ripen and digest them, that Nature may afterward more easily expel them. Some do unadvisedly apply them in the beginning of a Phrensie, because by encreasing the Heat, they encrease

the

the Flux of Humors to the Brain, and encreaſe the Raving.

In the Inflammation, Dryneſs and Blackneſs of the Tongue, Remedies propounded in the aforeſaid place are convenient; eſpecially ſuch as are compoſed of Water, or the Juyce of Houſleek, and *Sal Prunellæ*. Whereunto this followving of *Mindereus* may be added, becauſe Experience hath taught that it is very effectual:

Take freſh Butter waſhed in Roſe-water two ounces; Sal Prunellæ half a dram. Mix them, and keep the mixture in cold Water. Give the quantity of an Haſtifer or Bean oftentimes in a day, and let the Patients hold it as long in their Mouths as they can poſſibly. It is a ſign that the Cure goes well forward, if the black Sootineſs go away, and the dry chopped Tongue begin to grow moiſt, and peelings come away from the Tongue, as if it were flaid, ſo that the ſick parties do cough up the peeling of their Throats. But then their Palate is pained, and that very thin Skin wherewith it is covered can hardly bear any thing in regard of its tenderneſs, but it's offended with every light tartneſs, and the leaſt Acrimony imaginable; becauſe the former Inflammation having left it in divers parts flaid, it muſt be covered with new Skin, and ſo it requires to be perfectly cooled and healed. To this purpoſe the following Jelly will be moſt convenient:

Take Seeds of Flea-bane and Quinces, of each one dram and an half: Gum Tragacanth one dram. With Water of Roſes draw out a Liquid Mucilage, whereunto add the like quantity of Syrup of Violets. Make it in manner of a Jelly; of which let the Patients take often in a Spoon, and hold it long in their Mouths.

Warm Milk does mitigate the pain cauſed by Gargariſms, tempers the Inflammation, moiſtens the Tongue and Throat, and attracts the Venom to it.

Theſe following Pills may conveniently be uſed:

Take Seeds of Cucumers picked and bruiſed, one ounce: the White of an Egg as much as ſhall ſuffice. Make Pills, which let the Patients often hold in their mouths. Or,

Take Seeds of Gourds and Melones cleanſed, and of white Poppy, of each one dram: Liquorice and Gum Tragacanth, of each one dram and an half. Beat all to Pouder, and with the Mucilage of Quince-ſeeds drawn with Roſe-water, make Pills to be held in the mouth.

And becauſe this Inflammation, Dryneſs and Blackneſs of the Tongue, proceeds from the burning that is within; Juleps very Refrigerating are good to cool the ſame, unto which may be added, *Sal Prunellæ*, and Spirit of Vitriol. Alſo they may be mingled with the Patients ordinary drink.

The Cure of extremity of Thirſt was ſufficiently propounded in the aforeſaid place. But in a malignant Feaver, it will be happily extinguiſhed, with theſe two Medicines newly commended, *viz.* with Sal Prunellæ and Spirit of Vitriol taken in Juleps, and in the ordinary drink of the Patient.

Want of Appetite, Stomach-ſickneſs, Vomiting and Hiccoughing muſt be cured according to the Method delivered in the aforeſaid Chapter. Yet we ſhall add one thing touching Vomiting; that it doth ſometimes ſo vex thoſe that have malignant Feavers, that they preſently Vomit what ever they take; and though they have Thirſt, with Dryneſs and Blackneſs of Tongue, yet can they bear no kind of Liquor or drink: but Vomit all their Juleps, Emulſions, Ptiſans, and their ſmall Beer preſently after they have drunk them. This moſt grievous Symptom is ſuddenly Cured, as it were by a Miracle, with a dram of Salt of Wormwood, given in a ſpoonful of freſh Juyce of Lemons, as I have learnt by Experience.

A Looſneſs is very frequent in this Diſeaſe, and herein the wiſdom of the Phyſitian is very neceſſary. For if it be unſeaſonably ſtopped, the venemous matter is kept within. And if it be let alone, it weakens the Patients, and many times brings them to their Deaths. In the Cure of this Looſneſs, we muſt therefore thus proceed; If it be ſo moderate that it weaken not the Patient, it muſt not be ſtopt, but only moderated by ſtrengthening Clyſters; but if it be immoderate, and do very much weaken the Patient, it is wont to be a melting Looſneſs, that thaws the Patient as it were away, and muſt be boldly ſtopped; which new Treacle to the quantity of half a dram, or Laudanum Opiatum to the quantity of two or three grains, will effectually perform. Yet I haue often ſeen a Pernicious Flux which threatned to kill the Patient, ſtopped as it were in a Moment, by giving of powerful Diaphoreticks in a great Doſe; which did expel by the Skin that venemous Matter, which by vexing and grating upon the Guts, and other Bowels, did cauſe ſuch a melting and conſuming Looſneſs.

Worms do very often vex thoſe that have theſe Feavers, and are plentifully bred by the great Putrifaction of the Humors. Theſe are conveniently drawn away by ſweet Clyſters, and by potions againſt the Worms; eſpecially ſuch as are made of a Decoction of Scordium. For Scordium is equally good againſt the malignity and the Worms. And to temper the heat thereof, it muſt be boyled with Purſlane, Sorrel and Harts-horn. Alſo burnt Harts-horn is profitably boyled againſt the

Worms. For *Foreſtus* in the fourth *Obſerv.* of his Sixth Book ſaith, That no Remedy did ſo much good to ſuch as having a malignant Feaver were troubled with Worms and a Looſneſs, as burnt Hartshorn given to the quantity of a dram in convenient Juleps.

When the malignant and venemous quality bears great ſway in theſe Feavers, that they come near the Nature of the true Peſt; in ſuch Patients there are commonly riſings behind their Ears, and Carbuncles. Wherefore we will here ſubjoyn their Cure.

In the beginning of a *Parotis* or Riſing near the Ear, as ſoon as it begins to appear, the Part recipient muſt be relaxed and widened as it were, and if the ſwelling riſe but ſlowly, the motion of Nature endeavouring to expel the Morbifick matter that way muſt be aſſiſted, by applying drawing things to the ſwelling, and by giving Antidotes and Diaphoreticks. To relax the Part, make an Injection of Oyntment of Marſh-mallows, and lay on afterwards moiſt Wooll which is greaſie, from the Sheep. Attraction may be cauſed by applying Whelps or young Pigeons, by which alſo the pain will be mitigated. Plaiſters made of Leven, Figs, Onions, Doves-dung, adding thereto Butter, Hens-greaſe, freſh Hogs-greaſe, and Oyl of Lillies or ſweet Almonds. If by theſe Attractives the Part be overheated, and the pain be too much encreaſed; they may be omitted by fits, laying on in the mean time the Cataplaſm made of the Crum of White-bread; or anointing with the aforeſaid Oyls, being laid on with unwaſht Wooll; or with Oyntment of Marſh-mallows, as was ſaid before. And becauſe the part is not ſufficiently capable to receive the Morbifick matter; to derive another way a portion thereof, a veſicatory muſt be applied to the hinder part of the Neck, and alſo the Diaphoretick formerly cited muſt frequently be given. The matter being called forth into the external part, let Suppuration be endeavoured, by laying on a Cataplaſm made of the Roots of Marſh-mallows and of Lillies, with Figs, Meal of Linſeed, and the Oyls and ſeveral ſorts of Greaſe aforeſaid. When Suppuration is made, let the Tumor be opened; let the reſt of the matter be digeſted, by continuing the Cataplaſm, or by laying on a Plaiſter of Diachylon. Let the Ulcer be cleanſed with that common Digeſtive made of Turpentine, yelks of Eggs and Oyl of Roſes. Let the Ulcer be kept long open with a Tent, that all the venom of the Diſeaſe may ſufficiently be purged out, and at laſt heal it up and Cicatrize it. Yet this one thing is to be obſerved, That if the Tumor doth ſo encreaſe as to cauſe danger of Suffocation or Choaking, it muſt be opened before it be perfectly ripe: For ſo ſome portion of the matter being drawn forth, the Tumor will fall ſomewhat, and the danger of Suffocation will be avoided. In like manner, if the malignity be very intenſe, that the Patient ſeems likely to miſcarry before the Tumor be ripe; then alſo it muſt be opened before its due time that the force of the Venom may expire, whence oftentimes the Patient recovers. And upon this Account, in the Peſt the Buboes or ſwellings in the Groin are wont to be opened before they come to Suppuration.

Finally, It were a Wickedneſs to paſs over in ſilence a Rare Experiment, which happened to me in that ſame Epidemick Feaver, which cruelly raged and ranged at *Montpelier* in the year 1623. So that near half of thoſe that were ſick died of the Diſeaſe. But eſpecially, So many as had Swellings by their Ears (which were wont to happen about the ninth or eleventh day of the Diſeaſe) they all died within two dayes after; there preceding or happening at the ſame time Raving, Stupidity, Convulſions, with an unequal, frequent and very ſmall Pulſe, as it were the creeping Piſmire-Pulſe. And after I had ſeen divers in this condition, who could not be helpt by Antidotes, or by dravving things laid to the ſwelling; muſing with my ſelf if by any means poſſible they might be delivered from ſo certain deſtruction: I began at laſt to think, that therefore theſe ſwellings proved ſo fatal, becauſe the part in which they happened was not capable to receive all the Morbifick matter, which being retained within kills the Patient, and that therefore the work of Nature being only begun in thoſe ſwellings, might be ſupplyed by Evacuations, *viz.* Blood-letting and Purgation; when as alſo *Galen* in his 3. *de Comp. Medic. Secund. Loca. Cap. de Parotidibus*, In the Cure of theſe Swellings preſcribes Blood-letting. But this Advice was contradicted by the extream Weakneſs of the Patients, which was ſo great that they ſeemed to be even novv in the pains of Death, which alſo it ſelf ſoon followved. But *Galen* in the fore-cited place, when he preſcribes Blood-letting in the Cure of ſuch Tumors, does propound two conditions, *viz.* If Blood abound, and the ſtrength of the Patient will bear bleeding. Both which Conditions were abſent in theſe Caſes, for Blood had been before ſufficiently drawn, both by repeated Phlebotomies, and Cupping-glaſſes: Alſo the Patients were extreamly decayed in their ſtrength. Weighing all theſe things with my ſelf, I conceived that golden ſaying of *Cornelius Celſus*, was in this Caſe (if ever) ſeaſonable, viz. *That many things are done rightly in time of eminent danger, which were otherwiſe to be omitted: And that it's better to Experiment a doubtful Remedy in one or two perſons, than to leave ſo many perſons to undoubted Deſtruction.* I was alſo encouraged by conceiving, That this great Weakneſs of the Patients, was rather from oppreſſion of the Morbifick matter, than diſſipation or diſſolution of their ſtrength. For therefore their ſtrength did ſuddenly decay, becauſe Nature was not able to caſt off her heavy burthen; and I hoped when that Burthen was made lighter, ſhe would be freed. Add hereunto, That Bleeding

bleeding might be ſo ordered, that no danger ſhould be feared therefrom, *viz.* If two or three ounces only were taken avvay at firſt, for trial ſake, and if the ſucceſs were good, a greater quantity might be taken avvay afterward, I reſolved therefore upon this courſe. And a Merchant of *Montpelier* named *Bernardier*, being the firſt I met with, and a Tumor aroſe behind his left Ear on the eleventh day of the Diſeaſe with ſuch a Pulſe and other Symptoms as aforeſaid; I preſcribed bleeding to the quantity of three ounces, which the Chirurgion being an Antient and experienced man refuſed to do, for fear the Patient ſhould die under his Hands; afterwards being emboldened by my preſence and authority, he took avvay three ounces of Blood, after three or four hours, I viſit my Patient again, and find his Pulſe was better and ſtronger. The Blood was very corrupt; The day following I preſcribed him a Purge of Senna, Rhubarb and Syrup of Roſes; and ſo the Patient was recovered from the Javvs of Death. And afterwards all the ſick that had Riſings behind their Ears, firſt I bled ſeveral times a little at a time, and the day following purged them: and ſo all of them (to God be the Honour and Praiſe) ſo many as were thus ordered happily recovered; and never any afterwards that had thoſe riſings behind their Ears, died in the whole year.

Howbeit it is to be noted (which we hinted in the prognoſis) that the ſwelling doth often appear critically and profitably, and thereby the ſick are recovered of their Diſeaſes, *viz.* So oft as they appear in the declination of the Diſeaſe, and this is eaſily ſeen by the abatement of the Symptoms which follovv upon the Riſings; and ſuch are wont to happen in Feavers of leſs malignity. But in the time aforeſaid, ſuch was the malignity of the Epidemical Feaver, that the Tumors behind the Ears would often break forth in the ſtate of the Diſeaſe, and Symptomatically and deadly; until by the Remedies aforeſaid their deſtructive faculty was taken away.

In a Carbuncle ſupervening upon a Burning Feaver, if before its apparition Blood were not ſufficiently taken away, if the Patient can bear further Blood-letting, open that Vein which is nigh the Carbuncle, that the greater attraction may be made of the venemous matter to the part affected. Afterward let the Tumor be Scarrified on every ſide round about, and that with pretty deep gaſhes, and foment it a while with warm Salt-Water, that the corruption of the Blood may be hindered, and the Flux thereof promoted. A while after apply a grain of a Cauſtick to the middle of the Puſtule, and upon the vvhole ſwelling, lay this following Cataplaſm:

Take Leaves of Rue and Scabious bruiſed, of each one handful; three pair of dried Figs bruiſed; ſharp Leven an ounce; Pepper poudered one dram; two yelks of Eggs. Mix all into a Cataplaſm, which muſt be applied for two dayes together.

And then lay on this following:

Take Juyces of Comphry the greater, Scabious, Mary-gold, of each one dram; old Treacle four ſcruples; Salt one dram; two yelks of Eggs: mix them all and apply it to the Tumor.

Alſo at the beginning may be applied the Cataplaſm *de Arnoglo ſſo*, deſcribed in the Diſpenſatory of *Bauderon*.

But to the *Eſchara* after the Application of the Cauſtick, apply *Unguentum Baſilicum*, adding thereto Treacle, Oyl of Scorpions, and the yelk of an Egg.

When the Tumor is grown, leſt the malignant matter ſhould flow back again to the internal parts; let the compaſs thereof be anointed with Oyntment of Bolus, twice or thrice in a day: And upon the *Eſchara* or Cruſt, that its falling off may be haſtened, lay *Unguentum Baſilicum* with Butter and Sows greaſe mixed therewith. After the cruſt is come away, let the Ulcer be cleanſed with this following Oyntment:

Take juyce of Marygolds, Wormwood, Scabious and Smallage, of each one ounce; choyce of Mirrh Florentine, Orris, Aloes, Sarcocolla, of each one dram; Honey of Roſes two ounces: make of all an Oyntment, to be uſed till the ſore be perfectly Cured.

CHAP. II.

Of the Meaſles, and Small Pox.

THat Feaver which is commonly attended by the Meaſles and Small Pox, may juſtly be reckoned among Malignant and Peſtilential Feavers; ſeeing it is Epidemical and Contagious, and kills very many Children, to whom it commonly happens.

DIFFERENCE.]

What is the Difference between the Meaſles and Small Pox, Authors are not yet well agreed. But cuſtom hath obtained, that thoſe ſame larger Puſtules or Whelks like unto Warts (from whence they have their name) ſhould be called in Latin *Variolæ*, in Engliſh the Small Pox; but thoſe little Puſtules and as it were aſperities of the Skin with a deep redneſs like St. *Anthonies* Fire or the Roſe, which

which are discussed within five or seven dayes without suppuration, are called in Latine *Morbilli*, and in English Measles. There is also another kind of Pustules common to Children, like unto the Small Pox in respect of the fashion and size: but herein it differs, in that the Small Pox begins with redness and Inflammation; but these are white, and as it were bladders full of a wheyish humor, which within three dayes break and dry up, and are wont to cause no danger, and commonly break forth without a Feaver. It is described by *Vidus Vidius*, in these words; *Some besides the two former do add a third which they call the Crystals.* For so they term certain Bladders full of matter, which shine like Crystal, wherewith the Skin is in divers parts diapered; the common people call them *Ravaglione.* Unto which all men are not so subject as unto the Small Pox and Measles, neither are they so grievously afflicted under them. Wherefore these Bladders ought not to be reckoned as a third sort with the Small Pox and Measles.

Touching the Small Pox and Measles Authors dispute much, and especially whether these be new Diseases, or if they were known unto the Antients, and what is the next and immediate Cause of them. But since I affect all possible brevity in my Lectures, I have been wont to omit all Controversies, propounding only the plain and naked decisions of them; and accordingly I shall briefly unfold what is to be thought of the foregoing Questions.

CAUSES.]

And in the first place, I conceive the Small Pox and Measles to be no new Diseases, seeing they rise from a most ancient Cause, *viz.* the impurities of the maternal blood; which when the *Arabians* observed, they accounted it no new Disease. But if they had first come abroad in their times, they would have mentioned their novelty. And although they were the first that exactly described them; and *Hypocrates* and *Galen* with the rest of the Antients, have scarce mentioned them; we must suppose that therefore the Antients did not write distinctly of them, because they are only accidents of a malignant Feaver, and critical Eruptions, which do not make a distinct disease by themselves. Or because in *Greece* through the mildness of the Air, these Diseases were so light, as not to deserve the Care of a Physitian. Even as in the Western *Indies*, in regard of the great temperateness of the Air, it was wont to be so light, that it was scarce taken notice of before the coming of the *Spaniards* into those Parts. But a *Blackamore* which was brought thither, being taken with Pestilential Small Pox, the malignant and venemous quality being spread by infection, the disease began so to range and rage, that a great part of the *Indians* were slain thereby. For whereas before, those impurities of their Mothers blood remaining in them, were wont easily to be discussed, through the Clemency of the Air; now when a venemous quality was added to them, they caused grievous Diseases.

Now that the Mothers blood is the true Cause of the Small Pox and Measles, is hence chiefly gathered, because among many thousands of men, it is hard to find one, who once in his Life hath not had these Diseases. But a Disease common to all men, must needs depend upon some common cause: such as are the principles of Generation, *viz.* the Seed and Mothers Blood.

But the Seed cannot be the cause of the Small Pox and Measles, because from it come Hereditary diseases, such as last a mans life-time; it remains therefore that these diseases spring from the mothers blood, with which the Child is nourished in the Womb. For therein, be it never so pure, some impurities are found, which communicate their pollution to the parts of the Child; and that pollution of the parts doth defile the Mass of Blood; and being provoked by some occasion, doth make the same to boyl, by help whereof the blood ferments and becomes putrified, both it and the parts aforesaid. This the *Arabians* do manifest by a clear example of Wine, which being powred whiles it is new into a musty or otherwise ill-qualitied Vessel, receives that ill-quality from the Vessel, but when it begins to work and purifie, it cleanses both it self and the Vessel. Now this working doth commonly happen to Children; howbeit sometimes to those that are elder and have attained mans estate, because it is evermore set on work by some external Cause, such as is especially a certain disposition of Air proportionable to this Disease; whence it comes to pass, that sometimes the Small Pox, sometimes the Measles are rife, because the Air is sometimes enclined to the one, and sometimes to the other.

Neither can those impurities of the Mothers blood infect her and cause in her the same Diseases, although *Hypocrates* sayes in his Book *de Natura Pueri*, That there are three parts of the Blood, one most pure, with which the Child is nourished; another impure, wherewith the Mother is nourished; and another, most impure, which is kept in the Veins of the Womb, the whole time of going with Child, and after the Birth is purged away in the Child-Bed Purgations.

For First, seeing the Mother hath parts more hard and solid, they do not so soon take impression as the tender and soft Body of the Child.

Again, That most impure part of the Blood which is kept in the Veins of the Womb and of the After-Birth, the whole time of Belly-bearing, doth infect the Blood in the passage, which is carried through those parts to nourish the Child: whence the Child contracts an evil quality, which in its

time

time is the Cauſe of that Ebullition in the Blood of the Child. But that impureſt part of the blood remaining in the foreſaid places, doth not infect the Body of the Mother.

Furthermore, it's not to be wondred at, that the breaking out of the Small Pox and Meaſles, is ſometimes ſo long deferred, as that ſome have them at Mans eſtate. For thoſe impurities do not ſubſtantially remain in the Body as many imagine: for they would be corrupted by long ſtay, and acquire a moſt grievous putrifaction. But only an evil quality is by them imprinted upon the parts of the Child, which in proceſs of time infecting ſome part of the Humors, becomes offenſive to Nature; which then rowzing her ſelf, doth drive thoſe infected portions of the Humors into the Skin.

And foraſmuch as in the Maſs of Blood a twofold Excrement is found, the one thick, the other thin; of the thick, the Small Pox are bred: of the thin, the Meaſles. And although the evil and malignant quality be one and the ſame, infecting both Excrements: yet becauſe the Nature of the Excrements is different, the Analogy of the External Cauſe unto them both is different. Whence it comes to paſs, that ſometimes the Small Pox and ſometimes the Meaſles are Epidemically ſpread abroad.

And although the Small Pox are wont to break forth in the whole Body, yet are they wont to appear in greateſt quantity in the Face, Feet and Hands; which is otherwiſe in the Purple ſpots of the Purple Feaver, for they appear moſt on the Breaſt and Back. The Cauſe of which difference is this, That inaſmuch as the Small Pox ariſe from an Ebullition of the Blood, by help whereof an Excretion is made of the Excrements lurking therein unto the Skin; and the Liver being the Fountain and original of Blood, whoſe Emunctories are the Face, Hands and Feet; whence it comes that ſuch as have hot Livers, have red and rubied Faces, and feel intenſe heat in the Palms of their Hands and Soals of their Feet; it follows that the Small Pox and Meaſles muſt come out there more than any where elſe. Contrariwiſe, the Purple Spots which appear in malignant Feavers, do ariſe principally from the Miſaffection of the Heart, and therefore they break out chiefly in parts near the Heart, and eſpecially about the Loyns; becauſe in them the *Vena Cava aſcendens*, and the *Arteria aorta* which are annexed unto the Heart, have their Courſe.

Alſo another difference is to be noted between the Small Pox and Purples; becauſe the Small Pox and Meaſles appearing on the third or fourth day from the beginning of the Feaver, are wont to be critical, and for the moſt part void of danger: but the Purple Spots, though they appear on the ſeventh day are commonly Symptomatical, and render the Diſeaſe worſe; when as a man would think it ſhould be otherwiſe, for a Diſeaſe is more crude on the fourth than the ſeventh day. But the Cauſe of this difference conſiſts herein, That in the Small Pox and Meaſles the Feaver commonly begins at the higheſt; ſo that not only on the third and fourth day, but alſo on the firſt or ſecond daies excretions may be in them critical. But malignant Feavers proceed more ſlowly, and their beginning is commonly extended to the ſeventh day: ſo that excretions which then happen cannot be critical. Now that the Pox and Meaſles comes ſo ſoon to their ſtate, and not the malignant Feavers, is hence; becauſe the Pox and Meaſle-Feaver come from the lighteſt putrifaction, and rather from an Ebullition of the blood, than from any intenſe putrifaction of the matter; and therefore Nature by help of Coction makes it to ceaſe before the ſeventh day, becauſe it was a light Feaver, and roſe from the ſlighteſt Cauſes. But in malignant Feavers, ſo great and ſordid is the putrifaction, that it cannot be corrected in the fourteenth, nor ſometimes in the twentieth day. And therefore the Spots breaking out before that time, the Diſeaſe is exaſperated; becauſe Nature was forced to expel them, without Concoction and Symptomatically.

The expulſion therefore of Small Pox and Meaſles is cauſed by an Ebullition of the Blood: which Ebullition according to *Avicenna*'s *Doctrine* is twofold; the one perfective, the other corruptive. The perfective or depurative is that, in which only the impurer and Excrementitious parts of the Blood are by Nature purged forth, that the whole maſs may afterward remain pure; and then the Small Pox are innocent, which are Cured without any help of Phyſick. But the corruptive is, wherein not only the Excrementitious parts of the Blood, but the ſincere Blood it ſelf is putrified, whence ariſe dangerous and deadly Pox; and according as there is more or leſs putrifaction, in more or fewer parts of the blood, ſo is the danger more or leſs. This corruptive Ebullition doth chiefly happen, when thoſe Diſeaſes are Epidemical, being occaſioned by a malignant Conſtitution of the Air, by which an Ebullition of the Humors, and a malignant putrifaction is cauſed; whence many and dangerous Small Pox are cauſed; which are ſometimes (according to *Rhaſis*) the Fore-runners of the Plague.

Pox and Meaſles are reckoned among acute Diſeaſes, becauſe ordinarily they are terminated within the ſpace of fourteen days. Now ſome do wittily obſerve a double order of times in this Diſeaſe, *viz.* the time of Ebullition and the time of Eruption: the time of Ebullition is commonly terminated in four dayes; ſo that the firſt day is counted the beginning, the ſecond the Augment, the third the ſtate, and the fourth the declination: for then the Feaver and other Symptoms are wont to remit.

But the beginning of the Eruption of the Pox, is the fourth day it ſelf, the Augment reaches to

the seventh, the state until the eleventh, the declination unto the fourteenth, at which time the Pox are dried. Howbeit oftentimes they are not dry until the twentieth day.

Differences of Small Pox and Measles, are taken either from the substance, in regard of which, some are more or less Flegmatick, Bloody, Cholerick or Melancholick: or from the Quantity, in which regard they are more or less in number; greater or less; profound or superficial: or from the Quality, in which respect some are Red, others White, Yellowish, Violet coloured, Livid, Black, according to the diversity of Humors of which they are compound; or from the time, in respect whereof some come quickly out, others slowly; some are soon, others late ripe, or dissolved: or from the Place, in which respect, some Occupy only the Skin; others do seize upon the internal Parts also, as the Throat, Lungs, Guts, Liver, Spleen, and other Bovvels.

DIAGNOSTICK.] The Diagnosis respects either the Disease present or at hand. The small Pox and Measles, when they are present, are subject to the outward Senses, and need therefore no other signs. But these signs following declare them to be at hand.

Pain in the Head with Pulsation in the Forehead and Temples; great Sleepiness; Terrors in sleep; sometimes Ravings, Tremblings and Convulsions; Sneezings, frequent Yawning, Hoarsness, Cough, Difficulty in breathing; Heat, Redness, and Sence of pricking over the whole Body. Pain of the Back which comes sometimes alone, or appearing with few other Symptoms in a Synochus Feaver, it shevvs the Small Pox will come out. For seeing through the Back are carried the great Vein and Artery, in which the Malignant blood boyling, does send forth sharp Vapors to the Nerves and neighbouring Membranes; it must needs be, that pains should be felt especially in those parts. Great Anxiety and Unquietness. Tears flovving of themselves. Shining before the Eyes, and their Itching, a swelling of the Face with some Redness. A vehemency of the Symptoms at first, so that the Disease seems of a sudden to have attained its vigour.

All which are caused, either by many and thick vapours sent up by the boyling of the blood, into the Head, *Diaphragma*, and other parts; or from the Nature of the Pox themselves, now beginning to invade the parts; or by a Fluxion caused by heat, which dissolves the humors in the Brain.

PROGNOSTICK.] It's of great Moment to foresee the Small Pox; but much more to foretel their event, which the followving Prognostick Signs will declare.

And in the first place those Small Pox are wont to be void of danger, which come out soon and easily, and do quickly ripen.

In which the Feaver is moderate, without great Symptoms, which cease after they are come out, or is very much abated, in which the voyce is free and breathing easie.

Small Pox, which at first are Red and White, soft, distinct, few, round, pointed, coming only in the Skin and not inwardly, are wont to be safe.

All the Signs aforesaid do signifie the paucity of the Morbifick Matter, its Obsequiousness, Benignity, and the strength of Nature, lustily expelling.

Contrariwise, dangerous and deadly Pox are knovvn by a great Feaver, which lessens not after they are broke forth; for it signifies the malignant and venemous humours are not sufficiently expelled unto the Skin, but that the greatest part of them remain yet in the Veins. Great anxiety and unquietness; which comes from the same humors boyling in the Veins. Difficulty of breathing, which signifies either Pustules or Imposthumes in the Lungs; or a Quinsie, or great decay of streng h. Great thirst, which declares the inward burning; and if with the thirst shortness of Breath be encreased, Death is at hand. A Looseness or Bloody Flux, which shews the malignant humors have their recourse inward, which is a course quite contrary to that of Nature, and therefore deadly, so that few of those which after the Pox coming out, are taken with such a Looseness do escape.

A Bloody Urine is a most deadly sign; and likewise if by stool pure and sincere blood be voided. Sometimes also by the Nostrils, Gums and other parts of the Body blood is voided, which are commonly deadly Signs. For they signifie the extream Acrimony and malignity of the Blood: which doth vehemently provoke Nature, and compels her to a preposterous excretion thereof.

Also Pox long a coming out are very bad, which signifie the Contumacy of the matter, or the weakness of Nature; Many, Great, Double and united Pox, do shew an over-abundant quantity of Morbifick matter, and are bad. So are hard ones, shewing the thickness and incoctibility of the said matter. Also flat ones which shew the weakness of the expulsive faculty, and they are worse, if they have a black spot in the middle of them, which argues extraordinary malignity. And green, blewish and black which spring from that sort of choler called *Bilis Porracea* or *Atra*, Leek-green or Black Choler are a bad sign.

They are worst of all which when they are come forth do presently vanish, and the Tumors of the parts fall: for they signifie the retirement of the Humor inwards; and none of those escape who have the Pox on this manner going in again, but they die commonly within twenty four hours.

They are also dangerous, when spots like those of the purple or spotted Feaver, are mingled among the Pox; especially if those spots be Livid or Black. For they signifie not only that same light putri-

faction,

faction, which is wont to happen in the Small Pox by means of the ebullition of blood: but alſo that intenſe and profound Malignity is peccant; from which much greater danger is threatned to the Patient.

Dung or Urines in this Diſeaſe livid or black do portend great danger: for they ſignifie that Melancholy abounds in the Veins, and infects the whole Maſs of Blood.

CURE.] The Cure of the Small Pox and Meaſles is performed in the ſatisfaction of four Indications. Whereof the firſt conſiſts in the Evacuation of the peccant humors. The ſecond in aſſiſting the motion of Nature, or helping to expel the Pox. The third in the oppoſition of the malignant and venemous quality. The fourth in correction of Symptoms. All which that they may be conveniently effected, firſt a convenient Diet muſt be appointed, which muſt be the ſame which was ordered in the Cure of putrid Feavers: howbeit ſome things muſt be particularly noted.

Firſt, that the Patients be kept in a warm room, to the end their pores may be kept open, and the breaking out of the Small Pox may there be furthered. Therefore they muſt be kept in a Chamber well ſhut, which the cold Air muſt in no wiſe enter into. For many Children that had benigne Pox, have been killed by letting in the cold Ayr upon them, *viz.* The morbifick matter being thereby driven back into the inward parts. And for the ſame cauſe they muſt be moderately covered with Cloaths; but ſo that the heat of the Air or the weight of the Cloaths may not augment the heat of the Feaver. The foreſaid coverings are wont commonly to be made of red cloaths, becauſe they are thought by ſome Analogy to move the boiling blood to the external parts. Many are alſo wont to keep an Ewe or Wether in the Chamber or on the Bed; becauſe thoſe Creatures are eaſily infected, and draw the venom to themſelves, by which means ſome Eaſe may happen to the ſick perſons.

A decoction of Barley, or of the Roots of Sorrel, or of Harts-horn, is profitably uſed for drink, in the beginning of the Diſeaſe eſpecially, and when the Feaver is vehement. But if the Feaver be not very violent, a Decoction of Barley and Figs will be very profitable, *viz.* Effectually driving the Humors to the Skin; and *Foreſtus* and *Amatus* did continually uſe the ſame with good ſucceſs.

Furthermore, Whereas in the whole Courſe of the Diſeaſe, Sleep ought to be moderate, yet in the Augment when the Pox break forth, long Sleep is hurtful, and it is better to watch more than ordinary.

That therefore the aforeſaid Indications may be fulfilled, the Cure muſt be begun by Blood-letting (if Blood in any ſort is redundant, and the Age of the Patient is like to bear it) and a Vein muſt be opened as ſoon as may be. But if the Phyſitian ſhall not be called the firſt day, yet he ſhall do well to take blood before the breaking forth of the Pox, or while but fevv are come out; which time is wont commonly to laſt until the fourth day, from the firſt onſet of the Feaver. In which Caſe notwithſtanding, diligent heed is to be taken. For if upon the breaking forth of the Pox, the Feaver and its Symptoms be abated; it is better to leave the buſineſs to Nature working well, which will ſufficiently expel the whole Morbifick Matter to the Skin. Alſo Blood-letting is not in this caſe neceſſary, ſince experience ſhevvs, that an infinite company of Children having gentle Pox, and not Plethorick, are happily cured without bleeding. Nay rather in the former caſe ſometimes blood-letting may do hurt, becauſe the expulſion of the Small Pox is cauſed by an ebullition of blood: which ebullition if it be ſmall, it will by blood-letting be leſſened very much, and ſo it will become inſufficient perfectly to purge the maſs of Blood from its impurities. Contrariwiſe, if upon the Eruption of the Pox, the Feaver becomes more ſtrong, there be anxiety, difficult breathing, an Urine thick and red, and other ſymptoms ſeem greater, it's a ſign that Nature is oppreſt with the over-great burthen of humors, and that ſhe cannot govern them conveniently; and that therefore Phlebotomy is neceſſary, that a part of the burthen being taken away, Nature may be the better able to expel the reſt. In one word, when there is an ebullition perfective meerly and depurative, blood is not to be taken away: but in a corruptive, blood-letting is extreamly neceſſary, yea even in that which hath leſs malignity in it, whoſe degrees have been ſpecified before. And ſo neceſſary is Blood-letting in dangerous Pox, in which the corruptive Ebullition is wont to happen, that the tender age of Infants muſt not hinder it. For it is grown into a cuſtom to let Children blood when they are four years old, and ſometimes when they are three. The Phyſitians of *Paris* in their tender age and while they ſuck, do let Children blood. Which yet the tender age of Infants doth hardly admit, with that light nouriſhment of milk, and the plentiful efflux of their humors by tranſpiration; neither can this new licence of letting ſuch young ones blood be juſtified by any countenance from the wiſeſt Authors of Phyſick.

In pretty big Children, many times once blood-letting will not ſerve the turn, but it muſt be repeated if the Feaver remain intenſe, or if Raving or any other grievous Symptom do urge. Yea verily when the Pox are perfectly come out, which for the moſt part is within nine dayes, if the Feaver be very urgent, blood muſt be again let, and the Patients ordered as thoſe who have a putrid Feaver.

If Blood-letting be ſuſpected becauſe of the tenderneſs of the Childrens Age, or becauſe the fit-

ting

ting season is now past; the superfluous blood may be diminished by Cupping-Glasses with Scarrification applyed to the Back, Shoulders and Thighs, which may also well be used in the state of the disease, seeing the Motion of Nature from the Centre to the Circumference, is by them promoted. But care must be taken that in young Children the Scarrifications be not too deep: for it happens sometimes that an unadvised Surgeon cuts so deep, as to cut asunder some Veins, and let out the fervent and boyling blood, so that there is great trouble to stop the same.

Purgation is suspected in this disease; for it makes a motion contrary to that of Nature, *viz.* from the Circumference to the Centre; and to whomsoever, having the Pox, a looseness happens, the Pox commonly strike in, and the Party dies, as I said in the Prognostick. Yet observe, that many times Purgation is to good purpose practised before the Pox come out, and before the Feaver growes vehement, *viz.* when the Children are in the Neutral state of Decidence. For then if ill humors abound, they are profitably diminished by purging, that Nature may afterward more cheerfully set upon the Expulsion of the Remainder. But when the Pox begins to appear, Purging will be pernicious. And likewise, if there be great malignity abroad, as in an Epidemical Constitution, when very many Children die of that disease; it is better wholly to abstain from Purging; because in Diseases which are very Malignant and Pestilential, Purgation in the beginning of the Disease is very hurtful. Now the Purgatives must be compounded of gentle Simples, *viz.* Rhubarb, Cassia, Manna, Tamarinds, and Syrup of Roses.

In the Course of the disease, if the Belly be hard and bound it may gently be removed, but not provoked; and that by a Suppository of Honey alone without Salt; or with a Clister of Broath or Milk, or a decoction of French Barley, Raisins and Liquoris, with Sugar and yelks of Eggs.

After blood-letting and other Evacuations (if necessary) the expulsion of the Pox must be helped forward, not only with Specifick Medicines driving the humors to the Skin, but also with Diaphoreticks and Alexipharmicks; especially if the Pox be Epidemical and being very malignant, do threaten great danger.

There is a vulgar Medicine commended by *Rhasis*, *Avicenna* and all the *Arabian* Physitians, to drive out the Pox, which also the greatest part of our later Physitians use, according to the description of *Avicenna*, which is thus:

Take fat Figgs seven ounces; Lentils shaled three drams; Gum Lack two drams and anhalf; Gum Tragacanth and Fennel seed, of each two drams. Boyl all in a pint and half of Fountain water to the third part. Let the Patient drink thereof. Rhasis *adds Saffron fifteen grains, Raisins five drams, because Saffron opens and corroborates, and the Raisins do strengthen the Liver. And Tragacanth although it do incrassate and astringe, yet is it therefore mingled with the rest, that it may prohibit the over-great Ebullition of Blood.*

Lentils are by some Neotericks rejected, because they are restrictive and may hinder the coming forth of the Pox. But the Authority of so many and such noble Princes of Physick, must not rashly be rejected; but we must rather determine, the Lentils shared are with great reason put into this composition; *viz.* That by their astringent and incrassating faculty, they may bridle the Fervency of the Humors, and hinder their falling upon any noble part; to which purpose Gum Tragacanth was added, as I hinted before. This is taken out of *Galen*, who in the 1. *De Aliment. Facult. Cap.* 18. doth teach us, That Lentils twice boyled do strengthen the Natural parts, and by their astriction stop the flux of the Belly. The Lentils may therefore be put in or left out according to the Judgment of the Physitian who manages the Cure, as there is more or less necessity of attenuating and driving the Humors into the Skin. For if the matter be subtile, and the Ebullition great, the Lentils may profitably be put in for the Intent aforesaid. But if the matter seem to be thick, so that Nature can but slowly drive it into the Skin, then must they be omitted, and the Gum Tragacanth and only the other attenuating and Diaphoretick things used for the drink. By which it appears, that we must not too strictly adhere to the forms of Medicaments propounded by Authors; but that in several occasions they must be variously changed. Let this following Receipt serve for an example, compounded of the foresaid simples, and partly of others that are Diaphoretick and resist malignity; which may much help such as have this Disease, in making the Pox to come well out.

Take Roots of Fennel and Sorrel, of each one ounce; Harts-horn shavings, half an ounce; Leaves of Scabious, Scordium, St. Johns-wort, of each one handful; Three fat Figgs; Gum Lack three drams; Seeds of Navew or Turnep and Carduus Benedictus, of each two drams; Lentils unhusked half an ounce; Gum Tragacanth one dram and an half. Boyl all to a pint and half; Of the straining take three ounces; Syrup of Lemons one ounce. Mix them. Make of them a Julep, let the Patient drink thereof twice or thrice in a day.

If the Malignity be very great, as commonly it happens in Epidemical Small Pox, we must chiefly use Antidotes. And consequently all those Remedies which we have propounded in malignant Feavers will be good in this disease, respect being had to the Age and strength of the Patient. And among others,

others, Confection of Hyacinth, Bezoar Stone, Pouder of Coral, Pearls, Harts-horn, Oyl of Scorpions of *Matthiolus*, muſt be uſed frequently, with other things, the manner of whoſe Uſe may be learnt out of the foregoing Chapter.

Neither muſt ſuch things be omitted as do reſtore the Patients ſtrength both inward and outward, which may be alſo learnt out of the foregoing Chapter, and by the prudent Phyſitian adminiſtred in due ſeaſon.

And it muſt be heedfully remembred, That ſuch medicaments as drive out the Pox are not to be uſed in all Patients. For ſometimes they break forth ſo violently, that they have need to be reſtrained for a while. For the great Ebullition and immoderate Fervor of blood, if they be not tempered, are wont to deſtroy the Patients; and therefore it is good in ſuch a caſe to uſe bridlers and coolers. For example, a Julep may be thus compoſed:

Take whole Barley one pugil: Cinquefoil Roots and Tormentil Roots, of each one ounce. Leaves of Sorrel, Endive and Wood-Sorrel, of each one handful. Lentils excorticated half an ounce: Gum Tragacanth one dram. Boyl all to a pint. In the ſtraining diſſolve four ounces of Syrup of Lemons or Pomegranates. Make of all a Julep for four doſes, to be taken twice in a day.

Amatus Luſitanus in the 18. Cure of the Third Century propounds an example of ſuch kind of Pox ariſing from boyling humors, and cured only by coolers and thickners. Which Example I thought good to cite in this place word for word, that the young beginners may perceive in what caſes the Cure is moſt to be varied. *The* Boy *of* Altaraſius (ſayes he) *began to have the Small Pox, ſome of which did run together, ſo that in two dayes they flead his Miſerable Carkaſe: for the Puſtules crept along and did only flay off his Skin; which I have likewiſe obſerved in other Children: Againſt which, I thus ſet my ſelf to work: Firſt, becauſe this matter was too thin, I endeavoured to thicken the ſame, and not only ſo, but to abate the evil quality of the Liver and internal parts, that no more ſuch thin ſubtile Humor might be bred. This I did with Refrigerating Medicaments, as Syrup of Roſes, of Cichory ſimple, of Endive and Violets, with Waters of the like Nature mixed with them. He was anointed with Ceratum Santalinum. But the Diet likewiſe helped much, which was ordered cold and moiſt. By all which the matter became thicker, and the Pox began to appear thick and large.*

And for ordinary Drink preſcribe a decoction of Barley and of Sorrel Roots. And theſe Remedies muſt be continued until the Fervency of the humors ſhall begin to abate; if Nature ſeem to want their aſſiſtance.

Theſe things might ſuffice for a direct Cure of the Small Pox. But becauſe they may bring great damage to divers parts, both internal and external, we muſt endeavour the Prevention and Cure thereof.

The internal parts may eſpecially be preſerved with a Decoction of Lentils, of Gum Lac and Tragacanth, deſcribed before. For Gum Lac defends the Liver and Spleen, Lentils the Guts, and Tragacanth the Breaſt.

But the Lungs are peculiarly preſerved by Conſerve of Roſes and Violets, and Syrup of Violets, Jujubes, Myrtles, dryed Roſes, Poppies, and alſo theſe following LOHOCHS. See in my *Diſpenſatory* (at the beginning of the Lohochs) what a Lohoch is; and why ſo called.

Take Conſerve of Roſes one ounce and an half, Juyce of Lentils thrice boyled ſix drams: Poppy ſeeds half a dram: Gum Tragacanth half a ſcruple. With Syrup of dried Roſes make all into a Lohoch.

Or this of *Avicenna*, which is commended by *Guainerius* and *Foreſtus*.

Take Lentils unſhaled and finely poudered three drams: White Poppy ſeeds one ounce: Conſerve of Roſes two ounces: Julep of Roſes as much as ſhall ſuffice. Mix all into a Lohoch.

Or ſuch a Lohoch as this following may be made only of Syrups,

Take Syrup of Violets, Jujubes and dried Roſes, of each one ounce: Syrup of Poppies half an ounce. Mix them, let the Patient lick thereof often out of a ſpoon, and ſwallow it down leiſurely.

But if a Flux be at preſent in the Lungs and cauſe hoarſneſs and ſuffocation; it muſt not only be ſtopped with the foreſaid Remedies, but revelled by Cupping-Glaſſes, both dry and ſcarrified, and by bleeding, if nothing elſe hinder. Alſo give the Patients to drink a decoction of Barley, Jujubes and Liquoris, and let them uſe this following Lohoch.

Take Seeds of Marſh-mallows, Melons, Cucumers, and white Poppy, of each two drams; Raiſins ſtoned and Jujubes, of each four pair. Boyl all to a pint. In which diſſolve Conſerve of Roſes and Violets, of each half an ounce: Pouder of Diatragacanthum frigidum three drams: Sugar Candy and Sugar of Roſes, of each as much as ſhall ſuffice. Make all into a Lohoch. The Jaws and Throat may be fenced againſt the Pox before they break out, with this following Gargariſm.

Take French Barley one pugil: Plantane Leaves two handfuls; Red Roſe Leaves one pugil: Balaſtins, Seeds of Sumach, of each two drams. Boyl all in two pints of Water to a third parts conſumption. In the ſtrained Liquor diſſolve Syrup of Mulberries and Pomegranates, of each one ounce. Mix all into a Gargariſm.

If

If the young Age of Children cannot admit a Gargle, a Lohoch may be made of Syrup of Mulberries, Pomegranates, of dried Roses, either alone, or mingled with Red Rose and Plantane Waters. Which must often be given them in a spoon. Wherewith if the Fluxion cannot be stopped by reason of the abundance of the Rheum, so that there is fear of Suffocation impendent; such things must be used which widen the passages and help the excretion, after this manner:

Take Mucilage of Fleabane seed and Oyl of sweet Almonds new drawn, of each one ounce and an half; Whitest Sugar two ounces: mix them. Make of all a Lambitive to be given every hour.

If by means of the Acrimony of the flux, or the Plenty of the Small Pox, an Ulcer be bred in the Jaws or Throat, it must be cleansed with Barley Water and Honey of Roses, or with Allom Water, and if it tend to corruption, a little *Ægyptiacum* Oyntment must be mingled therewith.

The Guts will be preserved by the same Remedies which were appointed to preserve the Lungs. But if a present Looseness or Dysentery be urgent, first detergent and lenitive Remedies must be used, and afterwards astringents. And so Clysters must be made of chalybeated Milk, of Sugar and yelks of Eggs: and afterwards of a Decoction of Barley and red Roses with the yelk of an Egg: And last of all, of a Decoction of *Plantane*, *Knotgrass*, and *Prunella* or *Self-heal*, and other Simples set down in our Cure of the Dysentery. And it is to be observed, That a Looseness in Children that have the Pox, is oftentimes caused by Worms, which lasts during the whole Disease, whence they are in the danger of Death; because the expulsion of the Pox is thereby hindred wholly or lessened. Which is easily known by the thickness and viscosity of the Excrements, and their grey or whitish colour; then must be administred such things as kill Worms, and sweet Clysters must be injected.

Sometimes also the Kidneys are affected and are exulcerated, whence arises Pissing of Blood. In this Case it is good to give an emulsion of the four greater cold Seeds, with Trochischs of Alkekengy de Carabe, and other things set down in our Chapters of Pissing of Blood.

Among external parts, the Eyes are most of all to be guarded from the Small Pox. For being endued with a soft and humid substance; the matter of the Pox is easily driven unto them: whence arise grievous Calamities, and sometimes total Blindness.

Before the Pox break out therefore, or when they begin to appear, the Eyes must be anointed every hour with Plantane and Rose Waters, in which a little Saffron is dissolved; or with the following Eye-Salve, which doth more effectually preserve them.

Take Water of Roses and Plantane, of each one ounce and an half. Powder of Sumach seeds two drams. Infuse them a little while hot. Then strain the Liquor hard out. To the strained liquor add Camphire ten grains. Saffron five grains. Make all into a Water for the Eyes.

It will be yet more effectual, if instead of the Waters, the Juyces of Knot-grass and Shepherds-Pouch be mingled with the rest.

And if some Pox begin to peep out of the Eye it self, Pidgeons blood must be often dropt in, that their resolution may be hastened. Then also this followving Eye-Water is to be used.

Take Red Rose Water two ounces; Eye-bright water half an ounce; Trochisci albi Rhasis *one dram; Tutty prepared one scruple; Camphire five grains; Saffron two grains. Make all into an Eye-water, and wet the Eyes often therewith, with a thin linnen rag.*

But when the Eyes so swell that they cannot be opened, they must often be washed with a Decoction of Linseed, Fenugreek seed, Quince seed and Mallow seeds; and so the swelling will fall, and the Eyes open, and if when the Eyes are opened, there appear clouds in them, they must be scoured off with Sugar-Candy finely poudered.

And finally, if the Eyes are ulcerated, they may be cured with this following Eye-Salve.

Take washed Ceruss three drams: Sarcocol one dram: Gum Tragacanth one scruple: Opium two grains: With Mucilage of Gum Tragacanth drawn out with Plantane water make all into little Cakes or Trochischs, which must be dissolved in Womens Milk, or red Rose water, when it is to be used; and in all other things proceed, as Practitioners teach at large, in the Cure of Ulcers of the Eyes.

To preserve the Nostrils, they must often smell to Vinegar. But a Collyrium of Juyce of Knot-grass, and Shepherds Pouch, Sumach seeds and Camphire formerly praised, will work more effectually; let the tent be often moistened therein, and put up into the Nostrils. If notwithstanding, the Pox do grow within the Nose, they quickly become hard Scabs, which are often to be anointed with Oyl of sweet Almonds, that they may the sooner fall off. And finally, if an Ulcer happen in the Nose, it must be dressed with a Liniment of the Oyl of Egg-yelks and juyce of Plantane, stirred in a Leaden Mortar.

To preserve the Face, some wash it with Rose-Water and other Astringents, Which I cannot approve of: for a great part of the impurities flow unto the Face. For the Skin being thereof long loose and soft, is very fit to receive Excrements. Wherefore if those impurities which Nature sends thither, be repelled, being retained within they may cause great hurt; and therefore the motion of Nature is no waies to be hindred. But this ought to be the Physitians care, to hinder that the Pox which break out in the Face, do not leave behind them Pits and Scarrs, which doth often deform the Countenance.

And

And this he ſhall in good meaſure perform, if when the Pox are ripe, and are high and white in the middle (vvhich is wont to fall out upon the Ninth day of the Diſeaſe) he cauſe them to be anointed with a Feather twice a day with Oyl of ſweet Almonds, drawn vvithout fire, untill the Cruſts fall off. For by this Medicine the Acrimony of Choler is tempered, the ripening of the Pox is haſtened, and the falling off of the Cruſts furthered; which otherwiſe ſticking faſt, doth exulcerate the Skin more deeply; by reaſon of the Quittor which lies under them. Oyl of Nuts new dravvn without fire, mixed well with a like quantity of Roſe-water, till they come to the form of a Liniment, is excellent for the ſame purpoſe.

If by neglecting the Remedies aforeſaid, or through the extream malignity of the humour, there remain Pits and Pock-holes, all diligence muſt be uſed to repair the ſame. Which notwithſtanding is extream hard to do perfectly; although many have taken great pains thereabout to gratifie Virgins and other Women, who are exceeding careful to preſerve their Beauties. Among infinite Medicines recorded by Authors to this intent, I ſhall propound the choiceſt.

And in the firſt place, Oyl of Egg-yelks does nouriſh and ingender Skin, and therefore is very convenient to fill the Pock-holes.

Weathers Suet freſh and new, melted and done out with a Feather, is effectual to the ſame purpoſe.

But the filthineſs of Pock-holes is much amended, if they be waſhed firſt with Yarrow-Water or Cows-dung-Water diſtilled in *May*, and then anointed with Mans-Greaſe.

Foreſtus does much magnifie this following Oyntment:

Take Oyl of ſweet Almonds and white Lillies, of each one ounce: Fat of a Capon three drams: Pouder of Peony Roots, of Orris and Litharge of Gold, of each ten grains: Sugar-Candy one ſcruple. Mingle all well in a warm Mortar, ſtrain them through a Cloth, and anoint the Pock-holes therewith morning and night. And afterwards let them be well waſhed with Water diſtilled out of Calves-feet: and when that is not at hand, uſe the Water of Yarrow inſtead thereof.

Neither muſt I omit that which many Practitioners do teach, *viz.* That when the Pox be ripe, they muſt be bored through with a golden or a ſilver Needle, leſt the Quittor tarrying long in them, ſhould leave holes in the part. Which Practice is notwithſtanding now in a manner grown out of uſe, ſince Experience has taught, That the Pox being bored are longer in healing, and do longer hold their Cruſts, becauſe of the Weakneſs of Natural Heat, cauſed in the Part by boring, whereby more deformed Scars are left behind. And therefore it is better to abſtain from this boring, and to commit the Evacuation of the Quittor, to Nature alone.

To conclude this Cure, I ſhall ſubjoyn how thoſe diſpoſitions of Itching and Exulceration which happen to perſons that have the Small Pox, may be remedied.

And in the firſt place, When the Small Pox come forth, or when they begin to ripen, ſometimes an huge pain or Itching doth afflict the Patients; eſpecially in the Palms of the Hands and Soals of the Feet, becauſe the thickneſs of the Skin in thoſe parts hinders the Eruption of the Pox.

Which Symptom you ſhall help, if you cauſe thoſe parts to be held in hot Water, or Foment them a long time with an Emollient Decoction. But when there is great Itching in the Face, which compels the Patients to ſcratch, whence great deformity and foul Scars follow; uſe this followving Remedy:

Take Leaves of Pellitory of the Wall one handful; Flowers of Chamomel and Melilot, of each half a pugil. Boyl them in a pint of Scabious Water; To the ſtrained Liquor add three ounces of Honeyſuckle Water. With this Liquor hot, often let the Itching Pox be moiſtened, by dipping a thin Rag or Cotton Wooll therein, and ſo applying the Liquor gently to them.

Now the Ulcers which ariſe from deep and malignant Pox, are to be cured with *Unguentum album Rhaſis*, or with an Oyntment of Lead made after this manner:

Take Calcined Lead two ounces: Litharge one ounce: Ceruſs waſhed and Vinegar, of each half an ounce: Oyl of Roſes three ounces: Honey of Roſes one ounce: three yelks of Eggs: Myrrh half an ounce: Wax as much as ſhall ſuffice. Make all into an Oyntment,

FINIS.

FOUR BOOKS

Of that Learned and Renowned Doctor,

Lazarus Riverius

CONTAINING

Five hundred and thirteen Obſervations or Hiſtories of Famous and Rare Cures; moſt of which were his own. The other were communicated to him by twenty four ſeveral Famous Phyſitians and Chyrurgions, whoſe names are printed to each of them.

Unto which is added,

A FIFTH BOOK,

BEING

SELECT MEDICINAL COUNCELS

OF

Iohn Fernelius,

Chief Phyſitian to the KING.

All Engliſhed

By *Nicholas Culpeper*, Phyſitian and Aſtrologer.

Theſe Hiſtories and Obſervations are often mentioned, and referred unto, in theſe Seventeen Famous Books of *Riverius*, called,

THE PRACTICE OF PHYSICK.

VIZ.

1. *Of the Diſeaſes of the Head.*
2. *Of the Diſeaſes of the Eyes.*
3. *Of the Diſeaſes of the Ears.*

1668.

The Printer to the Reader.

READER,

THY *chearful acceptance of my former Endeavours in this kind for the good of my Native Country, hath encouraged me, though with great Care, Labour and Coſt, to preſent thee with the Learned, Judicious, and Worthily renowned* Riverius *his* Works of Phyſick. *He was an Author lately living, and ſufficiently known: And his Works will ſpeak for themſelves, and praiſe him in the Gates.*

And if thou ſhalt ſhew a friendly Countenance to this worthy ſtranger, who now ſpeaks Engliſh, I ſhall be thereby encouraged by all other means to ſtudy to promote thy good by bringing thee more acquainted with this, and other excellent Authors.

And whereas ſome, either out of envy, or miſ-underſtanding, do condemn Works of this Nature, publiſhed in our Mother Tongue, alledging chiefly, That ſuch Books encreaſe the number of Empericks; are a hinderance to learned and able Phyſitians; alſo occaſion ſome to hurt themſelves by raſhly practiſing on their own Bodies. I ſhall anſwer to theſe Objections in order.

First, as for Empericks: Theſe Books, and ſuch as theſe publiſhed in Engliſh, are ſo far from making more Empericks, that they will ſpoil thoſe that are, and make that we ſhall have fewer of them. For an Emperick being one that gives Phyſick (Hab Nab, as we uſe to ſay) relying only on Experience, and what he hath ſeen done before him, not being able to give any reaſon touching the Diſeaſe, its Cauſe, or Cure: Theſe Books will teach ſuch perſons how to go upon good grounds, and to be able to give a ſolid Reaſon for what they do, and of Empericks make them Rational Phyſitians, if they be men of good natural parts, though they be ignorant of all Tongues but their Mothers.

As for the hurt which is hereby pretended to be done to learned Phyſitians, *it is a meer imagination, and no learned Phyſitian that bethinks himſelf well, will ſo judg. For the uſe of theſe Books reſpects chiefly the Poor of this Nation, together with Seafarers, and* Soldiers. *But for the Rich that have Money to ſpare, and bide at home, no otherwiſe (in point of Practice) than for an honeſt Curioſity and delightful Speculation. What rich man is there ſo mad, who reading a Chapter in theſe Books, and ſeeing what a world of Conſiderations and Cautions do belong to the knowledg and orderly cure of every Diſeaſe, but will be more fearful than ever he was before to commit himſelf to the Cure of any but a learned Phyſitian. Now it is not by the poor, but by the Rich, that the learned Phyſitian maintains himſelf; the poor are but a trouble to him, only before ſuch Books as theſe were extant in the Engliſh Tongue, Conſcience (ſometime) forced the learned Phyſitian to take care of the poor, becauſe the unlearned were wholly unable: Whereas now there may be found Induſtrious men that know no more Languages than their Native one, who may in a rational way contribute to the Neceſſities of the poor. Nay, theſe kind of Books are profitable to the learned Phyſitians; for many of the Gentry, eſpecially of the Ladies and Gentlewomen, viewing the ſtate of their own bodies in ſuch Books as theſe (as in Looking-Glaſſes) will perceive certain Diſeaſes in themſelves, either now in being, or likely ere long to ſeize upon them, which otherwiſe they would never have ſo much as dream'd of; and thereupon crave the Advice and Aſſiſtance of the learned Phyſitian.*

Also the Ladies and Gentlewomen being well read in such Books as these, will better know how to demean themselves towards their Husbands, Children, or other Relations and Friends in their respective Sickness in point of ordering them, and will be more apprehensive of the Physitians Directions, and so better able to practice them; also more capable of his Reasons, and Prognosticks, and so more confident and cheerfully obedient. All which will very much advance the Cure, and consequently the honour and Gain of the learned Physitian: for as Hypocrates *notes in his first Aphorisme,* It is not enough towards the Cure that the Physitian do what is fitting; but the bystanders and friends of the sick must play their part, or all will not be well.

And in the third place, whereas it is objected, That people reading these Books will practice upon themselves, and hurt themselves.

I Answer, If they do, they have none to blame but their own folly; for it is not the intent of the publishers of these Books, that every one that can read English, should dare to take of sheir own Heads such Medicines as are described in the said Books. But our intent is, That where in the Country there is no learned Physitian at hand; at Sea, in the Kings and Merchants Ships, where the Chyrurgion is compelled to act both his own, and the Physitians part; In Armies and Leguers, &c. an ingenious and diligent Chyrurgion, Apothecary, or any other that hath from his youth been exercised in these kind of studies, and conversant about the sick, may attain such a competent knowledge in the Causes and Methodical Cure of Diseases, as they may with honor to themselves, and profit to the sick (by Gods blessing) supply the place of a more learned Physitian. For the use of such persons, these books are intended, and for diligent Midwives; and not that every fool should turn Physitian, or that every Reader should tamper with him or her self.

Also divers Honorable Ladies and Gentlewomen, that out of a truly Christian and Charitable Disposition have not disdained, but counted it a great Honor to be helpful to the poor in the time of their sickness, may by perusal of these books, and the like, confirm and encrease their knowledge, and become honourable Instruments in the Hand of God, of much relief and comfort to many poor distressed Creatures in their respective Countries and places of Habitation.

Farewell.

The

THE CONTENTS OF THE FOUR BOOKS.

BOOK I.

Obs.		Page
1	Of stoppage of the Urine	1
2	Suppression of the Courses	2
3	The Colick proceeding from Choler	ibid.
4	Sciatica, or Hip-gout Pains	3
5	The Green-sickness with Cholick pains	ib.
6	The Jaundies	4
7	A lasting Redness of one Eye	ibid.
8	Venereal Pains	5
9	The great Pox	ibid.
10	A Catarrhe with other Symptoms	6
11	An Old Head-ach with other Infirmities	ibid.
12	Colick pains	7
13	Colick pains	ibid.
14	An Old Head-ach	ibid.
15	Vomiting in a Malignant Feaver	8
16	A Feaver with worms	ibid.
17	The Jaundice	ibid.
18	Of the Jaundice	9
19	Of a Pleurisie, and the Feaver Synochus with putrifaction	ibid.
20	Of a Tertian feaver or ague.	10
21	Of the Purple feaver	ibid.
22	Of a Tertian ague	11
23	Of Bleeding at Nose	ibid.
24	Of a Malignant Feaver	12
25	Of an old Gonorrhœa	ibid.
26	Of a Tertian ague	ibid.
27	Of a Tertian ague	ibid.
28	Of Worms	13
29	Of a Malignant Feaver	ibid.
30	Of Nephritick pains	ibid.
31	Of Arthritick pains	14
32	Of Womb-fits	ibid,
33	Of a Looseness	ibid
34	Of obstruction of the Liver and Spleen	ib.
35	Of a beginning Phthisis, or Consumption	15
36	Of an old Gonorrhœa	ibid.
37	A deadly Head-ach	ibid.
38	Of a Schirrus of the womb	16
39	Of a Quartan ague	17
40	Of another Quartan	ibid.
41	Inflammation of the Dugs	ibid.
42	Of a Malignant Feaver	ibid.
43	A Malignant Feaver, with swelling behind the Ears	18
44	Cholick pains of the Stomach	ibid.
45	Vomiting of blood	ibid.
46	The Whites	20
47	A continual and Malignant Feaver	21
48	Of an Inflammation and impostbume of the Kidneys, bleeding at the Nose, a Malignant Feaver, with grievous Symptomes	22
49	Of the Rheumatick disease	26
50	A swelling of the Spleen	29
51	Of blood Coagulated in the Stomach.	ib.
52	Of Consumption, and weakness of sense in a part	30
53	Of prevention of Abortion	34
54	A Semitertian ague with Head-ach	ibid.
55	Of a Cough and Catarrhe in an Infant.	35
56	A Pleurisie	ibid.
57	A Con-	

Obs.	Pag.
57 *A continual Feaver in a little Girle.*	ib.
58 *The Cholick pain.*	36
59 *Cholick pain*	ib.
60 *Tissick, Inflammation of the Lungs, and Palpitation of the Heart*	ibid.
61 *Of Symptomes after Abortion*	38
62 *of Scabbiness*	ibid.
63 *Belly-ake*	39
64 *Of a Liver flux and Dysentery*	ibid.

THE First CENTURY OF THE Medicinal Obſervations,

And Rare Cures of

LAZARUS RIVERIUS,

Councellor and *Phyſician* to the King, and Profeſſor of Phyſick in the Univerſity of *MONTPELIER.*

The 1 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Of Stoppage of the Urine.

MR. *Anthony Meſtre*, a Gentleman ſixty years Old, of a Sanguine Conſtitution, and a ſtrong habit of Body, having in the Summer travelled by long Journeys betwixt *Paris* and *Montpelier*, he drank down abundance of Drink to quench his Thirſt, cauſed by the hot Weather. And three or four daies after he came to *Montpelier*, he fell into a total ſtoppage of his Urine; for the Cure whereof, he ſent for an ancient Phyſician, who three daies together combated this ſtubborn Diſeaſe with ſundry Remedies, as Clyſters, Fomentations, Baths to ſit in, Liniments and Diureticks. Finally, On the third day, when nothing elſe would do, a Catheter was thruſt up into his Bladder, and no Urine came away; whereupon the Phyſician being terrified, and deſpairing of the Patients Life, deſired to have another called to conſult with. I being ſent for at the Evening of the third day from the firſt ſtoppage of his Urine, and hearing what had been done before, I enquire if the ſick man felt any pain in his Loyns or Share, or had formerly had any fits of the ſtone in the Kidneys. He told me he had no pain in the aforeſaid parts, nor had he been ever troubled with Nephritick pains, nor had ever avoided any Stones or Gravel. All which diligently conſidering, I judged that this ſuppreſſion of Urine depended upon no fault of the Kidneys or Bladder; but rather upon the ſtoppage of the Emulgent Veins, cauſed by a multitude of Humors; for *Galen* in the firſt Book of his Method, Chap. 2. makes a two-fold cauſe of Obſtruction, *viz.* Multitude and thickneſs of Humors. In reſpect of Multitude, the Veſſels too much filled and diſtended cannot contract themſelves, ſo as to cauſe Expulſion. Which is manifeſtly ſeen in the Bladder, which being above meaſure diſtended by long retention of the Urine, can very hardly void the ſame, becauſe it cannot contract it ſelf. Being ſtedfaſt in this Opinion. I propounded to have a Vein opened, and ſtore

store of blood taken from him; which when the former Physician consented unto, there was a pound of blood taken away. Now scarce an hour was past after the blood-letting, when the Patient felt the Urine flowing down from his Kidneys, by the Uretors into the Bladder, and said, he knew he should quickly make water; and not long after he called for the Chamber-pot, which being filled at one pissing bout, other vessels were brought, so that within an hours space he voided many pints of Urine. And so he was perfectly freed: nor would he take the purge prescribed for him against the next day.

For the knowledge and cure of the diseases of the Kidneys, Reins and Bladder; see more in the fourteenth Book of the Translation of the Practice of Physick; and *Riolanus* Anatomy, both of the last Edition in Engish.

The 2 Observation or History of Famous and Rare Cures, &c.

Suppression of the Courses.

AN Outlandish Woman of a sanguine Complexion was troubled with many Infirmities, arising chiefly from Suppression of her Courses; for the Cure whereof, when such Physicians as were at hand had applied many Remedies, and the Infirmities proved unconquerable; Councel was asked of the Physicians of *Montpelier* by letter. And in the Relation, her ordinary Physicians had chiefly observed this one thing, which made them exceedingly wonder, and of the reason whereof they desired to be informed, *viz.* That as often as a Vein was opened in her Anckle, her Courses stopt; but when she was let blood in the Arm, they flowed more plentifully: which accident seemed to contradict the usual doctrine of Physicians, which saies, that the opening of the lower Veins does provoke the flux of the Courses; but bleeding from the upper Veins does stop the same. To which Doubt, the Physicians of *Montpelier* made answer, that this accident did very well agree with reason, and the Doctrine of *Galen*: For seeing that Woman was plethorick, and her Courses stopt by reason of over-great plenty of blood, which did so distend the Vessels of the Womb, that they could not sufficiently be compressed; blood being drawn to those Vessels by the opening of the lower Veins, the Obstruction was encreased. But when as blood being drawn from the upper Veins, the course of blood was drawn back from the Veins of the Womb, so that their fulness and distention was lessened, then they did more easily contract themselves, to perform that natural and ordinary expulsion which is wont to be performed by the Womb, which reason was backed by the forecited Authority of *Galen*, out of the 10. Book of his Method, Chap. 2. Where he teaches us, that Obstruction is caused, not only by the thickness, but plenty of humors also. The Physicians therefore that were with her were advised, that they should abate her superfluity of blood by taking a good quantity from her Arm: and that afterward they should draw the blood downwards, by opening the veins of her Feet, especially about the time, when she was formerly wont to have her courses. To which were added other remedies that provoke the Courses stopt: For Womens Diseases, see *Riolanus*, and the 15. Book of the Practice of Physick, and the Directory for Midwives.

The 3 Observation or History of Famous and Rare Cures, &c.

The Cholick, proceeding from Choler.

THe Wife of *John Daumont*, a Stone-Cutter of *Montpelier*, being thirty years of age, was vexed with a Cholerick Cholick for eight moneths together, during which time, she used divers Remedies prescribed by two several Physicians, who had her in hand one after another, but all to no purpose. Finally, desiring my advice, she was cured within five daies, with these three Remedies following.

Take of the ordinary Clyster-decoction one pint, Cassia new drawn one ounce, Hiera picra half an ounce, Honey of Violets an ounce and half, fresh Butter two ounces, Salt half a dram; mix them, and make of all a Clyster. Let it be given at a seasonable hour.

Take

Take green Polypopy and Carthamus seeds, of each one ounce and half; tops of Epithymum, and of dryed Thyme, of each a pugil; Annis seed, Fennel seed, Carraway seed, and Carduus Benedictus, of each two drams; Senna cleansed one ounce and half, Gummy turbith half an ounce, Cinnamon one ounce aud half, Chrystal of Tartar two ounces, Sal-gem half an ounce. Beat all, and fill therewith the Belly of an old drawn Cock; and then boyl him and them in three parts of Water, and one of White-Wine, till the flesh of the Cock be parted from his bones. Of this broth, let her take six ounces or seven every day in the morning, continuing the same seven or eight daies if need require.

Take Conserve of Wormwood and Maiden-hair, of each half an ounce; Citron Peels preserved six drams, one preserved Myrobalan, Confection of Alkermes three drams, aperitive Crocus Martis two drams; powder of the Electuary of Diarrhodon Abbatis one dram and an half, Spikenard one dram, with Syrup of preserved Citron peels, make all into an Electuary, of which let her take every day one dram and half two hours before Supper, drinking after it a little Wine tempered with a good quantity of Cichory Water.

Take Aron Roots, prepared according to the prescription of the *Dispensatory* of *Quercetanus*, half a dram; the Root of Acorus and Pimpernel, of each two drams; Cinnamon two scruples, Salt of Wormwood half a dram, Sugar of Roses to the weight of all the rest. Make all into a powder, of which let her take two ounces every day three hours after Supper, drinking after it a little Wine tempered with Cichory Water as aforesaid.

When she had used these Remedies four daies together, and had been afflicted after the same manner with pains of the Cholick, which was wont to return every day once or twice, with most bitter torments, persevering two or three hours together; on the fifth day about noon, when the purging broth should have wrought its operation, she was taken with so great a Torment, as it seemed insufferable, and she said she had never felt the like, which nevertheless went wholly away within the space of an hour, and never returned any more: And so the Patient was wholly freed from that cruel Disease. 'Tis credible, that the sharp and Cholerick matter deeply fastened in the Coats of the Guts, or of the Peritoneum, and thickned by long abiding there, was attenuated by the Medicaments, and the waies opened by which the matter was voided forth.

For the Cholick, and other Diseases of the Guts: See the tenth Book of the Practice of Physick, and *Riolanus*, both of the last Edition.

The 4 Observation or History of Famous and Rare Cures, &c.

Sciatica, or Hip-gout Pains.

John Ranquier, A Porter of *Montpelier*, in extream cold Weather, had been in the Water with his Legs many hours together; whereupon he was taken with a mighty pain in his Huckle-bone, which reached unto his Thigh and Leg, so that he could not go at all.

After a Clyster, he was let blood in the Arm of the same side: The following day he was purged with a very strong purgation. For three daies together following, he took every morning eight drops of Spirit of Treacle with Carduus Water, and did sweat plentifully, and so all pain was taken away. The manner how to make the Sudorifick spirit of Treacle shall be taught in the following Centuries.

The 5 Observation or History of Famous and Rare Cures, &c:

The Green-Sickness with Cholick Pains.

THe Maid-Servant of Mr. *Peter Deflours*, an Advocate of *Montpelier*, was troubled with exceeding great Obstructions of her Liver and Spleen, so that she was not able in that regard to go up a pair of stairs, being oppressed with extream weariness and shortness of breath. Moreover she had extream thirst, her Courses were stopt, her Hypochondria stretcht, and her

her whole Body was of an ugly colour. But above all, she was horribly tormented with Cholick pains, which came by Fits twice or thrice in a day. For the Curing of which Diseases, these following Remedies were used.

In the first place, because her condition could not bear long taking of Physick, I ordered her only one Flegm purging potion, premising blood-letting the day before; and I caused her to take the same potion again three daies after.

Afterwards she took every day in the Morning half an ounce of Spirit of Tartar, with a Decoction of common Wormwood. After the second taking whereof, the Cholick pains wholly vanished: and continuing this Medicament ten daies together, she was restored to perfect Health.

For Drink, she used White-Wine wherein steel hath been infused, which I ordered her to continue for some time.

For the Cholick and Green-sickness. See the tenth and fourteenth Book of the Practice of Physick, and *Riolanus*, both of the last Edition.

The 6 Observation or History of Famous and Rare Cures, &c.

The Jaundice.

THe Son of Dr. *Trousellier*, Dr. of the Civil and Canon Laws, dwelling in the Town of *Aymargues*, being fourteen years old, was troubled with a most filthy Jaundize, which died his whole Skin as yellow as Gold. For whom my self and Dr. *Phachequus* in consultation, prescribed these following Remedies.

Take Senna cleansed half an ounce, Annis seed one dram, tops of Roman Wormwood and leaves of Agrimony, of each half an handful; Licoris scraped and sliced two drams, Broom-flowers and Cichory-flowers, of each half a pugil. Boyl all to three ounces; In the strained Liquor, dissolve four scruples of Rhubarb, infused in Wormwood Water, with a little Cinnamon, and strained forth of the Electuary *de Succo* Rosarum [see English *Dispensatory*] two drams, Syrup of Roses solutive one ounce; make all into a potion, let her take it in the morning, and order her self accordingly.

Take Madder Roots half an ounce, Celondine Leaves one handful, Centory tops one pugil, Cinnamon half a dram, Saffron half a scruple. Infuse them all night with eight ounces of White-Wine: To the strained Liquor, add half an ounce of white Sugar, let her take it in the morning five daies together, after the potion aforesaid. And after the use of this Remedy, let her take again the purging potion before prescribed. With these Remedies alone she was perfectly Cured.

Of the Jaundice, see more in the Eleventh Book of the Practice of Physick, of the last Edition.

The 7 Observation or History of Famous and Rare Cures, &c.

A lasting Redness of one Eye.

A Pretty fair young Damsel, called *Antometa de Loiiys*, Eighteen years of Age, for three or four years together had a flux of Rheume into her left Eye, wherewith the whole Eye, Eye-Lids, and parts round about, were affected with redness and swelling. By means whereof, her fair Face was deformed: The Disease was most violent in Autumn, and continued all the Winter, nor could it be asswaged either by blood-letting or purgation with Potions and Apozemes or Vesicatories, and very many other Remedies, which were frequently applied, but all in vain.

Finally, at the beginning of Autumn, the Disease returning with like violence as formerly, it was thought fit to use more potent Remedies, for the rooting up of this stubborn defluxion. And therefore instead of the Apozeme, which she had formerly used, I prescribed opening and Diaphoretick,

Diaphoretick Pils, of the Salts of Tamarisk and Wormwood, and the Magistery of Tartar, with my Diaphoretick Pouder; whereof she took two in the morning three hours before dinner, and as many before Supper, four daies together. On the fifth day she took half a dram of universally purging Pils, by which she was excellently purged, whereupon the redness and Inflammation began very much to abate. She took again the opening Pils four daies together, and on the fifth she was excellently purged with the universal Pils aforesaid; and a few daies after, the redness of her Eye perfectly vanished, and returned no more. The Basis of the universal Pils aforesaid, you shall find in my Practice of Physick, in the Chapter of the Falling-Sickness.

In this Cure, I did not let the Patient Blood, though she were of a sanguine Complexion, because she had bled a few daies before both in her Arm and Ankle Veins. But the Cure being finished, I prescribed her a Decoction to move her Courses, because she had them not kindly. Which Decoction was as follows.

Take Marsh-Mallow and Valerian Roots, of each one ounce; Fennel Roots, Asparagus Roots and Smallage, of each six drams; Leaves of Betony, Pimpernel, Ceterach, Mugwort, Savin, of each one handful. Boyl all in a Decoction of red Vetches to a fourth part: In the strained Liquor, dissolve three ounces of white Sugar. Let all be made into a clear Apozeme, Aromatized with two drams of Cinnamon, and one scruple of Saffron, for four morning Doses, to be taken four daies before the coming of her Courses.

For the Diseases of the Eyes, read that matchless piece, the Second Book of the Practice of Physick. And *Riolanus* Anatomy, both of the last Edition.

The 8 Observation or History of Famous and Rare Cures, &c.

Veneral Pains.

A Renowned young man, Mr. *N.* being twenty five years Old, Skilful in the Laws and Affairs military, was vexed with veneral pains, which tormented him continually night and day for four years together, especially in his left Leg, from one end thereof to another. For a whole year he wore *Vigos* Plaister made with Mercury on his said Leg, by the advice of of Chirurgeons, on whom he solely depended for Cure. At last by the advice of many Physicians, my self being one, he used a sweating Diet-drink twenty daies together, and had many Topick Medicaments applied to his Leg, *viz.* Fomentations, Fumes, Oyntments and Plaisters; all which did him no good. He never leaves solliciting me alone, that I would do yet somewhat more to free him from this inveterate Malady. To satisfie him, therefore, I give him for a moneth together my antiveneral Medicament made up into pils, of which he took two in the morning, and as many in the afternoon, three hours before Dinner and Supper. Every fifth day he was purged with the Catholick Pils, and so by little and little the pain went away.

For Veneral pains, read my Translation of *Sennertus*, of the French Pox.

The 9 Observation or History of Famous and Rare Cures, &c.

The Great Pox.

THe famous man Mr. *N.* being fifty years Old, had been troubled with the Whore-masters Pox one whole year together, which would not give way to ordinary Remedies: but with the two Remedies aforesaid, *viz.* The Antivenereal Antidote, and the Catholick Pils used twenty daies together he was well recovered.

For the Great Pox, see my Translation of *Sennertus*, on the French Pox.

The

The 10 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Catarrh with other Symptomes.

THe Noble Gentleman Mr. *Guilielmus Helrardus*, Lord of *Miravaulx*, thirty years of Age, of a Flegmatick and Melancholick Conſtitution, was troubled with a ſtubborn Infirmity attended with many Symptomes; ſuch an extream heavineſs of his whole Body, that he could not ſometimes move himſelf, with ſo extream a weakneſs, that he was ready to faint away. Alſo in the Afternoons and in the Evenings, a thin and ſharp fluxion fell down upon his Lungs, which cauſed a very troubleſome dry Cough, which made him exceedingly fear a Conſumption, which rendred him exceeding penſive, ſeeing two of his Siſters had died of Conſumptions, and himſelf had bin troubled with ſpitting of blood. And the worſt of all was, that he would not adviſe with Phyſicians, becauſe he loathed all kind of Medicaments, ſo as that he vomited them up again. But this Infirmity growing every day worſe and worſe, the worthy Gentlewoman his Wife ſent for me. Having heard the ſtory of his Diſeaſe, I propounded many Remedies ordinarily uſed, which he being not contented with, I promiſed him very well taſted Medicaments, and ſuch as ſhould reſtore him to his former health. He being willing upon this condition to follow my Advice, in the firſt place I preſcribe theſe following broths.

Take Roots of Bugloſs and Aſparagus, of each one ounce; Leaves of Agrimony, Burnet, Scabious and Maiden-hair, of each one handful; Cream of Tartar one dram. Boyl all with a quarter of an old Cock, and make Broth, which let him uſe ſix daies together. With which he was purged dovvnwards tvvice or thrice a day, and ſaid he found himſelf ſomewhat better. Aftervvards I preſcribed him this followving Povvder.

℞ Take Salt of Tamarisk, Magiſtry of Tartar, and Milk of Sulphur, of each one dram. Mix them into a povvder; of which let him take half a dram every morning, with ſome of the foreſaid broth. Having uſed this Remedy, ſix daies together, on the ſeventh he was purged with this following povvder.

Take Senna and Cream of Tartar, of each one ſcruple; Diagridium eight grains, Cinnamon four grains, of my ſpecifick Cephalik povvder five grains; with this Medicament he voided an incredible quantity of Flegmatick Humors, not only by Stool, but alſo by Vomit, without any trouble, ſo that the Humors came as it were, of themſelves like Whites of Eggs. Alſo they came out of his Brain into his mouth in ſo great quantity, that it was as much as the Patient could do by hauking to bring them all out: Alſo he rendred his Urine much more plentifully than formerly. The ſame day he was ſo eaſed and cheared, that he profeſt he was cured. But becauſe his whole Body was filled with abundance of Humors, I ordered him to take the aforeſaid povvder again for ſix daies together, and to purge again upon the ſeventh day, which advice he diligently followved, aud the ſucceſs was as before: only he voided nothing near ſo much excrementitious matter as formerly, becauſe it was by the former Purgation abated: after his being the ſecond time purged, he went into a Bath made of Barley, Almonds and cold Seeds, being luke-vvarm, for tvvo daies together morning and evening, to moiſten his over heated and dryed Bovvels. After the Bath, he uſed the foreſaid povvder three daies together; and finally, was again as formerly perfectly cured.

For the Knovvledge and Cure of Catarrhs, ſee the firſt Book of the Practice of Phyſick, and *Riolanus* Anatomy of the laſt Edition.

The 11. Obſervation or Hiſtory of Famous and Rare Cures, &c.

An Old Head-ach with other Infirmities.

A Choice Virgin, *Margaret De Varanda*, Daughter to the learned man Dr. *David De Varanda*, a moſt Renowned Lawyer, and Profeſſor of the Civil and Canon-Laws, in the Univerſity of *Montpelier* deceaſed; being twenty years of age, was troubled with a moſt ſharp

sharp Head-ach, with a stretching on the right side under the short Ribs, Belly-ach, and other Symptomes. She used every year many Remedies, as Potions, Apozemes, Pils, Baths, Vesicatories, and many other things, which did her little good; also she was not much bettered by the use of steel, though all these Symptomes depended upon Obstructions and bad humors quartering in her Hypochondria to her Head. Finally, at the beginning of the Spring, in the year 1625. I prescribe here these following Remedies.

Take Conserve of Wormwood and Maiden-hair, of each one ounce: Conserve of Elecampane Roots half an ounce, salt of Tamarisk, Magistry of Tartar, and my specifick aperitive powder, of each half a dram; with syrup of Maiden-hair make an Opiate, of which she took two drams every morning, two hours before she did eat.

Every fifth day she was purged with Catholick pils [such as our *Extractum Rudii*, or *Extractum Catholicum* in the *London Dispensatory*, but not so strong] to the quantity of two scruples, and within fifteen daies she was perfectly cured.

For Diseases of the Head and Head-ach, read the first Book of the practice of Physick and *Riolanus* Anatomy, and *Johnstons* Idea of the last Edition.

The 12 Observation or History of Famous and Rare Cures, &c.

Cholick Pains.

Stephen de Varanda, Brother of the Damsel aforesaid, eighteen years old, was tormented some daies together with most grievous Cholick Pains. Coming to see him, to abate the most violent pain which he was scarce able to endure, I presently prescribe him six grains of *Laudanum Opiate*, which in the space of two hours took away all his pain; he Supt liberally, and slept all night, having passed many nights before without any rest.

The day following he rose in the morning and went about his ordinary business, nor would he take the Purge which I had prescribed to remove the cause; howbeit his pain returned no more.

The 13 Oservation or History of Famous and Rare Cures, &c.

Cholick Pains.

The Renowned Mr. *Stephen Deumoys*, the Kings Councellor in his Court of *Montpelier*, being tormented with Cholick pains, and having used other Remedies in vain, took half a dram of Pilulæ Catholicæ, wherewith he was excellently well purged, and perfectly cured of his Cholick the same day.

Those that desire to know and Cure these Diseases, ought to read the Idea of Practical Physick, *Riolanus* Anatomy, and *Riverius* Practice of Physick of the last Editions.

The 14 Observation or History of Famous and Rare Cures, &c.

An Old Head-ach.

The worthy Wife of Mr. *William Dortoman* a renowned Advocate, being of a melancholy Constitution, was troubled many years together with a most grievous Head-ach, which held her in a manner perpetually; for the cure whereof an almost infinite company of medicaments were prescribed by sundry Physicians, which doing no good, she desired me also to prescribe for her, which I did after this manner.

Take Conserve of Worm-wood, Maiden-hair and Elecampane Roots, of each one ounce; Salt of Worm-wood and Tamarisk, of each one dram. With syrup of Maiden-hair, make all into

an

an Electuary. Of which she took two drams every day, two hours before meat.

Every fifth day she took two scruples of *Pilulæ Catholicæ*, with which Remedies continued ten daies together, her grievous and long lasting pain was Cured.

The 15 Observation or History of Famous and Rare Cures, &c.

Vomiting in a Malignant Feaver.

Lawrence Bosch, a renowned Apothecary of *Montpelier* was grievously sick of the Purple Feaver in the moneth of *December*, 1622. after the Siege of *Montpelier*; and among other Symptomes, he was extreamly troubled with vomiting up of all that ever he drank, as soon as ever he had taken it in; Water, Wine, Juleps, Emulsions, he vomited all; Only he retained his Broths. His Feaver had raged for four daies together, with a mighty burning, and a thirst which no drink could quench. His inner parts were so dried and burnt, that his Tongue was extream black and parched. Which grievous Symptome was, by my advice, removed with this easie Remedy.

Take Salt of Wormwood one scruple; fresh Juyce of Lemons one spoonful: They were mingled in the spoon, and so given him. Presently his vomiting was stopped, and afterwards he drank what he pleased, and never cast it up.

The 16 Observation or History of Famous and Rare Cures, &c.

A Feaver with Worms.

THe Daughter of *John Nivelle* a Proctor, twelve years old, had a continual Feaver, with a most troublesome flux of the Belly, by which she voided ash-coloured Excrements, such as are commonly seen to proceed from persons troubled with worms.

There were prescribed for her at first detergent Clysters made of sweet things; also drinks ordinarily given against Worms, and powder of Rhubarb twice repeated, by all which she had no ease: nay, thereupon her Feaver and Looseness grew worse, so that they began to fear her death; because she was of a tender Constitution, had been long sick, and was exceeding pale-faced: At last I prescribed her this following Julep.

Take Roots of Sorrel, of Grass, of Cichory, of each one ounce: Leaves of Endive, Cichory, Sorrel, Purslain, and St. Johns-wort, of each one handful: Scordium and Roman Wormwood, of each half an handful. Of the three Cordial flowers, of each one pugil. Boyl all in Barley Water, till a fourth part remain. In the strained Liquor, dissolve four ounces of Syrup of Lemons, and some drops of Spirit of Vitriol to cause a gentle Tartness. Make of all a Julep for four Doses, to be taken morning and evening.

In those two daies space, in which she took her Julep, the Feaver and Looseness went quite away, and she was perfectly Cured. If any wonder this Disease was Cured with so easie a Remedy; let him know, that St. Johns-wort and Scordium have a wonderful force against putrifaction, and prohibit the generation of Worms, and kill them when bred. Yea, and those Herbs laid up with Cloaths do hinder the breeding of Moths: and I can truly witness, that I have used these kind of Juleps, in an almost innumerable company of Children troubled with Worms, with most happy success.

For the forementioned Disease, read the seventeenth Book of the Practice of Physick treating of Feavers. And *Riolanus* Anatomy; and *Johnstons* Idea, of the last Edition, Englished by me.

The 17 Observation or History of Famous and Rare Cures, &c.

The Jaundice.

A Student of Chirurgery who dwelt at that time with Mr. *Thierry Hagnenot*, a most renowned Chyrurgeon, who had long Practised the Art of Chyrurgery, was sick of the Jaundice.

I pre-

I prescribed him a Choller-purging potion, and then the Infusion for the Jaundice described in the sixth Observation, for five daies together; and in conclusion the Choller-purging potion again, with which he quickly recovered.

The 18 Observation or History of Famous and Rare Cures, &c.

Of the Jaundice.

THe eldest Son of Mr. *Demanse*, being born when his Mother had a Tertian Ague, had also four fits of the said Feaver or Ague presently after he was born, and afterwards fell into the Jaundice, so that his whole body was died all over with a deep yellow, which exceedingly terrified his Parents: now he was only two moneths old, when I was called to the Cure. I was in great doubt what to do in so tender a Body: At last I prescribed this following Syrup.

Take Roots of Madder, and the larger Celandine, of each two ounces: Leaves of Celandine, Centaury and Roman Wormwood, of each two handfuls: Cinnamon two drams, Saffron half a dram. Boyl all in Fountain-Water to a pint; In the strained Liquor, dissolve a pound of Sugar, and boyl it to a Syrup. Of this he took a small spoonful every morning for twenty daies together, and was perfectly cured, and is at present perfectly well, honourably supplying the place of his deceased Father.

The 19 Observation or History of Famous and Rare Cures, &c:

Of a Pleurisy, and the Feaver Synochus with putrifaction.

ON *June* the 10. in the year 1630. At *Grenoble*, Mst. *De Boissuzel*, born of a Noble Family, being twenty years of Age, of a Sanguine Complexion, about the evening began to be troubled with a pain in his left side without a Feaver. The same day a carminative Clyster was given him, and a discussive bag was applied to the pained part. The day following in the morning he began to be Feaverish, his pain remaining, which troubled him most when he lay on the other side. He was Clystered again, and blooded in his left Arm; and a Julep was given him of red Poppy Water, Syrup of Violets, and Sal prunellæ. An emollient and Carminative fomentation was applyed to the pained side, and afterward Unguentum Dialthea with discussive Oyls, his Blood appeared exceeding impure; in the Afternoon his Feaver was stronger than at other times: He was let blood again, also his Julep and Topick Remedies were repeated. On the third day in the morning he was again let blood in two porringers, the one of which was corrupt enough, the other more pure; the Julep and Topicks were continued. For drink, he used from the beginning a Ptisan drink of Barley and Liquoris, and all his food was Broths, which were sometimes altered with cooling Herbs. The same day, after noon his Feaver was exasperated; Blood was taken out of the same Orifice, to the quantity of six ounces, which seemed pretty good. With the morning blood-letting, the Pain of his side went quite away, which was never very vehement, nor had any Cough, Shortness of Breath, or Spitting of blood joyned therewith; which shewed that it did proceed either from a light fluxion, or from sharp vapors, seeing also that it came before the Feaver. And therefore it was a Primary Feaver, of that kind which we terme *Synochus*, and did not depend upon the Pleurisie. After his last blood-letting, seeing he was vexed with a vehement thirst and burning, I gave him to drink about a pint of cold Water, with twenty drops of spirit of Sulphur. Presently he felt a cold; all his belly over was covered with Cloths, and he sweat a little an hour after. Then he drank broth, and an hour after had a Clyster; which being come away, he fell into a new sweat, so plentifully that he was all over wet therevvith; which being wiped off, he svveat again, but not so plentifully, and rested quietly all the night. On the fourth day in the morning he svveat again, and his Feaver was in great part abated. So on the seventh day he was quite freed from his Feaver, and being purged on the eighth day, he needed no other Physick. In this Cure 'tis observable, that by the spirit of Sulphur given with Water, plentiful svveats vvere procured, vvhich I have found by many experiments, having seen many Tertian

Agues cured with the same Remedy, being given in the height of the burning Fit, and when the Patient is most thirsty; by which plentiful sweats were procured, by which not only the Fit, but also the whole Disease was perfectly terminated. In a lesser quantity of Water, a less quantity of Spirit must be given, least the Water become too tart.

The 20 Observation or History of Famous and Rare Cures, &c.

Of a Tertian Feaver or Ague.

MR. *Berardus*, a most Famous Apothecary at *Grenoble*, being fifty years old, in the moneth of *July*, 1630, was taken with an intermitting Tertian Ague, and being twice purged, and twice let blood, and never the better; he took my Catholick Pils on his wel-day, and the day following had his Fit much more gentle. Afterwards before his next Fit, he took this small potion following.

Take Cichory Water three ounces, Salt of Wormwood half a dram, Spirit of Sulphur twelve drops; mix them. After this potion his fit came no more, but he was plentifully purged by Urine.

At the same time Msr. *de Manissieu*, the Kings Councellor in the Parliament of *Grenoble*, being twenty four years of age, after two Fits, was cured by being once let blood without any other Remedy: now his blood was very hot and Cholerick.

The 21 Observation or History of Famous and Rare Cures, &c.

Of the Purple Feaver.

ON the 18. of *June*, 1630. I was called to *Grenoble*, to Msr. *de Chaupoullay* the Kings Advocate, who had been eight days sick of a continual Feaver, during which time he had been thrice let blood, and had taken a purging Medicament prescribed by his ordinary Physician. As soon as I saw him, I found his pulse very frequent and unequal, which made me suspect it was a malignant Feaver, and causing him to be uncovered, I found his whole Body full of purple spots. His Urines were sufficiently good, and shewed some beginnings of Concoction.

I ordered many Cupping-Glasses to be applied all along his back-bone, both without and with Scarrification, also Epithems, and that he should be anointed with *Mathiolus* his Oyl of Scorpions; also I gave him Confectio de Hyacintho in his Broths, and cooling cordial Juleps. For his drink he used the vulgar Ptisan, wherein Harts-horn tied in a Cloath was infused.

These Remedies he continued to the eleventh day of his Sickness, growing in the mean time every day worse and worse, till at last he was taken with Ravings and Convulsion Fits. On the said eleventh day he did sweat lightly, without any advantage. His Raving was joyned with a kind of stupidity; and therefore a Vesicatory was applied to his Neck, and Cupping-Glasses to his lower parts. Instead of the former Juleps which were made of cooling and opening Roots and Herbs, these following were prescribed.

Take Barly one pugil, Bugloss Roots two ounces, Borrage, Burnet, Scordium, of each one handful: Citron and Sorrel seeds, of each half an ounce; Tamarinds two ounces, Flowers of Borrage, Bugloss and Red Roses, of each one pugil; Dittamus half a pugil. Make a decoction in seven pints of Water, to a consumption of the third part. In the strained Liquor, dissolve one pound of white Sugar, and make it into a Julep. Of which let him take eight ounces morning and evening, adding to each Dose one dram of Sal prunellæ, and half a scruple of Spirit of Vitriol.

For his Drink he had a tincture of Roses: In his Broths he took pouder of Pearls, Coral, Ivory, Harts-horn and Bezoar-stone. But in the last daies, when all the symptoms grew worse and worse, instead of the said pouder, I gave him only a scruple of Bezoardicum mineral in all his Broths. And because towards evening his Feaver, Ravings, and Convulsion were wont to encrease upon him, I gave him this following pouder.

Take

Take Sal Prunellæ half a dram, Bezoardicum Mineral one scruple; mix them, and administer them in Cardnus water. On the thirteenth day was this Powder given him, and on the same day he began to take the Bezoardicum aforesaid in his Broths, and his fit came not that day, but he was better all the night after; after midnight the same Powder was given him again. On the fourteenth day he was a little better, but without any Evacuation; On the fifteenth he was after the same manner: On the sixteenth there appearing concoction in his Urines, as there had appeared in the whole Course of his Disease, the Coction by little and little augmenting, I gave him a purging Medicament of two drams of Senna, and one dram and an half of Rhubarb, infused in a cooling Decoction, adding to the strained Liquor, Manna and Syrup of Roses, of each one ounce; with which he was gently purged. On the same day very many Pustules were observed to break forth like small Pox, tending to suppuration in great number about the Vesicatory, also sprinkled up and down upon his Back, Loyns and Buttocks. On the seventeenth day the said Pustules were for the most part broken, and began to dry up.

But on the forepart of his Body about the Hypochondria and Breast, very small Pimples came forth, pellucid and Transparent, in an almost infinite number: the Feaver was very remiss, and his raving was much abated. On the eighteenth day he slept almost continually night and day, untill the twentieth day. He was purged again on the two and twentieth day, and after that the Feaver went quite away; and within a few daies he perfectly recovered. Two years ago the Lord of *Rastencliers* was Cured of a very dangerous purple Feaver, chiefly with this Medicine. I gave him in every draught of his ordinary drink, which was the vulgar Ptisan, one dram of Sal prunellæ, and ten drops of spirit [*Not oyle*] of Vitriol; by which the extream blackness and dryness of his Tongue, with a mighty Thirst were in a few daies taken away.

Read more of Feavers and Agues in that most excellent Book, the Practice of Physick, the last Book.

The 22 Observation or History of Famous and Rare Cures, &c.

Of a Tertian Ague.

MR. *de Chaune* on the 18. day of *June*, 1630. was taken at *Grenoble* with a Tertian Ague, and in the space of twelve daies was once purged, and thrice let blood, and had many Juleps, so that within the said time he was freed of his Ague. Now this is worth observation in the foresaid Patient, that there never appeared any contents in his Urins, yet their Liquor in the declination was good and laudable in its colour and substance. The reason whereof was, that the Patient had been long troubled with Nephritick Diseases, by which means his Urine was strained of all its Crassitudes.

The 23 Observation or History of Famous and Rare Cures, &c.

Of Bleeding at Nose.

THe said Mr. *de Chaune*, having been long freed from the foresaid Ague, was taken with so violent a bleeding at the Nose, that he was weakened thereby. For the stoppage whereof, many Remedies being used, this alone did the Cure, *viz.* Vinegar and water frequently snuffed up into his Nostrils, with which the flux of blood was suddenly stopped. Which flux breaking out again two daies after, he used Vinegar and Water after the same manner as before, and it was presently stopped.

The 24 Observation or History of Famous and Rare Cures, &c.

Of a Malignant Feaver.

ON the 19. of *July*, in the year 1630. I was sent for to *Grenoble*, to the Son of *Stephen Mercier*, a Writing School-master, sixteen years old, sick of a Malignant Feaver: now he was in the fifth day of his Disease, being all besprinkled with violet coloured spots, with Raving, Loosness, and other grievous Symptomes. He had been once let blood, and had used no other Remedies. I gave him two scruples of my Sudorifick pouder with twelve grains of Camphire, in four ounces of Carduus water. Being well covered, he sweat plentifully, and was in very good Case; his Raving ceased, and his loosness was abated. The day following his Feaver was sufficiently strong, without any grievous Symptome: he was let blood, and the same day his Feaver went quite away.

The 25 Oservation or History of Famous and Rare Cures, &c.

Of an old Gonorrhæa.

MSr. *Chevilier*, a Citizen of *Grenoble*, being thirty years old, and of a Sanguine Complexion, and troubled with a very old Gonorrhæa, asked my advice on the eleventh of *July*, 1630. I prescribed him in the first place a purgation of one scruple of Mercurius Dulcis, with the same quantity of *Pill Cochy* the day after he was let blood. And after that a Bolus of a dram of pouder of Rhubarb, and three drams of Turpentine, which he took five daies together, and was thereby purged three or four times each day. And finally, he used this following Water eight daies together.

Take dried Mints three ounces, Lettuce, Rue, Agnus, Castus, each two ounces and an half; Dictamnus Cretieus ten drams, white Sugar two pound: Powder all, and add thereto five ounces of Venice Turpentine, and thirty ounces of white Wine, and distil them in Balneo Mariæ. Let the Patient take two spoonfuls every morning two hours before meat. And with these Remedies he was Cured of this stubborn Disease.

The 26 Observation or History of Famous and Rare Cures, &c.

Of a Tertian Ague.

ON the 25. of *June*, 1630. at *Grenoble*, I was called to Msr. *de Poulemeis* thirty years old, a Knight of the Order of *St. John*, being Sick of a Tertian Ague. He was then in his third Fit. But before those Fits appeared, he had been some daies Feaverish without any course of Fits. I prescribed him against the next day, which was his wel-day, a scruple of the Calomelanos of May, erne, and five grains of Diagrydium in the form of Pils, with which he was lustily purged, and towards the evening he perceived an appetite to eat, which before he had not. On the day of his Fit, he took before it came this following Julep.

Take Cichory water three ounces, Salt of Wormwood half a dram, Spirit of Sulphur one scruple: Make all into a Julep. This he takes two hours before his Fit, and being well covered, he sweat plentifully, and so was freed from his Ague.

The 27 Observation or History of Famous and Rare Cures, &c.

Of a Tertian Ague.

ON the 30. day of *June*, 1630. I was called to the Lord of *Semiane*, who had a Tertian Ague. He had nine Fits before, and by one of the Kings Physicians had been five times let

let blood, and had taken a Medicine made of the Infusion of Senna and Cassia: howbeit his Fits grew worse, and in them one Symptome did most of all trouble him, *viz.* a most sharp Head-ach, pricking and tearing the half of his Head only, like an Hemicrania. Presently I judged this pain to proceed from sharp vapors, arising from a Cholerick matter lodged in his Stomach, or the neighbouring Parts: and therefore I prescribed him a purging Medicament of one ounce of Aqua Benedicta, with the Infusion of half an ounce of Senna; which purged him four times by stool, and gave him two Vomits; at the first Vomit, he cast up a about a pound of Leek-coloured Choler; at the Second a like quantity of Verdegrease-coloured Choller, and the following fit, he had no Head-ach at all. Then I gave him temperate opening Juleps, and purged him again with Senna, Rhubarb and Diacatholicum, and he was perfectly Cured.

The 28 Observation or History of Famous and Rare Cures, &c.

Of Worms.

THe younger Son of Msr. *Imbert*, a Merchant of *Grenoble*, being about three years old, was many daies vexed with a Loosness, and continual Stomach-sickness, with a most acute Feaver, which seemed to arise from Worms in the Stomach and Guts. Many Remedies were used in vain: And when the Child was in a desperate condition, I gave him twelve grains of the Calomelanos of Turguetus [Mayerne] and presently his stomach-sickness ceased, and he slept almost all the day; but at night a greater vomiting and loosness hapned than before. Among the stools were found a great quantity of bits of Worms putrified; he slept in the morning, and the whole day after, and vomited no more, and within twenty four hours the Feaver left him, and he had no further need of Physick.

The 29 Observation or History of Famous and Rare Cures, &c.

Of a Malignant Feaver.

MSr. *De Beauboys*, a young Courtier in the beginning of *July*, 1630. was Sick at *Grenoble* of a Malignant spotted Feaver. I was sent for on the ninth day of his sickness; he had been eight times let blood, and refused all other Remedies; he had a grievous loosness, and sometimes raved. On the tenth day his Feaver and loosness were more intense, his pulse did intermit, he let his Excrements go from him into his bed: On the eleventh day he was in the same condition; On the twelfth he was worse: On the thirteenth he seemed at the last cast, and that the pangs of Death were upon him. I cause a Vesicatory to be applied to his Neck, and give him to drink in the morning two scruples of my Diaphoretick pouder, twelve grains of Camphire in Carduus water, and he remained two hours covered, but did not sweat. In the evening he took the same potion again, and being well covered; he did sweat pentifully, was much better, all that day took in every draught of broth one scruple of Bezoardicum Minerale. A few daies after he perfectly recovered; When his Feaver ceased, a swelling arose behind his Ear exceeding painful, which was discussed without breaking.

The 30 Observation or History of Famous and Rare Cures, &c.

Of Nephritick Pains.

ON the 3. of *July*, in the year 1630. *Peter Berard*, a famous Apothecary at *Grenoble*, thirty years of Age, was taken with a most grievous Nephritick Pain, and presently he took two Clysters very laxative of Confectio Hamech, Diaprunum Solutivum and Turpentine; which giving him no ease, he sent for me. I prescribed him a third Clyster, emollient and carminative with Diaphœnicon, and Diaprunum solutive, of each half an ounce, and four ounces of Aqua

Aqua Benedicta. With this Clyster he was lustily purged, and his pain quite taken away. For the sick man perceived the Morbifick matter to be drawn forceably out of his Loyns and whole belly without any trouble. At the same time Fomentations were applied of the foresaid Decoction.

The 31 Observation or History of Famous and Rare Cures, &c.

Of Arthritick Pains.

ON the 8. of *July*, 1630. I was sent for by Mr. *Perdreau*, Apothecary to the most eminent Cardinal *Richelieu*, lying sick at *Grenoble* of pains in his Joynts, which tormented his Legs, Arms, and other Parts with Swelling, Inflammation, and a light Feaver. He had been twenty daies troubled with this Disease, and had been nine times let blood of his own Head, and his blood was full of wheyish moisture: also he had been divers times purged. By my advice there was given him a scruple of the Calomelanos of Mayerne, eight grains of Diagrydium and a Clove. He was gently and plentifully purged, and was much better. Afterwards he took morning and evening a cooling Julep, in the Dose whereof was infused three drams of Senna, and half a dram of Coriander seed, which he took cold two daies together. Afterward he took the former pouder with like success, and was perfectly Cured.

Read more of the Nine former Observations in the Practice of Physick, *Riolanus* Guide to Physick and Chyurgery, and *Johnstons* Idea.

The 32 Observation or History of Famous and Rare Cures, &c.

Of Womb-Fits.

IN the moneth of *October*, the year 1631. the Wife of Mr. *Dalmeras*, the Kings Councellor in the Supreme Court of *Subsidies*, was troubled with the Mother, with a Vomiting, a Loosness, and extream Weakness, so that she seemed at deaths door. After many Remedies used, *viz.* Strengthening Fomentations applied to the stomach, Chickens applied to the heart, and Epithems thereto applied, also Cupping-Glasses fixed upon her Thighs and share, a Clyster injected of Broth and Treacle; and after she had taken Cinnamon Water, at last she drank this following potion, which did her abundance of good.

Take Water of Mugwort, Roses and Orange flowers, of each one ounce: Cinnamon Water three drams, Confectio de Hyacintho *one dram, Pouder of Diamargaritum Frigidum half a scruple, Saffron four grains. Make all into a potion.*

Having taken this potion, she vomited no more, and was very well for two daies, afterwards her Disease came again, and troubled her by fits. But as oft as she took the said potion, all the Symptoms ceased.

The 33 Observation or History of Famous and Rare Cures, &c.

Of a Loosness.

A Strong man, of a Cholerick temper, and a middle Age, was taken with a very Cholerick Loosness, with an exceeding great Thirst: being called to him, I prescribed him Lapis Prunellæ in his ordinary drink; also in his Juleps made of Lettuce and Purslain Water, which he took thrice a day, and so in the space of twenty four hours he recovered.

The 34 Observation or History of Famous and Rare Cures, &c.

Of Obstruction of the Liver and Spleen.

A Certain Student, a Polander, by reason of unseasonable Watchings, fell into grievous Obstructions of his Liver and Spleen, which brought him to extream Leanness, whereas he

he was before well flesht, and of a good habit of Body. And after he had used purging potions, aperitive Apozemes, and other Remedies which did him little good; I prescribed him these following Pils, by the use whereof he was restored to health in a moneths space.

Take of the best Aloes and Gum Ammoniacum dissolved in Vinegar, and forced through a Searse, and thickned again three drams: Senna cleansed and choise mirrh, of each one dram and half; Saffron half a scruple; with Oxymel of Squils, make all into a mass of pil-stuff, of which let him take two scruples every other day two hours before Dinner.

The 35 Observation or History of Famous and Rare Cures, &c.

Of a beginning Phthisis or Consumption.

THe Renowned and most Beautiful Woman, the Widow of the Lord *De Ribes*, being twenty five years, was grievously troubled with a thin sharp Rheume which fell down upon her Breast, with a dry and almost continual Cough, Leanness, a slow Feaver, and redness of Cheeks, which infirmities she had received by infection from her Husband; who two moneths before had died of the Tissick, so that she seemed to be posting to the same Disease.

On the 15. day of the mone h of *May*, in the year 1629. I prescribed her a purging potion of Senna, Manna, and syrup of Roses, with a pectoral Decoction. The next day I caused her to be let blood. Then I ordered her to take pectoral and cooling Broths for twelve daies together, and in every fourth broth Senna was boyled to the quantity of half an ounce.

After her Broths, she used a Bath of a decoction of Barley and svveet Almonds: Mean while she took a nights one spoonful of a syrup to stay her Rheume and Cough, which was compounded of Syrup of Violets, Jujubes, dried Roses and Poppies, of each a like quantity.

With these Remedies she grew perfectly well, nor had she any need of a Caustick or Issue, nor of the Asses Milk which I had prescribed for her. Howbeit I persvvaded her to take her purgation twice a day.

The Diseases mentioned in the four last Observations, are more largely treated on in the Practice of Physick, *Riolanus* and *Johnstons* Idea.

The 36 Observation or History of Famous and Rare Cures, &c.

Of an old Gonorrhæa.

MSr. Q. Dr. of the Civil and Canon Laws, being for eight moneths troubled with the Gonorrhæa, asked advice of me. In the first place I prescribed him this following Bolus.

Take Venice Turpentine three drams, pouder of Rhubarb one dram; make them into a Bolus, which let him take five daies one after another. After this Medicine he was pretty well, but after some daies the flux returned. Afterwards he used the Water for a Gonorrhæa, vvhich is described in the Dispensatory of *Quercetanus*; at the first giving, the flux was wholly stopped, and therefore he continued the use thereof only for three or four daies, and the Disease came no more.

Read for this Disease *Sennertus* his most excellent Book of the French Pox.

The 37 Observation or History of Famous and Rare Cures, &c.

A deadly Head-ach.

ON the 6. day of *April*, 1629. at *Lodova*, I visited the daughter of *Francis Fezon* a Merchant, being seven years old, which for two moneths had been troubled with a grievous head-ach about her Forehead and Eyebrowes, which took her almost every hour so violently, that she many times desired that her head might be cut open with a Knife. And two daies before

fore I came to her, she had three or four fits of the Falling-sickness,and foamed, Her ordinary Physician had prescribed her many Remedies, especially Purgations by Apozemes, and Cupping-Glasses and Vesicatories were applied to her Neck, but all in vain. Being about to consult touching this Case, word was brought, that a new Fit had killed her, and after her death some corrupt Matter came out at her Nostrils. Whence might be conjectured, that an Imposthume was secretly lodged in her Brain; but the same being opened, there was nothing found therein, save a serous or wheyish humor shed into the Ventricles of the Brain.

This Accident brought into my mind the History of a certain Virgin, who being tormented with the like pain for many moneths together, and having tryed many Remedies in vain, a certain Chirurgeon shaved all the Hair from her Head, and covered the same with a Vesicatory, as if it had bin a Spice-Cap; whereupon bladders being raised,a great quantity of wheyish Blood flowed out, and so was Cured, which Remedy might also have helped this Girl aforesaid.

The 38 Observation or History of Famous and Rare Cures, &c.

A Schirrhus of the Womb.

ON the 26. day of *December*, 1630. the Wife of Mr. *Dugast* of *Bitteren*, twenty years of age, came to *Montpelier* to be cured of an Infirmity,with which she was troubled. Now it was a Schirrhous,hard swelling of the whole Body of her Womb,and had been of five months continuance,when she brought forth her first born Son, and unwarily exposed her self to the cold Air; by which means, the remainders of her Child-bed purgations were suppressed, and retained in the body of the Womb, where they caused a tumor, which in tract of time attained to the hardness of a Schirrhus. Sometimes she felt pricking pains in the part, whence there was a suspition, least that tumor might have some affinity with a Cancer. These following Remedies I prescribed for her.

Take Diacatholicum half an ounce,Hiera Picra and Diaphœnicon,of each one dram and half; Rhubarb poudered one dram; with Sugar,make all into a Bole. Let her take it in the morning, and order her self accordingly. The day following, let the Basilica-Vein of her right Arm be opened, and let her bleed eight ounces.

Take Roots of Asparagus, Butchers-Broom, Parsly and Briony, of each one ounce. The Barks of Capar-Roots, and the middle rind of the Tamarisk, of each half an ounce. Leaves of Agrimony, Ceterach, Maiden-hair, Mugwort, Feverfew, of each one handful: Senna cleansed, and Polipody of the Oak, of each one ounce: Epithymum half an ounce, Agarick newly trochisked two drams, Ginger and Cloves, of each two scruples: Boyl all to a pint in the strained Liquor, dissolve Syrup of Cichory with Rhubarb three ounces: Make of all an Apozeme for three Doses, in three mornings to be taken one after another.

Take Roots of Marsh-mallows and Lillies, of each two ounces; Roots of Briony and wild Cucumer, of each one ounce: Leaves of Mallows and Violets,of each two handfuls; Leaves of Mugwort, Nep, of each one handful: Fat Figgs twelve pair, Linseed and Fenugreek seed, of each an ounce: Flowers of Chamomel and Melilot, of each two pugils. Boil all in three parts of Water, and one of White-Wine added towards the end, with which the part affected must be fomented morning and evening.

Take Fresh new made Butter and Hogs-Grease, of each one ounce; Oyl of sweet Almonds and Lillies, of each two ounces; Musilage of Fenugreek seed drawn with White-Wine six drams, Gum Ammoniacum dissolved in Vinegar three drams,Saffron half a dram, Wax as much as shall suffice. Make of all an Oyntment to be used after the Fomentation.

Take of the Roll of Melilot Plaister, and of Plaister of Musilages, of each one ounce; Gum Ammoniacum dissolved in Vinegar,and drawn through a Searse,and then thickned,half an ounce, with Oyl of Lillies make a Plaister upon Leather of a fitting magnitude and shape, to be applied to the said part after annointing, and to be renewed every fifth day.

Take of the best Aloes half an ounce, Gum Ammoniacum dissolved in Vinegar, and thickned again two drams; Bdellium and Myrrh, of each one dram; Senna cleansed, and Agarick newly

newly trochisked, of each two drams; Fæcula Bryoniæ one dram. With Oxymel of Squils, make all into a Maſs of Pill-ſtuff. Of which let her take half a dram every day in the morning two hours before meat, for fifteen dayes together.

When ſhe had begun the uſe of theſe Remedies, an extream Fit of Cold Weather hindered her continuation thereof, and ſhe returned into her Country; and at her departure, I adviſed her to renew her uſe of the foreſaid Remedies in the Spring, and to continue them a long time together. To which I added, That ſhe ſhould frequently ſit in a Bath, ſhould uſe an emollient Cataplaſm, and a Diet Drink of China Roots for her ordinary drink. All which Remedies being continued for three moneths together, eſpecially the Fomentations, Oyntments and Plaiſters, with the Diet Drink aforeſaid, ſhe was perfectly cured. And her monethly purgation, which was ſtopped for eight moneths together, came again and kept its natural courſe: So that after that time ſhe bore Children. Read for this, and all other Womens Diſeaſes, that Excellent Piece, the Fifteenth Book of the Practice of Phyſick.

The 39 Obſervation or Hiſtory of Famous and Rare Cures,&c.

Of a Quartan Ague.

A Comely Damſel, the daughter of Mſr. *Deſplans*, the Kings Councellor in the Supream Court of *Subſidies*, in the moneth of *November*, in the year 1630. was troubled with a double Quartan two moneths. I preſcribed her an infuſion of one dram of Senna, in my Feaver-conquering Water, which ſhe was to take every day, and at the Fourth taking, her Ague was perfectly taken away, and ſhe was afterward very well in health.

The 40 Obſervation or Hiſtory of Famous and Rare Cures,&c.

Of another Quartan.

MSr. *Varandeus*, A Canon thirty years old, being ſick of a Quartan Ague, in the moneth of *December* 1630. uſed the foreſaid Remedy every day, and was Cured at the ſeventh taking thereof.

The 41 Obſervation or Hiſtory of Famous and Rare Cures,&c.

Inflammation of the Dugs.

ABout the beginning of *January* in the year 1631. the Wife of the renowned *Mſr. de Rocemore*, Chief Preſident in the Court of *Subſidies* and of Accounts, being in Childbed, began to be troubled with the Inflammation of her right Dug, by reaſon of a blow which ſhe had there received. Now there was milk therein, which could not be ſuckt out. On the firſt day there was an Embrocation uſed thereto of two parts of Oyl of Roſes, and one part of Oyl of unripe Olives. On the ſecond day and the following dayes, the ſaid Embrocation was continued only to the part pained, and her whole Dug anointed twice in a day with Oyntment of Marſh-mallows, and within a few dayes ſhe was cured, without any other Remedy, Cupping-glaſſes were faſtened to her Shoulder blades, but no vein was opened, becauſe I ſaw the Diſeaſe preſently diſcuſſed.

The 42 Obſervation or Hiſtory of Famous and Rare Cures,&c.

Of a Malignant Feaver.

IN the moneth of *April*, in the year 1631. A young Woman, the Widow of *Montandus*, a Citizen of *Montpelier*, was troubled with a malignant Spotted Feaver, and ſhe had ordinary

dinary Remedies administred till the eighth day, in which I was called, and found the sick Patient extream weak, with a mighty Thirst, dryness and blackness of Tongue, and black Fired humors sticking to his Teeth. Besides sundry cordial Medicaments, I prescribed her very cooling Juleps, with *Sal Prunellæ* and Spirit of Vitriol. And in her Ptisan which she did ordinarily drink of, she took *Sal Prunellæ* and Spirit of Vitriol. Cooling and moistening Fomentations were applied to her Breast and *Hypochondria*: and within two dayes her thirst and burning vanished. And afterwards with a Purgation and other lighter Remedies, she in a few daies recovered.

The 43 Observation or History of Famous and Rare Cures, &c.

A malignant Feaver, with Swelling behind the Ears.

IN the Year 1623. After the Siege of *Montpelier*, a very malignant Feaver ranged up and down, of which well-nigh half that had it, did die. More peculiarly, all that had Swellings behind their Ears (which was wont to happen about the ninth or eleventh day of the Disease) did die. And having seen many of these, whom I could not cure with any Antidotes; I began to think that Risings behind the Ear are therefore counted a natural sign, because that part is not large enough to receive the whole Morbifick Cause, which remaining in the inner parts kills the Patient; and that the Work of Nature must be supplied and helped. And though the Patients had a small, very frequent Pulse, and almost such an one as they call the Pismire-Pulse, so that they seemed to be at the point of death: yet revolving in my Mind this saying of *Cornelius Celsus*, viz. That many things may well be practised in a dangerous case, which were otherwise to be let alone; and that it is better to try a hazardous Remedy upon one or two, than to leave so many sick people to certain destruction; I ordered them to be let blood by piece-meal (because of their Weakness) twice or thrice in one day, and the day after I gave them a Purgation. By which Method, all that used the said Remedies were happily delivered, nor did any die afterward. The History of the first Patient cured after this manner, is found described at large in the First Chapter of the Third Section of my Method of Curing Feavers. Read for these Feavers, the Practice of Physick, *Book* 17. And *Johnstons* Idea, and *Riolanus* Guide to Physick and Chirurgery.

The 44 Observation or History of Famous and Rare Cures, &c.

Cholick Pains in the Stomach.

IN the Moneth of *April* 1631. The Wife of *Mr. William Dortomen*, a renowned Advocate of *Montpelier*, was suddenly taken with most vehement pains, quartering in the Region of her Stomach and Spleen, which could not be abated, either with Fomentations or Purgations: but Blood being plentifully drawn out of her left Arm, they vanished immediately.

The 45 Observation or History of Famous and Rare Cures, &c.

Vomiting of Blood.

PAul *Hilary*, a Merchant of *Nismes*, being afflicted with an abundant vomiting of Blood, four or five times in the space of six Weeks, for the stoppage whereof many Remedies were applied by his ordinary Physitians: at last the symptome returning again, and holding longer than ordinary, so that he was in extream danger of death, I was called to him on the 28. of *May* 1631. He was 50 years old, of a cholerick temperament, and exceeding ready in all his actions; and having been Consul the year before, he had wearied himself with exceeding great Labours both of Body and Mind: whence much Choler was bred, which by aduction came near the nature of black choler, and putting the blood into great Commotion, caused

the

the ſame to find an Iſſue, to which end the Acrimony of the ſaid humor did very much conduce, as being apt to open the Veins: as alſo the exceeding thinneſs of the blood by reaſon of abundance of the Wheyiſh ſubſtance mingled therewith. I conceived that this blood came out of the Veins by way of Anaſtomoſis, becauſe he vomited it in exceeding great Quantity, being curdled into clodders. Yet between whiles he vomited nothing at all, ſo that for a whole moneth after his firſt Fit, he vomited no blood at all. Add hereunto that he voided blood by ſtool alſo, as well as by vomit; yea and his firſt Fit, began with voiding blood by ſtool, which ſhews that the Meſeraick Veins which end into the Guts were opened by Anaſtomoſis.

On the foreſaid day when I viſited him, the Eruption of blood was ſtopped for twenty four hours, Howbeit, it ſeemed to be again at hand, as might eaſily be ſeen by the unquietneſs, Thirſt, Heart-burning, Heat of the Midriff, pulſation of the Head and the Patients Feaver: and therefore, ſeeing it was towards evening he had only a Julep given him of Plantane and Purſlane Water, with Sal Prunellæ. He ſlept all night full of Tumblings, Toſſings, and Unquietneſs.

On the twenty ninth of the Moneth of *May*, in the morning, he was let blood out of his left Arm, only the quantity of four ounces, becauſe he was ſo troubled with Heart-burning, and ſo weak, that he thought he ſhould quickly die. His blood was exceeding red, and all in a manner turned into Serum: upon his blood-letting he became ſtronger and was better; alſo his Urines, which before were like Water became coloured. A detergent Clyſter being given him in the afternoon, he was again let blood ſeven ounces; the blood was very like the former, and he was the better after it. The foreſaid Juleps were repeated. For drink he uſed Water in which Iron hath been quenched, with Syrup of Quinces and Spirit of Vitriol. An aſtringent pouder was put into his Broths, Barley- Creams and Panadaes; alſo a binding and ſtrengthening Electuary was preſcribed, to be taken once a day, towards the evening. A Fomentation was applied to the Hypochondria of the decoction of Purſlane and Plantane; and other things boyled in Oxycrate or Water and Vinegar; alſo cooling a aſtringent Oyntment was applied to the ſaid parts. His Broths were made with Ironed Water. The following night he ſlept ſufficiently, but his dreams were troubleſom.

On the thirteenth day of the ſame moneth, his Urines were better coloured, his Pulſe better, only his thirſt and pulſation in his Head did continue. In the morning was given him a Medicament of one dram of Pouder of Rhubarb, and two drams of Tryphera Perſica, with which he did four or five times void many Chollerick and Wheyiſh Humors, whence he became better, his Urines were amended, and he ſlept all night.

On the laſt day of the ſame moneth, he was well in the morning, but his Urine had no ſwim, his thirſt continued, and his pulſation in his Head. He had a cooling aſtringent Julep given him to drink, made of a decoction. His Urines grew paler by little and little, void of Swim, thirſt encreaſed, notwithſtanding his ſharp drink, Towards evening the Feaver was augmented, the Patient was very unquiet and thirſty, alſo he complained of a mighty boiling in his ſtomach, whereupon I was exceedingly afraid that his vomiting of blood would return againe, the cauſe whereof ſeemed to be the tranſlation of Choller to thoſe parts, whence it was that the Urines were ſo pale. I conceived the Procatartick cauſe of this returne to be, either the too frequently giving him over-boiled-broths, or over-hot application of the Fomentations by the Apothecaries unskilfulneſs, which ought to be applied but lukevvarme. A token hereof vvas that the Patient ſaid he felt an heat under his ſhort Ribs preſently upon the firſt application of the Fomentations. To the end therefore to prevent this Symptom at hand, I cauſed him to be let blood in his left arm eight ounces; vvhich iſſued out vvith violence. At the ſame time Epithemes vvere applied of Vinegar and Water luke-vvarm, Frictions vvere uſed and ligatures, a Clyſter was given, and a Julep of Purſlane Water and Red Poppy Water, vvith Syrup of the red Poppy and Sal Prunellæ. With vvhich Remedies vvithin tvvo hours he vvas freed from his Heat and thirſt. He paſſed over the reſt of the night vvith very little ſleep, the beating in his Head ſtill remaining.

On the firſt day of *June*, his Urines vvere vvell coloured, vvith an Eneorema or ſvvim; he took a potion of a decoction of the leaves of Cichory, Sorrel, Purſlane, vvith half an ounce of Tamarinds, adding an ounce of Syrup of Pomgranates, a ſcruple of pouder of Rhubarb. He vvas tvvice purged in the forenoon, and voided great quantity of Wheyiſh humors. After the ſecond ſtool, he vvas taken vvith a violent vomiting, and caſt up his Broth, vvhich he had took up a little

little before with Flegm, but no blood, in the afternoon he had two or three stools of Chollerick Frothy excrements, and slept indifferent well at night.

On the second day of *June*, in the morning he seemed a little troubled in his discourse; so that he could not rightly pronounce his words, nor conveniently deliver his mind in good sence, which nevertheless he was himself aware of, and said that his mind was not Free. The pulsation in his Head did continually persevere, he took the foresaid Medicament of half an ounce of Tamarinds, and a scruple of Rhubarb. And seeing the foresaid disturbance of his mind continued, two Cupping-Glasses were applied to his Shoulders, with Scarrification, with which very Wheyish blood was evacuated, and the ordinary frontal was applied. Within an hour that small Raving went quite away, and the whole days space he had four or five Stools which he bare very well. At night he slept quietly, and was thereupon much better.

On the third of *June*, he professed that he found himself very well, and that the beating of his Head was very much diminished. He took again the foresaid Medicament, and was purged as before. Epithemes were dayly applied to his Heart and Fomentations to his Hypochondria, of Oxicratium or Vinegar and Water: also he took in the Evening the aforesaid Opiate.

On the fourth of *June*, the Patient continued in the same condition, he took in the Morning the foresaid Opiate, and again in the Evening, and in the after noon Syrup of Corals. But because in his spleen an extraordinary hardness was perceived, an Emollient and Aperitive Fomentation was applied, as also an Oyntment indued with the same vertues.

On the fifth day, he took in the Morning of the Broth of an old Cock, boyled with temperate Aperitive Medicaments, China Root and Cream of Tartar. An Issue was made in his left Leg, and the Fomentation and anointing of his Spleen were continued. And now the Remedies used to stop blood, were by little and little left off, and we proceeded to the use of such as were proper for the obstruction of his Spleen, and against his Melancholy Humor. Then he began to use solid meats with a little thick Wine, when he was free of his Feaver, the Excrements of his belly, and his Urine better digested, and his sleep almost continual. The swelling in his Spleen appeared sufficiently great, and therefore I prescribed him the aforesaid Cock broth for twelve days, adding every third day two drams of Senna. Also I caused him to continue his Fomentation and his Emollient and aperitive Liniment for the like space, and after those twelve days a Bath, after that the Waters of *Meyne*, with iteration of the Bath once a week. And finally the magistral of Juyces, with the opening Opiate.

On the sixth of *June*, he took his broth with two drams of Senna, and was therewith duly purged.

On the seventh day I departed, and with the use of the foresaid Remedies, especially the magistral Syrup for a long time together he was cured.

The 46 Observation or History of famous and rare Cures, &c.

The Whites.

A Renowned Nun, by reason of the hot distemper of her Liver and Kidneys in the beginning of *August* 1630. was taken with a very plentiful and troublesom flux of the Whites of which a Chyrurgeon going about to cure her preposterously and giving her vehement purgations, the Disease was lengthened out to the Winter following, nor did it now cease, but was only diminished, and the sick Patient continued pale and without colour. Now the spring following, her infirmity began by little and little to grow worse, until the Beginning of the Summer, at which time she had no appetite, and was troubled with a light Feaver, unto which a cough sometimes was joyned, so that it was feared she would fall into a Consumption.

I appointed her in the first place a gentle purgative of Senna and Rhubarb and afterwards to be let blood. And then a laxative Ptisan for four days, then a lukewarm bath to temper the Heat of her Liver and Kidneys for two days following.

Upon

Upon her bathing, ſhe was taken with a Looſneſs, ſeeming at firſt to do her good, but afterwards ſhe was thereby weakned, ſometimes ſhe had a Feaver, and her Stomach was void of Appetite. I ordered her to take for five or ſix days together a ſcruple of Roman Wormwood, an hour before dinner. The firſt day ſhe had many and large Stools; on the ſecond her Looſneſs was wholly ſtopped, and on the other days her Stomach was very much ſtrengthened, her Feaver vaniſhed, ſhe became daily better colored, but her want of Appetite did perſevere. I ordered her to continue the uſe of the Rhubarb for twelve days longer without the Syrup, made into a bolus with one dram of Turpentine, to ſtop her whites. And ſhe was freed from all the aforeſaid diſtempers and diſorders.

The 47 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A continual and Malignant Feaver.

ON the laſt day of *January* 1629. the moſt reverend Biſhop of *Niſmes*, being fifty years old, began to be ſick of a malignant Feaver, which had its exaſperations every day, from eleven in the morning to ſix in the after-noon; he was Stomach-ſick by fits, and troubled with the Hiccup, his Urines red and troubled, his excrements liquid, Chollerick and few, his want of ſleep perpetual to the ſeventh day. Being firſt taken ill in a ſmall Village neer the Kings Camp, he preſently betook himſelf to *Belliloca*, when on the ſecond day of his ſickneſs, he was let blood by two Phyſitians, and very corrupt blood came away. This was done after he had taken a Clyſter.

On the third day, he was again let blood, and blood like the former was taken away. In the mean ſpace cooling Juleps, and ſuch as reſiſt the venemous quality of the Diſeaſe, were adminiſtred. On the ſame day light ſweat appeared, without any cold ſhaking before the ſame, or any ſhivering, but he was very Stomach-ſick before his ſweating. On the fourth, fifth and ſixth days the like ſweat returned, without any abatement of the Feaver.

About the end of the fifth, drops of blood came out of his Noſe. Now I was ſent for on the ſixth day, in which the Feaver appeared vehement with a great and frequent Pulſe, Thirſt, Tumbling, and other Symptoms. On the ſame day he was again let blood eight ounces.

About the beginning of the ſeventh day, he was taken with a ſhaking fit for an whole hour, after which he was greivouſly Stomach-ſick for another hour, at laſt he did ſweat plentifully, which continued all day in a manner; ſo that he was fain to be ſhifted ſeven times. After his ſweating, his Feaver was wholly allayed, and his Urines which were before red and thick, became yellow and well conditioned.

On the eighth and ninth day he had a moderate Looſneſs whereby was voided Cholerick and phlegmatick matter, whereby he ſeemed reſtored to his former health.

On the tenth day he was removed to *Niſmes*, becauſe of the unhealthyneſs of *Belliloca*, and becauſe the Plague began there to break forth.

On the twelfth day he was purged with a Medicament of Senna, Rhubarb, Manna, and Syrup of Roſes.

On the thirteenth he began to uſe more ſolid meats, in a ſmall quantity, and on the fifteenth, Wine much allaied with Water. The ſame day he left his Bed and dined at the Table, to make it appear that he was perfectly recovered.

Nevertheleſs he fell into a Relapſe on the ſaid fifteenth day about Midnight, with frequent Vomitings, whereby he caſt up a little Flegm.

About the beginning of the ſixteenth day, after a Clyſter, he was let blood, and very corrupt blood came from him. Juleps were made of cooling, Aperitive and Alexipharmacal Medicaments, Epithemes, anointings with *Mathiolus* his Oyl of Scorpions, were applied, and Confectio de Hyacintho was ordered to be given him in his Broths.

On the ſeventeenth day, the Clyſter was repeated and he was again let blood, the blood being like the former. Bezoar ſtone was given him in his Juleps, and ſometimes Bezoardicum Minerale in his Broths. To take away his Inclination to vomit, Salt of Wormwood was twice given him, not without ſucceſs and ſtrengthening Fomentations were applied to his Stomach. An Oyntment of Oyl of Nutmegs and of Quinces was applied to the ſame part. In his Julep

treacle

Treacle Water was mixed once or twice, becauſe there was great ſuſpition that there was a touch of the Peſtilence in this Diſeaſe, becauſe of his frequent Stomach-ſickneſs and Faintings, Spirit of Vitriol was given him in his ordinary drink.

On the 18. day, he was taken with a ſhaking Fit, which was followed by a ſweat, which continued four or five hours, but the matter was little that ſweat out and he bore it ill, was very unquiet, Stomach-ſick, and vomited frequently.

Afterward to ſtop his Stomach ſickneſs, a dram of Salt of Wormwood was given him, diſſolved in Wine, which wrought moſt happily, ſo that he was very ſeldom troubled with any vomiting afterwards. A few hours after, being again taken with a ſhaking Fit, he vvent twice to ſtool plentifully, and at laſt he fell into a ſweat, which he could not long bear, by reaſon of Unquietneſs; the ſweat came ſlowly away, but it continued many hours.

To aſſiſt that motion of Nature there was given him Bezoar ſtone with Broth, and ſome hours after in more Broth there was given him Bezoar Solare, wherewith he did ſweat abundantly and eaſily, and by that means his Feaver was very much abated.

On the 19. day, his Feaver was much gentler, a Laxative Clyſter being given him with three ounces of Aqua Benedicta, with which he had five ſtools during that whole days time, and voided much Choller mingled with Flegm; at night he ſlept quietly, his Urines were well coloured, with a thin ſettling. His ſtrength was repaired by Roborating Medicaments.

On the 20. and the 21. day, all things were after the ſame manner: once or twice in a day, he voided by ſtool Excrements ſufficiently thick.

On the 22. day he vvas purged with a Medicament like the former: and he had many ſtools of a Chollerick and Flegmatick matter; alſo he vomited thick Flegm with a little Choller. Afterwvard he ſlept pleaſantly all night, as alſo the following day, which was the 23. and then he was quite void of the Feaver; and the Urines appeared better digeſted.

To expel the Remainders of the Humor on the 24. day he took an opening Broth, wherein on the 16. day we boyled half an ounce of Senna with correctives; and therewith he was four times purged; whereupon his Stomach to his Meat was encreaſed, and his thirſt gone; and the opening broths being continued for certain days, he was reſtored to his former Health.

The 48 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Of an Inflammation and Impoſthume of the Kidneys, Bleeding at the Noſe, a Malignant Feaver with grievous Symptoms.

ON the 2. day of *March*, in the year, 1629. I was ſent for to the moſt reverend Biſhop of *Lodoven*, being fifty years old, who had been formerly ſick of a Malignant Feaver, and had tvvice relapſed into the ſame Feaver, and was freed from the ſaid Relapſes by divers Critical Evacuations, eſpecially by plentiful bleeding at the Noſe, and with very many Remedies preſcribed by two Phyſitians of *Lodoven*, and my ſelf. After he ſeemed to be recovered many days together, on the 17. of *March*, about tvvelve a Clock, he began to be ſick, and on the day following was ſuddenly taken with a ſharp, and ſettled pain about his right Kidney, which was followved by theſe Symptoms, frequent vomiting and Hiccupping, troubled Urines, ſometimes red and Watry, ſometimes vvith Gravel, partly red and partly vvhite, ſometimes alſo he complained of nummedneſs in his right thigh. On the 22. day, a feaver ſeized him, and on the followving days he had ſhaking Fits, tvvice or thrice a day; after vvhich the Feaver vvas exaſperated for tvvo or three hours.

I coming to him on the 27. day of his Diſeaſe vvith the Phyſitians aforeſaid, vve conceived (adviſing together) that there vvas a ſtone in his right Kidney, and that the pain had cauſed an Inflammation in that part. But becauſe there appeared then little or no pain, vve conceived the Inflammation vvas come to ſuppuration. We reſolved to let him blood, firſt in his right Arm, afterwvards in his Ankles on the ſame ſide, and that he ſhould have emollient and cooling Clyſters frequently injected, vvith Juleps, lenitive Emulſions, Epithemes, Fomentations, Liniments and Cataplaſmes. We began vvith Blood-letting, vvhich vvas celebrated on the 27. day

day aforesaid, in the Evening to the quantity of eight ounces. About Evening he bled at the Nose the quantity of two pound, and the blood still issued, and he grevv weak. Therefore we consulted to stop the bleeding, and ordered him to bleed for revulsions sake in his right Arm. We gave him *Sal Prunellæ* dissolved in cold Water. An Astringent frontal was applied, Vinegar was dropt into his Ear, he took juyce of Nettles, a Cupping-Glass was applied to the Region of his Liver; a Linnen Cloath wet in Vinegar was wrapped cold about his Neck, and his Arms and Legs were tied. Which working no effect, the Patient said he must go to stool, nor could he be perswaded to use the Stool in his Bed. We told him before-hand, That if he rose out of his Bed being so weak, he would faint avvay; hovvbeit that fainting would be profitable to stop his Bleeding. Which happened just in a manner as we had fore-told; for after he was up he fainted avvay; out of which Fainting Fit being recovered by giving him Wine, and throvving cold Water in his Face, he had a plentiful stool, and after he was laid again in his Bed, he bled not so violently as before: and after he had rested a while we gave him one dram and an half of *Sal Prunellæ* dissolved in Water, which when he had taken, the Bleeding was quite stopped, and there needed no more Remedies.

The following day, which was the 28 of *March*, he vvas troubled with a mighty Thirst, and certain painful Pustules, caused by adust blood, brake out about his Fore-head, Cheeks, Lips, Tongue, and in the Palms of his Hands, but no shevv of any pains in his Kidneys. Only he did exceedingly abhor all meat, so that he would by no means take any Broath, much less Juleps and Emulsions. Hovvbeit he slept by fits all the day long, and had two stools of Cholerick and very stinking Excrements. His Urine had no colour, was thin, void of setling, with gravel in the bottom of the Chamber-pot. In the morning we gave him in his drink half a dram of Salt of Pearls with boyled Water, and his Thirst was much abated. In the Afternoon and again in the Evening, we gave him twelve drops of Spirit of Vitriol, with an ounce of Syrup of Maiden-hair in boyled Water, by which also his Feaver and Thirst were much abated. He was frequently anointed on his Loyns with *Populeon*, *Galens* cooling Oyntment and Oyl of Roses. Three or four spoonfuls of Oyl of Sweet Almonds was mingled with his Broaths. The Night following he slept quietly, avvaking now and then with mournful groanings, as formerly he was accustomed.

On the 29. day in the morning, he complained of a pain in his right Kidney, which was not very vehement, yet he was not able to lie upon his right side. His Urines were thin and pale, with gravel, partly red and partly white. He had Pustules about his Mouth which were anointed with nevv Pomatum, a little *Sal Prunellæ* being mingled therewith. We prescribed him a Fomentation and a Cataplasm, Emollient and pain-asvvaging, to be applied to his Kidneys, as also a Julep of a Decoction of cooling Herbs, with Seeds of Lettuce and white Poppies, the tops of Mallovvs and Violet, and Bugloss flowers.

About four in the Afternoon he was taken with a light shivering, which vvas followed by an Intense Feaver, which lasted for some hours. At ten of the Clock he took a Julep of eight ounces, and slept little all night.

On the 30. day, at 3. of the Clock in the morning, he was afflicted with a vehement shaking fit, for half an hour; afterwards his Feaver was augmented, the Ulcers of his mouth and Throat were more grievous and painful, for the asswaging whereof Diamorum was used, his Thirst was exceeding great, his stools liquid and very stinking. Having taken some Broath tvvo hours after, a plentiful Sweat broke forth in his Head and Neck, with a moisture only in his other parts; in the middle of which he had another stool, and had to the number of five stools betwixt that and eight of the Clock. His Urines appeared more digested and coloured, having a very small setling, also his Feaver was abated, but he was exceedingly weakned by his Loosness. About four of the Clock he took a Julep, vvith a twenty drops of Spirit of Sulphur, now the Quantity of his Julep vvas alwaies eight ounces. He slept again till six of the Clock, and when he avvaked, he said the Julep had done him much good, and that he felt a coolness all his Body over, and indeed his Feaver seemed more remiss: having taken some cooling Broth, he complained of a pain in his Palate, which having viewed, vve find it Ulcerated by the heat of the foregoing Feaver. For the asswagement whereof, he used a Decoction of preserved Mulberries: Afterwards we prescribed him this following Gargarism:

Take

Take Plantane and Meadsweet Water, of each four ounces; Rose-water two ounces; Crude Allum two drams. After a gentle boiling, dissolve therein Diamorum and Honey of Roses, of each one ounce. Make it into a Gargarism. We also ordered his Palate to be often smeared with a pencil dipt in Honey of Roses. Also he frequently washt his Mouth with his ordinary Ptisan Drink made of Barley and Liquoris.

And from that time he slept quietly enough till Midnight; when he was again taken with a shaking fit, which lasting two hours, there followed an Acute Feaver, which the day following, being the last of *March*, towards Eight of the Clock, appeared much abated, the Urines being always thin and very crude. In the Afternoon the Feaver was yet much more remiss, and he seemed to be generally better then on the daies before. He had three stools that day, liquid and Cholerick. He took his Juleps twice a day, and Epithemes were frequently applied.

But the Night following, about that time when his shaking Fit was wont to come, he was vexed with a grievous anxiety, and a very troublesome disquietness, with a Loosness; which voided frequently small quantities of Cholerick and Flegmatick matter, he slept not all that night, nor could he endure in his Bed. That we might therefore assist that motion of Nature, which was performed with difficulty and labour, we gave him a Purge the first of *April* at three of the clock in the morning. Mean while the Ulcers of his Palate and Mouth were exceeding troublesome, and smelt like a stinking dead Carkass; the Urines continually thin and without colour did affright us: his unquietness was abated about Nine of the Clock, and he had five stools that day. About Evening he was much better, but his Urines were continually white and crude, the Ulcers in his Mouth did continually trouble him; the Pustules upon his Lips and Chin, yea and on a part of his right Cheek, degenerated into a filthy Crust, like many small Pox running together into one. Also in the middle of his Thighs, on the inside, there arose pustules like Small Pox, distinct one from another, and in both his Legs as broad as ones hand, which were signs of the greatest malignity and adustion possible.

On the second of *April*, at one of the Clock after mid-night, his Feaver came again with a very small shivering, after which the heat encreased, with unquietness much less than formerly. About the end of this Fit, he took again his purging Medicament, and voided greenish Choler with plenty of Flegm. After noon, his Purge left working, and he was quite free of his Feaver, and said he had a stomach to eat some more solid meats. The Ulcerous Scabs of his Chin and Cheeks exhaled a stinking smell.

On the third of *April* after mid-night, a Fit of the double Tertian returned again, the same hour, like the former. His Urines appeared more coloured, the ulcers of his Chin and Cheeks did stink sufficiently. We resolved to prepare the reliques of the Morbifick matter for further purgation, by Remedies internal and external. The internal were, aperitive and cooling Juleps; the external an Emollient Fomentation, opening and moistening, applied to his *Hypochondria*, especially to the region of his Liver, in which there was some stretching perceived, also the Liniment had the same vertues. Before Noon, his Feaver was abated, but it did not wholly intermit, his Urines were well and laudable with a little setling. Between Noon and six in the Evening he had two stools of liquid yellowish Excrement: To the Ulcers of his Chin and Cheeks was applied an Oyntment of Turpentine, the yelks of Eggs, and Honey of Roses. At seven of the Clock in the Evening his Fit returned with shaking, which lasted till mid-night, and ended with a double Sweat, which flowed plentifully. Afterwards he had no Feavourishness upon him, the stink of his Jawes was taken away within twelve hours by the use of the foresaid Oyntment, and the Ulcers began to send forth white and thick quittor. In his Fit we gave him to drink Syrup of Violets with Ptisan and Spirit of Sulphur.

On the fourth of *April*, when he was free from his Feaver, in the fore-noon the Remedies aforesaid were repeated, and he seemed free from his Feaver all that day. At six of the clock in the Evening, his Fit returned again with shaking, and was much longer than the former Fit.

On the 5. day of *April*, a Clyster being premised, he was let Blood to abate the Feaver and putrifaction of the Humors, which two things seemed to be the cause of the encrease of the Fit. About five of the clock in the Evening, *Crollius* his Feaver-Medicine was given him, of Salt of Wormwood, Spirit of Sulphur and Cichory Water, when the sick man felt his extream parts begin to grow cold. After which, being more then ordinarily covered, and his Members armed with heated Cloaths, the beginning of the Fit was in this manner delayed till

seven

seven a clock, and the cold Fit continued an hour; afterwards by force of the foresaid Medicament, he vomited a good quantity of Choler and flegm; afterward his heat was mild, and without any very great unquietness.

On the 6 day of *April*, the Patient complained of a fiery heat in his Stomach, which by fits did very much vex him. Also he complained of a pain in his left side under the short Ribs, which when I was about to feel, he could not endure my hand to touch the place, and there seemed to be a manifest tension or stretching: for three whole daies together his Urine was not saved. But because he was wont to have three or four stools a day, we conceived that his Urine went away with his stools; but because, besides the foresaid stools, he had an almost continual desire of going to stool, we did very much suspect that some grievous Disease lay hid in his Kidneys, epecially seeing he was frequently troubled with the Hiccup. Finally, about two a clock he voided into the Chamber-pot true Quittor, white, smooth and even, and no waies stinking, to the quantity of three ounces: with very little Urine. Hence it plainly appeared, that there was an Imposthume in his Kidney, which being kept in, brought grievous Symptomes. Yea verily, and the Patient slept all night, and the Feaver was very remiss until Midnight. A fiery heat did by fits afflict his stomach, and an Hiccupping did vex him by fits. At midnight the pain and swelling of the left Hypochondrium were much abated, so that he could endure it to be touched. He voided again some Quittor by way of Urine, to the quantity of half an ounce, and no more. He voided Cholerick matter twice or thrice by stool, with which we conceived there was mixed some Purulent matter, though we could not certainly tel. After Midnight his Fit returned, or rather there was an exacerbation, for it came not with any shaking or shivering, nor with a very intense Feaver, but rather with an unquietness and languishing.

On the 7 of *April*, in the morning before day-light, he made water, which was hardly an ounce in quantity, and in the bottom there was a little Quittor settled. About seven a clock he had a small stool, and the half of it was Purulent matter: whence it might be conjectured that an Imposthume was opened in the capacity of his Belly, which purged it self by his Guts; but by reason of the mixture of other Excrements when his stools were large it did not shew it self. Also we conjectured that his Urine with Quittor and Dung was shed into his Guts, or that it was not drawn by his Kidneys, because he Pist little or nothing, and there appeared no fault in his Bladder, or the passages thereof. Add hereunto, that his stools were very large, which if they were not drawn away with a Clyster, he was much worse. And this very day being unquiet almost to desparation until noon, after he had voided his Clyster, he was in a quiet condition. The intense heat continued about his Stomach, and which is a wonder, he was not troubled with thirst; cooling Juleps and Emollient were given him, as also Emulsions, Sometimes Almond Milk was mingled in his Broths. For Drink he used a Decoction of Barley and Liquoris with Syrup of Violets, mean while he grew every day weaker, and his pulse became more feeble. About five in the Evening, he made a good quantity of water without trouble, at the bottom whereof was a little Quittor; he rested exceeding well, and at eight a clock he Pist again, with less quantity of Quittor, and his Pulse seemed better. All night he rested quietly, Pist three times plentifully, and there was alwaies Quittor in the bottom of the pot; and the Exacerbation of his Feaver was very little and short.

On the 8 of *April*, early in the morning, a Julep was given him, and after an hour a Clyster was administred, with which he had two plentiful stools. In his Broth was dissolved a Pouder of the cold Seeds with Sugar; sometimes Almond Milk, sometimes cooling and gently cleansing Herbs were boyled therein, his Loyns were anointed with a cooling Oyntment. For Drink he used a Decoction of Barley, Grass, and Liquoris, all which remedies were ordained to cleanse the Ulcer already contracted in his Kidney, and to temper the remaining Inflammation of those parts. He was much better all that day, and was hardly Feaverish. At six in the Evening, his fit returned, with a light shivering and continued in a manner all night, but not very vehement, his Urines were mattery, and he was pained in his Hemorrhoids.

On the 9 day he was purged with a gentle Medicament of Senna, Rhubarb and Manna, he was prety well, but loathed his broths, and could not easily swallow, his Feaver was very small, but he was weak, he felt a weight as it were about evening in his stomachs bottom, he was frequently troubled with the Hiccup, as he had been all his sickness along. At night he had no fit nor exacerbation, only a burning in his mouth, which kept him from sleep,

and constrained him to wash the same frequently; dryness and adustion appeared in his Lips, and yet he had no thirst.

On the 10 day, his mouth was dry, his belly loose, his Feaver very smal, his pulse languishing, his stooles very stinking, and alwaies when he went to stool, he perceived an ugly tast in his mouth; his Urines were crude, with very little Quittor, at night he was better, his fit returned not, only a light exacerbation, he had four cholerick stooles, his Urines were plentiful and crude, with very little Quittor.

On the 11 day in the morning he was better, nothing troubled him but a mighty weariness; his looseness continued, and his Urines as before. In the afternoon, he was yet better, and felt no weariness, his appetite returned, and he seemed to be absolutely in the way of recovery, had but his Urines amended: at night he was a little unquiet, slept not, his feaver was a little more intense, he had only one stool.

On the 12 day, a small Feaver continued with some little weariness about evening, he was free from his Feaver till ten a clock, and then it was lightly exasperated, and troubled him little; he had no stool, his Urines as before.

On the 13 day a smal Feaver continued, yet he was better.

On the 14 day he was purged, with the aforesaid Medicament, but being much troubled with the dryness of his mouth, he was compelled frequently to wash his mouth, a slow Feaver continued upon him.

On the 15 day he began to eat solid meats with appetite, his Urines were more coloured, but with Quittor in the bottom, his slow Feaver continued.

On the 16 day in the morning he was well disposed, his bleeding at nose returned, which was stopped by a sparing blood-letting: he had three stooles that day, having taken a Clyster, his Urines and Feaver were the same as formerly.

On the 17 day, he did eat his meat with Appetite, his Feaver was less, he had only one stool of more solid Excrements than formerly, his Urines the same, he rested little that night, and his Feaver had no exacerbation.

On the 18 day he was better, he eat his meat with great appetite, an horse-leech was applied to his Hemorrhoid vein which continued swolne, to draw the blood from his nose which seemed ready to break forth; much blood and wheyish moisture came away, and he slept better the night after.

On the 19 day, he had a stomach to his meat, he had a small Feaver in the after noon, his Urines pale and thin, without any setling, and void of Quittor.

On the 20 day all things were as the day before.

On the 21 day, I departed; and by little and little he grew afterwards well, and was in a Few daies restored to his former health, principally by the use of whey.

For the Reins and Kidnies, read the fourteenth Book of the Practice of Physick, with *Riolanus* Guide to Physick and Chyrurgery.

The 59 Observation or History of Famous and Rare Cures, &c.

Of the Rheumatick Disease.

A Gentleman of 50 years old, of a chollerick constitution, having a long time committed many errors in his diet, especially by feastings and immoderate and unseasonable Exercises; began for two years last past to be tormented with sundry paines, which sometimes afflicted his Arms and hands, other whiles his feet, legs, and other parts, and they were never fixt, but sometimes in one part, sometimes in another, so that to day his right hand, to morrow his left hand would be pained, and a while after it would leave his hands and go into his feet. And when the pain left the parts, a great weakness remained in them, so that the Patient was compelled to lie by it many daies together. Nor did these paines afflict only his joynts, but also the other parts; for sometimes his Head was pained, otherwhiles his teeth and jawes, sometimes his shoulder, otherwhiles his Hypochondria; so that no part of his body, in a manner was freed from paines. At the beginning of the disease, the distance between his Fits was longer, so that being afflicted with his pains fifteen or sixteen daies together, he was afterwards free for a moneth

moneth or two: but now his free times from pain were much shorter, and he could scarce enjoy his health eight daies together. Sometimes he had a light feaver, especially when his pains came, and he was grown extream lean, and weak all his body over. Many remedies were prescribed by such Physitians as were at hand, for the mastering of this rebellious disease, especially evacuating remedies, viz. Blood-letting and purging, but all in vain; and therefore he consulted with the Physitians of *Montpelier*, who prescribed him these following Remedies.

From the History of the Symptomes, with which this worthy Gentleman has been long time afflicted, it may be conjectured, that he is troubled with that disease which is called the Rheumatick distemper, which name we do not use according to the vulgar and common signification, by which all those diseases are usually termed, in which some matter is transferred from the head to some other parts, as is usually conceived in Catarrhs. But properly and peculiarly according to the doctrine of *Hypocrates* in his Book *de Locis in Homine* and of *Galen* in his first Book of the differences of Feavers, and in his 1. *Compositione Medicamentorum Secundum genera*, we call that the Rheumatick Disease, which takes its original from the habitual distemper of the whole body which is punctually described by *Galen*, in his first book of Feavers, Chap. 7. in these words. You shall understand that the Rheumatick diseases so called, are caused after some such manner as this, viz. The whole body being weak, the principal parts though there be little blood, yet being burthened therewith, they thrust it into the fleshy parts of the Skin, so far *Galen*. Whence it appears that the true nature of the Rheumatick disease does herein consist, that the whole body is habitually so weak, that when any principal part thereof happens to be burthened with blood, though it exceed not much in quantity, it transmits the same into the fleshy parts beneath the skin, and into the skin it self, and from thence it easily slips into the joynts. Now that principal part which in this disease, we judg to be most offended, is the Liver, which by reason of some adventitious distemper breeding blood, not sufficiently fit for nourishment, it is wont to afflict the whole body with the like weakness and very much to trouble the same. Now, this kind of weakness has its original from some distemper, which that we may more accurately find out, we must call to mind that the inbred temper of the parts may be changed four manner of waies. First by defect of the inbred heat and of the *Humidum Radicale*. Secondly by the augmentation of some of the four qualities, wherein the Temper is conceived to consist. Thirdly from a vitious and malignant, or venemous quality, introduced into the part. Fourthly when the Vital spirit is dulled, dissipated, distracted, or vitiously corrupted. Now in this patient of ours, the second Cause is chiefly to be blamed, viz. the Heat of the Liver augmented and become Preternatural, whence the concoction of that part is depraved, and the blood is made wheyish, hot, and unfit for nourishment, and for that cause is distracted into several parts; which partly by its acrimony it twitches, and causes sundry pains, partly it is turned into wind, and produces other Symptomes until at last its wheyish and windy parts, are evacuated by insensible transpiration, sweat or Urine.

Those most excellent Physitians could not attain to the cure of this disease for two Reasons, First because (as was said before) the distemper which breeds the Rheumatick disease properly so called, is habitual and confirmed; and therefore is hardly changed. Secondly, because they seem not to have observed that precept propounded by *Galen* in the Cure of this disease in his first book of Feavers Chap. 6. Which is this. The true scope therefore in the Cure of these diseases is, not evacuation, but strengthening of the whole body: which words are not so to be understood, as if no evacuation were requisite (for the same *Galen*, before begins the cure of this disease with blood-letting, and if the excrements also were depraved, he gave a purge) but because we must work more and more frequently with strengtheners, less and more sparingly with evacuators.

Seeing therefore, an hot distemper proceeding from his remarkable and very great Errors in diet, bred cheifly in his Liver, causes a weakness thereof and of the whole body. We must with all our Art oppose the same with such remedies as may correct the said distemper, and by a specifick property, may strengthen and refresh the Liver. And because that distemper is habitual, it requires a very long use of Medicines.

In the First place therefore, among all the Remedies, which Art has been able to find out to cool and strengthen an over heated Liver, Tincture of Coral holds the cheif place; of which

the patient may take two spoonfuls every day, two hours before he eates. The preparation thereof is after this manner.

Take Red Coral grosly poudered six ounces ; put it in a round glass, and poure thereon juyce of Lemmons, till it stand four fingers above the Coral (if you have not juyce of Lemons, take juyce of Barberies) shut the glass well, and set it in Balneo Mariæ four or five daies together, and separate the Tincture from the feces and keep it in a glass by it self for your use.

The Tincture will be more pleasant, if with a like quantity of Sugar Candy, it be reduced into a syrup ; but it will be much more ineffectual. It will be better to add Sugar to each dose, when you give it.

For the same Intent the Conserve of Eglantine berries or Hips is much commended. You must free the berries from their seeds, and then boyl them in water, and pass the pulpe through a searse, and at last boyl it up with Sugar to the Consistency of an Electuary. It is made, just as they make Marmalade of Quinces.

Of this Conserve he may take every day the quantity of a Walnut, at Morning, Evening, and when he goes into his bed. Also he may use this following Electuary.

Take Lozenges made of Trionsantalon with a four-fold quantity of Rhubarb, weighing two drams a peice. Let him take every day a Lozenge and drink a little of his ordinary drink after it.

Also the Tincture of Roses will be very good for the same purpose, which is made as followeth.

Take Red Roses dried one ounce ; Luke warm water three pints ; Spirit of Sulphur or of Vitriol, one dram and an half: infuse them together six hours, to the strained Liquor add Sugar half a pound, let him drink a cup thereof at times convenient.

These four Remedies, must be continually used, in such sort, that he take one in the morning two hours before meat, another in the evening when he goes to bed, and the day following the other two at the same hours, in such sort frequently changing his Medicines, that nature may not be too much accustomed to any one of them. And when he cannot have them all at once, let him use two or three in the order aforesaid ; yea he may, at the beginning, if he please, use the foresaid Remedies thrice a day, viz. Morning, Evening, and two hours before supper.

The Tincture of Roses may be used at all times, when he is thirsty, between meals, also presently after the taking of his other Medicaments.

Among roborating medicaments, the most convenient is Amber-greese, which wonderfully refreshes the spirits and native heat, nor does it heat so much as is commonly conceived, and it is as it were the Balsom of the radical moisture. He may take eight or ten grains thereof at a time, with Tincture of Coral, in ordinary broth, or in a soft Egg.

But because the Distemper and weakness of the principal parts is wont to cause superfluity of excrements, therefore they must be voided at times, by gentle purgatives, as has been said, which may be effected by a magistral Syrup compounded of juyces, and which may do more by altering and strengthening the Liver, than by purging.

Take the juyces newly prest out and clarified by settling, of Endive, Cichory, Sorrel, Fumitory, Hops, Agrimony, and Buglos, three pints ; juyce of Fragrant Apples newly pressed forth, one pint and an half ; Senna cleansed six ounces ; Epithymum two ounces ; Agarick newly Trochisked one ounce ; Mace and Cloves of each one dram ; Infuse and boyl them according to Art, till there be thirty ounces of the Liquor left. In which dissolve the infusion of one ounce and an half of choyce Rhubarb, made with yellow Sanders in some of the juyces aforesaid by it self and Sugar thirty ounces. Boyl it to a perfect syrup well clarified. Steep it in a glass, and give him thereof one ounce and an half or two ounces, twice or thrice in a moneth, with the broth of a chicken, altered with endive, Cichory and Sorrel Leaves.

And in the intermediate times, when he shall be bound in his body (which must alwaies be kept soluble) he may take an ounce of the same Syrup with common broth, an hour before dinner.

Or he may dissolve the said Syrup in a decoction of Prunes.

Or in the said decoction instead of the Syrup may be dissolved half an ounce or an ounce of Manna, to be taken an hour before dinner as aforesaid.

Or in the said decoction of Prunes, there may two drams of Senna be sometimes boyled.

The

The foresaid Remedies may be used twice a week if his belly be not disposed to stool.

Moreover to asswage the Heat of his Liver, nothing is more excellent, than a bath of Luke-warm water, which must be most frequently used the whole Summer long, almost every day an hour before supper, in manner of a bath to sit in.

Hereunto add an excellent diet of meats easily digested, and of excellent juyce, viz. Partriches, Capons, Chickens and Pullets, especially broths, strong-broths, juyce of flesh prest out, and such like; all which must be taken in an indifferent quantity, that they may be more easily digested.

For his drink let him use a thin infusion of Rhubarb, made after this manner.

Take Rhubarb grosly poudered half a dram; fountain water three pints: let them boyl a little and then strain out the Liquor. Let him use the strained liquor for his ordinary drink, with a little Claret Wine mixt therewith.

Sometimes also in stead of the said Infusion, he may use a Decoction of Cichory Roots with Wine, as has been said.

Let him void as much as in him lies all vehement motions both of mind and body, Venery, and other things, which he beleives have done him much hurt.

If the pain shall happen to be setled in his Joynts, it may be asswaged, and dissolved by these following Remedies.

Take Pulp of Marsh-Mallow Roots four ounces; New Milk two ounces. Make it like a Liniment and smear it upon the pained part. Or

Take of the Roul of Plaister Diapalma as much as shall suffice, spred it upon a peice of leather and make a Plaister answerable to the pained part.

The 50 Observation or History of Famous and Rare Cures, &c.

A Swelling of the Spleen.

THe Sister of Msr. *Nicolas* a Canon of *Montpelier*, twenty years of Age, after a Tertian Ague ill cured, fell into a great swelling of the Spleen, which filled all her belly almost, with a slow Feaver, want of Appetite, want of rest, and other Symptomes.

I prescribed in the first place Blood-letting in her left Arm, after a Clyster. After that an Aperitive Apozem, with Cream of Tartar for twelve daies, and every third day there was infused two drams of Senna, and one ounce of Syrup of Cichory with Rhubarb was added. At the same time there was applied to her Spleen an Emollient and Aperitive Fomentation, morning and evening, and a Liniment after the Fomentation. She took also in the Evenings viz. An hour before Supper of this following Opiate.

Take Conserve of the flowers of Tamarisk and Elicampane Roots, of each one ounce, Conserve of Maiden-hair two ounces. Conserve of common Wormwood and of preserved Citron peels of each half an ounce, Confectio Alkermes three drams, Salt of Wormwood and Tamarisk of each two drams. Diarrhodon Abbatis one dram. With Syrup of Maiden-hair make all into an Electuary, of which let her take the Quantity of a Ches-nut every day in the morning, two hours before meat, and let her drink after it a little wine allaied with water..

With these Remedies she was cured in the space of fifteen daies.

The 51 Observation or History of Famous and Rare Cures, &c:

Of Blood Coagulated in the Stomach.

THe Brother of Msr. *Dumoys* the Kings Councellor in the Presidial Court at *Montpelier*, being fifty years old, after vehement exercise in continual hunting, vomited a little blood, voided

voided also a little by stool. The following daies, he was oppressed with a heavyness in his Stomach and Heart-burning, so that he frequently called for meat, and if he wanted the same a small space, he said his strength failed him. Also he frequently supt off a little Wine. When the Region of his stomach was handled, he felt a pain, his hands were somewhat coldish: and he was a little thirsty. His ordinary Physitian saies he was troubled with the Feaver Lipyria, proceeding from the Inflammation of his Stomach. But when I feeling his pulse, could perceive no Feaver; he said that his weakness hindered the Feaver from showing it self. Now he gathered that Inflammation from blood before voided, which argued the effusion thereof into the substance of the Stomach; from the pain of the part it self, the coldness of his hands, and his heart burning; whereupon he pronounced boldy, that he would certainly and shortly die. But I judged that all those Symptomes did proceed from blood congealed and corrupted in his stomach; which corrupt blood, as *Galen* tells us, puts on the Nature of Poyson, and thence faintings, or Heart-burnings, coldness of the extream parts, and other Symptomes arise. For I could not think it possible, that an Inflammation of the stomach should not cause an intense Feaver, and thirst. Moreover, the sick man was delighted by the Application of an hot tile and of hot cloths upon his stomach, also with the frequent taking of pure Wine unallaied, and with very hot broths, all which an Inflamed stomach could not endure. A Clyster being given him, he voided some clotters of blood therewith. He was let blood, and that which came away was very Flegmatick. After the Emulsion which he took in the evening, by order of his usual Physitian, he was very ill all the night. But the foresaid Physitian would not content himself with such Remedies as dissolved coagulated blood and brought the same away, therefore I who only by occasion had once visited him, left the whole Cure to him. But the day following, no other Remedy being used, he voided by stool most filthy black matter, and so was freed from all the foresaid Symptomes; which plainly shewed, that the Cause of this Disease was no other than blood congealed in his stomach according to my opinion.

The 52 Observation or History of Famous and Rare Cures, &c.

Of a Consumption, and weakness of Sense in a part.

THe most beloved wife of the excellent Msr. *Paschal* the Kings Councellor, and a Mr. of the Court of Accounts being twenty two years old, of an hot and dry Complexion (as by the readyness of her actions, the sharpness of her wit, her angryness, the largeness of her Veins, her lean Constitution of body, and other signs, might easily be discerned) seven years since began to be troubled with an impairment of her sense of feeling in her left hand, with a leanness of the said part and a Consumption thereof; which appeared first in her Thumb, whose Muscles that make up Venus Mount, were first of all wasted away, and soon after the sense of that part was diminished, and consequently her other fingers were taken with the same infirmity until at last they had well nigh lost all feeling, for at present, if a Needle be thrust into her Thumb, it hardly puts her to any pain. Moreover little Bladders did sometimes arise on the tops of her fingers, as if they had been burnt, and some other things appeared in the habit of her body, which shall be mentioned in their place.

This Case is most difficult, most rare, and most intricate, although most excellent Physitians who undertook her Cure, did little doubt thereof, taking that same impairment of the sense of feeling to be the beginning of a Palsie, which opinion of theirs, although it may be confirmed by no small reasons; yet is it an easie matter to make another judgment of the Nature of this Disease, and to under-prop the same with most strong reasonings, viz. That it is a mere Atrophy of the part after which the sense of feeling was impaired by reason of dryness, without any obstruction of the Nerves. I shall produce the arguments on both sides, and leave it free to the reader to choose the sounder opinion. And in the Conclusion (which will be a rare and singular matter) I shall demonstrate, that this Disease is to be cured with the same Remedies, whether it proceed from the one Cause or the other.

In the first place therefore; that this hurt of the sense of feeling is a kind of Palsie, seemes to appear from hence, in that from any other Cause, that sense cannot be in any part diminish-

ed

ed or aboliſhed ſave from the obſtruction of the Nerves, which carry the Animal ſpirits and the ſenſitive and moving faculty to the parts of the Body. In the next place, becauſe this Gentlewoman had formerly a Tumor in the right ſide of her Neck, and a ringing in her right Ear, alſo a pain about her Neck, which are ſignes of a flux of Humors from the Head.

But one the other ſide, that this Diſeaſe ought not to be referred to the Palſie, but rather to ſome ſort of Atrophy, theſe following reaſons may evince.

Firſt of all, in the palſie, not only ſenſe but all motion is hurt, eſpecially when it is an old Confirmed palſie, ſuch as that is which has afflicted the patient for ſeven years together; for though ſometimes motion may be hurt, the ſence remaining unhurt, and contrarywiſe, the ſenſe may be ſometimes hurt, and motion not hurt; yet this difference is to be obſerved, which is plainly taught by *Galen* in his firſt Book *De Locis Affectis*, Chap. 6. viz. That in a part Capable of motion, ſence cannot be hurt, without the hurting of motion, whereas motion may be hurt without any harm to ſenſe; for ſenſe conſiſts moſt what in paſſion, as motion does in action, and ſeeing the ſame Animal Spirit does carry both ſenſe and motion through the ſame Nerve though it come in leſs quantity than can ſuffice for motion, yet may it be ſufficient for ſenſe: but if the obſtruction of the Nerve be ſo great, that ſenſe is hurt, motion muſt needs be hurt much more. How can it then come to paſs, that ſometimes ſenſe ſhould be hurt and not motion? for this reaſon alone (according to *Galen* in the fore cited-place) namely, if thoſe Nerves only are affected which are carried into the skin, thoſe being unhurt which end in the muſcles, ſenſe will only be loſt, motion being undamnified, as it happened to *Panſanias* the Syrian Sophiſter, whoſe hiſtory *Galen* relates in his third book *De Locis Affectis*, Chap. 12 as alſo in the place Forecited; who travelling towards *Rome*, fell out of the Coach, and receiving a blow about the ſeventh Vertebra, from whence a ſmall Nerve is carried to the skin of the two little Fingers, in thoſe two fingers the ſenſe of feeling was loſt, their motion remaining entire, becauſe the Nerves which were carried to the muſcles of thoſe parts, remained unhurt. Now in the Caſe propounded, it could not be ſo; becauſe if the diſeaſe ariſe from the obſtruction of the Nerves, we muſt grant that the Nerves which are carried to the muſcles were greivouſly affected, for extenuation and Conſumption never happens in a palſied part but that the ſaid part is firſt deſtitute of the influx of the Animal Spirit, for the natural faculty, when the Animal cannot act, is drawn into conſent, and badly nouriſhing the part, cauſes a Conſumption; but ſeeing by the integrity of motion, the integrity of the Nerves is apparent, we muſt conjecture that the foreſaid Conſumption, is not cauſed by the palſie; but that rather the impediment of ſenſe depends upon the want of nouriſhment and dryneſs of the parts. Nor is it true, which was lately aſſerted, that all abatement and loſs of ſenſe is a ſort of palſie, for in the diſeaſe called *Elephantiaſis*, ſenſe is diminiſhed and aboliſhed, by reaſon of the dryneſs of the parts cauſed by black choller.

Secondly, from what hath been ſaid, another argument may be collected, for leanneſs and want of nouriſhment doe not happen to palſied parts, unleis the palſie be confirmed. But Authors count the palſie then only beginning, when ſenſe only is hurt, motion remaining undamnified. Whence it follows neceſſarily, that the foreſaid want of nouriſhment does not at all proceed from the palſie.

Thirdly, ſeeing they terme this diſeaſe a beginning palſie, 'tis ſtrange the beginning of a diſeaſe ſhould laſt ſeven years, and make no further progreis; and that the fluxion, which poſſeſſed only a Nerve or two carried to the skin of the fingers ſhould not ſeize upon the greater Nerves cauſing motion, which touched the other; ſo as thereby to ſtop both ſenſe and motion, and to cauſe an abſolute and perfect palſie.

Fourthly, before the ſenſe of feeling was impaired, there began firſt to ſhew it ſelf a Leanneſs and Conſumption of the muſcles of the thumb, after which followed, an inpairement of the ſenſe. Therefore the Atrophy of the part depends upon ſome other Cauſe, than upon the palſie, and ſeemes to be the Cauſe of ſenſe diminiſhed.

Fifthly thoſe little bladders like burnings, which frequently afflicted the extremities of her fingers, argues the humor flowing into thoſe parts to differ much from that which is wont to cauſe the palſie. Which humor truly is ſent from the Liver not only to the fingers, but alſo to the whole half of the body neareſt thereunto, for both the toes of her right foot were

poſſeſſed,

poſſeſſed with the ſame bladders, and alſo her right Leg was varigated with Tetters, and her right Arm was ſtreaked with certain rivulets diſtinct from the ordinary Veins, running a ſtreight Courſe under the Skin, and being coloured with a deep red enclining to black and blew whence clearly appears, that black Cholerick blood flowed into the part affected, which marring their nouriſhment, cauſed leanneſs and dryneſs; by vvhich dryneſs the ſenſe of feeling was diminiſhed: For the wiſe Maſters of Phyſick have taught us, that motion is furthered by dryneſs, but ſence by moiſture. And therefore when a part is rendred over moiſt, it becomes unfit for motion, and when it becomes over dry, it is unfit for ſenſe. The like Rivulets do alſo appear in the right Leg of the Patient like Varices, which evidently declare a fault in the Liver.

Finally, ſuch things as help and hurt do more and more declare the Nature of this Diſeaſe, for as hitherto ſhe never uſed convenient Medicaments, ſo by the uſe of baths and other hot things,and Medicaments very ſtrongly reſolving being applied to the part,ſhe was much worſe than before.

Now although this later opinion ſeems nearer to truth, yet if any man liſt to favour the former, perſwaded with the laſt reaſon alleadged in favour thereof, which truly is not to be ſlighted, he may think thus at leaſt, that Peradventure ſome deflux of Humors may affect ſome parcel of the ſpinal marrow, whence the imminution of ſenſe may ariſe; but that the leanneſs and non-nutriment of the part ſprings from hence, is impoſſible, as the reaſons fore alleaged do plainly evince, and at leaſt according to that opinion, we muſt ſay, that the leanneſs and imminution of ſenſe are complicated Diſeaſes, ariſing from different Cauſes. All which being ſuppoſed, which way ſoever your mind incline, the way of Cure will be ſtill the ſame, as we promiſed at the beginning.

Proceeding therefore to the Cure from right Indications, we muſt uſe all our endeavours to amend the hot and dry diſtemper of her Liver, which is the original of all her Maladies; the Conſumption, and non-nutrition of the part muſt be amended, and we muſt procure it to be renouriſhed, from which if the hurt of ſenſe proceed, when the Cauſe, viz. dryneſs is taken away, it will ceaſe. But if this hurt of the ſenſe ſhall be judged to ariſe from ſome harm of the Nerves, and from a fluxion from the brain into the back-bone; yet muſt we not therefore adminiſter heating Remedies, which will encreaſe the primary Cauſe of the fluxion, namely, the diſtemper of the Liver. Nor muſt hot Medicaments be mixed with coolers, for by them the diſtemper of the Liver will never be corrected, eſpecially ſeeing in the forms of Remedies formerly preſcribed according to his indication, hot Medicaments are much more prevalent than cold. Nor muſt external reſolving Medicaments be applied to the part affected, becauſe they will conſume and dry the ſame much more, and will no waies ſerve to the Cure of the Diſeaſe; for if there be any obſtruction of the Nerves,it is not in the Hands, but in the original of the Nerves by the Vertebraes, and ſo we imitate *Galen*, who in the *Syrian Pauſanias* aforeſaid applied thoſe Medicaments with happy ſucceſs to the Vertrebra's of his Neck, which other Phyſitians applied to his two ſenceleſs fingers, with no effect.

Yea verily,and thoſe Palſies which happen in hot and dry bodies,may be cured with cooling and moiſtening Remedies only, as *Trallianus* teaches, in his firſt Book, Chap. 16. In theſe words: The efficient Cauſe of the Palſie we may diſcerne for the moſt part to be a thick, clammy, and cold Humor. We muſt alſo know; that this Diſeaſe proceeds from an hot or dry quality when an hot diſtemper has too much parched the Humors. And a little after, for if the quality ſhall be only hot and dry,then extenuating and heating Medicaments (for all ſuch conſume the Native moiſture) do more burn the matter,and make it more thick. And in concluſion he adds the Cure by Diet and Medicines, purely cooling and moiſtening; which he averrs to have been taught by experience, ſaying, I verily knew one that was Palſied by ſorrow, Care, and faſting; who thereupon taking Hiera, was ſo damnified, that he became wholely unmovable, and was at deaths door, had he not been altered quite contrary, taking nothing but moiſtening things, potions, meats, and other things which brought him to a temper, eſpecially frequent bathings, Oyntments of water and Oyl, change of the Air into temperate, and all kind of Mirth. You may ſee a ſtory not much unlike this in *Foreſtus* his 97 Obſervation, in his firſt Book, of a certain youth, who in his Legs and Feet was deſtitute of ſenſe and motion with an extenuation and Atrophy of the ſaid parts. And whereas by the uſe of heating and drying Medicaments preſcribed by other Phyſitians, he grew continually worſe and worſe,

he

he was in the end cured by *Foreſtus*, only by giving him in, and applying without moiſtening Medicaments.

In the firſt place therefore ſhe muſt keep a cooling and moiſtening Diet. Her meats muſt be of a good juyce, and eaſie to digeſt, eſpecially the fleſh of young Animals. In her Broths let her uſe cooling Herbs, Borrage, Sorrel, Endive, Lettuce and Purſlane. Let her abſtain from all fried, Salt and peppered Meats, from Pulſes, old Cheeſe, and other thick and hot meats; let her drink weak Wine well allaied with Water.

Eſpecially let her avoid paſſions of the mind, and above all, ſadneſs and anger; let her ſleep very long, becauſe nothing moiſtens more than ſleep. Let her be alwaies looſe-bellyed by Nature or by Art.

As ſoon as ſhe is delivered of her great Belly, a moneth after her lying in, let her ſet upon the uſe of theſe followving Medicaments.

Take Roots of Bugloſs, Graſs and Aſparagus, of each half an ounce: Leaves of Endive, Cichory, Sorrel, Bugloſs, of each half an handful. Boil them with a Chicken, and make Broth, of which let her take every morning for twelve daies together.

In every third doſe of Broth, infuſe all night half an ounce of Senna, and one dram of Annis-ſeed.

After her firſt purging Broth, open the Baſilica-vein of her right Arm, and take away ſeven ounces of blood.

When ſhe has done with her Broths, let her go into this followving Bath.

Take ſweet Almonds bruiſed and Barley meal, of each one pound and half. Boyl them in a bag for a Bath, into which being lukewarm, let her enter morning and evening, long time from her meals. And let the decoction be renewed every day.

Take Oyntment of Roſes, and Ceratum Santalinum, of each one ounce: Juyce of Cichory and Oyl of Roſes, of each half an ounce: Trochiſchs of Camphire one ſcruple, white Wax a little. Make all into an Oyntment, wherewith let the Region of her Liver be anointed when ſhe comes out of the Bath, and is dryed, and let her continue the uſe of it every day, when ſhe goes into her bed for a long time together.

Take Whey of Goats-milk, made by boyling of the milk, and well clarified ſix ounces; Juyce of Cichory and fragrant Apples, of each one ounce. Let her take it in the forenoon, two hours before dinner, fifteen daies together.

If the Seaſon ſhall be too cold to uſe the Whey, let her uſe inſtead thereof a decoction of China, made after this manner.

Take China Roots cut into thin ſlices one ounce, Fountain water ſix pints, Juyce of Lemons three ounces, ſteep them together twenty four hours, then boyl them in an earthen pot glazed and well covered, till a third part be waſted away. Strain it through an Hippocras bag, and let her take ſix or eight ounces of it every day in the morning.

Take of the Juyces newly preſſed forth, and clarified by ſetling of Borrage, Bugloſs, Fumitory, Cichory and Sorrel three pints; Juyce of fragrant Apples newly preſſed out and clarified two pints and an half; Infuſe therein eight ounces of Senna, new Polypody of the Oak and Epithymum, of each two ounces; Agarick freſhly trochisked one ounce, Mace and Cloves of each one dram. Afterwards boyl them to a pint and half; In the ſtrained Liquor, diſſolve an ounce of Rhubarb, infuſed in ſome of the foreſaid Juyces, and one pound and half of white Sugar. Boyl them to a Syrup, of which let her take two ounces in Chicken Broth, altered with the leaves of Borrage, Bugloſs, Fumitory and Sorrel.

In the intermediate daies, let her take every morning two hours before dinner, an ounce of the opiate made of Eglantine berries well ripened, duly boiled and paſſed through a Searſe, and then reboiled with a ſufficient quantity of Sugar, as Marmalade is uſually made.

Sometimes let her uſe the Lozenges of Diatrion Santalon, of which let her take two drams in the morning inſtead of the foreſaid Opiate, drinking a little Cichory Water after it.

If by reaſon of the Injuries of the Seaſon, ſhe cannot this Autumn exactly uſe all the foreſaid Remedies; ſhe muſt repeat them afreſh the followving Spring, and then ſhe muſt frequently bathe, and long uſe the Whey, for in theſe Remedies lies the chief force of the Cure.

Finally, the Waters of Meyne are very uſeful, and moſt excellent for the Cure of this diſeaſe, to which ſhe may go about the beginning of the moneth of *July*, and uſe them a moneth together.

In the mean while from firſt to laſt, topical Medicaments muſt be uſed, and frequently applied to her diſeaſed hand.

Take Oyl of ſweet Almonds new drawn without fire two ounces, Oyl of Chamomel one ounce. Mix them, anoint the part hot morning and evening, and then wrap it up in hot linnen Clothes.

After the foreſaid Oyl have been uſed for 15 daies together, uſe the following as long.

Take Oyl of Puppy-dogs and of Earth-worms, of each two ounces: Oyl of ſweet Almonds three onnces, uſe them as before. After that, for as many daies more, let her uſe this following Liniment.

Take Violet Oyl, and Olive Oyl, of each one ounce and an half: Tarr two ounces: Oyl of ſweet Almonds one ounce. Make all into a Liniment.

Finally, if the Diſeaſe ſtubbornly reſiſt the foreſaid Remedies, ſhe muſt uſe this followving Decoction.

Take Roots of Briony, Lillies and Marſh-mallows, of each three ounces. Boyl them in the Broth made of the Head, Feet, and Guts of a Calf or Weather; and in this Decoction, let her plunge her Hand and part of her Arm hot morning and evening, and hold it therein two hours. And let this be done after the uſe of the Bath for ſixteen daies together.

And to provide againſt that ſuſpition of ſome matter ſettled in the original of the Nerves, ſhe may uſe Oyntments and Liniments that povverfully diſcuſs and reſolve, preſcribed by her able Phyſicians, with them anointing her Back-bone hot for ſome daies together. Done at *Montpelier* the 14. of *Auguſt*, 1631.

The 53 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Of prevention of Abortion.

THe Wife of *John Vieules*, a Citizen of *Montpelier*, miſcarried three times one after another, at ſeveral ſeaſons of her being with Child. And now being two Moneths gone with Child, ſhe had pains about her Navil and Loins, which threatned miſcarriage. Another Phyſician had appointed her two Plaiſters to be applied to her Navil and Loins, made of the roul of Plaiſter for fractures and diſlocations, whereupon ſhe was better for ſome daies, but afterwards the ſame pains returned. I being called, and obſerving that the Woman was young and ſanguine, I cauſed her to be let blood, by which means in a few hours ſhe was freed from her pains and fear of miſcarriage. Her blood was full of wheyiſh moiſture; Howbeit for preventions ſake, I order her to take a dram of pouder of Rhubarb in broth once a week for a moneth together. Alſo I willed her to anoint her Belly and Loins with an aſtringent Oyntment, the day before ſhe purged, and to uſe an aſtringent Electuary the day after, but ſhe did not make uſe of them. Thoſe Symptomes came at the very time when ſhe was wont to have her monethly purgations, when ſhe was not with Child. Afterwards, when ſhe was in her third Moneth, the ſame Symptomes returned, and ſhe was preſently freed by blood-letting. Likewiſe, in the fourth, fifth, ſixth, ſeventh and eighth Moneth the ſame Symptomes periodically returning, ſhe was again let blood, and they ceaſed. The laſt blood-letting was performed eight daies before the beginning of the Ninth Moneth, with the like good ſucceſs, *viz.* On the 15. of *January*, 1632. And at the end of the ninth Moneth ſhe brought forth a Boy well fleſht and lively, but ſomewhat pale.

The 54 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Semitertian Ague with Head-ach.

ON the 12. of *October*, 1631. I was called to the Lady of *Leſignan* being ſick of a continual Feaver joyned with an Ague, and heavy pain in her Head, alſo a pain in the tendons

dons of her Neck, and a fluxion of Rheum into her right Eye, whence I conjectured, that the pain of her Head was Idiopathick, which she had caught by exposing her self to the cold Air of the Night; her Feaver was sufficiently slow and flegmatick, without thirst, I found her in the fourteenth day of her Disease; and she had been once let blood before, and had two purging Medicaments given her, also a plentiful sweat brake forth on the foresaid fourteenth day, but all did no good; her Feaver was still the same, which grew more violent towards evening, with coldness of her extream Parts, by which the fits were known. On the fifteen and sixteen daies she was again let blood; afterward a Medicament was given her, and after some daies repeated of the Infusion of Senna with Cream of Tartar; also opening broths were given, because she refused Juleps and other internal Remedies; Fomentations and Oyntments were applied to her Hypochondria, which appeared to be distended. Because of her Head-ach, a Vesicatory and Plaister were applied to the Suture; these things were continued to the twenty six day of the Disease, her Feaver continuing, the Urines being sometimes digested with a laudable swim; sometimes crude with a Swim very much divided, and many times of three Urines which were saved in the night, the first and third were crude, the middle most laudable, which threatned that the Disease would be long. After the foresaid time, seeing she refused other Remedies, I gave her three daies together half a dram of Salt of Tartar, and fifteen drops of spirit of Vitriol in a Decoction of Wormwood, whereupon she grew very well, and her Feaver was conquered. Howbeit her Urines remained thin, with a swim torn as it were in pieces; she was purged again, and so perfectly recovered.

The 55 Observation or History of Famous and Rare Cures, &c.

Of a Cough and Catarrh in an Infant.

THe Son of Msr. *Boirarques*, Controller in the Chamber of Accounts at *Montpelier*, eleven Moneths old, was sick of a Catarrh, with a continual Cough and Feaver, he frequently vomited flegm, he suckt much, and pist little. After many Medicaments used to little purpose, I ordered them to anoint the Region of his Kidneys with Oyl of Scorpions of *Matthiolus* thrice a day, whereupon he made Urine more plentifully, and his Catarrh was abated. For *Mercatus* saies in his eighth Book of the Diseases of Children, that Catarrhs happen in Children, sometimes by fault and through weakness of the Kidneys; when they do not draw the wheyish humor; whence it comes to pass that the said humor being drawn upwards, becomes matter of a Catarrh. If that Symptome had continued, those Remedies had been used which are propounded by the said *Mercatus*, Chap. 13. Where he treats of Urine in Children suppressed, as Clysters, opening Broths, &c.

The 56 Observation or History of Famous and Rare Cures, &c.

A Pleurisie.

A Tailor being young and Cholerick, and troubled with a Pleurisie; after many blood-lettings, and other ordinary Remedies; on the fifth day a Feaver violently continuing with a pain in his side, he did take a roasted Apple with a dram of Frankincense, and drank thereupon four ounces of Carduus Water, and afterwards being covered, he sweat a little, without any diminution of his Feaver; the day following he did sweat very much twice or thrice, and so recovered his Health.

The 57 Observation or History of Famous and Rare Cures, &c.

A continual Feaver in a little Girle.

IN the year, 1632. In the Moneth of *January*, the Daughter of Mr. *Darenes* a Lawyer, being seven years old, was sick of a continual Feaver, not very vehement, but more violent at cer-

tain times, *viz.* Towards the evening. The Feaver began with a flegmatick vomiting, which was followed by a looſneſs continuing for a day, by which flegm was likewiſe voided, her breath was ſowr and ſtinking. I preſcribed her a potion of a dram of Rhubarb, with an ounce of Syrup of Roſes: Before the Medicine was given her, there came another Phyſician that would have it omitted, and maintained that it was better to let her blood. Howbeit ſhe took the Medicament, which ſhe vomited up ſoon after, with thick and very putrid flegm. Then I preſcribed her a Clyſter, with half an ounce of *Diacatholicum*, to be given her about evening, with which and the other Medicament working together, ſhe had five ſtools that night, conſiſting of Flegmatick, Cholerick, and very ſtinking matter. In the morning her Feaver was very ſmall, and at noon ſhe was freed therefrom, and reſtored to her health.

From this Obſervation may be gathered how much thoſe Phyſicians are miſtaken, who conceive that in all continual Feavers, the Cure muſt be begun with blood-letting. Seeing that many times in Children the ſaid Feavers ariſe from putrid Humors ſettling in the firſt Region, which are eaſily dravvn avvay by purging. Now in this Girle, her vomiting of flegm, and her looſneſs did ſhew the redundancy of ſuch an Humor.

Of Cholick Pain.

THe Wife of Msr. *Andifret*, a Citizen of *Montpelier*, was troubled with a moſt grievous Cholick pain the 22. of *January*, 1632. A Carminative and purging Clyſter was adminiſtred in vain. I being called, preſcribed another Clyſter of a Decoction of Emollient and carminative things, made in a like quantity of Water and White-Wine, diſſolving therein one ounce of Catholicum, tvvo ounces of Honey of Roſes, and four ounces of Aqua Benedicta. Preſently after ſhe had taken the Clyſter, the pain ceaſed, ſhe ſlept three hours, was aftervvard moderately purged, and her pain returned no more.

If you deſire a competent knovvledge in the Art of Phyſick, read *Riolanus* Guide to Phyſick and Chyrurgery, vvith *Johnſtons* Idea of Practical Phyſick, and *Riverius* Practice.

The 59 Obſervation or Hiſtory of Famous and Rare Cures, &c:

Cholick Pain.

ON the 8. of *March*, 1632. Mrs. *de Varanda* being ſixty years of Age, was tormented with moſt grievous pains about the Region of her Loyns, Liver, Stomach and Guts: two Clyſters were given her, with which ſhe was luſtily purged, and a great Cupping-Glaſs was faſtened before and behind, her pains continued very vehement. I being ſent for, gave her a dram of the Pouder of Woolfs Guts in three ounces of Wine; her pain preſently ceaſed. And the followving day a purging Medicament was given her, to expel the Reliques of the Morbifick matter.

The 60 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Tiſſick, Inflammation of the Lungs, and palpitation of the Heart.

ON the 8. of *April*, 1632. the Widow of Msr. *de Sejelory*, a Citizen of *Montpelier*, ſtarting out of her bed about midnight thinly clad to a Window, was preſently taken with great ſhortneſs of breath, like a fit of the Tiſſick, vvith a Cough, ſpitting of blood, a Feaver and redneſs of Face. I being ſent for, Cauſed a Vein to be opened in her right Arm, and

and eight ounces of Blood being taken away, her ſhortneſs of breath preſently ceaſed. Afterwards a laxative Clyſter was injected, and a Julep given her of red Poppy-Water, Syrup of Violets, Sal Prunellæ and Confectio de Hyacintho.

On the ninth day, at ten in the forenoon I viſited her again, and found her in a Feaver, troubled with a Cough, and ſpitting of bloody matter; alſo ſhe felt an heavy weight in the middle of her Breaſt, with an inward burning and prickings in many parts of her Cheſt. I cauſed her to be let blood in her left Arm, and that the Clyſter and Julep ſhould be repeated; to anoint her Breaſt with Oyl of Violets, and that ſhe ſhould lick frequently ſome Syrup of Violets. After the blood-letting, ſhe was preſently eaſed, and that ſence of weight and burning in her Cheſt were abated. At five of the Clock in the evening the ſame day, conceiving that vapors aroſe from beneath, and the humors into her Cheſt, which that ſhortneſs of breath did ſufficiently declare; I cauſed her to be let blood in the Saphena Vein, after which ſhe was alſo better. The night following ſhe took the foreſaid Julep again, ſhe ſlept but little.

On the tenth day in the morning ſhe was better, her Feaver and other ſymptoms were very remiſs. About the third hour of the evening ſhe had a coldneſs in her extream parts, with a light ſweat in her Feet and palmes of her Hands, after that an acute Feaver, her Pulſe very much expreſſed, and the ſenſe of heavineſs in her Cheſt very much augmented. Dr. *Ranchinus* the Chancellor was called to conſultation, who conceived that it was a Pleuriſie ariſing from Inflammation of the Mediaſtinum. And by common conſent, ſhe was let blood in her right Arm to ſeven ounces, after which alſo ſhe was better, the other Medicines were continued; alſo Frictions, Ligatures and Cupping-Glaſſes were frequently applied to the lower parts.

On the eleventh day, which was the third of her ſickneſs, moved with what I had obſerved in another diſeaſe of the ſame Patient, in which ſhe was afflicted by turns with a flux of her belly joyned with a Tenaſmus, and a Catarrh falling upon her Breaſt; ſo that as often as her looſneſs ſtopt, ſhe was grievouſly afflicted with her Catarrh; and when her flux returned, her Catarrh preſently ceaſed, the humor falling into her Breaſt, being drawn downwards, I conceived that a purge would do her moſt good, which I made after this manner.

Take Leaves of Bugloſs and Lettuce, of each one handful; Tamarinds half an ounce, Liquoris three drams, Violet flowers one pugil; Boyl all to four ounces. In the ſtrained Liquor, diſſolve one dram of Rhubarb infuſed in Bugloſs Water with yellow Sanders, Manna, and Syrup of Roſes, of each one ounce. Make all into a potion; which ſhe took in the morning, and voided much flegmatick, wheyiſh, ſharp and ſtinking matter. Nevertheleſs the Diſeaſe was more violent towards the evening as formerly, yet her pulſe was not oppreſſed as before, and the weight in her Breaſt was leſs. But ſhe felt a pain about her right chanel bone, which encreaſed by handling the ſame; ſhe ſlept little that night, ſhe took Emulſions frequently.

The fourth day of her Diſeaſe, and the twelfth of the moneth, when as in the morning her Feaver and the pain in her chanel bone continued; Dr. *Ranchinus* was again called to conſult, and beſides the foreſaid ſymptoms, ſhe had a great palpitation of her Heart, which appeared alſo in her right Hypochondrium, alſo in her right ſide, but it laſted not long there. But about her heart it continued, and did beat like an hammer, violently: She was again let blood in her right Arm, and an Oyntment was appointed for the part pained, and Remedies to revel the humors to the lower parts. About evening the diſeaſe was again exaſperated, and the palpitation continued: Some hours after ſhe did ſweat a little all her body over, by which ſhe was a little eaſed. But her Palpitation and Feaver continued as before: When we began to ſuſpect that vapors did ariſe from her Womb, we preſcribed her a Clyſter for the Mother, Frictions, Ligatures and Cupping-Glaſſes to be applied to her lower parts. Emplaſtrum Hyſtericum was applied to her Navil, and a Julep was given her to aſſiſt her ſweating, of Scabious and Carduus Water with Bezoar-ſtone, and half an ounce of Orange flower Water in regard of her Womb. In the night ſhe had three large ſtools of ſtinking corrupt matter; After midnight ſhe ſlept quietly till morning.

On the fifth day of the Diſeaſe, I found her in the morning with a ſmall Feaver, without any oppreſſion in her Breaſt, or any pain, and with very little palpitation of heart. About evening ſhe did ſweat a little, and was better afterwards. After ſhe had voided her Clyſter, her Palpitation was augmented, her Feaver became more intenſe, and ſhe was pretty well in the night.

On the ſixth day all things were as before, in the evening Cupping-Glaſſes were applied with Scarrification, which did her good.

On

On the seventh day her Courses began to flow plentifully, by which means all Symptoms were very much abated.

On the eighth day she was better.

On the ninth day she had a light loosness joyned with a Tenasmus; by which she voided few flegmatick excrements, and before that loosness, she vomited much bitter stuffe.

The Humors were prepared with temperate Aperitives.

On the tenth day, which was the eighteenth day of the moneth, her loosness was less, at night it stopt quite, she had no Feaver. And after that she plainly amended.

On the 29. of the said moneth of *April*, when she felt her self exceeding well, and was busie about her Houshold occasions, as she was sitting in a Chair, she fell suddenly to the ground and died.

Her body being opened, her Mediastinum was found full of wheyish blood, which peradventure the membrane being broken towards the upper part of the Lungs, and pressing the same and the Aspera Arteria might suddenly choak her. Moreover the whole substance of her Lungs was found full of a purulent matter, exceeding heavy: also her left testicle was as big as a small Egg, of a blackish colour, and as it were gangrenated. Yea, and as soon as it was opened, there lept out of the middle of her testicle a certain matter like a Nut-kernel, and very like a putrified Clotter of blood. We conjectured that to have been the cause of her Mother-fits, to which she was very much subject; yea peradventure the palpitation of her Heart arose from thence, *viz.* from filthy vapors ascending from that part.

The 61 Observation or History of Famous and Rare Cures, &c.

Of Symptoms after Abortion.

THe renowned Wife of Mr. *Desgardies*, on the twenty eighth of *March*, 1632. suffered Abortion, by which she voided her secondines in the first place with much blood, whence extream weakness brought her in danger of her life. The flux of blood being stopped, the day after she voided her Child, now it was of four moneths. And she seemed afterward to recover, and was indifferently purged: Howbeit an extream carrion-like stink was perceived in her purgations. On the seventh day she was taken with an intense Feaver, and voided that same fleshy Womb-cake which is called the Womb-Liver, very stinking and full of black blood; whereupon she grew afterwards well by little and little.

The same happened in *Madam de Laroche*, who the fifteen day of *April* the same year, having been four moneths great, and suffering abortion, did void her Child with the Membranes, and was therefore judged clear. Yet she afterwards fell into a violent Feaver, with frequent shivering and faintings. After which she voided most stinking purgations, with clotters of blood and bits of flesh. On the seventh day she voided the foresaid Womb-cake whole, which was extream stinking; whereupon she began to be better, and by little and little recovered.

These two stories teach us, that the purgations of the Womb, when they stink like a dead Carkass, do for the most part signifie, that there is some part of the secondines abiding yet in the Womb. See more of this in the Practice of Physick of the last Edition.

The 62 Observation or History of Famous and Rare Cures, &c.

Of Scabbyness.

A Young Man, Servant to Mr. *Grassetus*, one of his Majesties Judges, was tormented with a filthy Scab, with felons frequently breaking forth; of which diseases he could not be freed by blood-letting, and many Purges used at times, in the space of six moneths. At last there was given him one scruple of Mercurius dulcis, and half a scruple of Diagridium, with which being excellently purged, he was in a few daies freed from that filthy Scab.

The

The 63 Observation or History of Famous and Rare Cures, &c:

Belly-ake.

THe Wife of Mst. *de la Faverie*, having had the Jaundies for a time, of which she was imperfectly cured, she fell into a long lasting Tertian Ague, which being ended, a slow Feaver remained, with exasperations every other day, and hardness of her Liver. Upon these there followed a most cruel pain, which did at first torment the Region of the Liver, and afterwards the whole Belly, especially the Region of her Womb, her Conrses being very little; Clysters were given her, Fomentations and Liniments were applied, with which the pain was very much abated, but especially by giving her half a dram of Sulphur poudered, mixed with one dram of Nutmeg; this was given her by another ancient Physican in my absence, and he kept it as a secret. But the pain was not quite taken away, and it soon returned again with no lesse vehemence, so that the Patient seemed to be now in danger of her life. The foresaid Remedies being repeated in vain, I prescribed her these following Pills the 29. of *July*, 1632.

Take Aloes two scruples, Laudanum Opiate four grains, Diagrydium six grains. Make all into six Pils; which after the Patient had swallowed at the beginning of the night, she slept an hour, and when she waked, she profest her pain was quite gone. She slept indifferently the rest of the night, did sweat much, was very well in the morning, free from pain and Feaver; she was not at all purged, but in the morning she had a Clyster, and thereby voided many Excrements, which being repeated every morning three daies together, her pain returned no more.

The 64 Observation or History of Famous and Rare Cures, &c.

Of a Liver-Flux and Dysentery.

A Certain Baker having had a Bloody-flux for two moneths, fell at last into a Flux of the Liver, wherewith he voided much watry blood, without other humors, with a Feaver and extream weakness, whereupon his Friends judging that he would quickly die, sent for the Divine and the Scrivener. I being likewise sent for, gave him four grains of Laudanum about evening, and within an hour his Flux stopped, and he went not to stool all that night, untill next day at one, at what time his Flux returned, but it was not bloody, but only Cholerick, but in the evening there was a little blood mingled therewith. On the same day in the morning six ounces of blood were taken from him in two Vessels, the last of which was hot, froathy blood. Cooling astringent Juleps were prescribed him, Epithems, and a cooling Oyntment to be applied to his Liver, and the tincture of Roses for his ordinary drink. These things were administred on the 14. of *August*, 1632. The night followving was bad enough, and without sleep, with many Cholerick, and sometimes bloody stools. But on the fifteenth day he took a potion of Rhubarb, Tamarinds and Myrobalans in a cooling and binding decoction, with which he was much purged all day long, and very much weakened. At the evening he took the Laudanum again, and presently his Flux was stopt, yet he slept not all night. In the morning there was prescribed a binding fomentation of Roots, Herbs, and other materials shut in a bag, and boyled in red Wine and Vinegar, and so applied hot to his whole Belly. Also a julep of the juyce of Purslane, Plantane and Services; and withall a strengthening and binding pouder, to be used in Broths and Panadaes, and in the space of twenty four hours he was perfectly cured.

The 65 Observation or History of Famous and Rare Cures, &c.

Of Mother-Fits.

THe Wife of Msr. *Mouretus* a Proctor, was taken the 15. of *August*, 1632. with frequent stomach-sickness, which made her vomit a little flegm with great straining, pain at her heart, and

and a kind of Feaver, which appeared and diſappeared many times in a day. Then her Courſes appeared before their due time; I conceive ſhe is troubled with ſome diſeaſe in her Womb, and I appointed her an hyſterical Clyſter, a Plaiſter of Galbanum, and a ſmall potion of Orange flower water two ounces, and four grains of Caſtorium. Theſe things did her no good, and beſides her Courſes ſtopt. On the ſecond day, when her ſtomach was ſick, I gave her a potion of Salt of Vitriol, wherewith ſhe vomited an huge quantity of Clammy flegm, with great labour and ſtraining. On the third day I cauſed a Vein to be opened in her ankle, which did her much good. But on the fourth day ſhe was troubled with faintings and languiſhings, ſo that ſhe ſaid ſhe perceived the vapors ariſe to her heart. A vein was opened in her other ankle to no purpoſe: On the fifth day this following potion was given her, which is very good for ſuch as are troubled with the Mother.

Take Musk and Dragons blood, of each thirteen grains; Orange-flower water four ounces. Make them into a potion.

With this Medicine ſhe was very much eaſed, and was better all the day after. But upon the ſixth day her ſymptomes returned, with which ſhe was alſo very much troubled the ſeventh day. On the eight ſhe took one dram of Pilulæ Fætidæ, with which ſhe was very well purged, and was ſo well afterward, that ſhe needed no more Phyſick.

A Dyſentery.

THe young Son of Msr. *Dorthes*, two years old, was troubled with a ſtubborn bloody-flux; after many other Remedies given in vain, I gave him half a ſcruple of extract of Corals, with Plantane water, and the looſneſs was ſtopt the ſame day.

The 67 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Cholick Pains.

A Certain Courtier, when the King was at *Montpelier*, on the 2. of *October*, 1632. fell into a certain moſt grievous Cholick pain, for the removal whereof, firſt a Clyſter was given, emollient and purgative, after that a carminating and evacuating Clyſter with Turpentine, with which he was eaſed, but the pain returned ſoon after. Finally I cauſed to be diſſolved in a Carminating decoction four ounces of Aqua Benedicta, and one ounce of Diaphænicum. With which Clyſter he had four ſtools, and voided much flegmatick matter, and was perfectly cured.

With the ſame Clyſter Msr. *Verchand*, a Citizen of *Montpelier*, dwelling near St. *Firmins*, was freed from the like pain.

The 68 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Hardneſs of the Liver with a Cachexy.

MAdam *de la Faverie* after the Diſeaſe fore-deſcribed, Obſerv. 63. Was troubled with a Cachexy and palpable hardneſs of her Liver. By the uſe of theſe following Pils for tvventy daies together ſhe was perfectly reſtored to health.

Take Calibs prepared with Sulphur half an ounce; the beſt Aloes, Senna, Agarick trochisked, and choice Rhubarb, of each one dram; ponder of Diarrhodon Abbatis half a dram, Saffron half a ſcruple, with Syrup of Roſes ſolutive make a maſs of Pil-ſtuff. Of which let her take one dram every day in the morning, walking lightly after it; and after three hours let her take ſome Broth, wherein the Leaves and Roots of Parſly have been boyled.

Becauſe

Because these Pils did not purge, there was added twice or thrice four grains of Diagridium to one dose.

The 69 Observation or History of Famous and Rare Cures, &c.

A Disease resembling the Mother.

THe Wife of Msr. *Salgues*, a Merchant of *Montpelier*, which was tormented many daies together with a pain about the Region of her Liver, with a light swooning, and a certain constriction of her jaws, and flegmatick Vomitings: her pains returned by fits, and sometimes reached to other parts of her belly. Sometimes she was taken with such fainting fits, that she seemed as though she would presently give up the Ghost. Seeing it was conceived to be the Mother which troubled her, suitable Remedies were used, but all the symptoms did return afterwards. At last having used Baths, Fomentations and Clysters, she voided by stool a certain flegmatick compact and broad matter like a swvatheband, of an hands breadth, and afterwards she had some stools of slimy matter, and at last was perfectly well.

If you intend to be skilful in Physick, diligently peruse my Guide to Physick and Chyrurgery, and the *Idea* of Practical Physick, and *Riverius* Practice. And be sure you don't scratch your head with a pair of Fools Fingers.

The 70 Observation or History of Famous and Rare Cures, &c.

The Dropsie.

A Certain young man, twenty five years of Age, being the Cooke of the Marquess *De Varenas*, after a continual and intermitting Feaver, fell into a Dropsie tympanites, with abundance of Water joyned therewith; after many Remedies, and frequent Purgings, by means of which he voided much serosity and wind, and his belly grevv lesser, which in tvventy four hours time returned to its former greatness; at last with these tvvo follovving Remedies used for fifteen daies together, he vvas cured.

Take Eryngo Roots, Madder, Smallage and Parsly, bark of Capar Roots, middle rind of the Ash-tree and Tamarisk, of each one ounce: Asarum Roots half an ounce, Leaves of Agrimony, Ceterach, Maiden-hair, Ground-Oak, St. Johns wort, Wormwood, Centaury, of each one handful: Carrot-seed, and Parsly-seed of Macedonia, of each half an ounce. Boyl them in two parts of Water, and one part of White-Wine to thirty ounces. In the strained Liquor, dissolve four ounces of Syrup of Cichory with Rhubarb. Make it into an Apozeme, for four Doses to be taken four mornings, adding to every Dose half an ounce of Diuretick spirit, and one scruple of spirit of Vitriol.

After the third or fourth dose of the Apozeme, he was purged with six grains of Mercurius Vitæ, and ten grains of Scammony, which caused no Vomit, only wrought downward.

The other Remedy was a Cataplasm of the Roots of wild Cucumer, made with pouder of Cummin-seed. Whose description you have in my Practice in the Chapter of a Dropsie.

The 71 Observation or History of Famous and Rare Cures, &c:

Of small Pox and bloody Flux.

A Boy five years old, the Son of Mr. *Limnsin* a Baker being strucken sick of the small Pox, the third day was taken with a bloody Flux, with a frequent desire of going to stool, he voided flegmatick and snotty Excrements, with great store of blood. The Pox were small, white and flat; being called to see him, I prescribed as follows.

Take red Rose-leaves one pugil, red Sanders half an ounce, Liquoris scraped and whole Raisins, of each one ounce: boyl them in the broth of a Wethers head. In nine ounces of the strained Li-

quor dissolve three drams of Confectio de Hyacintho, Conserve of Roses forced through a Searse half an ounce; one Egg. Make all into a Clyster, and give it oftentimes.

Take Waters of Scabious and Carduus, of each one ounce and an half; Syrup of dryed Roses one ounce, Coral prepared, and Pearls prepared, of each half a scruple; Bezoar-stone three grains, Confectio de Hyacintho *half a dram. Make all into a Julep, which give him twice a day.*

Take Oyl of Scorpions of Mathiolus *half an ounce, anoint his Groins and Arm-pits therewith frequently.*

When he had twice used the Clyster, and twice taken the Julep, his Looseness was quite stopped, and the small Pox began to break out more powerfully, and the Disease was afterward perfectly cured, so that he had no further need of my assistance.

Although the Remedies propounded are common; yet this Case deserves observation, because of the extraordinary event thereof; of all the Children that ever I saw in my whole life that had the small Pox, and a bloody Flux, none ever escaped but this: in others the bloody Flux was a certain sign of death, especially when much blood came away.

The 72 Observation or History of Famous and Rare Cures, &c.

Of a Malignant Pleurisie.

THe Wife of Msr. *Argelies* of *Frontinia* about the end of *March*, 1633. was troubled with a most grievous Pleurisie in her right side. About the end of the seventh day, and the beginning of the eighth, she was suddenly taken with a grievous palpitation of the Heart, so that her ordinary Physician supposed the pangs of death to be upon her, and pronounced openly, that she would suddenly die. But I conceived this palpitation to proceed from some putrid matter contained in her belly, and sending vapors upward. The event shewed it to be so, for after two hours she went twice to stool, and voided very stinking excrements, and so the palpitation ceased. Her case was counted dangerous, because the Disease would not abate for seven days together though frequent Remedies were used, and she did seem abated; yet on the eleventh day there was a rising behind her ear, which struck in again the day following, and on the thirteenth day she died. Whence it was manifest, that her Disease was a malignant Pleurisie, or rather a malignant Feaver attended by a Pleurisie.

The 73 Observation or History of Famous and Rare Cures, &c.

Of a Bastard Pleurisie.

ABout the same time the Maid-servant of Msr. *Germain*, a Citizen of *Montpelier*, had a pricking pain in her side, with a Cough and white Spittings, which nevertheless appeared twice or thrice bloody; she could lie best on her pained side, which was the right. Now she had no Feaver, which shewed that it was no true Pleurisie, seeing such an inflammation cannot be without an acute Feaver. On the seventh day of her sickness, the pain never ceasing all the while she spet blood plentifully for some hours, after which followed the flux of her courses, and after that her Disease was perfectly terminated. I conceived the cause of this Disease to be a certain sharp wheyish humor brought into her side by the Veins, which caused a pain without inflammation. Which humor being much stirred on the seventh day, it opened some small Veins, whence her spitting of blood was occasioned. But Nature conquering, and sending the said wheyish humor to the veins of the Womb, the Disease was terminated.

The 74 Observation or History of Famous and Rare Cures, &c.

A Palsie and Convulsion, being Hypochondriacal Symptomes.

MSr. *Fouquet* a Physician of *Frontinia* was troubled the foregoing Autumn with a very long lasting double Tertian which lasted to the beginning of Winter, 1633. He was of a melancholick Complexion, being forty years old, he had fed in the Lent upon bad diet; also had been troubled with very grievous passions of mind; After Easter he began to be troubled with a Catarrh falling upon his left Shoulder blade, where he felt a pain; a few daies after he fell into a painful imminution of motion and sence in all parts almost, but especially in his Legs and Thighs. Moreover painful stretching happened by fits in the said parts, so that the toes of his Feet were contracted, and the Muscles near his Groins were stretched like cords. In his upper parts, especially his Arms, he could stir himself more freely: But in all parts, his sence was obtuse and dull, so that he affirmed he had little or no feeling in his Nose and Face. He voided at his mouth a thin humor, which he said tasted sharp and harsh like vitriol; every day his Feaver was exasperated, and during the exacerbation, the tension of his muscles, his fluxion and other symptoms were encreased; also his Breast was very much straitned, so that he seemed to be stifled. At the beginning of his illness, he was twice let blood, and twice purged, and went to the Balerucan Baths; where he was four times put into the Bath four daies together, and had his Head washed, to no purpose. Being returned from the Bath, he took my Advice; Now I judged that this Disease of his proceeded from a wheyish humor flowing from his Brain into the marrow of his Back, and all the Body of the Nerves: and that the said wheyish humor was first gathered in his Hypochondria, especially in the Meseraick Veins, where a great quantity of melancholy humor was contained, bred of foregoing Causes. So that I conceived this Disease of his was an Hypochondriacal affection, whose symptomes were that same Palsie and imperfect Convulsion, bred of a wheyish humor, shed into the foresaid parts. An Argument whereof was both the melancholick Constitution of the Patient, as also the flowing of such an humor from his Mouth in great quantity, likewise the Feaver wherewith he was troubled in a manner continually; and as the Feaver encreased, all the Symptomes encreased; when as nevertheless a Palsie is wont to cure a Feaver proceeding from flegm. Now *Sennertus* tells us, that such Symptomes proceed from a melancholy humor, treating of the Hypochondriacal Disease, and of the Scurvy. This is no Palsie properly so called, which is caused by the stoppage of the beginning of the Nerves, but abusively so called, being no total privation of sence and motion, by stopping the Influx of the animal Spirits through the Nerves; but rather a depravation of the sensitive motive function, because there is a painful sense.

I prescribed him an Apozeme for many days together of temperate aperitives, purging him one day, and altering another, and applying an emollient and opening fomentation to his Hypochondria, a Liniment of the same faculty; also blood-letting after the first dose of the Apozeme, a Clyster being premised and a purging medicament. He used for his drink, the infusion of Tamarisk bark, Agrimony and Burnet. But the blood which came from him, appearing very full of bad juyce, he was let blood again. He found no good by his other Medicaments, but seemed to grow worse.

On the 24. of *April* I visited him again, and found him very weak with a continual slow Feaver, which had nevertheless Paroxysms of a Tertian Ague. In which his Hypochondria were puffed up with wind by fits, especially his Spleen. Sometimes also by reason of the said Wind, his Midriff was so compressed, that he would cry out, he was choaked and stifled; and having drunk a cup of Water, he belched twice or thrice, and was presently freed from the said suffocation. A fatty substance did swim upon his Urines like Cobwebs, and their sediments were of a mealy substance. Which kind of Urines are deadly, according to *Hypocrates*, in the second of his Prognosticks. On his wel-day he did spit exceedingly, and felt the humor tickle down between his scul and skin, or the muscles of his face.

On the 29. of *April* I visited him again, being at the last cast, his pulse very small, his spitting

spitting staid, and his breath stopt. Yet his understanding was unhurt: He died the day following in the morning.

If you mean to do good in Physick, diligently peruse *Riolanus* Anatomy, *Johnstons* Idea, and *Riverius* Practice.

The 75 Observation or History of Famous and Rare Cures, &c.

A pain in the side proceeding from Worms.

ABout the end of the moneth of *April*, 1633. the Daughter of *Raymund Michael* of *Frontinia*, being eight years old, began to be troubled with a Feaver and Cough, after which followed a pain in her side, so that she was supposed to have the Pleurisie. Howbeit, the fifth day of her Disease she voided three or four Worms by means of a Clyster; and the daies following she voided more, having taken Medicines against the Worms and a Purge, and so she was cured. Whence it appears, that Vapors arising from a putrid matter (of which Worms are bred) do cause pains of the side, a Cough, and other Symptomes, which make shew of a Pleurisie when there is none.

The 76 Observation or History of Famous and Rare Cures, &c.

A Kings-Evil swelling.

ON the 6. of *June*, 1633. Msr. *de Gaian* brought his Daughter to me, being thirteen years old, of a sanguine Complexion, which appeared by the reddish colour of her Face, and she had her Courses ever since she was eleven years old. Having for eight moneths together had a certain fluxion upon the right side of her Face, a few daies after it fell into her Neck, so that one of the kernels of that part seemed to be a little swelled. After that time the Tumor grew by little and little, so that it was now bigger than a Gooses Egg. She had many Remedies applied by a Physician and Chirurgion in that place for two moneths together, Purges, sweating Decoctions, a Caustick to the nape of her Neck, also Remedies applied to the part; first Resolvers and Emollients, afterwards Suppurators and strong drawers, by which no good at all was done; rather the Tumor which before was small, encreased greater. Whereupon I advising with Msr. *Delort*, Dean of the University, and Mr. *Thierry Haguenot*, an ancient Chirurgeon: At first we sent to the Balerucan Baths, that she might use them in drink, bathing, and have them powred upon her Head. And afterwards we prescribed these following Medicaments.

Pulvis Arthriticus to be taken with Ginger once every week, Blood-letting after the first Dose of the Pouder.

Fomentation by a spunge wet in Chalk-Water, pressed forth, and tied hard on upon the part for ten daies together. A Suffumigation of the stone Pyrites quenched in most strong Vinegar, and the smoak received by a Funnel which shall cover all the Tumor.

After the Suffumigation, the Emplaister of Vigo with a fourfold quantity of Quick-silver, to every ounce of which Plaister, add one dram of Roman Vitriol.

A Diet-drink of Sarsaperilla, to be used a long time without Wine.

The infusion for the Branchocele, described in the *Dispensatory* of *Quercetanus*, which must be used when the Moon is in the full.

The Waters of Meyn, drunk for a moneth together, and applied by way of Fomentation to the part twice a day, and of the same Water a Diet-drink was made.

Her Diet was continually drying.

After

After her return from the Waters of Meyn, if the Tumor ſhall not be diſcuſſed, it muſt be opened with a Cauſtick.

Thoſe were the Remedies we ordered for her,and ſhe uſed all of them,excepting the Waters of Meyn; becauſe when the other things did no good, but the ſwelling rather encreaſed, there was no hope from theſe Waters, but we thought beſt to come to open the Tumor which was done on the 19. of *September*, 1633. And when after a Cauſtick, inciſion was made upon the Eſchar,a very thin and clear Water brake forth,like Fountain-Water,and the Tumor preſently fell, and was well near as flat as the oppoſite part, which made us wonder, and we judged it worthy of Obſervation. For I ſuppoſe no Author ever wrote of any ſuch Tumor proceeding from Water, ſaving the Hydrocele and Hydrocephalos. Ten or twelve hours after it had been opened, ſhe was troubled with an acute Feaver, and a great fluxion happened into the part with inflammation; on the third day the Feaver ceaſed, after twice blood-letting, and twice purging. A Cataplaſm of Bread-Crums was applied to the Tumor, which ſettled a little, and a certain Flegmatick quittor flowed out of it. The thirteenth day after it was opened, the Eſchar formerly cut off, went out at the Ulcer; the caſe remained whole, and perfectly Membranous like a Sack, and a few daies after ſhe was cured.

The 77 Obſervation or Hiſtory of Famous and Rare Cures, &c.

The Venereal Pox.

A Certain young man of a Cholerick and Melancholick Complexion,being infected with the Whore-maſters Pox, in the moneth of *June*, 1633. underwent a ſweating Diet, and afterward was anointed with Quick-ſilver. After the ſecond anointing, when the flux began to proceed well, he was ſuddenly taken with a contraction of his Arms and Thighs, with a mighty ſtretching of his Belly, and ſuffocation, and ſuddenly his Flux ceaſed. Vehement frictions were uſed upon the parts contracted, Aqua Imperialis and Cinnamon Water were given him, which did no good. Afterward we gave him of our Treacle water, drawn with ſpirit of Wine, with which he was much eaſed, and a ſharp Clyſter being adminiſtred, his fit went away. Two days after, becauſe he did ſpit but little, Mercurial Emplaiſters were applied to his Legs, Thighs and Arms, which within twenty four hours made him ſpaul abundantly. But the Patient fell into ſuch a fit as the former, and being rubbed, and the former Water being given him, alſo a Clyſter being adminiſtred, which he could not void forth again; he was no waies eaſed by ſuppoſitories, bnt ſeemed wholly to be choaked. I cauſed another ſharper Clyſter to be given him of two ounces of Diaphænicon, and as much of Hiera picra,after which he went plentifully to ſtool, and was freed from his fit. The day following he fell again after his ſpauling into the ſame fit, but a more grievous one than any of the former; for it could not be driven away neither with Treacle Water, nor with iterated Clyſters, which purged him plentifully. Finally, ſeeing it was my Opinion from the firſt, that theſe Symptomes proceeded from a maſs of Excrements in the ſtomach mounting aloft, which could not be voided at the mouth becauſe of their thickneſs,or the weakneſs of the expulſive faculty: and being collected in great quantity, and malignantly diſpoſed,they vexed the mouth of the ſtomach,whence thoſe Convulſions aroſe, by reaſon of the conſent of the Nerves. Alſo,that from the foreſaid matter agitated by heat,many Vapors are raiſed,which diſtending the ſtomach,did compreſs the Midriff,whence followed ſuffocation, and a ſtretching of the Belly: I judged therefore that his ſtomach was to be evacuated with a quick and potent Remedy. And to this purpoſe, I gave him a dram of Salt of Vitriol diſſolved in Water, with which in the ſpace of a quarter of an hour, he voided about two pounds of a Flegmatick, Clammy and thick humor mixed with Melancholy, and was preſently freed from his fit; afterwards his fluxing was continued for many daies together, without any other Symptome, and ſo he was perfectly freed.

The

The 78 Observation or History of Famous and Rare Cures, &c.

Of Venereal Pox.

I Have Cured it in many, with a Decoction made of Sudorificks and Purgatives used twen daies together. If that did not the deed, I proceeded to fr ctions with Mercurial Unguent Many have been Cured in the middle of Winter only with this Decoction, who could not use sweating Diet, by reason of the Inclemency of the Air.

For this Disease, Read *Sennertus*, of the French Pox. And don't trust to a K avish Auth quoted by him, which giveth Direction how to lie with the most Pocky Whore, and yet receiv no harm.

The 79 Observation or History of Famous and Rare Cures, &c.

Of a Pleurisie degenerating into an Empyema.

THe Son of Msr. *de Calvieres*, Judge of Criminal Cases at *Nismes*, being twe ty years of age, about the middle of *May*, 1633. at *Montpelier*, fell into a Pleur sie on his left side, with which he was held in such a manner, that he could not lie on eithe of his sides, but only upon his back. Many Remedies were prescribed for him, by three Physicians in Consultation, and he was let blood ten times or more; yet his Disease lasted long, though the pain in his side seemed sometimes to cease, and the Patient could turn himself to any side. But his Feaver still continued, and the pain of his side returned. His Feaver had lasted to the forty fifth day, in which his side was observed somewhat to swell, and was pained when touche, and somewhat red. 'Twas judged, the Pleurisie was turned into an Empyema; and suppu ating Cataplasms were applied, wherewith his side did swell somewhat more; the sixth or seventh day after, when the opening of his side had been too long delayed (which ought to have been done as soon as ever the swelling in his side appeared) the Imposthume broke inwards. Howbeit the Patient did easily Cough up the quittor, which appeared laudable, and no waies stinking and came away in a great quantity daily; at first pure, and afterwards mixed with much flegm. After the Imposthume was broken, he could easily lie on either side, his Feaver lasting where-as before he could not lie on his wel-side, because he felt a mighty weight in his pained side, which sign is observed by *Hypocrates* in his Prognosticks. Eight daies being past after the breaking of the Imposthume, the voidance of quittor ceased, and there came nothing away save flegm. Then he began to feel a weight again in the same side, so that he could not lie upon his sound side; also some kind of rising did again appear on the outer part of his side, I conceived a new Collection of Humors was made in his side, and that there was need speedily to open the same, lest the matter being again shed into the Chest, should trouble the Lungs afresh, whence there might be danger of a Consumption. But because the other two Physicians with two Chirurgeons would not assent unto my Judgment, and his Mother made hast to remove him; he was carried to *Nismes*, where at last the Empyema was opened by a Caustick applied to his side, and quittor did a very long time flow from the Ulcer; and in Conclusion, the Patient was perfectly cured.

The 80 Observation or History of Famous and Rare Cures, &c:

Child bed Purgations suppresst.

A Woman of mean rank and quality, being e ght moneths gone with Child, was taken with a continual Feaver the 5. of *July*, 1633 On the third day of the Feaver she miscarried, and her Child-bed Purgations were wholly stopt; purple spots appeared in her whole Body, especially about her Neck; her Feaver was violent. I prescribed the opening of her Ankle vein, and

and Juleps compounded of cold aperitives, Frictions of the Lower parts, a relaxing Fomentation and Liniment to be applied to her Share and Perinæum. No good ſeemed to come by all I did, rather about the end of the ſecond day after her abortion, her Feaver was very much enraged, ſo that ſhe fell into a raving, and her countenance was very much changed, whereupon every body was convinced that ſhe was in a moſt dangerous condition. Then I cauſed a Vein to be opened in her Arm, and blood to be drawn to the quantity of ten ounces, which was very corrupt; it was about five a Clock in the evening, and I gave order to let her blood four hours after, *viz.* about nine of the Clock. I preſcribed her very cooling Juleps of a decoction of Lettuce, Purſlain, Sorrel, with Sal Prunellæ; alſo a cooling and emollient Clyſter, with which Remedies ſhe was ſo amended, that the day following her Feaver appeared very ſmall, her Purgations began to flow, and in a few daies ſhe perfectly recovered without any other Remedies.

The 81 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Suppreſſion of Urine by reaſon of a bit of Fleſh growing in the Yard.

A Certain Officer belonging to the Senate of *Divion*, being at *Montpelier* about buſineſs on the ſeventh of *July*, 1633. fell into a total ſuppreſſion of Urine, by a Caruncle ſwelled in his Yard, through immoderate carnal embracements. A Chirurgeon whom he at firſt ſent for, putting in a Catheter, cauſed a great effuſion of blood by wounding the part, and yet he voided no Urine. The ſick-man was tormented with moſt grievous pains and endeavors to piſs: I being called, ordered him to bleed twelve ounces, becauſe he was of a ſanguine Conſtitution; alſo to have an emollient and cooling Clyſter, and a lukevvarm Bath to ſit in, a cooling Injection, and anointing of his Kidneys, Share and Perinæum, with a cooling Oyntment; it was nine a Clock in the evening, and I then ordered him to be let blood again about midnight, all which orders were performed. In the morning he was in the ſame condition, endeavored mightily to make Water, but could do nothing, except four or five drops at a time. Being ſent for again, I preſcribed him a vomit of one dram of Salt of Vittiol, by help whereof, he tvvice vomited many flegmatick Humors; but in the ſecond vomit he voided an ounce or two of Urine, and ſaid that he was eaſed, vvhich had not hapned before. After that, by fits he piſt ſomevvhat more plentifully, ſo that within the ſpace of four or five hours his Bladder was quite emptied. There remained ſome kind of Inflammation of the part affected, which was cured with Emulſions with Sal Prunellæ in them, with Injections, Clyſters, and a Bath to ſit in, and Junctions.

The 82 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Difficulty of Breathing.

THe Son of Msr. *Hugs*, a Merchant of *Montpelier*, five years old, having been ill ordered by his Nurſes, among divers Symptoms was troubled moſt, with this, that when he ran, or uſed any vehement motion, he was troubled with ſhortneſs of breath. Finally, on the third of *July*, being much heated by exerciſe, he fell into a Cough with difficulty of breathing, a ſmall Feaver, and gentle Looſneſs, by which he voided yellow, flegmatick, and ſometimes greeniſh Excrements. Yet were theſe ſymptoms ſo light, that his Parents had no thoughts of calling a Phyſician; but an Apothecary applied a Veſicatory behind his Neck. I being ſent for on the fifth day of his Diſeaſe, find the ſame ſymptoms, from whence I conjecture a fluxion upon his Lungs, with danger of an Inflammation; and therefore I order him to be let blood, vvhich vvas not performed, becauſe the Chirurgeon could not find the vein: but Cupping-glaſſes with Scarrification were preſently applied, and a pectoral cooling Julep was given him. Theſe things were done about noon. But about three in the afternoon the Patient vvas ſuddenly taken vvith ſvvooning, from vvhich being quickly recovered, his pulſe vvas afterwards ſmall, languiſhing, frequent

frequent, and like the pulse of dying persons, his belly was very much stretched and pained, he fetcht his breath extream short, and had an unquenchable thirst. Many Remedies were used in this desperate Case, a Consultation of Physicians being called, which did no good at all; but the Patient growing still worse and worse, died at midnight. The body being opened, his natural parts seemed in good Case, save that his Bladder of Gaul was bigger than ordinary, and full of a blackish Humor. But the left part of his Lungs did stick so fast to his Midriff, that it could not be parted, from whence, in part, we conceive his shortness of breath proceeded. Also the left Ear of his Heart was larger than ordinary, and full of a thick compacted matter, perfectly white like boyled Lard. Which we conceive to have been the cause of his sudden death, by suffocating the left Ventricle of his Heart, and hindring the Ventilation thereof.

For Knowledge and Cure of these Diseases, diligently peruse *Riolanus*, *Johnstons* Idea; and my Practice of Physick.

The 83 Observation or History of Famous and Rare Cures, &c.

Spitting of Blood.

ON the thirteenth of *August*, 1633. Msr. *Duprat*, a Councellor at *Montpelier*, fell about night into a spitting of froathy blood, with a Cough, and voided a great quantity thereof in the space of a night.

Being called to him on the fourteenth day in the morning, I order him to be let blood eight ounces, and after that to have a Julep of Plantane Water, Syrup of dried Roses and Sal Prunellæ, afterward a Clyster was given him, a Cupping-Glass was applied to the Region of his Liver, he used a thickning and astringent Lick-Pot. At ten a Clock he was again let blood to six ounces, also he was ordered to use Syrup of Purslane. In the afternoon he fell into his spitting of blood again in great quantity, *viz.* to a pint: His Julep was repeated, Water and Vinegar were applied to his Testicles, a cooling Epitheme to his Liver, a cooling Liniment to the same part and to his Loins, a Cupping-Glass was frequently fastened to his Hypochondria; and about evening he was again let blood in his Arm, to the quantity of seven ounces; Juleps were prescribed of the infusion of Yarrow, Tormentil Roots, and Conserve of Roses; described in my Practice of Physick, in the Chapter of Spitting of Blood, which are very efficacious. For drink he used Conserve of Roses, with a Decoction of Barley and Liquoris. At night this following Syrup was prescribed.

Take Syrup of dried Roses, of the Juyce of Purslane and white Poppy, of each one ounce; mix them. Let him take a spoonful once every two hours, so as that he take the whole three ounces in the compass of that night. This Syrup did him wonderful much good, and the day following which was the fifteenth, it was repeated again, so as that he was to take one spoonful at longer distances. On the same day in the morning a Vein was opened in his Ham, and a good quantity of blood taken away; also the other Remedies were continued, and other things added, as an astringent and soddering Electuary; and finally, a Clyster was given him. All which time he did not spit very much blood, and the spittle which he coughed up at long distances, was bloody. Howbeit he was troubled with difficulty of breathing and hoarseness. But the following daies he did spit no more blood, and became perfectly well.

The 84 Observation or History of Famous and Rare Cures, &c.

A Gangrene.

A Certain man of a mean Condition, being sick of a continual Feaver, had a Vein opened by an unskilful Chirurgeon; whereupon his Arm swelled, was inflamed, and at last Gangrenated, so that his whole Arm was of a lead-colour. But in two places the colour was most of all changed, in which he felt not the Scarrifications which were made. Wherefore after many

ny Scarrifications, the ordinary Remedies were applied, which did little good, rather his Arm did grow worse. I being at last sent for, ordered the Scarrified Places to be moistened with spirit of Sulphur, whereby the mortified flesh was burnt, and cauterized as it were. Afterwards I ordered his whole Arm to be fomented hot, with spirit of Wine, wherein Aloes and Myrrh had been infused, afterwards the foresaid pouders of Aloes and Myrrh were sprinkled in great quantity all his Arm over, and then were laid upon the pouders, Linnen Cloths, wet in spirit of Wine; which Medicine being used for some hours together, his Arm in a Miraculous manner returned to its natural colour, the swelling being asswaged, and the Gangrene stopped, so that the day following the mortified and burnt parts began to separate from the living flesh; unto which was applied a digestive made of yelks of Eggs, Turpentine and Honey; and after perfect separation, the Cure was finished with Epuloticks.

The 85 Observation or History of Famous and Rare Cures, &c:

Nephritick Pains.

ON the 10. of *October*, 1633. the Cook of Msr. *de Miron*, his Majesties Lieutenant in *Languedoc*, being many years troubled with pains in his Kidneys, which would not give way to ordinary Remedies; he took a Bolus of Diaprunum Solutivum half an ounce, Panacea one scruple. With which he was gently purged, made thick Urines, and was freed from his pain. While the Medicine wrought, he felt the matter drawn away from his Reins without any pain.

The 86 Observation or History of Famous and Rare Cures, &c.

A Cholick Pain.

IN the beginning of *November*, 1633. the Lady *de Varanda*, was most grievously tormented with Cholick pains, and after two Clysters taken in vain, she drank a dram of the pouder of a Woolfs-gut in Wine, which was given her the foregoing moneth for the same pain; as may be seen in the 59. Observation of this Century, and presently her pain went away. Now ten or twelve daies after, though she had been purged with Apozemes, her pain returned more sharp than formerly; and though two drams of Philonium had been dissolved in a Clyster, which she took, her pain ceased not. The foresaid pouder was given again, and the pain became lesser, and within three hours went in a manner quite away. But the day after it returned more bitter than before. Five grains of Laudanum were given her, and her pain was quite taken away, and returned no more.

The 87 Observation or History of Famous and Rare Cures, &c:

Of an Ulcer in the Heart.

ON the 23. of *January*, 1634. I was called to the daughter of Msr. *N.* fourteen years old, who had for many daies before been troubled with a vomiting of Flegm, which took her once or twice in a day, especially in the morning, with an Heart-burning, which troubled her by fits. Also she had a pain on the top of her left shoulder-blade, and on the top of her arm where it is joyned to her shoulder. The night following, which was the fifth since she was first ill, she was taken with a Looseness and a Feaver, which held her all day. On the sixth day she took one dram of Rhubarb poudered with Broth, and had many stools; the Feaver continued, yet in the night she had but two stools, and slept two hours. On the seventh day her looseness continued, but not so frequent; so that she was let blood four ounces. These two things we alwaies observed upon the coming of her Feaver, that her Pulse was in a manner

alwaies intermittent; and whereas the foreſaid pain continued evermore fixed in the ſame part, and did not at all reach unto the Cheſt; yet the Patient could not lie upon that ſide, *viz.* her left, but preſently ſhe was taken with the heart-burning and Cough, ſo that ſhe was alwaies forced to lie upon her right ſide. A dry Cough vext her by fits, ſometimes ſhe voided wind upwards and downwards, and the ſame ſymptomes continued, eſpecially heart-burning by fits, and a pulſe unequally intermitting, & little ſleep; ſhe continued the uſe of cordial Medicaments internally and externally, alſo Worm-killers, and ſuch as ſtrengthened the ſtomach. When her heart-burning did very much trouble her, ſhe took a ſcruple of ſalt of Wormwood, with a ſpoonful of Juyce of Lemons; after which ſhe was exceeding well for ſome hours; but her ſymptomes returned, at night her Urines were thick and ſufficiently pale. On the ninth day a Veſicatory was applied to her Neck, whereby her Cough ceaſed; and before that the pain of her ſhoulder was abated, and ſhe could better endure to lie upon her left ſide: The ſame day ſhe took one dram of the Infuſion of Rhubarb, with one dram of Hiera Picra, and one ounce of ſyrup of Cichory with Rhubarb, with which ſhe was very much purged to good purpoſe, and her Looſneſs continued ſome daies, whereupon ſhe ſeemed to be perfectly upon her Recovery; though her pulſe did ſtill intermit in the third, fourth or fifth pulſation. After that ſhe was riſen out of her bed, the intermiſſion of her pulſe ceaſed, the frequency thereof remaining, and the Patient was troubled with a dry Cough eſpecially at night, with ſhortneſs of breath: Which ſymptomes continued for a long ſeaſon, and beſides difficulty of breathing; ſhe had by fits a pricking pain in her ſide, which did more vex her when ſhe lay on her wel-ſide, her Feaver was continually violent and contrarywiſe her ſhortneſs of breath was worſe when ſhe lay on her pained ſide. All which gave great ſuſpition that there was an Impoſthume in the left ſide of her Lungs. Finally, on the 34 day of her Diſeaſe ſhe was taken ſuddenly with ſpitting of blood, which ſhe voided by coughing to the quantity of eight ounces. Now the blood was thick enough, and not frothy, which the Patient her ſelf ſaid came down from her head, and that before the voidance thereof, ſhe felt a tickling in her throat, alſo ſome blood came away when ſhe blew her Noſe. Howbeit, in the evening, when her ſpitting of blood returned, it was apparent enough that it came from her Lungs, for it was altogether frothy, and was one pound in quantity. Whereupon ſhe was let blood in the Baſilica Vein of her left Arm, a julep was given her of Plantane and red-poppy water and Sal Prunellæ, and ſyrup of dried Roſes: ſhe uſed all night long ſyrup of Violets, of dryed Roſes, and of Poppies mingled together, wherewith her Cough was allayed, her voiding of blood hindered, and ſhe ſlept by fits. The day following in the morning ſhe was again let blood out of her right Arm, her julep was repeated, and many other Remedies uſual in ſpitting of blood were preſcribed in a Conſultation with Msr. *Ranchinus* the Chancellor, and *Delort* the Dean of the Univerſity. She did again ſpit blood to the quantity of eight ounces, about eleven a Clock before noon; her Medicines were continued, and ſhe was again let blood in her Ankle. At four a Clock in the evening her ſpitting of blood returning in a violent manner, ſhe died ſuddenly. Her Carkaſs being diſſected, the Lungs were found of a white colour, ſticking to the ribs on both ſides, and round about to the Midriff; alſo it ſtuck round about to the Pericardium or Heart-bag, ſo as to make one continued body therewith. But the Heart was found whitiſh, and near the middle thereof where it looks towards the Midriff, it was eaten and ulcerated, ſo that ſemi-putrid-fleſhy fibres might be pluckt away with the tops of ones fingers. And it was obſerved, that certain ſmall bits of fleſh very like theſe fibres were ſpit up with the blood ſhe did ſpit. So that, moſt true it is, that this ſick perſon did ſpit up the ſubſtance of her heart, which is very ſtrange. And whereas in the Heart-bag no Liquor was found, we muſt ſuppoſe that the matter cauſing this Impoſthume or Ulcer was mingled with the blood, and voided by Coughing. Some ſuch ſtories are to be found in *Schenkius* his Obſervations, the ſecond Book, where he treats of Tumors and Impoſthumes of the Heart.

The 88 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Dropſie of the Breaſt.

THe renowned Wife of the moſt noble Msr. *De Thomas*, the Kings Councellor in his Court at *Montpelier*, was troubled five moneths, with a fluxion of thin humors falling upon her

her Lungs, with a dry Cough, difficulty of Breathing, and a continual and ſlow Feaver, which was more violent every night, with a ſlight ſhivering, after which followed very plentiful night ſweats, ſo that every night ſhe was forced to ſhift her ſelf three or four times. For ſome daies the exaſperations of her Feavers came twice a day; after noon, and in the evening: in the day ſhe ſweat not, but alwaies in her ſleep. Alſo from the beginning of the Diſeaſe, ſhe had a pain on the left ſide of the Region of her Breaſt, and ſhe could hardly lie on that ſide; ſo that as ſoon as ſhe laid her ſelf on that ſide, ſhe was taken with a moſt troubleſome Cough, and more pain'd than before. Yea, and ſometimes by preſſing her ſide with the top of ones fingers, an exceeding great oppreſſion of her Lungs, and difficulty of Breathing did follow thereupon. Whereunto was added the puffing up of her Spleen, joyned with ſome ſtretching, which is thought to have occaſioned thoſe other diſorders.

Having conſulted with Msr. *Ranchinus* the Chancellor, it was believed that her chief infirmity was in her left ſide, and that it was ſome Collection of the humors which oppreſſed the left ſide of her Breaſt. But what kind of matter was collected, could not certainly be known. Howbeit thus much may be avouched, that it is either Water or Quittor, for the ſigns of both concur; and the like is recorded by *Hypocrates*, where he ſaies, in his ſecond Book *de Morbis*, that ſuch as are troubled with a Dropſie of the Lungs, are affected juſt as thoſe that have a ſuppuration, only leſs violently and longer. Our opinion did more encline that it was a watry collection, becauſe neither Pleuriſie, Inflammation of the Lungs, nor ſpitting of blood had preceded, nor had ſhe ever voided purulent matter. She died of a Comſumption, and gave charge before ſhe died, that her Body ſhould not be opened.

The 89 Obſervation or Hiſtory of Famous and Rare Cures, &c:

Of Suppreſſion of Urine.

MR. *Raymund Ratte*, ſixty years of Age, a plethorick perſon, and troubled with the ſtone, who had been accuſtomed without any hurt to void many ſtones at times with his Urine; about the end of *January*, 1635. after he had voided many ſtones upon occaſion of immoderate exercile, fell into a total ſuppreſſion of Urine, which ſuppreſſion (as was clearly apparent by ſigns) was in his Kidneys, not in his Bladder. For three days together he had made no water when I was called to conſult with two ancienter Phyſicians, the one of which was his ordinary Phyſician, who during the three days aforeſaid, had preſcribed ſundry Diureticks, both external and internal; Clyſters, baths to ſit in, potions, and the like. And before that he was called, the Patient had been purged with a gentle Cathartick. I delivered my Opinion in the firſt place, and ſaid that the chief cauſe of this Diſeaſe, or at leaſt which Foments this Symptome, is a mighty plenitude of the Veins above the Kidneys, which by reaſon of diſtention, cauſed by plenty of the ſeroſities, retained the ſpace of three daies, cannot eaſily contract themſelves to expel the ſame, whence many times a difficulty of making water does ariſe. Now that there is a great plenitude of ſerous humor, is apparent both from the plenitude of the Patients body, as alſo becauſe he has been uſed to drink much; and when he was in health, he was wont to make three or four pints of water every night. Therefore I judged that Diureticks were not to be uſed, which by bringing humors to thoſe paſſages, might encreaſe their diſtention. But that rather ſome notable revulſions were to be procured by blood-letting, and purging, and that blood ſhould be taken away in a good quantity as ſoon as might be; and that five or ſix hours after a ſtrong phlegm and water purging medicament ſhould be adminiſtred. The other Phyſicians were of the ſame mind, and a pound of blood was taken away before noon; and at evening one dram of the pouder of Diacarthamum without the ſeeds, was given him, which gave him many ſtools, and after four or five ſtools, he began to make water, and made firſt four ounces of blackiſh Urine, and a little after a greater quantity of red, and after that clear as water. He voided abundance of Urine in the ſpace of a day, and was cured. Almoſt ſuch another caſe was propounded in the firſt Obſervation of this Century.

The 90 Observation or History of Famous and Rare Cures, &c.

Pain of the Stomach.

ON the 25. of *January*, 1635. I was called to a Gold-smith of *Montpelier*, who for two moneths had been troubled with a most violent and perpetual pain in his stomach, so that by the pain and want of rest, he was grown extream lean. During the said space of time, his ordinary Physician had prescribed him twelve or fifteen gentle Purgations, and many other remedies both internal and external, not omitting Fomentations, Liniments, and such like. At last three Physicians being called to consultation, a vomit was prescribed of a decoction of Radish-seed, Orach, &c. Which are commonly prescribed to cause vomit; which having taken, he vomited not at all; and having taken the like Medicine again, he eased his stomach, and vomited plentifully, whereby his pain was not at all eased. Afterwards he was again purged, and a sweating Diet was prescribed him. Two daies after his purging, before he began the use of his sweating decoction, some body put into his head to send for me, which he did about the evening, and told me the History of his Disease. And I to shew that he might have ease, at least for a time, prescribed him for that night five grains of Laudanum, with which his pain was wholly taken away, and he slept all night; whereas for three moneths, he had never slept longer than an hour. In the morning he said he was cured: Yet his pain returned, and could no waies be asswaged, but by giving him Laudanum divers times, and that for a small while, till at last he died of a Consumption. His body being opened, a mighty Schirrhus was found, which possessed the whole Pancreas and part of the Mesentery; also it went about the Pylorus, and the beginning of the Jejunum Intestinum; so that it did so straiten the passage from the Stomach to the Guts, that it was almost quite shut up, and his stomach was found full of meat and drink. Seeing therefore the nourishment could not be distributed into the body, he died of a Consumption. The Schirrhus could not be felt by the hand, because it lay concealed under the Stomach and Guts. It made so great a pain, because it possessed the Pylorus and the lower part of the Stomach.

For the Diseases in the eight last mentioned stories, Read the Guide to Physick and Chirurgery, and the Idea of Practical Physick, with Riverius *Practice of Physick, of the last Edition.*

The 91 Observation or History of Famous and Rare Cures, &c.

Of Worms.

THe Son of Msr. *Gerard*, being four years, began to be sick, *January* the 25, 1635. of a Feaver proceeding from Worms, with a vomiting of leek-coloured humors, and continual Stomach-sickness. I prescribed him an usual potion against Worms, to which was added because of the malignity (which was known by the humors voided, and by a kind of swelling all his Body over) four grains of Bezoar; also he had a sweet Clyster given him. Having taken the potion, he vomited two Worms, and voided one by stool with the Clyster. At night he took the potion again, and was next day well, so that his Friends did not desire he should take any more Physick. Two daies after he fell into the same Disease, and was much more grievously tormented than before, with unquietness and continual groaning, even in his sleep. I presently prescribed him a potion of the infusion of Rhubarb in syrup of Roses in Purslane-water, with which he had three stools, of exceeding black excrements; and after his purgation all the Symptoms remained, as also his vomiting was encreased, so that he cast up all his Broths, and whatever he drank; whence it was, that the potion formerly given him against the Worms had now no effect (though formerly it did him so much good) because he vomited it up again. And therefore considering that he did not vomit the Confectio de Hyacintho which was given him in Broth; I gave it him two times more, with an addition of four grains of Bezoar, whereupon he vomited no more, slept in the night, and was much better, Whence I conclude, and think it worthy of Observation, that Bezoar stone is of great efficacy in the

Case

Case of worms. He took the foresaid purging potion again; after which he had a critical loosness, with which his Disease was very much abated; and at last with specifical Juleps of a decoction of Scordium, and St. Johns-wort made with cooling things, it was perfectly cured, he being after his Juleps again purged with Senna, Rhubarb and Syrup of Roses.

The 92 Observation or History of Famous and Rare Cures, &c.

An Impostbume of the Abdomen.

ON the 16. day of *February*, 1635. I was called to the Daughter of a Widow, sometime the Wife of *John Peire*, a Merchant of *Montpelier*, being fourteen years old, whom I had cured two years before of a beginning Dropsie, since which time she had been alwaies sickly. And now she had been three weeks sick, without the advise of any Physician. I found her sick of a continual Feaver, with a moderate loosness, whereby she voided many Flegmatick and crude Excrements. She told me also, that her belly did again swell, and that she felt therein at times a pricking pain, likewise her Legs did swell by fits. Presently I began to think that her Dropsie was returning, which that I might more certainly examine, I put my hand upon her Belly, which as I was about a little to press, she would not suffer me, complaining that I put her to pain. Whereupon, I supposing that such kind of pains were not usual in Dropsies; I called for a Candle, and looked upon her Belly; which I found naturally coloured, but raised and swelled, and that the swelling was round about her Navil five fingers in breadth, beyond which Circumference she might be touched without pain; but where the Tumor was, she was much pained if it were never so little compressed, especially on the left side, two fingers from her Navil, where from the beginning of her sickness she felt at times a pricking pain. Moreover, in the Tumor it self I perceived some Humor slipping to and fro, all which considered, I pronounced that an Impostbume was lurking between the Peritoneum and the Muscles of her belly, and that it was already come to suppuration; and presently I caused a Chirurgeon to be sent for, who was of the same Opinion. And therefore we resolved to open the Impostbume as soon as might be, least if it should break into the Cavity of her belly, it might cause sudden death. A Caustick was therefore applied to that part, where from the beginning she had felt a pricking pain; and after three hours an Eschar being raised, an Instrument was forced in two fingers deep, but no matter came forth. But the Chirurgeon durst not force his lancet any further, least he should make an hole in the Peritoneum, and so the matter should flow into the Cavity of her Belly. Wherefore he put a tent into the hole, which being drawn out three hours after, a little quittor came away. The day after the tent being drawn out in the morning, a great quantity of quittor came forth, being of a bad colour and smell. Howbeit the Patient grew worse and worse, so that she died the fifth day after the Impostbume was opened. Her body being opened, the muscles of her Belly in the place swelled, were found to be putrified on the left side near the Navil, and on the right side beneath the Navil, the Guts did stick fast to the Peritoneum, and the parts thereabouts were putrified, the Liver being very yellow did stick on all sides to the Peritoneum and the Midriff, and was so great as to fill half the Chest, and to be very near the Heart; all was full of Quittor and Corruption, and stunk abominably: moreover she was extream lean all her body over, being consumed away, by reason the Liver was not able to make blood.

And not only Impostbumes of the belly in a cronick disease, and a body ill affected are deadly; but those also for the most part, which follow Feavers, either continual or intermittent; which *Hypocrates* has condemned in his Coick Prognosticks. And Mr. *Pachecus*, a Physician of *Lunella*, my friend, saw a young man that had a Tertian Ague, whose fits exceeded not the number of seven; yet an Impostbume happened about his groin, which being opened, sent forth laudable quittor at the first; but in the following daies, there followed bad Symptoms, the quittor seemed worse, and the sick person died on the twentieth day: which Impostbume he might nevertheless have judged at the first to be mortal, because when it appeared, bad Symptoms appeared with it. Whereas Impostbumes tending to health, ought to bring with them an abatement of Symptoms. If the contrary happen, it signifies only a setling of the matter into that part, and not a critical expulsion.

The

The 93 Observation or History of Famous and Rare Cures, &c.

Hard Labor in Child-bed.

THe Wife of the Baron *Daumelas*, General Treasurer of *France*, was three daies in Labor, so that she was at last extreamly weakened; I being sent for, prescribed her this following potion.

Take Dittamus of Crete, the two Birth worts, and Trochisks of Myrrh, of each half a scruple; Saffron and Cinnamon, of each twelve grains: Confectio Alkermes half a dram, Orange-flower water and Mugwort water, of each one ounce and an half. Mix them into a potion, which when she had taken, presently her throws came upon her, and a little after she brought forth twins. The same happened to the Wife of Msr. Sartrey, *when she was brought to bed of her first Child, she being the daughter of Msr.* Boschius, *an Apothecary at* Montpelier.

The 94 Observation or History of Famous and Rare Cures, &c:

An immoderate Flux of Courses, with Suffocation of the Womb.

A Maid servant of the Baron of *Castries* did suffer so plentiful a flood of Courses, that she voided four or five pound of Blood in the space of two hours; whence followed so grievous an Hysterical fit, that she lay speechless, and as it were dead; though her Eyes remained open, and she made signs with her hand, that she was strangled. Being called to her, I prescribed this following potion, fit both to stop her flux of Courses, and to assivage her Womb-sickness.

Take Water of Orange-flowers, of Roses and of Plantane, of each one ounce: Dragons blood twelve grains, Sal. Prunellæ one dram. Mix them, make them into a potion, which she took again three hours after, having taken some broth between. After the first taking, all the Symptoms were abated; after the second, they wholly ceased.

The 95 Observation or History of Famous and Rare Cures, &c.

The Venereal Disease in a Child.

THe Son of Msr. *N.* being two years old, was by his Nurse infected with the Whores Pox, which first discovered it self in broad red Pustules, which were thick upon his Peritoneum; after which followed Ulcers in his Buttocks, after that Pustules in his Face, and at last Ulcers in his Throat and Lips; Also his body daily consumed. Being sent for to him, I prescribed these following Remedies.

Take Senna cleansed one dram and an half, Choice Rhubarb and Agarick newly Trochisked, of each two scruples; Cinnamon half a scruple. Infuse them in Carduus water, and in the strained liquor dissolve one ounce of Syrup of Roses; make all into a potion, give it in the morning, and let him take it again once every week.

In the intermediate daies between his Purges, he used this following Decoction.

Take Guajacum wood one ounce, of the bark thereof half an ounce; Fonntain water three pints; infuse and boyl them according to Art, till a third part of the Liquor be consumed. Let him take four ounces of the strained Liquor in the morning, without sweat, by reason of the coldness of the Air, for it was mid-winter; also I feared least his tender body should be over dried, for which cause also I allowed him a restorative diet. He did use the same decoction for his ordinary drink, but allayed with an equal quantity of fair water.

When

When he had continued these Remedies for twenty daies, all the Symptomes vanished, and the Child was nourished, even while he took his Physick, and at last grew fat. Now it was in the midst of Winter, and he seemed perfectly cured.

Howbeit within a moneths time the same Symptomes returned, and the Child was again grown lean.

We ordered that he should use the same Remedies again, only we made the Decoction a little stronger, by boyling the Liquors half away, and we covered him with Cloths that he might sweat a little. With this Cure he was again restored to health in the space of fifteen daies, which nevertheless we had continued longer for fear of a Relapse, but that the extream coldness of the Winter did hinder us. Having therefore omitted his Medicaments for twenty daies or thereabouts, the Ulcers were renewed. And because then the Air was mild enough, it being *February*, and the Wind in the South, I set afresh upon the Cure, but after a more effectual manner.

In the first place I gave him eight grains of Mercurius Dulcis, with four grains of Diagridium in broth, with which he was strongly purged by vomit and by stool; and every fourth day I gave him this Medicament: and in the intermediate daies he took a Decoction, made after this manner. The foresaid quantity of the wood and bark of Guajacum was put into an Alembick, with one pint and an half of Water. They infused twenty four hours, and were afterwards distilled to the half, the Alembick being well luted. The Liquor which remained in the Alembick was strained and mixed with the distilled Water which was a little sharp; and of this mixture he took four ounces in the morning hot, and being well covered, did sweat lustily after it. This last Method of Cure was continued twenty daies together, by which his Disease was quite taken away.

To the Ulcers on his Buttocks was applied an Oyntment made of Honey of Roses, Yelks of Eggs and Turpentine. And the Ulcers in his jaws were soon Cured by Honey of Roses, made sharp with Spirit of Vitriol.

The 96 Observation or History of Famous and Rare Cures, &c.

Immoderate flux of Child-bed Purgations.

A Certain Woman having miscarryed, was troubled with an immoderate flux of Blood, which did exceedingly weaken her. I ordered her to be rubbed and tied on the upper parts of her body, Cupping-Glasses to be applied under her Dugs, Epithems also and young Pigeons, and her hands to be fomented with hot Wine, in which Confectio Alchermes was dissolved, and to take this following potion.

Take Water of Plantane, Orange-flowers and Roses, of each one ounce; Sal Prunella one dram, Dragons blood half a scruple; Mix them into a potion. Which was presently given her, before the other Medicaments were provided, and within a quarter of an hour the pains of her Belly and Loyns ceased, and her Flux stopped, so that she had no need of those other Remedies.

See my Directory for Midwives, and *Riverius* Practice, and *Riolanus*; all of the last Edition.

The 97 Observation or History of Famous and Rare Cures, &c.

A Cancer.

MSr. *Chape* of *Tholouse*, of a Noble Family sojourning at *Montpelier*, in the year, 1635. towards the end of Winter, was taken with a small push on his upper Lip, which turned into a Tumor that covered almost all his Lip, and it was hard and livid, with a pricking pain and sense of heat. By the advice of another Physician he was frequently let blood, and gently purged, with Purges of Senna and Cassia, cooling Juleps being first used. And when he had for some daies continued these Remedies, and the Disease nevertheless grew worse, leaving

ving his former Physician, he committed himself to my Care the second of *April*, in the year aforesaid. But I considering the foresaid signs, add that all topick Remedies whatsoever did exasperate the malady, and made the pricking and burning pain more vehement: I conceived it was a cancerous Tumor, and although that Disease be accounted incurable, yet I undertock the Cure thereof, being taught by *Galen*, that a Cancer at first, while it is fresh may be cured, as we have it in the 10. Chap. of his second Book *ad Glauconem*, where speaking of a Canter, he has these words; *I have often Cured this Disease when it was but beginning, but when it is grown large, it cannot be cured without manual operation*; and a little after, *this Disease I have (as was said) Cured at the beginning, especially when the melancholy humor was not very thick; for then it easily gives way to purging Medicaments, by which the Cure is effected*; and it it easie to conceive, that these purging Medicaments must purge black Choller. Which must be used so long as till the Patient have recovered his former health, using in the mean time such a Diet as may breed very good Humors. And according to the Rule of the said *Galen*, in the ninth Chapter of his Book *de atra Bile*, and his Comment upon the 47. Aphorism of the 5. Section, Those that are troubled with this Disease must be purged with strong Medicaments. Wherefore I conceived I must fly to the use of strong Remedies, the chief of which is the Root of black Hellebore, which is most effectual to purge Melancholy. Thus therefore I began the Cure.

Take Roots of Buglos and Cichory, of each one ounce: Leaves of Agrimony, Borrage, Ceterach and Veronica, of each half an handful. Boyl all with a Chicken, and in the strained Broth, dissolve one dram of Tartar: Let him take this Broth in the morning, twelve daies together.

In every fourth dose of Broth, dissolve two ounces of the following Syrup.

Take of the Juyces newly pressed forth and clarified, by setling of Borrage, Buglos, Fumitory, Cichory, of each three pounds: Juyce of Veronica and Fragrant Apples, of each a pound; Senna cleansed six ounces: Epithymum two ounces, Choyce Rhubarb and Agarick newly Trochisked, of each one ounce; Ginger and Cloves, of each one dram. Infuse them, and boyl them according to Art, till there remain fifteen ounces of the strained Liquor, in which dissolve the like quantity of Sugar, and boyl it to a perfect Syrup, for the use aforesaid.

To the last dose of Broth, add four grains of extract of black Hellebore. Let him take it, and order himself accordingly.

This purged him very vehemently, both upwards and downwards, but the same day the Tumor was much abated, and without pain.

After the use of his Broths, he used a lukewarm Bath for three daies together. Horse-Leeches were applied to his Hemorrhoid Veins, an Issue made in both his Legs; he drunk Whey boyled with Epithymum for a moneth, and bathed once every week.

Fifteen daies after he had taken the extract of Hellebore, he took the same again with three drams of Diaprunum Solutivum, the operation whereof was like the former, and the same day the Tumor seemed to be abated.

All Topick Medicaments did exasperate the Tumor, and made the pain more intense, saving the Oyntment of green Frogs, which is exceedingly applauded by *Aquapendent*, *Chametæus*, and others, and it did very much in this Disease. So that I conceive the Cure thereof to be chiefly attributed to two Remedies, *viz.* Extract of black Hellebore, and the Oyntment of green Frogs. Yet the magistral Syrup did much assist the Cure, which he used twice a week.

Within a moneth after the beginning of the Cure, the Tumor came to suppuration, and broke of it self, with quittor sufficiently good. The Oyntment aforesaid was continually applied to the Ulcer, and spread all over the Tumor; and the Tumor grew less and less, and was at last insensibly Evaporated, and the Ulcer was brought to a Scar.

The Oyntment of green Frogs is thus made:

Take Green Frogs that live among Trees, or in pure Waters, and put them in an Earthen Pot full of small holes in the bottome, and fill their mouths with Butter, cover the Pot close, and

daub

daub the juncture with clay, and set it over another empty pot which must be set in the ground up to the brim; then make a fire round about fit for distillation, and gather the Oyl that drops into the pot in the ground, and mix it with the ponder of Frogs into a Liniment.

The 98 Observation or History of Famous and Rare Cures, &c.

Of a flegmatick Inflammation of the Lungs.

Msr. *Gualtier*, General Treasurer of the Kings Exchequer, being sixty years of Age was troubled with a flegmatick Peripneumonia; which was known by his Cough, difficulty of breathing, Feaver, pain under his right shoulder, and redness of his cheeks. And because he seemed very ful of flegm, of which he had vomited a great quantity; he had a Clyster given him which wrought three or four times, and was the next day let blood, only once; and a purging Medicament was given him of an infusion of Rhubarb, with Manna and Syrup of Roses, with which he was excellently purged on the fourth day of his Disease, which was the 29. of *May*, 1635. and the day following he appeared free from his Feaver and other Symptomes. Whence it appears, that parging is sometimes good in a Peripneumonia or Inflammation of the Lungs, though it be for the most part Pernicious to Parge before the seventh day.

The 99 Observation or History of Famous and Rare Cures, &c.

A Consumption beginning.

IN the moneth of *May*, 1635. The Wife of Msr. *Thomas* a Councellour in the Exchequer Court, died of a Consumption, and a moneth or two after, her maid that had tended her night and day, seemed about to fall into the same Disease. For she had a lingring Feaver, with a dry Cough which held her day and night, leanness of her whole body, want of Appetite, and want of sleep. I being sent for to her, ordered her to be let blood, and to have an universal purgation with an Apozeme, and luke-warm baths, with a thickning course of diet, and cooling; all which did no good. At last considering with my self that her disease proceeded from a Malignant quality, impressed upon her Lungs and heart, by way of Contagion, I prescribed her a decoction of Guajacum for fifteen daies, without sweating, and a restorative diet. With which Remedy she was perfectly Cured. And her Feaver, Cough, and other Symptomes went quite away.

The 100 Observation or History of Famous and Rare Cures, &c.

Small pox.

THe Son of Msr. *Bondon* of *Languedoc*, being nine years old, and sick of a Feaver which seemed to threaten the small pox was committed to my care, in the moneth of *June* 1635.

The first day I commanded a Vein to be opened, and six ounces of blood to be taken away; and at night as much more to be taken; Juleps were prescribed him, and to be anointed with Oyl of Scorpions, and other ordinary Remedies. On the second and third day he raved a little. The small pox appeared, small, thick sowen, and flat. They encreased by littleand little, but very slowly, so that on the sixt day his Face seemed not at all swelled, The Pox were flat in his Face, and al his body over, and hollow in the midele, yea and some of them were black in the middle. His Parents were the more fearful, because they had lost three Children of the same disease, whose Pox were just like these of our Patient. I therefore thinking it

best to fall to work with the most effectual Medicaments, prescribed him this following Ju-

Take Carduus water, three ounces; Treacle water, three drams, Trochisks of Vipers, one scruple; Bezoar stone, six grains. Give it in the evening.

Young Pigeons were applied to his Heart, and afterwards a Liniment of Treacle, Confectio Alkermes, and Oyl of Scorpions of *Matthiolus*.

In all his broths a Scruple of Bezoardicum Minerale was dissolved. The day following, which was the seventh of the Disease, he had three stools of a matter sufficiently thick, but of a perfect Lead colour. At the same time he voided most thick Urins, and the breaking out of the Pox was so furthered, that in a daies space, his Face was much swollen, and from that time forwards the Pox grew sufficiently great. The Bezoardicum Minerale was continued for a day longer, and afterwards Confectio *de Hyacintho*, which was given him at first. Till at last the Patient was perfectly freed from that Cruel Disease.

THE

THE SECOND BOOK OF THE Medicinal Obſervations, *And Remarkable Cures of* LAZARUS RIVERIUS,

Councellor and *Phyſician* to the King, and Profeſſor of Phyſick in the Univerſity of *MONTPELIER.*

The 101 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Cholick pain.

THE firſt of *July*, 1635. Mſr. *Sarret*, Viſitor General of the Salt-pits, being forty years old, was taken with amoſt grievous, Cholick pain, which could not be aſſwaged, neither with Laxative and Carminative Clyſters, and Aqua Benedicta; nor with Fomentations and Baths to ſit in, uſed for twenty four hours. His pain therefore continually raging, I preſcribed theſe following Pills.

Take of the beſt Aloes one dram; Diagridium eight grains; Laudanum Opiatum five grains. Make all into ſix Pills, and let them be gilded.

He took theſe Pills at Midnight, and at four a clock in the morning his pain was quite gone, and he was purged five times that day, and ſo was perfectly cured.

The 102 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Small pox, and Looſneſs.

THe Son of Mſr. *Graſſet*, a Counceller in the Court of Accounts, five years old, was ſick of the ſmall Pox, with a Looſneſs, which continued during the whole courſe of the Diſeaſe. On the ſeventh day of the Diſeaſe, which was the 15. of *Auguſt*, in the year 1635. his Looſ-

nesse was much more violent, his Feaver high, vvith mighty thirst ; the Pox vvere flat, because the Loosnesse did hinder their rising. Other Remedies having had all along little effect, I prescribed him this followving julep, respecting his Loosnesse and the malignity of the Disease.

Take Roots of Cinquefoyl and Tormentil of each one ounce ; Scabious and Pimpernel leaves of each one handful ; Scordium a pugil ; yellow Sanders two drams. Boyl all to twelve ounces for three doses, to be taken twice a day : adding to every dose half a dram of Confectio de Hyacintho, half a scruple of trochusks of vipers, and four grains of Bezoar stone.

After he had taken once of this julep, his loosnesse vvas abated, the Pox rose high, and his thirst vvas lessened.

In very many children besides, the same potion did vvonderful much good, in stoppinge their Loosnesse, and in raising the Pox vvhen they vvere flat. To it I added, Rose vvater and Orange-flovver vvater, of each half an ounce. It did vvonderful much good, vvhere there vvas no loosnesse the Pox being flat ; and thus I compounded it for the most part.

Take Roots of Cinquefoyl and Tormentil of each one ounce : Leaves of Burnet and Scordium, of each one handful ; Yellow sanders and shavings of Ivory, of each two drams, Boyl all to twelve ounces. In three drams of the strained liqour dissolve Orange-flower water and Rose-water of each half an ounce : Trochisks of vipers one scruple. Bezoar stone four grains, make them into a potion, give it all at once, twice in a day to such as are big : but to sucking children give frequently a spoonful.

The 103 Observation or History of Famous and Rare Cures, &c.

The after-birth retained

THe honorable Wife of Msr. *Grasset*, Councellor in the Court of Exchequer, in the beginning of *October* 1635. Having miscarried of a three moneths conception, and brought forth a very well shaped child ; had her after-birth retained. Whereupon she was long troubled with the whites, and perceived a kind of a stink in her mouth, which vanished after some daies. She voided certain peices of a membranous substance, but very few and small. Whereupon the women avouching that she had voided her after-birth, by peicemeale, I was still of a contrary opinion. By little and little she recovered her former health, the white flux stil continuing. Howbeit, after two moneths and an half, she was taken with an immoderate flux of her courses, with which her after-birth being dried was voided peice after peice. Which is very well worthy of observation, that the after-birth could be so long retained in the womb, without greivous detriment to the patient.

The 104 Observation or History of Famous and Rare Cures, &c.

Of a watry Rupture in an Infant.

THe Son of Msr. *de Aumelas*, General Treasurer of *France*, being eleven moneths old, had a watry rupture in his right testicle, with a matter contained in the proper membrane of the testicle called *Dartos* ; so that the testicle seemed as big as a small Egg. And this tumor had troubled him from his birth, which they had long laboured to discuss, by applying Cotton-wool smoaked with Franckincense. At last they sent for me, and I prescribed a Cataplasme, in the beginning of *November*, 1635.

Take Bean-meal half a pound, boyl it in strong rich wine to the Consistence of a pultis, then add three drams of Oxymel simple. Make all into a Cataplasm or pultis and apply it morning and evening.

In the space of eight daies, with this only remedy, the tumor was quite discussed.

The

The 105 Observation or Histoty of Famous and Rare Cures, &c.

Worms.

ON the 25 of *November* 1635, a Boy four years old was troubled with worms, that he was tormented with a greivous pain in his belly, with extream weakness, so that his pulse could not be perceived in his wrist, his Eyes were hollow and void of spirits, just like the Eyes of dying persons. He had been sick three daies, and voided four worms at his mouth, with a vomit of black humors. An Apothecary had given him potions against the worms, and a purging potion of Electuary of Diacarthamum, and Rhubarbe, which wrought not at all I prescribed him powerful Remedies against the worms both internal and external, which did no good. The next day he continued in the same condition. I ordered him to take eight grains of Calomelanos of Turquetus, and six grains of Scammony, with which he was purged and voided a clammy, glewish and putrid matter, with two worms. He had two stools, was very much eased, and within a few daies perfectly recovered.

If thou meanest to make profitable use of these Histories, resolve neither to be Fool or Knave, but be sure you read over with care my Guide of Chyrurgery and Physick, the Idea of Practical Physick, and *Riverius* Practice: all of the last Edition,

The 106 Observation or History of Famous and Rare Cures, &c.

Pain of the Hemorrhoids.

THe 21 of *December* 1635, Mr. John *Charanton*, of *Montpelier*, having walked on foot to a village two miles from the City, thick clad, he was exceedingly heated, by which means his humors were very much stirred, and settled to his fundament, whereupon his Hemorrhoid veins did exceedingly swel, with Inflammation and a most sharp pain. All the following day he was exceedingly tormented, and past the night without any sleep. The day following he rode to town, resting himself upon the stirrups with great pain, whereby the tumor was very much irritated. I being called in the afternoon, caused him to loose seven ounces of blood; in the morning he had two stools. About evening, because of the vehemency of his pain, he was again let blood. In the evening he took a julep with Syrup of Poppies. And he used four times in the night a fumigation of great Houseleek boyled in white wine; he slept by fits, and the tumor was asswaged, and the Hemorrhoids abated in their distention, and by continual use of this suffumigation and of pain-asswaging liniments, he was quickly Cured.

The 107 Observation or History of Famous and Rare Cures, &c.

Children dying in the Birth.

A Dyers wife of *Nismes*, from the time that she had been married, had three times brought forth a mature Child, in the ninth moneth; she had the ordinary throwes of women before the birth, without any unusual trouble so that her Labors were not very hard or troublesom; nor was the woman of an ill Habit of body, nor had she any disease upon her, or any thing preternatural in her child-bed pains, the child sufficiently stirred it self in her womb, yet when it came into the world, it was found dead, and this had happened three times. Her Physitians after her second birth prescribed her purgations, and a sweating diet, also she changed her midwife, Yet the third child was found dead, in the same manner. The cause and cure hereof is demanded. Since no cause is related in the History, it is exceeding hard to conjecture the same. Yet, to speak my opinion; I say these cases happened, either through the childs weakness

weakneſs, or the ſtraitneſs of the womb or its neck, in the time of Child-birth. The weakneſs of the child contracted from ſome hidden fault of the ſeed or mothers blood, might cauſe, that when the child did moſt indeavour to make its way in the birth, it might faint away and die, as an eight moneths birth does for that cauſe neceſſarily periſh, becauſe it made ſome endeavor in the ſeventh moneth, which if it repeat in the eighth, it faints away and dies. If therefore a double endeavour does unavoidabley kill any child, a child that is weak may well periſh by one endeavour. Alſo this weakneſs might cauſe the childs death another way, inaſmuch as being brought into the world, by reaſon of the ſaid weakneſs, it might be unable to endure the air and light, and be killed by them. And finally, it might proceed from the ſtraitneſs of the womb or its Neck, becauſe at the time of birth, it does collect and purſe it ſelf to force out the child; and if the ſaid conſtriction ſhall be too violent it may choak the child. The ſame may happen from the neck of the womb, if it too much contract it ſelf when the child comes into it; for by that ſtraitening of it ſelf it may deſtroy the child. Theſe things thus propounded the remedies are to be directed to two ends, viz. To ſtrengthen the child and to hinder the overgreat conſtriction of the womb.

In the former reſpect, the parents muſt uſe a laudable diet and of good juyce before the Conception; that pure and faultleſs ſeed may be ingendred. Alſo the mother during the whole time of her being with child muſt uſe the like diet, that ſhe may afford good blood to nouriſh the child with. Moreover let her uſe this following pouder twice a week.

Take Kermes berries, ſhavings of Ivory, Coral, and Pearls prepared, of each one dram; Maſtich half a dram; Manus Chriſti pearled two drams; make all into a pouder, whereof let the doſe be a dram, in a ſoft egg, or in broth.

Let her other whiles initead of the pouder uſe this following Opiate.

Take Conſerve of roſes two ounces; preſerved Citron peels one ounce; Myrobalans preſerved, and Nutmegs preſerved, of each half an ounce; coral prepared, and pearles prepared, of each one dram; ſhavings of Ivory, half a dram; Make all into an Opiate, with ſyrup of preſerved Citrons, of which let her take the quantity of a Cheſnut, once or twice in a week, inſtead of the foreſaid pouder.

If at laſt ſhe grow weary of both theſe, let her uſe theſe following Lozenges, which are very pleaſing to the taſt.

Take Confectio Alkermes three drams; amber greeſe one ſcruple; Sugar diſſolved in Orange-flower water, and Roſe water four ounces; make all into Lozenges, which ſhe may uſe at any time, when ſhe takes not the former medicaments.

When ſhe is entring into her ninth moneth, let theſe following things be applied to her belly, in the morning for the ſpace of half an hour.

Take generous wine three pints, beat it and diſſolve therein Oyl of Nutmegs half an ounce, pouder of cloves and Kermes berries of each three drams. Mix them, and let a Sponge wet in this Liquor, be applied to her Belly upon her Navil, hot, twice a week.

Take Nutmeg, Mace, Cloves, and Cinnamon, of each equal portions: mix them with white honey, into the form of a Liniment, and ſpread them upon a cruſt of toaſted bread, and apply them to the Navil, every morning when the fomentation is not uſed.

Take Orange-flower water, and Roſe water, of each three ounces: Cinnamon water one ounce. Mix them. Let her take one ſpoonful every morning, during the whole ninth moneth.

At the time of her labour, give her in every draught of broth half a dram of Alkermes made according to the deſcription of *Meſue*, by reaſon of the doſe of Amber; and an hour after every broth, give her a ſpoonful of Cinnamon water.

To her navil apply frequently a peice of hot fleſh half roaſted, and ſprinkled with the pouder of Cinnamon, Nutmegs, and Cloves.

In reſpect of the ſtraitneſs of her womb or its neck, if ſhe be not with child, let her frequently uſe, when it is not winter, a bath to ſit in made of an emollient decoction. When ſhe is with child, from the beginning of the ninth moneth to the day of her deliverance, let the neck of her womb and the Perineum be anointed with Line-ſeed Oyl drawn without fire. Given at *Montpelier, December* 24 1635.

THE

The 108 Observation or History of Famous and Rare Cures, &c.

Of Wandering Pains about the Chest.

Msr. *Raymundus Melgorienſis*, fifty years of age, of a Sanguine complexion, returning from being a Souldier in *Italy*, he complained of moſt cruel pains, which tormented him every night, after his firſt ſleep; and theſe pains began in his left ſide, and reached withall to the fore and hinder part of his cheſt, alſo to his left ſide and ſhoulder blades, with ſo much vehemency that he was thereby ſuddenly awaked, and could not in any poſture find reſt in his Bed, but was compelled to riſe. Theſe pains continued to the morning, and then ceaſed. Nor is there any ſhew of them all day long. He began to be vexed with them now two moneths ſince, and had never uſed any Remedies. Another Phyſitian who had formerly preſcribed for him, conceived that theſe pains proceeded from a thin Catarrh, falling upon thoſe parts in the Evenings, at what time the flegmatick humor is accuſtomed to move. But I conceived theſe pains proceeded from winds, which are raiſed only in the night, by reaſon that the natural heat is then made more intenſe by the Concentration thereof through ſleep. The matter out of which theſe urines are raiſed, is a redundancy of bad and crude humors in the ſtomach, Meſentery, and eſpecially about the Liver. Now theſe Humors were collected in the Camp, through bad diet. Hence alſo the concoction of his Stomach was weakened, whence it comes to paſs that the cruder part of his meates, infected likewiſe with bad humors, is turned into windes, which run into all places. And when digeſtion is finiſhed, no more of theſe winds are ſent up, and conſequently the pains ceaſe about the morning.

For the Cure of this diſeaſe, I preſcribed in the firſt place an Univerſal Evacuation by Apozemes, and blood-letting, which being finiſhed, I preſcribed him a decoction of China for fifteen dayes with the uſe of which medicaments, the diſeaſe was by little and little diminiſhed, and in a moneths ſpace cured without any other Medicine.

The 109 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Jaundies in a Woman with Child.

THe honorable wife of Msr. *De Aumelas*; General Treaſurer of France, about the end of the ſeventh moneth of her being with child, by ſome houſe-hold occaſion was vehemently provoked to anger, after which ſhe vomited in the morning, had a pain in her Stomach, and became ſick of the jaundies. Now this jaundies of hers had two peculiar properties; one, that in her bed the colour of her face and whole body, was a very remiſs yellow: but when ſhe roſe and ſtirred a little, it began to grow more deeply yellow all of a ſudden. The other is that ſhe was not Coſtive as people ordinarily are in the jaundies, but voided cholerick ſtools. Her urine was red, but did not colour the cloaths put into it. I being her ordinary Phyſitian, called for Msr. *Rhanchinus*, to conſult with, that we might conſider about letting her blood; for on the one ſide, the Procatarctick cauſe perſwaded bleeding; for in all Diſeaſes ariſing from Anger, blood letting is extreamly convenient, by reaſon of the extream commotion of blood thereby raiſed. Moreover, thoſe Cholerick Evaporations ſuddenly ſeizing her, upon a light motion, did argue that her blood was very much exagitated. Nor did this diſeaſe ariſe from the obſtruction of the Choler paſſage (in which caſe *Galen* forbids to let blood, in his book of blood-letting) becauſe then her belly would have been bound, and her ſtools white; but rather from the Liver being inflamed and over heated. On the other ſide, her being now long gone with Child, ſeemed to diſſwade us from blood-letting, and ſeeing the patient by reaſon of her diſeaſe was in danger of death, if it ſhould happen that ſhe died after blood-letting, the fault would be attributed thereunto. For theſe laſt Cauſes, Msr. *Rhanchinus*, would not conſent that ſhe ſhould be let blood: but it was agreed to give her one dram of Rhubarb in ſubſtance, that the Choler

Choler might be carried away by little and little by stool; which was done. The Rhubarb did little good, and the patient after five or six daies miscarried. Peradventure letting of blood might have prevented the same. But the ill conditions of our Women, in ascribing all bad events to the Remedies used, is the Cause, that even the more prudent sort of Physitians, do sometimes to avoid Calumny, abstain from the use of most profitable Remedies.

The 110 Observation or History of Famous and Rare Cures, &c.

Of a Quinsie.

ON the 18. of *Februar*, 1636 a certain young man a digger was troubled with so vehement a Quinsie, that he could neither speak nor swallow, yet he breathed well. When I was sent for, he had taken a Clyster. Whereupon I caused him presently to be let to blood ten ounces. Then a Vesicatory was applied to the Nape of his Neck, and Cupping-Glasses with Scarrification to his shoulder blades. And four hours after his bleeding, he took two ounces of Aqua benedicta, with which he was purged up and down, and after that, he began to speak and swallow, and a little while after, did perfectly recover.

The 111 Observation or History of Famous and Rare Cures, &c.

Hysterical and Hypochondriacal Symptomes.

ON the 15 of *March*, 1636. the worthy Wife of Msr. *de Clausel*, a Councellour in the Court of *Exchequer*, being fifty five years old, of a Flegmatick and Melancholick Complexion, and sickly, fel by reason of long grieving, into divers Symptomes, which vexed her frequently, but especially in the night. She had pains in her whole left side, from her Ribs down to her belly, so that she could not lie upon that side; she had flegmatick and sowr vomitings, Headach, Heart burning, and fainting fits so violent, that she thought she should presently die; she had shiverings and tremblings all her Body over, after which she fell into sweats; her pulse was very small, languishing and weak; she had had frequent belchings, by reason of abundance of wind breaking out at her mouth. When I was first sent for, I appointed her a Carminative and Laxative Clyster, a potion of the Waters of Orange flowers, Roses, and Cinnamon; bags and Oyl of Nut-megs to be applied to the region of her Stomach, by which she was much eased and freed from the the foresaid Symptomes. But because they frequently returned, she purged twice in four daies. And her Symptomes returning again, I gave her two grains of Laudanum Opiatum, with conserve of Roses, in form of a Bolus, when she went to sleep: wherewith in an hours space all her Symptomes were quite taken away, and she slept quietly, nor did those Symptomes return any more so violently, but they were much gentler. Afterwards she was purged twice a week with Specifick pills, with which she grew every day better. And so she was at length restored to her perfect health.

If thou meanest to be helpful to thy self, or thy neighbours, bestow so much money and pains as to peruse the Guide to Physick and Chyrurgery, The Idea of Practical Physick, and *Riverius* Practice, of the last Edition,

The 112 Observation or History of Famous and Rare Cures, &c.

Cholick pain.

ON the 22 of *March*. 1636. the widow of Msr. *Dortis*, having been many years troubled with an exceeding hardness and distention of her whole Belly, whence by fits she was cruelly pained, as it were with the chollick; she was now taken with the same pain being much more raging than formerly, about night. An Apothecary being called gave her two Clysters to no purpose, although they did purge her much. I being called in the morning prescribed her a

Pill

Pill of five grains of Laudanum, and within an hour the pain quite ceased, and came no more.

At the same time Madam *de Varanda*, Mother of the foresaid Gentlewoman, was taken with a true Cholick pain, whereunto she was subject: a Clyster was given by an Apothecary, which not working, I was sent for, and found her crying out by reason of extremity of pain. I prescribed her a Clyster of a pound of an Emollient Decoction, an ounce of Diaphenicon, and four ounces of Aqua Benedicta, by which her pain was quite allaied, and the patient voided many flegmatick Excrements and much wind.

I my self being a moneth before vexed with the same pain, and finding little help from an Emollient, carminative, and Laxative Clyster, was cured with such a Clyster as this, so that as soon as I had received it, all my pain went away; though I did not void the Clyster till two hours after.

The 113 Observation or History of Famous and Rare Cures, &c.

Pissing of Blood.

THe renowned Msr. *de Serres*, the Kings Councellor in the Court of Accounts and Subsidies, and Controller of the *Exchequer*, being fifty years old, of a Cholerick temper and Melancholick, having for many daies together suffered grievous disturbances and sadness in his Mind, and by that means had lost a nights sleep; made bloody Urines, which appeared presently after he came from Horse Back; and at the same time he was troubled with sharpness of Urine. After which time, as oft as he journeyed on Horseback, he made bloody Urines in like manner, and with the like sharpness. Yea verily the foresaid sharpness of his Urine, was often wont to returne upon him, although his Urines were no way infected with blood. Also with his Urine he voided gravel, which stuck to the sides of the Chamber pot, which he had been accustomed to void for many years. The question therefore now is, upon what next and immediate Cause this pissing of blood depends. And though Pissing of blood in general is wont to arise from many Causes; yet in this present case, two only will come under consideration; viz A stone contained in the Kidneys, and by its roughness tearing the small Veins, and drawing blood from them; or Humors sharp, Salt and Cholerick, opening the mouths of the foresaid Veins. Two things especially do seem to declare that it is the former cause, viz. Those sands which the Patient has been accustomed for many years to void with his Urine, which any one may judg to spring from some stone lurking in the body: and that some periodical Excretion of blood, happening then only when the Patient uses immoderate exercise, and vehemently shakes his Kidneys with riding. whereby the stone comes to beat upon the substance of the Kidney and its small Veins. Howbeit these two signs are not sufficient to demonstrate a stone in his Kidney. For the Principal signs, and those that perpetually accompany or go before the same, are wholly wanting. The cheif of which is a pain in the Loyns, which cannot be absent, if there be a stone, but must of necessity afflict the Patient, and return by fits; and it is either gravative and pressing as a weight, when the stone sticks in the substance of the Kidney; or it is pricking and cutting, if it be contained in the Membranous Cavity of the Kidney. Add hereunto that this vvorthy Gentleman vvas never in his vvhole life tormented vvith Nephritick pains, nor ever voided any stone; vvhereas nevertheless it can hardly happen, that a disposition to breed stones, vvhich for the most part is native and Hæreditary, should lie idle fifty years together, and break first into act in that age, vvithout giving any signs or tokens of it self, all the time foregoing; vvhen as the chief conjecture that pissing of blood comes from the stone, uses to be taken from this consideration, viz. That the Patients had formerly voided stones. Add hereunto that the parents of this Patient were never observed to be troubled with the stone, which is of no small moment in this case. Finally, all other signs that demonstrate a stone in the Kidney, are here wanting, as nummedness of the thigh on the same side, retraction of the Testicles, stomach-sickness and vomiting, gross meats used long time before, and such like.

The two signs propounded to prove that there should be a stone, are thus confuted. Such gravel as truly shews a stone lurking in the body, does settle to the bottom of the pot, and if you rub them between your fingers, they will hardly go to pouder. But if the sands stick to

the ſide of the Chamber-pot, and are eaſily rubbed into a pouder by the fingers (ſuch as is the gravel voided by our patients) they can never be ſigns of the ſtone. For ſuch gravel is not bred in the Reins or bladder, but in the Veins and Liver, by aduſtion of the Humors, whoſe thicker and more Tartarous parts do reſemble gravel, and are ſeperated with the ſerous Humor contained in the Veins, and are thruſt out into the Kidneys and bladder. Which having been obſerved by few, many are counted to have the ſtone, that were never ſubject thereto. And dayly experience teaches us, that many void ſuch kind of gravel, from their Child-hood, all their life long, who nevertheleſs were never troubled with the ſtone, and who had little reaſon to fear the ſame.

The Periodical voiding of blood happening then only when the Patient does vehemently exerciſe himſelf with riding, though it may poſſibly come from a ſtone in the Kidney; yet there is no queſtion but it may alſo proceed from heat ſtirred up in the Kidneys and the whole maſs of blood, without any preſence of the ſtone. For Cholerick and ſharp humors, or ſuch as are of the Nature of ſalt Flegm, being agitated by motion and heat, are ſent unto the Kidneys, being mingled with the Seroſities of the blood, and opening the ſmall Veins of the Kidneys, they cauſe a flux of blood. And I confidently aver, that this is the Cauſe of our preſent Patient, ſeeing he is of a Cholerick conſtitution, and his blood attained aduſtion by the paſſions of mind and watchings aforeſaid. Alſo the Acrimony of thoſe Humors which paſſed through his Kidneys appeared, from the ardor of his Urine which often troubled him, when he made no bloody Urine.

That this opinion of mine is agreeable to the judgment of moſt learned men, is eaſie to ſhew by infinite examples. It may ſuffice to reckon up ſome of them. *Hollerius*, a man exerciſed as much as any in the Practice of Phyſick, in his 52. Chapter of internal Diſeaſes; ſaies, That *ſome perſons void blood by way of Urine, as others do by their noſe, the Hemorrhoid Veins, or by Vomit. And experience ſhews that this kind of voidance of blood does often happen in ſuch as are thereunto diſpoſed, when their bodies are heated with vehement exerciſe. Wherefore piſſing of blood may happen, and return by fits, when mens bodies are heated with vehement exerciſe.* Which the ſame Author does more plainly evidence in his comment upon the 78. Aphoriſme of the fourth Section. *There are* (quoth he) *ſome, who if they ride hard, or exerciſe themſelves immoderately, their Kidneys are ſo heated, that they piſs blood.* The moſt learned *Montanus*, in his 283. Counſel, propounds the caſe of a certain Hungarian Biſhop, ſo like this preſent caſe of ours, that I think fit to inſert the ſame word for word. *I conceived* (quoth he) *That this moſt reverend Biſhop did therefore make bloody and troubled Urin, becauſe a dilatation is made both in the Cavities of his Kidneys, and in his Urinary Veſſels, by reaſon of extream heat raiſed in his back, by reaſon of violent motion, cauſed by the ſhaking of his coach paſſing over rough waies, and by reaſon of great heat following, while he walkt up hill in a Fur red Coat when the Sun ſhone extream hot. By all which means ſo great an heat was raiſed in the parts about his Kidneys, that by reaſon of too much dilatation, he voided bloody Urine. Whence it is, that ſtill as often as he is wearied, and exerciſes his body, he fals into the ſame Symptome, viz. Of Turbid and bloody Urine. For the dilatation is cauſed by motion, which ceaſes upon reſt. Now the burning heat when he voids his water, and alſo the pain about his Fundament proceed from the ſame cauſe, viz. From the ſaid dreggy Urine, which has in it ſharp and biting parts, either of choler, aduſt humors, or ſalt flegm, or all together. Now the pain which he feels about his Fundament is in the muſcles of the Neck of his bladder, which Neck borders upon thoſe parts, and there is good reaſon that the pain ſhould chiefly be felt in that part.* So far *Montanus*. From whence it alſo appears, that the ſuſpition of a ſtone in his bladder, which our patient imagines to himſelf, becauſe of the ardency of his Urine and the vexation of his Fundament, is vain; ſeeing thoſe Symptomes may proceed from the ſame Cauſes which we have ſhewed to be the original of his bloody Urine. *Horſtius*, in the 37. Obſervation of his 4. Book. *A Boy* (quoth he) *eight years old, the Son of* Johannes Struppius *the magnificent Chancellor, of a lean habit of body, has no ſtomach to meat, is thirſty and voids bloody Urine, without any pain in his Loyns, nor does he feel any trouble in the voidance thereof.* Although *bloody Urine often happens, as is manifeſt in the ſtone of the Kidneys, in the Ulceration of them and neighboring parts, and ſuch like diſeaſes; yet this is a rare caſe, becauſe this piſſing of blood is without pain, whence may be collected, that this bloody excretion is not cauſed by a ſtone cutting the Kidneys, nor*

by

by any exulceration. It remains therefore, that the Cause of your disease must be the acrimony of Choleric blood and the weakness of his kidneys. So far *Hollerius.* Which examples I was willing in this place to set down more exactly that the mind of our worthy patient might be wholly freed from fear of a stone bred in his kidneys or bladder, with which fear he has been long tormented by reason of the opinion of his other Physitian.

As for that concerns the Cure, it must aime at two things, viz. to temper the acrimony of the Humors, and to strengthen the kidneys, that they may not so easily receive sharp humors flowing in from other parts. This may be effected by a cooling and thickening diet, which the patient has for some time begun to use, and wherein he must persevere a long time, using especially Lettuce, Plantane and Purslane in his broths, as also meates made of Barly, Oates, Rice, and such like, also for his drink, water wherein Iron has been quenched, and red wine somewhat harsh; ever more abstaining from vehement motions of body and mind.

And although the renowned patient is not very full of blood, yet I judg it profitable for him to bleed six or seven ounces from his Arme, that the hot distemper of the whole Mass of Humors may the better be corrected, Yea verily, and if the disease should last long, it seems good to derive the humors to the lower parts, by opening a vein in his ankle, of the Hemorrhoid veins.

After which a gentle purgation will be very convenient, which must be repeated at certain times that the humors having recourse to his Reins, may be voided forth by stool; The Composition whereof, may be after this manner.

Take Leaves of Lettuce, Purslane, Plantane, and the tops of Mallows, of each half an handful; Tamarinds half an ounce: Yellow Myrobalans one dram; boyl them to six ounces. In the strained liquor dissolve one ounce of Cassia new drawn. Strain it again, and dissolve therein one dram and an half of Rhubarb infused in Lettuce water with yellow Sanders, Manna and Syrup of Roses of each one ounce, mix them and make all into a potion.

After the first purgation, Juleps, Apozems, Broths, or Emulsions, respecting the foresaid Indications, may be accommodated, so as the patient can best away with. Which being used for some time; sheeps milk or goats milk will be best for him. Which is exceedingly commended by *Hypocrates, Avicen,* and later Physitians; and *Forestus* brags that therewith alone, he had often cured pissing of blood. Now, they add to every dose a dram of Bole Armenick, which as it is fit for a violent pissing of blood; so I conceive it is seldom to be used in this lighter disease.

And because the patient is of a dry and lean habit of body, and of an hot and dry constitution, before and after he uses the milk, I conceive a bath of Lukewarm water is very good for him, which he must use all the Summer long, in form of a bath to sit in.

After his use of the Milk, let him use the waters of Meyne.

In the intermediate times, if sharpness of urine do sometimes trouble him, Waters of Marsh-mallow flowers and Roses, with conserve of Mallow or Marsh-mallow flowers or Emulsions and other things aforesaid, may be used.

And finally, to seal up the Cure, a strengthning Opiate, moderately astringent and cooling may be used. Nor will it be unprofitable, if the disease continue, to make an Issue in his leg, to draw away by little and little those sharp humors, which flow into the Kidneys and urinary passages.

All the time of the Cure, Topicks applied to his Reins, will be very useful, and they must be cooling and astringent,

Take Unguentum Comitissæ, and Refrigerans Galeni, of each two ounces: wash them well with Vinegar and water mingled together; and anoint the Loyns therewith frequently.

Also a plate of Lead with many holes bored in it may be worne a long time, upon his Kidneys.

The 114 Observation or History of Famous and Rare Cures, &c.

A Caruncle in the Yard.

THese following Remedies were transcribed in the Chamber of Accounts at *Montpelier,* wherewith *Geofrey Giannatius* cured *Charls* the ninth of that name King of *France,* in the

year 1584. and had two thousand Crowns for his Reward.

In the first place, *Take Cassia new drawn half an ounce: juyce of Liquoris one dram: Electuary of the juyce of Roses two drams, water of Hops four ounces: mix them into a potion, to be taken in the morning. Afterwards for ten daies together, let him drink eight ounces of this following decoction, lukewarm.*

Take Roots of Liquoris sliced, of Marsh-mallows, Sebestens, Raisins, each one handful; Seeds of Mallows, Marsh-mallows, Smallage, Parsley, of each half a dram; Fountain water two pints, boyl them to the half. Of which let him take eight ounces for ten daies, having first taken the potion, or a Bolus of Cassia.

How to make the first oyntment.

Take Oyl of Roses one pound. Cerus of Venice four ounces: Camphire half an ounce. Tutty prepared with Rose-water half an ounce. Litharge of Gold prepared three ounces: Antimony excellently poudered one ounce and half, Opium, Olibanum, Mastich, Aloes Hepatica, of each two scruples: mix them all and keep them in a Leaden boxe.

How to make the second Oyntment for Consolidation.

Take of Galens *Oyntment of Roses new made, and washed in Rose water, Ungnentum Allum Camphoratum of Rhasis, of each one ounce: Pomatum made without the ponders half an ounce: mix them together and keep them in a Leaden box, for use.*

How the Oyntment is to be applied.

Take a very small candle of white wax covered with a very fine cloth. And to find the place where the Caruncle is, Take a Candle thicker than the former, smeared with Oyl of sweet Almonds, and put it into his Yard. And if you feel a stoppage, that you cannot thrust it further; mark the place in the Candle, and measure the length of that part of the candle which went in, then wrap the Candle, in a peice of thin Linnen, and noint it at the end with the Oyntment, and then put it into the Yard, till it reach the bit of flesh which stops the passage thereof. And if you find two Carnosities; then you must so order your first Oyntment, as that it may touch them both, continuing the same for fifteen, or eighteen, or twenty daies, according to the greatness of the malady, and according as the Carnosity shall be found to open and turne to quittor. And when you perceive his urine to come freely and easily away, with little quittor therein, then you must take away the first gray Oyntment, from the Candle; and anoynt the whole Candle with the second Oyntment, continuing the same eight or ten daies, till there come no quittor out with the Candle, nor no more pain is perceived in making water, at which time you must abstain from the use of remedies.

The 115 Observation or History of Famous and Rare Cures, &c.

Nephritick pains.

THe 18 of *April* 1636. the widow of Msr. *Dortis*, was tormented with a most vehement Nephritick pain, which reached all along from her left Kidny, according to the course of the Uretor, as far as to her share, with sharpness of Urine and frequent provocations to make water. She received no help from Clysters with Aqua benedicta, nor with Turpentine, nor with Laudanum, nor from mighty vomiting which came of its own accord, nor from baths to sit in; nor from Laudanum taken inwardly, her cruel pain continuing two daies together. At last a vein in her Ankle was opened, and presently being let blood, her extream pain ceased, only a dul pain remained.

The 116 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Worms.

ON the 8 day of *June* 1636 a Damſel three years old, the daughter of one *Robert* a Baker, was ſick of a moſt acute Feaver, with great Anxiety and weakneſs. Being called to her about the evening, I judged ſhe was troubled with the worms, and preſcribed her in a little potion, of half a dram of Hiera and half an ounce of Syrup of Roſes, with Purſlane water, which purged her in the night, and thereby ſhe was much eaſed, the day following, I preſcribed theſe following Juleps.

Take Leaves of Sorrel, Purſlane, and Endive, of each one handful. Tops of Hypericon and Scordium of each one pugil. Boyl them in a pint of water. In the ſtrained liquor diſſolve three ounces of ſyrup of Lemmons, Make all into a julep. Let her take three ounces morning, and noon, and night. Within two daies ſhe was perfectly cured.

Three daies after the daughter of Msr. *Beuf* a Merchant, being ſix years old, was troubled with the like diſeaſe very grievouſly, I preſcribed her the ſame Remedies; with the ſame ſucceſs; but ſhe had one dram of Hiera, and one ounce of Syrup of Roſes in her potion.

The 117 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Stretching pain of the Belly.

ON the 15 of *June* 1636 *Peter Blanc*, a Citizen of *Montpelier*, had been troubled with an old looſneſs by which he became exceeding weak and lean. At laſt the 15 of *June* 1636. he perceived an huge rumbling in his belly, after which followed vomiting, and then he was exceedingly troubled with a painful ſtretching in his belly and a Feaver. He voided nothing at all either by vomit or ſtool, and he returned his Clyſters, as they came, without any mixture of excrement. By order of an unskilful Chyrurgion he took a purging medicament, which brought nothing away, but his ſtretching and pain were thereby much encreaſed. I being called on the fifth day, found the man very weak, with the face of a dying man, as *Hypocrates* deſcribes it, and his hands and feet cold, the tokens of death at hand. I was much troubled in my mind to know what diſeaſe this was, and could not imagine that it was any other than a mighty Inflammation, which with its extream ſwelling did ſo preſs the Guts, and ſo hinder the paſſage of the excrements. The Body being opened, the thick Guts were found livid, half corrupted, and one of them bored through; and in his belly many moſt ſtinking humors by which it was manifeſt, that the excrementitious humors which had been uſed or a long time, to flow into the Guts and to cauſe a Looſneſs did at laſt ſtay ſo long by reaſon of the weakneſs of the expulſive faculty, as to corrupt the Guts, and at laſt by their weight to open that part in which the ſaid humors did abide, it being more putrified, and ſo to ruſh violently into the belly. And that Conſequently his meats, and part of his Clyſters, were paſſed through that hole, into the Cavity of his Belly.

The 118 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A malignant Feaver.

ON the 4 of *July* 1636. *Peter Stelle*, Conſul of the town of *Perolz*, being forty years of Age, fell into the diſeaſe termed Cholera, which was ſtopped in the ſpace of twenty four hours by convenient Remedies. After which followed upon the third day of his illneſs a large bleeding at the noſe, by which he was very much weakned. He was troubled with a mighty thirſt

thirst at the beginning, and with unquietness, and a burning heat in his Midrif. Being called to him, I found his pulse small and very frequent, with an Hypocratick face, and afterwards viewing the habit of his body, I found it sprinkled with large black and blew spots, whence the extraordinary malignity of the Disease was apparent, which was the Cause of so great Symptomes. Besides ordinary remedies, and cordial juleps with Sal Prunellæ to be given him thrice a day, I prescribed him this pouder.

Take Sal Prunellæ half an ounce: Camphire half a dram. Make them into a pouder. Divide it into four parts, and let him take one every third hour. He took this pouder at night, and was much better in the morning. I ordered him to take the pouder again with other remedies, and the same day he was freed from the present danger of death, and in a few daies after was perfectly recovered.

If thou wouldest fright away all diseases from thy self and freinds, then be sure thou beest a diligent understanding Reader of the Guide to Physick and Chyrurgery, *Riverius* Practice of Physick, and the Idea of Physick: All of the last Editions.

The 119 Observation or History of Famous and Rare Cures, &c.

The disease Cholera, proceeding from over violent purgation.

A Sword-smith at the sign of the Lillie, being purged by a Barber with a certain strong pouder, in the extremity of hot weather, and he himself being of a very cholerick constitution; the night following, he was violently purged, voiding cholerick and watry excrements up and down; with pain in his Stomach, extream thirst, and exceeding weakness the day after. I being sent for in the morning, did give him six grains of Laudanum, and within a quarter of an hour all the symptoms ceased. Nevertheless, strengthening bags steeped in red wine were applied to his stomach, and the same day he was perfectly cured.

The 120 Observation or History of Famous and Rare Cures, &c.

A Stubborn Loosness.

ON the 8 *September* 1636. Msr. *Peter Hucher*, the Son of the renowned *John Hucher*, in times past Chancellor of our University, after a long Tertian Ague, was taken with so vehement a Loosness, that within three daies, he was extreamly weakned, and in danger of his Life. I being sent for prescribed him in the first place one dram of Rhubarb in pouder, with which he was much worse. The day following when he went to rest, I gave him a Bolus of Mastich and Terra Sigillata, of each half a dram, Laudanum four gains. His loosness was stopped, but yet he slept not; the daies following he went to stool only twice or thrice, & in a few daies after was perfectly well. At the same time Msr. *Grasset*, President of the Court of Accounts, after a long continual Feaver joyned with Ague fits, was taken with a most troublesome loosness, with which he was extreamly weakened; I visited him with another elder Physitian; and together we gave him in the first place divers strengthners, and after that astringents, all in vain. The Ancient Physitian would never agree to give him Laudanum, and his loosness had continued twenty daies, being alwaies alike violent. Also I often propounded Tincture of Corrals, which by strengthning the Liver does stop fluxes, also it potently cooles, which was much to be wished in the patient, being of a Cholerick Complexion, but it was neglected for divers daies together. At last, I daily urging the preparation and administration thereof, we gave him two ounces thereof, twice a day, for three daies together: wherewith his loosness was manifestly abated every day, and his excrements appeared digested, so that in a few daies he was thereby perfectly cured.

Note, That he had before twice taken in broth Rhubarb twice infused in Cichory water, and dried again, which made him worse than before.

The

The 121 Observation or History of Famous and Rare Cures, &c.

Head-ach by being in the Sun.

THe 8 of *October*, 1636. Msr. *William Dortoman*, a renowned Advocate, being in the town, exposed himself to the Sun about Noon, going on foot to another town a good distance off, whereupon he was taken with light fits of a double Tertian, which came about the evening, and in his fit he was troubled with an extream Head-ach, which the first three daies, went away with the Ague fit when it was morning. Mean while he was twice let blood, and had one purge given him. Which notwithstanding his Head-ach and Ague continued, and after the fourth fit it turned into a continual Feaver: For it cruelly tormented him as well in the mornings as at other times, nor did the feaver ever leave him. Seing therefore it was manifest that the Head-ach proceeded from his being in the Sun, it was feared there might be some Inflammation in his brain, for remedies had been applied to his fore-head and did no good. To remove therefore this grievous symptom, I caused seven ounces of blood to be taken from his forehead veine, whereby his Head-ach was presently much abated, and the following fit returned much lighter, with little Head-ach. And the next day in the morning he felt no pain at all.

The 122 Observation or History of Famous and Rare Cures, &c.

An hectick and a putrid feaver together.

THe 13 of *October* 1636. the Daughter of Msr. *de Serres* Controller in the Court of Accounts fourteen years of age, about the End of Summer was taken with a Tertian Ague, which after four fits went away of it self, and sometimes after returned again; and the fits again ceasing, a small Feaver held her, with obstructions in her belly, whereby her courses were stopped; in which condition she continued three moneths without taking any thing, being in the Country. In the beginning of *October*, I being sent for, found her troubled with a lingring feaver, extreamly lean, and having a very eager burning heat to feel to, which grew worse at night; yet she did not perceive her self to be feaverish, and though in the night she seemed to be burning hot, yet she was not thirsty, which made me conjecture her feaver did turn to an Hectick, and the rather because she grew hotter after her meales, and all along the Artery of her Arm, the heat was perceived to be more intense, which the very by standers observed; and some Oyly matter did swim upon her Urines. Seeing therefore it was apparent that there was a putrid feaver linked with a beginning Hectick; I first set my self to remove the putrid feaver, and presently caused her to bleed seven ounces from the Basilica vein of her right Arm. The day following she was purged with a gentle Medicament. The third day she took a cooling and opening julep. The fourth day she was again let blood, for her blood seemed very corrupt and adust. Her juleps were continued, and an Emollient and opening fomentation was applied to the Region of her spleen, also a Liniment of the same faculty. The fifth day an emollient and purgative Clyster was given her, by which she was much purged, and her feaver much exasperated; her pulse was small and frequent, her heat sharp and biting; all which continued the whole night and half the day following. The two next daies, she was much better, her feaver was remiss, and the mighty exasperations thereof were very gentle; the swelling of her spleen and the resistency thereof to the touch, were less; also the pain which she was wont to feel, when she was touched and pressed never so little upon her spleen, was well near quite gone. Mean while the fomentations, Liniments, and Aperitive broths were continued. When those two daies were over, she was purged by a gentle Medicament, which brought away much flegmatick matter by vomit, and wrought only twice downwards; the same day her feaver appeared yet more remiss. Afterwards her opening broths, fomentations and Liniments were continued; also in every third broth half an ounce of Senna was infused. So by little and little she regained her former Health.

The

The 123 Observation or History of Famous and Rare Cures, &c.

Fatty substances voided by stool.

THe little Daughter of Msr. *de Rochemore*, named *Lucretia*, being three years old, had a continual Feaver proceeding from worms. She voided by stool very crude excrements, and resembling plaister, amongst which were found sometimes certain little green round things like large pease, which being laid upon a trencher and held near the fire, did melt like butter. Having never seen such like matter before, nor ever read thereof in any Author, I was very doubtful, whence it should have its original. An ancient and experienced Apothecary said that he had observed the like excretions in his own Daughter. At last, seeing this matter could not be thought to proceed from the fat or Oyly moisture of her body, (for she had no hectick nor melting Feaver) and her excrements appeared very undigested; I conjectured, that this matter proceeded, from the fat eaten with her meat, which she had eaten too plentifully; or from broths not well skimmed from the fat; which fat did hurt digestion by relaxing the stomach, and was therein ill digested; especially seeing other meats eaten in too great quantity, would remain undigested. This fatness therefore, retained long in the stomach or Guts, received its thickness and green colour, from the Heat of her Body.

On the 12 of *October* 1636. this Conjecture of mine was confirmed by another Case of a Man troubled with Hypochondriacal Melancholy, who frequently though that he had poison given him, which to resist he frequently took great quantities of Oyl. Now he voided such like round pellets, which he melted and kept in a Glass. Which matter contained in the Glass was like the dregs of Oyl, and void of all smell. Whence I conjectured that the Oyl taken in so great quantity, could not all be digested by Nature, but that the thicker parts were by long heat more thickned, and wrought into such pellets, which being melted, did resemble dregs of Oyl.

The 124 Observation or History of Famous and Rare Cures, &c.

A Quinzie.

THe 14 of *October* 1636. a Taylor forty years of age was troubled with the quinzie, which hindred his swallowing, and he was let blood, Clysters were given him, and a Vesicatory applied by an Apothecary; these things doing no good, they sent for me. And observing that he was hardly able with all his might to swallow a little broth taken in a spoon, and that he could not therefore drink a purging potion. I prescribed him two ounces of Aqua benedicta, which purged him frequently by vomit and stool, and the same day he was cured of his quinzie.

The way to deliver from death is to be well studied in these Books, viz. the Guide to Physick and Chyrurgery, the Practice of Physick, and the Idea of Physick, of the last Editions.

The 125 Observation or History of Famous and Rare Cures, &c.

Sciatica Pain.

ON the 8. of *January* 1637. Msr. *Grefveille*, Councellor in the supream Court of Accounts, was vexed with a pain in his huckle bone, in the bittersest of the winter: having taken Clysters, and a purging Medicine, and a Plaister being applied to the part pained, all did no good; at last, his ankle veine on the same side was opened, and within a few hours the pain abated, and afterwards went quite away; so that the second day after his blood-letting, he went about his wonted affairs, being able to go about the City on foot.

The

The 126 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Sleepy Diſeaſe, Cured with a Sleepy Remedy.

THe 22. of *October*, 1636. A certain Virgin of *Melgore*, tvventy years old, named *Liquiore*, vvas troubled vvith a double Tertian, about the beginning of Autum, for tvvelve daies together: and vvas freed therefrom after the uſe of ſome Remedies. She fell again into the fits, vvhich at firſt ſeized her after their vvonted manner; but aftervvards certain nevv Symptomes hapned vvith the fit, viz. Extream ſleep, redneſs of Face, ſticking out of the Eyes, a pricking pain of her left ſide, and Extream difficulty in ſvvallovving; her meat going to the bottom of her gullet, and to the Orifice of her Stomach, vvas ſuddenly caſt up again: and if any thing paſſed in, it vvas vvith great trouble. I ſuſpected that a fit of the mother vvas combined vvith an Ague, and appointed her Remedies againſt the mother, vvhich notvvithſtanding, the diſeaſe continued. Some daies after, theſe Symptomes returned vvithout a Feaver, vvhich exceedingly confirmed my opinion; alſo in that the pain in her right ſide, did ſometimes go over into the left; aud ſometimes ſhe felt pricking pains in ſeveral parts of her belly, her ſtomach vvas pained and ſick; and ſometimes ſhe ſeemed to be ſtrangled. I obſerved three things peculiar in this diſeaſe. The firſt vvas difficulty in ſvvallovving vvhich is not common in fits of the Mother, yet that vvas not perpetual, but came by fits, for it hindered her from ſvvallovving meat or drink for many hours, and then it vvent quite avvay, ſo that ſhe ſvvallovved even pills in my preſence, without any trouble. The ſecond was, that theſe fits of the mother came every day in the evening, as conſtantly as Ague-fits. The third, that when her pain of the ſtomach and other Symptomes were moſt troubleſome, ſtrengthening and heating bags d d encreaſe her Diſeaſe, and brought the Choaking fit upon her. Which being told me, and I being preſent at one of her fits, the Patient complaining of an exceeding pain at her ſtomach, I cauſed a Cruſt of bread toaſted, and moiſtened in hot wine, and ſprinkled with the pouder of Cloves and Nutmegs, to be applied to her ſtomach; which very much encreaſed her ſuffocation, ſo that we were fain to take it away. Then for trial ſake I cauſed a cloth four times doubled, to be wet in Vinegar and water mingled, and to be applied cold to her ſtomach, which being laid on, the ſuffocation and pain of her ſtomach preſently ceaſed. Which experime t was ſeconded by cold water taken at the ſame time, ſome drops whereof ſhe ſvvallovved with much adoe, felt their coldneſs in her ſtomach, and was preſently releived. Afterwards, I cauſed the Cruſt of bread to be laid on again hot, which then ſhe patiently endured. The reaſon whereof I conceive to be, that the vapours being raiſed and troubling her ſtomach, were by hot things put more into motion: but after they had been laid with cold things, the ſtomach being free from the ſaid Vapors, could eaſily endure hot Medicaments. I conceived by the Feaver foregoing ſome ſeed retained, was corrupted, which did produce ſuch Symptomes. Peradventure alſo the relicks of menſtrual blood putrified might Concur to the production of theſe Symptomes. But the ſaid putrified matter had its motions at ſet times, even as we ſee the matter of inward Impoſtumes is alſo often moved at ſet times, and repreſents fits as it were of a Tertian Ague,

Now before ſhe was taken with her fit, becauſe ſhe could then ſwallow very wel, ſhe took by my advice four little pills made of four grains of Laudanum, and a little after the foreſaid fit came; but after two hours, the Laudanum beginning to work, all Symptomes abated, and ſhe was well all that night, whereas the foregoing nights ſhe was extreamly tormented. The day after in the morning ſhe took an Hyſterical and purging Apozeme, and continued the uſe thereof three daies together, wherewith the Cure was perfected. I doubted much, when I gave her the Laudanum, becauſe ſhe was wont to fall into a deep ſleep in her fits, which might be encreaſed by the uſe of the Laudanum. But at laſt I reſolved with my ſelf, that the ſaid deep ſleep did ariſe from vapors aſcending plentifully from the womb into the Head, by prohibiting the aſcent whereof, the ſleepy fit might be hindred. And the Event proved accordingly. Whence this true Concluſion is gathered, which ſeemes at firſt ſight a great Paradox, viz. That a ſleepy diſeaſe may be ſtopped by the uſe of Laudanum.

The 127 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Gripings in Children.

ON the 12 of *December* 1636 my little Son *Charles*, being four moneths old, was taken with a moſt cruel Cholick pain, which made him cry and roar continually. I gave him half a ſcruple of pouder Diamoſchu Dulcis in milk, whereupon his pain ceaſed for a quarter of an hour, and then it returned as fierce as before. A Clyſter was given him of a Decoction of Annis and Chamomel, with the yelk of an Egg and Sugar, and therewith the pain was wholly taken away. Eight daies after, he was taken with the ſame pain; he took the ſame pouder and the ſame Clyſter, but all in Vain. At laſt I cauſed a Fomentation to be applied to his whole belly, of Annis and Chamomel boyled in Aqua Vitæ, at the firſt Application whereof the pain went quite away. The day following the pain returned again, which being ſomewhat mitigated by the foreſaid remedies, the day following in the morning, I gave him an ounce of Syrup of Roſes. Which when he had taken, he vomited flegm like the white of an Egg, but voided little or nothing by ſtool, and his gripings returned. He took the Syrup again with infuſion of one dram of Senna, which alſo did little good. At laſt I gave him ten grains of the Earl of *Warwicks* pouder [or Pulvis Cornachini] in Milk, vvith vvhich being gently and largly purged, he vvas perfectly freed from this Diſeaſe.

The 128 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A fluxion upon the Lungs in an Infant.

THe 19 of *January*, 1637. My ſaid young Son *Charles*, a moneth after his former diſeaſe, fell into a moſt cruel Catarrh, vvhich did flovv dovvn into his breſt, vvhich cauſed him frequently to Cough, and to rattle in his pipes as he breathed. I gave him a purgation of Syrup of Roſes, vvith an Infuſion of Senna, vvhereby he vomited flegm, but purged little dovvnvvards. Pectoral Syrups vvere given him; his breaſt vvas anointed. His diſeaſe continuing, the ſame purgation vvas given him to ſmal purpoſe. At laſt I gave him ten grains of the Earls pouder in Milk, vvherevvith he vvas gently and plentifully purged, and vvas vvell the ſame day.

The 129 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Suppreſsion of Urine.

ON the 27. of *January* 1637. Msr. *de Labaie*, an Auditor in the Court of Accounts, vvas tvvo daies troubled vvith a total ſuppreſſion of Urine, vvith a pain in his left Kidney, and of the Uretor on the ſame ſide. He had taken Clyſters by order of another Phyſitian, and fomentations had been applied to the Region of his ſhare. I vvas called to conſult vvith the ſaid Phyſitian, vve ordered his Hemorrhoid Veins to be opened (vvhich did then ſwel) by Application of Leeches, an Emollient Clyſter was again given him, with half the quantity of Oyls, a Fomentation was applied to his Kidney and Uretor, aftervvards they were anointed with Oyls of Scorpions and ſweet Almonds, alſo a Cataplaſme of the ſtrainings of the Emollient Decoction, with Onions roaſted in the Embers; and at the ſame time, we gave him this julep following.

Take Juyces of Pellitory of the Wal and Sea-fennel, of each one ounce and an half. Juyce of Lemons and Oyl of Sweet Almonds, of each one ounce. Mix them, make all into a julep. Within an hour after he had taken this julep, he made water abundantly, and was freed, ſeven hours after we began our conſultation, during which ſpace the foreſaid Remedies

dies were administred. To seal up the Cure, he took the day following, a Bole of Cassia, Rhubarb, and Cream of Tartar.

The 130 Observation or History of Famous and Rare Cures, &c.

A Stubborne Gonorrhæa.

THe 6 of *February*, 1637. Msr. N. thirty years old of a Cholerick and Sanguine constitution, having had a Gonorrhæa for two moneths, and the Chyrurgeons had tried many remedies in vain, he did commit himself to my Care. In the first place I ordered him to be let blood in his Ankle, and the day after one scruple of Mercurius Dulcis, with half a scruple of Diagridium in broth; after that a Bolus of three drams of Turpentine, and one dram of Rhubarb, for six dayes together, which did him no good. The purging pouder is repeated, and after that he used the following water for twelve daies, which presently did him good, and he was perfectly cured; it did so powerfully cleanse the internal Ulcer, that his Urine being poured upon the ground did infect the same with a white colour, like dissolved Chalk.

Take dried Mint three ounces. Seeds of Lettuce, Rue, and Agnus Castus, of each two ounces and an half. Florentine Orris Roots two ounces; Dittamus of Creete ten drams; Sugar two pound; Pouder them all, add thereunto five ounces of clear Turpentine, and thirty ounces of white Wine, and distil them in Balneo Mariæ. Let the Patient take two spoonfuls, in the morning two hours before meat, and in the evening four spoonfuls after Supper.

If thou wouldest quel all Diseases, read and understand *Riverius* Practice, the Idea of Physick, The Guide to Physick and Chyrurgery, and the *London Dispensatory*, all of the last Edition.

The 131 Observation or History of Famous and Rare Cures, &c.

Of an Hysterical Epilepsie.

THe 17 of *February*, 1637. the Wife of Msr. *Palemarchus de Sumenes*, was vexed many years with Sundry Hysterical Diseases, which did imitate the fits of the falling-sickness, she tried many Remedies prescribed by many Physitians but all in vain. At last by the advice of a woman, she took the flesh of a Wolf reduced to pouder, and wore a peice of the said flesh salted alwaies about her, after which she was perfectly freed from the foresaid Disease.

The 132 Observation or History of Famous and Rare Cures, &c.

Immoderate flux of the Courses.

ONthe 6 of *March*, 1637. among other Remedies prescribed for the Wife of Msr. *de Vitrac*, who was brought to deaths door, by an immoderate flux of her Courses, which happened after abortion, the following julep did wonderfully help her.

Take of the flowers of Chamæleon, Spicknard, dragons blood very finely poudered, of each one scruple; Plantane and Rose water, of each one ounce and an half. Make a julep, of which let her take two spoonfuls, twice in an hour.

Also extract of Coral with Plantane water, did her much good.

The 133 Observation or History of Famous and Rare Cures, &c.

A Cholerick Cholick.

THe 18 of *May*, 1637 a certain woman was tormented with cruel pricking pains of the Cholick, all her belly-over, well near. Another ancient Physitian had given her ordinary Remedies hot, wind expelling, and flegm purging, by which she found no ease. At last, I being called, by the kind of pain, its Scituation, the hot complexion of the woman, and her very red urines, I conjectured it was a Cholerick Cholick; and I prescribed her presently blood-letting, a cooling and Lenitive Clyster, and a cooling julep, wherewith her pain was very much abated, and seeing her blood appeared extream Cholerick and corrupt, she was again let blood the day following, whereupon her pain went quite away. And finally, the Cure was perfected by a Choler purging potion. I prescribed her at the first a bath to sit in; which she used not, because of the great abatement of her pain.

The 134 Observation or History of Famous and Rare Cures, &c.

A Malignant Feaver.

ON the 7 of *June*, 1637. Mr *Patris* a Councellor, being fifty five years old, was taken with a light coldness, and feaverish all night, continuing much after one and the same manner; the day after in the morning he was free from his Feaver, and in the evening he was Feaverish again, and after the same manner his Feaver continued intermitting until the seventh day and then it was turned to a continual Feaver. Howbeit he was troubled with a frequent coldness of his Feet, and Knees, and sometimes of his Hands; his Urines were like those of an healthy person; howbeit all things grew every day worse and worse, so that it was easy to see, that it was a Malignant Feaver, and it was afterwards manifest by the spots which came out on the ninth day, also by his ravings, and the Convulsive motion of his Hands, with a certain profound sleepyness, and a looseness. The ordinary Cure, usual in such cases, was administred. But this is peculiarly observable, that he was let blood on the third day, and his blood appeared laudable. On the fifth day he was purged, while it was yet an Ague. On the seventh he had a looseness, which continuing till the eleventh, hindred any further blood-letting. & seeing on the twelfth day the flux seemed to be stopped, I doubted whether or no I should let him blood, seeing the other Evacuation had done no good, and the great weakness and danger wherein the Patient lay (so that his Kinred Lamented for him as one at deaths dore) seemed to disswade the same. Add hereunto, that for the two foregoing daies, many Cupping-Glasses were applied with Scarrification, to supply the want of blood-letting. At last I conceived that it was best to let him bleed four or five ounces by way of Trial, so that if he bore it well, more might be taken away afterward. Blood was taken away, black and corrupt, with the good bearance of the Patient; five hours after, the like quantity was taken away, the Patient remaining as strong as before. In his cooling Juleps were mingled Scordium and St. Johnswort: wherein Sal Prunellæ and spirit of Vitriol were dissolved. In all his broths he took a scruple of Bezoardicum Minerale. On the same twelfth day at night, he had a plentiful looseness, yet the Patient seemed to be better after it. Wine was given him to drink very well tempered with water. He did many times Sneeze in the Course of his disease, which made me hope he would do well, although many other Signs did portend his death. The thirteenth and fourteenth daies his looseness continued with extream weakness, Clysters were given him of Milk wherewith his looseness was moderated. A Julep was given him of Orange-flower and Rose-water, with Confectio Alkermes and some drops of Cinnamon water, of which he took now and then a spoonful to strengthen him. His looseness being abated, his sleepyness abated on the fifteenth day, and his raving ceased. Yet he made little or no Urine, On the sixteenth

teenth day, he was a little better. His Tongue, before dry, appeared moiſt. After which by little and little he grew perfectly well.

The 135 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Of a Looſneſs.

ON the fifteenth of *July*, 1637. Madam *de Groſſet* being fourſcore years old, but of an exceeding ſtrong body, was taken with a looſneſs and Tenaſmus, which made her go many times to ſtool every hour, with moſt grievous gripings. Her ſtools were various, ſometimes yellow, ſometimes Leek-green, and ſometimes black. The Seminary of the diſeaſe was taken away by four purgations, repeated with ſome diſtance between, of Rhubarb, Parſly infuſed partly in ſubſtance, with Syrup of Roſes. In the Intermediate times, cleanſing, pain aſſwaging, and ſtrengthening Clyſters were given her, with cooling and thickening juleps and Emulſions.

The 136 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Prognoſtick of a Dyſentery

IN the moneth of *July*, 1637. the Daughter of Msr. *Guilliminet*, Secretary of the Parliament of *Languedock*, five years old, being troubled with a Dyſentery voided divers Excrements, Yellow, green, and ſometimes black. About the end of her diſeaſe, ſundry ſpots appeared, like flea-bitings in her Face and other parts, and one of her hands was ſwelled with a Flegmatick Tumor; which were certain preſages of death:

At the ſame time the Reverend Father *Guardane*, Provoſt of a Covent of *Franciſcans*, called *Minorites*, being troubled with a Dyſentery, was taken with frequent Hiccupings, which were forerunners of his death.

The 137 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Dyſentery

IN *Auguſt*, 1637. the Son of Msr. *de Mauſſac*, Preſident of the Exchequer Court, being eight years old, had a bloody flux and voided much blood, with green and Leek coloured ſtools, and a continual Feaver. On the third day of his Diſeaſe, he took the infuſion of a dram of Rhubarb, made in Plantane water with yellow Sanders, in which was diſſolved a ſcruple of the pouder of Rhubarb, and an ounce of Syrup of Roſes. He was very well purged, voided many Excrements without blood, and was in a manner free from his Feaver, all that day. The day following he voided pure blood, with which were mingled certain drops as it were of Leek coloured matter: his ſtools were frequent, with gripings in his belly and a Feaver, which continued till the eight hday, though all ordinary Remedies were adminiſtred both internal and external, as alſo ſundry Clyſters. On the the ſeventh day, extract of corals was given him three times, a ſcruple at a time, with Plantane and Roſe water and Syrup of Quinces, but in vain. At the beginning of the eighth day, when both his Feaver and Flux grew vvorſe and vvorſe, and he voided pure blood, he vvas let blood about Noon to the quantity of five ounces. At night all things vvere as formerly. The next day in the morning, I gave him tvvo grains of Laudanum, vvith extract of Coral, Plantane, and Roſe vvater, and Syrup of Quinces: his looſneſs vvas vvholly ſtopped for four hours, he ſlept quietly, vvaking betvveen vvhiles. After four hours, he vvent to ſtool again, thrice in tvvo hours, and voided meer blood as before, and vomited up his broth. Whereupon there vvas more appearance of danger, ſeeing other remedies had done him no good, nor Laudanum it ſelf, vvhich does alvvaies help in this Diſeaſe. He did ſneeze once

once. His fourth stool after the Laudanum, voided store of Excrements without any blood. He Vomited no more. Towards evening he went more frequently to stool, yet less than before he had taken the Laudanum, nor were they so bloody, but did partly consist of Dung, The night following, he slept pretty largely by fits, and his stools were seldomer. In the morning he took a Medicament of one dram of Rhubarb, one scruple of Citrine Myrobalans, red sanders half a scruple, infused in a decoction of Plantane, Purslane and Tamarinds, dissolving in the strained liquor a scruple of pouder of Rhubarb, and half an ounce of Syrup of Roses, Which made him void plenty of dung and humors with very little blood, and small gripings; his Feaver was abated, and the night following he went seldomer to stool, and slept better. The following daies his looseness continued by fits, without any blood, gripings, or Feaver. Yet he was afterwards vexed with a continual looness, and a lingering Feaver for an whole moneth together, with a mighty appetite, he had stools in the night in his bed, and frequently in the day time, so that it seemed to incline to an Hectick Feaver. Finally, I gave him two scruples of Bole-Armenick with broth two daies together, and so his looseness was perfectly Cured.

The 138 Observation or History of Famous and Rare Cures, &c.

Cholick Pain.

THe 25 of *September*, 1637. The Wife of Msr. *de Sorret* the Kings Councellor in his Supream Court of Accounts and Subsidies, being with Child, in her ninth moneth was taken with a most grievous Cholick pain, which made her at the first vomit all that she took; but she voided nothing by stool. She had devoured much fruit, her pain was fixed near her short ribs on the right side, so that there was fear of her Liver being inflamed, because she had a feaver and was very thirsty. After many Clysters, Fomentations, and baths to sit in, she voided downwards liquid and crude Excrements. Howbeit her pain continued. At last there was given her a purging Medicament, of half an ounce of Catholicum, infused in a decoction of Cichory and Maiden-hair, with a dram of Rhubarb also infused, and an ounce of Manna and as much of Syrup of Roses: She had seven stools and her pain was much abated. The day after the pain continued, but more remiss, a Clyster was given her, wherewith she had five stools, and afterwards voided much Urine, whereupon she vvas perfectly Cured.

To deliver from the Disease before mentioned, and to preserve health, Read with care the Practice of Physick, The Idea of Physick, *Riolanus*, and the *London Dispensatory*, of the last Editions.

The 139 Observation or History of Famous and Rare Cures, &c.

Inflammation of the Testicles.

ON the 20 of *September*, 1637. Msr. *Texiar* of *Nismes*, Doctor of the Canon and Civil Laws, by reason of Violent riding, fell into an Inflammation of his right Testicle, with a large Tumor. He was twice let blood in his Arm, once in his Ankle, and a purge was given him. The part was fomented with Rose water, and a Cataplasme was laid on of Bean Meal boyled in Vinegar and water, a fourth part of Vinegar being mixed with three parts of water, which Cataplasm never failed me in this Disease. Howbeit, in this Patient the skin of his Cod was so tender, that the sharp Vinegar did fetch off the Skin, and he could no longer endure the Cataplasm. I caused the Cataplasm to be repeated; but to take away the Acrimony of the Vinegar, I caused it to be boyled with Litharge; and so the Cataplasm did operate excellently, and the Patient was cured of his swelling in the space of three daies.

The

The 140 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Of an Hepatick flux.

THe 11. of *October*, 1637. The wife of *Peter Banete*, a Baker, after certain fits of a Tertian Ague, fell into a flux of the Liver; whereby all her ſtools became bloody. I being ſent for, preſcribed her preſently two grains of Laudanum, with half a dram of Conſerve of Roſes, and within an hour her flux ſtopped; returning afterwards, ſhe voided only Humors and not blood, and was Cured with other vulgar Remedies.

The 141 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Eryſipelas.

Mſr. *de Gout*, a Gentleman of *Montpelier*, twenty five years old, was often troubled with a red ſwelling in his Legs; he began to drink his wine much ſtronger than before, and with very little water in it; from which time he has never been troubled with his ſwelling, though it hath been four or five years ſince. I conceive the reaſon is this, that his expulſive faculty being ſtrengthened by the Wine, the matter of the ſaid Inflammation is expelled, by ſtools, Urins, or inſenſible tranſpiration.

The 142 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Tertian Ague with Vomiting and Looſneſs in the fit.

THe 18. of *Auguſt*, 1638. Mſr. *Durant*, a Proctor in the Court at *Montpelier*, fifty years of of Age, had five fits of a Tertian Ague, from which he was delivered only by blood-letting. For fifteen daies he was wel, and did Eat ſome ripe fruit. He fell into the ſame Ague again, and in the ſecond fit was vexed with a moſt grievous vomiting and looſneſs. which made him void many Cholerick Excrements upwards and downwards, with extream unquietneſs and debilitation; ſo that his life was now in danger. I preſcribed him the following Julep, with which preſently all his Symptomes were ſtopped, he ſlept two hours, and his fit was terminated by ſweat. And in a few daies he was perfectly well.

Take Water of Lettuce, Roſes and Plantane, of each one ounce; Syrup of Quinces, one ounce. Confectio de Hyacintho, one dram; Laudanum Opiatum, two grains. Mix them into a Julep and let him take it preſently.

The 143 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Grievous ſore Mouths in Children.

THe 4 of *September*, 1638 My Son *Stephen*, being four Years old, had a moſt ſore fluxion upon his Tongue and Jawes, ſo that they were full of infinite Ulcers and they whitiſh, and very painful, with great Inflammation. He could take neither meat nor broth, nor ſuck milk. And he cryed day and night, could not ſleep, was lean and almoſt conſumed. Among remedies, Honey of Roſes, with Spirit of Vitriol, did him no good. He had a large looſneſs with which he voided leek-coloured Choler. A Veſicatory did him much good. But his pains and cryings continued, and the Patient continually voided ſerous and ſharp Humors by his mouth, the heat and Inflammation drawing the Humors more and more.

At

At last I gave him one grain of Laudanum with broth, and therewith his pain was asswaged, a short sleep Caused, which continued afterward moderate, and came at its hours. After which he grew better, and the flux of humors running out of his mouth was wholly stopped. Howbeit the day following he had a purging medicament given him, which did him likewise much good.

The 144 Observation or History of Famous and Rare Cures, &c.

Of a Dysentery.

Ioan de Paravisol, eighteen years of age, was troubled with a most greivous Dysentery, with an acute Feaver. For seven daies she was in the hands of another elder Physitian, who did prescribe her nothing else but detergent Clysters and Rhubarb, whereby her Feaver was encreased, and her dysentery became worse. He being absent, I was sent for, and gave her first three grains of Laudanum, with which her flux was much abated that very night, and she slept three or four hours. In the morning I let her blood, and the blood came away exceeding hot. Then I gave her one scruple of extract of Coral, with Plantane water, twice in a day, but without any profit. For she had a most bitter night, both in respect of her Feaver, and of the flux which was bloody, and had been stopped some time by the use of Laudanum. The next day in the morning, I gave her Laudanum again, and the flux was stopped; at evening a vein was opened again. The Excretion of blood was in less quantity, but she voided leek-coloured choler very corrosive, her Feaver and thirst being very violent. For her thirst, I prescribed her Juleps, of a decoction of Purslane and Plantane with Sal Prunellæ, which did her much good; howbeit her disease continued still. At last there was given her in the morning, Rose water with common Oyl; at noon a decoction of the Guts of a wether boyled much away with the pouder of *Actes* berries. The Patient was thereby much holpen. And the day following those three remedies being again repeated, she attained her health.

The 145 Observation or History of Famous and Rare Cures, &c.

Of the Meazles.

The 28 of *Septem.* 1638. The Nurse of my Son *Stephen*, by name *Claudia* was taken with the Meazles, wherewith her whole body was covered, with an intense Feaver. Whereunto was added a most greivous symptom, viz. a thin fluxion falling upon her lungs, which caused her frequently to cough, and was in danger to choake her, with a mighty hoarseness. A Vesicatory was applied to her neck, and two grains of Laudanum were given her, with conserve of Roses. Her fluxion was stopt all night. The day after it returned again, and Laudanum was given her again with like effect, whereupon in a few daies she recovered, her hoarsness abiding a long time after.

The 146 Observation or History of Famous and Rare Cures, &c.

A Tertian ague.

IN the year, 1638 very long Tertian agues were rife in Autumne, from which many were delivered, by taking after frequent blood-lettings and purgations, one dram of Treacle with Plantane water for three daies together. In such as I feared its heat most, I gave it after supper. But one took Treacle without my advice while his disease was yet crude, with red Urines, and his Feaver was increased. Wherewith the experiment of *Galen* was confirmed which is recorded in his book *de Præcog. ad Posthumum*, Chap. 2. and 3. touching *Eudemus* Peripatetick, to whom while his disease was yet crude, the Physitians of *Rome* gave Treacle, and his simple Quartan was by that meanes turned into a Triple. But with the same Treacle given by *Galen*, when the signes of concoction appeared, he was happily cured.

THE

The 147 Observation or History of Famous and Rare Cures, &c.

An Inveterate Diarrhœa.

THe 15. of *October*, 1638. a Gentleman thirty years of Age, came to *Montpelier* to take advice about a Looſneſs that had troubled him eight years together, which made him go to ſtool five or ſix times in a day and night, voiding excrements partly cholerick and partly flegmatick. He fell into this ſickneſs by bad diet, which he was forced to uſe many years together, following the Camp. It did not much weaken him, yea rather he was ruddy of countenance, eſpecially about his Cheeks; I ſent him to the Baths of *Balaruca*, the Water whereof he drank ſix dayes together, and his Looſneſs was quite ſtopped, ſo that for eight dayes after he had left taking the Water, he never roſe in the night, whereas before he was wont to riſe twice or thrice every night. I preſcribed him many other uſual Remedies to ſtrengthen his natural parts, which he ſaid he would make uſe of in his own Country.

The 148 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A moſt ſtubborn Vomiting.

ON the 15. of *Octob.* 1638. Mſr. *Enguarran*, Canon of the Cathedral Church at *Montpelier*, of a melancholick and aduſt temperament, fell into a moſt ſtubborn Vomiting without any manifeſt cauſe, wherewith he voided with much ſtraining, flegmatick, clammy and mucilaginous Excrements; alſo he belched up much Wind after he had taken any Broth. Many Medicaments were uſed by other Phyſitians in vain, for two moneths together. At firſt he took Pills of *Hiera* for many dayes together: afterwards he was purged with a Decoction of Senna, and an infuſion of Rhubarb, and afterwards with Apozemes, in the uſe whereof he was not able to continue. Afterwards milk was given him, becauſe they ſuſpected he had an Ulcer in his Stomach; alſo frequently he took Treacle for fear he might have been poyſoned, and many Fomentations and Unguents were applied. I being called found his Hypochondria very much diſtended, eſpecially his left, his Pulſe ſtrong enough, though he was weak enough, in reſpect of his Animal faculties. I conceived the humors flowed out of his Hypochondria, and that this Vomiting was a ſpice of the Hypochondriacal Diſeaſe. At Evening two grains of Laudanum were given him, and all night he vomited not, but reſted quietly. The day following he was let blood, which was hinted by his other Phyſitians, and ſix ounces of blood was taken away, which was very aduſt; he vomited twice or thrice that day, a Clyſter was caſt in about the Evening; alſo I preſcribed an Emollient and opening Fomentation, to be applied to his Hypochondria, and a Liniment with the ſame Vertues. The third day he took this Pouder:

Take Rhubarb one dram; Myrobalans Citrine one ſcruple; Spodium and Maſtich, of each ſix grains: make them into a Pouder, give it in the morning with Broth. He vomited up his Medicament, and would take no more. After a moneth he died, and his Body being opened, his Epiploon or Caul was found thick, red, ſchirrous and contracted, ſo that it reſembled the Liver at firſt ſight, and was as thick as it; his Stomach was black and blew, thin at the bottom, and in the upper part ſchirrous; his Guts black and blew. His Spleen was in good caſe. Melancholy humors were heaped up in the Caul, and from thence flowed back into the Stomach.

The 149 Observation or History of Famous and Rare Cures,&c.

A long Looſneſs with an Ulcer of Inteſtinum Rectum.

ON the ſecond of *Novemb.* 1638. Mſr. *Ludowick Maſſanes* being vexed two moneths with a double Tertian, with a Looſneſs partly of dung, partly of Humors, and partly of Blood, whereby he had eight or ten ſtools in a day. At laſt he was freed from his Ague fits, his Looſneſs abiding, whereby a pain was raiſed in his right or ſtreight Gut, a little above his Fundament, alwayes vexing him, even when he went not to ſtool. Sometimes he voided laudable dung, ſometimes a reddiſh matter, reſembling the colour of the Liver, and ſometimes mixed with Quittor. I conjectured by reaſon of his long Looſneſs, that there was an Ulcer about the internal Hemorrhoids. He did loath in a manner all Medicaments. And therefore I adviſed him to uſe the Bath Waters for three dayes together. The firſt day, his Appetite, long ſince dejected, was preſently reſtored, and conſequently the pain of his Fundament quite vaniſhed, an indifferent Looſneſs remaining, whereby he had two ſtools in the night, and as many in the day, and his Excrements were ſoft, but well digeſted; whereupon he grew every day better, ſo that after fifteen dayes taking the Waters again he was perfectly Cured. Yet he received a Fumigation from a Decoction of *Tapſus Barbatus* through a groaning Chair, with which his Looſneſs was mightily ſtopped, though he uſed it but twice. The Effect thereof was ſenſible.

The 150 Obſervation or Hiſtory of Famous and Rare Cures,&c.

Arthritick Pains.

ON the twelfth of *November* 1638. Mſr. *Monret* of *Montpelier* was vexed with Arthritick Pains, which afflicted divers parts, and rambled through the Joynts. He had been troubled a whole moneth with this diſeaſe, and was many times purged, Blood-letting being alſo not omitted. At laſt he uſed this following Diet-Drink.

Take Sarſaperilla one ounce; ſhavings of Guajacum two drams; Water as much as ſhall ſuffice. Let them boyl till a third part be conſumed, ſtrain out the liquor, adding thereto a little Cinnamon.

After he had uſed this Diet-drink eight dayes together, he began to void with his Urines a flegmatick matter, which ſtuck to the bottom of the Chamber-Pot, and at the ſame time he found great eaſe of his pains; until he was perfectly cured, that flegmatick matter iſſuing forth for many daies together.

The 151 Obſervation or Hiſtory of Famous and Rare Cures,&c.

Wandering Pains.

ON the 13. of *Novemb.* 1638. Mſr. *Gaillard* was ſuddenly taken with moſt grievous wandering pains, tormenting ſometimes his Thighes, otherwhiles his knees, legs or feet, or Loins. Another Phyſitian was called, and took away five Porrengers of Blood within an hours ſpace, and his pain not abating, he gives him a Pill of Laudanum, whereby the pains were pacified that night, and till next day at noon. In the afternoon the pains returned as bad as ever. I being called, the other Phyſitian being abſent, preſcribed him a Bolus of half an ounce of *Diaprunum Solutivum*, and one ſcruple of Jallap to be taken at night, which he muſt otherwiſe paſs without ſleep and in moſt grievous pains. He was purged ten times to good purpoſe, for the pains were very much abated, and conſequently in a ſhort time quite diſcuſſed. He was a man of fifty years old, of a black cholerick temperament, toſſed with many paſſions of mind, by reaſon

reason of his being Consul that year. And therefore I did conjecture that these pains proceeded from a very thin and sharp wheyish matter, which was carried this way and that way in a kind of furious motion; and that therefore it was soon to be drawn forth by a purging Medicament.

If thou wouldst be a helpful Friend to Man-kind, be a diligent reader of *Riverius* Practice of Physick; and the Idea of Physick; and the best way to Physick and Chirurgery; and the *London* Dispensatory; all of the last Edition.

The 152 Observation or History of Famous and Rare Cures, &c.

Spitting of Blood.

ON the Tenth of *Decemb.* 1638. the Wife of Mr. *Capon*, Auditor in the Court of Accounts, fifty years of Age, after midnight was taken with a plentiful Spitting of Blood, which she brought up by coughing, and perceived it to be very salt. It continued till morning, returning by fits; at what time I being called, presently caused her to bleed seven ounces from her Arm, and after two hours to bleed as much more. After each blood-letting she took a Julep of Plantane and Lettuce Waters, with six drams of Syrup of Violets, and two drams of Syrup of Poppy. I caused Frictions and Ligatures to be made upon her Legs, and Cupping-Glasses to be frequently applied under her short Ribs; and a thickning and astringent lick-pot. At night she took a Syrup compounded of equal parts of Syrup of Violets, dried Roses, and Poppies, *viz.* a spoonful when she lay down to sleep; the other after midnight; and her spitting of blood returned no more.

The 153 Observation or History of Famous and Rare Cures, &c.

A Cancerous Tumor in the Liver, with Sciatica Pains.

ON the 17 of *Decemb.* 1638. the Widow of *Peter Aubert*, a Merchant of *Montpelier*, lay sick many moneths, being troubled with a continual Feaver; she had most cruel pains in her left huckle-bone, which reached to the further end of her Foot. Moreover, a Tumor was discerned in her Belly, towards her Navil, enclining to the right hand, and so that hard, so that it was counted schirrhous, and was placed among the muscles of the Epigastrium, because it was felt immediatly under the skin, and was not painful but being touched. Sometimes biting pains did occupy her left shoulder, and her side it self so as to counterfeit the Pleurisie. We imagined those pains did come from a most sharp serous matter, which was bred in her Liver being exceeding hot. The blood which was taken away was most fervent, and black and blew: she never felt any ease save by Laudanum; by means whereof her pains were eased. When the pain in her Hip grew worse, and a Tumor appeared in the part though not different in colour: also the part being compressed did ake much: as also the Patient perceived cutting pains in the same part by fits: Chirurgions were called, who affirmed constantly, that there lay hid a deep Imposthume; and so after consultation, the part was opened with a small Incision-knife and a Caustick, no Quittor came forth. Fifteen days after the opening, her Belly before swelled, was now more swelled, and she became hydropick, and at last died suffocated. Her Body being opened, her Liver was found full of schirrhous tumors, and for the most part suppurated; in the extremity whereof, there were two Cancerous Tumors sticking out as far as her Navil, and equalling a mans fist in greatness, touching one another in a manner, which caused that swelling in her Belly aforesaid: neither were they thought to be in her Liver, because they were not in the natural place of her Liver; yea the Liver was felt at a distance from those Tumors, but hard and painful; because the foresaid Tumors were more prominent, than the rest of the substance of the Liver. Her whole Liver did weigh twenty pound and more. Her hip was cut up as far as to the bone in the place of the opening, and certain small glandules were found suppurated, which contained congealed Quittor, so that it could not flow out.

Kings-Evil Swellings.

ON the 8. of *January* 1639. a certain Maiden of *Nismes*, being 18 years old, was troubled with Kings-Evil Swellings in her Neck, which were suppurated by many Remedies a long time applied, and afterwards consolidated. Howbeit, a part of the Tumors remained exceeding hard, which could not be dissolved, no not with *Emplastrum de Vigo*, Roman Vitriol, and *Gum Ammoniacum* dissolved and thickned again, of each an equal quantity, with as much Turpentine as should suffice: with which Plaisters those Tumors were perfectly dissolved in a moneths space: Convenient diet being in the mean while used, and convenient Evacuations sometimes made use of.

The 155 Observation or History of Famous and Rare Cures, &c.

Inordinate Flux of the Courses with the Whites.

ON the 15 of *January*, 1639. the Wife of Msr. *de Rignac*, Proctor General of the Court of Exchequer, having a fat, burly and flegmatick Body, after Abortions she was troubled with an inordinate flux of her Courses, and with the Whites. She was happily cured with Blood-letting, Purgation, a Diet-drink of *Salsa*, and a fine pouder of Frankincense, Mastich, Sandarach, Amber, Borax, Benjamin, Cloves, Nutmeg and Red-Roses, received by a funnel morning and evening a long time together.

The 156 Observation or History of Famous and Rare Cures, &c.

Grievous and lasting Head-ach.

ON the 29. of *March*, 1639. A Woman of *Frontinia*, being 40 years of Age, of a black cholerick temper, having suffered Abortion; afterwards she wanted her Courses, whereupon a most grievous Head-ach afflicted her for four moneths together, blood-lettings doing her no good, nor Leeches applied to her Forehead and Temples, and other Remedies. I being sent for, appointed her Temporal Artery to be opened, which was excellently performed; nor did the blood come out leaping by reason of the smallness of the Artery, and the thickness of the blood, but drop by drop: there was taken away to the quantity of five ounces, red and florid, both externally and internally. The Orifice was stopped with a Plaister of Mastich only, with a simple Ligature; and after that another Ligature which is wont to be made in Wounds of the Head, having continued sticking on five hours. She was freed from the pain of her Head, and was troubled therewith no more.

The 157 Observation or History of Famous and Rare Cures, &c.

A Tertian Ague.

THE 14. of *July* 1639. Msr. *de Vandiere*, a Student of Physick, after five fits of a Tertian Ague, having been twice let blood and once purged, took at the beginning of his fit a good dose of *Aqua Benedicta*, his fit was stopped, as also the working of the Medicine for two hours; afterwards he vomited five or six times without trouble, because in every Vomit he took four or five ounces of ordinary Pease-Broth. The fit was shorter than ordinary, and at the end thereof he had divers stools, and was perfectly cured.

The

The 158 Observation or History of Famous and Rare Cures, &c.

Nephritick Pains.

THe 22 of *July* 1639. I was troubled with a Cholick pain, which extreamly tormented me in the bottom of my Belly, and about my right Kidney. After two Clysters, the pain of my Belly ceased. The pain of my Kidney continued, which reached all along the Uretor, with a pulling back of my left Testicle, so that it was a true Nephritick pain. It was dissolved with an hot Bath, because when the Bath was luke-warm, it increased the pain. The pain came again, and was removed by application of Cupping-glasses to the part. The day after it returned again, and went away again upon application of the Cupping-glasses; soon after I took a Bolus of Cassia, Catholicon, Rhubarb and Cream of Tartar, and the pain returned no more. I conceived this Nephritick pain was caused by Wind, seeing with discussive Remedies, *viz.* an hot Bath and Cupping-glasses, it was asswaged, and no obstructive matter, as Stone, Gravel or Flegm was by me voided in my Urines, after the solution of the disease, in the disease it self, or at any time time before. Nor is it impossible that the same kind of Winds, which insinuate themselves between the coats of the Guts, may be transferred into the Kidneys and Uretors, and cause grievous distensions in those parts; seeing that Winds are wont to be conveyed into all parts of the Body sometimes, and in them to raise either pains or palpitations. Yea and very many think that the most vehement pains of the Teeth are caused by Winds shut up in the Vessels which creep about the roots of the Teeth. My conjecture was strengthened, because when my Purge did work, the Winds were sensibly carried from my Loins to my Belly with a gentle noise, which was easily heard by the by-standers.

The 159 Observation or History of Famous and Rare Cures, &c.

A Looseness.

A Few dayes after the disease aforesaid, I was taken with a cholerick Looseness, so full of Acrimony, that it did corrode my Fundament, and caused sharpness of Urine, a portion of the matter being translated to the Urines, a Dysentery was at hand. Having entred into a luke-warm Bath to sit in, I was presently cured.

Falling-Sickness in a Child.

A Boy three years old, had a Fit of the Falling-Sickness, from which he was freed with the smoak of Tobacco; which a Servant drew out of a Pipe, and blew into the open mouth of the Boy; the Boy fell a vomiting, and the fit ceased.

The 161 Observation or History of Famous and Rare Cures, &c.

A beginning Consumption.

THe 15. of *October* 1639. The Son of Msr. *Le Sage* of *Montpelier*, being 20 years old, for two moneths had been troubled with a defluxof Rheum into his Lungs, with a Cough, shortness of Breath, and a slow Feaver, so that he seemed to be fallen into a Consumption. I prescribed him Blood-letting, a Purge of Manna, medicated Broths, and other ordinary Remedies. But the chief were a Caustick to each Arm-pit, which does most potently derive fluxions to the Breast and humors therein contained; and herewith he was restored in a moneths space.

The

The 162 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Malignant Feaver.

THe 18 of *October*, 1639. *John Vezian*, a Perfumer in *Montpelier*, being 24 years of Age, was troubled with a malignant Feaver, by means whereof, about the eleventh day of the diſeaſe he fell into a Raving fit, and a few dayes after into trembling and Convulſive motions of his Nerves, which are wont to attend a deadly Phrenzy; he continued Raving near a moneth together; his Convulſions laſted twelve daies, and at laſt he eſcaped, after the uſe of many Remedies. Thoſe that did moſt good were the opening a vein in his forehead, and Juleps made of four ounces of Carduus Water, three drams of Treacle Water, two ſcruples of *Bezoardicum Minerale*, and 12 grains of Camphire. Which Julep he took five times.

The eighth day of *December* 1639. *Peter Randon*, a Stone-Cutter 30 years of Age, was taken with the like diſeaſe, which ſeemed very gentle till the ſeventh day, wherein he began to rave. On the eleventh day the Vein of his forehead was opened, the day after he took the foreſaid Juleps twice, and the day following once, and with them, all the malignity was diſcuſſed.

The 163 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Pleuriſie.

THe 15 of *December*, 1639. The Wife of Mſr. *Clauſelius*, Councellor in the Court of Accounts, Subſidies and Exchequer, twenty years old, fell into a Pleuriſie in her left ſide, the ſame day in which her Courſes began to appear, which nevertheleſs were well near ſuppreſſed, ſeeing a very ſmall quantity of reddiſh matter only was voided, but nothing appeared having the colour of blood. I being ſent for in the morning before day-light, was ſomewhat in doubt, Whether or no her Ankle Vein ſhould not be opened, to aſſiſt the motion of Nature. But becauſe the pain of her ſide was very urgent, and nothing worth ſpeaking of was voided by her Womb, I thought it better to open a Vein in her Arm on the ſame ſide, which proved ſucceſsful; for the pain of her ſide was very much abated. Preſently after blood-letting I cauſed her Thighs to be rubbed, and her legs to be tied, and Cupping-glaſſes to be applied to her Thighs to help forward her menſtrual purgation. After noon her Ankle Vein was opened, Fomentations applied to her ſides, and Liniments, alſo a Clyſter was given her between her two Blood-lettings. Juleps were appointed with *Sal Prunellæ*; on the ſecond and third day of the moneth they did continue a little, but in a very ſmall quantity. Yet becauſe the ſickneſs was not urgent, we left the buſineſs to Nature, eſpecially ſeeing ſhe did ſpit freely and plentifully, by which much flegm was voided, coloured with a light reddiſh colour. On the fourth day, when her Courſes had quite left her, and her diſeaſe was not abated, ſhe was again let blood in the morning, to the quantity of nine ounces, and after dinner again, the quantity of ſix ounces. The fifth time ſhe was again let blood to eight ounces in the morning, which blood was like the former, *viz.* very flegmatick, the Woman being nevertheleſs lean and of a cholerick Conſtitution. At the bottom of the Porringer it appeared aduſt. The ſame day in the Afternoon ſhe was again let blood to ſix ounces, and the Blood appeared red in the top, which appeared white before. Hence I gathered, that ſhe had been ſufficiently let blood, ſeeing blood had been taken away, till the colour thereof was changed, according to the precept of *Hypocrates*; and the Patient was ſomewhat better, and ſlept three or four hours in the night, whereas ſhe could never ſleep before during her Illneſs. Howbeit in her Emulſions, two drams of Syrup of Poppy were commixed, her Emulſions continued with Sal Prunellæ, and a Cataplaſm applied to her ſide of the materials of the Fomentation, with Flower of Linſeed, Oyl of Lillies, Oyl of ſweet Almonds, freſh new made Butter and Saffron. The ſixth day ſhe took a roaſted Apple, into which had been put a dram of Frankincenſe poudered, and drunk four ounces of Carduus Water after it, and covering her Body more than ordinary, to provoke her to ſweat. At Nine a clock in the morning this Medicament was given her, ſhe did not ſweat, but her ſpittle appeared for three or four hours more tainted with blood, and

came

came up more easily. About two of the clock in the Afternoon, her spittle appeared no longer red, but altogether white, her Feaver was more remiss, and the pain of her side was quite allay'd, so that she could lie without pain on vvhich side she pleased. Emulsions were continued to temper the Feaver of her Blood. On the seventh day her menstrual Purgations broke forth plentifully, and continued for four dayes together, by which means her Feaver was very much lessened, and the pain of her side wholly taken avvay. On the twelfth day she was purged with a Medicament of half an ounce of Senna, one dram of Rhubarb, Manna and Syrup of Roses, of each one ounce. The Purgation did luck well, and the Patient was perfectly cured.

At the same time a certain Countrey Woman was troubled with the same Disease, after the seventh blood-lettting, her disease was abated; on the twelfth day she was purged with the like Medicament, whereby she was much eased, and the disease began to decline a few dayes afterward.

The knovvledg and Cure of most diseases in Man are to be had from these Books, The Practice of Physick, The Idea of Physick, The Guide to Physick and Chirurgery, and the *London* Dispensatory, of the last Editions.

The 164 Observation or History of Famous and Rare Cures,&c.

A Malignant Feaver.

ON the 11. of *January* 1640. a Woman 50 years old, named *Martina*, a Broker for Oyl, was taken with a Malignant Feaver, with broad violet spots about her Shoulders and Neck in small quantity. I was called on the sixth day of the disease, her Pulse was low and languid, she was very sleepy, and her disease accompanied with a dead sleepiness. She was twice let blood; I appointed her an emollient and laxative Clyster, a Vesicatory to her Neck, cooling Juleps, with Antidotes. On the seventh day all things were worse. On the eighth day, being sent for again, I prescribed her a Diaphorerick potion of two scruples of *Bezoarticum Minerale*, and twelue grains of Camphire with Carduus Water, which was three times repeated. After it was first given, a Diaphoretick Fomentation was added, to be applied to her whole Belly and Breast with Spunges after she had took the potion; and her pulse became stronger and more ordinate. Being called again after two dayes, I found the signs of malignity as yet strong, whereby she was in extream danger. I appointed her Juleps of a Decoction of Cinquefoil, White Thistle, Bugloss, Scordium Leaves, Sorrel,&c. to be taken morning and evening; and four Vesicatories to be applied to her Arms and Thighs. On the eleventh day a rising appeared behind her Ear, which was brought to suppuration by Topick Medicaments, and at last the sick Woman was restored to her former Health.

The 165 Observation or History of Famous and Rare Cures,&c.

The Dropsie.

THe 8. of *November* 1640. the Maid-servant of Msr. *de Cross* his Wife, a famous Advocate, after a Tertian Ague fell into the Dropsie, because she had in her Fits drunk abundance of Water. I prescribed her the Infusion of Senna with Salt of Tartar for twelve dayes, after which she was somewhat better. Afterward this following Apozem was given her.

Take Elecampane Roots, Roots of Gentian, Valerian, our Orris and long Birthwort, of each one ounce: Bark of Capar roots, middle rind of Ash and Tamarisk, of each half an ounce; Leaves of Agrimony, the two Wormwoods, ground Oak and Centaury, of each one handful. Liquoris scraped and Raisins stoned, of each one ounce. Senna one ounce. Turbith and Agarick, of each half an ounce; Dwarf-Elder seeds three drams. Ginger and Cloves, of each one ounce. Boyl all to twelve ounces. In the strained Liquor dissolve Syrup of Cichory with Rhubarb four ounces. Make an Apozem for four Morning Doses.

With this Apozem she voided all the Hydropical humors by Stool and Urine, and was perfectly cured. It

It did not a little help forward the Cure, that whileſt ſhe was uſing a fume to diſcuſs the Tumor of her Legs, ſhe burnt both her Legs, whence followed Ulcers, from which much Water flowed during the uſe of the Apozemes.

The 166 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Quartan Ague.

ON the 15. of *October* 1640. the Son of Mſr. *Roche*, twelve years old, was freed from a Quartan Ague, by an Infuſion of Senna and Cream of Tartar, which he took for ſeven daies together.

On the 14. of *November*, Mſr. *Peliſſerius*, thirty years old, had a Quartan Ague for three moneths; in the beginning of *November*, after the uſe of an aperitive Apozeme, which he took a little before four dayes together, Purgatives being alſo mingled therewith. At laſt I preſcribed him an Infuſion of Senna with Salt of Tartar, for fifteen days. And at the twelfth time taking, the Ague fit ceaſed and came no more. Now he was of a Melancholick temper, hard to work on, a ſtrong tall man. At firſt there was infuſed half an ounce of Senna with a dram of Tartar Chriſtalized in ten ounces of Water: Wherewith he was purged only once a day. After ſome dayes I put in four ſcruples of the Tartar, and he was purged twice in a day.

After the uſe of this Medicament, though he was free from his Ague-Fits, I preſcribed him a ſtrengthening and opening Electuary for twelve dayes. By the uſe whereof his Face was reſtored to its ancient Comelineſs.

The 167 Obſervation or Hiſtory of Famous and Rare Cures, &c.

The Dropſie.

ON the 20. of *February* 1641. The Widow of *Paul du Craſs*, a Citizen of *Montpelier*, ſixty years old, was taken with a Dropſie and ſhortneſs of Breath, ſo that her whole Belly, Thighs and Legs were ſwollen very much. She was all her life-time of a very Fat and Phlegmatick habit of Body. I preſcribed her after ſome other Remedies, a Decoction of Guajacum, with Senna, Agarick, Turpet and Hermodactyls, to be uſed for fifteen dayes together.

Afterwards, with theſe two following Remedies continued for a moneth, ſhe was perfectly Cured.

Take Roots of Elicampane, Smallage, Fennel and Orris dryed, of each one dram and an half: Roots of Valerian, Gentian, Aſarum, Squill, of each one ounce. The middle Bark of Elder and Saxafras wood, of each ſix drams. Leaves of Wormwood, Agrimony, Ground Oak, Maiden-Hair dryed, of each two drams. Tops of Centaury and Broom-flowers, of each one dram. Seeds of Parſly, Ameos and Dill, of each one dram and an half. Cinnamon two drams. Bruiſe and ſhake them together, and infuſe them in four pints of White Wine certain dayes. And let her take two or three ounces of this Wine every day in the morning two hours before meat.

Every fourth or fifth day let her take a doſe of this following Pouder:

Take Senna cleanſed, Gummy Turbith, Hermodactyls, Dwarf-Elder-ſeed, Roots of Jallap and Mechoacan, of each one ounce: Cream of Tartar two drams. Cambogia half a dram: Pouder Diambre a Diarrhodon Abbatis, and ſweet Fennel ſeeds of each a ſcruple: Sugar-Candy three drams. Make all into a pouder, two drams whereof muſt be infuſed all night in four ounces of the foreſaid Wine. Let her drink the Wine and Pouder together in the morning.

The

The 168 Observation or History of Famous and Rare Cures, &c.

An Ulcer of the Gums.

ON the 23 of *February* 1641. The Daughter of Mſr. *de Raſtenclieres* being 18. years old, having endured for two years together ſtubborn Ulcers of her Gums, in her lower Jaw-bone, at the Roots of her three former Teeth which are called Cutters, ſo that her Teeth were looſe, and were bare of fleſh to the very holes: She could not be freed from this Diſeaſe, without much Pain and many Remedies; becauſe it depended upon an hot and dry diſtemper of the Spleen, and conſequently upon a black Chollerick Conſtitution. When ſhe had been a year Cured, there aroſe a puſh in the ſame place, but a little lower, *viz.* By the jaw-bone, and in that part where the lower Lip begins to be ſeparated from the Jaw-bone. After four or five moneths, uſing no Remedy, the puſtule broke, and an Ulcer remained, with part of the jaw-bone bare, appearing to the lookers on perfectly bare as broad as half a mans Nail.

After blood-letting and purgation, the Ulcer was perfectly healed within fifteen days ſpace, with this following Balſome.

Take choice Mirrh, and Sugar Candy of each a like quantity, pouder them, and fill therewith the Whites of Eggs hard boyled, and cut aſunder in the middle: tie them well with threds and hang them on ſticks laid croſs a Glaſs or Baſin, and ſet them in a Cellar. From them will drop a liquor or balſom, with which let the part be anointed oft-times in a day.

The 169 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Puffing up of the whole Body of a little Boy.

THe 3. of *June*. 1641. The Son of one *Roche*, a Citizen of *Montpelier*, 18. Moneths old, was blown up ſuddenly all his body over with a Feaver; and another Son of the ſame Family died of the Diſeaſe. I preſcribed him ſundry Remedies for ten or twelve days, *viz.* A Purge, Clyſters, Aperitive Juleps, a Veſicatory, Oyntments. At laſt I preſcribed a Syrup of the decoction of Agrimony, Roman and common Wormwood and Centaury, to be taken out of a ſpoon, twice in a day; and within three days he was well, a Looſneſs following, with plenty of Urine.

The 170 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Venereal pain in one Arm.

THe 15. of *June*, 1641, an outlandiſh Gentleman, thirty years old, had two years before been infected with the Venereal Pox, by means of which being ill cured, there did remain a pain in his left Arm, all along well near, which was worſt at night, and it ſeemed to be about the Periſtium or Membrane which covers the bones. I preſcribed him an univerſal purgation and to be let blood twice. After that a ſweating diet for twelve days, in the morning he took the decoction to ſweat, and at evening his Arm was held over the ſteam of a decoction of Guajacum and Cephalick Herbs made in water and white-Wine, which was ſprinkled upon hot flints, and thereby much ſweat came from his Arm. After the ſweat there was applied the Plaiſter of Vigo with a fourfold quantity of Mercury. When his ſweating drink was done, the fume was continued for five days, every morning and evening; and afterwards that Plaiſter was applied, which is preſcribed for the Sciatica, made of Orpiment, Verdegeaſe, *&c.* which raiſed puſtules and little Ulcers, in thoſe places where the greateſt pain was wont to be, and ſo he was perfectly Cured.

The 171 Observation or History of Famous and Rare Cures, &c.

Of a Chollerick Chollick.

A Certain Religious Person, was subject to a long and stubborn Chollerick Chollick, which went and came frequently. Some body did counsel him, to take in the morning, a peice of fresh Butter and to drink a little Wine upon it. By this Remedy continued a long time together, he was perfectly Cured of the said pain, and never troubled therewith any more.

The 172 Observation or History of famous and rare Cures, &c.

Sciatica pain.

THe Son of Msr. *Paschеque* the Physitian of *Lunelle*, my very dear Friend, was taken with a pain in his Huckle bone. After which followed a kind of nummedness of his Arms, nor could he well use his Fingers, also he could not easily fetch his Wind. All these Symptoms came from one and the same Disease, by reason of the fourth Muscle of the Chest, which arises from the Os Sacrum, and the inner Os Ilij, and climbing up by the Vertebraes of the Loins, does cleave to the ten first Ribs, and is inserted into the seventh Vertebra of the Neck: so then it is no wonder, if when this Muscle is affected in its beginning, with swelling pain, or any wearyness which is tensive, ulcerous or Phlegmonous; that then the parts should be affected, unto which it is fastened. Seeing therefore it serves to respiration, that comes to be hurt, when this Muscle is diseased in its original: and seeing it is inserted into the Vertebraes of the Neck, from which the Nerves of the Arms do spring, it is rational that the actions of the Arms and Fingers should also be hindred. These things are more largely explained by *Sanctorius*, in the 20. Chapter, of his Second Book. *De Vitandis Erroribus.*

The 173 Observation or History of Famous and Rare Cures, &c.

A Malignant Feaver.

THe 26. of *October*. 1641. The Daughter of Msr. *Conte*, a Merchant of *Montpelier*, twenty years old, was taken with a Malignant Feaver, proceeded so far, notwithstanding ordinary Remedies, that about the eleventh day of her Disease, she fell into Raving by fits, and contractions of her Nerves, which appeared chiefly in her Wrists: unto which were added fainting fits sometimes, and very black furredness sticking to her Teeth. Her Tongue was rough, black and burnt. In this Dangerous condition besides Epithems, young Pidgeons, and other strengthening things internal and external; I prescribed these following Remedies, which are wont to be of greatest Efficacy in these Diseases, *viz.* Five Vesicatories, to be applied to her Neck, Arms and Thighs; Juleps of three ounces of Carduus water, three drams of *Banderon* his Treacle water, two scruples of Bezoardicum Minerale, and six grains of Camphire; which Juleps she took two days morning and evening. Also a scruple of the said Bezoardicum Minerale was given her in every dose of broth. With these Remedies, she was in a few days freed from this grievous Disease.

The 174 Observation or History of Famous and Rare Cures, &c.

Gonorrhæa.

A Man forty years old from an impure bedfellow caught the Gonorrhæa, for whom I appointed at first a Bolus of one ounce of Cassia, Rhubarb poudered and Cream of Tartar,

tar, of each one dram. The day following I would have had him let blood in the foot, but he refused. Emulsions were prescribed him, for three or four days, wherewith the Acrimony of his Urine was tempered, the flux continuing after the same manner. Afterwards he used a laxative Ptisan for seven days together, made after this manner.

Take Tamarinds two ounces; Fountain Water four pints, boyl them to three pints. In the strained liquor being cold, steep all night Senna, Coriander seed, Liquoris, and red-Roses of each two drams, Let him take a draught in the morning an hour before meat. With this, his flux was very much abated; for the total removing whereof, I prescribed this following Bolus.

Take Venice Turpentine three drams; Rhubarb poudered one dram; make a bolus, which let him take every morning for five days together.

Then he used this following water for seven days.

Take dried Mints three ounces, seeds of Lettuce, Rue and Agnus Castus, of each two ounces and an half. Orris root two ounces. Dictamus ten drams, the best Sugar two pounds, Pounder all, and add thereto five ounces of Venice Turpentine, strong white wine thirty ounces. Mix them and distil them in Balneo, Let him take two spoonfuls in the morning, two hours before meat. Thus was this Gonorrhea cured. Yet because a little moisture did frequently appear on the top of his yard, as is wont for the most part to happen, in the end of a Gonorrhea; perfectly to stop and dry the same up, I appointed these following Pills.

Take Gum Arabick, Tragacanth, Amber, Mummy, Bole Armenick, of each one dram; ponder them, and with Syrup of dried Roses, make a Mass of Pil-stuf. Of which let him take one scruple every morning, two hours before meat, for eight or nine days together. And so his flux was perfectly stopped,

The 175 Observation or History of famous and rare Cures, &c.

Of Empiema.

THe Son of Mr. *Plantade* a Councellour in the Court of Accounts, Subsidies, and the Exchequer, being five years old; had a continual Feaver for about two moneths together, with a frequent and troublesom Cough; so that he was thought to incline to a Consumption. At last, Physitians being called to consult, they were informed that he complained of a pain in his left side, especially if he were handled thereabouts. Also it was related that when his Feaver began, he felt some pain in that side, which ceased within a few days: and therefore his ordinary Physitian judged that it was no Plurisie that troubled him. It was suspected that some Empiema lay hidden in that part, and the better to manifest the matter, it was resolved to apply an Emollient and drawing Cataplasm for some days; after three days usage whereof a certain rising began to appear in the part, and an obscure rowling to and fro of some Humor was perceived. The Phisitians being again called to consult, no man doubted but that it was an Empiema: and being opened, good store of Quittor came forth, and the evacuation thereof was continued for two moneths, till all the matter was voided forth, and the Patient was at last restored to his former Health.

The 176 Observation or History of Famous and Rare Cures, &c.

An ulcer with Corruption of the Bone.

A Boy 15 years old, had an Ulcer a long time upon the upper part of his foot, between the Instep and Toes, which a skilful Chyrurgeon that had him a whole year in hand could not cure. Another younger Chyrurgeon to whom the Patient was afterward committed, having widened the Ulcer and perceiving that there was a corruption in the Bones, he applied pulvis Catagmaticus, to take away the said corruption, but in vain. Afterwards he askt my advise, I bid him apply some Pouder of Euphorbium with lint; many small splints of bones came out;

the second day he laid on the Linnen bolster alone, the third day he applied the same pouder again and more splinters of bones came out, so that the bone appeared at last clean and free from rottenness, and the ulcer was afterwards in a short time cured.

The 177 Observation or History of Famous and Rare Cures, &c.

Difficulty of breathing with a very uneven pulse.

THe most excellent Lady, *Madam de la Roquette*, sixty years of Age, being very fat and burly, living a sedentary life, very religious and given dayly to prayers, began fifteen years since to be troubled with shortness of breath, which increased by little and little, so that now she could not go up stairs, without resting at every third or fourth step. About the beginning of *January* 1642. being upon a Journey, when the wind was South and the weather rainy, she was suddenly taken with a Catarrh, falling partly upon her Lungs and partly upon her jaw-bones. Whereupon her shortness of breath encreased, her right cheek was swelled, and her jawes were so straitened, that she could take in no meat, but only broth she could sip a little. She had been accustomed to be troubled at times for many years together, with a red swelling of her left Leg, which was wont often to be exulcerated, and before the coming of this Catarrh, she had the said swelling, with large exulceration. I being called to her on the eighth day of her Disease, found her pulse very uneven, and intermitting after every third or fourth stroak, with a very great difficulty of breathing. Which made me conjecture, that the Disease was greivous, not only in her Lungs, but also in her Heart, or the Vessels neerest the same, and I foretold that she should die. Which Prognostication was rendered thereby more certain, because the ulcer aforesaid in her Leg, was all of a sudden dryed up, according to that saying of *Hypocrates* in the 25 Aphorism of the 6 Section; for an Erysipelatous swelling to strike in is a bad sign. Moreover the swelling of her cheek being in a few days resolved, her jaws remained shut nevertheless, and it was apparent, that the closure of her jaws did proceed from a convulsion of the muscles which should move the same. On the 15 day of her Disease in the morning, her right eye was observed to be shut, the other being open, which happened by reason of the Palsie in her Eyelid, which threatned somewhat worse to follow, which accordingly hapened the same day in the after noon, *viz.* her left side became Paralytical. And three days after, her strength decaying by little and little, she died.

In the whole Course of her Disease no Cough did follow her shortness of breath, nor any rattling of her Pipes, unless it were one day before her death. Her body being opened, her spleen was found putrified, so that being lightly pressed it would break in pieces. The substance of her Lungs was of a black and blew colour, and full of a watry humor, and one lap thereof, on the left side, was full of putrid and mattery Flegm. The right ventricle of her Heart, had no Membrane in the inside, was putrid and exulcerated; so that if you toucht the fleshy fibres thereof with your fingers tops, they would crumble to pieces. The right Ear of the Heart seemed bigger than ordinary, and was filled up with a certain fleshy substance partly red, and partly black, like congealed blood, which nevertheless could not be broken asunder with ones hand. These two Diseases, *viz.* Of the Ear and the Ventricle of the Heart, I conceive to have been the Cause of so much inequality and intermission of her pulse, whiles the Heart seeking to shake that off which troubled it, was exercised with sundry motions, whence followed the interruption and interception of the natural pulse; but that her difficulty of breathing sprung from the stoppage of her Lungs is manifest enough.

It vvas my hap to see the like inequalty of pulse, in two other sick persons, one of which vvas the Son of Msr. *Hugo*, a Merchant of *Montpelier*, five years old, who being long vexed with such an inequality of pulse, at last died. In his opened body, there appeared nothing preternatural, but the right Ear of his Heart, which was much greater than ordinary, and was full of a certain hard, congealed, Flegmatick substance, like a great nut, which hindered the free motion of the Heart and caused the aforesaid Inequality. The like pulses appeared in the daughter of Msr. C. 20 years of age in whose opened body, an ulcer was found in the very heart, vvhereby vvell near half the substance thereof vvas consumed. The History of these Cases are described, in the former Observations.

The 178 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A conſumption.

THe daughter of Mſr. *Salomon*, a Citizen of *Montpelier*, about twenty five years old, being of a very chollerick complexion, was troubled ſome moneths together, with a greivous defluction of rheum falling down upon her Lungs, with a troubleſom cough night and day, want of ſleep, pain in her breaſt, a ſtrong Feaver, coſtiveneſs and Leanneſs of her whole body; ſo that ſhe ſeemed to be abſolutely in a Conſumption, kept her bed many days, and made haſt unto the Grave. I being called, and obſerving the very hot diſtemper of her bowels, and the perpetual coſtiveneſs of her belly, which was very troubleſom, premiſing a Clyſter, I cauſed her to bleed ſeven ounces. And ſoon after I cauſed two cauſticks to be applied between her ſhoulders, near her back-bone. I preſcribed her a laxative Ptiſan, to be uſed five days together which was thus made.

Take Tamarinds one ounce and half; Fountain water three pints. Boyl them to a quart. In the ſtrained Liquor being cold, infuſe all night, Senna, Coriander ſeeds and Liquoris bruiſed, of each two drams, Red Roſe leaves, one dram. Let her take a Cup of the ſtrained Liquor every morning, an hour before meat.

With theſe few Remedies ſhe was ſo recovered, that after fifteen days, ſhe roſe out of her bed, and begun to go about her uſual work. Yet her coſtiveneſs and want of ſleep continued, againſt which I preſcribed, firſt a Bolus of one dram of Conſerve of Roſes and a grain of Laudanum. Wherewith ſhe ſlept four or five hours, and after that whole nights together, for the moſt part, without any other help. Then I ordered her to take the foreſaid laxative Ptiſan again for ſome days together. The ſpring following, having uſed Aſſes Milk for a moneth together, ſhe was perfectly cured.

The 179 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Pleuriſie.

THe fourth of *April*, 1642. The Son of Mſr. *Roche* a Citizen of *Montpelier*, twelve years old was ſick of a Pleuriſie, in his right ſide; he was five times let blood, and other ordinary Remedies were adminiſtred to the ſeventh day. The Feaver was violent, with great unquietneſs, and the pain did very much trouble him. On the ſeventh day half a dram of Chimny-ſoot poudred was given him in Carduus water; within two hours after, all the Symptoms were very much abated, and the Patient was much better, and afterwards by little and little recovered.

The 180 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Hoarſneſs.

THe daughter of Mſr. *Viventius* of *Lunelle*, being twenty years old, expoſing her ſelf to the cold Air, fell into a greivous hoarſneſs, ſo that ſhe could hardly ſpeake a word, ſhe had no Cough, no ſhortneſs of breath, nor any Catarrh, that appeared. The Diſeaſe continued for ſix moneths; many Remedies were uſed, but in vain. At laſt while ſhe was a ſleep, an indifferent quantity of watry ſubſtance ran out of her Ear, and ſhe began to ſpeak freely, and with a clear voice. Whence may be conjectured, that the foreſaid humor being collected in her brain did poſſeſs that branch of the Nerves, which is carried from the fifth conjugation unto the muſcles of the Larynx, whereby the voice is formed and ſo thoſe muſcles became as it were palſied.

Four moneths after, another Virgin of *Lunelle*, named *Rudaude*, being troubled with the ſame Diſeaſe eight moneths together deſired my advice. Being moved by the foreſaid example, I conceived

I conceived that all the scope of the Cure was to be directed to the Evacuation or discussion of the Wheyish or flegmatick matter collected in her Brain. And having premised Blood-letting and Purging. I prescribed her a decoction of Guajacum and Sarsaperilla, with Senna, Agarick, Turbith and Hermodactils to be taken twenty days together, with a Diet drink of Sarsaperilla, and a drying Diet. Afterwards I sent her to the *Balerucan* Baths, where she did sweat for three days, and her Disease was perfectly cured.

The 125 Observation or History of Famous and Rare Cures, &c.

Inveterate Venereal Pox, with an hot and dry and almost Black-chollerick temper.

A Certain Gentleman thirty five years old, of the temperament aforesaid, being for two years troubled with the Venereal Pox, had filthy Ulcers in his Palate, upper Lip, and about the root of his Nose. At first, he was handled with sweating and fluxing, whereby he seemed to be cured; but a few days after, the Ulcers break out afresh, and the Patient is as bad as before. The Cure was again begun with sweatings and Mercurial Ointments, after which he was worse. The third time the Cure was undertaken in a manner quite contrary to the former, by coolers and moisteners, quite omitting such things as are proper for the Pox; but all did no good. At last coming to *Montpelier* and imploring the advice of three Physitians, he received these following directions, *viz.* that Indication being taken both from the hot and dry distemper of his Bowels, and from the Venereal Disease, he should use these Remedies following.

First, An emollient Clyster.
Secondly, A cooling and purging potion.
Thirdly, Blood-letting to nine ounces.
Fourthly, A cooling and purging Apozem.
Fifthly, A Lukewarm bath for two days.
At the coming forth from the second bath the Hemorrhoids were to be provoked.

Afterwards a liberal and temperate Diet-drink was prescribed him of Sarsaperilla and Guajacum, adding at the end of the decoction, Cichory, Endive and Tamarinds, let him use it five days, and sweat very gently.

Mean while let him have a drink of Sarsaperilla for his ordinary use, and keep a liberal and not a drying Diet.

After the use of the Sudorifick decoction for five days, let him take the foresaid purging potion again.

For two days following let him use the bath again.

Afterwards let him again use the Sudorifick decoctions for five days, made only of the foresaid Sudorificks, without the addition of Herbs and Tamarinds. And let sweat be provoked by the vapors of Spirit of Wine, impregnated with Tincture of Guajacum.

After he has sweat again for five days, let him be again purged with the foresaid potion. And after that let him bath for two days together.

Then let him sweat again for five days, with a decoction of Guajacum alone, and when the five days are past, let him take the purging potion again, and then let him use a lukwarm bath for two days together.

Let him continue this Method till the Ulcers shall be healed up. And that their Cure may be the better forwarded, let him use these followiug Topical Remedies.

First let a Gargarisme be made of a decoction of Guajacum, adding the Roots of great Comfry, and round Birthwort, Leaves of Agrimony, Vinca pervinca, Prunella, Mouse-Ear, Betony, of each one handful. Tops of St. Johnswort, and red-Roses, of each one pugil. Dissolving therein afterwards Honey of Roses.

Let his external Ulcers be cured, first by an infusion of Litteridge made of Vinegar. And if when the Crusts are taken off, they seem very foul, let the following Ointment be used.

Take Oyl of Roses one ounce and a half, Juyce of Plantane and Nightshade, of each one ounce. Boyl all to the Consumption of the Juyces, afterwards add of lead burnt and washed

six

ſix drams; White Wax, as much as will ſuffice. Make all into an Ointment.

If the Gargariſme ſhall ſeem too ill taſted, it may be made without Birthwort root, and the quantity of honey may be augmented; or Sugar of Roſes may be put in, in ſtead of Honey.

The ulcers being cured, let him uſe yet a moneth or two the foreſaid Diet-drink.

At the end of the ſaid Diet-drink, let him again purge and bath. And let him take cooling broths for ten days together, wherein let one dram of Sal Prunellæ, and half a dram of Cream of Tartar be diſſolved, with three drams of fine Sugar.

When he ſhall begin to take his broths, let a cauſtick be applied to both his Legs.

Finally, to confirm the Cure, let him uſe for ſome time together, an Opiate compounded of Sudorificks and Purgatives, whoſe deſcription may be ſeen in the Diſpenſatory of *Renodæus*.

The 182 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Suppreſsion of Urine.

A Certain Man ſeventy years of Age, having rid ſome miles upon a trotting Horſe, fell into a Suppreſſion of Urine, ſo that he could hardly make any water, and that only drop by drop. By another Phyſitian, he had firſt a Clyſter given him, then was let blood, and ſate in a bath. Alſo ſome Diuretick potions were given him. But finding no eaſe, and ſending for me, I obſerved a ſtretching and hardneſs in the Region of his bladder, with pain which was only felt by preſſing the ſame. Moreover the Patient had pains in his Back, Shoulders and Breaſt, ſo that he could hardly ſtir himſelf. It was a Southern and Rainy ſeaſon. I conjectured that all theſe Symptoms proceeded from a Catarrh flowing out of his Head, and that the flowing humor had invaded the body of the bladder and bred ſome Tumor therein, by which the Sphincter of the bladder was compreſſed, and the paſſage of the ſaid bladder made ſtrait. Therefore to direct and evacuate the humor flowing in, I preſcribed him a temperate purging Apozem for three days, a Veſicatory to be applied to the hinder part of his neck, and an emollient Fomentation and a little reſolving, to be applied to the Region of his bladder, and a Liniment endued with the ſame vertues. By the uſe of the Apozem his Urines came away every day better and better, ſo that three days being paſt, he made water much more eaſily and freely. Afterwards I appointed him a Bolus of Turpentine and Liquoris pouder for three days together, a Fomentation and Clyſter made of a decoction Emollient and more reſolving; and a Cataplaſm of the reſidence of the decoction, with Bean-Meal, Fænugreek, Oyl of Dill and Chamomel. With theſe Remedies he was reſtored to his fomer health.

The 183 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Feavers of Children.

THe Son of Mſr. *Paul*, a Citizen of *Montpelier* three years old, was taken with a moſt acute Feaver, which ſoon came to its height: he had a perpetual unquenchable Thirſt, which continued from firſt to laſt, and within five days he died. His hands and feet were oftentimes cold, and at the laſt continued ſo, ſo that the Diſeaſe reſembled the Feaver Lipyria. His body being opened, no Inflammation appeared in his Stomach, Guts, or any other part, of which there was great ſuſpition by reaſon of the foreſaid Symptoms. And ſeeing there appeared no Cauſe of ſo great Symptoms, and all the Bowels were well conſtituted; I ſuppoſed thoſe Symptoms proceeded, from a malignant and venemous quality, *viz.* from the ſmall Pox, which were then riſe, which this Child was not able to thruſt forth by reaſon of its native weakneſs, and the vehemency of the venom. This happened, about the beginning of *July* Anno 1642.

At the ſame time two little Girles of eight moneths old, began to be ſick of a frequent Looſneſs, wherewith Leek-coloured and Verdigreaſe-coloured Choller were voided, with a moſt intenſe Feaver. I preſcribed them both Clyſters of broth, the yelk of an egg, and Confectio de Hyacintho, a Liniment for their Bellies, of oyntment of Roſes, Comitiſſæ, and Oyl of Quinces; for their Hearts, cooling and ſtrengthening Epithems and Juleps of Plantane water, Purſlane water, Syrup

Syrup of Quinces, Confectio de Hyacintho and Lapis Prunellæ. Which they took frequently out of a spoon, and within two days the Feaver was much abated, and almost extinguished, and the looseness very much abated. The Nurse was ordered to use a cooling diet.

The 184 Observation or History of Famous and Rare Cures, &c.

A Dysentery.

ON the third of *August* 1642. my Wife fell into a greivous Dysentery in the afternoon, having taken the day before a gentle medicament; now this Disease was at that time very rife. At bed time, I gave her two grains of Laudanum, in conserve of Roses; the day after at two a clock after dinner, the Disease continuing, I gave her two grains more of Laudanum. Her looseness continued without blood, which continued five or six days, not very troublesom. And at last with a medicament of Infusion of Rhubarb and Myrobalans, with pouder of Rhubarb and Syrup of Roses, it was quite cured.

The 185 Observation or History of Famous and Rare Cures, &c.

Of a Dropsie.

John Haguenote, a Chyrurgeon about twenty seven years of Age, was troubled with the Rhumatick Disease, with pains all his body over, proceeding from a hot distemper of his Liver; which Disease continuing four or five moneths, brought him to an extream leanness with a continual slow Feaver. At last, notwithstanding divers Remedies administred to overcome so great a Disease, he fell into a Dropsie, which was partly Ascites, and partly Tympanites, by which his belly was swelled to a great Bulk. After many Medicines tried in vain, and many consultations to no effect, when he seemed wholly desperate, he was committed to my care alone. He was extream lean, so that his Muscles were wholly consumed, as in an Hectick Feaver of the third degree. I conceived the very substance of his Liver was extreamly decaied, so that it was impossible to restore the same. Wherefore premising a prognostick to that effect, I set upon the cure for experience sake, on the fourth day of *August* 1642. And in the first place I gave him universal purging Pills with one scruple of Calomelanos of Turquetus, He had six stools, and bore it well, and voided many Wheyish and Phlegmatick excrements.

The following day, he began the use of these following Apozems.

Take of Asparagus, Butchers-broom and Elicampane, of each one ounce. The middle bark of Ash and Tamarisk, of each half an ounce; Roots of Valerian, round Birth-wort, and Asarum, of each two drams. Leaves of Cicory, Agrimony, Ceterach and Maiden-hair, of each one handful; of the two Wormwoods, Ground Oake and Centaury, of each half an handful. Boyl them to a pint, and in the strained liquor dissolve Syrup of Maiden-hair, three ounces. Make of all an Apozem for three morning doses, adding to every dose one dram of Diuretick Salt, and thirty drops of Diuretick spirit. This he continued for six days, and voided twice or thrice a day Flegmatick and Wheyish excrements. On the seventh day he took again the foresaid Pills, with the same effect. Afterward he continued his Apozems for fifteen days, and the swelling of his whole belly was abated, for he went to stool every day four or five times, voiding Flegmatick and Wheyish excrements, and plenty of Urine. He continued extream lean and without any Appetite. I prescribed him a pouder of one dram of Vitriolum Martis, and two drams of pouder of Ivory, he took at first one scruple, in the morning with Panada; and at the same time he took morning and evening two spoonfuls of Tincture of Roses, These were continued only for two days. But because his belly was yet somewhat swollen and he voided flegmatick and very crude matter by stool, he returned to his opening Juleps which were made of a decoction of temperate and opening herbs and roots, the Salt and Spirit aforesaid being added, because from the long use of the foresaid decoction, I feared he should be too much dried. He took the said Julep in the evening, without the salt & spirit, but with Juyce of Lemons to quench his thirst. He voided

as

as before flegmatick and watery excrements. To his evening julep was ſometimes added one ounce of tincture of Corals, to ſtrengthen and cool his Liver. Theſe things being continued for twelve daies together, his belly was quite fallen, and the skin of his whole body felt ſofter; his muſcles began to be filled, and his whole habit of body to be nouriſhed, his appetite was good, and his ſtomach did well digeſt. At laſt to ſtrengthen his bowels, and gently to provoke his expulſive faculty, which remained ſluggiſh, every day he took half a dram of Rhubarb, made into a bolus with ſyrup of Roman Wormwood. This bolus he took for five daies together. Afterwards he abſtained from all remedies, for as many daies more. Afterwards to recover him out of his leanneſs, he uſed a bath of Barley and Almonds, which was repeated once every week. And when he had abſtained a moneth together from purging, he began to be tormented with pains in his limbs, yet not very violent, which continuing many daies, he ſent for me again: and I told him the defluxion of humors muſt be taken away by purging. He ſaid, that his former pains, in the beginning of his diſeaſe, were much encreaſed by purgation. Which was the reaſon, that I would not give him any vulgar purgation, but the foreſaid pils he took and they gently purged him, and his pains were taken quite away. He was perfectly cured of his dropſie, but being very careleſs in his diet, and did eat ever and anon meats bad for him, he fel into a tertain Ague, of which being by ſome remedies cured, after fifteen daies he fell into it again; and ſo he lived four or five moneths, his tertain ague fits ever and anon returning, by his own extravagancies of diet; till at laſt he died, having nevertheleſs lived ſix moneths before, even to his dying day, free from the dropſie.

The 186 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Gangrene cauſed by a veſicatory.

IN the moneth of *Auguſt*, 1642 the daughter of Mr. *Bon* a Councellor of the Exchequer Court, being two years and an half old, troubled with a malignant Feaver, was plied with ſundry remedies, and among the reſt a veſicatory being appointed, the Apothecary made it of the common veſicatory Plaiſter of the ſhops, and to make it the ſtronger, ſprinkled a great deal of pouder of Cantharides upon it, whereupon the skin was burnt, and the day following, all the part covered with the veſicatory, appeared Gangrenated. For the Cure whereof, ſcarrifications being made, it was fomented with Aqua vitæ, and then a liniment applied, made of Unguentum Egyptiacum diſſolved in Aqua vitæ. Within three daies, the Eſchar was ſeparated, and the remaining ulcer cured, with this following Oyntment.

Take the kidny-ſuet of an Oxe one ounce. Lytharge prepared, and Minium, of each one ſcruple. Oyl of roſes, as much as will ſuffice. Make of all an Oyntment.

The 187 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Of a Malignant feaver.

IOhn Richards a Citizen of *Montpelier*, having been afflicted with a malignant Feaver, for ſix weeks together, was ſo extreamly weakned, that he ſeemed to be near his grave. I coming then firſt to him, and hearing that he had been little purged, all his diſeaſe long, I conceived that his ſtrength was overpowred with the burthen of humors, but ſo weak withall that he could hardly bear purging. Therefore I undertook to purge him by degrees, and preſcribed him a potion of the Infuſion of one ſcruple of Senna in Cichory water, and half a ſcruple of Cream of Tartar, adding one ounce of Syrup of Roſes: this potion he took three daies one after another, and had two ſtools every day, his ſtrength was a little encreaſed; on the fourth day he took an ounce of Syrup of Roman wormwood. On the fifth day I gave him the infuſion of a dram of Senna, which being continued for two daies, he was gently purged to good purpoſe. Whereupon he began to be better, recovered by little and little, repeating his purgations at certain times.. Some time after he fell into a relapſe, and ſent for no phyſitian, till he was at laſt caſt, and ſo he died. This one thing only is worthy of note in this Obſervation; that a purging

ging Medicaments may be given in the greatest extremity of weakness, provided it be prescribed in a very small dose.

The 188 Observation or History of Famous and Rare Cures, &c.

A Looſneſs in a Boy.

THe Son of Mr. *Andeſſan*, Councellor in the Court of Accounts, being four years old, was troubled with a long Looſneſs, want of Appetite, and weakneſs. The original of this Looſneſs was from bad Diet, for they crammed him with much meat, and ſometimes gave him pure wine to drink; whereby his Natural heat was ſo waſted, that his nouriſhment was converted into crude and Flegmatick Excrements; for his ſtools were in a manner nothing but mere Flegm, when I firſt viſited him; whereas before they had been yellow, Green, Verdigreese coloured, and bloody, as I was informed. Having ordered his Diet, I preſcribed him a Medicament of Syrup of Cichory with Rhubarb one ounce, and half a dram of Rhubarb to be taken three daies together: after that, two ſpoonfuls of tincture of Corals, to be taken morning and evening; within five daies he was better, and the remedies being continued, he recovered in a few daies.

The 189 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Of a long Looſneſs, and ſtubborne Head-ach.

ON the 7. of *October*, 1642, I was called to *Lidova*, to Mr. *Fleury*, Treaſurer of the Exchequer, fourſcore years of age, being troubled with a looſneſs of two Moneths continuance, with which he voided many Wheyiſh and crude Excrements, but eſpecially his looſneſs troubled him in the night, by which and other ſigns, it ſeemed that the influx of Humors was chiefly from his brain. Moreover he was troubled with a cruel pain in his Head, on the left ſide thereof, from the Crown of his Head to his Eare and Temples on the ſame ſide, which pain when he lay upon the part affected, was manifeſtly pulſative. I ſetting my ſelf to the Cure, in the firſt place, becauſe of his Looſneſs, I preſcribed him this potion.

Take Choyce Rhubarb, one dram. Citrine Myrobalans, half a dram. Yellow ſanders, half a ſcruple; infuſe them in Plantane water, and in the ſtrained liquor diſſolve half a dram of Rhubarb pondered, Syrup of Roſes, half an ounce: make then into a potion. After the taking whereof he had three ſtools in the day time, and only two the night after, whereas before he was wont to go to ſtool five or ſix times a night.

The following day, the ſame Laxative potion was given him, adding the infuſion of one dram of Senna. He had five or ſix ſtools in the day, and none at all in the night, and ſo his looſneſs was quite Cured.

On the third day to take away his long and pulſing Head-ach, when many other Remedies had been tried in vain, I cauſed the Artery of his Temple to be opened, whereby three ounces of blood were taken away, and upon the Orifice was applied a Plaiſter of Frankincenſe, Maſtich, Bole-Armenick, Hares Hair and the white of an Egg with good Ligature: and the ſame day, the pain was quite taken away,

The 190 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Catarrh falling upon the Lungs.

ABout the End of *October*, 1642. I fel into a grievous Catarrh by being in the Sun, which falling upon my Lungs, made me ſhort winded and wheeze. I was let blood, and then purged for two daies together, with a Laxative Ptiſan, abſtaining from Wine, and keeping a very

very ſlender Diet: by which means my Wheezing ceaſed, and my ſhortneſs of breath was much abated. But there followed in their ſtead a very troubleſome Cough, which having continued two days, in the morning I put a bit of Tobacco into my Mouth, having firſt lightly ground it with my Teeth, which when I had kept half an hour upon my Tongue, my Head began to be a little dizzy, and my Stomach ſomewhat ſick, after which followed a ſmall vomit of Wheyiſh matter, which had a bitter farewel with it. The Dizzyneſs of my Head continued for two hours, and my Cough was ſtayed till evening, when it began a little to trouble me by Fits. About Supper time, a pain aroſe in my Head with a certain heat, eſpecially on the left ſide; after Supper, which was plentyful enough, my Head-ach was much worſe, and was accompanied with a troubleſome Stomach-ſickneſs, which having continued for an hour, and my Head-ach grew worſe and worſe, thruſting my finger down my throat I caſt up all my Supper with much Flegm, whereupon my Head-ach was abated, and ſoon after I betooke me to my bed, where falling aſleep, I paſt the night quietly, and was the following day, quite freed from my Cough and Catarrh.

The 191 Obſervation or Hiſtory of Famous and Rare Cures, &c.

An Old Head-ach proceeding from the Venereal Pox ill-Cured.

A Certain man infected with the *Lues Venerea* was cured by a Sudorifick Diet, and a Mercurial Oyntment, whereupon he ſeemed for a certain time to be cured; but afterwards the ſame Diſeaſe returned again, and he again was cured with a Sudorifick Decoction, taken for ſome days together, and then with a fume of Cinnabar, ſo that the Cure ſeemed perfectly accompliſhed. Yet he began afterwards to be troubled with a grievous Head-ach, on the left ſide of his Head, which upon the change of Seaſons, and eſpecially at the beginning of Autumn, did grievouſly torment him, and remained like a Nail evermore fixed in the ſame place. And when he had tried many Evacuating, revelling, deriving, and Anodyne Medicaments in vain, he came to me. And I was of Opinion that this grievous Head-ach, was from the Relicks of *Lues Venerea* not perfectly cured. Yet that the next and immediate Cauſe thereof, or at leaſt which fomented and encreaſed the pain was, beſides the Venereal Venom, a ſharp and biting Humor flowing to that part of the Head; or the Mercury it ſelf collected in that part or a rottenneſs contracted in the Skul. Which two laſt Cauſes, though not frequent, yet do ſometimes happen, as appears from many Hiſtories reported by Authors.

Now that reſpect may be had to all theſe Cauſes, In the firſt place I preſcribed an univerſal Evacuation, by blood-letting and Purgation, by Apozemes for four days.

After that a Sudorifick Diet drink, of a Decoction of Guajacum and Sarſaperilla, for thirty, or forty days, reſpect being had to the temperament, for if it be hotter than ordinary (for I could not ſee the man, only my adviſe was deſired upon a Relation of the Caſe in writing, wherein the complexion of the Patient was not expreſſed) it may be corrected with Baths and cooling Broths. For many times a *Lues Venerea* that could not be cured with Mercury, has been Cured by a long uſe of Decoctions. And if the Head-ach ariſe only from Virulent Humors which Vellicate the Membranes, it may be cured only with a longer uſe of the Diet drink.

And if that ſame Head-ach ſhall not give way to the Decoction long uſed, it muſt be conſidered if ſome Mercury be not collected in the part, which may be known by putting a little pellet made of Leafe Gold rould up, into his left Noſtril as far as can be, and pulling it out after it has been in ſome time; for if it come out Wheyiſh tis a ſign there is Mercury. The ſame may be experimented alſo, by covering a *Cephalick* Plaiſter with Leaves of Gold, and putting it upon the part pained; for if the Gold turn white, 'tis a ſign there is ſome Mercury in the part, which may be drawn forth by little and little, if a thin plate of Gold be continually worn upon the pained place, and a ſolid pellet of Gold be frequntly thruſt up into the Noſe.

If this Remedy do not remove the pain, the part must be opened, the Scull being boared with a Trepan. For many times the Scull is gnawn by sharp and Virulent Humors, and it is corrupted, the Skin remaining entire. And although the rottenness appear not, yet the Trepan does many times help by bringing forth a Virulent matter, which is collected upon the Coats of the Brain.

The 192 Observation or History of Famous and Rare Cures, &c.

A Pleurisie.

THe Daughter of Msr. *Divoul*, a Citizen of *Montpelier*, of a Sanguine Complexion, twenty years of Age, was troubled with a greivous Pleurisie of her left side, in the beginning of *March*, 1643. On the second day of her Disease, a Vein was opened on the same side, and eight ounces of blood drawn away. The day following when the Chyrurgeon would have let her blood again, he could not find the Vein; because the Virgin was very Fat, and the Vein lay buried in the depth of her Arm, so that because the Vein appeared better in her right Arm, he was forced to open the same, and drew thereout eight ounces of blood. Nevertheless, this blood-letting did no good: Seeing therefore the Pleurisie was very urgent, they sent for me, and when I saw there was great need to let her blood again; because she was almost choaked, and had a very high Feaver; I caused them to send for other Chyrurgeons, that one or other of them might open the Vein; having therefore sent for one of the Skilfullest, advised him if he could open the Vein, he should make a large Orifice and take away good store of blood at once, seeing it was so hard a matter to repeat Phlebotomy in this Patient. He did as I willed him, and took away fourteen ounces of blood, whereby the Patient was much eased, and not at all weakned. Four or five hours after, blood was again let to ten ounces. Which she easily bore, and the day following was perfectly freed from her Pleurisie and Feaver.

The 193 Observation or History of Famous and Rare Cures, &c.

Of a Falling-sickness.

THe Son of Msr. *Roche*, a Citizen of *Montpelier*, being twelve years old, was for some moneths tormented with Fits of the Falling-sickness; which came at first, only once a week and afterwards every day. He was purged once or twice, also let blood, and had an Issue in his Arm many years. Being sent for, I prescribed him an Apozem of Cephalick, and specifical Remedies against the Epilepsie, with purgatives, for four doses. Then an Issue was made in his Coronal Suture, and with these two Remedies he was freed from his Disease.

This Boy was of an hot and Chollerick constitution, and very ready in his actions, which bred a conjecture, that this Disease did arise from filthy Vapors, which by this emissary might be dissolved.

The 194 Observation or History of Famous and Rare Cures, &c.

A Dropsie.

THe Daughter of Msr. *Patris* Counsellour in the Court *Præsidiary*, six years old, and sick of a Dropsie, was cured with these following Remedies, in the moneth of *March*, the year 1643.

First a Clyster was administred, which was thus made.

Take Pulp of Coloquintida, one dram; course Bran an handful, boyl them in white Wine to nine ounces, make a Clyster; which brought away Flegmatick and Wheyish Excrements without

without trouble, and was continued for three days. At the same time there was applied to her whole Belly a Cataplasm of the Roots of Wild Cucumer, made with Cummin-seed and Honey, the description whereof you have in my Practice of Physick. Now when her Belly began to asswage, and she would not take internal Remedies, the Clyster was repeated three or four times, every other day, and the Cataplasm was continued. From whence followed a greater diminution of her Belly. At last I prescribed her a purging pouder of Senna, Turbith, and other things, the description whereof is in my Practice, whose dose was one dram, and she was therewith but little purged, seeing she vomited up the Medicament; and her Belly did yet appear swollen. Afterwards I prescribed her Juleps of Aperitive Roots and Herbs, with Salt of Diuretick Spirit, four doses, with the use whereof she made greater quantity of Urine, but her Belly continued still swollen. Afterwards I appointed her a pouder of Calomelanos of Turquetus twelve grains, Scammony eight grains, and Jallap fifteen grains. Which she took in Broth and was seven times purged, and voided much Wheyish Humor and Flegm by stool, whereby the swelling of her Belly was half in half abated, in the space of twenty four hours. The aforesaid Julep was repeated for three days; and the fourth day she took the foresaid pouder again, with the same success; and when her Belly was very much fallen, so that she began to get out of her Bed, and to have a good Stomach to her Meat, she took no more Physick, and so by little and little perfectly recovered.

The 195 Observation or History of Famous and Rare Cures, &c.

Venereal Pox in a little Boy.

A Litle Boy thirty moneths old, being sick of the Venereal Pox, with a filthy Scab all over his body, which he had caught of his Nurse, was cured with these following Remedies.

Take Shavings of Lignum Guajacum, two ounces. Fountain water two pound. Infuse them twenty four hours, then boyl them till a third part be consumed. Take three ounces of the strained Liquor and give it the Child in the morning two hours before meate covering his body a little warmer than ordinary, and continue this course twenty days.

Take Scammony poudered six grains; Calomelanos five grains. Mix them into a very fine pouder, and give it him in a spoonful or two of Sugared Panada, and let him drink a little broth after it. Continue this Remedy every fifth day, encreasing the dose of both the Medicaments according to their operation.

--Take the water of the foresaid Decoction, Fountain water three pints, make hereof a Diet drink for his ordinary drink, adding Sugar and Liquoris as much as shall suffice for to gratifie the Palate. These Remedies being continued for a moneth together, he was well Recovered.

The 196 Observation or History of Famous and Rare Cures, &c.

An Impostbume by the Back-bone.

SInce the time that I have Practised Physick, it has been my hap to see five Impostbumes upon the Back near the Back-bone, which were bred of a cold matter, collected by little and little without pain or Inflammation, and the colour of the part being no ways changed. The tumors were soft, like an Oedema, as big commonly as a mans fist. Howbeit, when they were opened, Laudable matter flowed out of them. The three first killed the Patients, in the space of three or four moneths, When as the Ulcer remaining after the Impostbume opened, became very hollow and winding, and a greater quantity of Quittor came thereout every day; whereupon the whole body was exhausted, and turned into an *Atrophia*, though the cure of the ulcers was by many Remedies endeavored. The fourth was cured by great incisions made in the back. By which all the cavities were laid open; and afterward with Fomentations of *Aqua Catapultarum*, and other Topicks, the Ulcers were cured, and in the mean time the antecedent Cause was

was provided against by frequent evacuations, and the use of a sweating decoction. Finally, the fifth was cured without incision, only it was laid wide open with a potential cautery, and then the Ulcer was clensed with injections of the Decoction *Catapultarum*, and a Fomentation of the same, and by a strong compression of the part, with swathbands and bolsters; and by continual application of very astringent Medicaments round about the Ulcer. And in the mean while the antecedent cause was provided against, with the foresaid Remedies.

The 197 Observation or History of Famous and Rare Cures,&c.

A Dropsie in a Boy seven years old.

THe Son of Msr. *Saget*, a Citizen of *Montpelier*, was troubled with grievous obstructions, whereby his Belly was mightily swelled; so that he was now become Hydropical. Being called to him the 28 of *April* 1643. I prescribed these following Remedies.

Take Senna clensed two drams; Annis-seed and Cream of Tartar, of each one dram; Roman Wormwood one pugil. Boyl then to two ounces, in the strained liquor dissolve of the Electuary of Diacarthamum one dram and half; Syrup of Roses half an ounce: make all into a potion. Let him take it in the morning and be ordered accordingly.

Take Roots of Smallage, Parsly and Asparagus, of each half an ounce. Leaves of Agrimony, Maiden-hair, Ceterach and Hyssop, of each half an handful, Polypody of the Oak, and Carthamus-seeds, of each two drams. Seeds of Smallage and Parsly of each one dram; Cream of Tartar two scruples. Boyl them with the fourth part of an old Cock, in the strained liquor dissolve Salt of Wormwood and Tamarisk, of each one scruple. Make a Broth, of which let him take every morning for twelve days.

In every third dose of Broth infuse two drams of Senna all night. Let him take it, and be ordered accordingly.

Take Oyl of Capers and Tamarisk, of each two ounces; Juyce of Dwarf-elder and wild Cucumers, of each an ounce and half; Boyl them to a consumption of the Juyces: in the strained liquor dissolve seeds of Agnus Castus, and Parsly of Macedonia finely pondered, of each half a dram; Oyl of Nutmegs half an ounce. Wax as much as shall suffice to make a Liniment. Let his Belly be therewith smeared hot, as he goes into his bed.

Let him use for his ordinary drink an infusion of steel and Rhubarb, in manner of a diet drink.

With these Remedies the swelling of his Belly was lessened, but not quite taken away, therefore I was fain to proceed to these Medicines following, which in three weeks space, quite cured the Disease.

Take Conserve of the flowers of Tamarisk and Maiden-hair, of each one ounce and half. Confectio Alkermes three drams, Salt of Wormwood and Tamarisk of each one dram, Ivory pondered and Diarrhodon Abbatis, of each two scruples; with Syrup of Maiden-hair, make all into an Opiate, of which let him take the quantity of a Chess-Nut every morning two hours before meat, and drink after it a little Wine tempered with Water.

Take Calomelanos eight grains, Diagridium seven grains, two Leaves of Gold: make all into a Pouder, and give it to him once a week with two spoonfuls of Sugared Panada, and let him drink a little broth after it.

The 198 Observation or History of Famous and Rare Cures,&c.

A Bastard Palsie.

AN honest Woman of *Aix*, about 50 years old, having suffered abortion, and living yet by it, was at first troubled with a nummedness about her Belly, which she easily perceived by putting her hand upon her Belly. After the abortion some moneths, she proved with child, and during the course of her Impregnation, the said nummedness seized also upon her Thighs and Legs, and a far worse Symptom was added thereto, *viz.* an inability to stir them.

After she was brought to bed, many purging and sweating Medicines were used, and many other heating and drying Remedies, without any effect. So that she had been now two years

troubled

troubled with this grievous Infirmity. In the parts aforeſaid, the ſenſe of feeling was not quite taken away, but only impaired, but all motion was quite loſt. Yet there is one thing peculiar and very well worth obſervation; That when her legs were drawn forth by her ſervants, or were any other waies ſtirred, preſently they became ſtif and convulſed, in manner of a Tetanus. To which is added a certain Convulſive motion like that of perſons which have the falling-ſickneſs which is wont alſo frequently to take her of it ſelf by fits. And when ſhe is taken with theſe ſymptomes, ſhe perceives a kind of motion in her Hypochondria, moreover ſhe is frequently afflicted with wandering pains, poſſeſſing divers parts, but eſpecially her Cheſt; ſo that ſometimes the fore part, other whiles the hinder-part: now the right, anon the left part of her cheſt, is vexed with theſe running paines. This is the Hiſtory of the diſeaſe, related by the Patient her ſelf, who returning from the bathes which ſhe had uſed in vain, deſired my advice the fourth of *July* 1643.

I could indeed have wiſhed, that the diſeaſe had been more exactly deſcribed, by thoſe skilful Phyſitians who had her under cure, to the end that the nature of ſo moſt intricate and difficult a diſeaſe might be the better known, and the Cure more ſolidly undertaken, by a diligent meditation upon all the Circumſtances thereof. Yet ſhall I not forbeare, (to ſatisfie the deſire of the Patient) to ſhew my opinion, ſubmitting the ſame to the judgement of thoſe moſt expert Phyſitians, who are able to obſerve all the particularities of the diſeaſe, and perfectly to ſee into the nature thereof.

I conceive therefore, that this diſeaſe is no true palſie ariſing from a flegmatick humor, looſning and reſolving the Nerves; but that it is rather a mixt diſeaſe conſiſting partly of a baſtard palſie, and partly of a convulſion. Now theſe baſtard palſies, compounded with diſtentions and convulſions of the nerves, are in thoſe inferior parts often produced by cholerick, melancholick, or wheyiſh Humors contained in the Hypochondria, or other parts of the lower belly, and tranſlated into the back-bone; from which ſeeing the nerves ariſe, which bring motion and ſence into the parts, as alſo into the muſcles and skin of the belly, it is no wonder, that the animal actions of thoſe parts are very much hurt. This may be confirmed by a larger diſcourſe, the Judgment of Authors, and by experience, but unto ſuch learned men it may ſuffice, to declare a few things, which make this conjecture of mine ſufficiently probable.

In the firſt place therefore it muſt be taken as a certain and unqueſtionable truth; that all privation of ſence and motion does not draw its original from the flegmatick humor; but that it proceeds ſometimes from an hot and dry diſtemper, and humors followving ſuch a Conſtitution. This may be confirmed by the opinion of *Trallianus* alone, vvho in the 16. Chap. of his 1. book, alleadges ſuch a Cauſe, and confirmes it vvith a clear example in theſe vvords. I *knew, truly, a man that was palſied through ſorrow, much care and faſting, and having taken Hiera picra he became ſo bad, that he could not ſtir at all, and was near to death, unleſs he had been altered to the contrary, both with all kinds of moiſtening things and potions and meates and other things that might reduce him to the right temper, eſpecially with baths and frequent anointings with water and Oyl, with mutation of the air to a temperate kind, and to uſe all kind of cheerfulneſs.* A ſtory not much unlike to this may be ſeen in *Foreſtus* his 97 obſervation of his 10. Book, of a Certain young man vvho being deprived of motion from his thighs to his feet, vvith an extenuation and non-nutrition of the ſaid parts, and grovving continually vvorſe and vvorſe by the uſe of hot and drying medicaments preſcribed by other Phyſitians, at laſt he vvas cured by *Foreſtus*, only vvith moiſtening medicaments, vvhich vvere partly taken in, and partly applied externally.

Moreover it is a thing long ſince obſerved amongſt Practitioners, that there is a cholerick cholick, vvhich does frequently degenerate into a palſie, and that ſuch a palſie ſprings from choler no man doubts.

And finally, That from a melancholick and vvheyiſh Humor, Symptomes are produced very like the palſie and convulſion, is every vvhere related by ſuch Authors as have vvritten of the Scurvy and the Hypochondriacal diſeaſe, as you may ſee in *Sennertus*, vvhere he explains the ſymptomes of the foreſaid diſeaſes, in his Book of the Scurvy, and of the Hypochondriacal diſeaſe. Novv that thoſe Impairments of ſence and motion vvhich afflict this honeſt vvoman, do proceed from aduſt and hot humors, vve may in the firſt place conjecture from ſuch things as help and hurt; for ſeeing ſhe received no good by heating and drying medicaments, but vvas al-

vvaies

vvaies vvorſe after them, it follovvs that they vvere no vvaies contrary to the diſeaſe. And this was the only way whereby *Trallianus* and *Foreſtus*, in the foreſaid Hiſtories came to the knovvledg of a palſie proceeding from an hot and dry diſtemper.

Secondly, That this patient has a dry diſtemper, may be hence collected, in the Cauſticks applied to divers parts, and Iſſues made thereby afforded very little humor, and vvere quickly dried up.

Thirdly, Palſies vvhich proceed from flegm, dravv their original from the brain, as the fountain of that humor; and thoſe parts vvhich are near the Head, are commonly firſt and moſt of all hurt. Whereas in the patient, there are no ſigns of any humor flovving from the head, nor is there any hurt in her upper parts, ſo that her Armes, hands, and other upper parts do perfectly performe their Actions.

Fourthly, the firſt Inſult of the diſeaſe did cauſe a dulneſs of the ſenſe of feeling in her belly, and the Muſcles of the Abdomen, vvhich ſhevvs that the nerves vvhich ſpring out of the back bone, through the Vertebraes of the Loynes vvere firſt hurt; and that aftervvards the diſeaſe vvas propagated to the nerves vvhich ariſe from Os Sacrum, and creep along to the thighs, and leggs. Whence may be gathered, that the humor offending vvas transferred from the parts contained in the lovver belly unto thoſe nerves, juſt as in a palſie follovving after the cholick, ſuch a like tranſlation is vvont to happen.

Fiftly, pains afflicting divers parts, eſpecially about the breaſt, and thoſe ſo flitting, do argue that ſharp and biting vapor are carryed from the Hypochondria into thoſe parts; as like pains in ſuch as are troubled vvith hypochondriacal Melancholy, do moſt frequently happen.

Sixtly, as often as this Patients feet and legs are ſtirred, a ſtretching and trembling motion does preſently ariſe, vvhich argues that the matter impacted into the nerves is thin and movable, and conſequently put into agitation by the leaſt ſtirring, by that means cauſing tenſions and vibrations of the Nerves.

Seventhly, when the convulſions ſeize upon this woman, a certain motion goes before in her bowels, which ſhe plainly perceives; which motion proceeds fron the foreſaid matter, beginning to work and ſtir it ſelf, or from vapors raiſed out of the ſaid matter by its commotion; as in a Sympathetick Epilepſie, ariſing from the inferior parts, ſuch Commotions are perceived in the Belly, when the fit is about to come.

Finally, this diſeaſe began to ſhew it ſelf after the patient had miſcarried and took its increaſe during the time of her afterwards being with Child; which ſignifies that bad humor collected in the veins of the womb, not ſufficiently voided by the monethly purgations, did fall into thoſe nervy parts, and did at laſt cauſe theſe Impediments of ſenſe and Motion.

Theſe things thus laid down, Let us come to the Cure, which muſt be directed to theſe Indications, viz. That the hot and dry diſtemper of her Bowels be corrected; that the melancholick and burnt humors (which I take to be the cheife cauſe of theſe ſymptoms) be prepared and evacuated, the obſtructed paſſages be opened, and the chiefe bowels producing theſe humors be ſtrengthened. I ſhall breifly propound ſuch materials as are fit to ſatisfy theſe Indications, and thoſe the choyceſt, premiſing this prognoſtick, That diſeaſes proceeding from melancholy, are of all others moſt hard to cure, and if they ſeize upon the nerves, they are yet harder to cure; and confirmed old diſeaſes of the nerves are incurable; whence it follows, that this caſe propounded is hardly vanquiſhable by remedies, and that there is little hope of Cure. I adviſe nevertheleſs that this Cure ſhould be undertaken, ſeeing many things daily fall out beſides hope, and many diſeaſes are cured, which were accounted deſperate.

In the firſt place therefore, her diet muſt be of meats of good juyce and eaſie digeſtion, ſomwhat cooling, and very moiſtening. Of which kind are the fleſh of young beaſts and new ſoft Eggs, as the principal. The other particularities of her diet, are left to the preſcription of her ordinary Phyſitians.

The reſt of the Cure muſt be begun with the laxative Clyſter, after which muſt follow the next day, blood-letting in her left arme to eight ounces. And if the blood be corrupt, or infected with any bad quality, ſhe muſt be let blood again the next day, out of her other arme in like quantity. After bleeding let her fall to the uſe of theſe following brothes,

Take Roots of Bugloſs and Aſparagus, of each one ounce; Leaves of Agrimony, Ceterach, Maiden hair and Cichory, of each one handful. Boyl them in Cock-broth, and diſſolve therein one dram of Cream of Tartar. Let her take hereof for twelve daies together.

In

In every fourth broth infuſe all night three drams of Senna, one dram of Annis-ſeed, in the ſtrained liquor diſſolve an ounce and half of choice Manna. Let her take it and be ordered accordingly.

Her broths being ended, let her uſe a bath to ſit in Luke-warm, of a decoction of Barley and Sweet-Almonds : let her ſit in it twice a day for three days together, far from Meal-times.

The day after her laſt uſe of the Baths, let the Vein of her left Ankle be opened, and take away ſix ounces of blood.

Afterwards let her drink the Whey of Goats-Milk for fifteen or twenty days, taking at firſt one Cup, afterwards two or three, as her Stomach can bear, for the more ſhe ſhall drink, the more good it will do her. Now the Whey muſt be made preſently before ſhe takes it, of Milk newly milked, by boyling the ſame one warm, and as ſoon as it begins to boyl, thereinto ſprinkling a little quantity of Juyce of Lemons or Vinegar, and preſently removing it from the fire, for preſently the Whey will be ſeparated from the Cheeſie ſubſtance, which is made exceeding clear by ſtraining and clarifying the ſame with the white of an Egg; and may be drunk in great quantity without offending the Stomach, ſo that it is by many drunk after the rate of Mineral waters, with great profit.

Every fourth or fifth day let two ounces of Manna be diſſolved in her firſt Cup of Whey.

During the reſt of the Summer, let the Bath to ſit in be repeated, ouce or twice in a week that her Hypochondria may be moiſtened, and the Acrimony of the offenſive humor tempered.

If ſhe be not of her ſelf loos-bellied, let her take a Clyſter every other day.

Take Conſerve of Eglantine berries four ounces: Conſerve of the Flowers of Borrage, Violets and Tamarisk, of each two ounces : Conſerve of the Roots of Elicampane and Citron peels preſerved, of each half an ounce. Ivory ſhavings two drams : Salt of Wormwood and Tamarisk, of each one dram and half; Two preſerved Myrobalans, Confectio Alkermes half an ounce, with Syrup of Maiden-hair make an Opiate, of which let her take the quantity of a Cheſnut every morning, two hours before meat, and drink a little Wine allayed with Water after it.

And becauſe the Diſeaſe is very ſtubborn and cannot be vanquiſhed, unleſs by Remedies very long continued; in Autumn the cure muſt be begun again, beginning with a Clyſter, then letting-blood, after which the following Apozem ſhall be uſed twelve days together.

Take Roots of Aſparagus, Butchers-broom and Bugloſs, of each one ounce. Roots of Enula campane, bark of Caper Roots, middle Rind of the Aſh and Tamarisk, of each half an ounce : Leaves of Agrimony, Borrage, Burnet, Cicory, Ceterach, Maiden-hair, of each one handful : Fragrant Apples, ripe and cut into bits, number two. Flowers of Borrage, Violets and Tamarisk, of each one pugil. Boyl them to a pint for three doſes, adding to each doſe one dram of Chriſtal of Tartar, Salt of Wormwood and Tamarisk, of each one ſcruple, Syrup of Maiden-hair, an ounce : Let her take it for twelve days, in the morning three hours before meat, renewing the decoction every third day.

In every fourth doſe, infuſe all night three drams of Senna; Annis-ſeed one dram. In ſtrained liquor diſſolve two ounces of choice Manna. Let her take it and order her ſelf accordingly.

After the Apozems, let her again uſe the Bath to ſit in according to the foreſaid directions.

The day after her laſt uſe of the Bath, let her Fundament be chafed with a courſe Cloath, and faſten two Horſe Leeches, to thoſe parts that ſwell moſt, and draw away five or ſix ounces of blood.

The next day make Iſſues in both her Legs on the inner ſide, and keep them open a long time

Take of Juyces newly preſſed forth, and clarified over a gentle fire, of Borrage, Bugloſs, Fumitory, Cicory and Endive three pints. Juyce of fragrant Apples newly preſſed out and clarified two pounds. Senna ſix ounces, Epithimum three ounces, Agarick newly trochisked and choice Rhubarb, of each one ounce and a half : Mace and Cloves of each one dram. Infuſe them and boyl them according to art, till there remain fifteen ounces : And therein diſſolve fifteen ounces of Sugar. Make all into a Syrup perfectly boyled, of which let her take two ounces twice or thrice in a moneth in Chicken broth boyled with Leaves of Borrage, Bugloſs, Agrimony and Pimpernel

Let her continue the use of the foresaid Opiate on all such days, as are free from the use of the other Medicaments.

The 199 Observation or History of Famous and Rare Cures, &c.

Vomiting in a Malignant Feaver.

THe Chamber-maid of Madam *de Rozeb*, called *Laprune*, being sick of a Malignant Feaver, on the tenth day of the Disease, was taken with such a troublesom vomiting, that she cast up all her broths and drink; and when she had been three days troubled in that manner, the Physitian that had care of her, by my advice gave her one scruple of Salt of Wormwood, with a spoonful of Juyce of Lemons; and her vomiting was suddenly stopt, and afterwards she kept all that ever she took. Three days after, the same vomiting returned, and was cured by the same Medicine.

Some days after, the same Medicament was by the same Physitian given to two Children, troubled with the same Symptom, and it cured them.

The 200 Observation or History of Famous and Rare Cures, &c.

A false Conception.

A Woman of *Giniaca*, fourty five years old, came to *Montpelier*, to ask advice concerning a Disease she had. She told us that being never married, she had to do with a young man by whom she conceived, and thereupon lost her Stomach, was pale all her body over, longed for certian meats, with other signs of being with Child.

Fourty days after her Conception, she perceived a kind of Palpitation about her right Hypochondrium, and from that time she began to be better, and her Appetite was restored. Her Belly grew dayly bigger, her Dugs did swell, and at last Milk began to breed in them, *viz.* In the fourth moneth in her left Dug, and that was reddish, and afterwards there came Milk into her right Dug which was white.

In the fourth moneth she had her Courses plentifully three days together, whereupon the swelling of her belly abated. But it began afterwards by little and little to rise again. Her Courses came every moneth, as they used before she conceived. She perceived a motion in her Belly, like that of an Infant in the Womb.

The ninth moneth she had the pains of a Woman in Travel, so that the Midwife was sent for, and all the by-standers looked when she should be delivered. Howbeit those pains ceased after twenty four hours, and nothing came from her.

From that time her Courses have come ordinarily, until the thirteenth moneth, wherein she again suffered the pains of Child-birth without any effect. And after that her Courses came no more, the bigness of her Belly continued, with motions at times, as it were of a live Child. And now thirty two moneths are past since the time she first conceived, neither is the swelling of her belly exceeding great, for it hardly equals that of a Woman six moneths gone with Child. Two risings appear sensibly distinct, so that a space appears between them: which Tumors encline to her Hypochondria, when the Woman lies. But when she is upright, they resemble the true form of a Woman with Child, being in the middle of her Belly: being compressed they give place, and then return again. They are often moved with a motion of their own like a Child in the Womb.

The swelling of her breasts is long since gone, and they are very soft and flaggy, out of which very little drops of green Milk were pressed forth.

All the time of her being great, she kept her self shut up in the House, tormenting her self with greife and fastings, because she had conceived out of the lawful state of Wedlock.

This

This is a moſt Rare Caſe, and involved with moſt intricate Labyrinths of difficulties; out of which notwithſtanding we ſhall endeavour to free our ſelves by the thred of Reaſon and Conjecture.

And firſt, That it is a true Conception, may be argued from her loſs of Appetite, the milk in her Breaſts, and the motion of the Child it ſelf, to which nothing ſeems wanting except the ordinary time of bringing forth: which ſome may ſay was therefore retarded in the Woman, becauſe long faſtings, and the flux of her Courſes had defrauded the Child of its due nouriſhment, whereby the Child could not ſo ſoon grow to perfection, and thereupon did ſtay longer than ordinary in the Womb. Howbeit, it is agreed upon by Phyſitians, Philoſophers and Lawyers, by whom this Controverſie has been oft diſputed, That the laſt term of a Childs being in the Womb cannot be extended beyond the Eleventh moneth. Nor let any man ſay, That between the natural and ordinary time of bringing forth, ſome rare and extraordinary Caſes may happen; as we have with us a late Hiſtory of Madam *de Cardet*, who affirmed, That ſhe bore a Child in her Womb firſt fifteen moneths, afterwards a year, two, and three: Of which matter are extant two Councels one contrary to another, of very Learned Men, *Hucherus* and *Varandæus* on the one part, and *Saporta* with *Pradillæus* on the other. Alſo in *Schenkius* certain Hiſtories are propounded, of Infants born two years in the Womb, who began to ſpeak and go as ſoon as they were born. For I avouch, That theſe are no Hiſtories but Fables; which is eaſie to confirm by reading them: For as for what concerns Madam *de Cardet*, by the Reaſons propounded by *Saporta* and *Pradillæus*, in their Counſel, it is abundantly proved that ſhe was Melancholick, and diſturbed in her Imagination; which not only her frequent Belchings, Palpitations of Heart, Vapors riſing to her Head and Face, and other things did witneſs, but eſpecially in that ſhe her ſelf ſaid, That ſhe heard the Child Cry in her Womb; which any Novice in Phyſick knovvs to be an impoſſible thing. And thoſe things vvhich hapned ſince that time, ſufficiently ſhevv that her Mind vvas diſturbed. For the ſame Lady, being yet alive, ſayes ſhe has been with Child now two and twenty years: Which Aſſertion of her, takes all the Credit away from her other Speeches. But the Hiſtories collected by *Schenkius*, are thereby convinced of Falſity, in that they affirm Children new born, to have begun preſently to ſpeak; but every man knowes tkat to ſpeak comes by diſcipline and teaching. As true as the reſt, is that which *Avicenna* ſayes, was told him by a faithful Woman; for he profeſſes himſelf only an Ear, not an Eye-witneſs. Seeing therefore it does not appear by any true ſtory that ſuch caſes have happened, and in this caſe of ours the Conception moved about the fortieth day, whereas a true Child ſtirs not till the third or fourth moneth; it is better to affirm, that this Woman of ours had no true Child in her Womb. For faſting and menſtrual Purgations are ſo far from retarding the Child, that they rather haſten the ſame, as *Hypocrates* tells us, That a Woman with Child by Blood-letting, comes to miſcarry. We muſt therefore ſay, that there was in the Womb of this Woman ſomewhat preternatural, *viz.* Either Water, Wind, a Mole or a Monſter. That it was Water, no man will ſay; that it was Wind, we have more reaſon to think; for it many times falls out, that Wind ſhut up in the Womb, makes a motion like that of an Infant, and does a long time counterfeit a true being with Child. But that this was not Wind, two things evince; one, that it could not be ſo long kept in the Womb, but it would have been at one time or another either evacuated or diſſipated; The other, That the Milk in her Dugs did witneſs ſomething greater than Wind to be in her Womb. Now the ſafeſt way is to ſay that it was a Mole; both becauſe the frequency of Moles makes it nó Wonder: and alſo becauſe the ſigns propounded do ſeem to anſvver very well to a Mole, *viz.* A panting motion at the fortieth day; Raw milk in the dugs; Flux of Courſes in time of Gravidation; Alſo the milk vaniſhing after the Ninth moneth, and the falling of her Duggs; To which may be added, the hardneſs of the Tumor of her Belly, which by preſſing changed its place, and then returned again. And although *Hypocrates* ſayes in his firſt Book *de Morbis Mulierum*, that the conception of a Mole does not bring milk into the Dugs; That is to be underſtood of true and perfect milk, and not of crude and flaſhy; which is uſually ſeen in ſuch caſes. And becauſe two diſtinct Tumors were felt, 'tis likely there were Moles in her Womb.

A man might be indeed ſatisfied with what has been ſaid, unleſs ſome things ſtood in the way,

way, from whence the extraordinary difficulty at first expressed does arise. For in the first place, according to the doctrine of *Hypocrates*, a Mole has no motion of its own, but is onely moved by the Wombs motion; and if any motion appear to such as feel the same, it is onely a panting motion. But in this Woman a greater motion is perceived, very like the motions of a true Child, which is easily discerned by the by-standers. Secondly, a Mole tumbles from one side to another, like a stone, with a sense of weight and heavineſs; in this Woman there was no such thing. Thirdly, in a Mole the Belly is widened equally in all dimensions, whereas in a true Child, it is raised up towards the Navil, and straitned on both sides, such as is the Belly of this Woman. Fourthly, a Mole sinks towards the Share and Groins; in this Woman the Tumor is in her *Hypochondria*. Finally, a Mole is continually encreased, and in the space of near upon three years it would have attained an huge Bulk. But in this case, the Tumor of the Belly is very little, resembling that of a Woman five or six moneths gone with Child; nor is it grown any bigger in a long time. In the Concurrence of so many difficulties, though I thought better to insist upon the generation of a Mole, as a thing more frequent, yet we should better satisfie all the *Phænomena*, if we durst to say, that some Monster lies lurking in the Womb of this Woman, which being grown to its determinate magnitude, does encrease no more, but is only nourished like a Child, whence it comes to pass, that neither the Womb is more widened, nor does the Conception die for want of nourishment. For so Histories tell us, That some Women have brought forth Serpents, Moles, Frogs, Mice, Birds and other Animals. Yea verily, and in *Apulea* and *Lombardie*, many Authors relate, That such Animals are frequently bred in Women, and therefore those kind of Animals are termed the *Lombards* Brethren: *Gardonius Tornamira*, and other barbarous Physitians term them *Arpa* or *Arpia*, because this kind of Monster has for the most part many feet, which in that Barbarous Language they term *Arpas*. This being, I say, supposed, we may satisfie all the *Phænomena*. For at the beginning of such a gravidation, all the true signs of a Woman with Child might appear, *viz.* milk in the dugs; a motion like that of a true Infant, which might appear on the fortieth day, because such a kind of Creature as we speak of, might be sooner shaped than a true Child; moreover, the Animal being perfected, the Belly increases no more; yet it provokes not Nature to expel it, because it lives only by transpiration, and is cherished by the warmth of the Womb. Now that there are two of these Animals, may be conjectured, because two distinct bodies are felt in the Womb. Through such conjectures as these, the Mind may rove at uncertainties, till the exclusion of the Conception (what ever it be) shall make it visible to the Eye-sight. Which exclusion (which is all I shall say of the Cure) I would not further by Art, lest the Woman should come in some hazard of her life; but it is best to wait so long, till either Nature of her own accord cast off the burthen, or that her Belly swell yet bigger, which notwithstanding I must avouch, from the Foundations before laid down, will never be. Some years after it was told me, that this Woman was delivered; but how, or of what, I could never fish out, because she studiously concealed the same.

It will not a little conduce to the Illustration of this Story, to relate another Case told me by an ancient Midwife touching a Woman of *Montpelier*; who first of all mist her Courses, afterward lost her Appetite, and fell to long for some certain Meats; but she specially desired to eat Oysters and such like shell-fish, wherewith she could never be satisfied. After the second moneth of her being great, she perceived the Conception stir in her Womb, and so it continued the following dayes and moneths; which nevertheless appeared strange to her and other Women, seeing a Child in the Womb is not used to stir before the third moneth. After the seventh moneth milk appeared in her Dugs, but of a bad greenish colour. Her delivery was delayed to the end of the tenth moneth. At what time having her pains upon her, she sent for the Midwife, and continued in those pains for three whole days together. And herein her pains were different from the ordinary pains of Women in Travel, because she said she felt her Belly to be prickt and cut, and her Womb to be torn. And so fierce was that pricking pain, that she was compelled to cry out exceedingly. At last after many throwes, she brought forth a certain Animal or Monster, not unlike a Toad, but it had more than twenty feet round about its body. Being received out of the Womans Womb into the Midwifes lap, it skipt from thence into the Floor, and ran a good pace, and at last got under the Bed; whence being drawn, it was suddenly carried away and buried in the Wine-Cellar, to cover the Womans reproach. It had

at

at the end of its Feet sharp claws, whence doubtless those pricking and cutting pains did proceed, which the Childing Woman felt. For the Membranes being broken which contained the Animal in the time of Gestation; it in seeking its way out, did tear the inner Membrane of the Womb with its nails, and caused those extream pains. Although these kind of Monsters have sundry forms and figures, because they are bred by chance and fortune, and the mistake of Nature, yet those which are frequently bred in *Apulea*, and are termed the *Lombards* Brethren, do for the most part come near this now described, as may be seen by the relation of those Authors that have written thereof.

THE

THE THIRD BOOK OF THE Medicinal Observations, *And Remarkable Cures of* LAZARUS RIVERIUS,

Councellor and *Physician* to the King, and Professor of Physick in the University of *MONTPELIER*.

The 201 Observation or History of Famous and Rare Cures, &c.

Inflammation of the left Testicle.

MSr. *B.* a Merchant of *Montpelier*, having contracted a Gonorrhæa by lying with a polluted Bed-fellow, advised with a Chirurgeon, who let him blood in the Foot, gave him a Bolus of Cassia, and the day following a Bolus of Turpentine, and other Remedies afterwards, wherewith the Gonorrhæa was stopped; whereupon the influent matter being translated another way, a swelling and inflammation arose in one of his stones, so that in two days 'twas grown as great as a Man's Fist. At last he came to me on the 8. of *July*, 1643. I caused him to bleed again in his Foot, I prescribed him Emulsions, and a Cataplasm of Bean meal boyled in Water and Vinegar mingled together. These Remedies being used two dayes together did no good, the Tumor and pain of his Testicle continuing not without a Feaver. I desired to see the Cataplasm, which the Chirurgion had made too hard, and therefore it did not allay the Inflammation for want of Vinegar, and it did heat the part, by reason of its over great solidity. I ordered him to be let blood in his Arm, and his Testicle to be fomented with Rose-Water, and the same Cataplasm to be repeated with equal parts of Water and Vinegar, and that he should use the Emulsions again made of a cooling Decoction; all which were made by the Apothecary according to Art: The next day he was better, his Feaver and Inflammation were abated, the Tumor remaining in the same condition as formerly. I prescribed him a Purgation of Senna, Rhubarb, Manna and Syrup of Roses; he was well purged, the Feaver quite gone, and the Inflammation much abated; but his Testicle did continue swelled. He was again let blood in his Arm, and a Cataplasm made of Bean-Meal boyled in pure Vinegar applied. The Tumor was thereby much abated, but the sharp-

neſs of the Vinegar did make his Cods ſmart; to remedy that, I cauſed the Vinegar to be firſt boyled with Litharge for ſo the ſharpneſs of the Vinegar is quite taken away; and therewith a Cataplaſm was again made with Bean-meal; it proved very well, and within four or five days the Tumor was ſo abated, that the Teſticle affected was hardly bigger then that which was well.

The 202 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Dyſentery.

MAdam *Luquiſſa*, Siſter to the Baron *de la Roquette*, was taken with a grievous Dyſentery the 14. day of *July*, 1634. the Weather being extream hot; I was called to her on the third day of her Diſeaſe, I preſcribed her a detergent Clyſter, and to be let blood.

On the fourth day ſhe was purged with one dram and an half of Rhubarb, and half a dram of Myrobalans infuſed in Plantane Water, diſſolving therein one ſcruple of Pouder of Rhubarb, and one ounce of Syrup of Roſes: She had two ſtools of Excrementitious humors; but in her other ſtools which were many, ſhe voided a ſnotty kind of matter drenched in blood. At night I gave her two grains of Laudanum, whereby her gripings were ſomewhat abated, and her ſtools were not ſo frequent, alſo by ſhort fits ſhe ſlept a little, whereas in the foregoing Nights ſhe had not ſlept at all.

On the fifth day, her gripings were the ſame, her ſtools frequent and bloody, Clyſters of Milk and Yelks of Eggs were frequently adminiſtred. In the Evening ſhe took again three grains of Laudanum with Conſerve of Roſes, and her pains preſently ceaſed, and ſhe went to ſtool only once in an hour, and ſlept between whiles.

On the ſixth day in the morning her ſtools were yet more frequent, with extream pains. She was again let blood, and three hours after ſhe took Broth of a Wethers Guts, with a dram of the pouder of *Actes* Berries. Her pains were quite abated and gone, and her ſtools were much ſeldomer, but preſently after blood-letting, her whole Belly was anointed with a mixture of Oyl of Roſes, Vinegar and Roſe-water, to allay the Inflammation of her Guts, which was known by the Feaver, and becauſe any light touch upon her Belly was painful; and with this Remedy ſhe was much eaſed. In the Evening a Clyſter was given her of milk and three ounces of Juyce of Plantane, to aſſwage the Inflammation of her Guts aforeſaid; for I conceived that it was a matter of very great moment, in ſo extream hot and ſoultry Weather, to direct the Cure chiefly to the aſſwaging of the Inflammation of thoſe parts, becauſe the greateſt danger uſes to ſpring therefrom: for commonly thoſe that die of a Dyſentery are brought to their end by a Gangrene of the Guts, which is eaſily cauſed by the continual flowing in of bad humors into the parts inflamed and ulcerated. Alſo at Night I gave her a Julep of Plantane Water, with a dram of the pouder of *Actes* Berries. All Night long ſhe ſlept not, and went frequently to ſtool, but without pain.

The ſeventh day, the frequency of her ſtools continued, but without pain; her Clyſters were continued.

On the eighth day ſhe took a dram of Rhubarb poudered in Broth, after which her ſtools were not ſo frequent. Afterwards for three days together ſhe took in the morning a Decoction of Myrobalans, wherewith ſhe was perfectly cured. The Decoction was thus made:

Take Myrobalans Chebulan, one ounce; Citrine Myrobalans half an ounce; Corants two ounces. Boyl them in a quart of Water, to the Conſumption of a third part. Clarifie the Liquor, and Aromatize it with two drams of Cinnamon; let her take it in four doſes morning and evening.

The 203 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Of Worms.

MSr. *de Saint Andre*, a Gentleman of Sixty years old, was troubled many dayes with a Dyſentery, and afterwards with a Tertian Ague. And at laſt when he ſeemed to recover, his

his Pulse was found to intermit, for three or four daies, with anguish of Mind, and weakness. The cause of this intermitting Pulse could not be discovered neither by his ordinary Physitian, nor by my self, in consultation with him. But it did discover it self, being a Worm, as thick as a mans finger, and half as long as ones Arm; which being voided, his Pulse became orderly, and the Patient who was an Outlandish man returned into his own Country.

The 204 Observation or History of Famous and Rare Cures,&c.

A Dysentery.

THe second of *August*, 1643. my Son *Charles* being seven years old, was taken with a Dysentery by reason of a sudden coldness of Weather which then happened. He voided much Flegm mixt with Blood, but without any pain or Feaver. On the second day he was as before. On the third, he was taken with a Feaver, his stools not so large, but more frequent, of a Leek colour and with gripings; Clysters of Milk were given him, and blood taken away to the quantity of six ounces. At Night the Flux being violent, I gave him half a grain of Laudanum; his flux was a little abated, so that he went seldomer to stool, and with less pain. On the fourth day I gave him a potion of one dram of Rhnbarb infused in Plantane Water, with a scruple of pouder of Rhubarb, and one ounce of Syrup of Roses: his Feaver being very remiss, he voided much Flegm and Choler many times, with amendment; but the Night following he was vexed with most grievous gripings, and those in a manner continual, with a perpetual but vain desire of going to stool. I gave him about midnight one grain of Laudanum, whereby the gripings were allaid, and the Loosness abated, so that he went to stool but once in an hour. His Drink was continually a decoction of Ivory, with Conserve of Roses mingled therein, wherewith I did sometimes mix a scruple of *Sal Prunellæ*, this was instead of Juleps which he obstinately refused to take. On the fifth day his stools were seldomer, so that sometimes he had not one stool in the space of two or three hours, and Flegmatick and Cholerick humors were voided without blood, or any Feaver. The sixth and seventh dayes, he was after the same manner. On the eighth day he took a dram of Rhubarb in Broth, and voided much excrementitious matter at times. On the ninth day his stools were more seldom and thicker, he had a stomach to his meat; and the dayes following without any other Remedies, blessed and praised be God, he was restored to perfect Health.

The 205 Observation or History of Famous and Rare Cures,&c.

A Purge in the Dog-dayes.

ANno 1643. in the Heat of the Dog-dayes, about the beginning of *August*, three little Boyes of two or three years old, were by Physitians that had the Care of them purged with gentle Purgations, and died the same day in Convulsion Fits. Two of these were troubled with a Catarrh falling upon their Breast, the third with a Dysentery. Other Children also by means of Catarrhs fell into Convulsions at the same time, and died the same day. Now these Epileptick Convulsions are caused by the humors melted through heat of the Air. Hence it is apparent, that we must be exceeding wary how we purge our Patients in the Dog-daies, according to the precept of *Hypocrates*.

The

The 206 Observation or History of Famous and Rare Cures, &c.

Costiveness.

A Certain Dominican Fryar of a Melancholy temper, was so costive, that he went not to stool sometimes for six or seven days together. Which inconvenience he did remedy, by taking two hours before dinner stewed Prunes and their Syrup, to which he added a quantity of Wine allayed with Water, the half of which he took before his Prunes, and the other half after them; and so his belly was more conveniently loosened and more effectually, than it had wont to be when he did only eat the Prunes. He also sometimes helpt himself by taking the quantity of a Walnut of new Butter, and drinking upon it a draught of Wine and Water mingled.

The 207 Observation or History of Famous and Rare Cures, &c.

A Pain of the Hemorrhoids.

THe same Fryar on the fifth of *August* 1643. was taken with a most greivous pain and remarkable swelling of the Hemorrhoids, with Inflammation. I being sent for, ordered him to bleed in his left Arm, a Clyster being premised; and after that a pain-asswaging Fomentation, with a Cataplasm of Crums of bread, which he could not endure by reason of the most exquisite sense of that part. The second day I caused him to bleed again from his right Arm, he took emollient Juleps, and some what laxative, that his body might be kept open, for the hardness of his Dung was wont etxreamly to encrease his pain. Now the Juleps were made after this manner.

Take Leaves of Lettuce, Buglos, and the tops of Mallows, of each one handful; Liquoris scraped, and Raisins stoned, of each half an ounce: Flowers of Buglos, Borrage and Violets, of each one pugil, boyl them to eight ounces. In the strained liquor infuse one ounce of Cassia new drawn, let them be again strained and clarified, adding thereto an ounce of Syrup of Violets, let him take it twice in a day.

To the part it self this following Oyntment was applied

Take Oyl of Roses and Violets, of each one ounce; Oyntment of Populeon half an ounce: make a Liniment hereof.

And because the Tumor and pain did continue, two Leeches were applied, and four ounces of blood taken away, and the tension and Inflammation were somewhat abated. And afterwards this following Fumigation was prescribed.

Take Great Housleek an handful, white Wine a quart. Boyl them, and let him receive the Steame of this decoction through a groaning Chair. And then let this following Oyntment be applied to the part,

Take Oyntment of Roses one ounce: crude Mercury two drams, mix them into an Oyntment.

Add although Mercury have a mighty faculty to soften and discuss a Tumor, yet the Hardness abode in the part. And therefore two Remedies were prescribed to mollify and discuss the Tumor. The first was the fume of Vinegar in which burning flints were quenched, which *Galen* says will mollify Scirrhous Tumors; the next was this following Liniment to be applied after the suffumigation.

Take Oyl of Bitter Almonds two ounces: Bdellium and liquid Storax, of each two drams. Make them into a Liniment

With these, the pain and swelling were dayly much diminished; whereinto also a decoction of Mille-folium was much subservient, which he took two days together for his ordinary drink, with a little Wine mingled with it.

And because he was continually costive, to loosen his belly, and withal leisurely to remove the antecedent Cause, these following Pills were prescribed.

Take of the Mass of Pills de Bdellio two drams, Senna clensed, choice Rhubarb and Agarick newly trochisked, of each one dram. With Syrup of Roses solutive make all into a Mass of Pills, of which let him take a dram every day in the morning, till the Mass shall be spent.

And these being continued certain days, he perfectly recovered. The fumigation of Vinegar was very effectual in discussing the Tumor.

The 208 Observation or History of Famous and Rare Cures, &c.

An Asthma and Dropsie.

A Poor old man being troubled many years with the Tissick, became Hydropical, and because he could not be plied with much Physick, a Clyster is prescribed him of an handful of Bran and one dram of Coloquintida, boyled in white Wine, with which he voided many Flegmatick and Wheyish excrements. The same Remedy he repeated every third day, and once in a week took half an ounce of Diacarthamum in broth, and within a moneth his dropsie was cured. But because his Tissick could not be cured by reason of his old Age, and the Patient only equired some Remedy to use in the fit, and thereby to free him from choaking and somewhat to abate the extremity of his short windedness. This following was prescribed him.

Take Cinnamon Water two ounces, Oxymel of Squils one ounce, mix them. Let him take some in a spoon during his fit.

With this Medicine he voided much thick and clammy flegm, and was soon freed from his fit which did threaten absolutely to strangle him.

The 209 Observation or History of Famous and Rare Cures, &c.

A Dysentery.

A Young man twenty years of Age, born about the end of *August*, 1643. was troubled with a Dysentery twelve days together; which he took no Medicine for, until being brought into the Hospital, he took by order of the Physitian thereof, one dram of Salt of Vitriol, dissolved in water; He vomited much flegmatick and Chollerick matter, and so the Humor flowing into his Guts was revelled, and he cured by this only Medicament.

The 210 Observation or History of Famous and Rare Cures, &c.

A double Tertian.

A Certain young man called *James du Rand*, being seventeen years old, in the moneth of *September* 1643. was sick of a double Tertian, and had past over eight fits ere he took physick: he was let blood, a Clyster being first given him, and the day after he took ten grains of Cambogia, prepared with Spirit of Wine and Sulphur. He was not purged, only was a little Stomach-sick without vomiting. The fit came sooner that day, yet was shorter than before, and he never had more, but was perfectly cured.

The 211 Observation or History of Famous and Rare Cures, &c.

Another double Tertian.

PEter *Alegre* twenty years old, had a double Tertian six weeks, in which time he was divers times let blood and took purging Medicaments. At last he took a Bolus of ten grains of red Precipitate made without corrosives, and a like quantity of Scammony, made up with conserve of Roses. He was troubled with a gentle Loosness eight or ten days before the taking of this

this Medicament, which he had not told his Physitian: howbeit such was the operation of the Medicament, that it purged not, the Looseness was stopt, and the Ague fits went quite away.

At the same time another troubled with the same kind of Ague, did take the same Medicament, and was thereby ten times purged, being Stomach-sick between whiles, and he was cured of his Ague fits.

The 212 Observation or History of Famous and Rare Cures, &c.

Spitting of Blood.

A Soldier named *Beaulaguet*, being thirty years old, of temperament chollerick and Sanguine, fell eight moneths since into a voiding of blood at his mouth, which at first he cast up by vomiting to the quantity of eight pints, from which he was freed, by frequent blood-letting. But the same vomiting of blood came afterwards again, though in lesser quantity, and now by fits he did spit bloody spittle, and sometimes pure and meer blood. For whom these following Remedies were prescribed, in the beginning of *August*, 1643.

After a Clyster, open the Basilica Vein of his left Arm, and let out six or seven ounces of blood.

The day after open the Ankle Vein of his left Foot, and take as much blood as before.

Take Leaves of Plantane one handful. Tamarinds half an ounce. Boyl them to six ounces: In the strained Liquor, infuse one dram of choice Rhubarb, Citrine Myrobalans half a dram. Yellow Sanders half a scruple. In the strained liquor dissolve Manna and Syrup of Roses, of each one ounce: Pouder of Rhubarb one scruple: Make of all a potion, which give him the day after his last blood-letting, and let him be ordered accordingly.

The day after his purgation apply two Caustick behind his Neck, between the third and fourth Vertebraes.

Take Roots of Snake-weed, Tormentil and Comfry, of each one ounce: Leaves of Plantane, Burnet, Mouse-Ear, Vinca-Pervinca, of each one handful; Red Sanders two drams: Boyl them to one pint and half: In the strained liquor dissolve four ounces of Syrup of dried Roses. Make a Julep for four morning doses, adding to each scruple of Sal Prunellæ.

The Juleps being ended, the foresaid purging potion must be repeated, adding one scruple of pouder of Jallap, and infusing all the Rhubarb.

Take Comfry Roots one ounce: Leaves of Plantane, Burnet, Bugle, Prunella and Mouse-Ear, of each half an handful, boyl them in the broth of a Wethers Neck, and let him take the strainings in the morning twelve days together.

After every fourth broth, let him take the purging potion aforesaid.

His broths being ended, let him use this following Opiate.

Take Conserve of Roses and Comfry Roots, of each one ounce: Trochisks of Amber and Terra Sigillata, of each half a dram; Coral prepared, Pearls prepared, and Blood-stone, of each one dram: Gum Arabick and Tragacanth, of each one scruple: with Syrup of dried Roses make all into an Opiate, of which let him take the quantity of an Hazel-Nut, two hours before meat, drink a little of his ordinary drink after it, which must be Ptisan made of a decoction of Barley and Liquoris, or water in which Iron has been quenched, and wherein Burnet and Mouse-Ear have been steeped.

In the beginning of Autumn, let him use for fifteen days Goats-milk or Sheeps-milk, lightly Chalybeated.

As soon as he had set upon the use of these Remedies, spitting of blood ceased, and it never appeared all the time he used them, nor ever afterwards.

The 213 Observation or History of Famous and Rare Cures, &c.

Wind in stead of Quittor coming out of a Tumor.

A Woman thirty years of Age. had a swelling for eight months in the lower part of her thigh,

and on her Knee; it was not red, but did pain her, so that she halted. Many discussing Remedies being applied, the Tumor remained as it was. At last in two places, *viz.* On the inside and outside, there appeared a remarkable rising and round about it softness and fluctuation so that all conceived there was quittor within; a potential caustick was applied to the most swelling part, which was the outer: afterward the Eschar being cut with a Pen-knife, and the Tumor opened, there came out a certain Wind, and nothing else. The like story there is in *Zacutus Lusitanus*, in the first book of his admirable Practice, Observation the 163. where from *Galen* and *Auicenna*, he teaches, that such Tumors as these in the Knee are many times opened by Physitians, supposing there is quittor concealed within, whereas nothing comes out but a windy spirit.

The 214 Observation or History of Famous and Rare Cures, &c.

Stingings of Bees.

A Merchant of *Montpelier* named *Claparede*, fifty years old, going early in the morning out of the City, and intending to Travail, when he was a mile on his way, a swarm of Bees flying in the Air suddenly assaulted him, and fixed all over his Face and Neck a thousand stings. Whereupon he was forthwith greivously pained, which made him presently turn home again. Being called to him, I find the man extreamly out of patience by reason of the pain, that he could hardly contain himself in his bed, his Face did swell and was red all over. I presently caused the places stung to be smeared with Treacle, which not restraining the extremity of the pain: I ordered him a Fomentation of the same Treacle dissolved in Aqua Vitæ, wherewith the pains were somewhat mitigated, and the swelling of his Face abated. Afterwards to the places most pained, bruised Onyons were applied in manner of a Cataplasm, and after that they were anointed with *Matthiolus* his Oyl of Scorpions. The extremity of the pain caused us many times to change our Medicines, which being continued for two hours, and a cordial and antidotary potion being given him, the pains ceased in all parts almost. But there abode yet a most acute pain in the Gristle of his left Ear, which could not be allaied with the foresaid Remedies. Considering with my self that not only Bees applied to the part, do attract the poyson, and asswage pain, but also other kind of Flies, I conceived that Cantharides might do good for a double reason; first because they are a sort of Flies, and then because they had a mighty drawing faculty. And because the Vesicatory Plaister kept in shops, has store of Cantharides in it; I laid a Plaister made thereof to his Ear, which in a quarter of an hour took the pain quite away. No bladders being raised, because it lay on so small a time.

The 215 Observation or History of Famous and Rare Cures, &c.

A Catarrh with Hoarsness.

About the end of *October*, 1643. When the Southwinds began first to blow, I was troubled with a Catarrh falling upon my Breast, which made me exceeding Hoarse, and almost speechless; which to remedy, I purged my self with a Laxative Ptisan, which I took twice a day two days together. This cured my Hoarsness, and in the day time I seemed to be free from the Catarrh, but in the night about midnight the defluxion encreased, and caused perpetual coughing, so that I was fain to rise from my bed. For the Cure whereof, I lost ten ounces of blood; yet the night following, the same Cough returned, which could no other ways be stopped, but by rising out of my bed. The day after my blood-letting, I seemed freed from the Catarrh, but at midnight my Cough came again; which effectually to allay, I took presently three grains of Laudanum, and going to bed again half an hour after I past the rest of the night without Cough or defluxion, in a most sweet sleep; and the following nights neither Cough nor Catarrh appeared any more. When the Disease was most troublesom, I

abstaine

abstained from Wine, using for my drink a Ptisan made of Liquoris and Coriander seed.

The 216 Observation or History of Famous and Rare Cures, &c.

A double Tertian with a Dropsie.

ANthony *Sany*, of *Montpelier*, being about fourty years of Age, a poor mean Man, in the moneth of *September*, 1643. Was taken with a most vehement double Tertian, which he endured an whole moneth without any Physick, keeping a bad Diet; whereupon first his Spleen did swell, and contract a Scirrhous hardness, and at last he grew Hydropical. Being in this condition, he sent first for the Physitian of the Hospital, who first prescribed him a purging potion, afterwards to be let blood, and after that an Apozem, cooling, opening and purging, for three doses; and withal an Emollient and Aperitive Fomentation for the Region of his Spleen, and to be again let blood after the use of the Apozems. When these things did no good, he gave him by my advice a Bolus of twelve grains of Mercurius Vitæ corrected, and working only downwards, in conserve of Roses; he had two stools without any Stomach-sickness or vomiting, and the day following his fit was milder and shorter, which before was wont to be most vehement. Two days after, the same Medicament was given him again, which voided by stool very much black, Leek coloured, and stinking Excrements, and his fit much abated. After two days were over, he took a third dose of the same Medicament and no Evacuation did follow; but his fit came no more: and from that time forward he was quite freed of his Tertian Ague. Howbeit the Dropsie remained and the swelling of his Spleen, and an exceeding pain in the same part, for the Cure of which Diseases he had given him a Bolus of a scruple of Calomelanos of *Turquetus*, and ten grains of Diagridium with conserve of Roses; which Remedy was used for six days together, whereby he was purged downwatds twice or thrice every day without trouble. And after the fourth time taking, the swelling of his belly did seem abated, the hardness and stretchedness of his Spleen discussed, so that he seemed perfectly cured. But for the more Sureties sake, the Medicine was continued yet two days more, and afterwards he was left only to Kitchin Physick to repair his strength, seeing no preternatural disorder was found remaining in his body. But the so sudden resolution of the Tumor of his belly, and the tension and pain of his Spleen, makes a conjecture that abundance of Wind was contained in the Patients belly, which was soon discussed, the ways and passages of the natural parts being laid open.

The 217 Observation or History of Famous and Rare Cures, &c.

The Dropsie in a little Boy.

THe Son of Mr. *Changerius*, A Proctor in the Court of Accounts, six years old, at the beginning of Summer, 1643. began to be afflicted with a troublesom pain in the Region of his Spleen, which did reach unto his Navil. After which followed a swelling of his belly encreasing by little and little, with leanness of his whole body. Which because they were not very troublesom, his Parents neglected to get him Cured, till the end of *October*, when they came to ask my advice. I prescribed in the first place a purging potion, afterwards opening broths for twelve days, adding to every third broth two drams of Senna, and one ounce of Syrup of Cicory with Rhubarb. At the same time his whole belly was anointed with an opening Oyntment, and he used for his ordinary drink a Diet drink of Rhubarb infused in Chalybeat Water. These things being diligently used did no good. And therefore betaking my self to more powerful Remedies, I prescribed him an opening and strengthening Opiate, to be used every day, also a purgation of Jallap and Scammony, of each ten grains, Calomelanos of *Turquetus*, twelve grains, reduced to the form of a Bolus, with Conserve of Roses. At the first giving, there

there were but six grains of Scammony and Jallap, but because the Medicine gave him but two stools, ten grains of each were used in the second dose, with which the Patient had four stools without any trouble, and the next day in the morning he went once to stool; and in his stools was found a bladder of Water as big as a Walnut, to which did cleave a sufficient quantity of thick and viscid Flegm. Every third day these purgations were used, and five times repeated, and the Patient was much more lively, but because of the Frost, these purgations were omitted for some time. After two moneths, his Navil opened of its own accord and a great deal of quittor came forth, whereupon the Patient died. The pains which appeared at the beginning of the disease might argue an Imposthume, if they had been observed by an attent Physitian, but because none was then called, and his Mother made no mention of that pain in her first relation of the Disease, and the Tumor had possessed his whole belly, it was supposed to be a vulgar Dropsie.

The 218 Observation or History of Famous and Rare Cures,&c.

A Cancerous Ulcer.

THe Mother of *Peter Renaldas*, a Chyrurgeon of *Montpelier*, being sixty years old, had an Ulcer in her left Leg, as big as the Palm of a Mans hand, black and blew, and malignant, having very hard flesh, and quite void of sense, so that she felt not when it was cut; which did proceed from black Choller burning the substance of the part. Now it was in the Moneth of *October*, 1643. when the Weather was very cold, so that baths to sit in being otherwise very necessary to correct the distemper of her Bowels, could not be used. And therefore I ordered her only to keep a cooling and moistening Diet, for many days together using cooling and moistening broths, and to be purged once in a week with a Laxative Ptisan. And she applied to the part, red Precipitate to consume the dead flesh, and a deep Eschar being made, the Emplastrum Stipticum Crollii was applied to the Ulcer, by help whereof, within one moneths time, the Ulcer was filled with flesh, and closed up with a Scar.

The 219 Observation or History of Famous and Rare Cures, &c.

A Wound with a Bruise.

A Priest seventy years old, well in strength, received a wound with a bruise, whereupon he was tormented with a bitter pain, and the part was very black and blew. He was presently let blood, and *Emplastrum de Cummino* was laid on, the day after a gentle purge was given him. The pain continued, and therefore the part was frequently anointed with Oyl of Wax warm, the foresaid Plaister being laid thereupon, and so in the space of twenty four hours, all the pain was taken away, and the old colour restored to the part.

The 220 Observation or History of Famous and Rare Cures, &c.

Of a Simple Tertian.

A Young Man twenty five years old troubled with a Simple Tertian, about the end of *September*, 1643. Was cured by these following Remedies. First a purge was given him. The second day he was let blood. The third day was given him red Præcipitate, prepared without corrosives with Scammony, ten grains of each. He voided much Chollerick and Leek-coloured Excrements, by two vomits and as many stools. The Disease continuing the same dose of both was given him, he was purged after the same manner and the Ague came no more,

The 221 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Of the Tiſsick.

A Man ſeventy years old, having been many years Tiſſical, was at laſt brought to that extremity, that he could hardly draw his breath, no not when he held his head upright; he was always gaping and wheezing, nor could any way reſt, but that he ſeemed preſently that he ſhould be choakt. By the uſe of theſe following Remedies, his Wheezing ceaſed, he fetcht his breath more eaſily, and was much eaſed.

Take Cinnamon water two ounces: Oxymel of Squils, one ounce: Mix them, let him take hereof out of a ſpoon frequently.

Take Elicampane Roots preſerved three drams: Sugar Candy, half an ounce: Syrup of Hyſſop two ounces: Gum Ammoniack diſſolved in Aqua vitæ, half a dram: Mix them into a Lchoch, of which let him take one ſpoonful morning and evening, licking it in by little and little.

The 222 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Chollick pain and Rheumatiſm.

ON the 19. of *December*, 1643. The moſt renowned Matron, the Wife to Mſr. *de la Roche*, Councellour in the ſupream Court of Accounts, Subſidies, and the Exchequer at *Montpelier*, was taken with a moſt cruel Chollick pain, whereby the whole Region of her Loins and of her belly beneath her Navil, was vehemently tormented. Now ſhe had been troubled two moneths with the Rheumatick Diſeaſe, which had gone over well near all the parts of her body one after another, cauſing pain in the ſaid parts, nor was ſhe yet free from the ſaid pains. For the vanquiſhing whereof, blood had frequently been taken away, both from the upper and lower parts; Clyſters were frequently injected, but few purges, and thoſe gentle were given her, becauſe the Patient being dainty and tender could not otherwiſe bear them. For the removal of this greivous pain I preſcribed her a Clyſter of an emollient and carminative decoction, in which were diſſolved double Catholicon one ounce, Diaphænicon half an ounce, Aqua Benedicta four ounces. Within half an hour after ſhe had taken the Clyſter, ſhe voided half a Baſon full of thick and viſcous flegm; and half an hour after that ſhe voided as much more of like flegm; and an hour after that ſhe vomited the ſame kind of flegm, only in leſs quantity and mingled with yellow Choller. She had two ſtools, and three hours after her receving the Clyſter ſhe was perfectly freed from her pain, The night following ſhe ſlept excellent well, and the foreſaid Rheumatick pains quite ceaſed.

The 223 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Dropſie.

James Mignot a Baker of *Montpelier*, being 35. years old, having in the moneth of *Auguſt* 1643. been troubled ſometime with a double tertian Ague, by careleſneſs in his diet, he fell into a continual Feaver, which having held him twenty days, turned again into a double Tertian, which laſted a whole moneth; and becauſe he uſed little or no phyſick, and drank abundantly, he fell at laſt into the dropſie Aſcites, wherewith he had been held two moneths when I was cald to him, and then his belly was mightily ſwelled, alſo his Thighs, Legs, and Cods; and his vvhole body vvas ſo vveakened that he vvas fain continually to keep his bed. I ſet upon his Cure after this manner.

The

The first day which was the 27. of *November*, I gave him a purging Medicament of Senna, Agarick, Manna, and Syrup of Roses, whereby he was moderately purged. On the 28 he was let blood eight ounces from his right Arm, and his Blood was full of Wheyish liquor. On the 29. he took a Bolus of twenty four grains of Calomelanos, and a scruple of Jallap, made up with Conserve of Roses; wherewith he had five stools of thick and black excrements, after which he voided store of Wheyish Humors, his Thighs and Legs were much abated, and his Cods were not above half so big as before. On the first of *December* the same Medicament was iterated with the same operation. On the second of *December* he took it again, and the operation was as before, but somewhat lesser: the swelling of his Thighs, Legs and Cods, was quite down: but his belly continued as before. The third day of the same moneth a Clyster was cast into his Guts, of the decoction of one dram and a half of Coloquintida, and an handful of Bran, boyled in white Wine. He kept it not long, yet had two sufficient stools. The fourth day of the same moneth, the same Clyster was repeated of one dram of Coloquintida, to which was added one ounce of common Oyl, that it might not too much provoke the expulsive faculty he kept it longer, but had only two stools. On the fifth of *December* he took a water-purging pouder, and was plentifully purged, voided much black excrement, such as he had also voided with his Clysters. The Pouder was made after this manner.

Take Senna clensed, gummy Turbith, Hermodactils, dwarf-Elder seed, Jallap, Mechoacan, of each one dram. Cream of Tartar two drams: Gambogia half a dram: Species Diamtræ, Diarrhodon Abbatis, and sweet Fennel seed, of each one scruple. Sugar Candy three drams: Make of all a Pouder, of which infuse two drams all night in four ounces of white Wine. Let him in the morning drink of the Wine and the Pouder.

The sixth day of the same moneth he took this following Julep.

Take Roots of Smallage, Parsly, Elicampane, of each one ounce: the middle bark of Ash and Tamarisk, of each half an ounce: Roots of Asarum three drams: Leaves of Agrimony, Ceterach, Maiden-hair, Cicory, Ground Oak, Centaury and Wormwood, of each one handful: Annis seed and Parsly seed, of each three drams: Flowers of Broom and Elder, of each one pugil: Boyl them to fifteen ounces; In the strained liquor dissolve four ounces of Syrup of Violets, make a Julep, for four morning doses, adding to each dose one dram of Diuretick Salt, and half a dram of Diuretick Spirit. At the first giving of the Julep no sensible effect appeared; But at the second taking, his Urines were more plentiful than formerly.

After the second dose of his Julep, *viz.* the eighth day of *December*, the Water-purging pouder was again given him, which wrought mightily, On the ninth and tenth of the same moneth his Julep was repeated, and his belly appeared softer and smaller: he walkt almost all day up and down in his chamber. On the twelfth, thirteenth, fourteenth and fifteenth days, his Aperitive Julep was repeated, and his Urines were more plentiful, and his belly grew dayly less, so that now he seemed perfectly to recover, and to need no strong Medicaments. And therefore I enjoyned him only to keep an exact diet, and to use as his ordinary drink Chalibeated white Wine, with his accustomed Ptisan which he had used from the beginning of his Disease, being made of a decoction of Agrimony, Ceterach, Maiden-hair, and the middle Rinds of the Tamarisk. Having given him this order, I saw him no more in five or six days time, which being past, he told me he was still extream thirsty, as he had been all the time of his Disease. I advised him for the quenching of his thirst, to dissolve in three pints of his ordinary Ptisan, half an ounce of the purest Salt Peter, and use the same for his ordinary drink, with the Chalybeate Wine aforesaid. Which being continued for five or six days, his thirst went quite away, and his Urines thereby became much more plentiful. So that continuing the same for ten or twelve days the remainder of the swelling of his belly was wholly discussed, and the sick man (God be blessed and Praised) recovered his former health. Howbeit I advised him, that he should yet use the Chalybeat Wine for a long time in his drink, and that he should take two ounces thereof every morning. These things were done two years agoe, and he has since that time lived lusty and strong, and is at this present in very good Health.

THE

The 224 Observation or History of Famous and Rare Cures, &c.

Immoderate flux of Blood in a Woman with Child, with a dead Child.

THe Wife of *John Chauvet*, Chief Officer of the Court of Accounts, Subsidies and the Exchequer, being thirty years old, in the beginning of her ninth moneth gone with Child, which was about the middle of *December*, 1643. received a small blow on her belly, but the day following she took a great deal of pains in making a bed; whence arose a small flux of blood from her Womb, which lasted two or three daies, and then it was stopt for as many daies more, and then returned again, and ceased by fits till the 28. day of the same moneth, in which the blood issued so plentifully, that within three or four hours her strength was exceedingly abated; and the same continuing, she called Physicians to advise, who first prescribed her to bleed in her Arm, and to take astringent Juleps, which Remedies working no effect, her flux continued very violent, without any sign of Child-birth towards, and the Woman said that for many daies she had not perceived the Child to stir, and one might feel it all on a heap and immovable; for which cause we conceived the Child was dead, and that her Womb endeavouring to cast out the unprofitable burthen, did continually contract it self, and expel the blood out of its proper Veins, nor could sufficiently perform that motion which was necessary for the Birth; and therefore it was necessary by all possible means to provoke the Birth, that the immoderate Flux of Blood might be stopped, which otherwise would kill the Patient. To which end a Clyster was given her in the first place, with Catholicon and Diaphœnicon, of each six drams; Oyl of Lillies three ounces, Salt one dram; with an emollient Decoction wherewith she was very well purged, and presently after the voidance thereof, the Flux of Blood was very much abated; which may seem strange, because such kind of Clysters are wont to encrease a flux of blood, but I suppose the reason thereof was, because the womb was burthened with the excrements in the *Intestinum rectum*, and being free from that burthen, it began to recollect it self, and to stop that preposterous motion, that it might betake it self to one more genuine and natural. And because after the Clyster was voided, the Womb did not endeavour the expulsion of the Child, but a flux of blood still continued, and it was apparent that the Child was dead; to drive the same out we gave her one dram of Salt of Vitriol dissolved in four ounces of Borrage water. Which verily seemed to do her good for two reasons; first, because by provoking vomit, it would provoke the womb also to thrust forth the Child; because in vomiting all parts in the lower belly, do vehemently contract themselves; secondly, because Salt of Vitriol is of a mighty astringent nature, and so might help the flux of blood. Having taken the Medicament, she vomited twice strongly enough, and voided many flegmatick, wheyish and cholerick Excrements, and soon after her throws began to come: which having continued four or five hours all after one manner, being no frequenter or vehement than at first, further to hasten the Birth, this following potion was given her.

Take Dittamus of Crete, the two Birthworts and Trochisks of Myrrh, of each ten grains; Saffron and Cinnamon, of each twelve grains; Confectio Alkermes half a dram: Cinnamon water half an ounce, Orange-flower water and Mug-wort water, of each one ounce and half. Which having taken, within a quarter of an hour she had strong Labors, and with three or four throws she voided the Child; whose skin beginning to putrifie, seemed in divers places to be torn. A little after she avoided the After-birth likewise, which was half rotten; and from that time forward her Child-bed Purgations came away very moderately.

The 225 Observation or History of Famous and Rare Cures, &c.

Of Sore Eyes.

A Countrey-man fifty years old, being troubled with an old Inflammation of his Eyes, by the advice of a Physician, did for a long time observe a cooling Diet, and did drink water, but found no ease. At last another Countrey-man perswaded him to leave off that cooling Diet, aud give himself to drink pure Wine. After his first cup of Wine he perceived his eyes to be better, and within a few daies continuing the same drink, his eyes became well. I have heard that the like happened to two more, which confirms the Aphorism of *Hypocrates*, that pains of the eyes are sometimes cured by drinking of pure Wine, *viz.* When the soreness of the Eyes proceeds from thick and flegmatick blood fastened into the tunicles of the Eyes, which by the use of pure Wine is melted, attenuated and discussed.

The 226 Observation or History of Famous and Rare Cures, &c.

The Iliac Passion.

THe 29. of *January*, 1644. Mr. *William Patris*, Councellor in the Presidial Court at *Montpelier*, began to be troubled with a vehement Cholick, caused by extream cold of the weather at that time. An Apothecary being called, gave him presently an emollient, carminative and laxative Clyster, wherewith he voided many excrements. The pain continuing, the same Clyster was repeated, with an addition of carminative Oyls, which he voided not. The pain still raging, a third Clyster was given him, which he likewise retained. Divers suppositories being put up, he voided some part of the Clyster, without any dung. I being called on the second day of the disease, prescribed him an emollient and pain-asswaging fomentation, to be applied to his whole belly, and a Clyster made of the decoction of the fomentation, which he also kept a long time, and voided a little part of it, without any matter; he had no pain, nor any Feaver; but he was troubled with vomiting by fits. Whence there was reason to conjecture that he was troubled with the *Passio Iliaca*, but what should be the cause thereof, was doubted in the Consultations of Physicians called to advise in so extraordinary a Case. For the Feaver which came the third day, with thirst and driness of his Tongue, did argue some inflammation. But how there could be an Inflammation of the Guts without pain, I could not conceive: it seemed rather to proceed from dung hardned, or from the twisting of some Gut. Many Remedies were used, blood-letting thrice repeated, twice in his Arm, once in his Foot, cooling Juleps were given him, Clysters were administred every hour of a decoction of the Guts of a Wether; an emollient fomentation was continually applied to his whole Belly. His vomiting continued till the seventh day, by which he voided his meat and drink, with a cholerick, flegmatick and dungy matter. About the end of the seventh day his belly began to be loose, and he voided many excrements by fits, his vomiting being quite ceased. His looseness continued five daies, the Feaver and weakness nevertheless continuing; in the end he voided liquid matter, such as he was formerly wont to vomit. On the thirteenth day of the disease he was extreamly unquiet and weak, and his weakness encreasing, he died. His body being opened, we found his Gut Ileon three times twisted and drawn together in a bunch towards the end thereof; and all that twisted portion of the Gut was gangrenated, with a portion of the Mesentery joyned thereto. The rest of the Guts were exceeding large, being as big as a mans Arm. Moreover the grangrenated Gut had a hole bored in it, above the complication; I suppose it was broken by the weight of the excrements in the Guts above it after it was mortified. By that hole, the superfluity of excrements flowed into his belly, and by long retention had putrified the inner part of the Anus, wherein also another hole was found, by which the Excrements did flow through the belly, and made a show as if the stoppage of the Guts had been opened. Whence it is apparent that a looseness happening upon the Ilicak passion, may sometimes deceive Physicians.

The

The 227 Observation or History of Famous and Rare Cures, &c.

Unquenchable Thirst.

ON the 17. of *February*, 1644. I was called to *Lodovamper*, the most illustrious Bishop of *Lidova*, being sixty years old, of a sanguine Complexion. He having been for some daies troubled with arthritick pains, of a sudden the pains were much diminished, and at the same time a Feaver seized him with an unquenchable thirst, so that having drunk two good draughts of Water, it was no waies abated. I conceived that these Symptoms did proceed from the retention of those humors which were before carried to the joynts, for they being restrained in the inner parts of the body caused that Feaver and Thirst; whereby he was in great danger of death, for persons troubled with the running Gout are wont commonly to die in their old age, when the expulsive faculty being weakned, cannot sufficiently expel superfluous humors into the joynts, so that they being retained in the Bowels, do cause grievous and for the most part deadly Diseases. For the cure of these diseases, I appointed a cooling and laxative Clyster to be given him twice in a day, for two daies together, and in every draught of his ordinary drink, which was a decoction of Barley and Grass, I dissolved one dram of Sal Prunellæ, and eleven drops of spirit of Vitriol. With these Remedies, in the space of two daies, that mighty Thirst was extinguished, and the Feaver very much abated. And in a few daies after, with gentle purgations and cooling broths used at times, he was perfectly recovered.

The 228 Observation or History of Famous and Rare Cures, &c.

A Catarrh flowing into the Lungs.

AT the end of *February*, 1644. I was afflicted with a most grievous Catarrh falling upon my Lungs, whereupon a vehement Cough troubled me night and day, with shortness of breath, so that I could not lie in my bed. For the cure whereof I was four times let blood, and purged as many times in the space of fifteen daies; also Cupping-Glasses were applied, and a Vesicatory, with many thickning medicaments against the Cough. I had also a small Feaver, which threatned an inflammation of my Lungs. Although I am wont twice or thrice in a year to be troubled with these Catarrhs, yet I never had any so long and stubborn, so that I much feared it would turn to a Consumption; seeing all Remedies wrought no effect, which at other times did me good. Supposing therefore, that I must make use of some effectual Medicine to pull up the roots of the defluxion, I took twenty grains of Calomelanos, and ten grains of Jallap. With which Remedy, I voided by stool much flegmatick and cholerick matter, such as my other purgations did not bring away, and I voided much Flegm at my mouth by coughing and spitting, which evacuation continuing two daies together, my Catarrh ceased, and my Cough went quite away, and so I was freed (by the goodness of God) from that grievous Disease.

The 229 Observation or History of Famous and Rare Cures, &c.

Bruises.

A Certain young-man fell from an high place, and all his members were bruised, so that he seemed to be at deaths-door. His Father took honey-combs with the honey in them, and boiled them in Wine to the consistence of an Oyntment, which he spread upon the skin of a Wether newly killed, and therein wrapped the Patient. Which being repeated for three daies together he was perfectly cured.

In particular contusions, this Oyntment is spread upon a Linnen-Cloth and applied, and presently works the Cure.

The 230 Observation or History of Famous and Rare Cures,&c.

A slow Feaver, with pains of the Loins and Thighs.

THe Son of *Jacob de Ladevese*, a Citizen of *Montpelier*, seven years old, was troubled for some moneths with a slow Feaver, whereby his body was much fallen away, and it was attended with pains in his Loyns and Thighs. He used many medicaments, but in vain: Being called to him, *April* the 19, 1644. I prescribed him a Bolus of Calomelanos ten grains, and Diagridium five grains, with Conserve of Roses. Which he took the twentieth day, was twice gently purged, and better after it. On the twenty one day of the same moneth he took twelve grains of Calomelanos, and six grains of Diagridium, was twice gently purged, and much better after it. On the twenty second day he took the same dose with the same operation, and was perfectly cured.

The 231 Observation or History of Famous and Rare Cures, &c.

A Cough, Shortness of Breath, and pains of the Shoulders and Arms.

THe Wife of *Peter Florens* an Husband-man, named *Vavaresse*, was troubled eight months with pains of her Shoulders and Arms, with straitness of her Breast, Cough, and difficulty of Breathing; she voided by Coughing much flegmatick and watry matter. She had taken many Potions and Apozems prescribed by another Physician, and all to no purpose. At last she implores my help on the eighteenth of *April*, 1644. and I gave her twenty grains of Calomelanos, and ten grains of Diagridium, with Conserve of Roses. Two hours after she had taken the medicine, she did sweat twice plentifully, and after that had three large stools, and the day after she said she was perfectly cured. Howbeit, three daies after I caused her to take the same medicine again, wherewith she had four stools, and from that time was perfectly freed from the foresaid Symptoms.

The 232 Observation or History of Famous and Rare Cures,&c.

A Chronick-ague, without any certain Course, with the Hypochondriacal Disease.

THe tenth of *June*, 1644. when I was at *Grenoble*, Msr. *de Sancto Martino de Vercors*, thirty years of Age, came to me, desiring to be cured of a most stubborn Disease. He was troubled three years with Ague-fits, which came twice or thrice in the moneth, without any certain Course; so that the Fit came sometimes after ten, otherwhiles after twelve or fifteen daies. It began with a light shivering, which a great heat followed, with grievous pains of his Thighs. It lasted fifteen, twenty, and twenty four hours, and went not away, but after plentiful sweating and making water. In the spaces between the fits, he performed all the functions of his body very well, save that he was bound in his belly, and voided his excrements with very much straining, which were clammy, and like wax. This disease took its original from a continual Feaver, which he had three years before in the Camp in *Italy*, not being duly purged at the end thereof. So that the reliques of the Disease resting chiefly in the Mesentery, became thick, and bred stubborn Obstructions. By which the passage of the humors being hindred, it made a Disease like the Hypochondriacal passion, and in the hot complexion of the Patient raised these kinds of Feavers. Which kind of Feavers did spring from a collection of wheyish

Wheyish Humors working and putrifying, which being voided by sweat and Urine, the Feaver ceased. Now the pains of his Thighs did arise from thick Vapors translated from the Hypochondria to those parts. He used many Remedies for the space of those three years, prescribed by skilful Physicians. I set upon the Cure after this manner.

Take Senna cleansed two drams, Fountain water eight ounces, Salt of Tartar one dram, Spirit of Sulphur thirty drops; infuse them cold all night. Let him take the strained Liquor in the morning, and order himself accordingly.

The day following let the Basilica Vein of his left Arm be opened, and take away nine ounces of blood.

After blood-letting, let the Infusion of Senna be repeated for three daies.

During the use of these Remedies, let his Belly be fomented with an Emollient and Aperitive Decoction in the morning, an hour before he takes the infusion; and in the evening an hour before Supper.

After the Fomentation, let the same parts be anointed with an Emollient and Aperitive Oyntment.

Then let him use Chalybeat Pils for fifteen daies.

At the same time, presently after his Pils, let him take the infusion of one dram of Senna, made with Salt of Tartar and Spirit of Sulphur.

During the use of the Pils, let the Fomentation and Oyntment be continued morning and evening.

In the middle, and at the end of his Pills, let him use a Luke-warm Bath for two daies together.

With these things he seemed to be perfectly Cured, for neither did his Ague-fits return, nor did his Excrements retain that same Wax-like consistency any longer. Howbeit, to make the Cure more compleat, I sent him to the medicinal Waters, to take them fifteen daies together. I prescribed him for that Summer a magistral Syrup to be taken twice in a moneth, and a strengthening and opening Electuary to be frequently used. And in Autumn, I ordered him after purging and blood-letting, to repeat his Chalybeat Pils for twelve daies with a Fomentation and Liniment. After that, to take his usual Aperitive and purging Pils twice or thrice a moneth all Winter long. And finally, to continue his Opiate on the intermediate daies: The latter Remedies, *viz.* The Syrup, Pils and Opiate he did not use, because he was by operation of the former freed from that stubborn Disease.

The 233 Observation or History of Famous and Rare Cures, &c.

Immoderate flux of Courses, and a Dropsie beginning.

THe honored Wife of the renowned Msr. *de Burcin*, President of the Senate of *Grenoble*, for seven moneths had a continual flux of her Courses, whereby she fell into a Cachexy, and the beginning of a Dropsie, with extream weakness. I was called to her the 12. of *May*, 1644. She said Physick did her hurt, because Purgations augmented her flux, and so did all things prescribed to open Obstructions. But I did prescribe her a purge of the Decoction of Plantane and Myrobalans, wherein half a dram of Rhubarb was dissolved; she was gently purged by this Medicament used for three daies together, and the flux also of her Courses was almost stopped, also her perpetual thirst was very much diminished. But to open Obstructions, and to bring away the whole Surplusage of Humors, these following Pils were prescribed.

Take Chalybs prepared with Sulphur one ounce; Senna, Rhubarb and Agarick Trochisked, of each one dram; Species of Diarrhodon Abbatis half a dram. With Oxymel simplex make a mass of Pils, of which let her take one dram three hours before meat, walking upon it.

These Pils being continued fifteen daies together she was freed from the immoderate flux of her Courses, and from the Cachexia. And to strengthen her Liver, she used Conserve of Roman Wormwood many daies together. And four or five daies before the coming of her Courses, least they should flow immoderately, whence she might happen to be exceedingly weakned,

ned, she took in the morning eight grains of Spikenard, with fifteen grains of Crocus Martis astringent made into pills, with Conserve of Roman-Wormwood, and so the immoderate flux of her Courses was stopped.

The 234 Observation or History of Famous and Rare Cures, &c.

Tooth-ach and a swelling on the upper Jaw.

THe 15. of *August*, 1644. I was taken with a pain in my teeth, which was followed by a Tumor on my upper Jaw, on the left side, with Inflammation and great pain. After blood-letting from the same side, I applied to the part all day long, a Cataplasm of Crums of bread, which I renewed every third hour, and before the Application, I anointed the part with Rose-Water, wherein Sal Saturni had been dissolved. The following night, when the pain continued, I took three grains of Laudanum, whereupon I slept quietly, whereas I had not slept the night before, and my pain was allaied and the fluxion stopped; and the Tumor appeared next day in the morning much lessened, and in the space of that day it was for the most part discussed.

The 235 Observation or History of Famous and Rare Cures, &c.

Most Rebellious sores in the Mouth.

A Certain Woman was troubled with most rebellious sores in her Mouth, which could not be Cured, neither by blood-lettings, many purgations, cooling Juleps, nor anointing with spirit of Sulphur. She slept not a nights, and could hardly eat any meat, because all parts of her mouth were full of little Ulcers. She took at night three grains of Laudanum, and continued the same remedy for three daies, and so the sharp fluxion which fell into the parts of her mouth was stopped, and consequently the Ulcers of her mouth were in a few daies thorowly Cured.

The 236 Observation or History of Famous and Rare Cures, &c.

A *Malignant Feaver.*

ON the 14. of *August* my Wives Maid began to be sick of a Malignant Feaver, which brought her to Ravings and Convulsions. And because she was poor, and loath to be at Charges, she was cured with little Physick after this manner.

She was four times let blood, Cupping-Glasses were frequently applied, moist and dry; her drink was a Decoction of Sorrel Roots, wherein I dissolved twice a day one dram of Sal-Prunellæ, and fifteen drops of Spirit of Sulphur. She took frequently in her broths one scruple of Bezoardicum Minerale. On the eleventh day of the Disease I gave her two drams of Spirit of Soot in Carduus Water, and she did sweat a little; On the twelfth day I gave her three drams of the same Spirit, with the same Water, and she did sweat plentifully; and the same day the Feaver abated, the Ravings and Convulsive motions ceased, and she was well within a few daies after.

Head-ach of half the head.

THe Daughter of Msr. *de Larcare*, being twelve years of Age, was troubled with an Head-ach on half her Head for ſome years, which no Remedies could eaſe, but her body continued, and received no encreaſe. She was ſent by my advice to the *Baleruan* Baths, and drank their Waters, and had her waſht with them, and ſo ſhe was perfectly Cured.

The 238 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Wound in the Arm hard to Cure.

MSr. *de Rochemore*, being twenty five years old, received a Wound in his Arm, a little above his wriſt, and aſcending towards his Elbow. In the Cure, new fluxions did continually ariſe, wherewith his whole Arm and Hand did ſwell, and after them followed ſuppurations, which in other places both of his Arm and Hand were opened, though the Cure was well followed, his Arm and Hand were ſwelled with a flegmatick Tumor, and out of the Ulcers wheyiſh quittor did flow. After many Remedies, reſpecting the Antecedent and Conjunct cauſe, the Cure was performed by Bolſters applied to the ſwelling places, whereby the afflux of Humors into the part was hindred, and the union of the hollow Ulcers procured. And ſo the Patient was Cured in the ſpace of fifteen daies, who had been before two moneths under Cure.

The 239 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Of a Pleuriſie.

IN the beginning of *September*, 1644. The Son of Msr. *Audifret*, a Citizen of *Montpelier*, five years old, was taken with a Pleuriſie of his left ſide, with a moſt acute Feaver. After ordinary Remedies uſed for five daies together, and four times blood-letting; I ordered two Cupping-Glaſſes to be applied to the pained ſide, with deep Scarrifications; now it happened that by the Scarrification of that Cupping-Glaſs which was neareſt the pained place, much blood-watry liquor flowed out all that day, and thereupon the pain and Feaver went away. I ordered Beete Leaves to be laid upon the places Scarrified, and the blood-watry liquor flowed out for two daies, and in concluſion, true quittor flowed out of the Wounds. And ſo the Patient was perfectly Cured. I believe the Scarrifications did reach unto the place of the Pleuriſie, and that the Morbifick matter did flow out at thoſe Wounds.

The 240 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Head-ach in a Semitertian Ague.

THe moſt illuſtrious Prince *Janethinus Doria*, Admiral of the Spaniſh Navy, when he was kept Priſoner of War in the Caſtle of *Montpelier*, he was taken at the beginning of *September* with a Semitertian Ague, which among other Symptomes, did grievouſly torment him with Heach-ach, and that perpetual, as bad out of the fit as in it, which after four times letting blood in the Arm, continuing as ſtrong as before; it was taken away within the ſpace of an hour, by letting him blood in his right Ankle in the evening of the ſixt day. So ſudden an effect was worth Obſervation, that ſtudents in Phyſick may learn what good revulſion is made from the Head, by opening the Saphena Veins.

The 241 Observation or History of Famous and Rare Cures, &c.

A Universal Catarrh on all the Joynts.

Msr. *de Barri*, eldest Son of Msr. *de Rochemore*, Chief President in the Supream Court of Accounts, and Subsidies in *Montpelier*, at the beginning of *August*, 1644. Began to be troubled with an universal Rheumatisme, infesting well-near all the joynts of his body with a continual Feaver, and extream crudity of Urines. This Disease befel him chiefly through unseasonable swimming, for going in the heat of Summer to a River far from the City, he drenched his heated body in the water, whence that universal Catarrh did proceed. For six weeks all the Medicines he took, seemed to do no good, for he was no better than formerly; and the pains did run up and down to several parts, and frequently return upon him. Now the chief Remedies were ten times blood-letting, cooling and thickening Juleps, to which were added twice or thrice gentle Purgations. At last the Disease continuing, there was given him a Bolus of Conserve of Roses, with twenty grains of Calomelanos, and six grains of extract of Jallap every third day. He voided many wheyish and leek-coloured Excrements. With which Remedy four times used, all the pains were taken away; and afterward the flegmatick Tumors which remained in the Joynts, especially of the Feet, were discussed with Resolving and Roborating Plaisters.

The 242 Observation or History of Famous and Rare Cures, &c.

Of Hiccupping.

A Maiden of thirteen years old was vexed an whole year together with a most troublesome Hiccup, which came by fits four or five times a day, continuing sometimes a quarter, sometimes half, other whiles an whole hour. All the foregoing Winter she had been vexed with this Symptome, but in the Summer she was for the most part free, so that it came but very seldome. In the beginning of Autumn it returned as fierce as ever. Her Father asked my advice the second of *October*, 1644. The day following I caused her to take sixteen grains of Calomelanos, and eight grains of Diagridium; with which only Remedy the Disease was quite cured that very day.

The 243 Observation or History of Famous and Rare Cures, &c.

Aneurisma.

THe Son of *Peter Vesian*, a Merchant of *Montpelier*, five years old, being sick of a Feaver in the moneth of *July*, 1644. by occasion of blood-letting, he fell into an *Aneurisma*, by the opening of an Artery; which was perfectly cured by applying astringent Cataplasms of Bole, Terra Sigillata, and other materials wrought up with Vinegar and the white of an Egg, and changed every third day, the part being very straitly swathed, and in the space of three moneths the Cure was finished.

THE

The 244 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Of a Catarrh falling upon the Lungs.

THe 14. of *October*, 1644. The South Winds having blowed for an whole moneth togther, that hot and moiſt ſeaſon was changed into a cold and dry, *viz.* The North Wind blowing, by means whereof, though for two daies immediately preceding, I had been purged by a Laxative Ptiſan and Manna, a Deflux of Rheum fell upon my Lungs, which cauſed me to Cough, fetch my wind ſhort, and to Wheeze a little. For two daies it did not much moleſt me, ſo that I went about the City nevertheleſs. The third day my Diſeaſe growing worſe, I took an ounce of Manna, and four grains of the Roſin of Jalap, with which I was but little purged; and therefore I took the ſame night ſome Laxative Ptiſan with Manna, and was plentifully purged in the Courſe of that night. On the fourth day I dined lightly, and five hours after dinner I took the ſame Laxative Ptiſan, and it wrought pretty well upon me that night. On the fifth day, at bed-time, my Catarrh being not yet gone, though much abated, I took three grains of Laudanum, preſently my Catarrh ceaſed, and I ſlept quietly all that night. Yet, becauſe on the ſixth day in the morning, a ſmall Wheezing might be heard in my Breaſt, with a light ſhortneſs of breath, I was reſolved to waſt away thoſe Reliques by faſting. Wherefore keeping in my bed all that day, I took only one Meſs of broth at Dinner-time, and ſome Barley-broth at Supper-time; I ſlept quietly all night, and my Catarrh was quite diſcuſſed. Howbeit, a ſlight pain aroſe on my right Jaw-bone, which was quite taken away, by a flux of blood out of the Gum where the Tooth was Rotten: now there came away drop by drop, about three ounces of blood mingled with flegm.

The 245 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Of a Spot in the Eye.

THe Daughter of Msr. *de Merviel* eight years old, having long had ſore Eyes, a very thick ſpot was left in her Eyes, which poſſeſt the middle of the Iris. Which was conſumed with Roſe-Water, wherein Sal Armonick was diſſolved in ſuch quantity, as that it did a little ſmite the Tongue, and it was kept two or three daies in a Copper Veſſel, till it got a blew colour.

The 246 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Catarrh with hoarſneſs.

ON the 7. of *November*, 1644. the South-Wind blowing, I was taken with a Catarrh and an Hoarſneſs. The ſecond day I kept my bed, and took nothing all day but two Meſſes of Barley-broth at Dinner and Supper-time: The third day I took a Laxative Ptiſan, with an ounce of Manna. The fourth day I reſted, and my Hoarſneſs was very much abated. On the fifth I had a dry Cough, which made me open a Vein. On the ſixth my Cough continued, therefore I took twenty grains of Calomelanos, and eight grains of Roſin of Jalap. The Medicament wrought not all day, only towards night it gave me two very ſmall ſtools. Howbeit my Cough was quite diſcuſſed.

The 247 Observation or History of Famous and Rare Cures, &c.

Difficulty of breathing with a Cough and Hoarseness.

THe Wife of Msr. *Dortoman*, a renowned Advocate, was troubled with a Cough, Hoarseness, and difficulty in fetching breath for twenty daies together: in the Course whereof, she was thrice purged with an infusion of Senna and an ounce of Manna. Being called to her in the beginning of *December*, 1644. I prescribed her to be let blood nine ounces; her blood was very corrupt, then she used seven daies together pectoral broths, in the first and last whereof Senna was infused, and Manna dissolved. Nevertheless a Cough and shortness of breath, though not so violent as before, continued; because her Lungs were weak, and her Brain very moist. In which respect the by-standers propounded the use of a Sudorifick Decoction, which I said I did not dislike, but that we would first try one Remedy more, most effectual to Root up stubborn Fluxes. Wherefore I prescribed her twenty grains of Calomelan, and ten grains of Rosin of Jalap, with which Medicine she was seven times purged, and quite freed from her defluxion, so that she needed no Physick.

The 248 Observation or History of Famous and Rare Cures, &c.

An old Cholick Pain and Looseness.

ANtonia de *Paravisol*, an honest Virgin twenty five years of Age, was troubled eight moneths together with a pain in her Belly, not unlike the Cholick, accompanied with a Looseness, with which she voided a Flegmatick and Cholerick matter, as also some quittorish stuff. She had taken very little Physick, till brought to the last cast, and supposing her self to be at deaths door, she implores my Assistance. I prescribed in the first place to assuage the pain which was cruel and continual, three grains of Laudanum, with one dram of Conserve of Roses, whereby her pain was stopped, at least for a time, and her Looseness abated. Afterwards to assuage the said pain, to open Obstructions, and cure that stretching of her Belly, which might be perceived by the Hand, and also to abate her Looseness, I prescribed the Medicaments following.

Take Roots of Marsh-mallow two ounces, Leaves of Mallows, Pellitory of the Wall, Violets, of each two handfuls: Seeds of Line and Fenugreek, of each one ounce; Flowers of Chamomel and Melilote, of each two pugils. Make of all a Decoction, wherewith let the pained place be fomented morning and evening.

Take Oyntment of Althea two ounces, Oyl of Chamomel and Lillies, of each one ounce. Make a Liniment, and therewith anoint the said part after Fomentation.

Take Roots of Grass, Asparagus, Butchers Broom, of each two ounces: Leaves of Agrimony, Burnet, Mouse-Ear and Plantane, of each one handful: Tamarinds one ounce, Crude Tartar half an ounce, Citrine Myrobalans two drams; Boyl them to one pint. Make an Apozeme for three morning Doses, adding to each dose half a dram of Rhubarb, and an ounce of Syrup of dried Roses.

With these Remedies her pain was so abated and her Looseness, that she supposed she was well-nigh perfectly Cured; but after fifteen daies the Symptoms returned with the same vehemency. Being called again, I prescribed as followvs.

Take Rhubarb poudered one dram, Conserve of Roses three drams. Mix them into a Bolus; Let her take it in the morning, and order her self accordingly.

Take Turpentine washt in Plantane water three drams, Rhubarb poudered half a dram; Make them into a Bolus. Let her take it three mornings together, after the use of the former.

With these two slight Remedies she was perfectly Cured.

The

The 249 Observation or History of Famous and Rare Cures, &c.

A long Tertian-Ague.

A Girle ten years old, having had a Tertian Ague three moneths together in the Hospital, after many Remedies tried in vain, took the 8. of *January*, 1645. twelve grains of my Feaver-frighter, it being her wel-day: she had five stools, her fit came that day out of its usual Course; the next day there was no appearance of the Ague, nor ever after. I shall say more touching this Feaver-frighter at the end of this Century.

The 250 Observation or History of Famous and Rare Cures, &c.

A Quartane-Ague.

A Woman forty years old, lying sick in the Hospital, had been troubled four moneths with a Quartane-Ague. On the 10. of *January*, 1645. she took twenty grains of my Feaver-Frighter, had six stools, and the next day instead of her fit, she had certain pains and disquietnesses, without any shaking or coldness foregoing, and without sensible heat. On the day of the following fit, the same unquietnesses returned without any fit. The day after she was purged with a Medicament of half an ounce of Senna, three drams of Diaphœnicon, and one ounce of Syrup of Roses: it gave her seven stools, and after that she neither had Ague-fit, nor any unquietness.

The 251 Observation or History of Famous and Rare Cures, &c.

A Quartane-ague.

THe Wife of *Lewis Lauter* a Taylor, twenty three years old, dwelling near the Latten Gate, and having been troubled with a double Quartane-Ague five moneths, came to me the twenty seven of *January*, 1645. to whom I gave on the twenty eighth day twenty grains of my Feaver-frighter or Ague-Chaser in the morning, seeing the first fit was expected about the evening; she had six stools, and vomited once about noon, three hours after she had taken broth, and when she began to dine. At night the fit came again without cold, but the heat was longer than ordinary. The second fit came not the day after, nor any more ever after.

The 252 Observation or History of Famous and Rare Cures, &c.

The Dropsie.

A Beggar-man called *Rafeau*, was troubled with a Dropsie three Moneths, whereby his belly grew exceeding big, and because his poverty would not afford him Physick, he used for a moneth together, by the advice of a Countrey Woman, a Decoction of the Roots of Knee-Holme or Butchers-Broom, and was purged twice or thrice with an infusion of Senna, and with these Remedies alone was perfectly Cured.

The 253 Observation or History of Famous and Rare Cures,&c.

An Hectick Feaver with fear of a Consumption.

THe Daughter of Msr. *Paschal*, four years old, had for six moneths together an Hectick Feaver, with a Cough and spittle somewhat rotten, whereupon she was deemed to be in a Consumption, and at last given over by her ordinary Physician, who openly professed that it was an Hectick in the third degree. Her Mother in this desperate case made her keep a thin Diet, whereas before she did eat solid meats, for she took nothing but broths all the day long, and at night some Barley Cream. And twice a week she gave her the infusion of two drams of Senna in a Decoction of Cichory and Bugloss made with Annis-seed, into which Decoction being hot, the Senna was put, and continued therein all night without any other heat. With this plain way of Cure she was restored in a moneths space.

The 254 Observation or History of Famous and Rare Cures, &c.

A Quartane-ague.

THe Mother-in-Law of Msr. *Athanasius*, Supervisor of the Salt pits, fifty two years old, had a Quartane-Ague six moneths together, and on the 5. of *February*, 1645. she took twenty grains of my Ague-frighter, had two stools, and twice vomited bitter gear after her broth. It was the day before her fit, which returned the next day at the accustomed hour in the same form and duration. But the next fit-day there was no appearance of the Ague, nor ever after.

If thou intendest to be able to know and Cure all Diseases, Read the Idea of Practical Physick, *Riolanus* Guide to Physick and Chirurgery, and my Practice of Physick.

The 255 Observation or History of Famous and Rare Cures, &c.

A Quartane-ague.

Ludovica Bevonse, forty five years old, dwelling near Holy-cross Church, and troubled with a Quartane-Ague four moneths together, took on the 8. of *February*, 1645. twenty grains of my Ague-chaser the day before her fit, which first made her vomit much very bitter Choller, three hours after the taking of the Medicine; and after her vomiting she took broth, which a little after she vomited up again with Choller not so bitter as the former; and half an hour after she voided by stool store of Humors, having only one stool. The day following she had a Fit like the former; and from that time forward the Ague left her.

The 256 Observation or History of Famous and Rare Cures, &c.

A Quartane-ague.

THe Daughter of Msr. *Boirargues*, Controller of the Court of Accounts, Subsidies and Exchequer, fifteen years old, having had a Quartane-Ague three moneths together; after many Remedies tried in vain, she took the 9. of *February*, 1645. twenty grains of my Ague-frighter; the day before her Fit she had six stools, the day after her Fit came three hours later than ordinary, and was much shorter than formerly. The second Fit came not, but instead thereof she had some disquietness. The third Fit came again, but very little: The fourth was greater. She took the Medicine again the day before the fifth Fit, which came somewhat less than usual, and after that she never had it again.

The

The 257 Observation or History of Famous and Rare Cures,&c.

A *Quartane-ague.*

Jane Guillarde, a Woman of forty years old, being troubled with a Quartane-Ague six moneths, on the 15. of *February*, took twenty grains of my Ague-Frighter, the day before her Fit. She had six stools, and did not vomit: The day after her Fit came, but was shorter by half; but she never had it more.

The 258 Observation or History of Famous and Rare Cures, &c.

A *Quartane-ague.*

A Woman fifty years old, named *Motona*, Living near the Church-Well, had a most vehement Quartane-Ague seven moneths together. The 17. of *February*, 1645. she took twenty four grains of my Ague-frighter, had three stools, and vomited once exceeding bitter Choller; her fits continued, but were much more gentle. After the third fit was past since she took the Medicament, she took thirty grains more of the same, and had twelve stools, and vomited twice leek-coloured Choller mixt with Flegm, and was perfectly freed from her Fits.

The 259 Observation or History of Famous and Rare Cures,&c.

A *Quartane-ague.*

Andrea Delona, a Maid of 13 years old, the Daughter of *James Delon*, Gardener to the Friars Minorites, having had a Quartane-Ague four moneths, took on the seventeenth of *February*, 1645. twenty grains of my Ague-frighter: She vomited twice, but had no stool; Her fits continued as before. After the third fit, *viz.* the three and twentieth day of the same moneth she took twenty four grains of my Ague-Frighter: it purged her five times by stool, but not at all by vomit, and so her Disease was quite cured, she never having any fit afterwards.

The 260 Observation or History of Famous and Rare Cures,&c.

A *Quartane-ague.*

Mary Delona, Sister of the foresaid Maid, being eleven years old, had the same Ague as long; she took the seventeenth of *February*, 1645. sixteen grains of my Ague-frighter, had three stools the same day, and two the day after, and was perfectly cured.

The 261 Observation or History of Famous and Rare Cures, &c.

A *Quartane-ague.*

THe 2. of *March*, 1645. *Antony Bayle*, a man of fifty years old, dwelling near St. *Anns* Church, and having had a Quartane-Ague five moneths, took twenty grains of my Ague-frighter, had three stools, without any vomiting or Stomach-sickness, and without any trouble. The day following the Fit came but half so big as formerly, and after that he never had it more.

The

The 262 Observation or History of Famous and Rare Cures,&c.

A Quartane-ague.

THe most renowned Msr. *de Lispine*, Councellor in the supream Court of Accounts, Subsidies and Exchequer,having had a Quartan-ague seven moneths; having tryed many Remedies in vain,and being fallen into a Cachectick disposition, which made him fear a Dropsie, because in his fits he had drunk abundantly, and would drink six or seven pints of Water; took on the eighth of *March*, 1645. twenty grains of my Ague-frighter, wherewith he was purged at least twelve times in twenty four hours, and he vomited three or four times: all which he did endure without trouble. On the ninth day of the same moneth, the fit which had wont to return about noon, came not till seven in the evening, without cold and with less heat intensively, but more extensively: The tenth day which followed the fit he was well. On the eleventh day in the morning he was taken with an extream pain, very like the Cholick, which possessed his left Hypochondrium, with bleeding at the Nose, whereby he voided about four ounces of blood. The pain being sometimes more intense, other whiles more remiss,continued all day with a continual desire of going to stool. Howbeit now and then he voided some evil humors; about evening he had a troublesome provocation to make Water, and his Urine scalded him at the end of making the same. On the twelfth day he was well all day long, and his fit which was then expected returned not.On the thirteenth day he made many Urines extream black like ink, with a thick and very black sediment. On the 14 day a pain in his left Hypochondrium came again, coming by fits. It became more intense the fifteenth day, and then it was plain to discern, that the pain was in his spleen, by reason of the stretching out and puffing up of that part which did not before appear. Fomentations were applied to the part affected, and Clysters were injected, whereupon followed a gentle Loosness, the vaies being opened, and the matter made thin,which being retained,did cause the pain. On the sixteenth day he took an infusion of two drams of Senna, with a scruple of salt of Tartar. He had three stools: but taking the same again the next day, he had five stools, and was thereupon better. Howbeit the daies following he had some shiverings,*viz.* on those daies in which his fits were used to come till on the third fit-day he had a perfect fit, but lighter than the former. He took again the Infusion of Senna two daies together, wherewith he was indifferently purged,and yet his fit came like the former fits. On the first day of *April* he took my Feaver-frighter again in the same quantity as before, he had three large stools, but never a vomit. On the second day a fit came like the former. On the fifth day of the same moneth, the expected fit came not. On the eighth he had again a very small fit. On the eleventh he had a fit stronger than the former, so that the Feaver seemed to return to its former state. Therefore on the thirteenth day he took my Ague-frighter again, the dose being doubled, which purged him abundantly two daies together, and from that time forward his fits never returned.

The 263 Observation or History of Famous and Rare Cures, &c.

A Bastard Pleurisie.

ON the eighth day of *March*, 1645. the Wind suddenly passing out of the South into the North, and making the Weather very cold, I began to be pained in the mornings with a most grievous pain in my left side and my breast,from whence extream shortness of breath did arise. Which I presently endeavoured to discuss with hot Fomentations,though a Feaver began to shew it self, which was nevertheless very small. The Fomentations made my pain more violent,whereupon I sent for the Chirurgeon,and took away ten ounces of blood from my Arm on the same side, the blood seeming to be very hot. Two hours after blood-letting, and an hour after I had supped some broth, I received a Clyster: After I had taken broth the second time,I was again let blood to twelve ounces. For though the pain seemed to arise chiefly from Wind; yet I feared least the grievousness of the pain should draw a fluxion to the part, which the year before had been twice diseased with a true Pleurisie. Herewith the pain was somewha

what abated. Yet becauſe it continued, the day following I took another Clyſter made of an emollient decoction, with an ounce of Diaphænicon, and four ounces of Aqua benedicta, by which my belly was plentifully looſened, and I had one Vomit; alſo while I was vomiting, the wind contained in the parts about my Cheſt was ſuddenly expelled, ſo that after my vomiting, I felt my ſelf perfectly freed from the pain of my ſide and Breaſt, and had no need of other Remedies.

The 264 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Quartane-ague.

ON the twelfth of *March*, 1645. *John Rey* a Lanthorn-maker, dvvelling in *Lapeyré*-ſtreet, and troubled ſix moneths with a Quartan-Ague; took twenty grains of my Ague-frighter, and was therewith tvvice purged by ſtool, and vomited many wheyiſh and Cholerick Excrements. The day followving, which was the thirteenth of the ſame moneth, his Fit came at the wonted hour, but leſs than formerly. On the ſixteenth day, inſtead of a Fit, he had a ſmall heat without any cold. On the nineteenth day, when his Fit was expected, there was no appearance of it, and from that time forvvard he had it no more.

The 265 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Quartane-Ague.

ON the 17. of *March*, 1645. a Woman of forty years old, named *Mary Courbiague*, dvvelling againſt the Houſe of the Lord of *Argencour*; a poor body, and keeping an exceeding bad Diet, and frequently drinking ſtore of Wine, had been two years troubled with a Quartan-Ague; ſhe took tvventy grains of my Ague-driver, being no way prepared thereunto; for ſhe would take no preparatives, only ſhe was let blood a few daies before. She had tvventy ſtools, becauſe her body was very impure, and ſhe vomited tvvice or thrice; the day after ſhe had a light Fit, and never any more.

The 266 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Quartane-ague.

THe ſame day, *viz.* the 17. of *March*, a Woman forty years of Age, called *Tonette Boxſiere*; the Widow of *John Alquier* a Taylor, dvvelling near the foreſaid *Mary*, and having been troubled ſeven moneths with a Quartan-Ague, took twenty grains of my Ague-frighter, was ſeven times purged by ſtool, vomited four times, and the day after in the morning ſhe had three large ſtools more. The ſame day her Fit which was to come at three in the afternoon, came after midnight, but with a Light cold and light Heat three or four hours, whereas before, the Fit was wont to continue moſt violent, for fourteen hours together. And after that ſhe had no more Fits.

The 267 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Double Tertian.

PEter *Palat*, 15. years old, lying at the ſign of the Silver-Eagle, being troubled forty daies with a double Tertian, after blood-letting and purgation divers times repeated, and many juleps given him by order of another Phyſician; he took the eighteenth of *March*, 1645. fourteen grains of my Feaver-frighter, was purged ſix times by ſtool. He took the Medicine at

at four a Clock in the morning, notwithstanding his Fit was to come at eight; at which time it came after the old manner, but he never had Fit after that.

The 268 Observation or History of Famous and Rare Cures, &c.

A Quartane-Ague.

THe most Noble Prince *Janethinus Doria* of *Genoa*, Admiral of the Spanish Fleet, his Gally being by tempest cast upon the shores of *Catalonia*, he was taken by our Souldiers brought into the Castle of *Montpelier*, where abiding two years, the Summer last past he fell into a Tertian-Ague, which held him four moneths, sometimes in manner of a simple Tertian, other whiles like a double Tertian, notwithstanding all the Remedies prescribed by his ordinary Physicians, and others called to consult with him, amongst whom I was sometimes called. At last the Winter coming in, his Tertian Ague turned into a Quartane; for three moneths together, two Physicians one after another did their best endeavors to Cure the same. At last the Disease continuing, he implored my help, and I gave him on the 17. of *March*, 1645. twenty grains of my Feaver-frighter. Three hours after he had taken the Medicaments, he twice vomited wheyish humors, and went not to stool all day. About midnight he had one plentiful stool, and the next day two. The same day his Fit was expected at six in the Evening, but it came not then, nor ever afterwards, and he attained thereupon his perfect health.

The 269 Observation or History of Famous and Rare Cures, &c:

A Catarrh with a Cough.

THe 4. of *April*, 1645. when by reason of a long Catarrh, I was vexed with a troublesome Cough, which was most violent in the night, and I purged divers times to no purpose. I took three grains of Laudanum, which allayed my Cough. But it returned two daies after through injury of Air, which was one day very hot, and another day upon the blowing of the North-Wind very cold. On the eighth day of the same moneth I took two grains of Laudanum, and my Cough went quite away.

The 270 Observation or History of Famous and Rare Cures, &c.

A Quartane-ague.

MSr. *Pichory*, a Councellor in the Court of Accounts, Subsidies and Exchequer, was freed from a Quartane-Ague by a very rare chance. Having had a Vein opened, a little after the Orifice was closed, and his Arm bound up, little drops of transparent water began to flow out of the Wound, which soaked through the Rowler, and made him often to change his shirts. The said flux continued for many daies, till the Quartane-Ague was quite gone. It is observable, that many years after he died of a Dropsie.

For the Knowledge and Cure of all Agues or Feavers, Read my Practical Physick and the Idea.

The 271 Observation or History of Famous and Rare Cures, &c:

Obstruction of the Oesophagus.

A Certain hunger-starved Countryman eating of a boiled hogs-foot, swallowed a great piece thereof, in the middle of which there lay a bone covered with flesh. Which by reason of its

its greatneſs and clammineſs ſtuck in his Gullet, and was glewed thereunto, ſo that neither vomiting nor ſupping down of any liquor could remove it. For two daies he remained in this condition in ſo great extremity, that he ſeemed ready to give up the ghoſt. A certain Chirurgeon doubled the end of a piece of wire like a fiſh-hook, thruſting it far down his Throat, with the Hook he took hold of the piece of fleſh, and by main force pulled it out.

The 272 Obſervation or Hiſtory of Famous and Rare Cures,&c.

A Quinſie.

A Man being taken with a true Quinſie, had the top of his throat ſo ſhut up by the inflammation,that he could ſwallow nothing. And while Remedies might be uſed to reſtore his ſtrength, that he might be able to bear plentiful bleedings and other Remedies; a Catheter was put into his throat, and a Syringe joyned to the Catheter,by which means they ſquirted broths into his throat,which went down into his ſtomach,as alſo other Remedies,by help whereof he was delivered from death.

The 273 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Jaundies.

A Jeſuite was troubled with the Jaundies and a weakneſs of ſtomach, by reaſon of Choller flowing back thereinto, whereupon he frequently vomited. The Colledge Apothecary gave him three ounces of Juyce of Fumitory: At the firſt giving,the vomiting was ſtaid;and the Remedy being continued for ſome daies, the Jaundies was quite cured. This Jaundies was cauſed by an hot diſtemper of the Liver,joyned with obſtruction of the Choller-paſſage. Now fumitory is very good in both Caſes, whoſe vertues are much more potent in the Juyce than in Decoction.

The 274 Obſervation or Hiſtory of Famous and Rare Cures,&c.

A Cruel Catarrh with divers Complications of Feavers.

THe firſt of *May*, 1645. I was called to the Lady of *Beaufort*, lying ſick at her mother Madam *du Pelous* Houſe in the Caſtle of *Bayart*, not far from *Rhodanus*. She was thirty five years old, of a ſanguine Complexion. For an whole moneth ſhe had been troubled with a cruel Catarrh with a continual Feaver, to which were added fits of an Ague,which came twice a day, *viz.* at ten in the morning, and ſix in the evening. With theſe a moſt vexatious Cough did trouble her night and day, with which ſhe brought up abundance of crude flegm, and could take no reſt. In a moneths time ſhe had been five times let blood by order of Dr. *Chaumel*,her ordinary and moſt expert Phyſician; ſhe had been thrice purged,and many other remedies had been uſed,of which one did her the moſt good, *viz.* a Bolus of three grains of Laudanum,with Conſerve of Roſes, which for twelve hours did quite ſtop her Catarrh and Cough,and ſhe ſaid ſhe was cured, by reaſon of the great eaſe ſhe found. As ſoon as I ſaw her in conſultation with two other Phyſicians, I judged her Diſeaſe to be a continual Feaver, complicated with two double Tertians. As for Remedies, that ſhe was to be let blood in her left Arm, ſeeing ſhe had a pricking pain in her left ſide,with a very ſtrong Feaver, blackneſs of her Tongue and a continual Cough. On the firſt therefore of *May*,about evening ſhe loſt nine ounces of blood, and a cooling and thickning julep was given her. She paſſed the night with ſomewhat leſs trouble,the next day in the morning,which was the ſecond of *May*, ſeeing the Feaver continued yet ſtrong,ſhe was again let blood eight ounces, whereupon her Feaver was abated,and the pain of her ſide went away.About the evening the ſame day,ſhe complained of a pain in her right ſide,

which growing ſtill greater and greater,was very ſore about nine a Clock at night,wherefore we were compelled the ſame hour to let her blood in her Arm on the ſame ſide; whereupon her pain was abated,and in the courſe of that night went quite away,howbeit the night was troubleſome,ſhe was void of ſleep,and did Cough almoſt continually. He Ague-fits went quite away; One after a purging medicament the day before I came to her, The other by reaſon of her former blood-letting: but her continual Feaver ſtuck by her after the ſame manner as formerly. On the third day of the ſame moneth,ſeeing her Cough and Feaver were vehement,we gave her before noon half the foreſaid Bolus,made of three grains of Laudanum, which was ready made, which within an hour did ſtop her Cough quite, and ſhe was in a good condition till midnight; howbeit her Cough returned by fits,wherewith ſhe voided thick,clammy and very putrid flegm; ſo that much of her ſpittle was yellow and green, the Feaver continuing very violent. And becauſe in the evening the Cough did exceedingly trouble her, and ſhe was extream unquiet, the other half of the Bolus was given her, wherewith ſhe paſt the night quietly, but ſlept very little. On the fourth day in the morning her Cough returned, but it was very free, and ſhe brought up much putrid matter, ſome of which was a little ſprinkled with blood. After two hours her Cough ceaſed till noon, and then it came again bad enough, and when it had held her a great while, and much afflicted her, and her ſpittle appeared more crude, ſo that it ſeemed to come from a new defluxion, the half of another Bolus made of three grains of Laudanum was given her,with which her Cough was again allayed. Her belly was looſe in the morning,and ſhe had two ſtools of many cholerick and greeniſh excrements, whereas before her body was alwaies bound, and Clyſters wrought very little. About evening a Clyſter was given her of a decoction of half an ounce of Senna, with Catholicon and Diaphænicon, of each one ounce; which gave her four ſtools, and in her laſt ſtool ſhe voided much flegm of a greeniſh colour,like that ſhe was wont to bring up by Coughing. After ſhe had voided her Clyſter, ſhe ſlept quietly three hours, and ſaid ſhe had not ſlept ſo ſweetly all the time of her ſickneſs. At ten a Clock in the night her Cough being ſomewhat returned, ſhe took a fourth part of the foreſaid Bole, which did not contain half a grain of Laudanum, yet it ſtopt her Cough, and ſhe reſted quietly that night.On the fifth day in the morning ſhe took a purging medicament of half a dram of Senna infuſed in a pectoral Decoction; wherein being ſtrained, two ounces of Manna were diſſolved. And the ſame day I left her, having ſeriouſly debated with her ordinary Phyſician touching what was afterward to be done, and committed the ſame to Writing. Wherewith,in the ſpace of twenty daies after my departure, ſhe was reſtored to her former health. The chief of thoſe Remedies were pectoral Broths, continual blood-letting,and purgation repeated. But the Bolus of Laudanum bore away the Bayes,which being given her many daies in a ſmall doſe, all the ſymptomes were thereby allaied.

The 275 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A long ſwelling of the right Foot.

A Noble Matron, Wife of the moſt noble Msr. *de Langon*, fifty years of Age,had a flegmatick tumor with extream pain in her right Foot, the Original whereof was thus. Travailing upon a time on Horſe-back,the Horſe ſhe rode on fell upon the ground,and in his fall tumbled on the right foot of the ſaid Matron, and by the blow her heel was depreſſed, and thruſt from the inſide of her foot outwards. Whence grievous pains followed, ſo that ſhe could not ſtir: Many Chirurgeons and Empericks had divers times vexed her, nor could the diſlocated bone be any waies reſtored to its place, whereupon ſhe was continually tormented with pains, inability to go, and a flegmatick tumor in her ſaid Foot. She had been four moneths in theſe ſtraites when I viſited her, which was the twentieth of *May*, 1645. Diligently viewing and conſidering the part affected,I found a ſmall diſlocation remaining,which had contracted a Callous, and was therefore incurable. I found that the chief pain was in the hollow of her Foot, not in the part diſlocated,becauſe the Nerves in that place were filled with humors.And therefore to cure the ſame, the flux of humors to the weak part vvas to be ſtopped; the humor al-

read

ready in the said part was to be discussed, and the part it self to be strengthened. All which was accomplished in eight daies space by these following Remedies.

Take Salsa perilla four ounces, Fountain water four pints; infuse them twenty four hours, and then let them boyl till half be consumed, adding towards the end Senna one ounce, Turbith and Hermodactils, of each two drams. Let her take half a pint of the strained Liquor in the morning, eight daies together.

Take Oyl of Wax one ounce; anoint the part affected therewith morning and evening, and then apply this following Plaister.

Take of the Mass of Diapalma Plaister dissolved in harsh red Wine, till the Wine be consumed, half a pound; Red Roses, Myrtles, Mastich and Tartar of Red Wine, of each one dram: Groundpine and Chamomel poudered, of each two scruples; make all into a Mass, and thereof spread Plaisters, and lay them all over her whole foot after anointing. With these things the swelling and pain were taken away, only she was forced to halt, because of the Dislocation of the Bone.

The 276 Observation or History of Famous and Rare Cures, &c.

Meazles.

THe foresaid Matron, Madam *de Langon*, was taken with a continual Feaver, with a Cough and Hoarsness, the 26. of *June*, 1645. For three daies together the symptomes were not very urgent; and therefore she past that time without any use of Physick. On the fourth day her Feaver becoming more violent, she was let blood, and a cooling Julep was given her. The same day her whole body was covered with Meazles; I being called the fifth day, I appointed her towards the Evening a Julep of equal parts of Meadow-sweet water, and of Carduus Water, with twenty grains of Bezoardicum Minerale. Two hours after she had taken her Julep, she did sweat abundantly; after her sweat, she had a large stool. The day after in the morning the same Julep was repeated, and she did sweat more plentifully after two hours, and her Feaver went quite away, and the Meazles were all well discussed.

The 277 Observation or History of Famous and Rare Cures, &c.

Stone in the Kidney.

A Certain man, fifty years of Age, being very much subject to pains in the Kidneys, took for twelve daies a Decoction of the Root of Asses Thistle and Liquoris, wherewith he voided many stones, and much Gravel, and was afterwards many years free from his Infirmity. There was half an ounce of the Thistle Root, and two drams of Liquoris in every dose.

The 278 Observation or History of Famous and Rare Cures, &c.

The Disease Cholera in a malignant tertian Ague.

A Certain young man, of a Cholerick Constitution, in the middle of the Summer fell into a Tertian Ague, which in the two first fits seemed pretty gentle, but in the third fit, so great was the malignity and fierceness of the Cholerick humor, that a vomit and frequent looseness being thereby raised with mighty weakness, the Patient was in extream danger of his life. Being sent for, I presently prescribed him a Clyster of Broth, with three drams of Confectio Alkermes, and a dram of new Treacle, wherewith his vomiting and looseness were presently stopped. And because in these malignant Feavers, those carnal symptomes are wont to return every fit, kill the Patient in the second or third fit; for prevention thereof, I ordered him a thick-

ning Diet, and to take four grains of Laudanum two hours before his fit; and so the foresaid symptomes did not return, the fit was light; and the Cure was finished with cooling, thickning and antidotary Juleps.

The 279 Observation or History of Famous and Rare Cures,&c:

Suppression of Child-bed Purgations.

A Certain curious Woman, three daies after she was brought to bed, desiring to help the over-wideness of her genital parts, applied thereto astringent Medicaments, whereby her Child-bed Purgations were stopped, and blood was so multiplyed in her Womb, that pressing upon her *Rectum Intestinum*, and the neck of her bladder, it hindred all evacuations, and her Belly was swelled like a bottle. Being called to her, first I caused a Catheter to be thrust into her bladder, and she voided abundance of Urine; after that I prescribed her a sharp Pessary to be put into the neck of her Womb, wherewith her Purgations came away plentifully; and lastly she had a laxative Clyster, wherewith she voided much dung; and so all her passages were opened.

For all Womens Diseases, carefully peruse *Johnstons* Idea, and specially *Riverius* on that Subject in English.

The 280 Observation or History of Famous and Rare Cures,&c.

Night-Sweats.

A Man forty years of age, of a Melancholick Complexion, was a long time troubled with Night-sweats, which did continue four or five daies,and then ceased. And they returned twice or thrice a moneth. It was sufficiently apparent,that these sweats did proceed from abundance of serosity, which was collected between whiles, and by nature afterwards expelled in form of sweat. Wherefore being poor, and not able to take much Physick, I advised him to take twice a moneth Jallap and Cream of Tartar, of each half a dram. Which having continued for the space of three moneths, he was freed from his tedious infirmity.

The 281 Observation or History of Famous and Rare Cures, &c.

The Whites.

A Woman forty years of Age, long troubled with the Whites,after many remedies used in vain, was perfectly cured with a Laxative Ptisan, which she drank of every day for a moneth together. This was the Composition of the said Ptisan.

Take Senna one dram, Coriander seeds prepared and Liquoris, one dram and an half of each: Fountain water in which three drams of Tamarinds and a dram of Lentisk wood have been boyled, one Cup. Infuse them cold all night, and in the morning let her drink the strained Liquor two hours before meat.

The 282 Observation or History of Famous and Rare Cures, &c.

Of a Rupture of the Belly.

A Man fifty years of Age, had a most grievous Rupture in his Belly for four daies together, which could by no means be holpen.Being called to him,I found his pulse very languishing, with coldness in his Hands and Feet. Also the part affected was very cold to feel to, so that I feared its Mortification. Among other Remedies, I prescribed a Fomentation of hot Aqua

Vitæ, to be applied to his Groin, which being continued for two hours, his Gut was gently restored to its place, and the Patient freed from eminent destruction.

The 283 Observation or History of Famous and Rare Cures, &c.

An Hysterical Passion.

A Woman twenty years of Age, of a Cholerick Complexion, being troubled with Hysterical Fits, and having a ruddy Face; a Clyster being given her of Water and Vinegar, she was presently freed, and needed no other Remedies.

The 284 Observation or History of Famous and Rare Cures, &c.

A Dysentery.

A Certain man troubled with a Dysentery, and refusing all other Remedies, used only a decoction of Burnet made with Water and Butter, of which he drank a Porrenger full at morning and night, and was cured within three daies. Burnet is exceeding powerful to purifie the Blood, and has a light astriction with it; and therefore 'tis no wonder if it help the bloody flux.

The 285 Observation or History of Famous and Rare Cures, &c.

A Schirrhous tumor of the Sweet-bread, with the Hypochondriacal disease.

THe most illustrious Msr. *Audeyer*, President of the Senate of *Grenoble*, being fifty seven years old, was tormented with most grievous and contumacious Infirmities; the Nature whereof, that it may be more exactly discovered, I must set down a bead-role of those Infirmities briefly, with which he has conflicted now this twenty years.

And in the first place, it must be known, that he was of a Melancholick and Cholerick Complexion, of a thin and lean habit of body. And the first beginning of his Maladies was Arthritick pains, which began to infest him by fits since the year 1622. And after them followed certain light fits of the Falling-Sickness, which did first invade him about the year 1626. and returned by fits, and within the space of two years they quite left him. At the same time his Arthritick pains returned upon him again, which stirred not all the time he was subject to fits of the Falling-sickness.

Now these Arthritick pains did vex him twice or thrice every year, so that sometimes for two or three moneths he was nail'd to his bed, with very little help from divers Remedies which were used; especially observing, that he had little good by often bleeding, rather that his pains were thereby alwaies made more sharp.

But after that, for eight years together, *viz.* from the year 1631. to the year 1639. he had been exercised with these pains by fits; he afterwards fell into more grievous infirmities, by reason of extream grief taken at the death of a noble Court Lady near allyed to him in the bonds of affinity and friendship, and very useful to him in his Affairs. Whereby he was first taken with an involuntary motion of his Eye-lids, which continued very long, whereby his Eyes by fits were somtimes opened, and then shut again; so that it was as it were a certain trembling of those parts,

parts, with which trembling, his Hands and Feet are many times taken, though very lightly.

At the ſame time he was vexed with pains in his joynts for the ſpace of three moneths, ſo that he was not not able to walk for ſix moneths after. And being then at *Paris*, he uſed the Ville-comitan waters by the advice of Dr. *Delormeus* a renowned Phyſician, which did exceedingly cool his ſtomach; and after that a very troubleſome and ſcabby itch did moleſt his whole body, which was preſently cured by an Oyntment (of Mercury I Suppoſe) applied to his wriſts and the ſoles of his Feet, by advice of Dr. *Labtoſſe*, a Phyſician of *Paris*; after which anointing there followed a mighty looſneſs for twenty daies together, with moſt grievous gripings of his belly; ſo that ſometimes he had a ſhew of the Bloody-flux. The weakneſs in the mean time of his Feet and Legs continuing, made him unable to go for an whole year. And at the ſame time his mind was exceedingly buſied both in peruſing Books and Papers; and much agitated and toſſed with extream paſſions, and extraordinary ſadneſs at the ill ſucceſs of his buſineſs, which may juſtly be thought to have occaſioned the following infirmities.

In the year 1640. he fell into a grievous ſhortneſs of breath, and ſtraitneſs in his breaſt, with a certain pain in the region of his ſtomach; which ſymptomes did exceedingly trouble him for fifteen daies together, and afterwards were much abated; but after ſome ſpace of time they ſeemed to gather new ſtrength, ſo that to this very day he is troubled with them, ſometimes more and ſometimes leſs.

For the quelling of this ſtubborn Diſeaſe, various medicaments have been by ſundry Phyſicians preſcribed for four years together; various purgations, by Apozemes, Potions, Syrups, Laxative Ptiſans, and the like. To which were added frequent Blood-lettings, Iſſues, Veſicatories, opening of the Hemorrhoid-Veins, Baths to ſit in, Phyſical Broths, chalybeated Whey, Milk, Sulphurous mineral Waters, as thoſe of *Borbon* and *Digne*; alſo vitriolated Waters, as thoſe of *Orleance*; roborating and Aperitive Opiates, pectoral Syrups, and many other things, which being uſed at ſundry times in the ſpace of four years, did ſometimes much, otherwhiles little eaſe the Patient. But his habitual diſeaſe did ſtill keep its courſe, and the illuſtrious Patient is ſtill troubled with the ſame infirmities.

And I being called to viſit him about the beginning of *May*, 1644. I conceived the cure was to be directed to thoſe two remarkable Symptomes fore-cited, *viz.* the ſtraitneſs of his Breaſt, and his difficulty of Breathing, whoſe cauſes are firſt to be conſidered, wherein the greateſt difficulty, with extream obſcurity ſeem to lie. For that ſame ſhortneſs of breath does not ſeem to be any true Aſthma or Tiſſick, nor to proceed from any defluxion out of his head into his Lungs, though ſome excellent Phyſicians did go about to cure him as one aſthmatical; for he has no Cough, no Wheezing, nor does he ſpit up any flegmatick humor. Secondly, his difficulty of breathing, is in a moment ſtirred up by the Procatarctick Cauſes, and goes away in a moment; ſo that if he move himſelf a little more vehemently than ordinary, or is never ſo little angry, preſently he is troubled with ſhortneſs of breath, and by and by he attains his freedom of breath again. Thirdly, though he is chiefly troubled with this ſymptom in the evenings and nights, ſo that he is fain to ſit upright in his bed till midnight; yet as ſoon as he begins to fall aſleep, his ſhortneſs of breath quite vaniſhes, and he laies his head down upon the pillow, and ſleeps the reſt of the night ſo quietly, and breaths ſo freely, that it is eaſie to ſee that there is a Diſeaſe in his Lungs.

The immediate Cauſe therefore of this ſhortneſs of Breath muſt be ſought elſe-where, *viz.* in his Belly, the parts wherein contained, being troubled with grievous Diſeaſes, contain in them the Original of all his infirmities.

This is in the firſt place demonſtrated, by that ſenſe of pain and ſtraitneſs, of which our noble Patient perpetually complains, and ſhews the ſeat thereof to be under his midriff, and about the region of his ſtomach: and as often as he is troubled with ſhortneſs of breath; that ſame pain, ſtraightneſs and oppreſſion (as he calls it) is ſtill encreaſed; and when the ſaid oppreſſion increaſes, the ſhortneſs of breath comes: ſo that it is manifeſt, that the one depends upon the other. And I diligently enquiring into the cauſe of that pain, ſtraitneſs or oppreſſion, and feeling the region of his ſtomach; I found it pliable enough, as long as I held my hand lightly upon it, but preſſing my hand harder, I perceived a certain hardneſs and reſiſtency deep under the bottom of his ſtomach, which I conceived to be in the Pancreas or Sweet-bread, which I conceive was ſwelled with an hard and ſchirrhous tumor, and ſeeing the pancreas is placed under the Diaphragma; it is no wonder that it being ſwoln, ſhould compreſs that part

which

which chiefly serves for respiration, and hinders the free motion thereof. Yet verily this cause found out by feeling, does not quite satisfie our doubt; for if the shortness of breath should wholly depend thereupon, it should be perpetual, and not come by fits, nor should it be so easily caused by external occasions, as commotion of the Body or Mind. This reason verily is so convincing, that some other cause must be joyned hereunto, *viz.* some thin matter, which is soon moved and soon quieted. Now what that matter should be,and what seat it should precisely possess, is not easily determinable. Yet I may with those most excellent Physicians, who undertook the cure of the Patient, assert the most probable reason to be, certain vapours and winds arising from his Spleen and Stomach. Now this Commotion of winds and vapours in his stomach is hereby easily discerned, in that the noble Patient is wont to be more grievously troubled with the foresaid symptoms after his meales. For from hard and laborious digestion in a weak stomach, many winds are bred, which distending the stomach, compress the Pancreas and Midriff, whereupon greater shortness of breath is wont to arise some hours after his meals. Moreover, in the greatest changes of the Air, when the Wind shifts from North to South, the foresaid symptoms are most troublesome, because by such a mutation of the Air, Rheumatisms are caused, which at other times were wont to cause pains in the joynts, and do now flow into the inner parts weakened by long distempers and obstructions, and exagitate the bad humors in them contained; or because by the moistness of the Air the humors are puffed up,and as it were fermented; whence a vapor arises, which seizing upon the Diaphragma and Lungs, breeds a straitness in the breast, and a difficulty in breathing.

If the Symptoms may be referred to any kind of Disease, I conceive they belong to that sort of Melancholy, which is termed Hypochondriacal; seeing they had their first original from a grievous and long sadness, in a body hot and dry; whence arose a great mass of Melancholy humors,which bred stubborn obstructions in his Hypochondria. Yea verily,and although the Scurvy which is frequent in Northern Countries,is not usual in this of ours; Yet this Disease seems to approach unto the nature of the Scurvy, seeing the two symptoms aforesaid, *viz.* straitness of the Breast, and shortness of breath,are most frequent Symptoms of that disease, as *Severinus Eugalenus* has noted in very many Observations; in whose Country that Disease is most frequent: and in imitation of him, *Daniel Sennertus* in his Book of the Scurvy,Chap.4. where he propounds the signs of that Disease,and in the 9. Article of the said Chap.does so describe these two symptoms, that he seems to describe the condition of our illustrious Patient to an hair.

And although (as has been said) the Disease called the Scurvy is not usual, and hardly seen in these Countries of ours; yet (I to neglect nothing in the Cure of so great a Disease) presently used the specifical Remedies belonging to that Disease, mixed with others that were good to open Obstructions, and correct and expel melancholy humors. And therefore, in the first place, I gave him the juyces of Water-Cresses, Brook-lime and Fumitory for many daies together, mixing therewith Salt of Tartar and Spirit of Vitriol, also frequently infusing a little Senna; and so thick, clammy and Tartarous Humors were purged out by little and little. And sometimes I mixed the foresaid Juyces with Decoctions of Elicampane, Bark of Tarmarisk, Leaves of Agrimony, Wormwood and Burnet. By which Remedies continued from the 7. of *May*,to the 28. thereof, our Patient seemed much holpen. And the Weather happening upon that day to turn from dry and clear into thick and rainy, by reason of South Winds, the foresaid Symptomes came all afresh, which continuing to the third day of *June*, by two blood-lettings a little at a time, they were much abated. From that time forward he used Salt of Steel or Vitriol for a whole moneth together, which is of admirable force to open Obstructions, strengthen the Bowels, and to correct their hot distemper. Howbeit sometimes, *viz.* every third or fourth day I gave him small Purges of Senna infused in the foresaid Decoctions, and sometimes Chalybeate Pills; and I gave him Chalybeate Water to drink ordinarily with thin small Wine. Which being continued (as was said) for a moneth together, the noble Patient was brought into a much better condition, so that he which before could not travel either on Horse-back, or in a Coach,without great trouble, could now endure a Coach running apace, and an Horse on a fast amble. Moreover, the vigor of his whole Body,and the colour of his Face were much restored. And this is especially worth Observation, that the noble Patient was very much hurt by Baths to sit in, and Fomentations applied to the Region of his Belly,and brought into an extream shortness of breath: so that we were fain wholly to abstain from the use of them, although very necessary for this Cure.

These

These things were done the fourth of *July*, at what time I procured leave of the most illustrious President to depart, and returned to *Montpelier*, leaving him written Directions for what was afterwards to be done.

After my departure, through the whole course of Autumn, and the Winter following, he used the foresaid Remedies by course, and at fitting distances of time, by order of the most renowned Dr. *John Matthew*, his ordinary Physician, *viz.* the Salt of Steel, Pills of Steel, and an infusion of Senna made with the foresaid Decoction, with Salt of Tartar and Spirit of Vitriol; to which was added a strengthening Opiate and Aperitive, prescribed by me before my departure. And when as after some moneths there was a great abatement of Symptomes, I advised him by Letters, to try the Fomentation and Bath to sit in; for it was to be hoped, that the morbifick causes being very much diminished, there would happen less commotion of humors, which did hinder the use of the said Remedies. The matter succeeded according to our wish, and he bore the Fomentation without any trouble, which did him much good. And the Spring following, he used not only the Fomentations, but also the Baths to sit in, and diligently continued the foresaid Remedies, some others being thereunto added, with which at last (blessed and praised be God) he was brought to a state of perfect Health.

The 286 Observation or History of Famous and Rare Cures, &c.

The Dropsie Tympanites.

THe most renowned Matron, the Wife of Dr. *de Guere*, Doctor of the Civil and Canon-Laws, thirty years of age, of a Cholerick Constitution, was troubled for ten moneths with a sufficiently great tumor in her belly, joyned with great stretching, so that it was just of the nature of a Dropsie Tympanites. The first Original of this Disease was chiefly ascribed to the Patients going into a cold Bath, being troubled with the Whites: whereby they were stopped. To which were added divers errors in Diet. She used many Remedies during the time aforesaid, prescribed by most skilful Physicians, *viz.* Potions, Apozems, and Aperitive and Diuretical Juleps, Opiates strengthening the Liver, and many other things to no purpose. At last, about the end of *May*, in the year 1645. she did commit her self to my Care, whom I undertook with these following Remedies.

Take Roots of Asparagus, Knee-holme and Cichory, of each half an ounce; Roots of Elicampane and Parsly, of each two drams; Leaves of Agrimony, Ceterach, Maiden-hair, of each half an handful; of the two Wormwoods, of each half a pugil. Boyl them to six drams; in the strained Liquor, infuse all night cold Senna one dram; Diuretick Salt one dram, Diuretick Spirit thirty drops. Let her take it in the morning six daies together, and order her self accordingly. She had four or five stools every day, and voided a clammy matter ash-coloured. After the second dose she was let blood eight ounces: At the end of her Apozemes, she took pills of Calomelan twenty grains, and as much Diagridium, which gave her seven stools: and the day following the Tumor of her belly seemed abated, which yet began about evening to be puffed up again. The Tumor setling, as I felt her Hypochondria, I perceived a very great and painful stretching about the Region of her stomach, in which respect I prescribed (with continuation of the Juleps) an Emollient Fomentation and Aperitive, to be applied every day to the whole Region of her Hypochondria, for also no small tension was likewise perceived in her right Hypochondrium. Which being used four daies together, her monethly Courses appeared, which had been wanting for some moneths before. And because they flowed but slowly, after three daies the Fomentations and the Apozems, leaving out the Senna, were used again. By which a moderate quantity of her Courses was procured, and from that time forward the Tumor of her belly seemed wholly discussed. Howbeit, to ratifie the Cure, I prescribed her the usual Aperitive and Laxative pils, to be swallowed twice or thrice a moneth, as also a strengthening Opiate and Aperitive, to be used every day for an whole moneth.

The

A Quartan Ague.

John Gossel of *Lorrain*, a Master of Arts, dwelling at that time in *Dauphine*, near a Town called *Revel*, with a Gentleman whose Sons he instructed, came to me the 15. of *June*, 1645. that I might help him, having been sick of a Quartan Ague for an whole year. Now examining his Hypochondria, I found an exceeding great tension and stretching, with hardness in the Region of his Liver and Spleen; which supposing to be the Cause of the stubbornness and long-lasting of the Disease, I thought best to remove the same, with Aperitive and Laxative Apozemes (blood-letting being premised) as also with Emollient and Aperitive fomentations: and with pils prepared with steel. All which things, I ordered him to continue for twenty daies together. Then I gave him a dose of my Feaver-Frighter, to be taken after the foresaid Remedies; and because he could not conveniently make use of the Apothecaries, which were sufficiently far from his Habitation; and could hardly bear the charge of Remedies, omitting all the other things, he presently took my Feaver-frighter: which purged him plentifully. The first fit after the taking of this Medicament was half as little again as the former, and the second less then that. And so the fits growing insensibly less and less, after the fifth fit, he was quite freed from his Quartan Ague; of which he informed me by letters, adding that he was infested with a Cough which remained after his Feaver. To Whom I wrote back, that he should use the Remedies prescribed by me before, for the opening of the Obstructions in his two Hypochondria, which I beleeved did remain and cause that same dry Cough.

The 288 Observation or History of Famous and Rare Cures, &c.

An old Vomit.

THe Wife of Doctor *Antony de Maniſſy*, a Physitian and Doctor of the University of *Valentia*, being twenty four years old, was troubled three years together, with a vexatious vomiting, with a pain in the Loyns reaching to the Region of the Spleen. Now she vomited after every meal, almost all her meat and drink mingled with Clammy flegm: whereby she became extream lean. Moreover she had certain Ague-fits as it were twice or thrice in a moneth, which continued twelve or fifteen daies together. Many Physitians that had consulted about her, did suppose that these Symptoms proceeded from a stone in the Kidneys fixed in their substance, and others said they were Obstructions and Hysterical infirmities that were the Cause. In reference to all which, sundry Remedies were used to no purpose. Till at last she came to such a Leanness joyned with a slow Feaver, that every one thought she would die of an Hectick. But I being desired by her Husband to prescribe her some Remedies, I conceived the chief original of her Malady to lie in the Spleen, which was both obstructed, and distempered with an hot and dry distemper. In respect of which, sparing blood-letting being premised, I did prescribe these following Remedies.

Take Roots of Cichory, Asparagus, Butchers broom, and Bugloss, of each half an ounce; Leaves of Agrimony, Ceterach, Maiden-hair, and Burnet, of each one scruple and an half. boyl them with a Chicken. In the strained broth dissolve Cream of Tartar one dram. Make a broth, which let her take in the Mornings for sixteen daies together.

In every fourth broth infuse all night cleansed Senna, three drams, Annis-seed one dram. Let her take it, and be ordered suitably.

Take Barley and sweet Almonds, of each one pound; let them be bruised and boyled for a Bath to sit in, whereinto let her enter warm, twice a day for three daies, after the use of the Broth.

Take Steel prepared with Sulphur, one ounce. Aloes, Senna, Rhubarb, Agarick new-

ly Trochisked, of each two drams: ponder of Diarrhodon Abbatis, half a dram; Saffron ten grains. With Oxymel simple make a Mass; of which let her take a dram every morning three hours before meat, and walk upon it. And this let her do for fifteen days together.

The use of the Pills being ended, let the Bath be repeated for four days.

These Remedies used in order, she was freed from the foresaid Infirmities, and restored to perfect Health.

The 288 Observation or History of Famous and Rare Cures, &c.

A Tertian Ague.

THe Maid Servant of Mſr. *de Sautereau*, a Senator of *Grenoble*, being thirty years of Age, was held of an intermitting Tertian Ague, and she had suffered fifteen fits thereof, in the Course of which, she was twice let blood; and a purge was twice given her, and many cooling Juleps were prescribed and Aperitive, by the ordinary Physitian; who after the fifteenth fit gave her twenty grains of my Ague-frighter on her well day, which was the twenty fifth of *June*, 1645. She was five times purged by Stool, gently and without trouble. The day after, her fit came much stronger. And from that time forward, she never had fit more.

The 289 Observation or History of Famous and Rare Cures, &c.

Of a Tertian Feaver.

Mſr. *de Pourroy*, President of the Senate of *Grenoble*, fifty years of Age: had endured twenty fits of a Tertian Ague, when I was called to him. He was twice let blood; many cooling Juleps were given him: and *Aqua Benedicta* of *Rulandus*, was twice given him to drink, whereby he voided great store of Choller and flegm by stool. I being sent for in the twenty one fit, found it very intense, exceedingly afflicting the Patient for twenty four hours together, with extream thirst and great unquietness, which was in conclusion discussed by sweats breaking forth at the end of the fit. His Urines were red, and as it were flaming, having no signs of concoction. Therefore I caused him to bleed a good quantity: I prescribed him very cooling Juleps; and to take Juyce of Lemons in his ordinary Ptisan: and Spirit of Vitriol in the said Ptisan, at the time of the fit. By which means, in two days space, the red colour of his Urine was much abated, and a light swim appeared therein. Nevertheless, the two and twentieth fit was as long as the former, but with less unquietness, which was much tempered by moist Epithemes applied to the Region of his heart. The day following, I gave him twenty five grains of my Ague-frighter, which wrought not all day, save that he had one stool at three a clock in the afternoon, and voided a pretty quantity of Chollerick matter. But the next day at eight in the morning he had another stool, much larger, by which he voided Chollerick and Wheyish excrements. At nine a clock his fit returned, and was shorter, lasting but eight hours. After the fit he had three stools. This fit happened the last day of *July*, 1645. The 1. of *August*, he had no fit, because it was his well-day. And on the second, when his fit was expected, he had none, so that he seemed cured. Howbeit on the third day, which was his well-day, a new fit came. The day following, which was the fourth of that moneth, he was let blood, his Urines appearing still red, and after noon, another fit came: so that his simple Tertian seemed to be turned into a double one. On the fifth day of the same moneth, a fit came like the former. Here those that were censorious had great occasion to insult, because with my Ague-frighter, I had turned a simple Tertian into a double one. But upon the sixth day I gave him again thirty three grains of my Ague-frighter, which gave him six stools, and he voided many Wheyish, Chollerick and Flegmatick Excrements. His fit came at the same hour, but somewhat gentler than before. After his fit he had three or four stools more, and the next day in the morning three or four more. And his fit returned not then, nor the days following; and within

within a few dayes after he returned to his ordinary Employments. And he continued in this Condition for 24 daies, in which time he committed many Errors in diet, which caſt him into a Relapſe. And therefore on the 30. day of the ſame moneth he was taken with a new Fit at two in the afternoon, which held him ten hours. On the laſt day of the moneth another Fit came at four a clock in the Evening, but much lighter than the former. On the 1. of *Septemb.* at ten in the morning a Fit returned like the former. I conceived, that theſe fits did proceed from ill humors newly collected by his bad Diet, which were lightly putrified, the Putrifaction not being firmly fixed in the parts, nor ſtrongly fermented, and that therefore they might be voided by eaſier Remedies, without making uſe of my *Feaver-Frighter*. I did therefore preſcribe him a purging Medicament of an Infuſion of three drams of Senna in a Decoction of Tamarinds, Cichory and Agrimony, with Anniſeed and Mineral Chryſtal, of each one dram. Adding to the ſtrained Liquor Manna and Syrup of Roſes, of each one ounce; Jallap one ſcruple. He was very well purged, and the following Fit was leſs. For two daies following he took opening and Laxative Broths, and ſo he was perfectly freed from his Fits, and obſerving a better Diet, he was reduced to perfect health.

The 290 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Quartan Ague.

A Young Fryar of the Order of Recollects at *Grenoble*, named *Theotimus*, fell into a Quartan Ague towards the end of *July* 1645. He had had five Fits when I was called to him. He had been let blood, but took no Phyſick. He took on the 7. of *Auguſt* 30 grains of my *Feaver-Frighter* the day before his Fit. He was much purged by ſtool, and ſomewhat by Vomit. His Fit came the next day much leſs than formerly: and after that no more.

The 291 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Quartan Ague.

A Friar of the ſame Covent named *Paſcalius* had undergone ten Fits of a Quartan when I viſited him: and I gave him 23 grains of my *Ague-Frighter* on the 25. of *October*, the foreſaid year: he had eight ſtools and two Vomits, and his Diſeaſe was Cured thereby.

The 292 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Quartan Ague.

THe Wife of the moſt Renowned Mſr. *de Chappoulay* the Kings Advocate in the Exchequer at *Grenoble*, 50 years of Age, had been ſick of a Quartan Ague 5. Weeks ſo grievouſly, that ſhe continually kept her bed, and did eat nothing but Broths, for ſhe was alwaies in a Feaver. On the 1. of *September* ſhe took 16 grains of my *Feaver-Frighter*, had ſix ſtools very gentle, and two more the next day; and her Fit which was to return after noon, was delayed to ſeven a clock in the Evening, and was much more remiſs. But the following daies it came no more. And when ſhe began to feed her ſelf, and uſed ſolid meats, ſhe did eat unripe Grapes every meal, whereupon ſhe fell again into a Quartan Ague, which became double and treble, I being returned to *Montpelier*. Now it hapned, that in *December* the ſame year, I was again ſent for to *Grenoble*, and then viſiting her, I found her grievouſly oppreſſed with a Triple Quartan. Wherefore I gave her 20 grains of my *Ague-Frighter*, which gave her ſeven ſtools and two Vomits. Her Ague returned not that day, nor two dayes following. But on the 23. day having eaten a liberal Dinner, ſhe was taken with a long Fit. For which cauſe ſhe took the day following a like quantity of my *Ague-Frighter*, had five ſtools, never a vomit, and was thereby freed from her Ague.

The 293 Observation or History of Famous and Rare Cures,&c.

A Quartan Ague.

A Woman 50 years of Age in the Hospital at *Grenoble*, was afflicted with a Quartan Ague a whole year together. On the 5. of *September* 1645. she took 20 grains of my *Ague-Frighter*, and was plentifully purged by stool and once by vomit seven hours after she had taken the Medicament. The sixth day her Fit came four hours later, and less than formerly. And after that she had no more Fits.

The 294 Observation or History of Famous and Rare Cures, &c.

A Quartan Ague.

THe Maid-servant of the Wife of Msr. *de Servien*, President in the Chamber of Accounts at *Grenoble*, was troubled with a Quartan Ague five Weeks. The 6. of *September*, 1645. she took 16 grains of my *Ague-Frighter* the day before her Fit, and was thereby much purged only downwards. On the second day her Fit returned without cold, later than the former, and continued longer. And the six following daies it returned not, and in that condition she remained a whole moneth. But using a careless Diet after the manner of Maids, she relapsed into her Quartan Ague, which turned first to a double, then to a triple Quartan after my departure. And I returning to *Grenoble* in the moneth of *Decemb.* I gave her 20 grains of my *Ague-Frighter* on the 23. of the same moneth, it being a cold frosty season. In the morning she vomited a clammy and glewish matter in great quantity; and in the Evening she was plentifully purged by stool, and so was quite freed of her Quartan Ague.

The 295 Observation or History of Famous and Rare Cures, &c.

A Double Tertian Ague.

PEter *Faiole*, a Proctor in the Senate of *Grenoble*, and one of the Consuls for that Year, being 40 years old, had a double Tertian 25 daies; during which time, he used store of vulgar Remedies by advice of another Physitian. I being called the 25. of *August*, 1645. found him confined to his bed, eating nothing but Broths, and daily afflicted with grievous Fits. And I gave him 16 grains of my *Ague-Frighter*, which gently purged him by stool, and he was quite freed from his Ague-Fits.

The 296 Observation or History of Famous and Rare Cures,&c.

A Quartan Ague.

GAbriel *Pyot* the Servant of Msr. *Marcha*, a Citizen of *Montpelier*, being 24 years old, was three moneths troubled with a Quartan Ague, during which time he used no Remedy, then took of my *Ague-Frighter* 24 grains on the 10. of *November*, 1645. which was his well-day. He was seven times purged that day without any vomiting, Stomach-sickness or trouble: and the day following he had no stools. His Fit which was expected at five in the Evening, came not till three a clock next morning; his second Fit which was wont to come in the Evenings came not at all; and from that time forward he had no more Fits.

The

The 297 Observation or History of Famous and Rare Cures, &c.

A Quartan Ague.

THe Wife of *John Alles*, a Chirurgeon of *Montfrine*, 30 years of Age, had a Quartan Ague four moneths together; and when I passed through that Town about the end of *October*, 1645. I was desired by her Husband that I would prescribe somewhat for her Cure. I found the Woman very pale and lean, not having had her Courses since the beginning of her sickness; and feeling her *Hypochondria*, I found her Spleen very hard, and in a manner Schirrhous. And therefore I judged her Quartan Ague could not be cured till those grievous obstructions were first removed. I therefore did first prescribe her a purging potion, and the day after to be let blood. Afterwards I gave her Pills of Steel, Aloes, Gum Ammoniacum and other things to be taken for 15 days together; and an emollient Fomentation and Aperitive to be applied to her *Hypochondria* every day during the use of the Pills. Which Remedies being diligently used, the stretching of her left *Hypochondrium* was very much abated, but her Ague-Fits kept their former course: I gave her therefore 20 grains of my *Ague-Frighter*, and after that she never had Fit more.

The 298 Observation or History of Famous and Rare Cures, &c.

A Quartan Ague.

AN Ingenious young man, *Michael Pineau*, a Student of Physick, having been four moneths troubled with a Tertian Ague, fell at last into a Quartan, which had troubled him six Weeks when he came to desire my help. I gave him therefore 20 grains of my *Ague-Frighter* on the 29. of *November* 1645. That day he had only two stools, and that about Evening. The day following which was his Fit-day, he had ten stools and two vomits, *viz.* at the hours of Dinner and Supper; and with his meat he voided Cholerick humors, and had no Fit that day, nor any time afterwards.

The 299 Observation or History of Famous and Rare Cures, &c.

A Quartan Ague.

A Damosel named *Joan Brunet*, ten years of age, having had a Quartan Ague four moneths, took 16 grains of my *Feaver-Frighter* on the 29. of *November*, 1645. She was purged five times by stool without any trouble; the day following her Fit returned after its wonted manner; but after that it never came more.

The 300 Observation or History of Famous and Rare Cures, &c.

A Quartan Ague.

BEcause all my Cures of Quartan Agues propounded under divers Titles, would exceed the Limits of this Book; therefore I have comprehended these following under one and the same Title, that I may continue the Series of my Cures. Also what I shall hereafter say of my Ague-Frighter may be more evident and illustrious.

When I travelled from *Grenoble* to *Montpelier* in *October* 1645. passing through *Valentia*, a certain Inn-keeper met me named *Claudius Bouden*, having had a Quartan Ague three moneths, against which he had used no Physick, save being once let blood. I prescribed him first a purging

a purging potion to evacuate the ill humors residing in the first passages, which might resist the Operation of my *Ague-Frighter*; of an Infusion of half an ounce of Senna, 3. drams of *Diaphœnicon*, and an ounce of Syrup of Roses, to be taken the day after his Fit, by which he was sufficiently purged. The day after he took 20 grains of my *Ague-Frighter*, was thrice purged by stool without trouble, and that only about the Evening. The day after his Fit returned, much longer than formerly; but after that he had no more.

In the same Journey passing through a Town called *le Bourg Sainct Audiol*, Mr. *Henry Chays* a very skilful Chirurgeon desired me to give him a dose of my *Ague-Frighter* for a poor Woman long troubled with a Quartan Ague: I satisfied his desire, and he afterwards told me the Woman was thereby cured of her Quartan-Ague.

John Ridelet, a Proctor in the Senate at *Grenoble*, 54 years of Age, was troubled 3. moneths with a Quartan Ague, which was a double Quartan, and a terrible one; so that he kept his Bed, and fed only upon Broths. He was extream Lean; also his Face, Feet and Legs were troubled with flegmatick swellings, so that he seemed hastening into a Dropsie. After many Remedies tried in vain, he implored my help on the 23. of *December* 1645. it being in the extremity of Cold and Frost. But I finding him in an exceeding bad condition, refused to give him of my Medicament, because I would not have it disgraced. Howbeit, overcome at last with the entreaties of his Wife and Brother, I gave him 20 grains on the 24. of the same moneth. He had 7. stools without trouble; at first he voided cholerick Excrements, and afterwards much Flegm. On the 25. he voided again the same kind of matter. His Fits continued. On the 27. day he took 24. grains of my Medicine, and had six stools without any trouble. The day following he had a light Fit. And after that his Quartan Fits never returned, at least during the seven daies I stayed at *Grenoble*; nor could I yet ever hear what became of him after my return: for the Dropsie hanging over his Head did portend great danger of Death.

Claudius Mousseau, a Baker of *Grenoble* at the sign of the Sword-Royal, being 40 years old, had a double Quartan four moneths; he took 20 grains of my Medicine the 25. of *December* 1645. when the Weather was cold and frosty. He had four very gentle stools. On the 24. and 25. dayes he had his Fits again. On the 26. day he took 32 grains of my Medicine. He had only two large stools; and never had Fit after.

Michael Gounselin a Smith of *Grenoble*, having had a Quartan Ague four moneths, took 32. grains of my Medicine on the 26. of *Decemb.* 1645. the Weather extream cold: he had seven Stools and two Vomits. The day following his Fit returned more intense than the former. On the 29. day of the same moneth he took the same Remedy, was six times purged by Stool without any Vomit, and he never had Fit after.

Martin Lebreton of *Paris*, Organist of the Church of St. *Lewes*, which belongs to the Jesuits, 20 years old, troubled with a Quartan Ague four moneths together, having took nothing all that time the third of *Feb.* 1646. he took 20 grains of my *Feaver-Frighter*; which purged him plentifully onely downwards; the day following he had a very light Fit, but none after that.

The Maid-servant of the Wife of the most noble Msr. *Mareschal de le Hospital*, named *Barbe Lepæse*, being 8. moneths troubled with a double Quartan, took 20 grains of my *Ague-Frighter* the 25. of *Feb.* 1646. being her well-day, she was purged by stool. The day following she was purged after the same manner and measure. Her Fit which was expected at five a clock in the Evening came at nine in the morning like the former, and after that she never had fit more, but was quite freed from that stubborn double Quartan.

The Foot-Boy of Msr. the Count of *Larochegnion*, eighteen years old, had a Quartan Ague four moneths, he desired my help the 27. of *Feb.* 1646. And because he had a long time took no Physick, and kept a Lenten diet, I thought good to prepare his Body by a moderate blood-letting and gentle purgation of an infusion of three drams of Senna with half a dram of Salt of Tartar, wherewith he was gently purged. On the second of *March* he took twenty grains of my *Feaver-Frighter*, it being his Fit-day, and the Fit not to come till six in the Evening. He had eight Stools, but no Vomit. His Fit came at two in the afternoon more violent than formerly. On the fifth day of the same moneth the Fit came again at two a clock and was like the former. On the seventh day he took the same dose of my *Ague-Frighter*, which wrought as before. Yet the Fit came as formerly, and he had three more Fits one after another, using no remedy. Yet he

he began to get fleſh, the colour of his Face was more freſh, and he had a better Stomach to his Meat. After thoſe three fits, the day before the fourth, he took twenty one grains of my Feaver-frighter, which gave him ſix Stools. The fit came the day after ſomewhat weaker; and after that time he never had fit more.

An Appendix, *by Additional Diſcourſe touching my* Ague-Frighter.

HItherto a Quartan-Ague has been counted incureable in the Beginning, Augment, and State: becauſe the morbifick matter is not at thoſe times ſufficiently digeſted nor prepared, ſo as to be brought away by Purgations; and all that endeavour to bring it away by ſtrong Purgatives, of a ſimple Quartan they many times make a double or a triple, and ſometimes a continual, whereby the Patients are brought in extream danger of of death. Hence it is that the more diſcreet ſort of Phyſitians, uſe to adviſe ſuch as have Quartan Agues to a long Patience, and put them off till the Spring ſeaſon, whoſe temper is moſt accommodate to concoct and purge out the Humor offending: but the Winters cold is ſo contrary thereunto, that during the ſame a Quartan is judged to be wholly uncurable. Becauſe the tartarous and Melancholly Humors are more condenſed, and as it were congealed; alſo the paſſages of the body as well ſenſible as inſenſible are ſhut up, ſo that all hope of Evacuation or Tranſpiration, ſeems taken away; Yea verily and the ſtubbornneſs of the Morbifick matter is ſometimes ſo great, that many Quartan-Agues have been by moſt learned Phyſitians ſet upon in a due method in the Spring and Summer time, with all poſſible variety of vulgar Medicaments, and yet they have fruſtrated all their endeavours, and continued an whole year, yea ſometimes two or three years together.

The Premiſes notwithſtanding, long uſe and continual exerciſe is wont to encreaſe Arts very much, and the new Inventions of latter Phyſitians have advanced the Art of Phyſick received from the Ancients, unto a more ſublime degree of Dignity. In whoſe Footſteps I treading, having for the ſpace of thirty ſeven years, in which I have practiced Phyſick, been diligently painful in ſearching into the moſt hidden ſecrets of Nature; although continually taken up (beſides viſiting the ſick) with Lectures, Diſputations and other Academical Exerciſes; I did oftentimes for a long while, ſeriouſly conſider with my ſelf, if by any means poſſible this ſtubborn and long laſting ſickneſs, might in a ſhort time be overcome and maſtered. And though this ſeemed a very hard Task, and almoſt impoſſible to be accompliſhed, yet (by Gods bleſſing to whom be honor and glory) I obtained my deſire. For at length by long Meditation, & elaboration, by adding, detracting, diminiſhing, and many ways preparing ſundry Materials, I found out the true and ſpecifick Remedy of a Quartan Ague, which plucks it up by the Roots. I will not ſay, it is an infallible Medicine, leaſt I ſhould ſpeak like a Mountebank. But I can with a good Conſcience ſay, that I never yet gave this Medicament, but it took away the fits at leaſt at the third times taking. Howbeit in ſome perſons, either through errors of Diet, or by reaſon of ſome Reliques of the Morbifick matter remaining within the body, there has happened a relapſe, which has been for the moſt part removed, by ſome light vulgar Purgation.

'Tis fourteen Moneths ſince I have begun to uſe this Medicament, which I meditated in my mind many years together. And I have committed to writing the names of the moſt that have hitherto taken it, with the Stories of their Diſeaſes. In whom Quartan Agues have been Cured, in the beginning, Augment and State; yea and in the middle of Winter, when all was frozen.

The Vertues of this Medicament are ſuch, that it oppugnes the Melancholy Humor by its Specifick quality and hinders the Fermentation thereof which cauſes the Fit, extinguiſhes the bad qualities thereof, and changes the whole Nature thereof. And ſo all thoſe Tumults which that fierce Humor is wont to raiſe in the body of Man are preſently appeaſed, that Humor being made weak and impotent like Water. For even as Vinegar, the Salt of Tartar, or of Saturn

Saturn, being mixed with it, does suddenly lose all its sharpness and strength, and becomes like water: so the Melancholick Humor, when it meets with its Specifick Remedy, is after a manner extinguished, and loses all power of acting and resisting. So that, for the most part, by once giving thereof, a Quartan Ague is chased away, and seldom needs it be given twice, and very seldom the third time. Whereas otherwise, the matter being rebellious, not tamed beforehand, it cannot be stirred in the least, by an hundred Medicaments. Whereupon the Physitians, being many times vexed with the stubbornness thereof are forced to give over the Cure. And although this Remedy be peculiarly ordained to Cure the Quartan Ague, yet it does in one day drive away Tertian Agues, by reason of the Analogy they have with Quartans (for long Tertian Agues do commonly turn to Quartans) as appears by the Cures of many Tertian Agues before set down; and therefore I have given it the general name of Ague-queller, or Ague-Frighter.

I think not fit as yet to set down the exact and plain description of this Remedy, till its vertues shall by some more years Observations be made manifest. In the mean time, to satisfie the Curious Searchers into Nature so far as to give them occasion of Enquiry, I shall here propound a faithful and sincere description thereof, howbeit somewhat obscure, and covered as it were with a thin Vail or Curtain, which the Sons of Art being industrious, may without very great pains draw aside. This precious Medicine therefore is compounded of a threefold Hercules, by twelve Labours brought to the highest degree of Nobility and excellency: unto which a fourth Champion is added, to accomplish the work. It may be given to Children the quantity of ten, twelve and fifteen grains. To grown persons from twenty grains to thirty and fourty. It works gently being given in due dose, nor does it disturb the body more than vulgar Medicines made of Senna and Rhubarb. Yet it works sometimes by vomit, if the Morbifick matter some part of it quarter about the stomach. For this is its peculiar Quality, that it goes directly to the Morbifick matter wheresoever it lies lurking, valiantly assails, stoutly cudgels, and at last vanquishes the same. The Histories lately described do plainly witness the same. For in some persons finding the passages open, and the matter not very plentyful, it performs its work without any trouble, and with a little purging; as in the Prince *Doria*, and some others before recited. But in others who had used no Physick all the time of their Diseases, and had gorged themselves with bad Diet, finding a Multitude of bad Humors, the passages close shut up, and extream Crudity, it could not overcome the Disease without some disturbance and Labour of the Patient; as it happened in certain poor common people, upon whom this Medicament was first experimented. And so much shall suffice to have said touching my Ague-Frighter, or Ague-Queller.

THE

THE FOURTH BOOK OF Medicinal Obſervations, *And Remarkable Cures of* Several Famous Phyſitians.

The Preface to the Reader.

ALL Phyſitians who are diligent and accurate in the managing of their Practice, do often meet with many things moſt worthy of Obſervation; which notwithſtanding being for the moſt part neglected, do unhappily periſh, and become a Sacrifice to Oblivion. And as for ſuch things as ſome do regiſter in their private Note-Books, they are reſerved indeed for their own private uſe, but are not in the leaſt profitable to the Publick. I do therefore make it my requeſt to all induſtrious Profeſſors of this Art, That if they are deſirous of the publick Good, and have already collected ſo many remarkable Obſervations as may make a conſiderable Volume, that they would be pleaſed to print them: But if they ſhall be too few to fill a Book, that they would vouchſafe liberally to communicate the ſame unto me, who will print them under their Names, as they may ſee I have done in the following Obſervations communicated by others: which I gathered here and there from my Friends, and

have published every mans Observations under his proper Name. Amongst which, many things may be found more excellent than any thing in my Observations; by which it is apparent, That any man may advance the Dignity of the Art of Curing by this kind of Writing, and gain himself some Reputation thereby.

Furthermore, I desire the gentle Reader to take notice, That I have caused these Observations to be Printed in the same order that I received them; that no man may complain I have not marshalled them according as the preheminency of one above another might seem to require.

Observations communicated by Mſr. Petrus Pachequus, *a Famous Physitian at* Lunell, *my most ancient Friend.*

The 301 Observation or History of Famous and Rare Cures, &c.

Want of Appetite.

A Souldier much vexed with a Cronick Ague, beginning now to be much eased in respect of the Fits, which were not so cruel as formerly, did humbly beseech me that I would recover his Appetite, which was wholly lost, otherwise he must of necessity die in the space of three or four daies. I prescribed him a Potion of half an ounce of Diaphenicon, with a decoction of common Wormwood and Agrimony; afterward I sharpened his Appetite with these following Remedies, as with a Whet-stone.

Take Leaves of Agrimony, Common Wormwood, Centaury the less, of each half a handful: make of all a Decoction. Take half a pint of the straining with a little Sugar. I ordered the Patient to drink of this Decoction nine dayes together: but after five dayes were past, he came unto me, earnestly intreating, that I would abate his Dog-like ravenous hunger, caused by my Medicine: which I did, by causing him to abstain from the foresaid Drink, and advising him to eat Butter and fat meats, and to drink strong Wine. I can testifie that many by this Medicine have fallen into the like ravenous Hunger.

The 302 Observation or History of Famous and Rare Cures, &c.

Cholick Pain.

Monsieur, the President of *Rupemore*, an Ancient Man, being tormented three whole dayes with a grievous Cholick; when no Anodines would ease his pain, having taken one dram of the Pouder of a Wolf's Guts, he was cured as it were by a Charm. Also a Priest very subject to this Disease. And a Widow dwelling at *Montpelier*,

Montpelier, which had been cruelly tormented 27 dayes together. And finally, a thousand more whom for brevities sake I pass over without taking any Clyster or Purging Medicine, which makes the Admiration greater.

The 303 Observation or History of Famous and Rare Cures,&c.

A Cholick *from the Kidneys affected.*

A Certain Widow being vexed with a Cholick pain, and that proceeding from the Reins, implored my help (when I was at the *Bellilucan* Baths) to ease her pain. Which I did in a moment. For I bade her immediately to go into the Bath, and presently her pain was taken away: And I admired that so suddenly it was eased without any Clyster or purging Medicament.

The 304 Observation or History of Famous and Rare Cures,&c.

A Cholerick Looseness *coming upon* Agues.

Such as are troubled with Cholerick and Malignant Agues, especially with a double Tertian, by reason of an abundance of a raging Cholerick humor, do fall into the Disease named *Cholera*; upon the return of their Fits, the violence whereof if you do not asswage, with such Medicaments as I shall by and by set down, the Patients will die within the space of two or three Fits. Mr. *Labrundus*, a very Learned Man, having one of these Agues, could hardly be recovered out of his Fit, which was attended with the disease *Cholera*, being as cold as a stone, his Pulse exceeding small and almost deficient, with hollow Eys and other horrible symptomes. At length after a multitude of Medicines, which many so affected would not use, but bid the World adieu, he was recovered out of the Jawes of death. I to prevent the tempestuous storm of the next Fit which should come the morrow after, ordered that the Patient should be refreshed with thick Panadaes and Jellies, that a Bridle might thereby be cast upon the humors, which would rage the day following. I appointed Epithemes and Opiates of Conserve of Roses, Bugloss, Borrage, preserved Myrobalans and Pearls; and three hours before the Fit, I caused this Wonder-working Clyster to be given him, without which, if I mistake not, my Friend had gone to the Pot.

Take Red Rose Leaves one handful, boyl them in the Broth of a Wethers head and feet. In a pint of the strained Liquor dissolve two drams of new Venice Treacle, and one yelk of an Egg. Make of all a Clyster. This Clyster he kept until the return of his Fit, which brought the Cholerick Flux with it, but much less than formerly. By this Method I cured many desperately sick of this Disease.

The 305 Observation or History of Famous and Rare Cures,&c.

Pain of the Hæmorrhoids.

Many in this hot Season of the Year are troubled with inward and blind Hemorrhoids, which cause extream pain. Likewise by reason of the Excrements being hardened and kept in by reason of their swelling, which closes up the Gut, most cruel pain is caused. The ordinary sort of Physitians give Cassia to loosen the Belly in this Case; but they do ill (questionless) in so doing. For seeing the Veins are most of all puffed up in the Fundament, by reason of their natural softness, and are always ready to receive blood; it comes to pass, that by the use of Cassia they are so far mollified, that afterward they more easily entertain superfluous blood, and consequently augment the disease. But I learned of a Beggar-Woman, to infuse Yarrow in boyling Water, and to give the said infusion to drink for a moneth together, and all of this Disease were so cured. The Lady *Du-Masia*, and the Wife of *Crancerius* a Chirur-

geon, troubled with the Hemorrhoids, were cured with this Medicine. At last I found this very Medicine in *Arnoldus de Villa Nova*, in his Chapter of the pain of the Hemorrhoids. The self-same remedy is good against the extraordinary afflux of the Hemorrhoids, if we will believe the foresaid *Arnoldus*, and there is reason also for it.

The 306 Observation or History of Famous and Rare Cures, &c.

The Stinging of a VVasp.

A Wasp having stung my hand, it pained me so cruelly that I was not able to endure it. I laid on Venice Treacle and the pain was gone in a moment. But when three hours after I threw away the Treacle, a most cruel pain returned as bad as at first, which was allayed by applying the same Medicine again, and keeping it on all the day.

The 307 Observation or History of Famous and Rare Cures, &c.

Pushes.

WHen I could not by any Medicines heal certain Epinyctides or Pushes, which arise in the Night springing from black Choler, by a Womans Advice they were anointed with Oyl of Juniper berries, and the Patient thereupon slept quietly, whereas he had lain sleepless before, and was perfectly cured.

The 308 Observation or History of Famous and Rare Cures, &c.

Convulsion.

A Young man had a Convulsion, so that he could not bend his Back-Bone. By help of this following Medicament he could presently walk nimbly.

Take of rank Butter and old Lard, of each three ounces; Bdellium, Ammoniacum, of each half an ounce; Myrrhe, Castoreum, of each three drams. Flowers of Stœchados and Rosemary, of each one pugil. Nutmeg and Cloves, of each one dram; a young Kitting or little Cat unbowelled and stripped and cut in pieces. Stop the Belly of a Goose with these things, and sew it up and roast it on a spit: and the first Liquor that drops, cast away; the next save in a dripping-pan half full of Vinegar, to anoint the Cramped or Convulsed Back. This is a divine Medicine.

The 309 Observation or History of Famous and Rare Cures, &c.

Red Pimples in the Face striking in again.

A Certain Carmelite Frier, a civil and well mannered person, but disfigured with great high red Pimples, thick spred all over his Face, came to visit me, whom at the first sight I knew not: because the foresaid Pustules were of themselves without any help of Art gone away, and his face become smooth. I told him he would suddainly fall into a most grievous disease; nor was I mistaken in my conjecture, for within fifteen dayes he fell into a continual Feaver, of which he died.

The

The 310 Observation or History of Famous and Rare Cures, &c.

The Mother-Fits.

A Certain Damosel being marriageable, was vexed with wandring Convulsive motions, by which, and by certain pains in her Womb, I conjectured that she was troubled with suffocations caused by vapors arising from the Womb. With this following Medicament I Cured her in a moment.

Take Assa-Fœtida two drams; Castoreum, Fæcula Bryoniæ, of each a dram; Rue-Seeds one scruple; Saffron, half a scruple; Laudanum of Paracelsus, eight grains: (which Laudanum I therefore added, both by the advice of Hypocrates, *who prescribes the juyce of sleeping Poppy in Fits of the Mother, in his Second Book of Womens Diseases, page 237. about the end, in the Edition of* Fœsius: *as also that I might temper and moderate the other Medicaments with the Laudanum) With Syrup of Mugwort make a Mass of Pills, of which let her take one dram.*

The 311 Observation or History of Famous and Rare Cures, &c.

Pains after Child-birth.

A Drunken Gossip after she was brought to Bed, was vexed with most cruel pains, which after other Remedies were cured with this following:

Take Galbanum, Assa-fœtida, of each one ounce; Spread therewith a round Plaister, and put four grains of Musk in the middle, and lay it on a little below the Navil. Her Womb which was contracted like a Globe in her Groin, returned to its proper place, and the pains ceased.

The 312 Observation or History of Famous and Rare Cures, &c.

A Medicine *for pains caused by a Vesicatory.*

MSr. *Amalricus*, being troubled with a sleepy Disease, when he was rowzed and came to himself, he complained exceedingly of the pain which was caused by a vesicatory which had been applied: and when I could not give him ease by any Anodine Medicament; Madam *Ranchina*, my Wives Sister asswaged the same only with Water and Oyl mingled together. I cured one Woman that was grievously tormented with the burning of a Vesicatory with this Medicine, and all others vexed with the like Calamity.

Take of the second green Bark of an Elder Tree bough scraped off with a Pen-knife, one handful. Boyl it in sweet Oyl with a little Water, until the water be consumed; to the straining add a little Wax: and make all into an Oyntment, which asswages all pains caused by Vesicatories. This is a Divine Remedy.

The 313 Observation or History of Famous and Rare Cures, &c.

Swelling of the Thigh.

THe Wife of Msr. *Justamondus* had a Swelling in her Thigh, which threatned a Gangrene, her Native heat in that part being by this time suffocated and over-whelmed. After she was let blood, I gave her an ounce of Syrup *de Spina Cervina*, in a Decoction of red Vetches, and the day following her Thigh asswaged pretty well. And this I observed in many other Women, whom I observed to be more liable to swellings of the Legs than men, because

the

the Womb is the Common Shore of the Body, into which Superfluous Humors are collected, and the Womb disburthens it self into the Neighbouring Hipps.

The 314 Observation or History of Famous and Rare Cures, &c.

Chops in Womens Duggs.

MY Wife was much vexed with Chops and Clefts in her Dugs, which I could by no means heal: a tattered old Woman quickly cured her, with Oyl of Nuts newly drawn, which she anointed upon the Clefts, and strewed Sugar finely poudered thereupon. The Balsom of Sugar works the same effect: as I have tryed an hundred times.

The 315 Observation or History of Famous and Rare Cures, &c.

The Dropsie.

A Priest named *Sabardetus*, having Vomited eighteen ounces of blood, fell into the Dropsie *Ascites*, that is the bottle-Belly Dropsie: of which I had Cured him with an infusion of Rhubarb in fair Water, which he drank for his ordinary drink: but when he fell to please his Palate, and had forgot his former Calamity, the Dropsie returned and killed him.

The 316 Observation or History of Famous and Rare Cures, &c.

Bleeding.

A Countrey Man being almost dead with bleeding at his Nose, sent for me: but when nothing would help, I dropped a little Vinegar of Roses into that Ear which was next the Nostril out of which the blood came, and his bleeding presently ceased. I learned this of Mst. *Pontaudus*, who saw this Remedy used by a *Dutch* Physitian. I have read it in *Scribonius Targus*, in the Chapter of Bleeding.

The 317 Observation or History of Famous and Rare Cures, &c.

Hiccupping.

CAptain *Dumasius* having a Tertian Ague, and taking Syrup of Poppies in the middle of his Fit, was vexed with such a troublesome Hiccupping, as almost kill'd him. And when neither Aloes often taken, nor other Remedies could cure this Disease, at length by our Patients own advice I sent him to the Baths of *Baleruca* to take Water, which having plentifully drank of, as the manner in those Baths is, he was quickly Cured, those Humors being dissolved and washed away, which the Syrup of Poppy had rivetted as it were into the Coats of the Stomach.

The 318 Observation or History of Famous and Rare Cures, &c.

A Flux of Blood out of the Ears.

I Saw *Erousolus Ginianensis*, who fell from Horseback upon the stones on his right Ear, out of which flowed three pounds of Blood. Also I have seen very many others who by a fall have

have bled plentifully at their Ears, and escaped with their lives. But as many as I have seen void quittor or bloody matter out of their Ears after a fall, they all died upon it.

The 319 Observation or History of Famous and Rare Cures, &c.

Listlesness to Carnal Conjunction.

A Woman very desirous of Children, but having no appetite to Carnal Embracements, entreated me that I would kindle in her the desires of the flesh, which were (as she said) Mortified in her. I did what she requested with this following Opiate.

Take Conserve of Eringos Root, and of the Male Satyrion, of each one ounce. Orange Rinds preserved in Honey six drams. One preserved Wall-nut. Confectio Alkermes, half an ounce. Amber-Greece, flying Pismires, of each one scruple. Mosch, six grains. With Syrup of preserved Citrons, make all into an Electuary. Of which let her take before a light Supper the quantity of a small Chest-nut, drinking a little Hippocras after it. The Woman confessed that she felt wonderful pleasure after the use of this Electuary. There is nothing in the World more effectual in these cases, then to anoint the Region of the Womb with Oyl of flying Pismires, which is made after this manner:

Take of Flying Pismires two ounces; infuse them in Oyl fourty dayes together in the hot Sun of the Dog-dayes.

The 320 Observation or History of Famous and Rare Cures, &c.

Proud Flesh.

I Had an Ulcer which secretly lurked under the Nail of my great Toe; that I might come to Cure this Ulcer, I bad the Chirurgeon to cut the Nail just over the Ulcer, and make an hole, that so Medicines might be applied; but proud flesh grew up, which after I had often taken away, it still grew again. Wherefore after I had long used burnt Allum, I determined to try a new Medicine. Wherefore I applied red precipitate well washed, and no waies painful, to eat out the proud flesh, which it quickly did, and it grew up no more.

The 321 Observation or History of Famous and Rare Cures, &c.

Pain of the Pleurisie.

A Damsel of a Constitution mingled with black Choler, was tormented with a most grievous pain in her Side, which had brought her to the Gates of death, from whence I reduced her by this following Medicament:

Take Oyl of Sweet Almonds two ounces; Laudanum Paracelsi, three grains: A little after she had taken this, her pain ceased, and she was better.

The 322 Observation or History of Famous and Rare Cures, &c.

A Prognostick touching Wounds.

IN the Siege of *Montpelier*, many wounded Souldiers, especially such as were wounded in their hands, were within a few daies taken with Convulsions of their temporal Muscles, and I observed that all of them died. A certain Captain in that bloody Battail at *Calvisson*, between the Marshal *du Trec*, and the Duke of *Roban*, was Wounded in his Thigh, and the Wound reached as deep as the *Periostium*, a Convulsion followed in the parts near his Thighs, and arose by little and little to his Temple Muscles, and kill'd him. They that are taken with this Convulsion;

sion, cannot open their mouths. At the beginning of the Convulsion they speak readily, and know not that they are are so near to their long home.

The 323 Observation or History of Famous and Rare Cures, &c.

Over-violent working of a Purge.

THe Baron of *Calvisson*, after he had taken the pouder of *Diacarthamus* against my mind, he had an hundred stools. I Cured him after this manner.

First, we made him a Clyster of a Decoction of Red Roses and Chamomel flowers, with a little Sugar of Roses, and the yelk of an Egg. Afterwards we gave him this following Clyster:

Take Capon Broth one pint; Sugar of Roses one ounce; Laudanum of Paracelsus five grains; the yelk of one Egg. This presently stopt the violence of the Purge. Instead of the Laudanum, a dram and half of Venice Treacle may be added.

The 324 Observation or History of Famous and Rare Cures, &c.

Extream Thirst.

MSr. *Viventius* being sick of a Feaver, was tormented with so extream Thirst, that he imagined himself to be one of the Water-Bearers of *Paris*, that carry Water about the City, and cryed night and day, *Water, Water, Who wants Water?* But his Thirst which no other means could stop, was asswaged with one dram and an half of *Sal Prunellæ*, which he drank dissolved in fair Water. Also my *Simeon*, having taken some Syrup *de Spina Cervina*, was almost killed with Thirst: and took a dram of *Sal Prunellæ*, and his Thirst presently ceased.

The 325 Observation or History of Famous and Rare Cures, &c.

Small Pox.

I Saw the Son of Msr. *Martinetus*, sick of the Small Pox with laudable signs; for after the coming out of the Pox the Feaver abated, he fetcht his Breath freely, and he had no Looseness, the Pox were high enough, his sleep was moderate, he took what was given him without offence: howbeit, all on a suddain without any manifest Cause, the Pox strook in again, and he died thereupon. I have seen the like befall many which had the same Disease, and I foretold that they could not escape death.

The 326 Observation or History of Famous and Rare Cures, &c.

A Deadly Prognostick.

THe Son of Msr. *Engarranus*, being sick of a Feaver could not swallow, but voided what he drunk through his Nostrils, the muscles of his *Oesaphagus*, being (as I conceive) taken with the Palsie. He died. Furthermore, whereas he was not favoured like his Mother during his health, yet before his death he was countenanced so like his Mother, that all wondered at it. Also a Boy of mine, not at all like his Mother, a little before his death resembled his Mother, as if he had been her Picture. And all sick persons that have voided their drink out of their Nostrils, or who were like their great Grandsires, their great Grandfathers, or Grandames, or their Parents, in the time of their sickness, they all died; which is a wonderful thing.

The

The 327 Observation or History of Famous and Rare Cures, &c.

Night-sweats.

THe Wife of Msr. *de Ladevese*, every night after she recovered of a Feaver, was wont to sweat. I prescribed her a cooling Julep of the Waters of Cichory and Bugloss, and the Syrup of Apples, and she did sweat no more. Whence I gather, That for people to sweat in their sleep is not alwaies a sign of Abundance of humors, but sometime of heat; for healthy persons of an hot Complexion are wont to sweat in the night. Add hereto, that the foresaid Gentlewoman was cured of her sweating without any Evacuation either Natural or Artificial.

The 328 Observation or History of Famous and Rare Cures, &c.

Bleeding caused by Tooth-drawing.

MAdam *Viventia* having drawn one of her Teeth, so plentiful a flux of blood followed, that she was at Deaths door, all Remedies being applied in vain. I being sent for, caused a great Rupture-Plaister to be laid upon her Temple on the same side out of which her Tooth had been drawn. Also I caused a little burnt Vitriol poudered with a little Cotton-wooll to be put into the hole out of which her Tooth was drawn, which she kept in with her finger. These things being done, within an hour the blood was stopt.

The 329 Observation or History of Famous and Rare Cures, &c.

The Pleurisie.

ALL that have the Pleurisie and vomit at the beginning of the Disease do recover, as I have observed in an infinite Company of Patients: the side being eased of the Humors cast up by vomit

The 330 Observation or History of Famous and Rare Cures, &c.

Menstrual Blood.

THe Menstrual Blood of Women, especially such as are in good health, does smell like a Mary-gold flower. Which makes me conjecture, that Mary-gold-flowers do provoke the Courses through similitude of substance.

The 331 Observation or History of Famous and Rare Cures, &c.

The Running Gout.

MAdam *de Cottereau* being troubled with an Universal Gout, so that no part of her Body was free, was cured with *Crocus Metallorum*; notwithstanding what *Hypocrates* relates touching forty daies.

The 332 Observation or History of Famous and Rare Cures, &c.

Pains of the Womb.

I Have seen many Women tormented with pains of the Womb, who found little ease by our Laudanum. But having taken a dram of *Antidotum Asyncritum* [described in the *Pharmacopœia* of *Renodæus*] they were presently freed from their pain. Which I have much admired, neither do thou count it a slight matter.

The 333 Observation or History of Famous and Rare Cures, &c.

Danger of an over-hot Bath.

A Very honest Woman coming out of a Bath hotter than ordinary, fell into so great an inflammation of her whole Body, that she could not rest a minute by reason of Pains and Anxieties. And after all cooling Medicines both inward and outward had been used in vain, a Bath of nothing but luke-warm Water, freed her from all her pains: whereby my Mind was freed of a great deal of Care.

The 334 Observation or History of Famous and Rare Cures, &c.

Pain of the Stomach.

CHolerick, Lean, Red-hair'd persons, of a thin habit of body are in the beginning of the Summer troubled with pains of the Stomach; because the mouth of their Stomach being extream sensible, is corroded with Cholerick Humors, which were formerly bridled by the temper of the Winter and Spring. The Cure is, to purge them with Rhubarb, and then to give them twice or thrice in the morning three or four grains of the Laudanum of *Paracelsus*. Doubtless it is better with them when the mouth of their Stomach is not so sensible.

The 335 Observation or History of Famous and Rare Cures, &c.

Scabby Legs.

TO Cure that great Scabbiness which after long sicknesses, especially the Quartan Ague, breaks out upon the Legs, having cruel pains attending the same, I have not found any thing among all the Medicines which we use, more effectuall than this following Oyntment:

Take Unguentum Basilicum, four ounces. Turpentine two ounces: Oyl of Roses three ounces and an half; three Yolks of Eggs; a little Wax. Make of all an Oyntment, and anoint the Scabby places therewith.

The 336 Observation or History of Famous and Rare Cures, &c.

Inflammation of the Mouth caused by Mercurial Oyntments.

TO such as are fluxed by being anointed with Oyntments made of Quick-silver, an Inflammation and exulceration of their mouth is wont to happen, sometimes exceeding hard to Cure, I having caused one to be anointed, his Mouth was so inflamed, that he was almost desperate, which

which inflammation, all other Medicines being tried in vain, was healed only with Chicken Broth made without so much as any Herbs in it. I suppose the virulency of the Quick-silver was mitigated by the benign and debonair substance of the Chicken.

The 337 Observation or History of Famous and Rare Cures, &c.

Pain of the Head.

AFter a pain in the one half of my head of Fourteen years continuance, it happened that a Vein opened in my upper Lip, out of which every moneth four or five pound of blood very hot and salt issued. I freed my self from this troublesome accident, by opening a vein twice every moneth in that Arm which was just opposite to my bleeding Lip; and blood being liberally taken away, my Head-ach ceased.

The 338 Observation or History of Famous and Rare Cures, &c.

Bruises on the Head.

A Maid Twenty years of Age, received a blow with a stone a little above her Fore-head, and went for all that about her usual business. Howbeit 3. daies after she complained of a dull pain in her head, she became sleepy, and was a little Feaverish. Upon the seventeenth day certain Convulsive motions appear; upon the twentieth an Impostume breaking, and greenish puittor coming out of her Nostrils, she died. ¶ Mr. *Viventius* fell backwards, he remained some daies intent upon his business; afterward he began to Rave, to desire fire, saying that he was cold; to be sleepy. He had a bad Night, ever and anon putting his hand unto his head. Upon the eleventh day the Impostume broke, and he voided purulent quittor out of his mouth, and died presently. ¶ A Nephew of mine having received a bruise on his Head, became sad, and complained a little of Head-ach. A moneth after he fell into a Feaver with Drowziness and Head-ach; he rose ever and anon and cryed out. On the seventh day of his Feaver he voided corrupt matter from his Nose, and presently died.

The 339 Observation or History of Famous and Rare Cures, &c.

A Tetter with Itch of the whole Body.

A Certain Fish-Wife was vexed with a Cruel Tetter all over her Body, with so great an Itch, that she continually clawed her self, and could not rest a moment. In the morning, by reason of her continual scratching, there was found in her bed, three or four handfuls of Scales like unto the scales of Fishes. I having ordered her Diet to be Chicken, Kids-flesh and Barley Broths, first of all prescribed her a Bolus of Cassia, afterwards I caused the Basilica Vein of both her Arms to be opened, also a vein in her Fore-head and in each Ankle, that I might draw out the corrupted blood from all parts of her Body. Which being done, I ordered her to use this following Magistral Syrup for thirty daies together.

Take of Senna, Polypody green, of each four ounces; Epithymum an ounce and an half. Choice Rhubarb one ounce. Annis Seeds, three drams. Yellow Sanders, one dram and an half. Infuse them all Night in juyce of Apples cleared by setling. Afterward boyl them according to Art, adding as much Sugar as will suffice to make all into a perfect Syrup. The first and second time she took two ounces, or two and an half, of this Syrup in Whey; afterward she took two spoonfuls every morning; and so her Body was kept open, and the Morbifick matter was leisurely evacuated. Sometime she took Lozenges of Diarrhodon Abbatis *in the morning after her Syrup. She used Chicken Broth many dayes together, wherewith the force of the Melancholick Humors was much abated. At last I sent her to the Water of* Meyne, *with the cooling qualitywhereof, her inflamed*

med Liver being brought into temper, she perfectly recovered; and required no more of my advice for 15 years after. Her Husband had died of the Leprosie.

The 340 Observation or History of Famous and Rare Cures, &c.

Pissing of Worms.

A Young Man that was tormented with pain in his Kidneys, voided with his Urine very many Worms, black, as long and thick as an ordinary Needle, horned, of a crumbly substance; two of which Worms, if you remember, I sent to you.

The 341 Observation or History of Famous and Rare Cures, &c.

Foolishness.

MSr. *N.N.* after long using of Red Poppy Water became foolish, and at length died. His Skull being opened, I found the Cavities of his Brain full of a black Humor like Ink, extream stinking.

The 342 Observation or History of Famous and Rare Cures, &c.

Fierce Distillations with Sweat.

I Have seen many troubled with cruel Distillations, who did sweat so exceedingly, that it brought them into an extream Weakness, which I thus suppressed:

Take Frankincense, Mastich, red Sanders, Kermes Berries, Red Rose leaves, of each one ounce. Make them into a Ponder, wherewith let the Patients Head-Cloths be Smoaked.

The 343 Observation or History of Famous and Rare Cures, &c.

Spots in the Eyes.

WAter of Honey does most certainly take away spots out of the Eyes. But if the Eye be pained withal, the pain must first be asswaged before this Water be used, for it will cause pain. Be sure to remember that.

The 344 Observation or History of Famous and Rare Cures, &c.

Stones preternaturally great.

MSr. *N.N.* had naturally very great Stones, so that they were far bigger than those of a Stone-Horse. He never had a Child. I suppose because he wanted tools fit for that work. After a Fall from an Horse his Cod swelled like a great Ball; the swelling came to suppuration, and great quantity of Quittor came away. The Ulcer being perfectly cleansed, there fell away pieces of his Stones which were great Stones indeed, hard as Flints, and flew in pieces being struck with an Hammer, as other Stones are wont to do. The Functions of his Body and Mind were little altered. At last, when a few daies were over, a gentle Feaver laid hold upon him, with Anxiety and Thirst, which a little after grew greater: the Pulse on that side on which his Stone was diseased, was much lessened, before any change could be felt on the other Arm. There followed a deep redness in his Face; also red Pimples in his whole Body, which quickly brought death. This Story is indeed very well worth Observation.

The

The 345 Observation or History of Famous and Rare Cures, &c.

Twins in the Womb.

I Have foretold that my Wife and many other Women would bring forth Twins, their Mothers having had Twins. Their Great Bellies were troublesome more than ordinary. Their Wombs swelled mightily. And their Legs and Feet were in a short time puffed up. The Child moved very little in the last moneths, because it was so straitned of Room, by reason its fellow took up half the place. I seldome failed in my Prediction.

The 346 Observation or History of Famous and Rare Cures, &c.

Blood drawn out actually cold.

I Saw a Woman extream angry by Nature, who being sick of a Feaver, was let blood in my presence. And when the blood upon the opening of the vein spirted upon me, I felt it actually cold, like Ice or Snow. She died within five daies after her Blood-letting.

The 347 Observation or History of Famous and Rare Cures, &c.

The Salvatella *opened in a Quartan Ague.*

TO open the *Salvatella* Vein [which is between the Ring-Finger and the little Finger] is very good in a Quartan Ague. Madam *Trossella* having a Quartan Ague, her *Salvatella* being opened an hour before the Fit, she confessed her fit was much abated; the next time it was opened, her fit was as good as nothing: after the third opening, her fits quite left her.

The 348 Observation or History of Famous and Rare Cures &c.

Tetters or Ring-Worms.

MAdam *de Castelan* was troubled with a foul and fierce Tetter or Ring-Worm on both her Hands, which vexed her extreamly. She refused the use of Bleeding, Purging and all other Remedies. In a few dayes I Cured her after this manner:

Take Oyntment of Roses, three ounces. White Precipitate, three drams. Mix them, and therewith smear the parts affected.

The foresaid Gentlewoman told me, That with this Oyntment she cured a Matron of great Quality in *Provence* troubled with the same Disease.

The 349 Observation or History of Famous and Rare Cures, &c.

An hard swelling of the Spleen.

AN old Woman troubled with a Schirrhous or hard swelling in her Spleen beseeched me to give her some ease, for she knew she could not escape Death. I gave her a Pill made of four grains of Laudanum, by which all the troublesome Symptoms were mitigated, especially shortness of Breath, which had much oppressed her; which made me wonder.

The

The 350 Observation or History of Famous and Rare Cures,&c.

Convulsion-Fits in Children.

ALL Children in a manner that are costive and bound in their Bellies, are subject to the Convulsion-Fits, as I learn out of *Hypocrates*, and by Experience. My Son *Charles* his Boy who was perpetually Costive, died of the Convulsion-Fits.

The 351 Observation or History of Famous and Rare Cures,&c.

Swooning upon Blood-letting.

MAny endure well enough the opening of a Vein and the effusion of their Blood; but when their Arm is untied and the Orifice stopped, they faint away. You may prevent this accident by giving the Patient a mess of good strengthening Broth, a little before the opening of the Vein; which I have many times experimented.

The 352 Observation or History of Famous and Rare Cures,&c.

Sciatica pain.

MAny there are who are troubled with very sharp pains of the Sciatica, they being of a Cholerick temper, and it being Summer, Such persons I did not torment with hot Medicines, but I opened a Vein; and after a purging Clyster, I gave them another Clyster made of Broth with Laudanum in it. So I cured your *James*, that Witty scoffing Companion.

The 353 Observation or History of Famous and Rare Cures, &c.

Tetters or Ring-worms.

A Boy Ten years old was vexed with a Tetter; which did sweat forth a blood-watry matter. The Wind coming North, that filthy matter was suppressed, and turned to his Lungs, and caused an Horrible shortness of Breath; which ceased so soon as the Wind turned South again.

The 354 Observation or History of Famous and Rare Cures,&c.

To draw Matter out of an Impostume.

A Souldier being wounded in the Brest bled not at all for seven daies together. With the advice of a Chirurgeon we applyed a Plaister to the Wound, which drew forth an abundance of matter. *Sigillorius* had also a Tumor which came to suppuration; but being not well opened nor in season, he was in danger of his Life, the matter being concentrated and kept in; which I drew forth with the help of this following Plaister:

Take Rozin of the Pine-tree new, clear and sweet smelling, one pound. Oyl of Bayes and Turpentine, of each two ounces; Gum Elemi four ounces. The Rozin and Gum must first abide in the pan till they are mixed; afterward add the Turpentine and the Oyl, and let all boyl together again, then strain them through a course Cloth. Spread a part thereof upon Leather. Make a Plaister and lay it upon the Wound. Renew it in the Winter only once in a day, but in the Summer twice in a day, and you shall see wonders. Neither do I think there is any thing more certain in

all

all my Observations, as you may learn out of Pareus, *his* 10. *Book, Chap.* 30. *Touching Wounds in the Breast and Chest. Now the foresaid Plaister must have two or three long slits in it in the middle, that the matter which is drawn may flow out easily.*

The 355 Observation or History of Famous and Rare Cures, &c.

To assuage the pain of Tetters.

A Mettlesome Woman troubled with a cruel Tetter with extream pain, all other Remedies being tried in vain, was wonderfully eased with this following Pultis.

Take six Rotten Apples, draw them into pulp through an hair searse, and add thereto Oyl of Roses, two ounces; and a little Breast Milk, and make a Cataplasm, and lay it upon the part pained. I have found by long Experience, that Rotten Apples do more assuage pain, than Roasted or Boyled ones, which alwayes retain somewhat of the fire in them.

The 356 Observation or History of Famous and Rare Cures, &c.

Summer Feavers of Children.

IN the Moneths of *July*, *August* and *September*, a great number of sucking Children died, which our Women said were troubled with the Worms. But I avouch, that their Death was caused by the sharpness of their Nurses Milk, wherewith their Stomach is inflamed, for their Hands and Feet are cold, they are extream thirsty, very unquiet, apt to vomit, and have a Loosness, as my self can witness. Wherefore they must be let blood, and then this following Cataplasm must be applied to their Stomach.

Take Barley meal one pound; the Crummy part of White-bread, four ounces: Boyl them gently in Goats-milk, adding afterwards Juyce of Nightshade, one ounce: Oyl of Roses as much as shall suffice. Mix all into a Cataplasm to mitigate the pain of Inflammation. We must also change the Nurse, and give the sick Child the Mucilage of Flea-wort seeds in a spoon with a little Sugar of Roses. Also Chicken Broths qualified with Purslane, Sorrel, or Lettuce. Also we must apply Pidgeons or the like Creatures cut down the back, to draw forth the raging heat of their Stomach.

The 357 Observation or History of Famous and Rare Cures, &c.

Worms.

OUr Women are of Opinion, That all Children have Worms; but when they void none, the Women say the Worms are turned into putrid Excrements: And it is well said. For seeing Worms put into a Glass and covered with warm dung do soon turn into a Paste: Why may not the same thing happen in our Bodies, whose heat resembles that of hot dung, the Worms being killed by bitter Medicaments? This seems to me very rational.

The 358 Observation or History of Famous and Rare Cures, &c.

Symptomes of the Mother.

A Melancholick Woman subject to fits of the Mother, did once a day void a great Quantity of Urine, crude and without any colour: which being voided, a world of Symptoms presently followed, coming as it were out of the *Trojan* Horse: to tell the Cause whereof, I count it extream difficult. For sometimes she had a pain in her Head, sometimes her Heart panted, some-

ſometimes ſhe ſwooned away; ſometimes ſhe was ſtomach ſick: ſometimes ſhe did ſweat in her Neck and Forehead; ſometimes ſhe ſhivered all her body over. But whence came all theſe Symptoms? I conceive verily they ought to be referred to the Womb, which is the ſink of Womens bodies. For ſeeing the foreſaid Symptoms came not till ſhe had voided her Urine, I am of this Opinion, that her Bladder being full and reſting upon her Womb, did with its Bulk keep the Womb faſt and cloſe. Whereupon the impurities and vapors contained in the Cavity of the Womb could not freely play their Rekes in other parts of the body; but when the Urine was voided, thoſe putrid Humors became free, and cauſed thoſe Various accidents.

The 359 Obſervation or Hiſtory of Famous and Rare Cures, &c.

An horrible Vomiting.

A Maid of 25 years old, complained of a pain in her Spleen, which was very inward; after which followed a Schirrhous or hard ſwelling. She vomited every day at ſeveral times twenty or twenty two pound of a greeniſh humor. In *November* ſhe fell into a terrible Dropſie, and the 16 day of *January* ſhe died. ¶ I ſaw a Country-man who vomited almoſt every day, but at ſeveral times 20, 25 or 30 pounds of that greeniſh Humor, who was cured by the uſe of ſteel, and he became perfectly well. Which verily is worth the marking.

The 360 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Catarrh.

NOthing does more ſtop a Catarrh or Flux of Rheum, than this following Cataplaſm of *Rulandus*.

Take ſtrong Leven two ounces. Amber poudered two drams. Make thereof a Cataplaſm, and apply it to the Crown of the Head, after the Hair is firſt ſhaven away.

The 361 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Feaver cauſed by being in the Rain.

MAny wet with Rain become ſick, and very often they fall into a continual Feaver, the tranſpiration of Excrements through the pores of their Skin being hindred, which is very apt to breed Feavers. After blood-letting, I have found nothing better than to open the pores again, with a ſweating Decoction.

Take Sarſaperilla one ounce; Carduus ſeeds half an ounce; Scabious, Mary-golds, of each half an handful. Make a Decoction of all together, and let the ſtrained Liquor be drunk hot, with a little white Wine, or a few drops of Treacle water mingled therewith. I have ſeen many Phyſitians, who never thought of Sudoriſicks in this caſe, yet when they ſaw the Effects of my ſweating drink, they could not but commend the ſame.

The 362 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Prognoſtick of the Small Pox.

AS many as I have ſeen ſick of the Small Pox or Meazles, having their Belly diſtended, and making a Noyſe, with unquietneſs, tumbling and toſſing, I Obſerved, that they all died within few daies, eſpecially if pain were joyned with thoſe other Symptoms.

The

The 363 Observation or History of Famous and Rare Cures, &c.

A Prognostick from the Constitution of the Air.

IN the year 1640. in the Moneth of *October*, upon the twelfth, thirteenth, fourteenth and fifteenth dayes, so great a cold happened, that all our Brooks and Rivers were frozen with Ice. In *February* following, Pains in the Sides were very rife, of which many dyed.

The 364 Observation or History of Famous and Rare Cures, &c.

A Prognostick in a continual Feaver.

I Have seen an infinite number of Patients, who being sick of Feavers slept not at all, yet remained quiet without complaining, and never speaking unless they were spoken to, and asked a question. And if you went about to feel their Pulse, they would pull back their trembling hand; as if they were afraid of their life. I have observed, that all such persons bade the World adieu.

The 365 Observation or History of Famous and Rare Cures, &c.

Rottenness of the Teeth.

I Have seen many in this Climate tormented with the Tooth-ach, by reason of rotten and hollow Teeth. I was wont to fill the hollow Teeth with Turpentine, and to burn the Tooth with a red hot Iron; which succeeded very happily.

An Observation communicated from Msr. Dabadi, *a most Famous Physitian at* Tholous.

The 366 Observation or History of Famous and Rare Cures, &c.

Scabbiness with Itching in a Man of eighty years old.

THe most Illustrious Senator and Dean Msr. *de Maussac*, being near the age of Fourscore and four years, naturally of a Constitution mixt of Blood and Choler, in which Choler prevailed, moderately fleshy and of a proper stature, and well shaped Body, with a nimble Industrious Wit, and a rare faculty to debate Cases of Law, not ordinary for one of his years: In former times he enjoyed his health very well, finding no alteration from the Weather whether hot or cold. Yet in the space of five years, three times he suffered some abatement of health by reason of Indigestion of his meat; not that his stomach languished through age, nor through any fault in his diet. He was not given to Feasting, nor to please his Palate; yet he delighted in Sallats and Fruits that will not last; which though they seem familiar to our Natures, and easie of digestion, yet can they hardly be converted into good blood, whereupon bad Humors are collected, which putrifying upon any slight occasion do often breed Malignant Feavers, as *Galen* hints in his Second Book of the *Faculty of Meats*. And this I observed to have happened to this Venerable old Man, first in *May*, the year after about Autumn; and lastly, but worst of all, about the time in which the *Pleiades* are wont to disappear;

whereupon he fell into an acute Feaver, which every other day had some exacerbation, after the Insult whereof he voided upward and downward an excrementitious flegmatick humor, which was at last mingled with Choler, with great unquietness and heart-burning, which are signs of at least a bastard *Cholera*: out of which dangerous condition he escaped upon the seventh day, Nature driving out the reliques of the Morbifick Matter to the skin, whereupon arose a filthy itch all his Body over, but especially in his legs, and chiefly in the left leg, where arose a red fiery swelling, the matter whereof being in a manner discussed, there remained an inflamatory disposition like the Shingles or St. *Anthonies* Fire, with painful itching, often provoking him to scratch, springing from a mingled pruritous matter, salt, sharp and pricking, which was shed abroad through both his Legs; arising from a mingled *Cacochymia* and *Cachexia*, which is familiar to old men; and it was so much the worse, because both his Legs did a little swell, which shewed great weakness of his Liver and other Bowels, which being weakned (especially his Liver) with the foregoing heat of the Feaver, it was much to be doubted, Whether (in so great age especially) they could be restored to their ancient good Condition.

We began the Cure with a Vomit, he being enclined thereunto, that we might empty the evil humor floating in his Stomach. Then we purged him downwards with a gentle purge. But when the Disease would not give way, we began to think of opening a vein, about which we were divided in our Opinions: his old Age and a *Cachexia* begun, which was clear from his extream itching and the swelling of his Legs and Feet pleaded against blood-letting. Howbeit his Feaver growing more intense, he was let blood, and not without cause; seeing that it is better to run a hazard, than certainly to perish. Bad blood came away, he bore it well, and had his Crisis on the seventh day, the reliques of the Morbifick matter being driven out into the habit of his Body and to his Legs. After some dayes we thought fit again to purge out the ill humors that were gathering head afresh, that we might more safely use a Bath of fresh Water, to procure transpiration, to temper the heat and Acrimony of the humors and vapors, also to open the skin and let them forth. After the Bath had been used divers days, his itch became more troublesome than before, the ill humors being drawn from the Centre to the Circumference, which had not been sufficiently purged forth. Wherefore because our Patient refused to take any more Purges, I resolved to draw the humors away by little and little with a gentle Lenitive, and to try what Asses Milk would do, which *Hypocrates* sometimes used instead of a Lenitive and purging Medicament, as may be seen in the Fourth Book *de Diæta Acutorum*. And the event was according to my desire; for having a whole moneth together drunk of Asses milk, his Belly of it self very dry and costive was loosened, and he voided abundance of excrementitious humors, in the place of which good humors bred; and the dregs of his gross humors being attenuated, his Hemorrhoid veins opened, by the flux whereof he was restored to his former Health; yea, and became more lusty. I say nothing of the strengthening things we gave him, nor of the Oyntments and other outward applications to mitigate the Itch; and when the fervor of the Shingles was abated, to discuss the remaining Morbifick matter; all which did much good to our Patient, by the blessing of Almighty God, the giver of Health and all good things beside.

An Observation communicated by Msr. Antonius Jodon, *a Renowned Physitian at* Autisiodore.

The 367 Observation or History of Famous and Rare Cures, &c.

A Dropsie of the Stomach.

IN the Year 1620. a Woman somewhat tall of stature forty eight years old, named *Joan Delier*, Wife of a Citizen of this City, believed that she was with Child, her Belly growing still bigger and bigger. But when she knew the time of Childbearing was past, she went to a Physitian who presently told her she was fallen into a Dropsie. Medicines being taken

taken in vain; the ſwelling of her Belly continuing three years together, (ſhe ſtill following her ordinary Employments) it grew at length ſo great, that ſhe was ſcarce able to bear ſo great a Burthen. At laſt ſhe fell into a continual Feaver, with ſhorter breath than before, and an unquenchable thirſt, together with much tumbling and unquietneſs. Within the ſeventh day ſhe died. Whoſe Body becauſe it could not be incloſed in a Coffin, becauſe of the extream greatneſs of her Belly in all parts thereof, being deſired of her Parents, I cut her Belly, and ſo great a quantity of Wheyiſh Liquor came out, that it weighed above Ninety pound weight. At laſt there came a thick and troubled humor, which was the grounds and ſetlings of the Wheyiſh excrement. Which being done, and ſpunges put into the holes which we had cut to let out the Hydropick Humor. We proceeded in an orderly way to diſſect her whole Belly, and when we looked for the Peritonæum that we might diſſect the ſame, (a ſtrange thing to ſay, but more ſtrange to ſee) this Membrane whoſe office it is to cover the Natural parts, did ſo ſtrongly cleave to the forepart of the Stomach, that it could not be parted without breaking or cutting. Yea, and we found our ſtopple which we had left in the Wound, ſlipt into the Cavity of the ſtomach. Before the cutting up whereof, we did conſider a while its unuſual greatneſs, and its two orifices, the Stomachus and Pylorus having both the ſame ſcituation, and touching one the other, the Caul poſſeſſing the upper Region, the Liver ſound enough, which yet the ſwelling of the ſtomach did bear up, the Heart (with the Midriff between) bearing heavy thereupon, had ſet its print upon it, as if it had been upon Wax. No wonder ſhe was ſo troubled with ſhortneſs of Wind for two years ſpace. The reſt of her inwards, as the Spleen, Kidneys, Guts, Meſentery, Gall-Bladder, Piſs-Bladder and Womb were ſound, and little altered by the Heat of her Feaver. Theſe things thus obſerved, we drew forth that mighty ſtomach with the Gullet and Gut *Duodenum*; and being cut open through the middle it was above a *Paris*-Ell broad; in the lower part thereof we obſerved a ſerous Mudder, being the remainder of the ſetlings of the foreſaid Hydropick humor. All the fibres of the inner Membrane were far ſeparated one from another. There was no fault in either of its orifices, ſave that in the middle of the Pilorus in its uppermoſt part, there hung a Bladder half a Finger long, and a little thicker than a mans Thumb, full of tranſparent Water, and entring almoſt into the Cavity of the *Duodenum* Gut. We obſerved alſo the inner membrane of the Stomach, ſtudded as it were with many little water bladderkies, part whole, and part eaten aſunder. And theſe are things (if I miſtake not) never obſerved before by any mortal man; I am ſure I never read or heard of the like. Now when I conſidered ſeriouſly with my ſelf, what ſhould be the cauſe of ſo unwonted a Diſeaſe as this, being a Dropſie proceeding from the Stomach; I could lay the fault no where elſe, but in an habitual cold and moiſt diſtemper of the whole Stomach, which when it drew nouriſhment from the trunk of *Vena Porta* by the *Ramus Gaſtricus*, and other branches, by reaſon of its diſtemper it turned the ſaid nouriſhment into a Wheyiſh Excrement, juſt as the Liver does, when a Dropſie is cauſed thereby. And the ſaid cold and moiſt diſtemper of the Stomach came by much drinking of cold water, eating of raw Fruit, and other ſuch like cauſes. And for as much as by reaſon of the great looſneſs of the fibres of the ſtomach, and the perverſe figure of that part, the lower orifice was ſcituate juſt even with the upper, the meats did eaſily paſs from one unto the other, ſo that they were not drowned in that vaſt Whirle-pit of Seroſities, but were in ſome meaſure Chylified in the Gut *Duodenum*; for all grant that the Guts can make Chyle, and Nature when neceſſity compels may render their Chylifactive power more effectual than ordinary. Now the Stomach did not expel the Water by thoſe open paſſages, becauſe its fibres were reſolved and deprived of their activity by the plenty of moiſture wherewith they were ſoaked.

Observations communicated by Msr. Francis Chomel, *the Renowned Physitian of the* Annonæensians.

The 368 Observation or History of Famous and Rare Cures,&c.

The Iliack Passion or Miserere mei.

A Certain Man being five days troubled with the Iliack Passion, so that he vomited up his dung,and many Medicines being tried in vain, he took an ounce of Quick-silver killed with Brimstone, enclosed in a little ball of Wax. Presently after he had taken it in, Fomentations were continually applied, and Clysters frequently injected. After some hours, little bits of Wax were seen in a Clyster which came from him, which was a token that the passage was open, so that a Purge being given him, he was perfectly cured of his disease.

The 369 Observation or History of Famous and Rare Cures, &c.

The Efficacy of an Issue.

A Certain Man long time afflicted with pain in his Loins, when nothing would help him, at length he died. Among other Remedies, a little before his death an Issue was made in his Thigh four fingers above his Knee,out of which when the crust fell off there flowed a kind of bloody waterish substance, about the quantity of half an ounce ; but afterwards there came out of the Issue every day an ounce of true and well conditioned matter or quittor, or more. The Chirurgeon wondered and could not devise whence that matter came. The man being dead,and his body opened, his Lungs were found full of matter, which was the chief cause of his death. And in his Loins a great Impostume was found, from whence that continual and stubborn pain proceeded. And from the said Impostume unto the Issue was found a gutter or little Conduit-pipe, by which some part of the Quittor flowed from the said Impostume out at the Issue. By which we may gather what industry Nature is wont to use in expelling Morbifick Causes, who framed that same Conduit-Pipe to purge the Impostume in the Loins by the Issue ; howbeit she could not bring to pass what she intended, being overcome by the greatness of the Disease.

The 370 Observation or History of Famous and Rare Cures, &c.

A Tertian *Ague.*

THe said Msr. *Chomel* told me,That he was wont to Cure all Tertians in a manner,by giving the Patient an hour before the Fit a good draught of the Decoction of Chamomel and Cream of Tartar, and presently after the Medicine was taken, letting the Patient blood. If he had no decoction ready, he was wont to give the Patient a draught of cold water, and the same effect for the most part follows. He conceived that the water, by means of the blood-letting was drawn into the Veins,and that it did temper the morbifick matter,and keep it from fermenting or working,by which means the Fit was hindred.

The 371 Observation or History of Famous and Rare Cures,&c.

Pain of the Cholick.

A Young Maiden of the age of 14 years, was vexed with a most cruel pain of the Cholick, with a swelling of her Belly,which could not be mitigated neither by Clysters,nor purging potions,

potions, nor by potions to kill Worms; only it was allayed by a luke-warm Bath: but when she came out of the Bath it returned, and within 20 days brought her to her grave. Two days together immediatly before her death, she voided a great quantity of exceeding black blood by stool. Her Body being opened, much glassie Flegm was found sticking to the outer Coat of her Guts, and during the whole length of the Guts, it was dispersed here and there in bits of different greatness, so that some were as big as Beans, others no bigger than hasel Nuts. In her veins and in the Ventricles of her Heart, we found no blood at all, because Nature with all her might had driven it into the Guts, where it turned black, as all blood out of the Veins is wont to do, and before her death was voided forth. Where we are to observe the seat of the Matter which caused this Cholick pain, which is not spoken of by Authors, *viz.* the outward surface of the Guts.

Observations received from Mr. *John Marsin a Skilful* Apamiensian *Physitian.*

The 372 Observation or History of Famous and Rare Cures, &c.

Bottle-bellied Dropsie.

IN the Year 1642. in the moneth of *October*, I was sent for unto a Boy of 14 years old, who after the Small Pox had been troubled with the Dropsie for a moneth together; he had no Feaver, yet was so weak, that he was fain to keep his Bed. I prescribed forthwith an Aperitive and Water-purging Apozem, the same which is described in the Practice of Dr. *Riverius*, in his Chapter of the Dropsie. And after the use of the Apozeme, I ordered him to be smoaked as it were in a Stove, with aperitive and discussing materials for three days together, once in a day. Whereupon he was perfectly well.

The 373 Observation or History of Famous and Rare Cures, &c.

Inflammation of the Testicles with suppression of Urine.

THe same year in the moneth of *Decem.* I visited a man 50 years old troubled with an inflammation of his right Testicle, and with suppression of his Urine. I prescribed him a Clyster partly emollient and laxative, partly expelling Wind; and when that was come away, I caused him to bleed eight ounces from the *Vena Basilica* of his right Arm. I caused his Reins to be anointed with Oyl of Scorpions of *Matthiolus*; and after he was anointed, I caused a Pancake made of Onions cut in small bits, and Egs beaten together with Hogs Grease, to be applied to the same part. And the day after I gave him a Bolus of Cassia, Diaphænicon and poudered Rhubarb. Hereupon he pist lustily. And for his inflamed Testicle we made a Cataplasm or Pultis of Bean-meal boyled in Vinegar and Water unto a just Consistence. Which Medicine being applied three days together unto the part affected, he was restored to his former health.

The 374 Observation or History of Famous and Rare Cures, &c.

Urine stopt.

THe same year and moneth, I met with a Woman 40 years old fat and well fleshed, troubled with a stoppage of her Urine. She had a Feaver but not very strong; and her Urine which she made in very small quantity was very red, with a great pain about the Reins of her Back

back: finally she vomited ever and anon by fits. Many Emollient, Laxative and Wind-expelling Clysters were given her, but in vain; she was twice let blood, *viz.* in her Arm and in her Foot. Also Fomentations and Oyntments were applied, as in such cases is usual. A Bolus was given her, made of Cassia, Diaphœnicon and Rhubarb, but all in vain. At last I applied the Pancake commended in the former Observation, to her Reins; with the which she slept quietly, pist plentifully, and found her self very well. The like success befell me in another Patient, who having an acute Feaver, without any pain of the Reins, yet was not not able to make water: the foresaid Pancake being applied, he pist afterwards, and his Feaver being chased away, became perfectly well.

The 375 Observation or History of Famous and Rare Cures,&c.

A Fistulous Ulcer.

IN the Moneth of *January*, *Anno* 1643. Msr. *Ferries*, a *Varilienstan*, being fifty five years old, of a very Cholerick Complexion, and one that had wearied himself with many Cares and Labors, desired me to undertake to cure him. He had been troubled for fours years past with divers pains in his Brest, caused by Humors falling down from his Head into the outward parts of his Chest. He had about the Bone called *Clavicula*, a swelling as big as a Hens Egg: but, which was worse, there appeared a Tumor on the right side of *Os Pubis*, as big as a couple of Goose Eggs, out of which being opened there had flowed for some moneths together, well-conditioned matter or quittor: there was a deep Ulcer, almost half a Foot deep: for the healing whereof, many Medicines were tried, but all in vain; so that every one feared it would prove a Fistula. I set upon the Cure after this manner:

I prescribed first of all a purging Potion, which was made to purge partly Flegm, and partly Choler. Then I caused him to be let blood. Then I gave him Apozemes made of temperate Aperitives, Wound-herbs and Purgatives. When he had done with them, he took of this following Decoction twice a day for twelve daies together.

Take Barley entire one pugil; the Leaves of Scabious, Sanicle, Mouse-ear, Vinca pervinca, Agrimony and Pimpernel, of each one handful. Seeds of St. Johns-wort and Carduus Benedictus, of each two drams: Of the three Cordial Flowers, of each a pugil. Boyl all in weak Hydromel, [that is, Honey and Water boyled together, the Honey being in small quantity] unto one pound and an half. Of the strained Liquor let him take six ounces morning and evening.

In the mean while, Injections were made daily into the Ulcer of the same Decoction. But when all would not do, but that all the aforesaid Infirmities continued, I prescribed him a sweating Diet-Drink for twenty five daies together, made of a Decoction of *Sarsaperilla* and Guajacum, of each a like quantity. Of the remaining materials a Diet-Drink was made for his ordinary drink. And every sixth day of his Diet, he took a purging Medicament. Towards the end of the Diet-Drink, the Ulcer seeming to remain much as it was at first, I caused the Chirurgeon to put a stick into the Wound, and cut the Skin and Flesh which was above it, being about a Fingers bredth deep, with an Incision Knife, that the Cavity thereof being opened, we might more easily apply convenient Medicines. The Event did answer according to my wish, for that same spongy proud flesh being consumed, the Ulcer was in a short time healed up, and the Patient freed both from the pains he felt, and from the fears he had conceived of a Fistula. To perfect and heal up the Cure, I ordered an Issue to be made in his left Arm, and that it should be kept open for a long time.

The 376 Observation or History of Famous and Rare Cures,&c.

The After-birth retained.

AT the same time, Madam *de Ruffia*, being aged Thirty five years, of a Sanguine Complexion, having brought forth a Child with much pain and Labor, had her After-birth remaining

ning within her Womb. We could not feel any Pulse that she had, her Face was like a dead Bodies Face, so that all seemed past hope. When I came to her, a certain Chirurgeon had given order, that some of her Hair should be cut off and burnt, and the ashes given her in a Cup of Wine: which being done, her After-Birth came very happily away. Howbeit, her Child-bed Purgations were stopped, which cast her into a Feaver. The day after I caused her to bleed eight ounces in her right Foot (for her Pulse was very strong and full) and the day following, because she was Costive, I ordered that she should take this following Clyster:

Take Mallows, Violet Leaves, Pellitory and Mercury Leaves, of each one handful. Flowers of Chamomel and Melilot, of each one pugil. Annis seed and Fennel seed, of each half an ounce. Boyl all in the Broth of a Calves-Head to a pound. In the strained Liquor dissolve Syrup of Violets and Red Sugar, of each one ounce, and give it for a Clyster.

When the Clyster was come away, she had a Vein opened in her left Foot, and bled seven ounces. By this means her Feaver was abated, her sleep returned, which formerly she was wholly deprived of, and by little and little, without any more ado by way of Physick, she grew well.

The 377 Observation or History of Famous and Rare Cures, &c.

A Salt Rheum, with inclination to a Consumption of the Lungs.

IN *October* 1643. I was called unto a sick man 40 years of Age, of a Cholerick Complexion, and of a lean and meagre Body. He was troubled with a salt and sharp Rheum falling from his Head upon his Lungs four years together; he had a very dry Cough, and obstructions in the parts under his short Ribs on both sides, with a slow continual Feaver. Add hereunto an Inflammation, which appeared by a pain about his Breast-bone, and the *Vertebraes* of his Back.

I ordered him in the first place a Purge made of Rhubarb, Tamarinds, Senna, Manna and Syrup of Roses, but in little Quantities. Then I caused seven ounces of blood to be taken from his right Arm. Afterward I made him take Broths made of temperate Aperitives, for 12 days together, steeping all night in every third Broth, half an ounce of Senna, and dissolving therein an ounce of Manna. When he had done with his Broths, he went into a luke-warm particular Bath made of a Decoction of Barley and sweet Almonds, twice a day, three dayes together. At the beginning of the Cure, I caused two Issues to be made between his Shoulder-blades, two fingers bredth distant from the Back-bone, on either side thereof: and I gave order, that once a Week a Cupping-Glass should be fastened upon the Issues. Which Remedy prevailed so much in this Patient, by reason of the Serosities, which in great quantity were drawn away every time the Cups were fastened, that I attributed the whole Cure in a manner thereunto.

The 378 Observation or History of Famous and Rare Cures, &c.

Inflammation of the Eyes.

A Certain Man of Thirty years old, of a Sanguine Complexion, but of a very moist Rheumatick Brain, was long troubled with an Inflammation, which did possess both that Coat of the Eye which is called *Tunica Adnata*, and both the Eye-lids. The Disease was not continual, but came by Fits. Many Medicines had formerly been used, but all in vain. At last I prescribed two Issues between his Shoulder-blades, and caused a Cupping-Glass large enough to cover them both to be applied, so often as the Rheum was more than ordinary. Which being done, his Eyes became perfectly well. This following Oyntment did not a little further the Cure, which he used at the beginning, as soon as his Body had been purged, and a Vein opened.

Take

Take Verdugreece twelve grains; Camphire and Lapis Calaminaris, of each half an ounce; Tutty prepared, half a dram; fresh Butter washed in Rose-Water, two ounces. Mix all into an Oyntment.

The 379 Observation or History of Famous and Rare Cures, &c.

A Malignant Feaver.

IN the Moneth of *May*, 1644. a Woman of thirty years old desired me to take her into Cure. She had been sick two days of a Malignant Feaver, with a pain in her Head, continual unquietness, extream thirst, and certain blewish Spots about her Brest and Back. Thrice in two days I caused her to bleed eight ounces at each time, and because she abhorred all inward Medicines, I bethought my self of some that might be outwardly applied. On the fifth day of her Disease, I caused a Cataplasm of Snails beaten with their shells into a mass, to be applied with Tow upon the Soals of her Feet. This Medicine was applied about three of the clock in the Afternoon; and when it began to draw towards Night, the sick Woman began to feel a certain grievous and troublesom pain in both her Thighs and Legs, which continued till midnight so fierce, that she always made her complaint, desiring the Cataplasm might be taken from her Feet. And at midnight she sweated all over her Body with such a filthy stinking smell, that she her self could hardly endure the same. Having shifted her Linnen, the Cataplasms were taken from her Feet, which did so stink as that they had almost poysoned the By-standers. In the morning I found the Woman cheerful, her Feaver and other Symptoms being very much abated. And I conceiving that she was past all danger, thought good to do no more to her; only I prescribed her a Purge, which notwithstanding through extream self-willedness, she refused to take; howbeit, a little after she perfectly recovered.

The 380 Observation or History of Famous and Rare Cures, &c.

The Gout.

IN the Moneth of February, 1645. a Gentleman of a Sanguine Complexion, fat and well fleshed, was for three daies troubled with the Gout in his Knees. As soon as I visited him, I ordered him to bleed a pound of blood: which appearing very impure, the day following I caused him to bleed as much more, whereby the Patient found himself much relieved, the blood being as bad the former. Then I caused him to bleed the third time ten ounces; and the day following I gave him a Purge made of Senna and Rhubarb in a convenient Decoction, with Diaphœnicon and Syrup of Roses; after which he was perfectly well.

The like succes befell me in two other Patients which were of the same temper and corpulency, in whom blood-letting three or four times repeated at the beginning of the Cure wholly took away the Disease, the part being fomented with Vinegar and Water mingled together, and afterwards anointed with Oyl of Roses.

Observations

Observations received from Msr. Des Grands Prez, *a most Expert Physitian of* Grenoble.

The 381 Observation or History of Famous and Rare Cures, &c.

A Swelling of the Tongue.

A Certain Person infected with the Whore-masters Pox was cured with Mercurial Frictions, which by order of the Apothecary, being used more frequently and longer than the Physitian had prescribed; the extream violence of the Flux, had so swelled his Tongue, that it hung out of his mouth the bredth of four Fingers. Which to Remedy, the Physitian would prescribe nothing, taking it hainously that the Order by him prescribed had been neglected and exceeded. Whereupon the Patient continued in this miserable condition for the space of four moneths, and his Tongue being altered by the Air was grown three fingers thick. I being sent for, after blood-letting, washing of the part affected, and a Seton fastened in his Neck, ordered a Pouder to be applied to his Tongue, made of Pepper, Ginger, Mustard-seed, and parched Salt. With the use whereof his Tongue began to grow soft, and to move it self the first day. The third day I ordered them to wash it oftentimes in Aqua Vitæ very well rectified; so that upon the fourth day it appeared much softer, and might be thrust into his Mouth, howbeit it would come out again presenly. But afterward perceiving certain Ulcers in the lower part of his Tongue near the Veins called *Ranulæ* which proceeded from the grating of the Teeth whereupon it rested; I caused the said Ulcers to be washed with the white Water made of white Precipitate, and I ordered deep Scarrifications to be made about the foresaid Veins. By which means, within few days the Tumor was wholly discust, and the Tongue brought to abide within its proper Quarters.

The 382 Observation or History of Famous and Rare Cures, &c.

A Dumb Person cured by Accident.

A Certain Beggar was entertained in way of Hospitality by a wealthy Farmer, in whose House he remained certain days by reason of a Dumb and deaf boy he had brought with him who was the same night taken with a continual Feaver. At length the Beggar being out of patience and despairing of his recovery, he slipt privately away and left the sick Boy behind him, who recovering his wonted health, was by the Farmer set first to look to his Lambs, and after that to keep his Sheep and Wethers, which service he performed excellent well. Now it fell out some years after, that being at Dice, he was struck over the pate with a thick Cudgel, and the hinder part of his Scul was broken into many peices. Howbeit by the industry of a Skilful Chyrurgeon he was Cured of that very Dangerous hurt. And as he grew well his sense of hearing began to come to him, and he began to mutter and babble some words, till that at last he attained to hear and speak perfectly; in which condition he lived to the fourty fifth year of his Age, serving as Vine-Dresser, to Msr. *Pajanus*, Proctor of *Grenoble*; and it is scarce two years since he died.

The 383 Observation or History of Famous and Rare Cures, &c.

Depression of the Skul.

IN many a Depression of the Skul has been cured, a Cupping-glass (after once or twice blood-letting) being fastned upon the depression with much flame; and sometimes Incision is added with many Scarrifications, and sometimes without them. Among the rest, I shall instance in one remarkable Patient named *Arthaudus*, a Proctor of *Grenoble*. This man being upon a far Journey, met his Enemy and was struck on the *Os Parietal Sinistrum*, with which blow he was struck to the ground, and left for dead. Being carried thence into a Neighbour Village, two Chyrurgeons did undertake to cure him, who used only blood-letting and Cupping-Glasses, without any regard of his wound, because they could perceive no manifest solution of Continuity. I being sent for, found the man wallowing in blood, which came out of his Mouth and Nostrils, with Stomach-sickness, and almost perpetual vomiting, hardly knowing them that were about him. Speaking with great difficulty, and not so much as opening his Eyes. Having veived his whole Head, when I did but touch his Skull where it was dented in, never so little with the top of my finger, presently he began to be Stomach sick. Which having observed, I ordered the Chyrurgeon to shave that part, and apply a great Cupping-Glass thereunto with much flame, which though it rested upon the sound and solid parts, did so much pain the Patient, that not being able to speak, he shrunk down muttering into his bed. But after the Cupping-Glass was removed, and incision made upon the part affected, and the Cupping-glass again set on, he was so far from being pained, that he perceived great comfort thereby: and thereupon began to speak to me, and knew all the By-standers. And though seven or eight ounces of Blood were drawn away by the Cupping-Glass; I ordered nevertheless, that the next day he should be again let blood. And thus the sick man, a few days after, recovered his perfect health.

The 384 Observation or History of Famous and Rare Cures, &c.

Consumption of the Lungs.

THe third Son of the Lord *de Perissol*, President in the Parliament of *Grenoble*, being fourteen years of Age, was brought from *Geneva* to *Grenoble*, in the eighth moneth of his Disease being consumed with Leanness & Consumption of the Lungs, with a very great Loosness, so that I foretold his Father he would shortly die because of an Ulcer of his Lungs, which he coughed up bit after bit, and those bits being laid upon the hot coals, they stunk extreamly. Also his breath smelt so strong, that it did not only infect the sick Mans Chamber, but was smelt all the Stairs over, by those that lodged near. All which considered, I said I could appoint him no other Medicine than a Womans Milk, which he must suck from the Dugs of an healthy well disposed Nurse. Which putting in Practice the next day, the Patient was something better the day after, and within two moneths he was perfectly thereby recovered. This Disease arose from a Pleurisie ill cured, which was changed into an Empyema, and the Empyema into a Consumption of the Lungs. This very Medicine I have experimented in many other Persons, in my self and Son, and two Gentlemen who did spit blood in great Quantity.

The 385 Observation or History of Famous and Rare Cures, &c.

Pricking of a Nerve.

A Certain Merchant of *Grenoble*, smiting upon a Table with his Hand doubled in, struck a Needle unto it, which stuck in a clue of thred. For two days together he felt no inconvenience thereby, but the third day so great pain arose in the part, continuing for divers days

days following that it could not be asswaged, either with blood-letting, Fomentations, Cataplasms or Anodynes. Observing the contumacy of this pain, I question the Chyrurgeon whether he did ever know that this Patient was troubled with the Whore-masters Pox; he told me, that three years agoe indeed, he was troubled with the Gonorrhæa and Putrifaction of his Yard, but was perfectly Cured thereof. Forthwith I prescribed him a Suffumigation of Vermilion, Storax, Benjamin, Frankincense and Henbane seeds, mixed with Turpentine; wherewith only his Hand was smoaked, and presently he was better, and the Medicine being continued a few days, he was perfectly Cured.

The 386 Observation or History of Famous and Rare Cures, &c.

A Quartan Ague.

I Have cured many of the Quartan Ague, whose happy cure, after Universal Medicines, I have cheifly attributed to *Oleum Magneticum*, Oyl of the Load-stone, which has no visible or otherwise sensible operation. I give two or three drops thereof in a spoonful of Wine, at the beginning of the Fit. And thereof I make my *Pilulæ Febrifugæ*, or Ague Quelling Pills.

The 387 Observation or History of Famous and Rare Cures, &c.

The Falling sickness.

I Have often tried, and can prove the same by many Witnesses, that Peony gathered under its proper Constellation, *viz.* When the Moon is descendant in the sign of *Aries*, does remove the Falling-sickness only by external Application. And I caused a certain Virgin of eighteen years of Age, who had been troubled with this Disease from her Child-hood, and dayly fits, being in the Hospital to wear it about her Neck and Arms. After which she was perfectly cured. Hence it is apparent, of what Consequence Astrology is, in the Practice of Physick.

Observations communicated by Dr Henricus Rufus, *Practitioner among the* Sammarcelinensians.

To Mst. Dr *Lazarus Riverius*, Councellour and Physitian to the King, and worthy Professor of Physick in the University of *Montpelier*, *Henricus Rufus sendeth Greeting.*

SInce the time that you (most worthy Professor) have shined as a new Star in this Province, no wonder it is that all Eyes are intent upon you, and seeing that by your light you do exceedingly refresh and cheer us, it is fit that we should extol and praise you, being made happy by your Influence. For he that does not know your Vertues and worthy Life, has at least heard of you and wished that he might be better acquainted. I will not insist upon the Gifts of your mind, and excellency of your discourse sweetned with Learning. So many people as at Grenoble, *and every where in the* Delphynate *you have recovered from the Jaws of Death cannot, nor ought to conceal your praises; only there is one thing that does afflict and make us miserable,* viz. *That the* Narbonensian Province, *and* Montpelier, *will not let us longer enjoy your presence, Howbeit, no place can wholly want you (renowned Doctor and Professor) for besides what was said before, your most accurate Practice of*

Phyſick which you have publiſhed, does comfort us in your abſence, and gives this advantage to the Common-wealth of Phyſitians, that we can have your advice though your ſelf be abſent: And yet this is not the end of your Labours; for in the middeſt of ſo many weighty Employments which take you up in the Univerſity of Montpelier, *and the importunities of ſo many ſick Perſons, which ſeek unto you for health, you are buſily compoſing another Book of your Obſervations, not regarding your health, nor diminiſhing your ſtudies, thae you may add Luſtre to the Art of Phyſick. Which though of your ſelf you could ſufficiently accompliſh; yet it is your deſire to adjoyn the Obſervations of divers Friends: neither have you diſdained to deſire my poor Obſervations, who was once your Scholar, and do account it my Glory to have learnt the Rudiments of Phyſick from your Mouth. I have yeilded to your command, though not ignorant that I bring Water to the Sea. If you ſhall read them, and find ſome things therein not conveniently expreſſed, I am well content (worthy Sir) that they ſhould be corrected by you, to whom I have vowed eternal Service and Veneration. Farewel, and live long to bleſs me, and the whole Tribe of Phyſitians.*

From my poor Study,
the Ides of *July*, 1645.

The 388 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Monſtrous and unwonted Hiccup.

Anno, 1634. in the Moneth of *December*, A Tailor of fifty years old, by reaſon of faſting, cold, and journeying, fell into the Feaver Ephemera, which within twenty four hours was diſcuſſed by plentiful ſweat: ſo that the following day, he continued free from his Feaver and Head-ach until eight a clock; howbeit he had no appetite to meat, and was very ſleepy and ſluggiſh. But upon the eighth day in the morning, he was again ſeized by the Feaver without any ſhaking; and a while after, towards the evening, he was tormented with a moſt greivous Hiccup, the noiſe whereof was heard four Houſes off in the Neighbour-Row, and eaſily in the ſtreet without any truce or intermiſſion. In the mean time, he was not very thirſty, and well in his wits, but very impatient of ſo cruel a Symptom. At eleven a clock with coughing he vomited a crude matter, not unlike corrupted fleſh, which the by-ſtanders took to be a peice of Marmalade of Quinces, which the Patient had eaten not long before. But the day following, he caſt up a bit of the ſame colour and greatneſs, *viz.* red, and as big as a Hazel Nut; which I cauſed firſt to be waſhed in Water, and then laid upon the coals, whereupon loſing its red colour, which it left in the Water, and ſtinking extreamly in the broiling, it appeared to be (as I formerly gueſſed by the ſtory) a piece of fleſh with the Membranes, eaten off from the Oeſophagus, or upper Orifice of the ſtomach, by an Ulcer which lay concealed in the ſaid Oeſophagus. Whether that Ulcer was bred all on a ſudden, taking its riſe the firſt day in which the man was taken with the Feaver Ephemera: or whether it was contracted long time before, is uncertain. Yet it is likely that it began not ſo ſoon: firſt becauſe no Inflammation or other tumor had gone before, which is commonly attended by an Ulcer: Again, becauſe that for many years he had been vexed with a light Cough, which brought up nothing viſible. So that the Diſeaſe, which had long ſince rooted it ſelf under the firſt Coat of the Oeſophagus or Stomach, being produced by thoſe external cauſes fore-recited, did all on a ſudden diſcover it ſelf. Now the Symptom was continual by reaſon of the Ulcer, whereof he died upon the fourteenth day raving: For the Hiccuping would remit nothing of its fierceneſs, neither with Blood-letting, Cupping, Deterſive Medicaments, Digeſtives, nor Purgers, amongſt which Hiera is very much commended.

The 389 Observation or History of Famous and Rare Cures, &c.

An Inflammation in the hinder part of the Brain, with Symptoms therefrom arising.

THe most noble and illustrious young Gentleman, *Monsieur de Larthandiere*, thirty seven Years of Age, fell in the Dog-days into a most grievous and sharp pain of his Head, which troubled him most in the hinder part, and towards the left side. He had an obscure and very light Feaver, his Sences were vigorous, especially his Tast: howbeit he was mighty thirsty, and could take no rest. His Forehead was not all hot, his Head but little, he felt no pain, though his Head were hard touched; laying our hands, one to his Forehead, the other to the Hinder part of his Head, we perceived his Brain to be shaken and pulled, within his Skull, and his whole Head did involuntarily shake this way and that way, his Urines were at first thick and white. Which things having observed, fearing there was a Phlegmone or Erysipelas in his Brain, I ordered him to bleed; first from the Cephalica or head Vein, then from the Mediana, two pounds of blood. The following days because the pain raged terribly, we caused him at several times to bleed two pounds more in the other Arm. On the fifth day we purged him; on the sixth we drew half a pound of blood, with Cupping-Glasses fastened to his Shoulders. In the mean while, his Head was shaven, and bathed with Vinegar of Roses, and we omitted nothing which might revell, derive or repel any kind of humors from the Brain. On the fourth day of the Disease, there brake forth a small Tumor on the right side of his Tongue, which we found to be hard, hollow, and Ulcerated without feeling, and indeed no other than a Cancer. On the seventh day towards the evening, he raved a little, and soon after he began to sweat, first in his Face, and then plentifully over his whole Body, so that we hoped there would be a true and a perfect Crisis: his Sweat was wiped off, his Linnen changed, and he did Sweat again abundantly. And now he began to complain of the Cloaths, crying out that he was smothered, which being removed, and the Sweat wiped off as before, we found him almost quite spent, and perpetually raving. His strength, which was very firm before the Sweat, we perceived to be wholly weakened, and in this condition he continued all night until nine a clock in the morning of the eighth day. He raved and talked exceedingly, being forgetful of all that had happened, or had been done about him, during his whole Disease. About ten of the Clock he seemed to come to himself, and to remember some things, and so we should have had some hope of him, but that his Convulsive Pulse, and the trembling of his Limbs did declare his Brain to be extreamly disordered. Soon after he pist plentifully, and his Urine was Red and shined like fire. About the same time as the day before, towards the evening he raved again, was which so much the worse, because, having recovered strength, he became Frantick, and drove all the-by-standers from him with great terror. At nine a Clock in the morning, he came to himself again, and continued so until the evening, about which time, a swelling rose in his Neck, as big as an indifferent Apple, not painful, nor different in colour from the rest of his Skin, nevertheless he continued raving with a Convulsive trembling of his Hands. On the tenth day all things continued alike. Towards the end of the eleventh day, he died with Convulsions. And because he was one of an illustrious Family, and much esteemed by his Friends, and died so unexpectedly, his death not being foreseen till the seventh day, nor foretold, it was thought convenient to open his Body, that the cause of his death might be manifested to his Friends. The other parts of his Body were found in a good condition, all save his Brain: For his Skull being opened, great plenty of very black blood, but thin flowed presently forth, before the Coats of his Brain were opened, and ere the Bone was well sawn asunder, it came out by the Saw; which blood being shed between the Skull and the Coats of the Brain, was guest to be two pounds or more. When the Coats of the Brain were discovered, we found them diapred all over with little Veins, which swelled with black adust blood. And in the hinder part for the depth of two fingers, and the length of four, where the Torcular Brain-tunnel is said to be scituate, there was not only blackness, but the Membranes were of a bright red colour, and perished with a Gangrene: into which part, when I caused a Pen-knife to be thrust, presently there

there came forth five or six ounces of a purulent matter or quittor, which stunk. Afterward the Chyrurgeons making deeper incision, all the Basis of the Brain very near, especially the Cerebellum, and that part of the Marrow of the Back, which is contained in the uppermost Vertebraes, and upon which the swelling did arise, were found likewise Sphacelated and mortified. And the Coats of the Brain were on the left side eaten through with Ulcers, through which 'tis probable the blood had Issued out, which was found immediately under the skul. By the narration of all which it is easie to infer, that the cause of that same sharp pain, want of Sleep, Ravings and Convulsions was the solution of Continuity, in the hinder part of the Brain called Cerebellum, or the Little Brain. Now two causes there were of the Solution of its Continuity, *viz.* an Ulcer and an Inflammation. The Ulcer being the principal cause, which was contracted some moneths since, by means related to me but not to be published, produced that little Ulcer in his Tongue, and made the Brain weak and subject to be inflamed. Now the Chollerick Inflammation was augmented, by the Patients youthful Age, his temper being Sanguine mixed with Choller, and by the hotness of the weather: but certain external Causes did especially further the same, *viz.* Swimming in cold Water, in the open Air, after he had been heated by abiding in the Sun and by being chafed with anger. But the Causes, why so obscure a Feaver should be attended with so many terrible Symptoms, were these, The first was because his Brain was only affected, and all other parts of his body sound. Secondly, because the Brain has of it self but little feeling, and is of a cold and moist temper. The third and most remarkable was, because the Brain is far distant from the Heart, and therefore the Spirits which pass to and fro in the Brain, being once gotten into those Labirinthian contextures of vessels in the Brain can hardly return unto the Heart, and consequently do not communicate thereunto the contagion of the part affected.

The 390 Observation or History of Famous and Rare Cures, &c.

A Lingering Disease proceeding from the Lungs being blasted, of which a Maid died, never perceiving her self to ayl any thing, February. 1643.

A Virgin of good Parentage, being over fourteen years of Age (as many supposed) was taken away by Death. Two years before, she was given to sighing, she loved solitariness, and her Face and whole body was pale and white. Two moneths before, when I visited her Brother, who was also wasted with a Lingering Disease, her Mother desired me to feel her pulse, whether she was Feaverish. I observed her pulse languishing and unequal, but without any Feaverish heat; wherefore, after I had a while considered her pale countenance, and questioned her Age, it came into my mind that her courses were about to come, which being by reason of the narrowness of the Veins and other passages hindered, Nature endeavoured to make way for them, whereupon the blood was by them infected, and stirred up those light Symptoms, as often happens to Virgins of the same Age, and her Mother and Kinswoman were of the same mind. Whereupon these things being done and said upon the by, I departed, resolving to inquire further into the matter, if her ilness continued, or the Symptoms should grow worse. But these promises on both sides, being either neglected or forgotten, two moneths after I was called in good earnest to the maid; I found her Disease much more grievous as being accompanied with want of appetite and a continual Feaver, and intended or encreased towards night, without any burning biting heat, or other sensible Symptom or token; she was very much weakned, the circumference of her Nostrils did widen themselves as she breathed, and yet she had no great difficulty in fetching her breath, no thirst, no redness in her Cheeks, no want to sleep; as she lay in her bed, she coughed a little without spitting. Her Heart, being moved more frequently and strongly still towards the evening was perceived to pant by laying on of a bodies hand, she her self not perceiving the same; her Urines were thick, white, fatty, with a broken Eneorem a or swim of the same condition. She never raved, she never lost nights sleep, no not so much as the last night, in vvhich quietly and vvithout any pangs or struggling, she changed her life for a better. Wherefore because of her unexpected Death in respect of her Parents, and because thirteen more of the same Generation had died either before or at the time they became marriagable, it vvas thought convenient by her friends to open her. And in the

the first place, her body being uncovered, we saw both her sides, from her Arm-pits to the last Bastard Ribs, spotted with reddish black and blew spots like stripes. Her Bowels contained in the Belly were sound, only her Liver was a little more black than ordinary, and her Stomach very small and coloured with Choller green as Leeks. When we came unto her Chest, from the Cavities thereof being dissected, there issued an abundance of venemous stinking Water, to the Quantity of four pints. 'Tis a wonder that it had not caused great difficulty of Breathing, while she lived, or that it had not been perceived to fluctuate by the Ear. Her lungs we found blasted; also in their edges round about, we saw every where whitish specks, which did break with the lightest touch, and quittor with corrupt Humor came forth of them. Yea, and the infection had dyed all the Vessels and Cavities of the Lungs with a light red colour. The Membrane *Pleura* and the intercostal muscles were tainted with a greenish colour; the Midriff was well, but the Pericardium or Heart-Bag by reason of Neighbourhood, was withered, putrified and dryed up. The Heart and Brain were sound. All things being considered, it was determined and resolved, that this infection had its original from the Parents, either from the seed or blood. The examples of her Brothers prove the thing. And if this Disease in the Virgin had come from any external cause, some part only of her Lungs would have been Diseased, and not the whole body of them. For she had not offended in her Diet, and course of Life: also her quiet death did testifie, that the corruption in the substance and temperament of those parts was made by little and little, and came not by a violent cause. And again, forasmuch as she had no cough, it is thereby apparent, that no flux or collection of Humors did corrupt her Lungs. Furthermore, as no man doubts but that such diseases are propagated from the Parents to the Children; so it cannot be denied, but that they may easily be communicated; and we ordinarily find, that in Families infected with such Diseases, many are taken with the same Disease, either all together, or one after another; yea, and sometimes they are transmitted unto the fifth or sixth Generation, and infect other Persons that converse with them.

The 391 Observation or History of Famous and Rare Cures, &c.

Stones continually voided by Stools.

I Knew a Gentleman, who so often as he went to stool voided with his Excrements stones of an uneven, Pointed superficies, of an Ash-colour, for many years together, not unlike in colour and substance to them which come through the Uretors from the Kidnyes. These stones, both with their bulk and sharpness did Vex his Fundament in their transition; so there is no doubt to be made of the stones, or of their perpetual Generation.

The 392 Observation or History of Famous and Rare Cures, &c.

Stones bred in all parts of the Body.

I Knew another honest Man who dwelt in the House of Msr. *de Leyssins* the Kings Councellor in the Supream Court of the *Delphynate*, being his Secretary and Clerk of the Market, who could shew great and little stones in any part of his body; I have often seen and touched such stones upon his Flesh, Muscles, Membranes, Nerves, Bones indifferently: so that his Ears, Nose, Dugs, Eye-brows, were not without them; for they bunched out visibly and appeared moveable to those that touch them; and if in one part they come to be dissolved, they grow in another, and they dayly encreased both in number and magnitude. The same Person was also Nephritick, and once when I visited him, he shewed me upon the whirl-bone of his right Knee, a notable tumor, full of divers such like stones distinct one from another, which were as in a bag and rattled when they were stirred. Some moneths after I came to him again, and he told me the same tumor was become soft and smooth. I Bared both his Knees, felt the swellings and perceived indeed that they contained an humor in them: and incision being made, presently came forth three or four ounces of very white well-digested matter and thick, such as I have often

ten

ten seen to come from those kind of Tumors which are called *Steatomata*, that is, Tumors full of matter like Tallow or congealed fat. In his left Knee, because I felt certain firm Stones yet remaining, though with soft matter between, I did not open the Tumor, waiting till they were fully dissolved.

The 393 Observation or History of Famous and Rare Cures, &c.

Stones bred in the Spleen vomited out.

I was cruelly troubled for four years together with the Stone in my Kidneys without any sensible hot distemper of my Kidneys or Liver, from which I was freed by little and little, by Gods blessing upon the use of the vitriolated Aureilian Waters. But I had scarce left voiding of Stones and Gravel, when I was taken with most cruel pains in my left side, about the Spleen. The pain took up but a small compass, not reaching so far as my Navil or Belly, only my left Kidney did Sympathise by fits, and the left side of my Stomach, especially when I was disposed to vomit. This Disease after ten days began to break away, touching which I observed, that I was neither bound in my body, as is usual in the Chollick pains, neither was my Urine stopt, which happens in the Stone of the Kidney: but contrary wise I voided abundance of Urine, in which you would have said there had been the pouder of Tiles and Bricks dissolved, which quickly sunk to the bottom of the Chamber-pot: yet that thick settling was not rough or gritty, nor any ways stonish, but it was quickly upon the least agitation mingled with the Urine like Chalk. I was vexed with the like fit, three or four times in the beginning of the Winter, using to mitigate the greivousness of the pain, such remedies as are wont to be administred commonly for the pain of the Chollick, only I omitted bathing, which I formerly found did me much hurt. And seeing among other Symptoms, frequent and painful vomitings did cheifly afflict me, before which I was troubled with anxiety and grievous Heart-burning: it came into my mind to make diligent enquiry what the conditions of that matter were, which I vomited up in such abundance, even when my Stomach was empty. As for colour it was a dark red, in consistence like a pultis, thick and clammy, and I found many little stones therein of an Ash-colour somewhat yellowish, such as formerly I had voided by Urine, and that not once only, but as often as I vomited with great straining and pain; or as often as the foresaid pain returned. This last year 1645. the pains grew milder by little and little, my Kidney pained me but little, but my Spleen and the left side of my Stomach pained me more than that, according to the old manner, but that the fits came not so often. By which I perceived, that the Seminary or Mine of these stones was first and last in my Spleen, and in the Vessels thereof, & that by the *Vas breve* (which by the Medicinal Waters and by vomiting, was made wide and open) it sent part of its stones with abundance of black choller into my stomach, which at first were carried only to my kidneys.

Observations communicated by Dr. Simeon Jacoz, *a most expert Costensian Physitian.*

To the most renowned Mst. Doctor *Lazarus Riverius*, Councellor and Physitian to the King, and his Majesties worthy Professor in the most Famous University of *Montpelier*.

WHat you lately desired, or rather Commanded me to do (most renowned Professor) I do now willingly perform, and present unto you the first fruits of my Practice of Physick or rather the fruit of your own Learning, which none can so justly Challenge, as he that took so much Care to manure the same. My poor Observations

do

do returne unto you as unto their spring, which it is your pleasure to joyn with the Observations and experiments of your self, and other excellent Worthies of our Art. They are yours, because I am so; to you they are due, because you are the first Author of them, under whose conduct I first set sail in the Sea of Physick: by whose Guidance I have luckily run the Apolinary Race, and then quietly rested my self in the quiet Station of your Family, in which as you have sowed in me the first seeds of practical Physick both publickly and privately, and cherished the same, so do you now make it your glory, when they are coming abroad into the World, to defend them from the danger of Calumny whereunto they are liable; for seeing so many difficulties do for the most part accompany, and so great dangers follow our first endeavours, I should never have dared to have let these first fruits of my Practice to see the light, were they not to come forth under the Happy Conduct of your Name, and had I not your self both for Captain and companion in my Journey. Whom because the Cure of diseases has made famous, use has made expert, and experience has made you happy and fortunate in Practice; whom Diseases fear as their Enemy, Men Love as the recoverer of their Health, and Death hates as his Conqueror. It shall never greive me to march into the Field under so great a Commander, who has evermore been freindly unto me both in publick and Private occasions, and in the middest of innumerable assaults of adverse fortune, has born up and cheered my mind with his dayly converse: who being exceedingly careful of my Learning, has continually watered my Wits with the fruitful streams of his Doctrine, and opened a way for greater things which peradventure riper age, and more advantagious opportunity may hereafter bring forth.

If *Fates* give Leave, If *Phœbus* when I pray
To bless my Studies, He *Amen* shall say.

In the mean time Fare you well, and long may you shine like a new Apollo *upon the Famous Universsity, and whole* France. *Many and happy years may you live; which is the ardent prayer of him, who is your most devoted.*

Dated the 6. of the Ides of *October*, *Anno* 1645.

SIMEON JACOZ,
Dr. of Physick
of *Montpelier*.

The 394 Observation or History of Famous and Rare Cures, &c.

A Deadly Frigidity of the Tongue.

A Young man of *Montpelier*, of twenty years old, by name *Ludovicus de Camp*, was in the moneth of *June*, 1643. troubled with a long Loosness, and was at last brought into the City Hospital, being by the Governours of the City committed to my Care. After divers Remedies administred, convenient for one in his condition for fifteen days together and all in vain, the Disease continued in the same condition as at first, with very great weakness, yet his appetite was pretty good and his thirst not very great. And in this condition he lived six or seven days longer, after which, I found his Tongue moist enough, and having its Natural colour, but it felt cold, without any coldness of his Hands or Feet; so that nothing seemed to trouble him but his Loosness, with which he was much weakned, yet I thought he would die in a short time, yet he lived four days with an actual coldness of his Tongue.

Another of the same Age in the same Hospital had many Ulcers in both his Legs and a Fistulous Ulcer in his left Groin, and being suddenly fallen away in his flesh he wasted to the grave. Howbeit, he continued in that condition two moneths or more, growing still leaner and leaner, and at last his Tongue became actually cold as in the former example, which calling to mind, I foretold that he would die within a short time, as it fell out twenty four hours after.

Another named *John Aventurier*, fifteen years old in the same Hospital was sick of a bloody flux: and within six days space his flesh was wasted away, his Tongue being actually cold, without any great coldness of his Hands or Feet, and the next day he died. From which

examples we may gather, that coldness of the Tongue is to be reckoned among the tokens of Death.

The 395 Observation or History of Famous and Rare Cures, &c.

The Falling-sickness joyned with a Dead Palsie.

A Girle named *Catharine Bognole*, ten years of Age, of a flegmatick Constitution, and of a broad well set body, was troubled five or six moneths with the Falling-sickness, by Fits coming almost every day, yea sometimes twice or thrice in a day; to which was added a privation of motion and sense in her right Arm. This Girle being brought into our Hospital in the moneth of *December*, 1643. I prescribed her in the first place a potion purging flegm with a Cephalick Decoction, which after some days was repeated, and she used between whiles preparatives and specifick Medicaments, but without profit. At length I gave her about two drams of *Montagnana* his Opiate four or five days together, which being over, she began to stir her fingers and soon after her whole Arm, and she was not so frequently taken with fits of the Falling-sickness; so that within twenty days (she taking every morning of the foresaid Opiate) was perfectly cured of both Diseases. The Opiate was made as followeth.

Take Roots of Male Peony, Stœcados, Costus, of each ten drams: Agarick, five ounces: Pellitory of Spain, Caroway-seeds, Annis-seed, Assa Fœtida, and Aristolochia Rotunda, of each two drams and a half; Juyce of Squils and choice Honey, of each one pound and two ounces. Let the Juyce of Squils and the Honey boyl together over a gentle fire, unto a good consistence, then add the pouders and make all into an Electuary. Let the dose be two drams every morning three hours before Meat.

The 396 Observation or History of Famous and Rare Cures, &c.

Fits of the Mother.

A Woman of *Montpelier*, threescore years old, had Fits of the Mother twenty four hours, with pain of her Head and Belly, especially over against her Spleen. She was full of Unquietness, could not sleep, and was very thirsty. And because she would admit neither of Clysters nor Cupping-Glasses, she was content only with a Plaister of Galbanum applied to her Navil. I advised her when she was a thirst to drink a Cup of Water tempered with Vinegar, which she did three or four times, and within a few hours she recovered and was free from her Fits. Another Woman I freed from fits of the Mother, only with a Clyster of Vinegar and Water, which she kept two hours.

The 397 Observation or History of Famous and Rare Cures, &c.

Gouty and Whore-Pockie Pains.

A Young Man of twenty five years of Age, named *Matthew Farlet*, for two moneths was troubled with most cruel pains of his Joynts, especially in his Knee, with a swelling which had the same colour with the other parts, and felt no pain when it was touched, but had a deep inward pain; the like he had in his Shoulders, Arms, Hands and Fingers, which were more sharp in the nights, tormenting the Patient and forcing him to keep his bed. After I had Physicked his whole body by Apozems and Blood-letting often repeated, he felt some ease, and especially by the use of Jallap, so that he was now able to go. Yet there remained a pain (though not so grievous) in his Knee, Arms and Shoulder-blades, which came still in the night: whereupon I conjectured that it was a Pocky pain; the rather because two years before he had been troubled with the Gonorrhæa: which being cured sooner than

then was fitting, he said he felt no pain from that time. He being brought at last unto the Hospital, because he was a Forreigner; I gave him for seven days together Mercurius Dulcis with Conserve of Roses, the first day one scruple; the second, third and fourth, half a dram; the fifth sixth and seventh, two scruples. It caused a light Salivation, an hour or two after the taking, which continued till dinner time; it gave him two stools a day, without any griping or sickness of Stomach. The Mercurius Dulcis was six times sublimed. On the eighth day he took a pouder of Senna, Cream of Tartar and Jallap, which purged him very well. And so his pain went quite away.

The 398 Observation or History of Famous and Rare Cures, &c.

A Swelling and pain in the Knee.

ANother young Man, twenty two years old, in the same Hospital of *Montpelier*, had a swelling in his left Knee, with a pain which came by Fits, which had succeded a Rheumatism, and had vexed him four or five Moneths. After universal Evacuations he took in the same time Mercurius Dulcis according to the Method aforesaid, for seven days with a light Salivation every morning after the taking the Pouder. But upon the seventh day he was extreamly fluxed, and the Roof of his Mouth and Jaws were Ulcerated, his Teeth loose and ready to drop out of his Head; flegm continually flowed out of his mouth which stunk so that himself could not endure it, and he slept neither night nor day. After four days time, I thought it time to stop the flux. Wherefore I prescribed him a Laxative Ptisan, to be taken twice a day for two days together, and so the Humors changed their course downward, the swelling went away, the pain ceased, and the Patient began to go without any help, and without any more Physick, after fifteen days, he returned safe and sound into his own Country.

The 399 Observation or History of Famous and Rare Cures, &c.

A Dropsie.

A Country Fellow thirty years old having had the Dropsie three Moneths, was brought about the end of *January*, 1644. Into the Hospital; and a few days after died. His body being opened, an huge Quantity of Water came away; we found his Liver in a very good condition: but his Spleen so corrupted that the whole substance thereof was like melted Pitch. Whence it is apparent that every sort of Dropsie is not always caused by extream weakness or distemper of the Liver

The 400 Observation or History of Famous and Rare Cures, &c.

Immoderate Flux of the Courses.

A Country Woman, thirty years of Age in the Moneth of *June*, 1644. was troubled with Immoderate flux of her Courses, and she was exceedingly weakned by reason of continual loss of blood for divers days together, so that she gave her self over for a lost Woman. It being my hap to be rambling in the Country as I recreated my self with Hunting, because Medicines were not there to be had, and her purse could not reach to the price of them, I gave her presently, about six in the evening five or six ounces of the Juyce of Nettles, and I ordered to lay upon her belly below her Navil a Cataplasm or Pultis made with the same Juyce and Wheat-flower. About Midnight I gave order to repeat both the Medicines, which being done, the Woman was better in the morning, her flux of blood stopped, and by little and little she grew perfectly well without the help of any other Remedy.

The 401 Observation or History of Famous and Rare Cures, &c.

The Whites.

A Costensian Woman fourty years old was troubled seven moneths with the Whites being of a Wheyish Nature, whom I cured within five weeks, by giving her every eight days eight grains of Rozin of Jallap; the serosities being purged away, upon which the Disease depended. And then I took away all occasion of Relapse, by this following Opiate.

Take old Conserve of Roses, two ounces; Conserve of Roman Wormwood one ounce. The powders Trionsantalon, and Aromaticum Rosatum, of each one dram: Red Coral prepared, half a dram; Old Venice Treacle, two drams; with Syrup of dried Roses, make all into an Electuary. Of this she took the quantity of a Hazel Nut every night, when she lay down to sleep for a long time together.

The 402 Observation or History of Famous and Rare Cures, &c.

Hard swelling on the Back of the Hand.

A Costensian Maiden of twenty years old, had a Scirrhous Tumor on the back of her hand, which was discussed by my advice; for a leaden plate smeared with Quick-silver, was laid upon the swelling and worn there eight days, and so the Tumor went away and came no more.

The 403 Observation or History of Famous and Rare Cures, &c.

A Beginning Dropsie.

A Woman twenty five years old named *Damiana Gulon*, who was my Neece, was troubled two years with suppression of her Courses, by reason of an heedless Course of Life, and because of Errors committed in her Childing (for she had come too soon into the cold Air,) with want of sleep, want of Appetite, sluggishness and loathness to stir, difficulty of breathing, swelling and hardness of the Spleen, and falling away of her whole Body; so that it seemed she would soon fall into the Consumption or Dropsie. She had used divers Medicines for almost an whole year, prescribed by most skilful Physitians according to the Rules of Art. But her Disease getting head, and all Remedies being used in vain, her Legs began to swell, and also her belly, though in much measure puffed up with Wind. All the the Symptoms grew dayly worse and worse, and at last the Region of her Stomach was raised up into a Transparent swelling. Being thus afflicted and cast down, she came to me, and with the following Medicines she was cured in the moneth of *September*, 1644.

First of all she took four days together a Laxative Ptisan of the Infusion of two drams of Senna, with half a dram of Sal Prunellæ, and fifteen drops of Oyl of Sulphur per Campanam. Then she fell upon the use of these following broths.

Take Sparagus Roots, Grass and Cichory Roots, of each half an ounce; China Roots cut in slices, one dram. Leaves of Agrimony, Ceterach, Bugloss and Cichory, of each half a handful; Crystal of Tartar, two scruples: Boyl all with a Quarter of an old Cock. In the strained broth dissolve, Salt of Wormwood and of Tamarisk, of each one scruple. Sugar of Roses, two drams: Let her take of this broth every morning three hours before meat, for twelve days together.

Her broths being ended she took again the Laxative Ptisan aforesaid for three days. And then she used this following Electuary, whose wonderful Effects, I have often times beheld.

Take Conserve of the Flowers of Tamarisk and Maiden-Hair, of each an ounce and an half.

Conserve

Conserve of Elicampane Roots, six drams : Steel prepared with Sulphur, an ounce ; Salt of Tamarisk one dram : Spirit of Sulphur per Campanam ten grains : With Syrup of preserved Citron peels : Make of all an Electuary, of which let her take every morning two or three drams ; for fifteen or twenty days together, and walk upon it.

She drank Water of the Infusion of Steel, with a little red Wine mingled therewith.

She had two Issues made at the beginning in both her Legs, and they were always kept open till she was perfectly cured. She presently began to mend, after the use of the foresaid Medicaments ; for her belly fell by little and little, she gained her Stomach and the fresh colour of her Face, with her natural sleep ; and the hardness on her left side was softned, and she recovered the benefit of her Courses.

The 404 Observation or History of Famous and Rare Cures, &c.

Worms.

A Boy four years old much subject to Worms in the moneth of *September*, 1644. was troubled with want of Appetite, Stomach-sickness, itching of his Nose, thirst, big-belly, with gripings in his Guts and a Feaver : so that it was apparent, all things considered, that he had Worms. I gave him twelve grains of Mercurius Dulcis, six times sublimated, with five grains of Diagridium. Two hours after he had taken the Medicine, he voided about twenty worms in a Knot, by stool, and all the foresaid Symptoms departed, and the boy became perfectly well.

The 405 Observation or History of Famous and Rare Cures, &c.

Intollerable Head-ach.

A Certain Man, fifty years of Age, lean, and of a thin texture, exceeeding prone to Anger, was troubled about two years with an extream sharp pain of his Head, on the right side thereof, from the top of his Head to his temple on the same side, which pain as oft as it returned, (which was three or four times a year) it forced him to keep his bed, and did so torment him that it brought him almost to desparation : but without any Feaver, Thirst, or Inflammation, only there was great pulsation of the Artery of that Temple. Being called to him in the moneth of *September*, *Anno* 1644. I ordered him to be let blood, giving him first a Clyster, to clense away the Impurities of the first Region. Then I gave him a Medicine to purge Choller, which was repeated after a few days, and he took in the mean space Juleps to refrigerate and prepare the Chollerick Humor. Afterward repelling Medicaments and Vinegar of Roses were applied to his Head, and the revulsions were made with Cupping-glasses, with and without Scarrification, and his extream parts were rubbed. He was again let blood, and yet his pain went not away. It returned in the beginning of the spring, *Anno* 1645. I gave him first an Emollient cooling Clyster, then a Medicine purging Choller, and so I came to open the Artery in his temple, which was performed by reason of the urgency of his pain, and there came five ounces of blood leaping out. And then appling Lint wet in cold water and binding it on, as is the practice in ordinary blood-letting, his pain ceased within half an hour, which formerly was wont to torment him many days together, and it returned no more from that time forward.

There might have been applied for more sureties sake, *Galens* Plaister of Frankincense, Mastick, Bole-Armenick, and the Wool of an Hare with the white of an Egg, and a good Ligature ; but we found no need thereof.

The

The 406 Observation or History of Famous and Rare Cures, &c.

A stubborn pain of the Head.

A Woman of *Costa* fifty years old, too much noted and over Famous, was troubled in the moneth of *October*, the year 1644. with difficulty of breathing, and a most cruel pain of her Head, which came and went by Fits, and troubled her most in the night, and seeing that it would not be removed by purging and strengthening Medicaments applied a moneth together; I suspected that it was a Pocky pain. And this suspition of mine was strengthened by the wearyness which she felt, which came of it self without labour, by her lazyness and loathness to stir, and because sometimes she was thick of hearing, and had a Ring in her Ears. The digestion of her Stomach and Liver was weakned, she was pained and tormented very much in the former part of both her Legs, especially in the night: also besides the course of life which she had formerly lived, the year before she had often used a Sudorifick Diet, Frictions with Mercurial Oyntments and Mercurial Pills. Wherefore the season of the year being extream cold, and the condition of the Patient would not bear the use of Antivenerial Medicaments; I bethought my self how to remove the pain of her Head, which because it came and went, I conceived it was caused by the malignant quality of the Quick-silver assailing and molesting the Brain, and I was not mistaken in my conjecture, for a piece of Gold being wrapped up and thrust into each Nostril and keep there some hours, and then taken out, they were both coloured white at the ends with the Quick-silver, and being put a little into the fire they recovered their former colour. Another peice of Gold which she held four or five hours in her mouth, was taken out white, and being put in hot coals, the Quick-silver vapored away. And with this Remedy often repeated, that most cruel pain of her Head was taken away wholly, Howbeit a little heavyness remained. And the Woman seemed to be better many days together, so that she rose out of her bed, could eat her meat well, and professed that she was cured; the shortness of her breath still remaining, and the pain of her Legs always returning in the nights. But fifteen days after, she was taken with a continual Feaver and died.

The 407 Observation or History of Famous and Rare Cures, &c.

A Bastard Tertian.

A Certain Man of *Costa*, twenty seven years of Age of an excellent Habit and complexion of Body, about the beginning of *September*, 1644. was taken with a Bastard Tertian, which having continued a whole moneth, and Medicines prescribed by another Physitian according to the Rules of Art, being used in vain: he took by my advice a vomit of one dram of Salt of Vitriol dissolved in Water, which caused him to vomit three or four times, and his Ague returned no more.

The 408 Observation or History of Famous and Rare Cures, &c.

Tooth-ach.

IN the beginning of *February*, 1645. I was taken with a frequent and troublesom spitting, with most cruel pain of my Teeth, which at length brought a Feaver, which after I had taken a Clyster, and was let blood went away, only my Tooth-ach remained and a continual spawling of thin Wheyish matter: the excretion of which continuing, there arose wandring pains in divers parts of my body, holding sometimes one, and then another part, which I judging to proceed from Melancholick serosity, I took eight grains of Rozin of Jallap, with which being very well and gently purged, I voided in great Quantity the superfluous serosity,

in

in ſeven ſtools, and the day following I found my ſelf free from the foreſaid pains and troubleſome ſpittings. But in the Moneth of *April*, the pain of my Teeth returned with the ſpitting, which went away within twenty four hours, upon my taking the foreſaid Medicine.

The 409 Obſervation or Hiſtory of Famous and Rare Cures, &c.

The Whores Pox.

IN the moneth of *May*, 1645. two Girls, the eldeſt of which was ſcarſe five years old, the younger three years old, were troubled with the Lechers Pox for five moneths together, which they had gotten by contagion; they had many Ulcers in their mouths and Privities, with puſtules and a filthy Scab all their bodies over. A skilful Chyrurgeon had given them a Decoction of Guajacum for a moneth together, but in vain. I being ſent for, cured the ſaid Girls within the ſpace of fifteen days with white Mercury Precipitate, giving every day to the elder ſix grains, to the younger four, yet ſometimes augmenting both the doſes, according to the operation, which was ſuch, that each of them had three or four ſtools a day. They never vomited, neither were they fluxed. But they perſiſted all the while in the uſe of their Diet-drink of Lignum Guajacum.

The 410 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Warts upon the Hands.

A Man had many Warts upon the fingers of his Hands, which he cured by my advice, by anointing them four or five ſeveral times with the Milk of a Fig-tree. The ſame cure was perfomed, and that much more effectually upon a certain Country man, by ſmearing the Warts with Spirit of Sulphur per Campanam divers days together, and by applying the ſame like a Fomentation.

The 411 Obſervation or Hiſtory of Famous and Rare Cures &c.

A bruiſed Wound.

A Certain Captain liſting Souldiers in the City for Mſr. *de Ville*, in the beginning of *May*, 1645. fell from the top of a pair of Stairs upon an Hogſhead that ſtood at the bottom, and was bruiſed and wounded in his right ſide upon the ſhort Ribs; ſo that much blood came away, and he was perpetually tormented with a moſt cruel pain in the bruiſed part, ſo that he could hardly move himſelf, or ſpeak, breath or cough, but he was forced to cry out with pain. I being called to him, cauſed a Vein preſently to be opened on the Arm of the ſame ſide, and a Plaiſter of Cummin-ſeed to be applied to the parts pained: which having been on twelve hours, and once renewed in that time, the pain was much leſſened, the black and blew color gone, he breathed more freely, and the day following he began to riſe out of his bed, and ſo after one day more, the pain went quite away.

The 412 Obſervation or Hiſtory of Famous and Rare Cures, &c.

The Peſtilence.

IN the time of the Plague, which in the years 1628. and 1629. did rage in a manner all *France* over: a man of *Coſta* conceiving himſelf to be taken with the Plague, becauſe of a ſudden he was ſeized with heavineſs and pain of his Head, and party coloured vomitings, preſently applied

plied Cantharides with Leven and Vinegar behind his Ears, and to the other Emunctories and kept his bed. After twenty four hours he had a rising behind his Ear, out of which continually flowed a sharp ferous Humor, and the like by the other Emunctories; whereupon the Disease was less grievous and dangerous, and he recovered some days after, and never had it again, though he converst dayly with such as had the Plague, and ministred unto them. The same Mans Wife a while after finding her self ill, was cured in the same manner, which Remedy they had learnt of others, who had practised it themselves with good success.

The same year, the Wife of *N. Micha* of *Costa*, conceiving that her eldest Daughter about twelve years of Age was taken with the Plague; for being an ingenious Woman she conjectured so much, by her horrible look, her Feaver, Heat, Head-ach and Stomach-sickness: she thrust a Feather smeared with Oyl down her Throat, which made her vomit first Wheyish Liquor, then a yellow Excrement, and at last green as Leeks in a great quantity, like half boyled Herbs. Then she laid her in the bed, gave her a draught of broth, and disposed her to rest. Some hours after the Girle arose cheerful, and was troubled no more with any Pestilential Symptom though she often converst with such as had the Plague. Eight days after, her two younger Brothers, and her little Sister, were taken with the same, yea, and more greivous Symptoms, whom their Mother in the same manner procuring to vomit, which brought up the like Humors, saved from the Suburbs of Death.

The 413 Observation or History of Famous and Rare Cures, &c.

The Kings Evil.

OUR Neighbour *James Gorrez* his Girle, four years old, had Swellings of the Kings Evil about her Neck and Ears, very high. Some body advised her Parents to let her grow Lousie, till the Lice should make all her Head sore and run; by which means the Morbifick matter, *viz.* a flegmatick Humor, was conveniently purged out some moneths together in great quantity, and so she was at last cured of her Swellings, without any other Medicine.

The 414 Observation or History of Famous and Rare Cures, &c.

Dropsie.

A Woman thirty years old, troubled with the Dropsie Anasarca, by the advice of another Woman, and of an Antient Apothecary, abstained from all manner of drink almost an whole year; and so at length she was cured, without any more to do. By whose example, a Country man her Neighbour, troubled with the same Disease, was cured after the same manner in the space of four Moneths. Another Hydropick person was cured by an Apothecary, who applied many Vesicatories to divers parts of his Body.

The 415 Observation or History of Famous and Rare Cures, &c.

Fits of the Mother.

THe Renowned Lady, *Madam de Popiam in Occitania*, being much subject to Fits of the Mother, used divers Medicines for many years together, but all in vain. At last, by the use of the following Pouder, she was freed from them for fifteen years together. She took about one dram thereof in Wine, or in a Wafer Cake, twice or thrice in a week, or oftner, if the Fits did much trouble her. She used this Pouder likewise against all Poysons, the Plague, Agues, and want of Appetite, with most happy success, as I have often seen. The Pouder is thus made.

Take Roots of Gentian, White Dictamnus, Tormentil, Pellitory of Spain, Rhaponticum, Bistort,

Bistort, round Birthwort, white Thistle, Bay-berries, Angelica, Masterwort, Coriander seeds prepared, Annis seeds, Juniper berries, Mastich, Bole Armenick, Terra Sigillata of each three ounces and an half. Oriental Saffron two drams and an half. Mix them, and make of all a very fine Pouder.

Observations Communicated by Msr. Samuel Formius *a most Experienced Chyrurgeon of* Montpelier, *having Practised the Art fifty Years.*

The 416 Observation or History of Famous and Rare Cures, &c.

The Bleeding of a Wound.

IN the Year, 1593. a certain Souldier having received a Wound in his Arm, with which his *Radius* and *Cubitus* were cut cross-waies, so great effusion of blood happened, that after divers astringent things had been applied, and the use of Caustick and Escharoticks, the blood would notwithstanding flow by fits; so that the Physitians and Chyrurgeons had thoughts to cut his Arm quite off. But I, to whom the Cure was committed, rouled a Linnen Cloth into the form of a Cylinder, or Garden Rowling stone, four fingers breadth in length, and as thick as mans Thumb, which I thrust perpendicularly down-right into the Wound, filling the by-spaces with little bolsters; and because the end of my Rowl came an Inch above the surface of his Arm, I laid four bolsters which came as high as the Rowl; and kept it fast, and upon the Rowl I laid a fifth bolster four square, and at last swathed all fast. And from that time the blood came no more; now I did not open the Wound for four or five daies, until the flesh which was bred within, might stop the Orifice of the Veins,

The 417 Observation or History of Famous and Rare Cures, &c.

The bleeding of a wounded Artery cured by binding.

A Young man of *Montpelier*, named *N. Peyre*, had received a Wound in a single Combat, in the fore part of his Arm, near his Arm-pit, by which the Axillary Vein and Artery were cut, whence so great bleeding arose, that I judged it could no waies be stopped with astringents, I presently betook my self to make a Ligature, which I happily performed after this manner. I thrust a crooked Needle into the sound flesh above the Wound, so that it went unto the bone, and compassed the foresaid Vein and Artery, beginning at the inferior part where the *Musculus Extensor Longus* was transfixed, and the Needle where it came out pierced through the *Musculus Biceps*; in the Eye of the Needle there was a four-fold thred, with which the Vein and Artery were compassed within; then having laid a Rowl or Cylinder made of Linnen Cloth upon the Skin, between the two ends of the Thred, I tied the Thred close upon the Cylinder or Rowl, which I did to keep the Skin and Vessels from being broken or cut asunder by the Thred; and thus the Vein and Artery aforesaid were so tied, that the blood issued no more. After ten or eleven daies, when the Wound seemed to be closed up, I cut off the Thred, and the Patient was cured. In mean space, after the foresaid Ligature was made, to assvage the pain caused thereby, and to cure the Inflammation vvhich followed the pain, he vvas frequently blooded, and Vinegar and Rose-vvater vvere applied to the part, and other Medicines to assvage pain, and stop the Inflammation,

The 418 Observation or History of Famous and Rare Cures, &c.

An intollerable Pain of the Os Sacrum.

A Certain poor Cobler about forty years old, had a most cruel pain in the lower part of the *Os Sacrum*, for two moneths together, which was so vehement, that the man fell mad upon it. Divers Remedies universal and particular, were used in vain. At last, being sent for, I applied two Cupping-Glasses, one to the part pained, the other a little lower, viz. upon his buttock, with deep Scarrifications, out of which much blood came, the which being wiped off, I set the Cups on again upon the Scarrified places, and a good quantity of blood came away again. The Man seemed free from his pain; nevertheless the day following, I applied a large Caustick to the pained place above the Scarrifications, and kept it on four and twenty hours; so that there was a deep *Eschara* which reached to the bone. Which being come away, the Ulcer was healed up, and the Patient freed from his great Misery.

The 419 Observation or History of Famous and Rare Cures, &c.

The Dropsie.

THe foresaid Cobler, two years after the foresaid Cure fell into the Dropsie Ascites, which being troubled with for six moneths together, so that his Navil stuck out as big as an Hens Egg: an Apertion was made in the middle of his swollen Navil, and the water drawn out by little and little, a pipe made of Tinn being put into the hole, in the end whereof there was a broad plate, that it might not sink into his belly, having holes bored through, that it might be tied. Afterwards it was stopped up, and so he was cured.

In this kind of Operation observe, that Hydropical Persons must not be opened, unless their Navil start out, and so nature seem to effect that way to discharge her self. For all that are opened, their Navils not swelling as aforesaid, die upon it. Now this starting of the Navil may be procured by Art, applying frequently upon the same, Cupping-Glasses without Scarrification, but with much flame; also by applying Emollient and Attractive Fomentations, which being used about the space of eight daies, will raise the Navil into a swelling, upon which the Orifice may be made.

The 420 Observation or History of Famous and Rare Cures, &c.

Another Dropsie.

A Certain poor Woman, twenty five years old, was troubled with the Dropsie. An old woman advised her to take the bones of any Beast which had lain drying in the Sun, and beat them to pouder, and take a dram thereof every day for a moneth in white Wine mingled with the juyce of Parsley. The Juyce was thus extracted. She took an handful of Parsley, and wrapped it in a Linnen Cloth, and roasted it under the hot ashes, and then she beat it in a Marble Mortar, powring on by little and little as much white wine as would suffice. She pressed out the juyce and wine together to the quantity of two or three ounces, in which she dissolved the poudered bones, and drank it every morning for a Moneth, at the end of which she was perfectly cured.

The 421 Observation or History of Famous and Rare Cures, &c.

Water in a Childs Head.

AN Infant newly born was troubled with the Hydrocephalos or Water-Head, the whole Head being Swoln with a great dilatation of the sutures. I cured this disease without any Physick or other Remedy, saving *Guido* his Swathe, made in form of a Cucupha or spice-cap, wherewith the whole head of the infant was covered, the two ends being tied up into knots. Every day the Swathe was renewed, and so within fifteen or twenty daies the tumor wholly vanished.

The 422 Observation or History of Famous and Rare Cures, &c.

The Dropsie.

I Have been told by credible persons, that two Hydropical women were cured by cutting the Nailes of their toes so close that some part of the flesh was cut away with them, and some blood came away, whereupon followed a dropping of wheyish excrements for many daies together, and so by little and little the Hydropical humor was drawn forth.

The 423 Observation or History of Famous and Rare Cures, &c.

A certain Wound of the head with Contusion.

A Certain woman by the fall of a beam upon the top of her Head, received a grievous wound with contusion, whereupon there appeared a Bag in the nether part upon the *Os parietal*, four fingers bredth in greatness, I would have opened the said bag or Impostume in the sloping part thereof, which the Patient obstinately refused. Wherefore I put the foresaid swath or cap upon the Impostume with a thick Emplaistred bolster that it might stick, whereupon the matter was pressed unto the wound, which was on the top of her head, and afterward came to Glutination, whereupon a perfect Cure happily followed.

The 424 Observation or History of Famous and Rare Cures, &c.

An Impostume upon the Breast-bone.

A Certain Student of Physick had one of these red hot svvellings called, Phlegmone of a very great bigness upon his breast-bone, as big as the palm of a mans hand, vvhich coming to suppurate, through the unskilfulness of another Chyrurgeon the Impostume vvas opened in the upper part. I being called vvould have opened it again in the nether part, vvhich the Patient vvould by no means hear of, vvherefore I applied a thick implaistered bolster and svvathed it fast on, by vvhich means the matter vvas all forced to the part opened and so expelled; and by this means the vvound vvas healed.

The 425 Observation or History of Famous and Rare Cures, &c.

A Hollow winding Ulcer.

A Youth eighteen years old had four moneths an hollow vvinding ulcer in his right thigh betvveen his groine and huckle; the Orifice vvas uppermost, and the cavity vvent dovvn-

ward the middle of his thigh. He would not suffer it to be opened beneath, which seemed necessary to be done. I being compelled thereunto, after detergent injections oft times repeated, applyed a very thick bolster Emplaistered that it might stick close; and swathing it in a spiral wreathed fashion, from the nether part to the upper, which was kept open: the said winding hollow ulcer was healed up in a moneths space.

The 426 Observation or History of Famous and Rare Cures, &c.

The Sleeping Disease in Children.

THe Daughter of Msr. *Ludovicus* a Citizen of *Montpelier* eight years old, was taken with the Coma or sleepy Evil, which *Avicen* termes Subeth, with frequent convulsions, to whom the Physitians had given many Medicines and applied divers Remedies, viz. Clysters, frictions, Cupping-glasses, Vesicatories, sneezing pouder, &c. I gave her one dram of white Vitriol in broth, whereupon she vomited, and was presently cured.

The Son of a certain Gardener five or six years old, was taken with the same disease, to whom I gave half an ounce of the *Aqua benedicta Rulandi*, which purged him up and down, and cured him.

The Daughter of Msr. *de la Croix*, a Merchant, being a year old and troubled with the same disease, without convulsion fits, took of juyce of Onions and ordinary Oyl, of each one spoonful mingled together, wherewith she vomited, and was well.

The Daughter of Msr. *Morand* a Goldsmith, four years old, troubled with the same disease, was cured with the same Medicine.

The 427 Observation or History of Famous and Rare Cures, &c.

Tertian Ague and Worms.

A Citizen of *Montpelier* thirty years old troubled with a Tertian Ague, took an ounce of Aqua Benedicta, and was cured of his Ague, and with the working of the Medicine he voided a broad worm seven foot long.

The 428 Observation or History of Famous and Rare Cures, &c.

A Leaden Bullet shot into the Heel.

A Certain Souldier was wounded in his Leg, which wound descended downwards as far as his heel, into the substance whereof the bullet was fastened, and there it stuck. The Ulcer was not cured, but became fistulous and continued in that manner seven years together. At last he committed himself to my care, I putting a Probe into the ulcer felt the bullet in the very cavity of the bone. Then measuring the place with my Probe, which went into the Ulcer six fingers deep, over against the place where the bullet lay, I applied a great Caustick, which because it did not pierce so far as the bone, I applied another which wrought to the heel-bone, which being barred, I opened his heel with my Trepan, where I found the bullet secretly enclosed, and drew it out, and in short while after the Ulcer was healed up.

The 429 Observation or History of Famous and Rare Cures, &c.

The Skul depressed by a wound.

THe Daughter of Msr. *Strinc*, Citizen of *Montpelier*, eighteen moneths old, fell down the staires, & hitting her head against the stones, her skul was bowed in between the Sagital and Coronal future, the quantity of half a nut. Being called to see her, I cut of her hair and applied a Cupping-Glass without scarrification to the depressed part, afterwards applied it again with scarrification. Afterwards I applied a Cataplasm made of bran Bread, Wine, and Roses, which I repeated twice a day, five or six daies together, reiterating the application of my Cupping-Glass with scarrification before every application of the Cataplasm, and at last for four or five dayes applying the Cataplasm alone without scarrification. The Tumor raised by the Cupping-Glass was discussed, and the depression or dent was taken away, so that the bone returned to its natural place and convexity.

The 430 Observation or History of Famous and Rare Cures, &c.

Ruptures.

I Have cured many bursten men and women, in some of whom the gut had been fallen without the Peritonæum for three or four daies together: so that they were fallen into the Iliack passion commonly called *Miserere mei*: which Cure I performed after this manner. I placed a Table or a Planke of sufficient breadth by the Patients bed in such manner, that one leaned upon the side of the Bed, and the other end rested upon the floore. Then I placed the sick person upon the said Plank with Pillows under him or her, in such a posture that the head of the Patient lies next the ground and the feet next the bed side. Then I fomented the part along time with cloths four times double steeped in cold water, in the mean while gently touching the same with my fingers, and having continued this fomentation, for half an hour, I applied a many times doubled cloth shaped like a Triangle wet in cold water upon the place, making a containing Ligature thereupon; and thus within a few hours for the most part, the Gut is of it self restored to its place. But if after the first Fomentation and the application of the Cloth thereupon the Gut be not restored to its place, Reiterate the same operation twice in a day, and upon the second or third Repetition the Disease is cured.

In some Patients being called late, when the Gut was inflamed, so that in regard of its swelling, it could not return back again by the straight hole in the Peritonæum, I have by widening the said hole by incision, saved three Patients from a speedy Death. Which operation I did thus performe. First I placed the Patient as aforesaid, and withall I bound him hand foot that he might not be able to stir while I am in my work. Then I drew a transverse line with Ink above the Line of the strangling of the Gut where the Rupture of the Peritonæum is. Then I draw another Line Perpendicularly cutting the foresaid Line at the place of the strangulation and in the middest thereof: then I drew the skin too on both sides with my two fingers in a transverse Line, and I cut it with my Incision knife Perpendicularly, so that the length of the Incision was as much as two fingers bredth. Then I lift up the muscles which cover the Rupture, by little and little with certain hooks, and I seperated them with a pen-knife until the production of the Peritonæum lie open to the sight. And then it is lifted up with an hook, and cut with the foresaid pen-knife, and so the Gut is put into its place again. But if the Gut be so swelled with wind or inflammation, that it cannot be thrust back into the Abdomen, the Apertion already made may be enlarged, by putting into the wound such a fashioned Catheter as they use to cut the stone upon, and by Clipping the Abdomen thereupon with Scissors, either in the upper or lower part as the Chyrurgeon shall think most convenient.

In this operation I noted one thing wel worth observation in a certain woman whom I cured by the means aforesaid, viz. that her belly being opened, the gut which had fallen out of the

Peritonæum

Peritonæum thirteen years together, causing a perpetual Tumor in her Groin, appeared covered with a fleshy kind of swath band, which compassed the said Gut, and continually growing in the inferior part by the Rupture, did so straiten the Gut in that part, that the Excrements could not find passage through the same, vvhereupon the Woman fell into the Iliack passion, which was the Cause that I took her in Hand.

The 431 Observation or History of Famous and Rare Cures, &c.

The tumor Ganglion *upon the Face.*

A Certain young Woman had one of those Tumors called *Ganglion* in her Face, as big as a Cherry, beneath her Eye, upon the Bone called *Zygoma*; which was Discust within a moneth, by applying thereunto a plate of Lead smeared with Quick-silver and stuck upon a Plaister that it might be kept on. The plate with the Plaister were laid upon the Tumor and a bolster thereupon, and then I tied them to with such a swath-band as *Galen* calls *Semiphalera*.

The 432 Observation or History of Famous and Rare Cures, &c.

A Tumor called Anchylops:

A Woman forty years of Age had a Tumor in the Larger corner of her Eye, vvhich Tumor is called Anchilops: I took it away, by applying a smal Caustick, and the coar being fallen away, I cured the Ulcer with a little red Precipitate and burnt Allum, two parts of Precipitate I mixed with a third part of burnt Allum, which I made up with a little Unguentum Aureum, and applied it to the Ulcer till their came a new Eschar as big as a Vetch, which being fallen away, the bone appeared bare, vvhich appearing untainted, I presently took a Course to fil up the Ulcer with flesh, laying on old worn rags and changing them tvvice a day, and so the disease vvas perfectly Cured.

The 433 Observation or History of Famous and Rare Cures, &c.

A deadly Costiveness.

A Certain Taylor for a moneth or longer had never gone to stool, and having took many Clysters and purging potions in vain, at last he died. His body being opened, all his Guts vvere found stuffed vvith Dung partly, and partly vvith meat and drink like puddings. The cause vvhereof vvas judged to be, that the Guts had vvholly lost their expulsive faculty.

The 434 Observation or History of Famous and Rare Cures, &c.

A fracture of the skul in the left temple.

A Certain Woman vvas vvounded in her left Temple vvith a stone, vvho presently upon the vvound received, came into the Hands of a young Chirurgeon, vvho being terrified vvith the grievousness of the Wound, called me to his assistance. I perceiving there vvas a fracture, and judging it necessary to use my Trepan, I confidently made a Cross-fashion'd incision upon the Crotaphita, by vvhich means the bone vvas discovered, and the fracture found, in vvhich a bit of the Skull as big as an Almond-shell vvas vvholly separated, depressed as lovv as the *Dura Mater*, and seen lurking under the Skul. But vvith the Trepan vvell applied, that portion of the Skul vvas dravvn out, and the vvound happily cured, neither did there happen any grievous Symptome upon the Incision of the Crotaphita.

The

The 435 Observation or History of Famous and Rare Cures, &c.

A Canker.

A Certain Woman fifty years of Age had a Canker in her left Dug, which began to ulcerate: a young Chyrurgeon a forreigner applied the following Medicament.

Take Aqua fortis, one ounce: Crude Sublimate, four ounces: Sal Ammoniack, two ounces: Arsenick, one dram: put all into an Alimbeck and still them till they become dry, adding as much distilled Vinegar as answers the weight of the pouders. Still the Vinegar again, till the matter come to be as thick as Paste.

First he carefully washed the Canker with hot wine, with Cloths dipped therein, and rubbed it lustily, to stir up the Humors in the part. Then he spread of the Paste upon a bolster six times smaller then the swelling, which he left upon the part twenty four hours, and there was made an Eschar six times greater than the bolster, so that it did eat the Canker wholly away, and when the Eschar fell off, the Ulcer was filled with flesh and then closed up. And in case the foresaid Eschar had not taken away the whole Tumor, but that some Roots thereof had remained, those he would have consumed with the pouder of red Precipitate and burnt Allum well mixed.

And to fill the Ulcer with flesh he used only Lint of old rags.

This is worth Observation, that when the Paste was laid on, a Feaver was presently raised, with vomiting and a looseness, and much provocation of Urine, which Symptoms continued two or three daies, Nature being vexed and provoked with the destructive quality of a Venemous Medicament.

With the same Medicine a Canker was cured upon a Souldiers Nose end, which had eat away the tip of his Nose.

The 436 Observation or History of Famous and Rare Cures, &c.

Another Cure of a Canker.

A Certain old Woman had a Canker in her left Dug, which she had born thirteen years together. Wherein little Cancerous Tumors grew out, which pained her more then the great one upon which they grew, because they were ulcerated. These little Tumors were taken away by frequent Application of Waters of red Poppy, Plantane and Roses, mixed with Honey of Roses at first, but afterwards the waters were used alone. And in another Woman that had a cancerous Ulcer in her breast, the same Medicine cured the Ulcer quite, and closed it up.

The 437 Observation or History of Famous and Rare Cures, &c.

A Gangrene in a womans Privy part.

A Woman thirty years of Age by reason of Sore Travil in her Child-bearing and rending of the Lips of her Privity, contracted a great swelling in the right Lip, by reason of the Concourse of blood into that part, which when she had neglected for three or four daies, at length a Gangrene was introduced into the part. I being thereupon sent for, made a large and deep incision in the inner part of the Water-Gate, and then I put my hand into those incisions & drew forth clotters of blood to the quantity of a pound and an half. Afterward I washed the part very well with Wine, Salt, Honey, and Vinegar mixed together and made very hot, and I Fomented the same with Linnen Cloths; then I made new Incisions, and washed and Fomented them. Afterwards I cut away certain portions of the inner coat which were putrified, and again fell to fomenting; and I persisted without intermission with such like incisions and Fomentations, until no stink appeared in the part, and that all the corrupted portions were taken

taken away. And afterward, the foresaid Fomentations were continued day and night, for two or three daies together, after which I mixed Unguentum Ægyptiacum, and Aureum, and applied to the part; and finally the Ulcer was closed up with Aqua Vulneraria.

By the same Method a Citizen of *Montpelier* was Cured of a Gangrene in his Testicle.

The 438 Observation or History of Famous and Rare Cures, &c.

Another Gangrene in the Foot.

A Gentle woman through a long sickness, contracted a Gangrene in her Foot, which being only in its beginning, was perfectly cured by continually Fomenting the same with a Vulnerary Decoction made of round Birthwort Roots, Rhaponticum, Zedoary, Myrrh, Aloes, and white Wine, unto which after boyling and straining, was added Aqua Vitæ with Camphire dissolved therein.

The 439 Observation or History of Famous and Rare Cures, &c.

Another Gangrene in the Foot.

A Certain Gentleman had a Gangrene in his Foot, which was gone so far, that the Physitians and Chyrurgeons had resolved to cut his Leg off, which they deferring to do till the next day, when they were gone there came an Emperick, who undertook to cure the Gangrene, whereupon the Patient submitted to his Cure, and he Fomented the part all night with water in which Lime and Chalk had been boyled, and in the morning the Gangrene appeared wholly taken away.

The 440 Observation or History of Famous and Rare Cures, &c.

A Wenn.

THe Son of Msr. *Malafosse* a Merchant of *Montpelier*, had a great Wenn as big as a large fist, under his shoulder blade near his Back-bone, which was cured by the following Method. I made me an instrument of hard wood like the stone with which Painters grind their colours upon a Marble; with which I did rub and grind upon the Wenn half an hour at a time twice a day: then I laid on an Emollient and suppurating Plaister very hot, which I kept on for four or five daies; and the Wenn came to suppuration, and being opened the matter or Quittor came forth being liquid, and afterwards all the substance contained in the Wenn was turned into matter and Evacuated, and Ulcer was healed up. The foresaid grinding and rubbing with the wooden Instrument serves to break the bag in which the Wenn is contained, and by that meanes also the matter contained in the Wenn is attenuated and divided into small particles, that it may the sooner come to digestion; Instead of a Cataplasme, an hot loaf newly taken out of the Oven and cut asunder in the middest may profitably be applied.

This kind of Cure wrought the same effect in many other Patients.

The 441 Observation or History of Famous and Rare Cures, &c.

The Letchers Pox in a new born Child.

A Woman infected with the Whore-masters Pox brought forth a Man-child with Pustules and Ulcers in divers parts of his body, who was cured with white Precipitate given in the quantity of two or three grains with Sugar and Milk, every day or every other day for a moneth together. He began to take it upon the fifteenth day after he was born.

The

The 442 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Kidneys turned into Quittor.

A Maid of eighteen years old did a long time void Urines with Quittor or matter in them, having a continual flow and Hectick Feaver, and at length ſhe died. Her body being opened her Kidneys were found wholly changed into Quittor, ſo that the Coats of the Kidneys were wholly filled with Purulent matter, there appearing not ſo much as any reliques of the fleſh of the Kidneys.

The 443 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Spot in the Tunicle Cornea.

A Poor Woman had a ſpot in her Eye, whom I adviſed to drop twice a day one drop of juyce of Rue into her Eye: which when ſhe had practiſed a good while together, the ſpot was taken away.

The 444 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Gutta Serena.

A young Woman was taken with the *Gutta Serena* [that is, a kind of blindneſs in which no fault can be ſeen in the Eyes] with which ſhe was ſo grieved, that ſhe was reſolved to ſtarve her ſelf to Death. Yet her Husband and others that were about her did compel her by force to take down a little broth or Wine, but it was very little which ſhe would take, rejecting all kind of nutriment as much as in her lay. She continued in this condition an whole year, and was made extream lean, her natural heat for want of food devouring the ſubſtantial moiſture of her body: and therewith all the Humors likewiſe of her body were conſumed, and that among the reſt which had Cauſed her Blindneſs; and ſo ſhe recovered her ſight, and was by little and little brought up again by a reſtorative Diet.

The 445 Obſervation or Hiſtory of Famous and Rare Cures, &c:

Children with crooked Legs.

MAny times, Children when they are two years old, and begin to go, prove Crook-legged, whereat their Mothers being troubled do ask adviſe of Chyrurgeons, which commonly endeavour with divers engines and deviſes to ſtrengthen their Legs and Thighs. But all is for the moſt part labour loſt, becauſe ordinarily, about the third or fourth year of their Age, their Bones and Muſcles grow naturally ſtronger, and the parts returne unto their natural Rectitude.

The 446 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Head-ach called Cephalæa *and* Hemicrania.

IN the *Hemicrania*, when one half of the Head akes by reaſon of an hot Cauſe in that kind of pain which *Gordonius* does term *Clavus* or the Nail, which is a pain fixed in the Temples, the opening of an Artery does wonderfully help, which I have ſafely performed in

many. I bound down the Orifice with a ſingle bolſter made of a double clout, and wet in cold water as in the caſe of Ordinary Phlebotomy, which I ſwathed with ſuch a Swath-band as *Galen* calls the Hare without Ears, and the blood never breaks forth afterward. Alſo I have ſeen a laſting Cephalæa, or univerſal Head-ach cured in the Hoſpital by applying a Potential Cauſtick unto the Temporal Artery. For the Eſchar being come away, which was cauſed by the Potential Cauſtick applied upon the Veins and Arteries, no flux of blood follows; becauſe provident Nature while ſhe endeavors to ſeparate the Eſchar, does without breed new fleſh, wherewith the mouths of the Veſſel are cloſed up. And whereas it is objected, that great bleedings in wounds which are ſtopped by actual Cauteries or Corroſives, are oftentimes renewed, when the Eſchar comes away. I anſwer, That thoſe Eſchars are thinner, and fall away ſooner, and therefore there is not in the mean ſpace time enough to breed new fleſh; but ſuch Eſchars as are made by a Potential Cautery, are more thick and ſolid, and are long before they come away, ſo that there is time enough for new fleſh to breed and ſtop up the Veins.

The 447 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Madneſs.

THere was a certain young Man mad, and for his Cure the moſt effectual Remedies were put in practice, ſo far as to come to the uſe of Antimony, the Trepan, and the opening of the Arteries of his Temples. And when all did no good, I adviſed that he ſhould be guelded; which being done, all ſymptomes were abated, and his fury ceaſed quite; yet ſo as that he continued in melancholy dotage, his madneſs being changed into Melancholy.

The 448 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Stoppage of Urine.

I Have made tryal of an effectual Medicine for ſtoppage of the Urine in three Patients. It is made of the brain of a Mag-pie dried and drank in white wine. Within an hour it makes the Patient to Piſs.

The 449 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Warts.

WIthin ſeven or eight daies they are cured with Purſlane bruiſed and rubbed upon them, and then applied as a Pultiſs, renewing the ſame twice a day.

Corns on the feet or toes.

CUt the Corns when the Moon is in the wain, firſt waſhing the feet a pretty while in hot water. Then apply Ivy leaves bruiſed, and renew the ſame every day morning and evening: within fifteen daies the Corns are drawn out; by which we learn, that there is in Ivy a moſt Potent attractive Faculty.

The 451 Obſervation or Hiſtory of Famous and Rare Cures, &c.

Burnings:

THE ſaid Ivy helps Burnings, if the Leaves thereof be boyled in water, and ſo applied.

The

The 452 Observation or History of Famous and Rare Cures, &c.

The Pestilence.

WHen there was a most cruel Pestilence at *Montpelier*, in the Year 1630. when they were infected with the Plague, they sent to me to know what they should do. I remembring that I had read in *Pareus* that the picle of those little Fish called Anchoves, had helped some of the Plague, I advised them to take thereof. One Patient drank a porrenger ful by it self, another took of it mingled with Urine, and both were cured ; for there followed vehement evacuation both by vomit and stool.

The 453 Observation or History of Famous and Rare Cures, &c.

Another Cure of the Plague.

IN the same time of Pestilence, three persons in one Family, viz. the Husband, his Wife, and her Sister were infected, and they drank their own Dung dissolved in their own Urine and strained through a Cloth, whereupon they purged and vomited most violently, and were all three recovered. We read a story somewhat like this in *Zacutus Lusitanus*, his 89. Observation of his third Book, where he relates, That in the Western Indies there is a little Beast like a Lizzard, frequently to be found in the Feilds called *Garit*; the biting whereof is deadly without hope, unless the bitten person do take in mans Dung. Howbeit, 'tis well enough known, that many are holpen of the Plague by other kind of Vomits.

The 454 Observation or History of Famous and Rare Cures, &c.

Gout-pain.

IS quickly eased by fomenting the part pained with the water of Ashen Leaves stilled in a Lead or Pewter still, such as the common People still Roses in.

The 455 Observation or History of Famous and Rare Cures, &c.

Tooth-ach.

I Have freed an infinite company of People from the Tooth-ach by putting a little Cotton wool wet in Oyl of Box wood, into their hollow Teeth. This Oyl is drawn in a Retort with a reverberating Heat, first infusing the Dust thereof in white wine twenty four hours, and then stilling all together. First there comes away an acid water, which does good in the Tooth-ach only by washing the Teeth therewith ; after that comes the Oyl, which is to be diligently preserved.

I have also happily used this following Medicament.

Take Seeds of Plantane two drams ; of Tormentil three drams ; Henbane seed four scruples. Let all be dried and finely poudered, adding thereto one grain of Opium. Bind the Pouder up in little Nodules, which must be Macerated in the following Decoction.

Take Elder Flowers one handful ; Red Roses two pugils : boyl them in Vinegar, and reserve the strained Liquor for the use aforesaid.

These Nodules being steeped in the said Decoction are held and gently pressed between the Teeth, and within a while much moisture flows out of their mouth, and the pain is taken away.

The 456 Observation or History of Famous and Rare Cures, &c.

Whore-masters Pox.

HEnry the Third of that Name, King of *France*, was troubled with the Whore-masters Pox, and could not be cured by his ordinary Physitians. He was informed that *Pena* who practised Physick at that time in *Paris*, did cure many of this Disease with a peculiar Medicine which he had learned of a Turk: whereupon he commanded him to be sent for, and he was by him cured. Now the Medicine he used was this:

Take of the Roots of the great Burdock cut in thin slices, eight ounces: white Wine, and Spring water, of each two pound. Let them boyl together till half the Liquor be consumed, adding towards the ends an ounce, or an ounce and half of Senna, according to the Patients disposition. Let the Patient take half a pint of the strained Liquor, and procure sweat by laying hot flints tied up in Cloths, one near the soals of his Feet, by each Leg one, by each Thigh one, and by each Shoulder one, and being close covered. Let him sweat plentifully an hour and half together; and about evening he will have a stool or two.

This Medicine was used (universal Remedies being premised) for the space of fifteen or twenty dayes, and in the mean time instead of ordinary Drink, he used a decoction of China, or Sarsa-Perilla, with a suitable diet.

After the use of the Medicaments, he took every day in the morning, the decoction of Burdock Root without the Senna and without any observance for a moneth or forty daies.

The 457 Observation or History of Famous and Rare Cures, &c.

Stoppage of Urine.

AN Apothecary of *Paris*, named *Lafoxilliere*, being troubled with a stoppage of his Urine, after many Medicines for four dayes together, taken in vain, he made himself this following Medicament, which made him pisse and cured him.

Take white Canary Wine four ounces; Juyce of Lemmons one ounce; Spirit of Turpentine two drams. Mix all into a potion.

The 458 Observation or History of Famous and Rare Cures, &c.

Of the internal Hemorrhoids

THe said Apothecary *Lafoxilliere* did happily cure the internal Hemorrhoids by injecting with a Syringe in the first place this followving Decoction.

Take of the middle bark of an Elm-tree two ounces; of the Roots of Tapsus barbatus half an ounce. River water four pints. Boyl all to the consumption of half the water, and strain out the Liquor for the use aforesaid.

After the Injection, let a Pill made of Crude Antimony, and Litharge of Gold finely pouldered, and mixed vvith Oyntment of Roses be put into the Fundament.

The Pill being put into the Fundament, let the compass thereof be anointed vvith this followving Oyntment.

Take Juyce of the greater Housleek, Plantane, Tapsus barbatus, and Nightshade, of each four ounces; Hogs Grease one pound. Boyl all till the Juyces are consumed, strain it through a Linnen Cloth; and when it is cold, add thereto the pouder of Cray-fish, or River-Crabs dried in an Oven, half an ounce; Tapsus barbatus in pouder, and the pouder of Periwinkle shells, of each two drams. Make all into an Oyntment. Continue these Medicines morning and evening for eight dayes together,

The

The 459 Observation or History of Famous and Rare Cures, &c.

Universal pains.

A Certain man forty years old was tormented with universal pains, which could not be alayed by many Medicines prescribed by Physitians. At last by the advice of a silly woman his whole body was covered with Elder Leaves tied up in two great sacks, and heated in the Bakers Oven after the Bread was drawn, which made him sweat plentifully. And with this Medicine thrice repeated, he was perfectly cured of his pains.

The 460 Observation or History of Famous and Rare Cures, &c.

A cancerous swelling of the Gums.

A Certain Maid twenty five years old had an hard swelling in her upper gum over the dog tooth as big as half a nut, which was twice cut away with an incision knife, and then seared with a red hot Iron, and still it came again. And after the second operation the ulcer and tumor remaining, she was by me perfectly cured by applying red Precipitate mixed with burnt Allum, with which I besprinkled some lint wet with spittle, or mingled it with Unguentum Apostolorum, and being applied fresh every day, within six weeks it was well cured, and the tumor being wholly eaten away by the corrosive Medicament, new flesh was procured by application of Lint scraped from Cloth, applying to the naked bone *Guido* his Pulvis Catagmaticus; and so the ulcer was healed up, and brought to a Scar.

The 461 Observation or History of Famous and Rare Cures, &c.

A fleshy Excrescence in the throat.

A Certain Taylor of *Montpelier*, eating of fish had a large bone stuck in his throat, and as he pulled it out he rent his throat, whereupon in process of time there arose a piece of flesh in his throat near the Palate of his mouth or Uvula bigger than a nut: to the Cure whereof he called an Emperick, who by an actual Cautery frequently applied, consumed the swelling: but the ulcer being not perfectly healed up, the swelling returned, and he called another Emperick, who by frequent application of Oyl of Vitriol consumed the tumor, and brought it to a perfect Scar.

The 462 Observation or History of Famous and Rare Cures, &c.

Running of the Reins.

With Conserve of the fruit of Bruscus or butchers-broom given the Quantity of two drams or half an Ounce for some dayes together, I have cured divers Gonorrhæa's.
Water stilled out of the said fruit works the same effect.

The 463 Observation or History of Famous and Rare Cures, &c.

A great piece of a Sword lies long concealed in a wound, and at last is drawn out.

Mr *de Suellies* in a single combate received a wound in his shoulder above the shoulder blade, which went in at the upper part, and came out at the nether part,

and there remained a peice of a sword therein a foot long; which the Chyrurgeon not knowing he healed up the wound, the swords end remaining within concealed between the shoulder blade, and the muscles which cover the same. In this condition he remained whole seven years together, oftentimes feeling pains in that part. At length Nature driving the Iron towards the upper part where the Scar of the wound was, a certain rising appeared with pain, whereunto a Caustick being applied and the Scar opened, the end of the Iron appeared, which with the Instrument called a Cranes-bil was taken hold of, and easily plucked out all over rusty.

The 464 Observation or History of Famous and Rare Cures, &c.

Kings-Evil swellings upon the fingers,

THe Daughter of Msr. *Duseigneur* a Goldsmith ten years old had hard Kings-Evil swellings on three of her fingers, which were cured by the smoak of Vinegar poured upon red hot flints continued morning and evening for a moneth together; which remedy is highly extolled by *Galen* to discuss hard tumors.

The 465 Observation or History of Famous and Rare Cures, &c.

Sight Impaired in an old Man.

A Certain old man by reason of a defluxion of Rheume falling into his Eyes, had his sight so far weakened, that he could not goe without one to guide him. Of which disease he was cured and his sight restored by putting into his Eyes every night when he went to bed, five or six of the seeds of Clary, which drew the flegmatick humors out of his Eyes and cleansed the tunicle or Coat called *Cornea*.

The 466 Observation or History of Famous and Rare Cures, &c.

Whores-Pox in a boy five years old.

I Cured it by giving him every day for twenty dayes together four grains of white Precipitate in Panada. It wrought only downward, and never fluxt him at all.

Observations communicated by Msr. Peter Estanove, a Skilful Chirurgeon of Montpelier.

The 467 Observation or History of Famous and Rare Cures, &c.

A wound in the Brest.

A Certain Souldier was thrust with a speare into the forepart of his Chest, so that the wound peirced into the cavity thereof. Within two hours after he was wounded, the whole Bulk of his body together with his Cods was blown up like a bag-pipe; howbeit the said swelling was easily cured with torrified Bran put into divers bags, and so applied hot.

The

An Horn growing in the face.

A Certain old woman had grovving upon the Bone Zygoma or Cheek-bal under her Eye an hard body tvvo fingers breadth long, juſt like an horn both in matter and ſhape, being broad at the Baſis or bottom, and ſharp or pointed at the top, vvhich in proceſs of time fell off by its ovvn accord, and a Cancer aroſe in its place

OBSER-

Obſervations communicated by Msr. Denis Pomaret, *a Skilful Chirurgeon of* Montpelier.

The 473 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A ſuppurated Tumor Diſcuſt.

Mary Pomaret my Daughter, being eight years old, had a ſmall Tumor proceeding of blood and flegm, on the outſide of her nether Jaw, on the right ſide of her Face, which came to ſuppuration. But I fearing that her Face would be blemiſhed by the Scar; before I would open the Impoſthume, I reſolved to try if I could diſcuſs the ſame, leaning upon the Authority of *Guido*, who in his General Diſcourſe of Impoſthumes, ſaies that ſuppurated impoſthumes are ſometimes cured by diſcuſſion: which is alſo confirmed by a ſolemn experiment of *Pareus*, who averrs that he cured a ſuppurated Impoſthume, with crude Mercury mingled with Diapalma Plaiſter, which diſcuſſed the ſame. In imitation of whom I mingled one dram of the ſaid Mercury, with an ounce of Diapalma Plaiſter, and laid it upon the ſuppurated Tumor, which within four daies ſpace was perfectly diſcuſſed.

For to diſcuſs ſuppurated matter, theſe following Conditions are requiſite. 1. That the matter be little in Quantity. 2. That it be thin and wheyiſh. 3. That it be in the Skin and ſurface of the Body, and not in any deep part. 4. That it be in a ſtrong youthful body, and ſoft fleſhed. 5. That it be in the Summer Seaſon of the year.

The 474 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Flegmatick tumor.

MY ſaid Daughter had an œdematous or flegmatick tumor, crude and come to ſuppuration, upon the Region of her Loyns, as big as the Palm of ones hand, which was diſcuſt within a few daies, by the foreſaid Plaiſter.

The 475 Obſervation or Hiſtory of Famous and Rare Cures, &c.

A Wenn.

A Capuchin Fryer of the Covent at *Montpelier* twenty five years old, had a Wenn upon his Knee, which he had carryed about a long time, ſo that at laſt it was grown extream ſoft, in which reſpect I adviſed him that it ſhould be opened, becauſe the matter contained within ſeemed well digeſted. But he refuſed, ſaying, he had ſeen juſt ſuch Wenns diſcuſſed with the Leaves of Sorrel wrapped in a wet paper and roaſted in the Embers, which was afterward incorporated with ſifted aſhes into the form of a Pultis. This Medicine he applied divers daies warm, and the Tumor vaniſhed wholly away; which I exceedingly admired, and have ſince that time cured two ſuch Wenns in the ſame part with the ſame Medicine. *John Guerinus*, ſixty years old was troubled with one of thoſe Wenns, and the Wife of *Timothy Coula* Carpenter of *Montpelier* had the other.

The

The 476 Observation or History of Famous and Rare Cures, &c.

Of the Tumor Ecchymosis.

THe Wife of *Petrus Laiardus*, a Merchant of *Montpelier*, fifty years old, fell down the stairs, and received a bruised wound upon her Head, so that there arose a Tumor caused by the blood which was shed out of the Vessels, which kind of Tumor is called *Ecchymosis*, as big as an Hens Egg. After the first Application of the white of an Egg mixed with Oyl of Roses, and after blood-letting, I began to think of opening the Tumor with my incision Knife, or bringing the same to suppuration, according to that of *Hypocrates*, in the 20. Aphorisme of his 5. Section; If blood be preternaturally shed into the Belly, it must needs suppurate. Hereunto concurred the store of matter, the age of the Patient, the hardness of the Skin of the Head, and the winter season of the year. But because the Patient would not hear of Incision, and I desired to avoid the pains and other trouble which would come by suppuration. I resolved to try a few daies if I could discuss the Tumor, though I had very small Hopes. Now I went this way to work: First I fomented the part affected twice a day with hot water, half an hour at a time. After the Fomentation, I shaved the part with my Razor against the Hair, that the pores might be the more opened, and that all filth sticking to the part might be well cleansed away; and at last I applied Oyl of Lillies and Chamomel, of each a like quantity, laying thereupon Cotton-wooll perfumed with the smoak of Aromatick powders, and well heated, and so the swelling was perfectly discussed.

The 477 Observation or History of Famous and Rare Cures, &c.

A Carbuncle.

TOuching Carbuncles, I have noted two things worthy of Observation; the one is, that though Carbuncles are wont alwaies to have a Feaver accompanying them, by reason of the great Inflammation which we see in them, as *Galen* teaches in his second Book *ad Glauconem*, in these words: *Whenever blood very hot and thick shall suddenly flow into any part, it burns the same, and causes an Ulcer with a Crust; and the parts round about are thereby brought into a burning Inflammation, and vexed with grievous pain.* Howbeit since the time that I have addicted my self to Chirurgery, it has been my hap to see three Carbuncles, which have run through their times without any Feaver, and without any other grievous Symptome, so that the Patients continually followed their Employments; one was in the Cheek, the other in the Neck, and the third under the lower Eye-lid of the left Eye. All which were cured with the same Medicines, wherewith we are wont to cure potential Cauteries, *viz.* Such as procure the falling of the Eschar.

My other Observation touching Carbuncles is, That in that most cruel Pestilence which raged at *Montpelier* in the years 1620. and the 1639. there appeared Carbuncles attended with quite different signs from those described by *Galen*, *Guido*, and late Writers. Which was the Cause that very many Physicians and Chirurgeons, yea of the most skilful did at first err in their Diagnosis of these Carbuncles. Now the different signs appearing in them were weakness, small pulse, the part on which the Carbuncle rose did not swell; a little inflammation incompassed the Pustule, the extream softness of the Eschar arguing putrifaction rather than adustion, freeness of motion in the part affected, and no perception of heaviness, which in vulgar Carbuncles is so great, that the part seems tied in bands.

The 478 Observation or History of Famous and Rare Cures, &c.

A fleshy Excrescence on the Right Leg.

A Young man named *Claparede*, had a fleshy Excrescence, which the Greeks call *Sarcoma*, in the inner side of his right Leg, four fingers above the Ankle, of the shape of a Rowling-Pin or Cylindre; the length of it was four fingers bredth, and it was as thick as the Arm of a new born Infant. This Tumor was nourished by an Artery which was carried unto the Basis thereof, which being very broad, could not be bound. If the Patient happened at any time to hit the Tumor with his other Leg, it would fall so a bleeding as to endanger his Life. Msr. *Samuel Formius*, an old skilful Chirurgeon was called to consult with me, and it was Resolved upon between us, to take away the Tumor by the Roots; and to avoid effusion of blood, we sought the *Arteria Poplitea*, which when we had groped out in the upper and inner part of the Leg, we made a bolster hard and compact of Linnen Cloths closely folded together in the shape of a Cylindre or Rowling-Pin, which being wet with the juyce of Netles, and smeared with the common Astringent Medicine, we laid upon the Artery all along according to the length thereof, swathing it very many times about with a fillet or swathband very fast. Then we applied other Bolsters unto the whole Leg, and the extremity of the Thigh smeared with the foresaid Astringent, and swathed very close and strait. Also actual cauteries were had in a readiness to stop the flux of blood, in case, notwithstanding the foresaid Ligatures, it should break violently forth. All things being thus in a readiness, I took hold of the tumor with my left hand and drew it outwards, and with my Incision-Knife in my right hand, I cut it out by the Roots, without any profusion of arterial blood. Soon after I applied an Astringent Plaister to the wound, which was left sticking twenty four hours after. Which being taken off, there followed no bleeding at all, nor at any time afterward. And because some superfluous and unsound flesh remained upon the part, it was consumed away by gentle Corrosives. The Ulcer yielded well conditioned matter, and at last by detergents, Epuloticks, and such things as bring the Scar together, it was perfectly cured.

The 479 Observation or History of Famous and Rare Cures, &c.

A Stone in a Mans Throat.

A Priest sixty years old, of a sanguine Complexion, was oftentimes troubled with an Inflammation of his Throat, especially when he strained himself more than ordinary in singing; which inflammation was cured with blood-letting, and a Gargarisme of Vinegar and Water mixed together. In the last coming of the said Inflammation, while I was busily viewing the part affected, I saw an extraneous matter fastened to his Throat, near the end of the lower jaw-bone of the right Cheek, like a Musket Bullet, which I easily drew out; and having carefully washed it, I found it to be no other than an hard and compacted stone, shaped like a wild pear, the Tail whereof had been fastened in the Muscles called *Massetores*, or the Champers. There remained a round mattering Ulcer, which was cleansed with Honey and Wine, and healed up.

The 480 Observation or History of Famous and Rare Cures, &c.

Wound of a Gum.

MSr. *de Roques Junior*, sirnamed the Knight, at the Siege of *Salsa*, was wounded with a shot in the upper and middle part of his Brest-bone, which was carried Obliquely unto his Back, and went out six fingers bredth distant from the Back-bone. Presently after he was wounded, he perceived most sharp pricking pains in the *Oesophagus*, or mouth of his Stomach, as if there were thorns sticking there, and because he was choaked with blood, he endeavoured

endeavoured strongly to cast it out; and at last after many and frequent strainings, and much voidance of blood, wherewith many Basins were filled, the pricking pain of the Oesophagus wholly ceased. After many daies, the Patient going to stool, found the like pricking pains in his Fundament, which he had felt in his Stomach; and feeling with his finger what the matter was, he found a solid pricking substance, which by little and little he drew out, and presently voided another like the former. Now these were two thin fragments of a bone, broad and flat like the Leaves of a Tree, on the one side smooth, on the other side rough; and the ends were sharp and cutting, like the edge of a Knife. It was judged, that the bullet had razed off these two fragments from his brest-bone, and violently driven them into his Oesophagus; whence arose that pricking pain of that part, so long as the said fragments remained fastened in the part. But after many strainings to vomit, they being removed and thrust into the Stomach, the pricking pain ceased; but after some daies those fragments slipping into the Guts, the same pain arose in the Fundament. These fragments were as broad as ones little finger, but longer than the same.

The 481 Observation or History of Famous and Rare Cures, &c.

Kings-Evil Swellings.

A Certain Country-woman having very many Kings-evil swellings in her Neck and Head, coming to me, shewed me two Ulcers upon the *Os Petrosum*, and two soft tumors in her Head, one upon the right bone of the *Sinciput*, and the other upon the *Os Occipitis*, being distant three fingers bredth one from another. I opened the Ulcer by Incision, and found the *Os Petrosum* beginning to perish. And because I feared some such thing lay hid under the foresaid Tumors, I thought good to open them with a potential Caustick; which being done, and the Eschars removed under both the Tumors (strange to tell) the Skull was perforated, as if it had been done with a Trepan, and the holes were as big as Farthings, by means of which, the motion of the brain might easily be discerned in its Coats, upon which some purulent matter floated; and I could not find any the least bit of a Bone. Some daies after the poor miserable Patient, weary of so many sores and sufferings, threw her self Head-long into a pit of water, and drowned her self.

Here is to be noted the wonderful malignity and sharpness of that humor which causes the Kings-Evil, which is able to melt and dissolve bones.

The 482 Observation or History of Famous and Rare Cures, &c.

Phrensie.

A Certain Husbandman named *Poulet*, by reason of a burning Feaver, fell into a Phrensie, and continually raving without sleep, he cried out, That he was damned, and that he desired to die. Now I cured him by this policy, I consented and told him that I would kill him, and divers Horse-leeches being fastened upon his forehead, and blood running down from the wounds which they had made; I shewed him my Razor, wherewith I told him I would cut his throat, and ever and anon with the haft of the said Razor I scraped his throat very hard; and in the mean while the Razor is all bloodied with the blood that came from his Forehead. Whereupon shewing him the bloody Razor, I told him that he was kil'd, and presently I covered his Face with Linnen Cloths, and shut the Windows, so that no light could be seen in the Chamber. He supposing himself to be dead, never stirred, and a while after was taken with a deep sleep, and so was freed from his Phrensie.

The 483 Observation or History of Famous and Rare Cures,&c.

Slipping down of the Womb.

A Certain Woman troubled with falling down of her Womb,with great force crowded into her Womb a round piece of Wax as big as an hand-ball; which she carried ten years in her womb,never troubled with that Disease. Which I found after her death by dissecting her body,she dying of a continual Feaver; for I found the foresaid ball in her womb,and her Sister affirmed, that it was thrust in more than ten years before, and had abode there ever since.

The 484 Observation or History of Famous and Rare Cures, &c.

A Tumor caused by ill opening a Vein.

AN honest Virgin named *Magaret Varsaline* of *Villa Nova*, being let blood by an unskilful Chirurgeon, had an Aneurisma happened unto her, by reason of an Artery opened with the Vein,which having Resolving Medicines applied unto it from the beginning,grew to a great bigness. Advice being taken,it was Resolved,that the Tumor should be opened,the Artery being first tied in the upper part,to which Opinion the Patient would not consent. But leaving her former Chirurgeon, she came to me, and entreated me to try the Cure with outward Applications. I, endeavoring to satisfie her, did apply bolsters to the part, wet with an astringent Decoction, and bound them close down. Which being continued for ten or twelve daies, the swelling was much abated. Afterwards the Patient returned to *Villa Nova*, where using no Medicines, and stirring her Arm with divers works, she raised the swelling again to a great height, with great pain, watching, unquietness, feaver, head-ach, thirst and other Symptomes. For which cause she sent for me, and Msr. *Formius*, an ancient Chirurgeon. We conceived it best to open the Tumor, the Artery being first bound with strong bolsters, as we did in the Operation upon *Claparedus* aforesaid, but the Patient would by no means hear of it. After twelve daies the Tumor opened of it self in the same place where the Vein had been opened; and by the hole, which was but small, there came out thin black blood, which did not stink; aud the following daies there issued matter or quittor well conditioned,but in small quantity,and at last the Ulcer was brought unto a Cicatrice or Scar,and the Patient was perfectly healed. Only this Inconvenience remained,that she was not able to stretch her Arm forth, but was fain to carry it half bent.

The 485 Observation or History of Famous and Rare Cures, &c.

Pain of the Cholick.

THe Wife of Msr. *Sartreus*,Councellor to his Majesty in the Court of Accounts,Subsidies, and the Exchequer, had a grievous pain in her belly for a moneth together, and having used many Medicaments in vain. At last I applied a great Cupping-Glass to her Navil,wherewith six or seven ounces of wheyish Humor were evacuated, and the Patient freed from her pains.

The 486 Observation or History of Famous and Rare Cures, &c.

A Pleurisie.

THe Footman of Msr. *Demanse*, General-Treasurer of *France*, being very hot with running, and all wet with sweat, drank plentifully of cold water, and a little after he was taken

ken with a grievous pain in his side, with such difficulty of breathing, that he seemed to be choaked. I being presently sent for, let him blood in a large quantity, and as the blood issued out, the difficulty of breathing, and the pain of his side were by little and little abated; and when the blood-letting was finished, both the Symptomes perfecty ceased, and the sick person was wholly cured.

The 487 Observation or History of Famous and Rare Cures, &c.

A Tooth pluckt out, and fastened in the Gum again.

A Certain Virgin dwelling in a Neighboring Village, being tormented with the Tooth-ach, which she thought was caused by one of her Grinders which was rotten, she sent for a Chirurgeon to draw her Tooth. He pluckt out the next Tooth being sound, and suddenly perceiving his Error, drew out the rotten Tooth: and soon after having washed the hole of the former Tooth with Wine, he thrust in the sound Tooth again; and prescribed an astringent Gargarism of red Roses, Balaustins, Pomgranate Rinds, Lentisk-wood, and Allum boiled in water and harsh red Wine, which the Patient often used. And he bad her for certain daies to use only supping meats, and to abstain from all chewing. And so the Tooth which had been pulled out, was fastened in its place again.

The 488 Observation or History of Famous and Rare Cures, &c.

The Whore-Masters Pox.

CHirurgeons are wont sometimes to err in the Cure of the Lechers Pox, when after the ordinary Remedies conveniently practised, they imagine the Patients are not perfectly cured, because some Symptomes attending the said Pox, do as yet appear; whereupon they do sometimes cast their Patients into fresh torments, and at last force them Headlong into an Atrophy or a Consumption. Whereas those Symptoms are wont to go away of themselves after a short time, or else are cured with some light Topick Medicines outwardly applied.

While I was at *Paris* with Msr. *Helot*, a very skilful Chirurgeon, a Gentleman of *Paris*, of a Melancholick Constitution offered himself to be cured, who besides pains in the Night, and other Symptoms of the Whore-Masters Pox, had a swelling in his Neck bred of flegm and melancholy. After he had been anointed with Mercury, he was abundantly fluxed, and all tokens of the said Pox were wholly taken away, excepting only the Tumor, of which two third parts were discussed. The Patient thought that he was not cured, because of the tumor remaining. But another Elder Chirurgeon being called, perswaded him that he was cured; and *Vigo* his Plaister with the Mercury quadruplicated being laid on, it was discussed in the space of a moneth.

Another Gentleman committed to my care, after that I had fluxed him, thought that he was not cured, because there remained an Ulcer in his Neck, and in the Region of his Oesophagus. Howbeit this Ulcer was cured with ordinary Remedies in a moneth, without any Medicine proper to the Whores-Pox.

I had another in hand, who among other Symptomes had a great pain in his Shin-bone. He was of a Cholerick Complexion, and had been four times smeared with Mercurial Unguents, which had brought him extream lean. He used a moistening Diet for a moneth together: Afterwards he was smeared all over with the Mercurial Unction, and with this friction alone his pain was taken away. He was fluxed, and voided for a whole moneths space that way Humors thin, yellow and very stinking, afterward for fifteen daies he voided thick flegm. Which Evacuation continuing too long, I was forced to expose him to the open Air, that it might be stopped the sooner. At last Incision was made upon the place where the pain had formerly been, and corruption was found in the bone, which was taken away by an Actual Cautery and Pulvis Catagmaticus, and the Patient perfectly Cured.

The

The last Example shall be of a certain Knight, who was cured of the Whore-masters Pox by the ordinary Method. Yet there remained extream pains in all his Joynts, that he could not move his Limbs without crying out. Msr. *Delort*, the Kings Professor at *Montpelier*, and very well exercised in the practice of Physick, diligently enquiring into the cause of these pains, conceived that they came not from the Letchers Pox; but rather from a dry distemper, possessing the Ligaments conjoyning the bones, and the Nervous parts annexed to them. And taking his Indication from the said distemper, he prescribed him a moistening Diet and bathing, by the continual use of which, he was perfectly cured.

Observations communicated by Msr. Osias Aimar, *a Famous Chirurgeon of* Grenoble.

The 489 Observation or History of Famous and Rare Cures, &c.

A contused Wound in the Eye.

THe most renowned Msr. the Lord of *Servien*, who was a Plenipotentiary Ambassador at *Munster* about making of Peace, many years since in a Tennis-Court at *Paris* was wounded in his left Eye with a Tennis-ball, whereupon grievous pains arose. The Learned and Experienced Chirurgeons of *Paris* used all Medicines and Remedies which seemed necessary for the Cure of this Accident according to the Rules of Art; and among other things, when they perceived an *Ecchymosis*, or swelling upon the *Conjunctiva*, they endeavoured by light Scarrifications to draw away the extravagated blood. Howbeit, the pain continued as it was: He therefore finding himself to grow worse and worse, resolved to come to *Grenoble*, that he might submit himself to my Care. And I by many Blood-lettings, Cupping-Glasses, and many Topical Medicines applied to the part affected, endeavored to qualifie and mitigate the Disease. But when all would do no good, I perswaded him at last to suffer one to look into his Eye, which before he would never grant, because of the extream pain which the light coming into his Eye, did put him unto. Having therefore opened his Eye, I saw a white substance covering the whole sight of his Eye, which I conceived to be that which Authors call *Hypopion*, and judged that it ought to be opened, to evacuate the matter contained therein, which caused continual pains. Having therefore made a light Incision, a small clot of blood came out, which outwardly was white, and within red. Which being gone, all the pain ceased forthwith, and within a few daies the Patient began to endure the light, and shortly after was restored to perfect Health.

The 490 Observation or History of Famous and Rare Cures, &c.

An Ulcer with Rottenness in the Brest-bone.

MSr. *Speaute*, General-Treasurer of *France* had a schirrhous or hard sensless tumor on his Brest-bone, which after a year was past, did open of it self. I searching the Ulcer found the bones underneath perished, unto which I applied many actual Cauteries, and at last with detergents and Epuloticks I brought the Ulcer to a scar, not omitting universal Medicines respecting the antecedent Cause.

The

The 491 Observation or History of Famous and Rare Cures,&c.

Ribs infected with Rottenness.

A Certain Matron forty years of age, being vexed with vehement pain on her left side, with a slow Feaver and extenuation of her whole body; after that for a year together she had tried many Remedies to no purpose in a Village where she dwelt, twelve miles distant from *Grenoble*, at last she came to *Grenoble*, and committed her self to my care. I presently examining the pain'd side, found there an Impostume suppurated, and having made a large incision crosswise, I drew out two porrengers full of very uneven and most stinking matter. The which being evacuated, I found three Ribs much corrupted at the ends, *viz.* the fourth, fifth and sixth Ribs, reckoning from the lowest to the highest. I was compelled to cut off those Ribs the length of three fingers bredth, applying afterwards to their extremities an actual Cautery. Here the providence of Nature was admirable, for she lived and armed the Pleura or Membrane compassing the Ribs, underneath those Ribs infected with rottenness, with much flesh to Roborate the same, and so to supply the defect of the Ribs. This Matron by a restorative Diet, and the use of Milk, was afterward reduced to perfect health.

Msr. *de Bessin*, Captain of a band of Souldiers, had for a long time a schirrhous or hard senseless tumor in his left side upon the true Ribs, *viz.* the fifth, sixth and seventh. A certain Chirurgeon opened the tumor with an actual Cautery, out of which there came very little matter, and there remained very grievous pains in the part; which compelled him, living in the Country, to come to *Grenoble*, and emplore my help. I found the Ulcer as big as the palm of ones hand, and the Ribs underneath infected more than half their length with rottenness. Premising therefore universal Medicaments, I cut off the extremities of the Ribs the quantity of four finders breadth, applying afterward an actual Cautery to their extremities. Finally, with Catagmatical powders I procured a separation of the burned parts, and with detergent and incarnating Medicines I did heal up the Ulcer, and bring it to a scar.

The 492 Observation or History of Famous and Rare Cures,&c.

A Fracture of the Temple-Bone.

A Man forty years old was wounded on his right Temple, and the bone beneath received a great fracture. Being called unto him, and finding that it was necessary to use the Trepan, I made a Cross-fashioned Incision upon the temporal Muscles, without any supervenient Symptome, although Authors do much fear the wounding of those Muscles, as being of most dangerous consequence. I applied my Trepan, replaced the depressed bones, and all things being rightly administred, the Patient was happily reduced to his former health.

The 493 Observation or History of Famous and Rare Cures, &c.

The Aspera Arteria wounded with Gun-shot.

THe Maid-servant of Msr. *de Viviers*, his Majesties Secretary in the Parliament of *Grenoble*, was wounded with a Pistol charged with three small Bullets in her throat under the Larynx, and the three Bullets she voided at her mouth, out of three holes in her *Aspera Arteria* or Wind-pipe, the wind came out with a noise and hissing. And although that cartilaginous and grisly part is healed with great difficulty: yet diligent care being taken, those wounds were perfectly healed up.

THE

The 494 Observation or History of Famous and Rare Cures,&c.

An Empyema through a wound of the Epigastrium.

AN Occitanian Gentleman was at *Grenoble* wounded with a Dagger in his Belly above his Navil, the Wound growing into the cavity of his Belly, without hurting his Guts or his Stomach. In short time this Wound was healed up: Howbeit two moneths after he comes to me oppressed with a great shortness of breath, and with sense of weight in his Brest, and a continual stink in his Mouth. These Symptomes caused a great suspition of Quittor or purulent matter collected in his Chest. But I looking for the scar of his former Wound, and finding it in the upper part of his Belly, I admired how a Wound inflicted in the Belly could cause a collection of matter in the Chest. At last enquiring in what posture the Patient was when he was wounded; he said, *He was then upon a pair of stairs in a certain house, and he that wounded him stood upon a lower stair, and so struck the Dagger in his Belly.* Whereby I came to conjecture, that the Wound taking its passage from beneath upwards, had pierced the Midriff, and had come into the cavity of the Chest, by which means matter might easily proceed from the blood shed out of the Veins of the wounded Diaphragma or Midriff. I opened his side between the fourth and fifth true Ribs, reckoning from the lowest upward, four fingers breadth from the back-bone. Apertion being made, there came out white Quittor very stinking: at the first bout I took away three porringers, the day after as much more, and so by little and little all the purulent matter being voided, the Patient within two moneths was perfectly cured.

The 495 Observation or History of Famous and Rare Cures,&c.

A Gangræne of the Perinæum, Fundament and Cods.

MSr. *Pourroy*, Master of the Chamber of Accounts at *Grenoble*, sixty years of age, had a swelling in *Perinæo* [that is, the space between the Cods and Fundament] which an Apothecary only had in Cure. A Gangræne invaded those parts, to the Cure whereof I being called, I found that it possessed the Cods, the Perinæum and the Fundament. Presently I made many Scarrifications, and those pretty deep; and I often washed the parts with Vinegar, Salt, Aqua-vitæ, Unguentum Ægyptiacum, and Mercury sublimate mixed together. Howbeit these things did not hinder the progress of the Gangræne, so that I was forced to have recourse to actual Cauteries, by help whereof the Gangræne was stopped. So great a stink came from those parts, that it poysoned the by-standers. A great quantity of corrupted flesh fell away: The Uretra was wholly detected, and had two holes eaten through it, by which the Urine came out. Nevertheless all those parts were united, incarnated, and happily healed up.

The 496 Observation or History of Famous and Rare Cures, &c.

A desperate Rupture cured by Cutting.

A Certain Proctor of *Grenoble* named *Baro*, by reason of the slipping of his Gut into his Cod, fell into the Iliack passion, because his Gut was filled with dung, which being very much hardened did hinder the reposition of his Gut. After many remedies practiced nine daies together, all in vain, I was called to consultation with Mrs. *de Ville-neuve* and *Davins*, renowned Physicians. Delivering my Opinion, I said, that the part was to be opened till we came to the production of the Peritoneum, which did Choak the Gut; howbeit it was to be feared least the Gut by reason of the long continuance of the Disease were gangrenated: and yet it was good to follow the saying of *Celsus*, *viz.* that it is better to use an hazardous remedy,

than

than to leave the Patient to a certain destruction: The renowned Physicians were of the same mind. Wherefore having placed the Patient in a convenient Scituation, I made an incision in his Groin, till I came to the Peritonæum, being very careful not to hurt the Gut. Afterward I thrust a silver Pipe round on the one side, and hollow on the other, into the production of the Peritonæum, and upon the Cavity of the Pipe, I opened the said production so wide as that I might restore the dislodged Gut. Then I thrust the Gut gently into the Belly, sewed up the production, and the Wounds of the other parts I perfectly healed with the Suture Gastroraphia and Conglutinating Medicines.

The 497 Observation or History of Famous and Rare Cures,&c.

An Imposthume of the Loins reaching unto the Kidneys.

A Gentleman of *Grenoble* had a Tumor in the Region of his right Kidney, which came to suppuration; and it being opened, a great quantity of wheyish matter issued forth. Some daies after there came out of the Ulcer two stones as big as Almonds; which made me to admire. But marking the deepness of the Ulcer, which reached four fingers breadth, and seeing other stones as big as beans come forth of the Ulcer; I was made to believe that those stones came from the Kidney which was likewise Ulcerated. This was more credible, because there flowed continually out of the Ulcer a great quantity of wheyish Excrements infecting the Cloths within a few hours with so much moisture, as if they had been soaked in water. Also purulent matter came sometime away with his Urine at the Yard. This accident happened ten years ago, and the Ulcer came to be a Fistula, which oftentimes is shut up three or four moneths together, and then it opened again and sent forth a certain bloody matter, and then it shut again of it self. The Patient lived very conveniently in that condition, and freely performed all the ordinary actions of a Man.

The 498 Observation or History of Famous and Rare Cures,&c.

A Rare kind of Convulsion.

MSr. *de Bollen* a Souldier, by the Bullet of a piece of Ordnance was wounded in his right Arm; and the Bullet took his whole Arm away, only that part next his shoulder was left as much as four fingers breadth. His Arm being Cured, and the Wound perfectly healed up, he was taken with a kind of Convulsion, which drew his head backwards towards the right side. And it frequently agitated his Jaws; so that he was fain to have linnen Cloth alwaies between his Teeth, which ever and anon he was wont to bite and grind with his Teeth. He called many Consultations of Physicians and Chirurgeons, who all were of Opinion, that in the extremity of the bone which was taken away by the Bullet, there was some sharp point which pricked some Nerve, and caused this Convulsion; and that therefore the extremity of the bone must be again opened, and diligently made smooth and even. This work being diligently performed, did no good, but the Patient was vexed after the same manner, which took from him all hope of Cure. By great hap I met him, and he told me his trouble: it came into my mind, that some hidden venome of the Whores-Pox might peradventure cause this Accident. And I asked him presently, whether or no when he was wounded he had any Whores-Pocky Disease upon him, or whether he had formerly had any? He answered, that a little before he was wounded, he had been troubled with a grievous Gonorrhæa, which notwithstanding had been perfectly Cured. This encreased my conjecture, so that I advised the Patient to try such Medicines as are given against the Pox: whereunto, being very desirous of help, he willingly submitted. Premising therefore Universal purgation, and a Sudorifick Diet-drink; I rubbed him with Mercurial Unguents, by which he was fluxed: and after the third day of his fluxing was over, those Contractions and Convulsions ceased, and he was never troubled with them again.

Observations which I Learned here and there by accident.

The 499 Observation or History of Famous and Rare Cures,&c.

An Ulcer of the Kidneys.

I Have been told,that an Emperick cured an Ulcer of the Kidneys,only by anointing it with a Mercurial Unguent.

The 500 Observation or History of Famous and Rare Cures, &c.

A Crooked Back.

MSr. *Francis Ranchinus*, Chancellor of the Faculty of Physick at *Montpelier*, told me the manner how he cured a Luxation, or disjoynting of the Back-bone of the most renowned Lady, Madam *de Montmorencie*, which proceeded from a Catarrh falling from the brain upon the Back-bone, by which two of the Vertebræ in the middle of the Back-bone were disjoynted. He therefore, after universal Remedies, to reduce the Vertebræ, first made use of a press, such as Barbers use to press their Trimming Linnen. Which did much good, for he put one board to her Breast, the other to her Back, and so she was pressed by little and little, the little bolsters of Linnen being put between the wood and her body. But this Remedy was found inconvenient, for by pressing of her Breast, it made her have a difficulty in her breathing. At last he used such an Instrument as they have in Coaches or Waggons to lift them up,when they stick fast in an hollow way, and is called in French a *Cric*; to the circular end whereof, he fastened a piece of wood which was to be set to the dislocated Vertebra, a little pillow being between. The other end of this Instrument was set against the Wall,and then the Patient was held fast by her shoulder-blades, and the Instrument gently forced,till she could no longer endure the Pain, and then they ceased. And this was done twice a day, and so by little and little the said Luxation was perfectly Cured.

The 501 Observation or History of Famous and Rare Cures,&c.

Inflammation of the Eyes with filth.

A Child new born was troubled with redness of the Eyes, and much filth which came from them like Quittor; the Disease continued three moneths,and many Oyntments and Eye-Salves were applied, which did no good. At last by prescription of a Certain Physician, Cotton-wooll was every night laid upon each Eye, being first diligently dried over the coals, and well teazed and pulled asunder with the fingers, and afterward each Eye was covered with a little Cotton in manner of a Bolster, which was swathed down. In the Morning the Cotton wooll was taken off,much fouled with the foresaid matter. This Remedy being continued divers nights together, the Infant was perfectly Cured.

The 502 Observation or History of Famous and Rare Cures, &c.

Falling-Sickness proceeding from the Mother.

THe Wife of Msr. *Polemarchus de Sumens*, was many years together vexed with many Symptomes of the Mother, which resembled fits of the Falling-sickness; she tried many Medicines prescribed by many Physicians, but all in vain. At last, by the advise of a Woman, she took the flesh of a Woolf reduced into pouder, and wore a piece of the same flesh salted continually about her; after which she was perpetually freed from the said Symptomes.

The 503 Observation or History of Famous and Rare Cures, &c.

A Tertian-ague.

A Certain Emperick Cured many of the Tertian-Ague, by once purging them with a gentle purge, and afterward letting them blood in the beginning of their fit. The fit was restrained, and appeared very little, and afterward returned no more.

The 504 Observation or History of Famous and Rare Cures, &c.

A Wound in the Chest hard to Cure.

MSr. *Henry Bachaman*, an expert Physician of *Avinion*, told me, that the Son of Msr. *Dorsan*, twenty years old, received a Wound in his Chest, penetrating into the Cavity thereof, which could not be Cured by many and divers Remedies applied thereunto, and continued three or four moneths, whereby the Patient was much emaciated and brought unto a Consumption. At last he advised him to suck the Milk of a Woman out of her Breast, and injections were made of the said Milk in the Wound; and with this only Remedy he was healed of his Wound, and brought from leanness into a good habit of body.

The 505 Observation or History of Famous and Rare Cures, &c.

Cholick Pains.

A Certain Citizen of *Marbon* told me, he had been subject to pains of the Cholick many years together, which was wont often to torment him, and that he was freed from the said Disease with the following Remedy taken once only, so that he never fell into the same any more, and that many others had been freed from the same Disease, to whom he had communicated the said Remedy. Now this Medicine is the Cork-stopple of an Hogshead of Wine, which has been many years so employed, and consequently is well drencht with Wine, it must be burnt to ashes, and a dram of the ashes taken with White-Wine, when the pain is Urgent.

The 506 Observation or History of Famous and Rare Cures, &c.

A Dropsie.

A Certain Credible Person told me, that he had seen many Cured of the Dropsie Ascites, or Bottle-belly Dropsie, by this following Medicine.

The whitest Flints must be gathered, which are found about the Brooks and running Waters, and being broken are transparent like Chrystal; these being heated red hot, were quenched

in White-Wine : the Patients took a Cup of this Wine every morning till they were Cured, which was performed in a moneths space.

The Salt of such flints Calcined, will, if I mistake not, work more happily.

The Salt of those Bugs called *Millipedes*, and in English Sows, is happily used by a famous Physician in this Cure, which he mixes with Juleps and other Aperient Remedies, purging them first with the juyce of our Country Orris, which if the Patient cast up, he takes him to be past Cure.

The 507 Observation or History of Famous and Rare Cures, &c.

Another Dropsie.

ANother Dropsied Person was cured onely with the use of Sal Prunellæ in his ordinary drink for a moneth together, in which space all the water in his Belly was evacuated.

I conceive this Cure happened not only by reason of the Diuretick Vertue of the Sal Prunellæ ; but because the Dropsie was caused by an hot distemper of the Liver, which was extinguished by the Sal Prunellæ, being a most potent Cooler.

Another Hydropick Person was cured with a Decoction of the Tops of Oaken-boughs, a Cup whereof he drank fifteen daies together.

The 508 Observation or History of Famous and Rare Cures, &c:

Kings-Evil.

A Bretaigner named *Daniel*, thirty years of Age, a Country-man of a well-fleshed and strong body, had Kings-Evil swellings many years together, both about his Neck and under either Arm-hole, who being hated by all his Friends and Acquaintance, because of that loathsome Disease, betook himself to the Hospital of Charity in *Paris*, as unto the true Temple of *Æsculapius*, perswaded that he should there find a certain cure of his Malady ; neither was he deceived by his Hope, for he was forthwith visited by the most illustrious Msr. *Gabriel Hardvinus* of St. *Jacques*, ordinary Physician of that Hospital, who premising universal Remedies, applied a Cataplasm of the Leaves of wild Cucumer, called *Cucumis asininus*, upon the swelled parts, and prescribing him a thin Diet, and gently drying, the day following he ordered for him this following Opiate.

Take Turbith, Hermodactyls, of each two ounces : Of the Roots of both sorts of Scrophularia or Pile-wort one ounce, Roots of the greater Angelica two drams, Senna half an ounce, Scammony unprepared four scruples. Make all into a Pouder, and mix them with Syrup of Damask-Roses into an Electuary. Let the dose be two drams, adding to every dose Mercurius Dulcis twenty grains ; The which being taken every other day fifteen times, and the Cataplasm being continually renewed, all the Knobs and Swellings went away, without any Incision or Eradication ; so that he sent the Man home safe and sound in the year 1641. *This I had from Mr.* de Leseq; *Dr. of Physick at* Montpelier, *sometime a Scholler of the foresaid Physician, Msr.* de St. Jacques.

The 509 Observation or History of Famous and Rare Cures, &c.

Tooth-ach.

MSr. *Leseq*; the Dr. of Physick aforesaid, told me, that he had seen the Tooch-ach Cured with Salt of Ash-wood, with which a Womans Thimble or some such tool is filled and applied to the Artery of the Temple where the pulsation is felt; and within a short time it makes a Knot in the Artery, whereby the Flux is intercepted.

Th

The 510 Observation or History of Famous and Rare Cures, &c.

The Knotty Gout.

MSr. *Chomel*, the *Annonæensian* Physician writ me word that he lately saw a Gouty person full of Ulcers in divers of his Joynts, out of which more than two hundred stones had come bigger than pease, and so hard, that an Hammer would not break them. And which is strange to say, the Quittor, Sanious and Wheyish matter which did flow unto the Ulcers, after a little abidance in the part did presently unite it self, and grow into the hardness of a stone. He observed likewise this rarity in that Patient, that such outward applications as did good to one part, did hurt another, and contrariwise.

The 511 Observation or History of Famous and Rare Cures, &c.

Pain of half the Head.

MSr. *Genton* the younger, told me, that he had been troubled with a pain possessing the half of his Head for many years together; and after many Medicines tried in vain, he was Cured by the smoak of Amber, which he received in at his mouth and Nostrils for half an hour together, when the pain was upon him.

The 512 Observation or History of Famous and Rare Cures, &c.

A Rupture.

THe same person related that he was troubled with a Rupture in his Belly for many years together, and was cured by three Plaisters given him by a certain Emperick, each of which he bad him wear nine daies with a Truss: they were all made of the same materials, and very stinking: and when they were taken off, all the matter was consumed, save that upon the Leather appeared a little pouder, like to poudered Glass. By the use of the first Plaister no Effect appeared; after the second was laid on, the Urines came plentifully, and of divers colours; sometimes green, sometimes black, and sometimes with pain. After the twenty seventh day, the three Plaisters being consumed, the parts seemed withered and lean, so that all the flesh and fat seemed quite consumed. By reason of the stink, I conceive this Plaister was made of Galbanum, which having an exceeding faculty to attenuate, was able to dissolve and liquifie the Humors which fell into the part affected, and were perhaps congealed about the same, so that Nature might afterwards void them, partly by Urine, and partly by Transpiration.

The 513 Observation or History of Famous and Rare Cures, &c.

A Dropsie with Bladders.

A Certain Countrey-Man being Hydropick, had an Impostume arose on the right side of his Belly, which being opened, there came out an almost infinite number of little Bladders full of water, more than two hundred were reckoned, and that for the space of many daies together. And so he became perfectly Cured: By this Observation, that History related by *Schenkius* is confirmed of a certain Hydropical person, whose Body being opened after his Death, his Belly was found full of bladders of water sticking to the Peritonæum, and other parts.

FINIS.

SELECT

MEDICINAL COUNSELS,

Of the Renowned

IOHANNES FERNELIUS,

Doctor of Phyſick in the Univerſity of *Paris*;
Chief Phyſician to the King's Majeſty.

Being *Pick'd* and *Choſen* out of *Four Hundred Conſultations and Advices* for Sick People;
of which, theſe are the Flower and Cream.

The I. Counſel.

Touching the Alopecia, *or falling off of the Hair of the Head.*

The Diſeaſe is propounded to Fernelius, *by another Phyſician in behalf of his Patient, an Out-landiſh Perſon.*

A Young Man well fleſht, and exceeding healthy, twenty years of Age, has often complained to me, that ever ſince he was an Infant, his head has been apt to be deformed by bald patches, where the Hair is fallen off: Having purged his Body I applied ſuch Remedies as I found commended by the Ancients, to cauſe Hair to grow; but all to no purpoſe. If you (Sir) have by long Experience found any thing very effectual in this Caſe, I earneſtly beſeech you again and again to communicate the ſame to me. Farewel, and have me ſtill in your Love as formerly.

The Anſwer of Doctor Fernelius.

The truth is, theſe bald patches when they are not contracted by any ſickneſs, nor through fault of any Humor, but from the firſt riſe and ſeed, they hardly admit any Cure. For the faults of the Seed and Nature can hardly be corrected by any Art. But if there be any Cure, I ſuppoſe this muſt be it. Let us not meddle with purging nor bleeding, thereby to diſturb his

his Body, seeing no Humor is cause of the falling of the Hair. But because the bald parts seem over-dry, it is good to loosen the Skin with emollient Fomentations, and to draw the moisture from the neighbouring parts thereunto, that there may be fit matter sufficient to make the hairs grow. First of all therefore, let the Fomentations be made of Marsh-mallow Roots and Lilly Roots, of Mallows, Violets, Pellitory of the Wall, Annis-seed and Fenugreek. Afterward, when the part shall seem softer, some Fomentation will be good that may draw in the matter made of Sage, Betony, Stæchados, Maiden-hair, Southernwood, Nettle-seed and Mustard-seed boyled in Water, and a fourth part of White-Wine. Presently after the Fomentation, the bald places are to be anointed with Bears-Grease, which questionless is of very great vertue. When fifteen daies are over, let his Head be rubbed morning and evening with bruised Onions, till it become very red, and then smear Honey thereon in place of a Cataplasm. If during this course, the Hair break not out, in the last place must be applied an Oyntment of Thapsia and Bears-Grease, which as it has a mighty name in the writings of the Ancients, so have I found it most efficatious in such cases. Now the true Thapsia is here with us commonly to be had, a dram whereof will be sufficient to mix to an ounce of the Grease: If by vertue hereof this make not the Hair to come, the Case is in a manner desperate.

The II. Counsell.

Of Numness of the Joynts.

BY the long Beade-Roll of Symptomes wherewith this Gentleman our Patient is troubled, I conceive there are two chief causes to which they may be referred. The one is an hot distemper of the Liver and Kidneys, whereby the whole mass of blood is also heated, and the whole body lean and fallen away; by the adustion whereof, the Patient seems inclined to Melancholy. The other is a weakness of the Brain, Nerves and Joynts, with a cold distemper, by which there is a great encrease of flegmatick Excrements which flow from the brain into sundry parts, and moisten the processes of the Nerves. Hence arises a numness which possesses almost all his Joynts flowing into, and assailing sometimes one part then another. Which is not a little furthered by anointings with Quick-silver, long since immoderately used, whose nature is to cool the Brain and Nerves, and weaken the Joynts. These, truly, are the Rudiments of grievous Diseases to follow; as of the Gout or Palsy, or other Diseases of the Head, portended by the swellings and inconstant motions of his Eyes. For the prevention of all which, after a gentle purgation of Rhubarb, Senna and Diacatholicon, I conceive it will be good to let him blood in the middle Vein of his left Arm; or if you would rather have him bleed in the right Arm, it matters not much. And then his Diet is to be ordered, which ought to be in manner temperate, so as not to cool or heat, nor moisten or dry over-much. And herein a chief Care is to be had of his Wine, that it be very weak, and well tempered with Water, lest it offend by its heat, or work too much upon the Brain and Nerves, by its vapor and exhalation. For I have known many fall into a numness of their whole Bodies, onely by the immoderate use of strong and unmixt Wine, wherewith the Skin onely seemed to be affected, without any fear of a Palsie. Also his whole body must be rubbed every morning, and his Head must be dryed with bags of Salt, Millet, Bran, Annis-seed, Fennel-seed, and Bay-berries toasted or fried. And then flegm must be brought away through his Nostrils, either by Sneezing pouders or Errhines; that is to say, Liquors to be snuffed up into his Nose: to which purpose also it will be good for him to lie upon his belly, and to avoid lying upon his back, which causes Humors to flow into his Joynts and Nerves. A moderate exercise of all parts of his body alike will be good before meat; as that which strengthens the Nerves Muscles and Joynts, and frees them from Excrements. After meals, it will be good to repress the vapors of his meat with Coriander seed, or some convenient pouder. And besides all these things which consist chiefly in matter of Diet, it will be necessary frequently to move his Belly, sometimes with a Clyster, which has a little Hiera picra in it, sometimes with a convenient Syrup or Pills. Let the Decoction of the Syrup be made with such things as are proper for the Liver, Brain and Nerves, wherein Senna, Agarick and Rhubarb must be infused, each in its convenient Dose. Let his pills be made of

Aloes

Aloes washed in the Juyce of Endive, with Agarick and Rhubarb. Every eighth day let him take the one or the other, but most frequently the Syrup, which will be best for him. In the intermediate days, give him some Methridate with Conserve of Bugloss, or of Acorns, or make him a peculiar Electuary of the Species of Trion-Santalon and Diamargariton. When fifteen or twenty days are over, a dry Bath will be very convenient, made of a decoction of Roots or Herbs, good for the Brain and Nerves, that in the Sweats caused thereby, superfluities may be voided and his Nerves and Joynts strengthened. And before these Sweatings, if the Disease be rebellious, and seem not sufficiently abated, by iterated purgations; the Patient must keep House about eight days, and use a thin Diet with a decoction of Lignum Sanctum, sweating twice every day: after which notwithstanding the foresaid vaporary or dry Baths may profitably be used.

The III Councel.

Of a Catarrh, with pain of one side of the Head, and their Cures.

AS near as I can gather by your Letters, those flegmatick Tumors, which now for these many years have quartered upon your Face and Cheeks do arise from a distillation flowing from the top of your Head into the *said* parts: and because the Catarrh falls so frequently into the same place, 'tis like the place it self has some infirmity which intices the fluxion to it. But there can thence be no certainty gathered, unless the seat and sort of the Disease be first throughly known. But that same Hemicrania or pain of half the Head, touching which your last Letter desires advice, is a distinct and different Disease, which requires a peculiar method of Cure. For the immediate cause thereof, is a vapour which arising from Choller flowing out of the Liver into the Stomach, does smite and twitch the Membranes of the Brain, yeilding matter peraduenture to the distillation. That same Catarrh with which by its oft returning you are so greivously afflicted, must be stopped with one dram of the Mass of *Pilulæ sine Quibus* (which are most proper both for your Age and Temperament) especially if for eight or ten days last past, you have taken no medicine against the Catarrh. The next day after, bags as hot as can be endured must be applied to the crown of your Head being shaven, morning and evening before Supper: which may draw the matter out from thence in most parts and resolve the same, and they must abide on for the space of half an hour or thereabouts, and be continued for certain days, till the fluxion be stopt. Moreover an Astringent Plaister to stop the passages must be applied to the Temples, or to those parts through which the humors go; which must be renewed every other day, and not taken away till the fluxion cease. And if it shall no longer run down by the Mouth and Cheek-bone, yet that the Gums and inner parts of the Mouth may not so easily receive the fluid humor, let them be washed three or four times a day, with an astringent and strengthening Gargarism. And because all the matter of the Catarrh is not so soon dryed up, some portion of this Gargarism must be drawn by little and little through the Mouth and Nostrils, through which the cavity of the Brain may be purged, morning and evening before Supper. Keep in the mean while a fitting diet: live frugally, use meats of good Juyce, and thin Wine very well allayed with Water, partly because of the cold distemper of your Brain, and partly because of the hot distemper of your Liver. Abstain from immoderate drinking, broths and other moist meats, the Wind, the cold and the rain; exercise your self moderately in the morning long before dinner. When you go to bed cause your Arms, Back, Thighs and Legs to be rubbed downwards. Let your Belly be always soluble, either of its own accord, or by artificial means, as Clysters, or Suppositories, least your body abound with excrements.

Here are the descriptions of your Medicaments.

Take of the Mass of Pilulæ sine Quibus *two scruples; of Pills of Agarick one scruple. Work them together a new with Syrup of Stæchados, and form seven Pills.*

Make the usual bags of Annis-seed, Fennel-seed and of Bay-berries each two drams; of Millet half a pound. Common Salt six drams, apply them to the crown of the Head.

Also, *Take Unguentum desiccativum rubeum half a dram; Mastich pondered one dram: make them into a Plaister and apply it to the temple of the pained side.*

Item, *Take Sage one handful, Mastich bruised half a dram, Harts-horn three drams; boyl*

them in Wine and Water, of each a sufficient quantity. Then strain it, and let him therewith wash his Mouth and Gums, three or four times in a day.

Make him the ordinary Head-Purge.

Give him the ordinary Clyster.

The IV. Counsel.

For a noble Matron vexed with the Tooth-ach, translated out of French.

THat same Tooth-ach which does so extreamly torment you, arises from a cold distillation, which falls from the left side of your Head into the Jaw-bone of the same side, and the nerves of the Teeth, and sometimes as far as the Shoulder-blades. To prevent the same, first the flux of Rheum must be stopped, and the cause thereof totally removed. And that may be done by these Pills taken once a moneth; or with this potion, if it be Summer, or the season hot. The day following your first purgation, your head being shaven must be rubbed with these seeds inclosed in a double cloth, which must be done the space of 14 or 15 days: Which being over, your Body must be purged as before. Then the day after, your Head, the left side especially, must be fomented with a little *Aqua Vitæ* every morning, the hair being sprinkled after the fomentation with the following pouder. Mean while care must be had of your teeth, which being wiped three or four times a day, long from your meals, hold in your mouth and chew this Masticatory, which is to draw down the Rheum from the whole body of your Brain, but especially out of its ventricles by the funnel into your Mouth and Palate. Moreover, let your Gums be washed oft every day with this decoction. Mean while use meats of a good juyce, and live soberly; drink not between meals; At meals drink moderately; abstain from moist things; keep the cold from your Head, Teeth and Feet: The Remedies hereunder prescribed, must be long and diligently continued, because the disease is inveterate.

Take of the Mass of Pill Cochy and de Agarico, and Assajereth, of each one scruple: make seven Pills.

Take of the Waters of Sage and Betony, and White Wine, of each one ounce. In which infuse of choice Rhubarb, Agarick trochisked, of each one dram. In the expression dissolve Diaphœnicon two drams; Syrup of Maiden-hair half an ounce. Make all into a purging Potion.

Take Millet one pound; common Salt half a pound; Annis-seed and Fennel seed, of each two drams. Bay-berries bruised one ounce. Make all into a very fine pouder; sprinkle it on her shaven Head.

Take Pellitory of Spain, Staves-acre, Ginger, Cardamoms, Styrax Calamita, of each half an ounce. Make a most subtil fine pouder, for the use aforesaid,

Take Mastich one ounce; Pellitory of Spain half an ounce; Cubebs two drams. Incorporate them in a solid form with Honey of Rosemary flowers: and make a Masticatory.

Take of small Sage one handful; Myrtle leaves half an handful: Mastich bruised half an ounce. Boyl them in Fountain water and white Wine, of each half a pint.

Strain them, and reserve them in a Vial for to wash her Mouth.

The V. Counsel.

In a Catarrh and moistness of the Brain, with a bad Disposition of the Bowels.

THe Brain being naturally cold and weak is over-whelmed with great Incomes of Excrements, which, their natural conrse being stopped, rush into sundry parts preternaturally: Into the Optick Nerves where by the dimness of the Patients sight they threaten blindness; into the Jaws and Teeth, whereupon they often cause pains, as also those which fall upon the

the Neck and Shoulder-blade. Also a portion of the said Excrement remaining within brings Ringing in the Ears, and heavinesse of the Head, and renders all the functions of the Brain lazy. There are also other Symptoms proceeding from the fault of the Liver and nutritive parts; Heart-pain or heart-burning and frequent inclination to vomit, a filthy colour of the Face and whole Body, largeness of the Belly, a bloat and somewhat swoln habit of the Feet, Face and whole Body; which foreshews a Cachexy. None of which Symptoms can come without the obstruction and impurity of the Bowels.

To help all these Infirmities together, a slender Diet must be prescribed twenty or thirty days together, in which the Patient must drink nothing but a Decoction of Guajacum, and that simple, and not very strong of the Wood; but of another stronger Decoction he must take at five a clock in the morning, and at four in the afternoon, so that he must dine at nine a clock in the morning, and sup at seven at night. And then his meat must be sparing, dry, and of good juyce. His drinks therefore shall be thus ordered; his strong Decoction after our usual form of a simple Decoction; the more dilute Decoction he shall use for his ordinary drink at meals, and to quench thirst at other times. This kind of Diet, though it attenuate the Humors, and digest a portion thereof into sweats, yet can it not perfect the Cure, nor restore health, but other Remedies must be used in this order:

Take Betony, Sage, Hops, of each one handful. Cordial flowers, of each one pugil; Senna Leaves, three drams. Make a Decoction for one dose; in the strained Liquor infuse Choice Rhubarb, four scruples. Agarick Trochisked, one dram: Cinnamon half a dram.

In the strained Liquor dissolve half a dram of white Sugar, and make a potion: let him take it when he begins his Diet-drinks, and repeat it once in eight daies.

If at any time it work but faintly, one dram of Diaphænicon may be added.

In the intermediate daies if he shall be at any time costive, he must have an Emollient Clyster. As soon as ever Sweat shall begin to break out, every morning his shaven Head shall be rubbed with these Bags very hot.

Let the common bags be applied exceeding hot in his sweat.

Item, *Take Nigella Romana, Styrax Calamita, Benzoin, of each three drams: Mace, Cloves, of each one dram: make all into a gross ponder for a fume; let him use it twice a day after his Head is wiped and dryed. Also daily in the morning and before Supper, let him use the common Head Purgers,* [Masticatories so called, it seems.] *which if they shall not bring away Rheum enough, half a dram of the Root of Artanita may be added. Let him persist in the use of these things till he be perfectly well. And least for time to come through Intemperance or Carelesness he should fall into the like Diseases, every moneth at least his Body must be purged with this Syrup which I have fitted for all these Infirmities.*

Take Roots of Smallage, Parsly, Fennel, and Capars, of each half a dram; of Endive, Maiden-hair, Agrimony, Dodder, Ceterach, Betony, Sage, Stæchados, Marjerum, of each an handful: Cordial flowers, Epithymum, of each one pugil. Make a Decoction to twenty drams. In the strained Liquor infuse four drams of Senna; White Agarick two drams: Gummy Turbith six drams: Ginger two drams: Choice Cinnamon half a dram.

Let them boyl a little after they have been infused, and press out the Liquor, and dissolve therein one pound of white Sugar. Make a Syrup perfectly boyled, not clarified. Let him use it once or twice in a moneth.

The VI. Counsel.

Of a distillation into divers parts, with a diseased Spleen, for a noble Virgin.

THere were in this Virgin evident tokens of a Distillation which fell from her Head, especially the left side thereof, into her side, Lungs, and Neck behind her Ears, and into her left shoulder blade, and into sundry inferior parts, with wheezing, and shortness of breath, which is a beginning of the Ptissick. Hereunto is added the pain of her Stomach, which seems to proceed rather from some fault of the Spleen than of it self. For I have a great suspition of that Bowel, though peradventure it may communicate its illness to the Liver, and be the original of the infirmity of the left side of her head. Her left Hypochondrium must therefore be observed and felt.

The Cure of these intertwisted Diseases must be endeavoured by frequent Evacuations, which must sometimes be accommodated to the Head, sometimes to the Bowels. In the last Quarter of the Moon before her Head-ach comes, let her purge with these Pills.

Take of the mass of Pill Cochy, one scruple; of Pills sine Quibus, two scruples. Make five Pills.

For three or four daies after, her Head must be rubbed in the morning with bags of Millet, Salt, Annis, and Fennel-seed, fried in a Frying-pan. Then also the Rheum shall be drawn out at her Mouth and Nostrils, to remove the threatening distillation. And afterwards her Head must be dried and strengthened chiefly by outward Applications and Fumes: and that Humor which is already lodged in her Lungs must be fetcht out by Pectoral Medicaments, but especially with Syrup of Hyssop and Maiden-hair, sometimes by way of a Lick-pot, otherwhiles as a Julep being mingled with convenient Liquor, that so some consideration may be had of moving her Courses. Also other Syrups pectoral may be prepared, which among other things shall contain the Roots of Elicampane, Polypody, Coltsfoot, Scabious, Hyssop, Savory, with Dates, Figs and Raisins.

The Narration of the foregoing Disease written by Claudius Melinus, *desiring the advice of* Fernelius.

A Virgin three and twenty years of Age, low of stature, of a compact and thick habit of Body, is vexed with these Symptoms. For this five or six years, three or four days before the last quarter of the Moon, she has an huge pain in her Head, both before and behind, but chiefly on the left side. She feels also a very great pain in her Stomach, when she eats but a little more than ordinary, or when she eats cold meats, vulgar Herbs, and moist meats. She Wheezes in drawing her Breath, and is short-winded in cold and moist Weather. She is pained all her Body over, but especially that part which reaches from the lower part of her left shoulder-blade to the top of her left Dug. She is vexed for want of rest, nor does the morning bring her to sleep. She had once the palm of her hand all scabbed. Her Body is bound, and her monethly purgations do not keep a constant Course. For sometimes they come not till three moneths are over, and sometimes after six weeks, and that sparingly.

The VII. Counsel.

Of the Falling-Sickness.

AS Lawyers from the Knowledg of the Fact understand what is Law and Right in the Case; so must we fetch the whole way of our Cure from the right knowledg of the Disease.

Not long since I was told of a kind of Fainting, expressed by uncertain signs common to other Diseases:

Diseases: which I conceived to intimate a Syncope or Swooning. But you avouch by undoubted signs, and inform me, that the Disease is the Falling-sickness arising not properly from the Brain, but by Sympathy with the Stomach, and that it has its certain times of coming, and that they are commonly in the Wain of the Moon. Things being thus, the Cure must be thus undertaken: Six or seven daies before the coming of her fit, she must have a Clyster, which besides other convenient things, must have in it half an ounce of *Hiera Picra*, and half an ounce of Diaphænicon. The very same day let her feed very sparingly with a thin Diet, and prepare the Humor to be purged with Oxymel simple or Compound.

The day after purge her with the Infusion of Rhubarb and Agarick, of each one dram: in which two drams of *Hiera Diacolocynthidos* must be mixed. Or if that Medicine be not to be had with you, dissolve therein of Hiera simple and Diaphænicon, of each one dram and an half. But you indeed your self considering the strength of your Patient and greatness of the disease, may better determine of the Quantity of the Medicaments.

The third day let her cease from all Evacuations and other Medicaments, unless peradventure you may think fit to give her a dram of the best Methridate.

On the fourth day, vomit her, which is a most efficacious, and most proper remedy in these Diseases, in respect of the waies to be purged, the Humors having a long time stuck fast in the Stomach and neighbouring parts.

Now that will be most effectual which is made of two scruples or one dram of Asarum Roots, dissolved in Hydromel, or a Decoction of Raisins, with a little Cinnamon and Syrup of Violets.

The following daies till the suspected time of the fit be over, give her every morning four scruples of this Opiate.

Take Conserves of Rosemary and Betony flowers, of each one ounce. Old Methridate, two drams and an half. Venice Treacle, four scruples. Misleto of the Oak, Peony seeds, Mans Skull poudered, of each two scruples. Mix them. Let her take it by it self, or in Betony Water. If you can get male Peony, you shall find nothing better, either the seed or the Root gathered in the Wane of the Moon, one dram in weight. And all these things must not be once only used, but three or four times, near the time of the Fit.

The VIII. Counsel.

For a Boy Eight years old, long since taken with the Falling-Sickness and loss of Memory and Reason, in a manner.

TAke Leaves of Betony, Rosemary, Marjerom, Stœchados, Sage, of each one handful. Of the Cordial flowers, of each a pugil. Boyl all in two pints of Water. In the strained Liquor steep all night Epithymum two drams. Senna four ounces; Ginger two drams: Choice Cinnamon four drams. In the morning, boyl them a little and press out the Liquor, wherein dissolve of the best Honey and whitest Sugar, of each half a pound. Make all into a Syrup indifferently boyled, that is, to an indifferent height. Let him take once in a week one ounce and an half, with the Water wherein Betony has been boyled.

Item, *Take Conserve of Bugloss and Rosemary flowers, of each one ounce. The best Methridate and Treacle, of each half a dram. Seeds and Roots of male Peony, Misleto of the Oak, Mans Skull, Harts-horn poudered, of each two drams. Mix all into an Electuary with a sufficient quantity of Syrup of Violets. Let him take one dram or four scruples, three or four mornings together after his purgation, three or four hours before Dinner. Let him drink no Wine at all, and let his drink be simple water, in which Harts-horn has boyled with a little Ginger. Let him abstain from Fruits, especially such as will not keep, from milk and all made thereof, from Beans and Pease, and Fishes.*

The

The XI. Counsel.

For the Falling-Sickness.

THis most grievous Disease of the Falling-sickness arising from a strong and inveterate cause in an impure and now ill-habited body, will hardly admit of any Cure. Moreover, the Patient is so weak, that no part is freed from disorder excepting the Lungs. His Head is vexed with pain, Swimming, Melancholy and the Falling-sickness, his Bowels are exceeding impure, by which means the rest of the Body is infected, his Urines are thick and gravelly, arguing an obstruction and heavinesse in his Kidneys. Nor is his old pain in his Thigh as yet gone.

In so great a Concourse of Diseases the Cure must begin with purging, which because it can scarce safely be performed by Purgatives, we must endeavour to do it rather by a thin drying Diet with Guajacum. Let him therefore first be purged either with the Syrup which I formerly prescribed him, or by a Medicine of the Infusion of Rhubarb and Agarick, with two drams of Diaphænicon.

The third or second day after let him begin his thin Diet, in which let him feed sparingly only on roast meats; and let him drink a simple Decoction of Guajacum Wood without the Bark, that he may the better accustome himself to it. Let him sup at seven in the Evening; at five or six in the morning, and again at four in the afternoon, let him drink a Cup of pure and strong decoction made of the Wood and Bark of Guajacum and of Polypody, with Sage, Betony and Stæchados: and this in the first daies shall be instead of a Preparatory Apozeme, nor let him be forced to sweat.

When six or seven daies are over, and the Humors thus prepared and stirred, let him be purged again with the former, or some like Medicament, or to which Senna and Epithymum are added.

And then let him begin to sweat with the Decoction aforesaid, that the inner parts of his Belly being Evacuated, the upper parts may consequently be disburdened of Superfluities.

When the Sweat shall liberally Evacuate and purifie his Body, so that it shall become extenuated and leaner, it will be time to use Topical Medicaments.

And then attenuating and dissipating Fomentations must be applied to his Thigh, which was the first cause of all his weakness, and after the Fomentations a Cataplasm must be applied, of the crude Roots of Briony and wild Cucumer, with Mustard-seed and the pulp of Figs mingled together in a convenient proportion; which though I should express to a Novice, I need not to you. If these things shall seem to you not to have done enough towards the Cure, at last a *Phænigmus* must be applied of Leven and Cantharides, till the Roots of the Disease be plucked up. For you shall do more by these strong drawers, than with a very long Ulcer or Issue, which only receives the Humors, but does not draw them.

And then you must also open the Hæmorrhoid Veins, either with the juyce of Mercury leaves, or of Figs; or with a Suppository of Hiera Simple, with the Root of round Birthwort, but so as an Emollient Fomentation be premised. Or if they cannot be sufficiently opened or will not run, it will be good to open the *Vena Saphæna* in his left Foot, and to let him bleed as his strength will bear.

While you apply these Topicks to the Cure of his Thigh, you may likewise set about the Application of Topicks to his Head. And in the first place *Errhina*, which may strongly draw spivel out of his Brain. Then use Frictions of his Head, with bags made of discussing Seeds, Millet and Salt, fried. After which his Head being shorn to the Skin, lay on a Plaister of Roots of Florentine Orris, with Hermodactyls and Mustard-seed: which being poudered must be made up with Melilot Plaister, and a sufficient quantity of Turpentine. And afterwards use a stronger, if need require; and to the same purpose Cupping-Glasses, sometimes without, sometimes with Scarrification may be fastened to the hinder part of his Head. And you must persist in the use of these things, with the foresaid Diet of Guajacum till both the

inward

inward and outward parts of his Body shall appear sufficiently cleansed from bad Humors.

Setons in the hinder part of his Head,and Issues in the Coronal Suture have not that drawing Faculty, as I said before ; nor can they as I find by experience perform that which the other Remedies are able to do, and they many times most miserably torment the Patients to no purpose.

When the whole body and all its parts have been thus provided for, if any suspition of the Falling-Sickness shall seem to remain, those Medicaments may seasonably be used, which are reported by their whole substance and hidden properties to cure the said Disease.

The X. Counsel.

For dimness of the Eyes, in the Wife of Msr. de Ribu.

THe dimness of both the Eyes,and blindness thereby threatned both by reason of the remaining Ophthalmia in the right Eye, and that which has since seized upon the left, have their first efficient Cause in the Brain. For therein store of Excrementitious Flegm is wont to be bred and stored up, and that by reason of the cold and moist distemper of the sick Gentlewoman, and by her immoderate way of living. For as that is the chief cause of the Gout, when it goes into the hinder parts ; so when it flows into the former parts, and through the Optick Nerves,it breeds in the Eyes such Symptoms as these, hindring the sight. For the dilatation of the Pupilla alone without the cause aforesaid, is not sufficient to produce blindness.

And here I am at a stand, doubting where this obstructing Humor, which is the *Causa continens*, and immediate procurer of this Disease, is lodged : Whether in the Optick Nerve, or under the inner parts of the Pupilla, in manner of a Suffusion,or whether it be poured out externally upon the Cornea of the Pupilla,in form of an Albugo. For these things are diligently to be considered and distinguished, without which the Cure, if any be to be hoped, cannot be performed. And therefore I desire to be diligently by you certified touching the premisses. If nothing can be perceived in the Eye before the Pupilla,the cause is in the Oprick Nerve,which is perhaps obstructed : for there is no suspition that the Faculty of Seeing is hurt, or that part of the Brain wherein it is lodged.

If any obscure thing be seen before the Pupilla,it must be considered,whether it lie deep under the Coats, or outwardly about the Tunica Cornea : the former is a Suffusion, the later an Albugo.

But in the mean while, till we shall be certified of these things, a general Cure is to be begun, which is alike common to all these infirmities. First a drying and attenuating Diet must be enjoyned, so that she eat no moist, supping or liquid meats, but only roast and dry,and that very sparingly, only so as to preserve her strength. Let her abstain from Wine twenty or thirty daies ; and let her drink be a decoction of *Lignum Vitæ* without auy other addition. And if with another stronger and sharper Decoction, at five in the morning, and four in the afternoon, you shall endeavour to bring sweat out of her whole Body, especially out of her head, you shall do much towards the Cure.

On the third or fourth day of this Diet, when the Humors shall appear to be in agitation,she must be purged with *Pilulæ Lucis* and *Sine quibus*, or by any other that you have found by experience more agreeable to her body.

These Pills must be repeated every eighth or tenth day, nor must she sweat on that day.

In the intervenient daies, if she be Costive, let her have an Emollient Clyster.

Every morning, chiefly towards the End of her Sweat, her Head being shaven or polled, Bags must be applied of Millet, Salt, Annis and Fennel seeds, and Bay-berries fried, which being in Bed let her endure on as hot as may be for the space of half an hour, that by them the clammy Humor of her Head may be drawn forth, and the Brain, the Fountain of all her Infirmity may be strengthened more than the other parts. For inthis Case the Bags are more effectual,

effectual, than either Plaisters or Sinaphysmes though never so hot.

The Bag being taken away, cover her Head with dry Tow, which must be smoaked with Storax, Benjamin, Cloves, and such like, a little before Dinner and Supper. And at the same time Flegm must be drawn out of her Head by chewing Masticatories made of Mastich and Pellitory of Spain: or by a Gargarism made of some convenient decoction, dissolve in a pint whereof a dram of Pellitory poudered. These things must be constantly used in the mean while, till I can more certainly know what the Disease of Eye is, whether an Albugo, a Suffusion, or an Obstruction of the Optick Nerve. For the weakness cannot spring from want of Spirits, or dissipation of her natural strength.

Which when we shall understand, we shall endeavour our utmost to effect the Cure.

The XI. Counsel.

For Msr. Lastier *almost blind with an Obstruction of his Optick Nerve, being sixty years old.*

THis same Hinderance or depravation of sight, which threatens either a suffusion or blindness has for its Cause, not only a thick Vapour, but also a thick and clammy Humor, which slipping out of the Brain into the Optick Nerve, does not yet fill the whole capacity of the Nerve. This Humor if it shall fall before the Chrystalline Humor and the Pupil, it will cause a Suffusion: but if it continue where it is, and encrease and grow thick together, it will cause only a blindness wherein nothing can be seen amiss in his Eyes. And therefore we must hinder any more matter from flowing thither afresh, and that by a good Diet, which may moderately nourish his body, but not moisten the same, nor fill it with excrements.

Twice or once at least in a moneth, he must purge with *Pills sine quibus* and *Lucis majoris*: and in the intermediate days, if he be bound, with Pills of Aloes.

His Head must be every morning dried with Fomentations of Salt, Millet, and discussing seeds Fried.

Frictions also must be used towards the hinder part of his Head, downwards, which will be very profitable.

Flegm must be frequently drawn out of his Head by Apophlegmatisms; Errhines are not so safe, Sneezing-pouders stark naught, because they turn the Course of the Humors to the place affected.

By these therefore, and such like means his Head will gather few excrements, and they will be brought away for the most part through the natural passages.

The other intention of the Cure is, that the Humor which has long since gotten into the Optick Nerve may either wholly, or as much as is possible, be drawn out, and brought back to the original of the fluxion. Which though it be an hard and very difficult task, yet we must try nevertheless what we can do.

Therefore we must often apply Cupping-glasses, especially the day after his purgation, and some days after that, to the Hinder part of his Head, on each side, at the original of his Neck, without scarrification.

He must be ordered to lie on his Back; and so lying it will be good sometime to shake his Head gently, that the fast sticking Humor may be removed out of its place.

I like not of those Setons as they call them of the Hinder part of the Head and Neck, having observed that they do little good, and many times great hurt.

But Experience has taught me that the most effectual and safe Revulsion is from the Optick Nerve into that Cavity, which is in the root of the Ear, and in the Connexion of the Jaw-bone behind the lowest part of the Ear. For through that runs a branch of the Jugular Vein, which enters the Optick Nerves on both sides, and accompanies them as far as to the Eyes. Thereupon therefore a small Plaister must be applyed as big as a Mans nail, either of that sort which consists of an equal portion of black Soap and common Salt beaten. Or of that which consists of Mustard-seed and Cantharides, of each one dram. Strong leaven one ounce. But these things must

must be prudently used, and with the greatest Art Imaginable.

But if it be feared that the humor to be revelled, is not sufficiently inclined to move, it must be prepared with an Emollient and attenuating Fomentation of a decoction of Marsh-mallows, Vervain, Eyebright, Rue, Fennel and Fœnugreek-seeds.

With the vapour of this decoction applied with a soft and tender Spunge his Eyes must be Fomented about the Evening, especially whilst the Plaisters stick under his Ears, that it may at least by its warmness soften and make thin the peccant humor.

But it will be in vain to use Eye-Salves, because their Vertue cannot penetrate to the place affected.

Nevertheless he may profitably eat Fennel-seeds oftentimes, or after meals take a pouder made of Coriander, Annis-seed, Fennel-seed, Eyebright, Liquoris and Cinnamon: for the vapour and steem of those things is carried out of the mouth and Stomach, to the fore part of the Eyes.

I know some will in this case command and commend exceedingly the decoction of Guajacum, which nevertheless without the Remedies aforesaid, will be in vain, and do no good at all.

The XII Counsel.

The Answer of Fernelius *to the Letters of Mſr.* Du Perat, *a Gentleman of very great Note in the Emperours Court, or of* Beucherius *his Physitian.*

YOur Letter to *J. Silvius*, most learned *Beucherius*, did sufficiently acquaint me with your remarkable Learning, and now at last I am confirmed in the opinion thereof by your Letter to my self, wherein also you declare your ingenious and extraordinary affection to me. Least therefore you should have suspition of my writings or prescriptions as not safe enough, I have, not perfunctorily, but very diligently read over and perused your former Letter to *J. Silvius*, wherein there being many things with prolixity of words obscurely delivered, you seemed to discourse not onely of the Gout in the Feet, but sometimes also of other Joint-pains, whose original you attributed sometimes to the Brain, sometimes to the Veins, of which if you now doubt when you ask my advice, do you not seem to give me also an occasion of doubting? But, if so be we are now both of a mind, that these pains spring from Rheum, and that it falls down from the Head into the Joynts, the Gentleman need not doubt or make any scruple to follow that Method of Cure, which you long since did usefully prescribe, and which in my letters I have very much commended, and imitated exactly, though with other kind of Medicaments, as every one has his own way of Practice, and every one is commonly wont most of all to commend those things, which he himself has happily experimented. Howbeit, I make no question, but those things which you have prescribed will do good, if the Patient persevere in the use of them. But I come now to your Queries.

If the Gentleman shall resolve to use the decoction of Lignum Vitæ, it can do no hurt, in the Winter, sometimes but not always to mingle therewith a like or less quantity of weak Wine. And here I desire you to take notice that there are many kinds of this Wood, or at least many degrees: nor must you use that, which makes a sweetish decoction like Whey, but that which is aromatical, the decoction whereof tickles the Palate and Throat with its biting Acrimony. When he shall take that second and medicated potion of Lignum Vitæ, if he sweat, let him keep House that day, and not commit himsef to the coldness of the Air, least his Skin being open and loose, the cold get in, and smite and vex his Nerves. When his fit begins, and he feels the first grudgings of pain, he must be exquisitely purged, not expecting any concoction. For the humor when it flows into the Joynts, is thin and watery, which is easily purged out. But when it has quartered sometime in the Joynts, it grows thick, and will hardly follow the Medicament; nor is it those Humors, which *Hypocrates* bids us not to purge before they be concocted. These are perhaps those things, which you (most learned Sir) do admire as paradoxes, which you desire me to explain, and to answer your arguments to the contrary. And though few Physitians are wont to render a reason of of what they say or advise: yet because you desire the same, after so ingenious and fair a man-

ner least I should seem to have spoken rashly and at adventure, I shall briefly explain my self in this case, which nevertheless would require a large discourse. Now I shall insist upon all your objections, not intending to teach and inform you, but to answer to your questions. In the first place therefore you say the cause of a cold Gout, is thick and clammy Flegm. And that, I say, being simply and absolutely understood, is false; for at first it is thin and watery, such as sometimes runs out at a Mans Nose by cold-taking; nor being thickened would it easily fall down and slide into the Joynts, and external parts of the body, but would stick by the way. But, indeed, in tract of time, by force of heat, it will become thick in the Joynts, and as *Galen* says by you cited, cannot be resolved but in a long time. And at length, if it be let alone, it grows into an incurable stony hardness, of which the Poet.

Solvere nodosam nescit Medicina podagram.

When Gouty Humors into stones convert,
They Jeer the Doctors, and despise their Art.

You must therefore distinguish the times of Diseases unless you will make Authors contradict themselves. Of the differences of this flegm, I have written according to the judgement of best Physitians, in my fifth book of the natural part of Medicine. Afterwards not allowing that the Brain is the spring of this Disease, you ask me why every internal cause which moves a Catarrh, does not produce the Gout.? You should likewise have asked, why every distillation from the Brain does not cause a Cough? You know (worthy Sir) that every distillation holds not one and the same course, also several Humors encline several ways. And as some parts are weaker and looser than others: so the Humors accordingly run this way or that way into this or that part. Moreover you tell me, there is no passage betwixt the Brain and Feet, by which the Humor might fall thither; and the more to prove what you would have, you gather that it can neither come in by the Spinal Marrow, nor by the Nerves. Which I confess truly, and I cannot beleive any one is so simple, as to think of such passages. Yet you say the Brain may communicate its Excrement to the Veins: seeing you are very skilful in Anatomy, I would have you shew me the way by which the Excrement can go back out of the Ventricles of the Brain (which *Galen* in his book *de usu partium*, tells us were made to receive Excrements) into the Veins. Can the Excrement return upwards from those inmost Ventricles into the Veins again? But if it sometimes fall into the Stomach, and obstruct the Liver, that is nothing to our purpose. I conceive there is no need of these ways or passages, for a distillation in the Joynts, but that some come out of the Ventricles of the Brain, others out of the external parts, and slip down even by the Neck and Shoulders, which gaining the parts under the Skin which are loose and being for the most part thin, it slips along leisurely without sence of pain, till it stop in the solid and more compacted Joynts, and abide there, whose Ligaments, Tendons, and Membranes it stretches, not without pain. This I perswaded my self to be the cause of the cold Gout, which being ill explained, most Physitians have left it as incurable. But the Authority of the Ancients shall never fright me from making Inquisition, neither in these, nor in any other Operations of Art, though I have not hitherto neglected any, no not the least Writer: yet I find by experience I have profited more by my own Inventions than by them. And now I return to you, where you endeavour to perswade me, that these flegmatick Excrements, do fall out of the Veins: and therein (you bid me be plain) you are many ways overseen. For you never saw any such Flegm drawn out of the Veins by Medicaments, but what ever flegm is brought away by purgers, it comes all either from the Brain, or the Stomach or the Guts, and it causes the Chollick: nor does that which in the Cholick or in Feavers is vomited, come out of the Veins into the Belly, but was collected in these places. You are also mistaken when you say, that you have seen much thick Flegm, and not unlike that which is bred in the Stomach, come out of a Vein with the blood, in Phlebotomy. For that some whitish matter which is sometimes seen to float in the Chyrurgeons Porrengers and grows together by vertue of the Fibres, is called blood, flegmatick blood, and such as aboun 's in *Leucophlegmatick* bodies. I verily, among vulgar Errors, do reckon this for a most greivous one, that in all Feavers, and whatever other Diseases, they make all faults of the Humors to be in the Veins, and there can be no place found in the body for bad Humors besides; and when-

we

we discourse of Humors, they never think of superfluous Humors, but understand all, only of these Humors mixed with the blood in the Veins. But of these things I shall find a time to speak more largely. And as for those other things you say, how that out of the Veins Mouths many matters Issue, either into the Skin or other outward parts of the Body which are weak, which cause the Scab, the Itch, Pustules, Inflammations, and sometimes hot Gouts: all this with you I acknowledg and confess.

Of Joynt Pains, for the same Mr. du Perat

What I am able to understand touching the Disease of the sick Gentleman and its cause, and concerning the prevention and Cure thereof, is as follows. The Age of the Patient, being sixty years, his temperament cold, the habit of his body corpulent, plenty of clammy and thick flegm in his Brain, Stomach and Guts; finally, many other signs, which I have collected up and down out of the writings of others, do demonstrate that this Joynt-pain we speak of proceeds from a cold distillation, rather than an hot, which the Nature and long-lasting of the pain does confirm: but into what Joynts the Humor chiefly falls, is not expressed. Though the knowledg thereof is of no small moment towards the Cure. Nor do I find that any notice is taken, whence that cold and flegmatick distillation does fall into the Joynts, which notwithstanding is the chief point of the Cure, to which all the Counsel of the Physitian is to be directed. I verily can never believe, either that the thick flegm which is purged away by Stool, or that which flows into the Joynts, can come out of the Veins. For both these Humors are sincere and Excrementitious, such as is no where contained in the Veins, but the former, which comes out of the Stomach and Guts, is bred there by the Nature of the Place: and the latter falls into the Joynts from the Brain and the whole Head, whose proper Excrement nevertheless it is. These things being thus declared, I hasten to the Cure. As soon therefore as the Patient shall be freed from his present pain, or at least two or three moneths during the time of his Health let him accustom himself to this Diet. Let him feed on Meats of good Juyce, Capons, Pigeons, Partridges, small Birds, young Hares or Leverets, Veal, Mutton, and such like, always roast, never boyled, and avoid all suppings and all Fishes and Cheese, Pease, Beans, and all Fruits, especially Summer Fruit that will not keep. He may conclude his Meals with Raisins of the Sun, or Marmalade of Quinces. For thus by a dry and moderately warm Diet, we must take care that little or no flegm breed in his body. And to that end, it will be also good, to take an hour or two before Meals, one Lozenge of Aromaticum Rosatum according to the description of *Galriel*, or a little preserved Ginger; let him take heed of hotter Medicaments, such as Diatrion Pipereon, Diagalanga, Diacalamintha, and such like: for they hurt by their heat, nor can they correct the Errors of his Diet. But after Meals, let him suppress the Vapors of his Stomach with this pouder.

Take Coriander seed prepared two drams; choyce Guajacum, one dram; choice Oriental Pearl one scruple; Sugar of Roses two ounces. Make all into a Pouder, let him take a spoonful after his meat. Let him Eat twice a day, and that very sparingly, and at such distances of time as may suffice for perfect concoction. For it will be good for him, sometimes to endure hunger, for the digestion of crudities. Let his drink be white Wine or Pale Claret; each moderately allayed with Water. Small Beer is good for one draught, but let him not drink thereof immoderately, and also all Water, if it be seasoned with much Spice, least he encrease serous Humors, which he is apt to breed. He must drink sparingly, not above thirty ounces in a day. And if he delight to have some other kind of drink; that is fittest of all for him which is made of Lignum Vitæ, and cuts Flegm, makes it thin, and scours it off the parts; and it opens obstructions better than any thing else, and digests them in the remotest parts; it drys up and consumes many crude and Superfluous matters, to which the force of other Medicaments cannot pierce, so that it is much conducing to the health of this Patient. Moreover he may drink as much as he will of this drink; Now it may be made very grateful after this manner.

Take Chips or shavings of Lignum Vitæ half a pound. Infuse it in six pints of lukewarm Water twenty four hours. Then boyl it to three pints putting in towards the conclusion, Raisins stoned two ounces; choice Cinnamon three drams; Cloves one dram: strain out the Liquor. Let him use it at meat instead of Wine, or at least for his first draught in place of Beer.

When his Belly is costive, let him use a suppository or an emollient Clyster. Also it will be good to give him this Clyster, twice a week, which scours off thick flegm, and draws it forth by stool.

Take Roots of Marsh-mallows and Elicampane and Polypody of the Oak, of each half an ounce : Centaury, Wormwood, Rue, Chamomel flowers and Melilot flowers, of each one handful : make a decoction to a pint : In the strained liquor dissolve Hiera Picra simple, and Turpentine, of each half an ounce : Honey of Roses and of Rosemary, of each one ounce : Oyl of Rue and Chamomel, of each half an ounce : make of all a Clyster, give it him after he has been at stool.

Every fifteenth day let all the rest of his body be purged, but especially his brain and Joynts, with this easie and gentle Medicament :

Take Water of Sage and Hyssop, each an ounce : infuse therein two drams of Agarick newly trochisked : in the strained liquor dissolve choice Rhubarb duly infused, four scruples, with half a dram of the best Cinnamon : Electuary of Carthamus two drams, Syrup of Stachados, half an ounce : make all into a Potion.

But if he shall be better pleased with Pills, these truly are good and fit :

Take the Mass of Pill sine quibus and Cochie, of each half a dram : with Syrup of Stachados make six Pills.

Now this course of life is burthensome, and such as he cannot endure a long season, but yet very profitable and fit for him. Howbeit, if the Patient be willing to be ordered ; and would for the time to come be safely cured of this Joynt Disease, 'tis necessary he undergo greater matters, so as quite to change his old and vitious habit of body, which gradually and without trouble, thus he may effect : Having finished his first moneth in the Diet aforesaid, in the moneth following which is next the Fit, let him wholly astain from Wine, and instead thereof drink the decoction of *Lignum vitæ* aforesaid, keeping (during the said time) somewhat a thinner and more exquisite Diet, though of the same kinds of meat before mentioned : Then let another more Medicinal drink be made, which may more potently digest and consume the already prepared humors, which let him use as a Medicament in the morning, and before Supper. And let it be made after this manner.

Take Lignum vitæ, or Guajacum, half a pound ; of the bark thereof two ounces ; infuse them two days in six pints of lukewarm Water, then boyl them to two pints ; towards the end putting in of true Acorns root and Elicampane root and Polypody of the Oak, of each half an ounce : small Sage, Stachados, Betony and Rosemary flowers, of each a pugil : Galangal three drams : Cloves and Mace, of each one dram : make a strained drink as is fitting. Let him take three ounces for a dose, in the morning at five a clock, and three hours before Supper, lying on his bed wel covered with cloths, so as he may sweat ; for thus, whatever vicious humor is spread abroad among his Nerves and Joynts, it will be by little and little digested and consumed.

And because the Brain is the fountain and original of this distillation, it is fit to apply more Remedies to that part, than to any other. Having therefore his sweat wiped off, let his Head and Neck be soon after warmed with these *Bags*, whose vertue is to dissolve the Reliques of the noxious humor, and to strengthen the Brain.

Take leaves of Sage, Marjerom, Stœchados, of each one pugil : Annis-seed, Fennel-seed, and Fœnugreek, of each one ounce : Millet one pound ; common Salt half a pound ; Fry all in a frying pan ; put them into two little bags, apply them to the fore-part of his Head and Neck hot, and let them lie on till they Wax cold, and repeat them warm oftentimes, if you shall think fit.

These things being acted, move him to sneez ; also with Errhins and Apophlegmatisms let the flegm be drawn out of his Brain, through his Mouth and Nostrils : with the continual use therefore of these Medicaments, the fountain of the Disease must be exhausted till it be drawn quite dry. About the end of the moneth, when by Diet, Sweat, Purging, Apophlegmatisms, and bags, his Brain shall be now sufficiently dried and strengthened, and there shall no sign appear of the dominion of flegm ; then verily, all his Limbs, Nerves and Joynts must be strengthned and made firm, that they may not hereafter so easily admit the desflux of humors, to which purpose a bath is effectual, which is made with a decoction of Roses, Balaustins, Sage, Stœchados, and Myrtle, adding a good quantity of Allum ; in which (being blood warm) let

him

him sit a good while fasting, so as neither heat nor sweat may be caused thereby; but that only his looser Joynts may be thereby strengthened, and let him do this three or four days one after another; after which he may safely return by little and little to his usual free course of Diet, which nevertheless must come as near as possible to this here prescribed: Let his Head be rubbed every morning with the Bags, and let the flegm be daily drawn out at his Mouth and Nostrils: Finally, Let him altogether avoid lying on his Back, and rather lie on his Belly; for lying on his Back makes the excrements flow into his Neck and Joynts; but lying on his Breast will make them encline towards his Nostrils and Mouth. Moderate exercise is good in an open and dry Air. Hard frictions of his Limbs will be very good for him when he is newly awaked.

These things being observed, I am confident the Patient will be cured of this Disease. But in case, omitting some what or other, he happen to be again taken, when his Fit begins let him be exquisitely purged with a good strong Medicament: For when a gentle Purge is given, it exagitates the Humors, and yet it purges not, and consequently augments the distillation and the pains, and oftentimes makes them twice as great as before, which makes many afraid and to forbear to purge, at the beginning of the pain. And therefore to the Medicament before prescribed, for a dram of Diacarthamum put in two drams, or so much as the discretion of his Physitian present shall think fit: with this alone I have often cured beginning pains. And soon after the Purgation, let dry frictions be used on his Head and Neck, and that with the Bags prescribed, very hot; that by these the remainders of the distillation may be stopped, and digested, lest it fall into the Joynts. But if so be nevertheless the fluxion of humors continues and possesses the Joynts, and at the beginning of the pain redness and heat appear (such as is attendant sometimes at the beginning of a cold Gout, whereby many are deceived) first you must apply things moderately cold, then pain-asswagers, lastly digesters. Cold things I say, which do not drive the Humors inward, but stop them when they are in motion, and extinguish the Heat. Of this sort is the Mucilage of Quince seeds, extracted with Nightshade Water, with which being warm, let the pained part be bathed, and let it be covered with cloths dipped therein. If this do not sufficiently mitigate the pain, add an eighth part of Vinegar; and if so the pain grow not milder, add a little Camphire, or a little white Trochisks of *Rhasis*.

Let him then abstain from Oyls, Oyntments and fat things all whatever, because the pains are inflamed and doubled by hot things. When by help of the premises, the vehemence of the pain, and all the ardour shall be extinguished: these and such like Anodines will be convenient as follow.

Take Oyl of Lillies and Chamomel, Mucilage of Fleawort extracted in Sage Water, of each one ounce: Saffron ten grains: Wax a little. Make all into a Liniment, wherewith to anoint the pains, twice or thrice in a day.

After the Anointing, apply this following Cataplasm.

Take Crums of white Bread steeped in new Milk, one pound: Saffron twenty grains: Chamomel Flowers and Melilot Flowers poudered, Meal of Lin-seed and Fœnugreek, of each half an ounce: Oyl of Lillies, a small quantity: Make all into a Cataplasm.

There are many things of this kind, as the pulp of Cassia Fistula, Cows dung applied, or Water distilled therefrom, Oyntment of the Juyce of Dwarf Elder; and innumerable other things, which vehemency of pain, and necessity has found out. Many torment themselves, and cudgel their Brains to find out new Medicaments. Yet verily, I conceive the Gout is more easily and safely cured by a good Method, than by a multitude of Medicaments. The pains being ended, or most what abated, the rest of the Humor is to be digested, lest in the Joynt it grow into a stony kind of hardness.

Take Pine-tree Gum, Tar, Emplastrum Oxycroceum, of each one ounce: Live Brimstone, Hermodactils poudered, of each half an ounce: Oyl of Turpentine as much as will suffice. Make all into a Plaister according to Art. Apply it after the anointing.

The

The XIII. Counsel.

Containing the Cure of the Gout, and all Joynt-pains, for Msr. Albertus *Junior, Marquess of* Brandenburg.

AS soon as ever any man is taken with pains in his Joynts, he must abate half of his ordinary Diet both in his Meat and Drink, and he must be enjoyned to follow a thinner and purer Diet, that the immoderate bulk of his body and Humors may be abated; he must drink no Wine, the heat and vaporous faculty whereof, provokes the defluxion of Rheum, and exasperates the pains. His Drink must be Small Beer or Water sweetned with Sugar, or some other Liquor that without any harm doing may please his Palate. All Salt and spiced Meats must be avoided, and such things which trouble the Head, as Garlick, Onions, Water-cresses, Mustard; especially when the pains are most raging. He must use little supping Meats or broths, and Eat roast Meat rather than boyl'd, that his Body may by all possible means be dryed, and a good quantity of Humors consumed. These therefore are the chief, and most observable Rules of Diet, which his ordinary Physitian may unfold more at large. And because so cruel a Disease cannot be put to flight only by Diet, these Medicaments must be added, whereby I am wont quickly to put an end to these pains. As soon as the pain shall seize upon him, if his Belly be bound, it must be softened with a Clyster, which must have in it Hiera picra simple, or Diaphænicon, with other things usual in such cases. The day after, his body must be purged with a strong purgation or else it will rather stir than evacuate the Humors, and so encrease the defluxion: also it must be strong that it may draw the Humors out of the strongest and remotest parts: Now such a purge, I commonly prescribed after this manner.

Take of the stilled Waters of Sage and Betony, and of white Wine, of each one ounce. Infuse therein of the best Rhubarb and Agarick newly Trochisked, of each four scruples: In the strained Liquor dissolve Electuarium Diacarthami two drams; Syrup of Violets or Maiden-Hair half an ounce. Make all into a potion, and let him take it in the morning four hours before dinner.

This Electuary of Diacarthamum by reason of the Hermodactils and Turbith, is proper for the Gout: whose dose must be fitted to the nature and strength of the Patient. No preparation is to be premised before the purge, because the Humor being at first, thin, watersh, and fluid, does easily follow the drawing of the Medicament. If one purge shall seem not to have drawn away a sufficient quantity of the Humor, and the pains continue as before, or by means of a new fluxion are grown worse, you must purge him the second time with a purge like the former, yea, and the third time if occasion require: but interposing some days of rest betwixt purge and purge, that the Patient may not thereby be weakned: which must be left to the judgment of the experienced Physitian. Now the pains must even before purging, at the very beginning be assuaged with this following Medicament, which by gentle cooling restrains the influxion, and yet does not drive the Humors more into the Joynt.

Take of the stilled Waters of Nightshade and Plantane, of each three ounces: steep therein, Marsh-mallow seed and Quince seed, of each half an ounce. Make a Mucilage, and spread it lukewarm on a clean Linnen cloth, or upon Tow, and apply it, renewing the same as soon as it begins to grow dry, that the part may always be moist till all the redness, heat and pain, be taken away.

This is a most effectual Medicament in the Feet and Hand Gout. If the Inflammation seem to be great, add an ounce of Vinegar. In the other Joynts, when a more grievous pain shall arise, as in the Elbow, the Knee and Hip, that the force of this Medicament may pierce the deeper, add Camphire eight grains. When the pains begin, neither Oyls, nor Fats, nor Mineral or Metallick Medicaments do any good, but are found exceeding hurtful in many respects. When the heat and redness being extinguished, the extremity of the pain shall abate, the remainders thereof will be chased away with this following Oyntment.

Take Mucilage of the seeds of Line and Fœnugreek extracted in Sage Water three ounces. Oyl of Worms, Chamomel and Lillies, of each one ounce. Fox and Goose-grease, of each half

half an ounce : Hermodactils finely poudered, two ounces : Marrow of an Hart, or of a Calf, and Wax, as much as shall suffice. Make an Oyntment and anoint therewith the pained and swolne part, twice or thrice a day, and wrap warm Linnen about it.

Also it will be good to apply this Plaister to the part affected, presently after it is anointed.

Take of the Oyntment prescribed, five ounces ; Round Birthwort Roots, Frankincense, Mirrh, Galbanum, Opopanax, of each half an ounce : Turpentine three drams : Wax as much as shall suffice : make all into Plaister Rowls.

If the matter of the pain be so Tenacious, that these Remedies cannot mollifie nor root it up, apply this Plaister at last :

Take Pine-tree-gum one ounce : Black Pitch two ounces : Wax one ounce ; old Axungia one ounce : Hermodactyls poudered, and live Brimstone, of each six drams : make a Plaister, which must dayly be renewed and continued till all the swelling seem to be taken away, and till the Joynt may be freely moved.

But if the perfect Cure be neglected, somewhat will be left in the Joynt it self, which at last hardening, will grow into a stony substance, and quite take away the motion thereof.

This is a certain and very safe way to Cure Joynt-pains when they are fresh, which if rightly administred will never fail thee ; nor need you seek far and near for other Emperical Medicaments, wherewith we are often deluded. For the Cure of this Disease must be accomplished by Art and Method, and not by Emperical Receits. Howbeit you must observe and be very circumspect in this Cure, that when a new Humor and a new defluxion shall arise, the Patient be still purged afresh.

But for to Cure such as cannot go by reason of an old Gout, and whose Feet are contracted and weakened as to going, if the infirmity be not exceeding old, it may be Cured after this manner :

Every morning let the Patients Feet be held in this decoction, as hot as it can be suffered, about an hour.

Take Juniper-berries, Elicampane Roots and Marsh-mallow-Roots, of each two ounces : leaves of Lawrel, Mirtle, Sage, Betony, Stachados, Origanum, Calaminth, Marjerom, Rosemary-flowers, of each one handful : Line-seed and Fœnugreek-seeds, of each one ounce : Boyl all in a clear Lye made of Vine-branch ashes, in such a quantity as may serve to cover the Feet, If you would have this more effectual, add one pound of common Salt.

Afterward, the Patients Feet being wiped, let them be anointed with this Oyl.

Take Roots of Pellitory of Spain, Ginger, Nutmegs, Cloves bruised of each two drams : flowers of Sage, Hyssop, Rosemary, Stachados, Spikenard, of each one dram, or half a dram : Round Birthwort Roots, and Hermodactyls poudered, of each one ounce. All being mingled together, pour on a pint of Aqua Vitæ and let them steep an whole day : then add Turpentine one pound and an half : put all into a Glass Alembick : distil them with a slow Fire ; Keep the Water and Oyl apart for the use aforesaid.

The Patients Feet therefore being wiped, let them be smeared with this Oyntment and Oyl, and wrapped in Linnen clouts : Then let the Patient lie down well covered. Apply to the soles of his Feet red hot Stones quenched in Wine, and let them lie, till the sweat flows out of his Legs and Feet. And when the Patient arises, let him all the rest of the day and the night following, arm himself well against the cold : and thus his feet will obtain a freer motion. And these are the Remedies wherewith the Gout, and other pains of the Joynts, may be soon allayed and driven away.

Now I shall briefly shew how they may be prevented.

How to prevent the Gout, or other pain in the Joynts.

When the pains being ceased, and his Feet strengthened, the Patient shall feel himself restored to his health ; for a moneth or two, before the usual pains return, he must use such Remedies as may prevent the same : And to that end, if his body be impure and full of superfluous humors, he must use the more sparing Diet, and it must be drying and attenuating. He must drink no Wine, if his age, and the weakness of his Stomach will permit the forbearance, and he must

must so order the matter, that his Body, being disburthened of part of the bad humors, may grow lean.

And seeing Diet alone cannot do that sufficiently, he must be purged every seventh ot eighth day, sometimes by such a like Potion as was before described, and sometimes with Pills of Agarick and Cochia. In the days intervenient, he must use Clysters, if he be costive.

After the second or third Purgation, if the Body shall be sufficiently purged, it will be seasonable to move sweat, either with Guajacum, or any other Heaters; that the Humors wherewith the Nerves and Joynts are preternaturaly soaked, may be attenuated, and so perfectly discussed.

Then also must such Remedies be applied to the Head, as exhaust the whole Fountain of this Infirmity, wherefore the sweat being wiped off, every day, if you please, before Supper, his Head being shaven, apply these Pouders very hot, that they may discuss the Humors, and by drying, confirm and strengthen the Brain.

Take Leaves of Sage, Marjerom, Stachados, of each half an handful; seeds of Annis, Fennel and Cummin, of each two ounces: Bay-berries bruised half an ounce: Millet one pound: common Salt half a pound: Fry all in a frying-Pan, put them in bags: which may be applied exceeding hot to the Head and Neck, till they grow cold of their own accord.

Then cover his Head with cloaths which must be smoaked with Fume,

Take Nigella Romana, Storax, Benzoin, Amber, Mastich, of each half an ounce: Cloves two drams: make all into a gross Pouder to smoke his Head-cloaths.

If haply under the Skin of his Head some Humor be manifestly discerned, his Head must be often washed and Fomented with Lye, wherein the *Cephalick* or Head-herbs have been boyled.

And if neither, so the superfluous Humors of the Head shall be dryed up, let his Head be shaven, and thereon let this Plaister be laid, which is of so great force to discuss.

Take Pulp of Figs, old Leaven, of each two ounces: Mustard-seed bruised three ounces: Emplaister of Mucilages four ounces: soften and incorporate them: adding a little Turpentine if need be. With this Plaister let his Head be covered, and let it lie on, till it have evacuated all the superfluous humors: stronger Plaisters cannot so safely be used; we must therefore content our selves with this.

The Fountain of the Disease being drawn dry, and the Head quite freed from excrements, and strengthned, for the last part of the Cure, all his Limbs and loose Joynts must be knit and strengthned by such a Bath as this that follows.

Take Leaves of Myrtles, Balaustins, red Roses, Plantane, Vervain, Bay-berries, Origanum, Calaminth, Penny-royal, Thyme, Sage, Rosemary-flowers, of each two handfuls: Juniper-berries four ounces: Roch-Allum four pound: boyl all in a sufficient quantity of Water for a Bath, and let him bide therein two or three hours (but let him not be forced to sweat) that his Limbs and Joynts may be better strengthned: and let him use it three or four days one after another in the morning fasting.

This excellent way of Cure, does so pluck up both the causes of the Gout and Joynt-pains, as well that which causes the excrement, as the joynts weakness it self, that the Patient is thereby made perfectly sound and whole. But yet he must not be so confident of the Cure, as to take liberty to return to a temperate course of Diet. But keeping ever after a more moderate Diet, every Spring and Fall let him take a Purge a little before the usual time of his Fits. And for three days after let him wash his Head with the formerly prescribed Lye. Also let him use the Bath, unless he be very much averse therefrom, as counting it troublesome. This is a sure and no ways deceitful Cure, which every Physitian can accommodate to any kind of Gout or Joynt-pain. And I should have illustrated the same with many other prescriptions and those very effectual, in case the particular species or sort of the Disease had been expressed unto me, by its proper signs and Symptoms.

The

The XIV. Counsel.

Concerning extream Pursiness in a corpulent Man.

The Disease is propounded by Dr. Melinus *to Dr.* Fernelius, *for Msr.* de Boiſ-dauphine.

Claudius Lavallensis, whom you are acquainted with, is now the ninth moneth here as Ambassador for the most Christian King, and at last is fallen into a Disease, which he calls an heavinesſ or Pursinesſ of his body; but I call it a Plenitude or Plethora of Humors more than his Strength can bear. Moreover he has now already had twice a Looſneſs, by which 'tis probable he voided ſuch Humors as did burthen him, ſeeing he bore it well certain days together, and was better after it. Now the Excrements which Nature freely expelled, were brown for the moſt part, and very ſtinking, uneven, and among the reſt, a little flegmatick, clammy matter. He aſſiſted the voluntary flux of his belly, by a dram of Senna, ſteeped in the Broth of ſtewed Prunes, and preſſed out. And therefore, ſeeing he is perſwaded that he needs purging, and does ſufficiently confide in me, and the Practitioners of this place; he refers all to you and your Authortty, of whom he is very confidently opinionated. Two things cheifly argue a Plethora or Plenitude *ad Vices*, the heavineſs of his Body, and becauſe he finds much good by light Purgations now and then uſed.

The Anſwer of Doctor Fernelius.

With ſuch faithfulneſs and diligence I ſee the Infirmity of your Lord, Msr. *de Boiſ-dauphine*, expreſſed in your Letter, that you do as it were ſet before my Eyes, and reduce into my Memory, how I have my ſelf found the ſame, when I have been with him. A Corpulent habit and vaſt bulk of Body, becauſe it cannot be maintained ſave by liberal and full Diet, cauſes ſtore of Excrements; now eſpecially, his Age declining, he living a ſedentary life without Labor or Action, the Air being cold, and the Soil moiſt. And though my Lord Ambaſſador ſeem full of cold and flegmatick Excrements, yet he has withal good ſtore of Choller, which I ſometime remember did of it ſelf come away by Stool with violence, and every day give him three ſtools at leaſt, keeping his body always very ſoluble. Now in caſe abundance of ſuperfluous Humors are grown up in his body beſides his Nature and Cuſtome; what wonder is it, if his body being weighed down with the bulk thereof, is become heavy, and unfit to perform its wonted functions? Now leſt hereafter any vvorſe thing ſhould happen, vve muſt endeavour, that look what ſuperfluity of Humors, a thin and ſpare Diet has not been able to rid avvay, it may be purged forth by Phyſick: ſeeing we find, that the Looſneſs of his Belly, vvhether coming by Nature, or procured by Art, does him much good: but it muſt be done leiſurely, and by little and little, becauſe gentle things do move him, and ſeeing it is in no wiſe ſafe, violently to ſhake ſo great a confluence of Humors, leſt we bring an old Houſe upon our Heads: The moſt convenient purgation therefore will be by Pills of Rhubarb and Aloes, of each two drams; Agarick a dram; Cinnamon and yellow Sanders, of each half a dram, made up with Syrup of Cichory. And thus he ſhall uſe theſe Pills. Firſt let him take a ſcruple in the morning, an hour or an hour and half before dinner. And two or three days after, let him take half a dram, or two ſcruples, two hours before dinner. And thus muſt this purgation be often repeated, at ſhort diſtances of time, ſtill encreaſing the quantity, and continuing the ſame, till it appears that all the bad Humors are purged out, and he have recovered his former health and ſtrength of body.

The XV. Counsel.

Of the prevention and Cure of the Gout, for Msr. de Valletot, *the Kings Musitian; translated out of French.*

THat you may (Sir) rightly preserve your health and prevent those pains, which are wont to afflict your Feet, Knees, Limbs, and other Joynts. First you must purge four or five times in a year; *viz.* After *Easter*, and about the moneth of *August*, with the under written potion. But after the Feast of *All-Saints*, and about *Candlemas*, with the Pills likewise under-written. And if need be, the day before you must take an emollient and preparatory Clyster. And four or five days after your purgation, or longer, if you please, it will be good to rub and dry your head, with a bag full of the seeds under-written, exceeding hot. And when these days are over, it will be good, especially in the Summer, to wash your head with a Lye made of convenient Herbs hereafter set down, and after to dry the same very well with hot cloaths. Moreover, six or eight days after your purgation, it will be good to dry and strengthen your Brain, towards night or when you go to bed, to use the fumigation here described. But to the Medicaments prescribed, one principal thing must be added, *viz.* Your course of diet. Wherein five points are chiefly to be observed. First, That you eat not nor drink too much of any meat or drink whatsoever. Secondly, That you must not use strong and vaporous Wine, but such as is very well allayed with Water. Thirdly, That you abstain from sleeping in the day-time, and that in the night you lie not on your Back, but upon one side. Fourthly, That every morning you diligently comb your Head, and void all the excrements of your brain, and endeavour to go to Stool. Fifthly, That you use moderate exercise, and keep your head mean while from cold. If happily the Remedies prescribed shall not hinder, but that a new addition shall be made of pain or defluxion; at the first groveling of the pain you must apply the Oyntment here described, especially if it be joyned with redness, swelling and heat. And if this Oyntment shall not suffice, another must be added. The heat being extinguished, and the pain much what asswaged, the Plaister following must be applyed to the same part, which must be so often renewed, either every day, or every other day, that no swelling, redness, nor Inflammation remain.

The Solutive Potion.

Take Waters of Betony, Sage, and white Wine, each one ounce. Infuse in them Rhubarb four scruples. Agarick one dram; Cinnamon ten grains. In the strained liquer dissolve one dram and a half, or two drams of Diacarthamum. Syrup of Stœchados six drams. Make all into a potion. Take it in the morning.

The Dose of Pills.

Take of the Mass of Pill Cochiæ, and Agarick pills, each one scruple; of Alephangine Pills one scruple; Syrup of Violets as much as shall suffice. Make five pills; let him take them at three of the Clock in the morning.

For the Bag.

Take Annis-seed, Fennel-seed, Cummin-seed and Bayberries, each two ounces. Millet one pound, common Salt half a pound. Beat them, and fry them, and put them in bags made of thin-wove cloth, for the use aforesaid.

The Fume.

Take Nigella Romana, Styrax, Benzoin, Amber, of each half an ounce. Let them be dry and grosly poudered, and so put into a Box, for a fume pouder. Or a Cucupha, or quilted Cap may be made therewith to wear upon the Patients Head.

The

The first Oyntment or Smear

Take Water of Night-shade and Plantane, each half a pound. Vinegar two ounces. Infuse therein seeds of Quinces, and Flea wort, of each half an ounce: extract a Mucilage over the warm Embers, and therewith luke warm foment the pained part, with Linnen Cloaths.

The second Oyntment, truly so called.

Take Oyntment of Populeon three ounces; Dialthæa one ounce and half; let them be incorporated together to anoint the pained part, after the fomentation aforesaid.

The Plaister.

Take Florentine Orris root, Hermodactils poudered, of each six drams. Emplastrum Oxicroceum and de Mucilaginibus, *of each two ounces. Pine-tree Gum one ounce. Soften them with a sufficient quantity of Oyl of Worms, and make a Plaister-Rowl, spread some upon Leather for the pained places.*

Diet-drink.

If he cannot be perfectly cured with these Remedies, it will be good for him to abstain from Wine, and to drink twice a day the former decoction of *Lignum vitæ* with the bark, which has been by Mst. *Fernelius* formerly described.

The XVI. Counsel.

Of trembling of the Members.

YOU (most learned *Orpheus*) out of your own Ingenuity and Candor, adorn me with such Praises, as I am loth to acknowledge, or rashly entertain. But that, out of the honesty and sincerity which becomes a Christian and Phylosopher, you bear a loving affection towards me; I give you all possible thanks, and shall be ready upon all occasions to requite your love, if by any means I may assist you by my endeavours or countenance. And that I may now satisfie you as to the business in hand; that same trembling which you propose, in the strongest Age of a Man, cannot spring but from very greivous and preternatural causes. And because I do not understand that the Patients Brain is remarkably affected, nor that flegm does any where abound, there must be some extraordinary cause of this Symptom. Considering the Patients by-past life, and the constitution of his body, I am with you induced to think, that his Nerves and solid parts are weakened by immoderate use of Strong unmixt Wine, and of Venery; and that they are now become so feeble that they cannot perform their Natural and wonted office; neither being able firmly to move, nor to hold the Joynts Stedfast. Hence is trembling caused, which is then urgent, when the Patient is put in fear, either by the presence of great persons, or upon some other occasion as is usual.

And seeing that this trembling has its original, rather from the dryness then repletion of the Nerves, it will hardly admit of cure, even as a Convulsion springing from emptiness. Yet if you are minded to make tryal, you must endeavour the Cure, neither by purgations or immoderate evacuations, but by the contrary Causes, and a good course of diet. But nevertheless if you shall perceive any crudity to stand in the way, that may safely be removed, either with a Clyster or with a potion of Rhubarb and Agarick, you may do it.

Yea, and if also you shall think fit to purge pure Choller, which abounding about the Midriff, is many times observed to rush into the Nerves of the spinal marrow; and sometimes to cause trembling, other whiles numbedness and palsie: the self-same, or some such potion should be repeated, every tenth day. Also he should be prepared two or three days before his purging, by Apozems: and in the intervenient days, if he be bound, he must have a Clyster, with a good deal of *Hiera* simple, and Honey of Rosemary.

This Method of Cure is to be continued, to the thirtieth or fortieth day, or at least till his trembling do begin to go away. At which time he must wholly forbear Wine, the only Abstinence whereof, has cured these Diseases. And let his Drink be, either Barley Water, or ordinary Ptisan, in which Cinnamon or Nutmeg are steeped; or a dilute Decoction of Guajacum, which they call a *Bochet*; or Metheglin wherein Sage has been steeped. Let him use Meat of good Juyce, and sparingly, sometimes roast, sometimes boyl'd, that it may neither altogether dry, nor over-much moisten. When by means of good Diet, and the foresaid Medicaments, his Body shall seem not so much to tremble, and so the Humor will be prepared, and the Antecedent cause evacuated; then it will be good to use Baths, wherein Cephalick Roots and Herbs are boyled, or vaporaries thereof composed, wherein for some days together, in the morning his Body is to be rubbed, till the sweat runs down. And when he is dryed, let him be laid in a warm Chamber, wherein all his Back-Bone must be anointed with this Oyl:

Take Stœchados, Rosemary flowers, Sage, Marjerom, Primroses, of each one handful; Bay-berries and Juniper-berries, of each half an ounce: Nutmeg, Ginger, Cloves, Pelitory of Spain, of each three ounces. All being bruised, sprinkle thereupon a pint of Aqua vitæ. *Then pour thereon common Oyl a pint and half. Let them boyl together over a gentle fire, till all the Water be drunk up. Press out the Oyl, and reserve it for the use aforesaid.* And never leave this course, till his trembling be quite gone.

If haply during the Cure any suspition of a Distillation shall arise, which may concur to foment the trembling; it also must be dryed, with Millet and other fried seeds, and with a fumigation. Or if it prove very troublesome, it may fitly be derived by Errhins, or Nose-liquors.

The XVIII. Counsel.

Of Trembling and Heavinesse.

A Letter of the Provost of Pertica, *propounding the Case.*
Translated out of the French.

FRom the Year, one thousand, five hundred and fifty, I began to feel a great ilness, with a trembling of all my Members, especially after meat and sleep. A pain goes from the middle of my Hip, directly to the Brain, comprehending all the right side of my Back-bone, and reaching into my Arm on the same side; and all my members remain heavy, so as not to be moved, and to desire nothing but sleep, especially after meals. And I feel through the whole habit of my Body, a certain fluxion under my Skin of Waters, which sometimes makes a tumult like a swift torrent; and sometimes they run slowly, so that you would say it were only the elevation of a thick Vapour, through the Nervious parts, as far as to my Gums. Now my Head is frequently vexed with coldness, as also other outward parts of Body: nor can I long stand upright, nor endure to stand still; and the right side of my Body seems absolutely fallen away, and pined.

The Answer of Dr. Fernelius, *to the foresaid Letter.*

A Frequent distillation falling upon the Muscles, Nerves and Membranes, especially on the right side, is one, if not the only cause, of all those Symptoms, which are at large declared in your Letter, as of heaviness and pain, which in is your Back, Arms, Hands, and right Hip: whereunto is added a weakness of your Body, by reason of the ill Constitution of your Stomach and Bowels. For they are obstructed and impure, nor do they conveniently nourish the Body; and the Causes are, frustration of Concoction, and the Head especially, but the whole Body withal, clouded with Vapors, and wonderfully burthened. In this variety and contrariety of Infirmities, a light and gentle Cure must be undertaken, which may clense the Head and Nerves, as little offending the Stomach and Bowels as may be. In the first place therefore the whole Body must be purged with this following Syrup, twice a moneth, which is compounded with respect to all the Premises.

Take

Take Syrup made of Head, Liver and Spleen-respecting ingredients, with three ounces of Senna, and two drams of Agarick.

Five or six days together after purging, take fasting, at least two hours before meat, one of the following Lozenges.

Take pouder of Diamargaritum Frigidum, *and* Electuarium lætificans Galeni, *of each half a dram: shavings of Ivory and Harts-horn, and choice Cinnamon, of each a scruple: white Sugar dissolved in Rose-water three ounces. Make an Electuary in Tables or Lozenges weighing three drams a-peice.*

Also these dry Remedies following, are to be used to purge and strengthen your Head.

Flegm must be drawn out at your Nostrils by the Juyce of Marjerom and Betes, or some Strong Sneezer.

Your Head must be dried and strengthened by the ordinary Bags. And as for the coolness and weakness of your Nerves, if any thing help you, it must be a decoction of Guajacum, used at meals instead of Wine, in the morning to sweat upon: which sweating if your strength will not bear, at least your whole Body must be rubbed, soon after sleep, pretty hard, with hot and dry linnen cloths; and afterward, with moderate exercise, let all your Joynts be long warmed and strengthened. And after you have been purged two or three times by the Syrup, if your Joynts prove not sufficiently firm and Strong, use dry Baths, or Bath-Stoves, which have a mighty faculty to dry and Strengthen the Nerves. They must be made after this manner.

Take Juniper-berries, Roots of Acorus and Elicampane, of each two ounces: Sage, Betony, Marjerom, Stœchados, Bays, Wormwood, Origanum, Calaminth, Rue, Chamomel, Melilot, Dill, of each a handful: Annis seed, Fennel seed of each half an ounce: Boyl all in Water and White Wine. Pour the decoction on a hot Tile, and receive the Vapour in an Hogshead, or other covered bathing Vessel till your Body grow hot and the sweat run out. If you cannot easily endure the stove: at least lie in your bed in the morning very well covered, and let hot stones extinguished in the foresaid decoction, be laid to the soles of your Feet. And thus as you lie, you may gently sweat, and let the sweat be wiped off.

And this course must be continued till all your Nerves be sufficiently firm and strong. As to diet eat but twice a day, and that sparingly, that your weak Bowels may not be be overwhelmed, Let your meats be of good Juyce, and easie of digestion, such all Men are wont to commend.

Eat no fish, or very little, but no Beans or Pease, or the like. Abstain also from Fruits and herbs that are raw; from all suppings and Broths, and from all those things, which overmuch fill and moisten the Body. Use Wine that is neither very vaporous nor strong, but thin and plentifully allaied with pure Water, least it trouble the Brain and Nerves, Abstain from all other drink, and use that soberly and sparingly. Because nothing does more cool and moisten the Nerves and oppress the whole Body with heavines, than over much pouring in of drink. You must sleep long after meals, and avoid noon-day sleeps.

The XVIII. Counsel.

Of pulsation and hissing noise all the Body over, and of Corpulency.

A Senator of *Carnote*, fleshy and full of Blood, being thirty four years old, having a great Burgomasters Belly sticking out, as he was lying in his Bed, thought he heard a certain hissing noise, and pulsation as it were, which being evenly spread all his Body over, did not rest peculiarly in any one part, nor could be perceived by the touch, but only was heard both by the Patient and those that were with him, if they diligently listned. Now though this Man was not troubled with any pain, nor any horrible Symptom appeared, yet he was afraid least he should die suddenly. This Symptom as we have it declared unto us, is a vehement pulsation of all the Arteries, which is most of all, obscurely heard, about the Head and Temples, as he lies in Bed. And it proceeds from plenty of spirit and hot Blood, which growing hot without Putrifaction and working, stretches the Veins, and fills the Arteries with thin and vaporou

vaporous blood, causing a sence of that same swelling, great and vehement pulsation. An argument hereof is, that if his blood either by intemperate diet, or immoderate exercise, or the fire, be a little heated and stirred; these Symptoms of his are exasperated and grow worse. And therefore this is only the effect of abundance of Heat of blood, nor does it argue any more grievous evil to lurk within, nor does it threaten any worser evil, provided timely Remedies be applied. The first and cheifest way of prevention and cure does consist in point of diet. And the sick Gentleman must use very little Wine, and that must be such as is weak, and well allayed, that it may retain very little tast of Wine, He must eat boyled flesh rather than roast, and dip both in Juyce of sower Grapes or Vinegar, or Juyce of Sorrel or of Lemons or Pomgranates. He may profitably eat Fish, especially if they be of hard and solid substance: yet let him eat thereof, but sparingly and frugally. Sometimes especially on Fish days, let him sup with Barley Cream. Let him shun all Salt and peppered Meats, or otherwise spiced, and sharp, as Garlick, Onions, Mustard, Water-Cresses. Also vehement exercise of his Body must be avoided, and over heating the same, also Wrathfulness and Sadness; finally, all disturbances and over much intention of the mind. If by this course of Living, in the space of about twenty days the trouble shall not cease, the weather being warm he may take some Physick: and in the first place give him an emollient Clyster, the day after purge his body with this Medicament, which is also accommodated to the pain in the Kidney.

Take Pulp of Cassia six drams; Diaprune Laxative one dram and half; Rhubarb poudered one dram. With Sugar make a bolus.

On the third day, open the inner Vein of his left Arm, and take away blood as his Strength will bear, to ten or twelve ounces, The following days, give him in the morning one dose of Syrup of Cichory simple, and Syrup of Vinegar simple: out of a double quantity of Water wherein Cichory and Sorrel Roots have been boyled. Moreover, let the prescribed course of life be continued, till that same vehement pulsation be quite gone, and the danger of fulness be avoided. And also nothing will be more useful for the health of his Body, than long to hold that same cooling order of Diet prescribed.

The XIX. Counsel.

Of a Consumption of the Lungs, for a Citizen of Roan.

THe Disease described is the Consumption, caused not only by a distillation, but through fault of the Lungs, which have been long time apparently oppressed with shortness of breath, and are now so weakened that their proper substance does not only consume, but corrupt and rot. An argument whereof is, a soft and flegmatick swelling of his Foot and Thighs. Moreover his now spiting of Quittor and purulent matter, argues the Consumption to be confirmed. And therefore the Disease is now become uncurable, nor is there any hope. Howbeit, the life of the Patient must be lengthened as long as by Art is possible, by gentle and debonair Medicaments, which mitigate the Disease without weakening the Patient. And therefore abstain from any further Blood-letting. And in case Blood happen at length to break out again, it will be better suppressed, by a dram of choice Rhubarb pondered.

Or if it shall any ways seem fit to purge, it will be sufficient to give him Cassia Fistula, or an Infusion of Rhubarb. And his spitting must be furthered with Lenitives and Detersives, which do not vehemently open, such as Jujubes, Sebestens, Figs, Raisins, Polypody, Colts-Foot, Pimpernel, Hysop, with good store of Sugar, made up in manner of a Lick-pot. Also *Electuarium Resumptivum* will be good, and *Unguentum Resumptivum*, wherewith his whole Body must be anointed, evening and morning. So also in the beginning of the Spring, he must use Asses Milk, artificially prepared, which must be given him in the morning when his Stomach is empty, four hours at least before Meat: or if he cannot easily have the use thereof, Barley Cream and Sugar of Roses, must in like manner be given him at the same hour. I doubt not but the rest of his diet has been prescribed, according to the Rules of Art. Let him use meat easily to be digested, a little at a time, and often, lest he over-whelm his weak Nature, and encrease Crudities, which are the Cause of the Flegmatick Swelling.

The

The XX Counsel.

The History of the Disease written by Mr. Crab, *the Kings Physitian, to the Physitians of* Paris, *for the Lady* De le Aubespine, *enclining to a Consumption.*

THis most noble Lady had been now six moneths with Child, still subject to defluxions from her Head into her Breast: whereas after a long stay in the Sun, and acrimony of blood contracted by passions of mind, she fell into a spitting of blood, which was much in quantity, hot and of a flourishing colour, all which signs shew, that it came from no other part save the Lungs, and rather by opening the Mouth of a Vessel, than by breaking the same, or fretting it in sunder, as things going before and following after do perswade us. Now this Symptom ceasing only by Medicaments and those but few, which did abate the fervency of blood, and furnished with an astringent and soddering faculty, the Physitian who was with her thought fit to abstain from blood-letting, and other stronger Remedies acommodated to her Disease, till being brought to bed, she might more easily bear them through increase of strength, But a Feaver arising after she was delivered, which after a Chollerick and Putrid Looseness, without any other Physick, save an Apozem to move her purgations, went away; she complained of a pain in the right side of her Chest, and how she could not endure to lie on that side of her body, with shortness of breath, and a sence of weight if she lay on the other side. But a few days after, she after a long coughing fell to spit blood again, and that frequently: wherefore finding her in good strength, we thought it fit to proceed to the cheifest and best Remedies of that Disease. This Methed therefore we resolved exactly to follow. Having clensed her Belly with a gentle Clyster, out of the inner Vein of her right Arm we took three ounces of blood. The day after we did let her blood again. And because by both the bleedings thick slimy and half putrified blood was voided, the same day, some hours after, we drew some out of the same Vein: which finding to be purer and more sincere, we thought fit to stop it.

After blood-letting we purged her, having first given her a Julep. Now her purgation was exceeding gentle, of a dram and an half of Rhubarb in the infusion, with half a dram thereof in Pouder, and half an ounce of Syrup of dried Roses. After purging we set our selves to strengthen her Brain, and to draw the Vapors through the sutures of the Skul, applying to the Coronal Suture Emplastrum ex Ammoniaco and Pigeons dung.

In the mean while, we did not neglect the part affected. In the first place therefore, we prescribed a Clyster, and stoppers of blood. And such things as might heal the wound if any were, and that the thin and sharp defluxion being thickened might stop. Among which kind of Medicaments is the solid Electuary of Terra-Lemnia and Bole-Armenick, Red Coral and Blood-stone, Conserve of Roses and Syrup of Poppy being added, with Species of Diatragacanthum frigidum, rejecting the hot Species of Diapenidium as unfit in this Case. But that the Humor already in her Lungs might more easily be purged out, we prescribed an attenuating and deterstive Chest-Syrup, which might move spittle. Also a march-pane made of new Pine-Kernels and Almonds with Sugar and Rose-Water made up with an infusion of Gum Tragacanth, Sorrel-seed, Plantane-seed and Purslane-seed; which March-pane besides that it makes one easily expectorate, by its astringency it likewise glues and sodders. We added that which every body commends, the use of Asses milk, with pouder of Sugar of Roses.

So that now we doubt not but that this noble Lady will recover by the use of the prescribed Remedies, nor do we fear any mischance as long as she will follow good advice, and shall not neglect that course of diet, which she hath hitherto observed. But in case by external Injuries or some vehement motion of mind, or strong and loud contentious speaking, or untimely watchings, the disease shall return upon her, we advised her to use the same Remedies. But for prevention of this evil, we account moderate blood-letting and purging with an Infusion of Rhubarb, when the Spring enters, and in Autumn, to be the most speedy and convenient Remedies in the world, and we do exceedingly commend the same.

The-

The Answer of Fernelius.

Hot and fresh-color'd blood many times by fits brought up with coughing, is indeed rightly judged to come from the Lungs. But because the most noble Lady our Patient has a soft and tender body and weak Lungs, and has been long time subject to a distillation and Cough, it is very much to be feared, that a Vein is not only opened, but fretted asunder (for I find no reason to think that it hath been opened by violence) yea, and seeing upon the last voidance from that part, an evident pain arose in her right side, with shortness of breath and a sharp Cough, also with a certain pain and heavines and weight, especially when she lies on the contrary side, unless she had then a true Pleurisie, we have great reason to suspect, both that her Lungs are ulcerated, and that there is such a collection of matter as threatens an Imposthume. Howbeit the Remedies of Art have been so accurately and diligently applied to these evils, that the sick Gentlewoman seems now to be in a good and safe condition, without any danger of a Relapse: which is to me the best and most acceptable news in the world. And therefore I conceive she ought to persist in the use of these Remedies, by help whereof she has recovered, and especially of the Milk and Barley Cream. But nevertheless, because these kind of Maladies are wont to be most dangerous and deceitful, and commonly to lie long hid, under a counterfeit appearance of health, till at one time or other upon some light or no occasion, they gather Head afresh; wary observation must be made, whether any of the old malignity remain in her Brest or no, and whether she is not sometimes vexed with her Cough, or troubled with a lingring Feaver, or shortness of breath. For if these things be observed, it may haply seem fit besides her morning milk, and course of diet prescribed, to give her such things as are gently lenitive, and mildly purge and strengthen the Lungs,

The Disease before described, brought the Lady de l' Aubespine *to her death. For she was consumed with a lingring Feaver, the pain of her side came again, and spitting of blood, with greater shortness of breath. Her body being dissected, her Lungs were found putrified, cleaving to her Ribs, with sundry Ulcers.*

A Writing of Mr. Fernelius, *when he was to Reason with other Court Physitians, about the Sickness of* Madam de l' Aubespine, *when she came first to this City.*

When she was with Child in her sixth moneth, without any violence betiding her, without any distillation or foregoing Cough, she began of a sudden to bring up from her brest, and spit out blood with Wheezing, but no great straining. At the same time she began also to bleed at the Nose and sometimes the blood would run back into her Throat, where as during this time of her being with Child she had not before bled at the Nose, though her Veins did swell with fullness, and formerly she was always wont to bleed, when she was great. When five days were over, her spiting of blood stopt and went away, yet a dry Cough continued without wheezing or rattling, without any difficulty in breathing in her Child-bed, little or no Purgations brake forth, which were afterward provoked with Syrup of Hysop. The fifth day after she was brought to bed, a most burning Feaver held her for two days, by force whereof a light pain was raised in her right side. After a this lingering Feaver held her, scarce discernable, and settling into her right side. A few days after, a greivous distillation fell into her right Shoulder, and into her Shoulder-blade, and into that part of her side, which before had troubled her. Being the third time let blood after a purge: the pain of her Shoulder and Shoulder-blade, ceased. But it continued in her other side as it does still. After which she alwayes found it troublesome to lie on her right side, and was short breathed, though she voided no blood. By all which it may appear, that the first eruption of blood came neither from the breaking nor fretting of a Vein, but only a Vein was opened through immoderate plenty of blood, And that was only in the right side of her Lungs from which she felt blood to drop, when she lay on her right side. After which came the distillation, which falling on her right side, caused that pain, so that there is a conjunction of two Diseases, the one of her Lungs, the other in her right side. And besides these Diseases, her Liver is also over hot and obstructed, with a light pain and hardness, and her right Kidney is sometimes afflicted with *Nephritick* pains.

THE

The XXI. Counsel.

Touching spitting of blood from the Lungs with a Cough. For Mr. de Baumont *fifty years old. Translated from the French.*

THat you may receive some ease of your shortness of breath, and that it may be hereafter prevented, least you fall into a Cough and spitting of blood, and that in so great quantity as lately happened: you must use all diligence in shunning vehement exercise, great heat, wrath, and other perturbations of mind. Also you must abstain from strong Wines, and hot meats, salted or spiced, and all other occasions, which may over-stir or heat your body. Nor must you eat or drink liberally: Moreover four times in a year, when the season is most convenient, and on some fitting daies, your body must be purged with the underwritten Bolus, and it will be good to take Conserve of Roses frequently when you are going to bed. But if your spitting of blood should happen to return, it will be convenient after a gentle lenitive to open the Basilica Vein in your Arm, which is best for the fluxion into your side. And the day after to drink a little potion with tosted Rhubarb in it. And frequently to use every hour a familiar Opiate, such as was long since prescribed for you, till the spitting of blood cease. And in the mean space to abstain from Wine, and quench your Thirst with the Julep of Roses, or with Syrup of Myrtles, or of Purslane.

The Bolus.

Take Pulp of Cassia new drawn six drams, Rhubarb powdered one dram and half, Electuary of Diatragacanthum frigidum or white Sugar as much as shall suffice. Make all into a Bolus.

The Potion.

Take Rhubarb toasted one dram and half, Syrup of dryed Roses six drams, Plantane water four ounces. Mix them into a potion.

The Opiate.

Take Conserve of dried Roses one ounce, Bole-Armenick three drams, Terra Sigillata two drams; red Coral, Amber, Harts-horn burnt, of each half a dram: Syrup of Myrtles as much as shall suffice. Make all into the form of an Opiate, or of a Lick-pot.

Also for prevention, though you void no blood, you must often take of this Electuary.

Take Conserve of Roses and Comphry, of each half an ounce: Trochisks of Amber and of Terra Sigillata, of each one scruple: Red Coral, choice Pearl, of each half a scruple; Sugar of Roses as much as will suffice. Make all into an Electuary: Let him take a spoonful an hour before meals.

If blood shall break out again, the use of Bole-Armenick will be very profitable. And afterwards, when it is suppressed, your Lungs must be strengthened, gently purged and cleansed with this following Syrup.

Take stoned Raisins one ounce, Polipody of the Oak, scraped Liquoris, of each two drams: Colts-Foot, Scabious, Pimpernell, Knot-Grass, of each one handful: Seeds of Marshmallows and of Cotton, each one dram. Make a Decoction to a pint, in the strained Liquor dissolve nine ounces of white Sugar. Make it into a Syrup of an indifferent Body: Let him use it every hour, and at all times out of a spoon without any waters. It strengthens and cleanses the Lungs.

For another in the same Disease.

Against his Thirst, let him use the Julep of Roses, with four times as much boiled water mingled with it, or Syrup of Jujubes, Myrtles and Purslane after the same manner.

Also, *Take of the Powder of Electuarium Diatragacanthi frigidi, one dram and half; Yellow Sanders, Harts-horn, of each two scruples; Choice Rhubarb two drams, white Sugar dissolved in Rose-water, three ounces and an half; Make all into Lozenges or Tables. Let him take one of them one hour before Supper.*

Also, *Pils of Rhubarb are good, and a fumigation when he goes to bed. Likewise Conserve of Comphry and Roses, each one ounce: Trochisks of Bole half an ounce, Syrup of Myrtles as much as shall suffice. Make all into an Opiate.*

The XXII. Counsel.

For Mr. Sigismund, *troubled with extream shortness of Breath, called* Orthopnæa.

UNderstanding by your Letters (most renowned *Sigismund*) that you earnestly desire the recovery of your health, and that you place great confidence in me to that end; I find my self vehemently allured and provoked, according to my slender Learning and Experience in the Art of Physick, to endeavor all I can to help you. I account it verily a miserable and sad condition, for a man truly ingenious in his manners, and of remarkable learning, most apt for employment in the Common-wealth, in the prime of his youth to be so tormented and insnared by the cruelty of one Disease, as that he is thereby taken off from all excellent Employments whatsoever. I have therefore sought out, and devised for you a very easie method of Cure, and a few Remedies, which by Gods blessing may deliver you from this grievous bondage, and that sweetly and gently, according to your desire, without any offence either of your Brain or Lungs. The Disease propounded is that which we call *Orthopnæa*, returning at certain Seasons, the distances whereof I wish I had been acquainted with, under this Disease the Lung-pipes are already somewhat obstructed with thick and clammy flegm, wherewith the very substance also of the Lungs seems to be stuffed in some Measure. And as often as any new distillation from your Head falls thereon, it doubles the Obstruction, fils the Wind-pipes, stops the Breath, and makes very great shortness of Wind, which persists so long, till the newly fallen fluxion is either dissipated, or concocted and spit up. There are therefore two principal scopes of the Cure; one that the distillation may be driven from the Lungs, the other that the Lungs may be freed from that wherewith they are already stuffed. To attain the former, our chief care must be to diminish the matter of the distillation, and to endeavor that hereafter as little as may be come in the place thereof. Now this may be done, if a thin, sparing, drying Diet be observed, and you eat but twice a day not of suppings, broths, and such like liquid meates, but of dry and solid things, most commonly of rost flesh, such as is of good juyce, and easie of digestion. You must abstain from all Fruits, excepting from Raisins, Figs, Prunes and Almonds. Let your drink be White-Wine or thin Claret, not too strong nor Vaporous, and sufficiently allaied with water, that it may not fly into the Head, and fill the same. Never eat so, as to satisfie your self; drink very exceeding sparingly, and oftentimes endure thirst; that by this course of Diet, all superabundant humors may be drawn out, and your whole body grow lean, and your head it self, the fountain of this evil, become dry. You must by little and little accompany your self to these Rules, wherein the chief force as well of curing as preventing the *Orthopnæa* is placed. It will be exceedingly conducing to your health, to continue and most punctually to observe the same all your life. Nothing is so grievous and molestful, which custome will not render easie. And because Diet alone, though punctual enough, can hardly draw out all the impurity of a body which has been now a long time crazy, purgation must also sometimes be used; especially at the beginnings of the four quarters of the year. It may be in the beginning of Winter and Spring, with pils of Agarick and pils Cochy; but about the beginning of Summer and Autumn by such a like potion as this.

Take

Take Sage and Betony water and White-Wine, of each one ounce; infuse therein choice Rhubarb, Agarick trochisked, of each four scruples: in the expressed liquor, dissolve Diacarthamum two drams, Syrup of Hissop half an ounce: Make all into a potion; Let him take it in a chosen day and hour.

If the time of the future fit be certain and fixt, the purge is to be taken eight or ten daies before. Or if peradventure it set upon a man on a sudden; at the very beginning of the fit he must be strongly purged, that the matter which flows in may be rooted out, before it fasten it self into the Lungs; and if one Purge cannot do the deed, another must also be given, till the whole defluxion be rooted up and stopped. Every morning your head must be dried and rubbed, either with rough Linnen Cloths, or sometimes with such bags as follow.

Take Annis-seed, Fennel and Cummin-seed, of each two ounces; Bayberries bruised one ounce, Millet one pound, Common salt half a pound; Fry them in a Frying-pan, then put them presently in a bag, wherewith your Head must be rubbed hot.

After the rubbing of your head, let flegm and snivel be every morning drawn out of your Nostrils, and with the vulgar and common medicaments used to that end. Sometimes you must move neezing, that a revulsion to your Nostrils may be made of such humors as are wont to fall into your Throat and Lungs. You must use moderate recreatio especially in the morning, and before Supper, or at least instead of Exercise, hard and rough fricti s of your body are to be used. Let afternoons sleep be avoided, and sleep but little in the night. Lie never on your back, but only on one side, that the excrements of your brain fall not into your throat and wind-pides, but may run to your Nostrils. Shun the Air when it is moist and cold, cloath your head well in the Winter, that it may not feel the Injuries of cold. Also your head may be smoaked with odoriferous materials, hot, dry and strengthening, as Nigella Romana, Storax, Benzoin, Amber and Roses. These few precepts therefore of regulating your self must be observed after your cure all your life long, that you may not so easily slip into this Disease again, whereunto you have been accustomed. And now I come to the proper and peculiar Cure, which by the help of medicaments, may remedy the vitious constitution of your body. To this Intent you must chuse a time between your fits, when being delivered from one, you did not fear to fall immediately into another: and this time of Cure ought to be about thirty daies. In the first place therefore, the former course of life being undertaken and punctually observed, your belly must be loosened with a Clyster of an emollient Decoction, with Hierapicra simple and Diaphœnicon, each one ounce. Honey of Roses and Rose-mary, of each one ounce: Oyl of Annis-seed three ounces. The day after purge with that potion which I before described. After that, the remaining humors must be purged with this Apozem.

Take Polypody of the Oak, Carthamus seeds, Roots of Elicampane and Fennel, Raisins cleansed, of each half an ounce: Savin, Betony, Stœchados, Hyssop, Savory, Colts-Foot, Thyme, of each one handful: Seeds of Annis, Marsh-mallows and Cotton, and of Liquoris, each two drams. Make an Apozem for four Doses, clarified and aromatized, with a dram of choice Cinnamon. Let him take it twice a day, two hours before meals.

This Apozem must be continued five or six daies, and in the mean time if your belly be bound loosen it with a Clyster. And at last purge again, either by potion or by pils: Now such a potion as this will be exceeding good, being fitted both for the Head and Lungs.

Take Polypody of the Oak, Carthamus seed, Elicampane Roots, cleansed Raisins, Senna, of each three drams. Make a decoction for one dose: in the strained Liquor, infuse Agarick trochisked one dram and half. In the expression, dissolve Diaphœnicon two drams: Syrup of Hyssop half an ounce. Make it into a potion, take it fasting four hours before meat.

When by these Medicaments, and a sparing course of Diet, he shall appear sufficiently emptied; Remedies proper to the head may be then seasonably applied. Being therefore polled to the skin every morning, and an hour before Supper, it must be rubbed with such bags as I formerly described exceeding hot, and they must be endured till your whole head feel hot: and then if it may not seem troublesome, it will be very good for you to use the decoction of Guajacum for eight daies. And that is to be took in the morning, and three hours before Supper; and when by force thereof you find your self to sweat, then the bags very hot may most seasonably be applied to your Head. Your sweat being wiped off before you take meat, let the Snivel and Rheume be drawn out of your head after this manner.

Take Sage, Betony, Marjerom green, of each an handful; Orris root an ounce; beat them together, and at last pour on White-Wine and Hydromel, of each two ounces. Squeeze out the Juyce, snuf it up into your Nostrils, having first blowed your Nose; and if this shall not draw enough, make use of this more potent Errhine following.

Cut two pieces of the Root of Bindweed, like two plugs or stopples, two fingers broad in length; steep them in Aqua vitæ, and put them into your Nostrils, first into the right, and then into the left, and suffer them there to abide till the Rheume run down abundantly on either side.

Also neezing may likewise be provoked, by the violent motion whereof the excrements of your Brain may be derived into your Nostrils, and all the evacuation of your Head drawn that way. To which intent neither Cupping-Glasses nor Apophlegmatismes will much avail: for the former do very little purge the Brain, and the use of the latter is not very safe, because they bring the Rheume into the Throat, from whence it should rather be revelled. When for the space of about eight daies your Brain shall be sufficiently purged, shave your Head, and lay on this Plaister, which powerfully stops and dissipates all fluxions.

Take fat Figs and sharp Leven, of each half a pound; seeds of Agnus Castus and Water-Cresses bruised, of each one ounce; Mustard-seed bruised two ounces; of the Plaister of Muscilages four ounces: soften and incorporate them, adding Oleum Irinum as much as shall suffice. Spread hereof a Plaister upon Leather, and lay it all over your Head, and let it be renewed every morning.

It will by little and little draw all the moisture out of your Head, which neither Cantharides applied to the Hinder part of the head, nor an Issue made in the fore part of the Head at the future, nor letting blood in the Fore-head Vein can effect. While you wear this Plaister, the Cure may be directed to the later scope or intention, and the stoppage of your Lungs opened by this Apozeme.

Take Roots of Elicampane, Polypody of the Oak, Carthamus-seeds, cleansed Raisins, of each half an ounce; Hyssop, Savory, Thyme, of each one handful; Senna one dram and half. Make a Decoction to half a pint, adding towards the end Agarick trochisked half an ounce: Orris root of Florence three drams. In the strained Liquor, dissolve white Sugar, the best Honey, of each one ounce. Make an Apozeme of three Doses; Let him take it every other day, four hours before Dinner.

When you have took the Apozeme, take off the Plaister, and keep your Head very warm, and let the rest of the Cure consist in the use of those things which smooth and comfort the Brest and Lungs, such as is this Cough-Syrup following.

Take Jujubes, Sebestens, fat Figs, five of each; Polypody of the Oak, Carthamus-seeds, Raisins stoned, Elicampane Root, of each half an ounce: Origanum, Calamint, Hyssop, Savory, Thyme, of each one handful; Seeds of Marsh-mallows and Cotton, of each three drams. Make a Decoction in Hydromel to a pint; Make a Syrup perfectly boiled, clarified and aromatized with Guajacum and Florentine Orris Root, of each two drams. Use it often in a spoon, licking and swallowing it down by little and little.

For the same intent and purpose this following Wine is excellently good and profitable, which being taken in the morning, does also strengthen all the faculties of the Body.

Take the best White-Wine, Hydromel perfectly boiled, of each one pound: Infuse therein Elicampane Root and Polypody of the Oak cut small, of each two drams: Let them so stand, and after twenty four hours, let him take every day four or five ounces, at least three hours before Dinner.

This Course of Cure, though easie, and not intangled with difficult and burthensome Medicaments, will yet be sufficient to chase away this stubborn Disease. But if nevertheless any shadow thereof shall happen to return at the very beginning, you must strongly purge with the foresaid Medicaments, and in the very fit the bags must be applyed very hot to your Head, and lick Oximel Squiliticum, and sometimes a little Aqua Vitæ: for this readily helps, especially if your purge have brought away good store of watry and serous excrements. And because stubborn and long lasting Maladies can be hardly universally and suddenly rooted up; if any thing shall remain after the Cure, let it be by little and little taken away with the good Diet before prescribed, and such purgations as are accommodated to the several Seasons of the Year. These things verily will hinder you from easily relapsing into your former Infirmities, as commonly it happens.

The

The XXIII. Counsel.

Touching the Asthma *or Tisick for a Spaniard of* Bruges.

THis old *Asthma*, as it is represented to me, proceeds from two causes; the one is a pertinacious Obstruction of the Lungs and Wind-pipes, caused by degrees through flowing in of Rheume, which is now so hardened, that the greatest part thereof resembles hail or pretty hard Cheese; another Cause is a distillation from the Brain, falling plentifully at certain periods upon the Lungs, by which the straitness of the Lungs is for the most part obstructed, and then respiration is rendred exceeding difficult, and a true Asthma or it may be an Orthopnæa happens, which continues two or three daies, till a potion of the distillation be voided by Cough and spitting. The prevention therefore of the Fit, and the Cure of the whole Disease consists in these things following. The third or fourth day preceding the suspected Fit, we must purge him with a good strong purge, which may evacuate all the humor which causes the fluxion of the Brain, and other parts; such as this following.

Take Sage and Colts-foot Water and White-Wine, of each one ounce: Infuse therein choice Rhubarb four scruples, Agarick trochisked one dram, Cinnamon half a dram; in the Liquor squeezed out, dissolve a dram or two drams of Diaphœnicon, and half an ounce of Syrup of Hyssop. Make all into a Potion, give it on a day and hour convenient.

The day following derive the excrements of the Brain through the Nostrils with this Errhine or Nose-liqour.

Take Betony, Sage, Marjerom, of each one ounce: Orris root half an ounce; beat all together: Then pour thereon four ounces of White-Wine, squeeze out the juyce, and make an Errhine or Caput-purgium.

Let him use it in the morning and before Supper, and let him so accustome himself to derive the flegm of his Brain through his Nostrils by frequent and continual Errhines. To bring it by Apophlegmatisms through his palate is not safe, because that way is near to his Throat, by which the fluxion and distillation falls into the Lungs. Nor can Setons, so called, or Ulcers raised in any part, though they flow never so long, bring any useful derivation (for so I have known many deluded) but the most effectual and most profitable one is, that which is made the natural way, and according to the custom of Nature by the Nostrils. At the same time his Head being also shaven or close shorn must daily be rubbed with such dry things as dry and dissipate cold excrements, and corroborate the Brain it self, that it may not hereafter breed so many excrements.

Now it may be done after this manner:

Take Sage, Betony, Stœchados, Rose-mary flowers, of each one handful: Juniper-Berries two ounces, Seeds of Annis, Cummin, Bay-berries braised, of each an ounce: Millet one pound, Common Salt half a pound: Fry all in a Frying-pan, and then put them in a bag, which must every morning be applied hot to his Head.

If after three or four daies the signs of a distillation shall appear, or the sick Person shall not be sufficiently purged, give him the same purge again. And if neither by these Remedies the fit can be kept off, but that it will return as formerly, or more weak; give him in the Fit it self Syrup of Hyssop, or Oxymel of Squils, or Conserve of Elicampane. Anoint his Brest with Oyl of Lillies, of sweet Almonds and Dill, with a Musilage of Fœnugreek extracted in Scabious water. And let his Head be rubbed and his Neck with the bags prescribed very hot. Give him very sharp Clysters with a thin and attenuating Diet. We conceive 'tis best for him to abstain hereafter from blood-letting; for though it sometimes help the Symptome, yet it is a very great Enemy to the Cause and the cold distillation. These therefore are the chief Remedies wherewith we help the Head, as being the Fountain that sends forth the Humor. And that the other Cause of the evil may be removed, which is rooted in the Lungs; when the Patient shall be free from his Fit, let him mollifie the thick flegm of his Lungs, and cut and scour the same away with this Syrup.

Take

Take Marsh-mallows, Elicampane, Polypody of the Oak, Carthamus-seeds, Raisins stoned, of each half an ounce. Jujubes, Sebestens, Fat Figs, of each five in number. Hyssop, Savory, Origanum, Calamint, Pimpernel, Colts-foot, Maiden-hair, Scabious, of each one handful; Seeds of Marsh-mallows, Mallows, Cotton, Liquoris shaved, of each two drams: boyl them all to fifteen Ounces. In the strained Liquor, dissolve fifteen ounces of white Sugar, make a Syrup perfectly boyled. Let him take it every hour out of a spoon in manner of a Lick-pot, without Waters.

The humors being prepared, let him every fifth or sixth day, gently purge them forth with this other Syrup.

Take of the Decoction of the foresaid Syrup fifteen ounces; wherein infuse Senna, Agarick, each three ounces; white Ginger one dram, Orris Roots of Florence half an ounce. Then Boyl them a little, and strain out the Liquor, wherein dissolve fifteen ounces of white Sugar, and make all into a Syrup perfectly boyled. Let him take two ounces for a dose in Barley-water.

Also during the whole time of Cure he must keep a convenient Diet, wherein all such things must be avoided as breed a thick juyce, as Ox-flesh and Swines-flesh: the feet and remote parts of animals, and in a manner all Fishes and Cheese. All windy things, as Beans and Pease, much use of Herbs, Crude Fruits, such especially as will not keep, such things which treasure up watery humors, and the matter of the distillation, as chiefly immoderate drinking, much and frequent supping; so that by all means the body may be made dry, and less excrementitious. He must therefore use fleshes of good juyce, and they roasted rather then boild: must drink very sparingly, and abstain from water, because it breeds Crudities and cold Humors, and fastens the humors which are setled in the Lungs and other parts; he must resume the use of Wine which he had omitted, and use that sort which is least vaporous, and does not trouble the head, and allay it well with water. Other things which may be desired as to point of Diet, may easily be collected from what has been said, which must all encline rather to heat than to cold, unless there be great suspition of a hot Liver. When the Patient shall have diligently continued in the use of what has been prescribed for forty or sixty daies together, and rid away the grosser part of the morbifick matter; that the remaining root may be quite plucked up, it will be very profitable to put him upon a Diet-Drink of Lignum Sanctum, but let it be made after this manner.

Take shavings of Guajacum or Lignum Sanctum half a pound, Bark of the same two ounces; Infuse them twenty four hours in six pints of water, then make a Decoction to two pints, adding towards the end Betony, Sage, Marjerom, Stœchados, of each one handful: Polypody of the Oak, Raisins stoned, of each half an ounce. Strain out the Liquor; Let him take five ounces for a Dose blood-warm, at five a Clock in the morning, and at four in the afternoon, well covered in his bed; and let him eat three hours after.

Also, *Take shavings of Guajacum half a pound, Infuse them twelve hours in ten pints of water. Then make a decoction to five pounds; strain out the Liquor, let him use it at his meals, and when he is thirsty instead of Wine. When he shall use this course of Diet, he must be purged every fifth or sixth day with the Syrup aforesaid, and that day abstain from the foresaid drink. Also as he lies in bed he must have the hot bags applied to his head, that he may procure heat, if not sweat in that part. Also he must frequently use the Nose-liquors or Errhines.*

The XXIV. Counsel.

Of the Cough.

THis frequent and molestful Cough which brings up thick putrid, stinking, and oftentimes bloody matter, and is attended by a non-nutrition and falling away of the Body, argues a grievous Disease of the Lungs, *viz.* either an Impostume or an Ulcer, which brings a man to a true Pthisis or Consumption of the Lungs, in which respect the Issue of this Disease is not onely doubtful, but full of fear and danger, which can be by no Art avoided. Seeing he has been divers times let blood, I conceive 'tis best to abstain from Phlebotomy hereafter

after, least his languishing strength be too much abated. When his spitting of blood shall prove more immoderate than ordinary, it must be stayed by a potion of four scruples of choice Rhubarb, half an ounce of syrup of dried Roses, with three ounces of Lambs-tongue plantane water: and the said potion will be much more effectual, if the Rhubarb be tosted. Other astringents of Bole-Armenick, and Coral, and Bloodstone, and such like, are not now useful; but all endeavor must be used, that this spittle and flegm may come up most easily with syrups and other Cough-medicines, very smooth and gentle, and with meats and all matter of Diet of like nature. For all sharp, salt, biting things are to be avoided, and whatever lies tickling, or through its acrimonious quality may exasperate his Cough: also wrathfulness, loud speakings and outcries, with immoderate exercise, because these are the things which tear asunder the Lungs, and rub open the Ulcer.

The XXV. Counsel.

Of the Palpitation of the Heart.

THis palpitation of the Heart (as it is largely, plainly and faithfully described) springs not from over great store of Blood, nor from a watry humor preternaturally shut up in the Pericardium or Heart-bag, nor from any small bunch growing thereunto, or any other of those causes celebrated by the Ancients, which press the Heart by their weight; but from a disease in the left Hypochondrium, out of which I have for the most part perceived this Disease to proceed. For there lies both the Spleen and the Sweet-bread under the bottom of the Stomach, and other neighboring parts are full of naughty humors, not simply melancholick, which is as it were the dregs of the blood, but rather black cholerick, which have grown together by little and little of yellow choller adust, and cast into those parts: which as often as by Anger, Exercise, strong Wine, or hot meats, it comes to be stirred, it breaths out an ugly and melancholick spirit, which entering into the Arteries (of which there are many all the spleen over) it easily creeps into the neighbouring Heart. The heart being vexed and provoked by the malignity thereof, endeavors by palpitation to cast from it self that which is hurtful and troublesome, even as the brain does in the Falling-sickness. Part of the vapor being carried higher into the Brain, breeds Watchings, Dreams, Frightments with Hobgoblins, full of fear and sorrow, as if there were some admixture of Melancholy: and the truth is, this Disease, which is the original of all the evil which the Patient complains of, is very like that which causes hypochondriacal melancholy. For Crudity of stomach, sowre belchings, abundance of wind breaking out above and beneath, rumblings of the Belly, and such like symptomes, which do most of all shew themselves in the Patient when he eats any hot meats, are in no wise caused by a primary fault in his stomach; but by consent, and through plenty of black choller abounding in the left hypochondrium, and about the stomach; in which parts peradventure a man may feel somewhat contracted or bent, hard, painful or pulsative. Hence also did precede that same great extenuation of body, long Feaver, lingring, continual, and like an Hectick. But the surest sign of all is, that all the Symptomes grow milder, and the Patient is much bettered by medicaments, purging burnt choller, by loosnesses, and breaking out of the Hemorrhoids. That therefore by imitation of these, the rest of the Cure may be compleated; I advise that he use frequent and gentle purges, such as the syrup now prescribed. To which nevertheless sometimes a dram of Rhubarb may be mixed: and that same purgation which he is ordered to take twice a week will be more effectual and profitable, if he shall take it two daies together one after another; if his strength permit, he may take it oftener; but if not, when he is costive let him at least use a lenitive Clyster. The day after his purgation, four or five hours before meat, you must give him one dram of old Methridate mingled with a like portion of Conserve of Bugloss. And that the Evacuation of the hurtful humour may proceed the better, it will be good (especially if any such thing shall be found there as aforesaid) to foment the left Hypochondrium every morning, and perhaps before Supper also, with this preparatory decoction.

Take Roots of Althea, Lillies, Fennel, Capars, of each one ounce: Mallows, Violets, Ceterach, Wormwood, Mints, Melilot, Chamomel, Dil-tops, each one handful: Seeds of Annis, Line, Fenugreek, each half an ounce: Cyperus, Calamus Aromaticus, each two drams. Make of all a little bag; boyl it in a sufficient quantity of Water, wherein

let

let a new and ſoft ſponge be ſteeped, to foment his left Hypochondrium. If the place being wiped be afterward ſmeared with this following Liniment, it will alſo not a little help.

Take Oyl of Violets, Lillies and Chamomel waſht in Vinegar, of each half an ounce: Muſſlage of Fleawort-ſeed and Fenugreek extract in Bugloſs water one ounce; Wax a little quantity, make all into a Liniment.

Moreover he muſt continue that Electuary which he has already happily experimented, to mollify the Symptomes of Choler; and that only on thoſe daies in which he neither takes Syrup nor Methridate. And for the ſame purpoſe, and to quench his Thrift (if he have any) this Syrup may be made, which will alſo be exceeding good, as often as either ſwooning or palpitation of Heart troubles him. Now it muſt be mingled with three or four times ſo much diſtilled Water.

Take Juyces of Bugloſs, Borrage and Sorrel, of Lemons and Pomegranates, of each three ounces, white Sugar ſixteen ounces. Make a Syrup, boyled to an indifferent height over a gentle fire, and aromatized with two drams of yellow Sanders.

As to matter of Diet, the Patient muſt be warned to be very ſpare in the uſe of Wine, which muſt be neither vaporous nor generous, and allaied with much water wherein Bugloſs-flowers have been ſteeped. He muſt wholly abſtain from things ſalted, peppered, Muſtard, Garlick, Onions, and from all hot meat: alſo from Milk, and all things made thereof, and whatever meats are ſoon corrupted. Suppings are eſpecially good of the broth of good juyced fleſh, which muſt be altered with Bugloſs, Borrage, Lettuce and Sorrel. He ſhall ſometimes ſup with Almond-milk made of Barley-Cream, and ſweetned with Sugar, without drinking any Wine before or after. For by this means the Humors become mild and gentle, and good juyce comes in place.

The XXVI. Counſel.

Nummedneſs or Inſenſibility of the Stomach.

THe chief Symptoms whereof this Patient complains are weakneſs of Body and inſenſibility of Stomach. Moreover, this weakneſs muſt needs have its cauſe in ſome principal bowel: and that ſame bowel wherein that cauſe quarters is the ſtomach, by fault whereof the body is not nouriſhed. For that ſame nummedneſs or inſenſibility, whereby the goodneſs and comfortableneſs of the meat is not perceived, ſhews that the ſtomach is grievouſly diſordered; and that either by thick, clammy and viſcous flegm ſticking to thoſe inner Coats, or from a cold diſtemper, whereby the ſence thereof is laid aſleep as it were and dulled, and the latter opinion is the more probable. For when as the ſtomach is ſcoured many times with accommodated Medicaments, and perfectly cleanſed, and yet its natural ſence is not reſtored, but the ſame diſpoſition remains, and preſently the ſame plenty of flegmatick humors grows there again, it muſt of neceſſity be concluded, that it is benummed by a cold diſtemper; by which the greateſt part even of good meat is turned into clammy, roaping, and very crude humors.

The Cure.

Let his Diet be hot and dry, wherein let him abſtain from ſuppings, and all boyled and moiſt meats and Barley-broths; yea, and from Jellies too; alſo from all Fruits, excepting Raiſins of the Sun. Let him uſe the fleſh of little Birds, Partridges and Capons cut into bits, out of a preſerve or Sawce which has a little Cinnamon and Nutmeg, and let all be roaſted. And if he cannot bear theſe ſolid meats, let him take the juyce ſqueezed out of roaſted Capons. Let his Wine be ſtrong, that it may warm his ſtomach: Let him uſe no other purging medicament but Aloes, and of that let him take half a dram with ſyrup of wormwood reduced into three pils an hour before meat twice a week. In the daies between, let him take a Clyſter, which beſides other things, has ſix drams of Hiera ſimple. Alſo on ſuch daies as he ſhall not uſe his pils, let him take the quantity of a Nutmeg of green Ginger in the morning, and an hour before Supper.

Item

Item, *Take Wormwood, Mints, Red Roses, of each one handful: Calamus Aromaticus, Cyperus and Ceterach, of each two drams: Boyl them in water, adding in conclusion half so much White-Wine.*

Foment his Stomach herewith morning and evening with a new Spunge. Also anoint the Region of his Stomach with Oyl of Nutmegs, and then apply a convenient Plaister. And if these things shall not do the deed, apply to the Region of his Stomach a Cloth dipt in spirit of Wine, and heated: for that is judged the most excellent Medicament in a Numnedness and Palsie.

The XXVII. Counsel.

Of a Windy pain in the Stomach.

THis vehement pain of the Stomach coming by fits proceeds from much Wind, which when the pain is going away, does wont to break out with belchings. Now crudity ingenders this Wind which the Stomach plentifully gathers in time, and which sometimes it casts out by Vomit. But the weakness of the Stomach alone is not the total cause thereof. But the Cause is to be sought higher in the Liver, for it is both wholly distempered, and much obstructed, and has a Vein broken or eaten asunder, out of which blood came in times past, and was voided by vomit. By which Causes all digestion is corrupted, and many Diseases usually threatned to the Stomach and whole body. But this Disease, if it be not diligently cured, is the fore-runner of a Dropsie or Cachexy, or some more grievous Disease. Many Remedies may truly be propounded against Crudity, which nevertheless I dare not allow in this Case for fear of hurting the Liver. For neither strong Openers, nor Detersives, nor Medicaments of Hiera or of Aloes are fitting in this case, because they grate upon the Veins, and open their Mouths, out of which afterwards the blood issues. Therefore, I conceive no Medicament safer than Rhubarb, which purges both crude flegm and choller, opens Obstructions, and stops the blood, if every third or fourth day half a dram or two scruples thereof be given, reduced into most fine powder in White-Wine or Plantane-Water: or in form of Pils two hours before meat. No purgation will be found safer, and more efficacious for to prevent the pain. It will also sometimes be good to soften his belly with a Clyster. Also this following Electuary will wonderfully strengthen the Stomach, and the good digestion of the Liver.

Take Red-Roses, yellow Sanders, Cinnamon of the best, of each four scruples: Choice Pearls, Red Coral, Harts-horn, of each one scruple: Sugar dissolved in Rose-water four ounces. Make all into Lozenges, weighing two drams a piece. Let him take one in the morning, another in the evening before Supper.

If peradventure his pains shall return more violent, they must be assuaged with a Fomentation of Roses, Balaustins, Mints, Wormwood, Chamomel and Annis-seed boiled in Water and White-Wine. Other Medicaments must not be used, unless great necessity require, for fear of those things formerly expressed. Among other things pertaining to his course of Life, let him shun labor and immoderate Exercise, whether by running or hard riding; let him shun baths, liberal and over-much eating and drinking of Wine: also all meats very hot and biting.

The XXVIII. Counsel.

Touching pain of the stomach, for Msr. deLauzun.

THat Symptome which most of all troubles the Patient; is a long lasting pain of the Stomach, more frequent and tedious in Summer than in Winter. Searching out the Cause hereof, besides those things which I was informed as touching the signs, I observed with my hand a mighty hardness spread out from the bottom of the Stomach to both Hypochondria. Suspecting this to be the cause of the pain, I thought good to try what matter it was that caused this tumor: and having given, after a Clyster, a Medicament only of Rhubarb, the stools

came away first thick, resembling pitch; then like dissolved Cassia, afterwards red, very like to thick and dreggy blood: which when they had continued of their own accord two or three daies, it was by the Judgment of all concluded, that they were not melancholick, but bloody dejections proceeding from scorched and burnt blood, which eating asunder or opening a Vein was fallen into the hollow part of the Liver, and the Pancreas or Sweet-bread. This blood congealing without the Veins and putrifying, has caused both the tumor and the pain, the fainting Fits, and the lingring Feaver, and other Symptoms. Nor verily can I after diligent Inquisition, find any other cause of these pains and Symptoms. That same black and burnt blood being voided, the pains abated by little and little, and the Gentleman seemed without pain above twenty or thirty daies. But happening to exercise himself more vehemently than ordinary, and to grow extream angry, soon after he began to be vexed with new pains, like the former. And then giving him another Medicament to purge, the like black Stools came away, resembling burnt blood, which ceasing, his pains ceased likewise. Hence the Cause of the pain was evidently known, and it was apparent, that blood came by little and little out of some Vein, especially when the Patient was heated, or fell into any vehement perturbations of body and mind; which being gathered together into some certain place, and clottering and putrifying by its malignant substance and vapor, it caused all these Symptoms; to which cause also store of winds is added, being shed forth into sundry parts of the body. This Disease, if it be not timely cured, threatens sudden death or the Dropsie. The best way of prevention is, for the Gentleman to abstain from all those things which make the blood hot or thin, or which violently move the same, or by any means make it break out of the Veins. Such are vehement and unseasonable exercise of the body, anger, wrath, fear and other disturbances of the mind: thin and strong Wine, Mustard, salt things, and all things which are peppered, and all Sawces made thereof. Also heating the body, either by extream heat of weather, or by the fire or baths, or by any great commotion. He must therefore abstain altogether from all these things, that very little or no blood may hereafter be shed out of the Veins. But if all this will not serve to prevent the Disease, so that some Rudiments of the swelling and pain may hereafter appear, as it were in a set course or period of time; then all speedy help must be applied: First with an Emollient Clyster, and then with a purge of Rhubarb only, or sometimes Senna added thereto. Let him abstain from Agarick, and especially from Aloes or Hiera Picra, that they may not open the mouths of the Veins. To which Remedies, if the Disease give not way, a Vein must be opened in the inmost part of his Arm, and that for Revulsions-sake, yea, and though the Disease should not trouble him, it would be good twice every year to open a Vein at the beginning of the Spring and Autumn, to abate the boyling fervency of the blood. To the same purpose also those Syrups are good which we have prescribed of the juyces of Endive, Plantane, Knot-grass, Roses, Sorrel and sowr Grapes: or if a more effectual stopping of blood be requisite, give him that powder which I prescribed in form of an Electuary, and these things are good to resist the cause. But the grievousness of the pain we must lenifie and asswage with a Clyster, which will draw away the winds, which I know are sometimes mingled with the principal Disease. Sometimes we must foment the Stomach with such things which both strengthen and expel wind; and sometimes anoint it with an Oyntment of the same faculty. The matter or Composition whereof I shall not at present set down, because it is by it self largely elsewhere declared.

The

The XXIX. Counsel.

Concerning a Feaver, with grievous Symptoms, for the Countess of Ales.

A Letter of Her Physician in ordinary.

I Hear (most learned Sirs) that the noble Countess of *Ales* being troubled with a vehement and long Disease, was Cured by your care and diligence. Now the Disease was a continual Feaver, which growing somewhat gentler on the thirtieth day, became afterwards more violent, with unquietness, watchings, looseness, raving, shortness of breath, want of appetite and thirst in a thin body, which you did not only overcome, but the whole constitution of her body was made much better than it had been before her sickness. For her stomach had swelled two years before with winds, and with a certain wheyish moisture, distending the coats thereof, which brought a Disease by fits, very much resembling the Palpitation of the Heart. Her Womb was grown cold and hard, and her hope of Issue very little; but with Juleps and gentle Medicaments, Powders, Fomentations, Liniments, as setting all right again within, you have so ordered the matter, that her Womb presently conceived. And I doubt not but she might have been an happy Mother of a perfect Issue, if she had kept her self quiet, and studied by a more plentiful kind of Diet to encrease and restore her strength. But, she being more intent to certain controversies sprung up about her estate, than mindful either of her self or her Child, she fell into that Charybdis which *Hypocrates* has presaged to thin bodied women with Child. *Whatsoever Women, quoth he, preternaturally Extenuated, do conceive with Child, they suffer abortion before they can recover their wonted Flesh.* For it was in the sixth moneth after her Conception, when resolving to return home, she travelled every day twenty miles, till she was received into her Sisters House at *Albigniac.* In which place, presently either smitten with the heat of Sun, or of the Journey, or wearied with the shaking of her Horselitter; she began to loath all kind of meat, to vomit up what she had eaten, to be vexed with a pain in her Kidneys and Hips, and to be frighted with fear of an Abortion. All which being by our assistance allaied, she fell again into a continual Tertian-Ague: the Exacerbation whereof every third day did last above twelve hours. On the sixth day, being frighted with the vehemency of the Symptoms which afflicted her in the Exacerbation, we took away three ounces of blood, after which all Symptoms were better and milder: but she voided her Child on the seventh day, with three little round balls crooked beneath, as big as a mans fist. Hereupon the continual Tertian turned into an Intermittent, which again some daies after became a double Tertian; for the Cure whereof, after light purgations, we took away four ounces of blood. At length I observed a swelling beneath the Skin of her Legs and Face: yea, and when we said that her belly was also swelled, the sick Lady told us, That she had suffered abortion two years before, and that she had the same Symptoms thereupon. The swelling encreased by degrees; Also a looseness followed the same. At last the looseness being stopt, there remained a Transparent Tumor which would sound like a drum; and therefore I am very much afraid least her strength suddainly failing, she chance to drop away.

The Answer of Mr. Fernelius *and Mr.* Du Mouceau.

Seeing (most learned Sir) the most illustrious Countess of *Ales* was a little while since afflicted with many and most grievous Maladies, and now having suffered abortion, and overcome so manifold a Feaver, and her looseness being stopped, and other Symptomes represſed, there seems now to remain only a suspition of the Dropsie: if her strength fail not, we hardly think she is in so much danger of death. For she has been long ago subject to this Disease, from which she has been delivered sometimes without any help, onely by the benefit of Nature; and other whiles by the directions of Art and some slight Medicaments. We conceive her Womb is not the cause of the swelling, nor that the light Errors of her Childing

did give beginning to so grievous a Disease: but the faults chiefly of the Liver, and then of the Spleen. For in those bowels we long ago observed hard Tumors that resisted the Touch of ones hand, which our Medicines had not perfectly cured at what time she conceived with Child: and it is also credible, that in the time of her being with child they did not a little encrease, and being by degrees augmented and filled with Humors, they were the cause both of those various Feavers, and of this Dropsie. And this truly the pain of her right Hypochondrium does constantly shew, which we hear to be so grievous, that she cannot endure the least touch of a finger. And therefore we conceive that in the first place all the Cure is to be directed to this bowel, and that gently, and by degrees, that not the least violence may be offered to her natural strength. For these bowels being opened, and their Diseases cured, we hope all the Tumor of her Belly will be abated. And although you being most expert in practice, cannot be ignorant of the kinds of Remedies wherewith the premises may be accomplished, yet we have prescribed certain forms to the Apothecary, which he may alter by your direction, as you shall judge the Nature of the Disease, and Patients strength do require.

Take Endive Water three ounces, White-Wine one ounce and an half: Infuse therein choice Rhubarb half an ounce, choice Cinnamon two drams; In the expression dissolve Syrup of the juyce of Cichory half a pound. Let her take it at four times, every third or fourth day a dose.

Take of the Electuary Trionsantalon, the Rhubarb being encreased four fold two ounces. Let her take thereof sometime in stead of the former Syrup. Item,

Take Ivory one dram, powder of the Electuary of Cubebs half a dram, of Trionsantalon, Diarhodon Abbatis and Diamargaritum Frigidum, each one scruple: White Sugar dissolved in Wormwood-water three ounces. Make all into Lozenges, weighing three drams a piece: Let her use them in the intermediate daies.

The XXX. Councel.

Of a Distillation and Loosness of the Peritonæum, complicated with sundry Diseases; for a Senator of Burdeaux.

Diseases quite different and disjoynted one from another, are met in a body long time ill disposed. One is a distillation from a cold and excrementitious head, sometimes into the Jaw-bones, the Neck and Shoulder-blades; otherwhiles into the Lungs and lower parts, with a Cough and shortness of breath, which portends a Tissick. Another is a Nephritick pain, vexing by fits, proceeding from gravel or a small stone; although at present I see no sign of a stone bred, and sticking in the left Kidney, which either alters and twitches the Kidney, or foreshews Nephritick pains at hand. The third Disease is an over great loosness of the Peritonæum in the right groin, or a tearing the same in sunder by force of Coughing, which threatens a Rupture of the Guts. That evil habit of body which you gather from its swelling and dull colour, has its original from the Impurity and Obstruction of the Liver and Spleen.

Now Diseases so variously implicated cannot be cured without very great art and diligence. In the first place a Diet must be used of very good juyce, and the Patient must eat Capars, young Hares, Partriges, small Birds, Veal and sometimes Mutton; and all these rather rosted than boiled. Suppings, Broths, and much drinking must be avoided; also the eating of Figs, and such things as are of bad juyce; fulness, surfeiting and over much crudity. And his Diet must be very spare and drying, that by consuming the superfluous moisture, his body may be dried, and less subject to distillations, Cachexy, and other Diseases. To this end also moderate exercises will conduce, lest his body growing dull by ease and idleness, should be oppressed with plenty of superfluous Humors. The use also of Medicaments is necessary, both to cure and prevent the foresaid infirmities. And twice a moneth his body must be purged with this Syrup which is accommodated to the Head, Liver and Lungs.

Take

Take Roots of Cichory, Sorrel, Butchers-Broom, Asparagus and Parsly, each half an ounce: Agrimony, Endive, Dodder, Ceterach, Betony, Stachados, Hyssop, Colts-foot, Burnet, Saxafrage, each one handful: Seeds of Endive, Dodder, Marsh-mallows and Musk-melons, also Liquoris shaven, each two drams. Make a Decoction in a sufficient quantity of Water, for four doses to be taken as shall be said.

When there shall be more need of purging, and the distillation shall appear over violent, or the body too heavy; if a slender Diet will not help, add to the first dose two drams of Diaphœnicon. That matter which is already got into the Lungs must be washed out and scoured away, in the intermediate dayes free from purging, by the frequent use of this following Syrup, which is also very good for the Kidneys.

Take Roots of Elicampane, Polypody of the Oak, Seeds of Carthamus, Raisins of the Sun, each half an ounce; Jujubes, Sebestens, Fat-Figs, four of each; Hyssop, Savory, Colts-Foot, Betony, Saxafrage, of each one handful; Seeds of Marsh-Mallows and Cotton, and shaved Liquoris, each three drams; Make a Decoction to a pint and half. In the strained Liquor, dissolve nine ounces of white Sugar, and four ounces of the best Honey. Make of all a Syrup well boiled, and Aromatized with Florentine Orris and Cinnamon, each two drams.

Let him take thereof frequently in a spoon in manner of a Lick-Pot, and sometimes mingled with Barley-water.

Item, *Take of the powder of Electuary Diatragacanthum Frigidum, Diaireos simple, each two drams; Aromaticum Rosatum one dram and half: Seeds of Parsly of Macedonia, Saxafrage and Basil, each half a dram; white Sugar dissolved in Pellitory water four ounces. Make all into Lozenges or Tables, of two drams weight apiece. Let him sometimes eat a Lozenge in place of the Syrup far from meals.*

Now his loose Groin must as he lies on his back be fomented with such a decoction as this.

Take Pisidia, Balaustins, Cypress-Nuts, Galls, each an ounce: Allum three ounces. Boyl them in Bean-water for a Fomentation: Then lay on the Rupture-Plaister mixed with the former powders.

Such smaller matters as I mention not, may be gathered out of the Counsels and Writings of others.

The XXXI. Counsel.

Touching a Cachexia, or ill habit of Body beginning.

SEeing not onely the Head or Womb alone, but all the Body besides is grievously affected, badly nourished, dead and ugly coloured; all the joynts are loose and languishing, and not able to perform their Office: and the Patient is exceeding weak, frequently fainting away, with shortness of breath, especially when her body is more than ordinarily stirred: the sick Gentlewoman seems to be affected as those are that are going into a Cachexy, or are Leucophlegmatick. And therefore the cause of all these infirmities must be sought not in her head or womb, but in the principal bowels, especially in the natural, as the stomach, liver, spleen, and adjacent parts, by whose help the whole body is wont to be nourished. These therefore are very impure, and full of superfluous humors; by whose illness and impurity, all meat be it never so good is corrupted, whereby this variety of Symptoms is caused. In so great Impurity of the bowels, obstructions are much to be suspected, and observation must be made, whether her midriff or parts about her belly be not swoln, pained or hard. Unseasonable and immoderate eating of Milk and Fruits was the occasion of all these Maladies: nor can either her head or womb be rightly cured, before care be taken of her bowels, being the fountain and fomenters of their Infirmities. This diligent method of cure must therefore be chiefly followed, after which we may seek to help the parts and symptoms, if they shall not be sufficiently abated.

Take Roots of Cichory, Parsly, Fennel and Capars, Polypody of the Oak, Carthamus-seeds, each half an ounce: Hyssop, white Hore-hound, Origanum, Agrimony, Ceterach, Dodder, Maiden-hair, each one handful: Seeds of Annis, Fennel, Endive, Musk-melons, each

each one dram; Make a decoction to fifteen ounces. In the strained Liquor, infuse all night four ounces of Senna, white Agarick two ounces; Epithymum half an ounce, Ginger two drams. Let them boyl a little in the morning, and press out the Liquor, and dissolve therein one pound of white Sugar; make of all a Syrup indifferently boiled, not clarified. Let her take every fifth or sixth day two ounces, with a like quantity of Barley-water or White-Wine.

To this dose 'twill be good to add sometimes one dram of choice Rhubarb. If at any time on the daies betwixt the takings of the Syrup, she be costive, let her take of these following pils.

Take of the best Aloes, powder of Hiera picra simple, choice Rhubarb, Agarick trochisked, each one dram; with Syrup of Wormwood, make them into a mass. Let her take two or three pints at a time, an hour before meat.

When she uses neither the Syrup nor the Pills, a Decoction or wine of Roman wormwood will be good, mingled with a decoction of Cichory. Or if she loath that, she may use this Electuary, which is both strengthening and preparative.

Take powder of the Electuary of Aromaticum Rosatum and Diamargaritum frigidum, each two drams; Ivory and Harts-horn, each one dram; white Sugar dissolved in Rose-water three ounces. Make all up into Lozenges weighing three drams apiece.

Let her take one in the morning, and another an hour before Supper. Let her stomach and parts about her Midriff be fomented with the Oyntment.

Take Oyl of Nutmegs, Oyl of Mints, Oyl of Wormwood and Oyl of bitter Almonds, each half an ounce: with a little Wax make a Liniment.

Anoint the parts aforesaid in the morning and before Supper, and lay on a Cloth quilted with Cotton-wooll.

Let her Diet be of good juyce, attenuating, moderately heating, and not very full, lest her weak faculties be over-whelmed with plenty thereof. And therefore she must abstain from much suppings and moist meats, because they fill too much, breed crudities, and hinder the Cure. But above all, she must abstain from overmuch drink: and if thirst trouble her, it must be artificially deluded, because it is not true and natural, but counterfeit. Let her eat twice or thrice a day, and little at a time, no more than she can easily digest. The Event will shew what is afterward to be done.

The XXXII. Counsel.

Touching a Cachexy, and beginning Dropsie, for an Ambian Gentlewoman.

THis Gentlewomans Disease arising from slight beginnings, is by little and little grown to a Cachexy and a Dropsie, wherein her belly is not very big, but the greatest swelling is in her feet and legs: yet that same old and stiff hardness of her liver which now is near to a schirrhus, is very considerable, with stomach-sickness, vomiting, want of appetite, and unquenchable thirst. For these things argue that some part of the humor is putrified in that bowel. Since therefore by fault, and corruption of the said humor, her stomach is defiled, that must be in the first place cleansed, that the aforesaid Symptoms may abate. She must be often purged with a Medicament made of Rhubarb, Senna and Agarick, which must be steeped in a convenient decoction, adding the Syrup of Damask-Roses. And she must take such a like potion every eighth or tenth day. And that she may not think it a trouble to take the same potion so often, a laxative syrup may be compounded for the same purpose, wherein sometimes the juyce of Damask-Roses may be mingled, or the juyce of Dwarf-Elder clarified by setling, especially when we would purge the watry humor. But I conceive we ought to abstain from the juyce of Iris or Gladiolus, because it is exceeding biting, and oftentimes exulcerates the inner parts. And withal in the intermediate daies, when she shall be bound in her body, a stool may be moved not only by a Clyster, but also by pils of Aloes & Rhubarb, or sometimes with a syrup made after this manner.

Take Syrup of the juyce of Cichory and of Damask-Roses, of each three ounces; choice Rhubarb infused in Horehound or Fennel-water six drams. Mix them; Let her take an ounce hereof every other day.

In

In this Cure, the chiefeſt care is to be taken of her diſordered Liver. Fomentations, Ointments, Plaiſters, which ſoften the hardneſs of the Liver, muſt be repeated as often as may be, the ſtrength thereof being ſtill preſerved. Make her an Electuary of the powder of Diacubebs and Trionſantalon with Ivory. The ſwelling of the Legs and Feet proceeding from flegm muſt be diſcuſſed with Whey and Lye, boyled with the Roots of Dwarf-Elder, Elicampane, Roſemary, Marjerom, Thyme, Laurel, Origanum, and ſuch like things. If the ſwelling of her Belly ſeem to fall into her Legs and Feet, eſpecially after walking, it were good to raiſe bladders in the moſt ſwoln places, with Leven, pulp of Figs, and a little Cantharides, which being opened, all the Humor which ſwells the belly has been ſeen to come out that way. Let her Diet be ſparing and dry, and let her drink very little.

The XXXIII. Counſel.

Concerning the Dropſie, for an Ambian Gentleman.

TOuching the Conſtitution of the Gentleman our Patient, I told you before that he was troubled not only with a Cachexy, but the beginning of a Dropſie: whereby both his belly was immeaſurably ſwelled and ſtretched, and his Face bloated and diſcoloured. The beginning of the miſchief was from his Liver, with which the Spleen does confederate. For both thoſe bowels were found to be ſwoln, ſtiff and hard, and to make ſhew not only of an obſtruction, but of a Schirrhus.

I endeavouring the Cure of theſe Maladies, ordered him to keep a moderate and dry courſe of Diet; I gave him a purge, I ſtrengthned his Bowels with an Electuary which moderately opened; and having uſed theſe things only four daies, he ſeemed ſo much holpen, that he took himſelf to be already cured. But verily, that which cauſes and foments his Malady lurks ſtill within, *viz.* a Schirrhus of both the Bowels, which I would thus Cure. Every tenth or twelfth day you ſhall purge him with a Medicament that brings away choller, melancholy, flegm and watry humors. And if in the interim he be bound, give him a Clyſter; alſo in the ſaid interim you ſhall endeavor to open obſtructions both by Apozems, and alſo by aperitive and deterſive Syrups; and with Ointments externally applied you ſhall ſoften his Liver and Spleen, being ſtill careful to preſerve their ſtrength. Following this Method of Cure thus generally propounded, you will reſtore the ſick Gentleman to his former health, whom therefore I leave to your Care and Ordering.

The XXXIV. Counſel.

For the Chancellor of the Emperour Charles *the Fifth, ſick of a Dropſie.*

THe Patient having naturally a very hot Liver, by a continual working of his mind, by cares, watchings and immoderate labors, and peradventure by ſome diſorders in his Diet and courſe of Life, has added an acquired diſtemper to that which was natural. And theſe Cauſes getting head, it is come to paſs that the Liver being ſo hot, is become as it were roaſted, and hot Choller does after a more inſolent manner abound: Hence comes that ſame violent burning Feaver; and after that, wandring uncertain Feavers, and an Eryſipelas with thirſt, watchings, unquietneſs, and other furious Symptoms of Choller, which upon every light occaſion have vexed the Patient. And theſe things happened then chiefly, when only a diſtemper and the fervency of Choller did urge. But afterwards the miſchief grew higher: For the Liver has been long obſtructed with the redundancy of Choller and other Humors, and at laſt is hardned with a Schirrhus. Moreover, the proper ſubſtance thereof is depraved, and the inbred heat much waſted. For the tokens of its obſtruction is the laſting of the Diſeaſe, and the pale and whitiſh Excrements of the Belly. And the ſign of a Schirrhus, is, that he can lie longer, eaſier, and with leſs trouble on his right ſide than his left: for on this ſide the Liver lying, does by its bulk preſs and ſtifle the ſtomach as it were; and hinders the motion of the Præcordia or Midriff, and the fetching of breath. If there be no reſiſtance to the touch, but all his belly ſeems ſoft,

soft, the Cause is a watry Humor shed out under the Peritonæum, and placed before the Liver, which makes that a Man cannot feel his Liver. Moreover, that the substance of the Liver is weakened, and its natural heat wasted and dulled, so that it is now no longer fit to nourish the Body, the Atrophy or non-nourishment of the Limbs and whole body is a sign, so that the whole body does as it were melt away. Also the Crudities long since observed, frequent weaknes and decay of strength, old pains of his Feet, after that, swellings of his Legs first, and then of his Thighs, caused by flegm; a Collection of waters about his Belly, which argues not onely a Cachexy, but a true Dropsie, and of that sort which is termed Ascites.

This truly is the end of all these infirmities, towards which they long ago conspired, and which might have been foreseen by many things preceding long ago. Now therefore there is an evident Dropsie, which though it do not much distend his belly; yet seeing it is not bred by immoderate use of cold drink, nor by any effusion of blood, or fault of the Spleen; but has gone further, having so grievous a Cause as I said before, and that so manifold, contracted by little and little a long time in the Liver, and deeply rooted, it will very hardly be rooted out. Truly, when I consider with my self so long a series of causes, and the continuation of so many effects, which have introduced both leanness and consumption of the body, a feeble pulse, and great weakness, if I shall not judge the Case desperate, yet I dare hardly promise a perfect cure, thinking it sufficient, if some of the infirmities be removed, and others assuaged, that life may be as much as possible prolonged, and with as little Tediousness as can be to the Patient. Which how it may be effected, I shall here set down: The Cure, such as can be hoped, must be performed two waies, *viz.* By removing the cause, namely, the Diseases of the Liver, and by purging out the water. The greatest care is to be had of the cause, which alone may at last bring the Patient to his end, and in the last place we must look to the water. For though all the water should be drawn away, yet more will breed as long as the cause continues. Now the Remedies to both intents shall be thus ordered. If his strength will bear it, he must be frequently purged with one dram of Rhubarb steeped in Horehound or Fennel-Water, with half a scruple of Cinnamon, adding thereto Sugar or Syrup of Cichory. For so Choller being voided by little and little, without weakning the Patient, his thirst will not onely be assuaged, and his Stomach-sickness taken away, and appetite provoked, but his Liver also being strengthened, will breed less water. Nor would I venture to give him any stronger purge, in regard of his so great weakness. In the intermediate daies, if his belly be bound, give him a convenient Clyster. If peradventure abundance of water shall stretch his Belly, it may twice a moneth be purged forth with a convenient Medicament. And in this case, we must not allow the juyce of Iris, because it burns the Throat and Gullet, nor yet wild Cucumer nor Chamelæa, because it offers violence to the body. I commend Danewort or Dwarf-Elder, the juyce whereof gently purges water without offence. Beat an ounce and half in a Mortar, and then pour on Wine or Barley-water, and then strain it, and give it him when he has no looseness. His faculties and bowels will be strengthened by the frequent use of an Electuary made of the powder of the Electuary of Cubebs, Trionsantalon and Ivory, with Sugar dissolved in Horehound-water. I would not burthen the sick Gentleman wasted by his Disease and old Age, nor oppress his wearied faculties: onely I would refer the greatest part of the Cure to a good Diet, which is of greatest moment in this case. Let his meat be flesh of good juyce, easily digested, for the most part roasted, never boyled, or very seldom. Let him abstain from supping meats, and all moist things: yet I allow him sawces to provoke his Appetite. It is good for him to eat frequently a little at a time, three or four times a day, that his weak faculties may not be over-burthened, and his meat well digested. Let him drink exceeding sparingly, that for want of drink the parts being dried, the Reins may exhaust the superfluous waters; and the matter of the bowels themselves not being hindred by impertinent Humors, may purge, amend and strengthen it self. Let his drink be not pure Wine, which most order in these cases, but such as is well allayed with water, which may both soon assuage his Thirst, and temper the heat of his Liver. And if Age and Stomach did not advise the contrary, I should bid him drink cold water, which does assuage thirst, and resist the Cause better than Wine, and yet it does not more encrease watery Humors. For it is an extream hard thing in so mighty a thirst, to content himself with little drink. But he must endeavour with all his might to do it, as a thing which has cured many:

many ; use and custom will make it easie to him. For when he forbears drink, yet his mouth may be moistened by Humors drawn from other parts. Howbeit a very fit Remedy may be provided for this Inconvenience,if Mastich or any thing of like faculty be continually chewed; for it will draw much water to the mouth, not out of the Head alone as some think, but out of the Stomach and Belly : and so it will be good in many respects. Some like of Vomits to this intent : These I conceive to be the chief Heads of this Cure, to which much may be added by those Learned Physicians to whom the whole Care of his Person is committed. I can hope for no good from the Lucensian waters, because they are not remarkable for any sensible qualities, nor have any tast but that of our ordinary waters. Some have gone to those waters, and others have had them brought to them, but to no purpose ; though they have drunk seven or ten pints in an hour, and sweat upon it, and diligently observed all the Rules prescribed by the Magnifiers of those Baths.

The XXXV. Counsel.

The Cure of a Cachexy, or ill habit of the Body.

ALL the Symptomes that are described do appertain to the Obstruction of the Liver and Spleen, with their hardness or stretching, with whom the stomach does necessarily consent. For so great is the impurity of the bowels and bordering parts, that all digestion being hindred and depraved, the whole body is become foul, and being over-whelmed as it were with bad Humors, it is fallen into a kind of Cachexia or evil habit. The same impurity of the bowels is cause of Inflation or puffing up, Suffocation, Stomach-sickness and wandring Winds, with rumbling and sundry pains. Finally, it is the cause of faintings and decay of strength, and it makes the Patient so frequently desire meat : for he endeavors to prevent the fainting fit at hand,by quelling the acrimony of the Humor by the debonaire quality of the meat. 'Tis hard to cure these old Infirmities, unless the Patient punctually follow the Physicians advice. In the first place he must live very sparingly, eat only three times a day at just distances,and meat of thin and good juyce. He must abstain from suppings and broths, all liquid things, and immoderate drinking, because the natural heat is over-whelmed with plenty of moisture, and the concoction hindred. He must choose a thin and dry Diet ; thin Wine and well watered, moderate exercise, and sometimes strong, as his ability of Body can bear. Moreover, his Obstructions must be removed by Medicaments, and all the bad Humor must by little and little be drawn away into his Belly, and that by way of Epicrasis, after this manner. Let him have an Apozeme for three doses ; Then let him take of Pilula de Tribus : In the intermediate daies when he shall not purge, his Stomach and Guts must be strengthened with this Electuary.

Take shavings of Ivory and Harts-horn, of each two scruples : Choice Cinnamon, choice Pearls, powder of Aromaticum Rosatum and Trionsantalon,of each one scruple ; with four ounces of white Sugar make an Electuary. Every morning, and an hour before Supper, let him foment his Stomach and parts about his Midriff with this Liniment.

Take Musilage of Fenugreek-seed extract in Endive water one ounce, Oyl of Wormwood, Roses, Mints and Capars, of each half an ounce : Mace, Cloves, Red-Roses powdered, of each one scruple ; A little Wax, make all into a Liniment. Now these gentle purgations must be given him ever and anon, and continued till all the Tumor and resistency be taken away, and till all the Symptoms be asswaged, which I cannot hope before two moneths be over.

The XXXVI. Counsel.

The Cure of a long and often returning Feaver for one of the Emperours Court.

THis plain and distinct Enumeration of all the signs and symptomes observed in this sick Gentleman, has set before mine eyes the very expres Nature of the Disease, and all its causes both internal and external. His forme, figure, habitude and whole constitution of body, and the integrity of his Functions, both natural and animal do shew a laudable natural temperament: but in that the largeness of his Veins argue that it enclines a little to heat, this is happened by course of time and his age, which by little and little has made his body hotter. And now at last the heat has exceeded the bounds of Nature; by reason of great perturbations of mind, watchings, cares, troubles, which this Gentleman has undergone in the management of great Affairs. From these and the like evident causes, his Liver is inflamed and enclined to breed much Choller; which being augmented in tract of time, and coming to work and boil, is the efficient cause of all the Symptomes described. This, even in his healthy time, causes sudden and vehement Passions of mind and frequent Wrathfulness. The same is the cause why his Belly being bound, his Head is offended with a sharp vapour, and the rest of his body not having the benefit of transpiration, is sometimes hot and sometimes cold, and the palms of his hands and soles of his feet are burning hot, which is also a sign of an hot Liver. And therefore Choller so much abounding in the by-past years, has caused that the whole body as it were melting, is fallen into a certain leanness, and also that Choller not being timely purged, but kept in, and now and then putrifying, has many times caused cholerick Feavers: and that much more often in his latter years, wherein a greater quantity thereof has been collected, and when his Body has been so disposed and prepared, that upon the lightest occasions of heat, cold, Labor, Passions of Mind and Diet, it is wont to fall into these kind of Feavers: which is an argument truly of the inner Cause abounding, so as to be burthensome and very troublesome to nature. Moreover, the sort of Feaver, and the manner of its Invasion do demonstrate and expres the inner Cause: for shaking at the first a biting heat, redness and inflammation of his face, with a light raving, a quick pulse, and respiration quick likewise, Urine red, and thick cholerick Stools towards the end of the Disease are all signs of superabundance of yellow Choller, which by permission makes the Blood most thin and fervent.

And therefore both the Feaver, and the cause of all the symptoms related, can be referred to nothing else but to the exuberance of Choller, and the immoderate heat of the Liver. And thereto belongs the Cure of the Erysipelas, and all fluxions which fall into his thighs; because the Erysipelas presently follows the Feaver as a certain Indication thereof, since it arises from the same humor that causes the Feaver. But if so be any Oedematous or Flegmatick tumor of the feet shall seem to have discussed the Erysipelas, though he was wont to have it during his health, and was thought to be familiar; yet ought it to be suspected, and we should fear least it be the forerunner of a Cachexy shortly to follow. For commonly the Liver being obstructed with much thick Choller, does contract obscure rudiments of a schirrhus, while by degrees and insensibly they gather Head, they cast a man headlong into a Cachexia and Dropsy. And though these frequent returns of Feavers and defluxions into his thighs are inveterate, and the age of the Patient does now decline. Yet he that shall take time and diligence, he may in that so lusty and vigorous old age of the Patient promise either a perfect cure, or very great ease: especially if nothing shall be perceived hard, nor resisting the touch in the right Hypochondrium, nor any trouble shall be perceived when he lies thereon. Now the scope of the Cure must be to open the Obstructions of the Liver, to purge out the superabundant Choller thereof by degrees, and to cool and strengthen the bowel it self. Which things he that shall seasonably performe, he shall verily take away all the Cause of the Feaver, draw dry the fountain of defluxions, and lengthen the Patients life yet many years. In the first place therefore give him a purge of the infusion of two drams of Rhubarb rightly prepared, whereby all that superfluity of crude and half-putrid humors, Fluctuating in the stomach, and about the Veins of the

the Mesentery may either be expelled or corrected. In the next place the obstructions of the Liver and Spleen must be removed by these Remedies, which whiles they extenuate and open, they do withall draw the matter of the obstruction into the Belly by little and little. Such an one is Syrup of Cichory compound, which for a dose may have two scruples of Rhubarb. This must be given every other day, or every third day three hours before meat without any observance. If you shall intermit too long, all our labour will be in vain, nor shall we attain the effect we expected. For so by frequent purging, the ways being opened and loosened, nature will be gradually accustomed to carry the choller into his belly. A Syrup against burnt choller.

Take Roots of Cichory, Sorrel, Grass, Asparagus, each half an ounce: Agrimony, Ceterach, Dodder, Hops, Adianthum, Maiden-hair, of each one handful: Senna leaves cleansed three ounces. Make a decoction to half a pound; In the strained liquor, dissolve clarified juyces of Bugloss, Borrage, Fumitory and Sorrel, each one ounce and half; White Sugar one pound: make of all a Syrup perfectly boyled. And when it is boyled, add to it the expression of six drams of Rhubarb infused in Endive water, with two drams of choice Cinnamon. Let him take twice a week one ounce and an half, or two ounces for a dose; with Barley or Balm-water, without any observance of keeping within, &c.

On the intermediate daies let him be kept close with a Clyster. Against the crudity of flegm, which sometimes happens in the Winter.

Take Choice Rhubarb one dram and half; Of the best Aloes, Hiera Picra simple, Agarick newly prepared, each one dram: with Syrup of Wormwood, make all into a mass.

These kinds of purgations will leisurely void all superfluity of choller by stool, not suffering the Feaver to be kindled, nor the fluxion to fall down into his thighs; nor will they weaken, but rather strengthen his natural faculties and powers, while they ease nature of the burthen of hurtful humors. In the remnant of this Summer, while the humors of the body are fluent by reason of the heat, and melted as it were, you must set upon the Cure. The other scope of the Cure will be to cool and to strengthen the whole body; and that must be done by course of Diet, rather than by medicaments. Let the Patients Diet be therefore spare at the beginning of the Cure, which may moderately cool and moisten: Hens-broth boyled with Lettuce, Sorrel, Juyce of unripe Grapes or Verjuyce, Bugloss, Borrage. Let him dip his roasted meats in a cooling Sawce; as juyce of Sorrel, sowr juyce of Grapes, juyce of Pomegranates, Citrons or Oranges. Let him avoid salt things, things peppered and spiced, which burn the Liver and humors; all sugared things which most readily turn to Choller: Garlick, Leeks, Onions, Mustard, Watercresses, and all things of like nature. Let him also avoid strong Wines, and let him mix water with weaker Wines, not fearing the weakness of his stomach. Beer is sometimes good, but it must not be too stark and hard, nor too thick and new. His body being made purer by Physick, his meat may be encreased in quantity, keeping the same quality. Twenty daies being spent in the Cure, let him drink in the morning Barley broth duly prepared; and after it let him sleep if he can, and continue the use thereof two or three moneths, or if he will all his life long, after the example of those who are wont to use this much to the advantage of their Health. I conceive nothing is to be applied to his thighs, except waters or juyces of Night-shade, Plantane and Roses, with an eighth part of Vinegar, provided as much as may be that he do not let them hang down.

The XXXVII. Counsel.

Of a painful Ague.

THe sick Woman mentioned in the Letter, being afflicted by a grievous Ague, with frequent vomitings, with faintings, and an exceeding weakness of her whole body, but especially of her bowels, because she has neglected all use of Physick, and not timely used such Medicaments as were advised her, is justly fallen into most cruel pains of her belly, with which she has been long and vehemently tormented. For the morbifick Cause of the Feaver out of the Bowels (where the root of all Agues lies) is fallen into the space between the membranes of the Belly and Peritonæum, and so finishing the Ague, has brought these pains. And when afterward it

it could not fall out of these membranes, nor could find any ready passage, whereby it might slip into the belly, becoming as it were furious, it takes at length its course another way, and so leaps over into the head and limbs of the body, where also it moves new torments. 'Tis to be feared, lest at last occupying the Nerves and the tendons, it should breed a kind of Palsie, which *Paulus* saies, is bred of the Cholick pain, and of which I have observed many things in my Writings. These verily are of all Diseases the most grievous, which are wont to happen after Agues neglected or ill cured. But we must now come to the Remedy; And though purgations will not now do so much good as formerly they might have done, yet they must be prescribed, and those sufficiently strong, that they may revel the noxious humor out of the extream and upper parts into the Belly: or if the Woman will not take the stronger, give her at least such weak ones as she has been accustomed unto, frequently repeating them. After purgations, pain assuaging Oyntments must be applied, and discussers to the pained part, which may be made of Oyl of Worms, Oleum Irinum, and Oyl of Turpentine, adding such things as are good for the Palsie; also Baths will be good, wherein are boyled Cephalick herbs, but much more dry Baths or Vaporaries, if the strength of the Patient can bear them. Moreover, a most stubborn Disease in a disobedient Patient does commonly portend a doubtful or bad Conclusion.

The XXXVIII. Counsel.

Of a Lingring Feaver, and divers other Diseases: Out of the French.

THat I may return a well-grounded Answer to those questions sent me touching a lingring Feaver, 'twill be worth the labor to enquire the true cause and original thereof: which seeing it has followed other intermitting and uncertain Feavers; I am of opinion, that the root thereof lies either in the Kidneys, or in some bad quality of the Liver or Spleen: for it is symptomatical, and therefore to judge distinctly thereof, we must consider the Urines. For if they be thick, gross, white, matterish; or if formerly they have been bloody, it is a sign that some Imposthume or Ulcer lurks in the Kidneys.

But if there be no disorder in them, we must seek the cause in the Liver and Spleen. For I cannot think that these Infirmities are the consequences of the Cholick or Nephritick pain, wherewith the Patient has been troubled. His thirst and desire to drink Wine rather than Beer, his loathing of meat, especially that which is most strong and nourishing, belching, rumbling in his Guts, Wind, noise of the Stomach, and absurd digestion thereof, and swooning fits do argue that the fault is in and from the stomach, both by its own proper Infirmity, and its vicinity and sympathy with the Liver and Spleen. Nor must we regard a defluxion so much (if any do fall upon the stomach) for a Catarrh alone does not bring forth so cruel accidents. The Remedies both for the Feaver and other Diseases must be gentle and gradual, the Age of the Patient and his weakness, with the length of the Disease must be considered. Every other day therefore, if his belly be bound, give him this following Clyster.

Take Marsh-mallow Rosts one ounce, Chamomel flowers, Melilot, Dill, Wormwood, course Bran, each one handful: Annis-seed and Fennel-seed, each two drams. Make a decoction; In a pint of the strained liquor, dissolve two ounces of Honey of Roses, Common Oyl three ounces; Make a Clyster. If it shall not sufficiently purge thick and clammy flegm, add Hiera simple five drams or an ounce.

Let him take weekly of this following Syrup, that his stomach may be by degrees scoured, and those other parts which foment this Disease. And in case he shall use it more often, it will do him the more good, for it does in no wise weaken, yea verily it lustily strengthens.

Take Roots of Sorrel, Cichory, Grass, Parsly and Polypody of the Oak, each half an ounce: Agrimony, Ceterach, Dodder, each one handful: Senna two ounces. Make a decoction to half a pound; in the strained liquor, dissolve a pound of white Sugar. Make all into a Syrup perfectly boyled, whereto as it boyls, add the expression of two drams of choice Rhabarb infused in White-Wine, with an ounce of pickt Cinnamon.

Let him take one ounce and half for a dose with Barley water in the morning, three hours and

and no more before meat. Sometimes instead of the Syrup, he may use these following Pils.

Take of the best Aloes, of choice Rhubarb, of Hiera Picra simple, each one dram: Agarick prepared half a dram. Soften them with Syrup of Wormwood, and make them into a Mass.

Let him take a dram in five pils, in the morning four hours before dinner. In the intermediate daies, to strengthen his stomach and vigorate his bowels; it will be good for him to take liberally of this following Conserve.

Take Citron peels preserved one ounce; Preserved Myrobalans, Conserve of Roses, each half an ounce: Powder of Aromaticum Rosatum ten grains, choice Cinnamon, yellow Sanders, Ivory, Harts-horn, each one scruple: Sugar of Roses as much as shall suffice. Make all into an Electuary or Preserve, covered with Gold: Let him take a spoonful in the morning, and an hour before Supper.

To quench his Thirst, let him drink of such a Julep as this.

Take Rose-water half a pint, Juyce of Pomegranates three ounces, Of Lemons two ounces, White Sugar eight ounces; Mix all into a Julep. Let him use it in his thirst, far from meal times, with three or four times so much boyled water. Nor let him please himself with other drink, or give himself to a plentiful use of water, vulgar Ptisan or Beer: but let him content himself with the foresaid Julep, or with Syrup of Pomegranates, or the juyce of Citrons, Oranges, both at and betwixt meals.

But if he shall be taken with fainting fits, 'twill be much better to give him what has been before prescribed, than to give him Wine. Yet he may at his meals tast a little, so as no thirst may thereby follow. But, to assist his stomach busied in the digestion of meat, it will be good to give him a plain Diet, and a little at a time. And if his meat be solid, let it be sprinkled with the foresaid Juyces. Nor let a cooling Diet fright you, for this mans Infirmities will better bear cooling than hot things.

The XXXIX. Counsel.

Of a Quartane-Ague, for Queen Leonora.

FRom her tender years and first childhood, the Patient has been found to be subject to the Tissick, because when the Air is moist, and there is a new Moon, a new distillation does more vehemently vex her. She has been often taken with great and dangerous fits of the Mother, wherein both her understanding and all her sences perish; and by vehemency of the suffocation, the small veins of her Neck, Eyes and Face do gape, so that red spots do long after remain in those parts. But she is especially troubled with those numerous obstructions of the Liver, by means of which she has often fallen into long Feavers, and many times into a very stubborn Jaundice. Her constitution being as aforesaid, she past over all the last year in Idleness, abating nothing of her Diet, which was wont to be exceeding plentiful. Hence comes a large Harvest of crude humors and all kind of excrements and obstructions doubled, which have caused at length that she has not her Courses nor Hæmorrhoids so largely, nor in so due season as formerly. By which means her whole Body began at last to grow Heavy; and fifteen dayes before she was taken with this Disease, she was troubled with a strange kind of wearinesse coming of its own accord. Withall, she perceived her Appetite dejected, though with divers Sawces, and delicate provocatives of Appetite, she endeavoured to quicken the same, that she might live as intemperately as formerly she had done. Hereupon the Quartane-Ague seized her on the second of *September* of it self, without any other Disease foregoing: but with so small and obscure beginnings that hardly any body could perceive the same. The Second fit gave manifest proof of an Ague, wherein all kinds of vomiting appeared: and then we began to prepare the humors of her body both with Syrups, and Clysters, and a spare Diet. Howbeit, the third fit was much more vehement than the former, both in point of cold, vomiting and choaking (by reason of the Tissick mingling therewith) and tumbling and tossing of her whole Body and thirst. And therefore, in the middle space

space between the fits we purged her gently, as also on the day, after which was her best day. And although she had every way plentiful evacuation of flegm and choller, caused by art and nature; yet her ague manifestly encreased, and had a fourth, fifth and sixth fit exceeding sharp and lasting, so that now no welness or intermission can be discerned. For no sweat has broke out to finish the fit: Seeing therefore it partakes of a continual Feaver as well as of a Quartane-Ague, lest it should degenerate into a worser kind, we thought it good to open the Basilica Vein of her left Arm, out of which eight ounces of corrupt blood were taken, which did her much good, and she bore it well. For besides the suspition of a continual Feaver, the suppression of her Courses and Hæmorrhoids did perswade us to let her blood with her intemperate Diet, idle Life, redness of Face, huge Swelling and fulness of Veins, by means whereof her Nose did frequently bleed. After that she had been let blood, her body seemed to be more strong, her ague perfectly intermitting; but the fits were wel-nigh as vehement as before, with loathing of meat, stomach-sickness, vomiting and bitterness of her mouth. Which Symptoms, when they would not be tamed either by Diet, Syrups or more Clysters, we thought good to purge her the second time after a new fit. After which the other fits following were more gentle, and they grew lesser and lesser gradually, so that she was not troubled either with cold or hot fits; and therefore in the whole moneth of *October* we plyed her only with a convenient Diet and emollient Clysters; save that once when she had a grievous illness in her stomach, we boyled some Senna in her broth, and a few daies before for a light Cough proceeding from a distillation, we gave her Syrup of Jujubes. Whatever hereafter shall seem requisite for the remainder of the Cure, those that have the Care of her may in imitation hereof, of themselves prudently determine.

The XL. Counsel.

For a Quartane-Ague intangled with a Distillation.

SEEing the worthy Gentleman our Patient had been long vexed with many and sundry infirmities, and with a perpetual distillation for the most part, I conceived that I was to bend my Care not only to the Quartane-Ague wherewith he was troubled, but also to other intangled Diseases, because while they were present, the Quartane-Ague could hardly be cured, and if it were, yet would the Patient be still liable to many Infirmities whereof to Complain. Having therefore with all my might diligently considered all things, I conceived the Cure ought not to be deferred, but diligently to be undertaken, such a Cure I mean, as both by Medicaments and Diet shall cure the old Infirmities, and change his present ill constitution of Body.

Let his Diet be very dry and attenuating, and moderately hot, that it may correct this cold and snotty habit. Let him abstain from all suppings, all liquid things, boyled flesh, fish, cheese, fruits and immoderate drink. Let him feed on fleshes of good juyce, and all roasted, or seldom boyled, which if he please he may dip in Sawces of Pepper, Ginger, Cinnamon, Nutmeg, and sometimes Mustard. Let his Wine be rich and not vaporous, white pale Claret, thin, not over much allaied with water, and let him drink thereof sparingly at meals. Let him exercise in the mornings, and let his exercise be much and strong, till his body grow hot, or begin to be weary, and let him diligently avoid cold-taking. When he wakes from sleep, let him be rubbed a long time together with dry and course Cloths, or sometimes with a dry hand. Let him frequently use gentle Medicaments, such as draw away raw and hurtful humors by little and little without violence. Let him frequently take Clysters with Hiera Picra simple and Diaphænicon, of each six drams; Honey and Rosemary two ounces, Oyl of Rue and of Dill, each one ounce and half, mixed up with an emollient decoction every sixth or eighth day. The day before his fit give him pils made of Hiera Picra simple, Rhubarb, Aloes and Agarick, which must be made up each a like quantity with Syrup of Wormwood, and let him take one dram for a dose, or four scruples. Sometimes instead of the pils, let him be purged with this Syrup.

Take Roots of Smallage, Parsly, Fennel and Capars, Polypody of the Oak, Carthamus-seed, each half an ounce: Agrimony, Betony, Hyssop, Origanum, Hops, Ceterach, Thyme,

Thyme, Epithymum, each one handful: Seeds of Annis, Fennel and Musmelons, of each one dram and half. Make a decoction to fifteen ounces, infuse therein all night Senna four ounces, White Agarick two ounces, Ginger two drams; let them boyl a little in the morning, and strain out the Liquor, and therein dissolve white Sugar a pound: Make all into a well boyld Syrup not clarified. Let him take two ounces for a dose, with Burrage or some other convenient water. It is good sometimes to dissolve therein the expression of a dram of choice Rhubarb infused in White-Wine, that by little and little all kinds of humors may le separated and voided forth.

Thus therefore their use is to be continued every other day, that hardly a day shall pass, but that the day before he took a Clyster, some of the Syrup or some Pils. The sick Gentleman must not be much wearied with preparative Syrups, but every preparation must be endeavoured by a duly ordered Diet. And because sometimes he is forced to drink in his fits instead of Ptisan or Barley Water or other cooling drink, which renders the humors more compact, you must give him *Galens* Oxymel simple, or Syrup of Vinegar mixt with good store of Water: But 'tis good for him to drink as little as may be, which makes all Diseases shorter; but to drink pleatifully, busies nature, and calls her from the digestion of the humors.

The XLI. Counsel.

For a Quartane-Ague complicated with a Looseness.

THis Quartane-Ague cannot be simple, nor have its Original only from melancholy juyce, but from a mixture also of yellow Choller, which being burnt, affords matter thereunto. By the superabundance thereof vomitings were at first raised; and when all the Humor could not be purged that way, it length it broke into the Belly, bred a Diarrhæa rightly so called, which th eatens either a Tenasmus or a Dysentery. It is accompanied with Appetite dejected, weakness, and great falling away of the body; all which are signs and symptoms of raging yellow Choller. And because all these threaten greater danger to the sick Gentleman than his Quartan-Ague, we shall in the first and mostly set our selves against them, not neglecting the Feaver in the mean time. The Looseness therefore must be stopped, not with such things as wholly bind and stop, lest by that means his Ague encrease; but with such as help the hot Distemper of the Liver, and withall restore his Appetite and strength. The Pain asswaging Clysters prescribed which will keep off the Bloody-Flux, must be frequently injected; to which your Learned self may add Musilage of Quince-seeds, or Starch, or Bean-meal, as need shall be. When he thirsts betwixt meals, Syrup of Lemons and Oxysaccharum simplex will be good for him; Syrup of sowr Grapes, and such like, mingled with a good quantity of Water. Sometimes the inside of a Pomgranate, or Juyce of Citrons, or a Quince-Juyce; wherein, or in Verjuyce, or wine of sowr Grapes he may dip his meat; or it may be steeped therein, that by these things, and a convenient cooling Diet and moistning, the fervency of Choller may be abated, and the distemper of the Liver corrected so as to preserve the strength thereof. Almond-Milk made with Barley-water and Sugar of Roses every day in the morning, at least four hours before the ordinary hour of Dinner is exceeding effectual. Externally apply to his Liver either a cooling and strengthening Epithem or Ceratum Santalinum, and let him wear it a long time. Besides these, if his strength permit, give him a little Rhubarb at convenient distances: annd I would rather he should take a dram thereof in substance than the Infusion. If having used these Remedies about fifteen daies together, the Symptomes are not sufficiently tamed, you must forbid him all use of Wine, and give him any other drink rather. For I have made experiment, that many cannot be freed from such like Symptomes and the Quartane-Ague, till they leave Wine: and they were stronger with the use of Water than when they drank Wine.

The

The XLII. Counsel.

For a Swelling of the Spleen.

THe Sympomes related declare that the Patients Spleen has been long affected, though perhaps neither swelling or pain were perceived. But that pain also of the shoulder is the fruit of a diseased Spleen, which distending and plucking asunder the Membrane, is often found to bring such a pain; even as when the Liver is inflamed, the pain reaches to the Jugulum. The Disease of her Womb seems to have risen from the impurity of the Spleen, which has by little and little discharged it self into that part, but so that the womb it self is at last infected, and the Humor by its Acrimony has burnt the neck thereof, and of the Bladder. Which is the cause that she cannot admit the carnal imbracements of a man. And therefore that Impurity of the Spleen collected by little and little, and at length putrifying is grown hot, and has bred the tumor and symptoms aforesaid. Now this tumor, though it be troublesome by its heat, yet is it no Phlegmone, much less an Imposthume, because this bowel is not liable to such kind of swellings. Moreover, this Tumor can by no other means be taken away, than by stool; and that way it may be derived by a Syrup, which consists of Bugloss, Borrage, Fumitory, tops of Hops, &c. with Senna and Rhubarb.

The intermediate daies let her Belly be loosned with a Clyster of an Emollient Decoction, half an ounce of Diacatholicon, and three ounces of Honey.

To mollifie the Tumor, make an Emollient Fomentation and corroborating, of *Mallows, Violets, Pellitory of the Wall, some Hop-tops, Capar-Roots, Red-Roses, Betony. Let them boil in water, and add a little Vinegar.*

Also a Liniment may be made of the same vertue.

Suppurators must not be applied, because all Impostbumes in the Liver and Spleen are deadly. Let her drink no Wine; Let her use Syrup of Vinegar and Syrup of Maiden-hair.

The XLIII. Councel.

Of Hypochondriacal Melancholy, for Msr. de Maligny.

I Hear that the most Illustrious and Prudent Msr. *de Maligny* is besieged with many and sundry Symptoms, and those grievous and dreadful; but all which concur in the signification of one and the self same Disease. For, though the said Symptoms, have more vehemently raged a few daies since, by reason of the exceeding heat of Summer; yet they seem to have now a long time had some Rudiments and Foundations. Sadness and Fear without occasion which have frequently troubled the Gentleman, Solitariness, deep and serious Cogitation, troublesome sleeping molested with Apparitions and sundry Frightments do all proclaim Melancholy; not that primary sort which comes through fault of the Brain alone, but that other which proceeds from the Hypochondria, or parts about the Midriff and short Ribs, and is therefore called Hypochondriacal. For a manifest sign thereof, we have in that swelling, which is observed about the Spleen and Pancreas or Sweet-bread. Nor do I conceive the continent Cause thereof to be Natural Melancholy, which is the dregs of blood; but another adust sort which is bred of yellow Choller over burned, and which we by a peculiar name term *Bilis atra*, black Choller. For this having been now a long time by little and little heaped up in the Hypochondria, is for the most part perceived to boil and work thereabouts, and then it sends from out of it self malignant vapors, which being forced against the Midriff, do in a manner stop and hinder the breath. If they go into the Heart, they cause strong palpitation and sometime Syncope: if they hap to go into the Brain, they produce Dotages next to Madness, and they joyned with a certain fear and sadness. For which causes, the sick Gentleman being as it were danted in his mind, is very much afraid of himself, and can hardly be raised into any good

good hope of Health. The cause therefore of his palpitation of heart, and fainting fits, is not in his Heart or Pericardium, but only in his Hypochondria or Præcordia, out of which this filthy vapour, carried up through manifold Arteries, gets into the Heart; and produces these bad symptoms common in a manner to all Hypochondriacal persons. Yea, and moreover, if you diligently feel his left Hypochondrium, where it inclines to the Navil, you shall, I conceive, find much such a palpitation there, as is in his Heart: for they both arise from one and the same Cause. Moreover, flatulent belchings, rumblings in the belly, stomach-sickness, frequent spittings, and other signs of a crude Stomach, are common to all Hypochondriacal persons, and proceed from the nature and condition of black Choler.

Now the evident and foregoing causes, are these: This renowned Gentleman being naturally very Cholerick, hath by Cares, deep Thoughts, hot Diet, and Intemperance therein, heaped up a great quantity of yellow Choler, which also once put him into a kind of Jaundice. At last, not being timely purged out, and the foresaid causes continuing, it turned into black Choler, which is now the continent and immediate cause of all the foresaid Symptoms. Touching the Prognostick, I may say thus much; That though this Disease be grievous in respect of the Swouning fits, and other Symptoms, and full of terror, yet will it admit cure, rather considering the Age and strength of this Gentleman: especially if he follow and obey the Counsels of his Physitians: for otherwise, if he continue the same, he will either dye of a swouning fit, or through weakness, or he will be taken mad, with that kind of madness we call *Mania*; or if he avoid these evils, he will hardly at length escape the inconveniences of a Dropsie. His Infirmities are many and different, but because the whole Cure of all does chiefly consist in two things; the first, and chiefest whereof is, that the inward cause, which as we have said, is black Choler, be quite rooted out; the other, that the swouning fits, and other grievous accidents, be so long kept off, till the Cure be performed. The Cause aforesaid, though it so much abound, that it over-whelms the Patient in a manner, yet seeing his natural forces do extreamly languish, and are oppressed by the cruelty of the symptoms, it ought to be drawn away leisurely, and by little and little, and with such moderation, as his weakness may easily bear: to which intent, such an Apozeme as this will be convenient.

Take *Roots of Buglos, Sorrel and Cichory, of each half an ounce: Agrimony, Dodder, Ceterach, of each one handfull: Senna one ounce and half. Make a decoction to a pint, adding towards the end, of the three Cordial flowers, of each one pugil. In the strained Liquor infuse choice Rhubarb three drams: Cinamon four scruples. Press out the Liquor again, and dissolve therein two ounces of Syrup of Violets. Make it an Apozeme not clarified in three Doses. Let him take it every other day in the morning, four hours at least before meat.*

The use of this sweet and gentle Apozeme will be exceeding safe, nor must he take any stronger Medicament, but continue in the use hereof, for without offence it will take away all the Cause of his Infirmity, and by little and little restore his strength. Having finished this Apozeme, let the Gentleman rest four daies, only a light detersive Clyster being injected, if peradventure he be bound in his body. But afterwards let him take again the said Apozeme, having alwaies regard to the strength and well bearance of the Patient.

On the daies intermediate, when the Patient is not purged, give him a Syrup to prepare the Humors and allay the Symptoms, made after this manner.

Take *of the clarified Juyces of Buglos, Borrage, Sorrel, Fumitory, sweet smelling Apples, and Pomegranates of each two ounces: white Sugar half a pound. Make a Syrup indifferently boyled. Let him take twice a day two ounces at a time, with a like quantity of Barley-water, at least two hours before Dinner.*

And these two Medicaments shall be interchangably taken; one, one day, and the other the next. And in the interval (which I told you must be four or six daies) let him use this Confection twice a-day, which will recreate his Faculties, and abate the acrimony of the Humors, and the violence of the Symptoms.

Take *Conserve of Buglos one ounce: Conserve of Roses, Citron-peels preserved, of each half an ounce: Ivory one dram: Harts-horn, Harts-heart-bone, choice Guaiacum of each half a dram: Oriental Pearls, Lignum Aloes of each one scruple: Red Coral, Cristal fine poudered of each ten grains: White Sugar as much as shall suffice. Make all into a Confection covered with Gold. Let him take a spoonfull an hour and half before meat, and*

drink a little tempered Wine after it. To this may sometimes be added a small quantity of Confectio Alkermes; though the use thereof, as of all other hot things, is in this Disease, if in any, much to be feared. For nothing does so much exasperate this Disease, as the use of hot meats and medicaments. And therefore we must content our selves (as I said before) with these Remedies, nor can we pass over to hotter or stronger without mischief, or at least damage.

Now the use of those four aforesaid Remedies must be continued, viz. Of the Apozeme, the Syrup, the Clyster, and the Preserve, just as I have before expressed, till the Patient find himself perfectly cured.

I must speak also of Bleeding. It will be exceeding good to open a vein, if it be done seasonably, and conveniently. For much Blood is contained and imprisoned in the Veins, being very hot and burned (though the Urines seem to tell another tale) which requires to be cooled and fanned: nor have the Ancients devised any thing more wholsome, than this Remedy of Phlebotomy. And therefore after the third purgation by his Apozeme, if his strength seems sufficiently recreated and constant, let him blood boldly out of the middle, or inmost vein of his Arm, and that to the quantity of eight or ten ounces, unless he faint away, which seldome happens. For, more frequently, the natural strength is found to grow vigorous and lusty, upon discharge of the burthen of Blood.

How to asswage the Symptoms.

In very deed and in truth, all symptoms cease, when the disease shall be throughly cured. But nevertheless, if during the time of the Cure, they shall vehemently rage, they must be pacified with a peculiar remedy, especially his palpitation of Heart, and his fainting fits. As often therefore, as either of these shall happen, rub his belly, loins, and thighes downwards, that a revulsion may be made of the vapour creeping upwards. Also let a large cupping-glass be fixed to the lower part of his belly without scarrification. Let his belly be provoked with a suppository if it be bound. And apply to his Heart and left Hypochondrium this following Epitheme.

Take *distilled waters of Plantane, Roses, Purslane, Bugloss, Balme, Carduus, Vinegar, each two ounces. In these dissolve, of the three Sanders, of red Roses pondered, of Amber, each three drams; Trochisks of Camphire, half an ounce; Make an Epithem, and apply it blood-warm.*

Let him take inwardly the juice of a sower Pomgranate, which is a most speedy remedy in these fits. In want thereof, use the juyce of a Citron, or a Quince, or of Barberies. For by these the biting quality, and also the malignity of the humour is blunted, whereas contrariwise, 'tis provoked and exasperated with hot things; and if in the fit, there will be leisure to give him some of the Confection aforesaid, it will do him much good.

His Diet.

A good course of diet is of no mean force, both to cure the Disease & asswage the Symptoms, without which, scarcely any thing worth speaking of, can be effected in this Disease. He must wholly abstain even by the counsel of *Galen* from all hot and fervent qualitied meats as most adverse to him; seeing they both encrease the fomenting cause of all the mischief and malady, and exasperate and provoke the symptoms. He must therefore eat cold and moist meats, though the crudity of his stomach seems to perswade the contrary, as Veal, Kids flesh, Capons, Chickens, and young Pidgeons; and these boyled with Lettuce, Purslane, Sorrel, and Borrage, rather than roasted; or if haply he shall delight to eat these meats roasted, or Partriges, or little birds roasted, let him dip them in some cooling and astringent juices, as of sorrel, sower Grapes, Pomgranates, or Quinces, or also Vinegar. For by these, the humour is dulled, and the sowering fits kept off, as they are by sugared things exasperated. He must abstain from salt & aromatick things, let his bread be neither salted, nor too much fermented. Let his wine be pale red, somewhat tart, & moderately astringent, that it may strengthen the mouth of his stomach, and drive away his fainting fits; and let it be allaied with good store of water, least it provoke vapours. Let him shun all rich, white, thin, vaporous wine, as most hurtfull for him. Yea verily, if he

he would be perſvaded once to leave the uſe of all wine, and to drink inſtead thereof, either juice of Pomgranates mingled with water, or a decoction of Barberies, or of ſower Cherries dried (which moſt people keep for other uſes) nothing would conduce more to the Cure. And even by this one Remedy alone, many have recovered. And above all things, he muſt drink ſparingly, becauſe too much fluctuation of humours, and rumblings of the belly, and wind, and ſpittings, and crudities are encreaſed by overmuch drinking. Let him content himſelf with two ſpare meals in a day, viz. one at nine in the morning, the other at four in the afternoon. And at midnight, it will be very good for him to drink Almond milk made with barley-water, becauſe it exceedingly bridles the fury of the Vapours and Humours. And in the hours betwixt thoſe two meals, let him neither eat nor drink, but attend the uſe of ſuch medicaments as have been before deſcribed. Let him ſhun all diſturbance of body and of mind, as anger, wrath, cares, troubleſome cogitations, as alſo ſtrong motions of body, ſuch as cauſe panting of the heart. Let him not ſo much as riſe to ſtool, but uſe a bed-pan, &c. Cool air is better for him than extream hot, and the northern winds are better than the ſouthern. Nor muſt the patient be kept in a cloſe ſmothering chamber, but in one that is airy, with the windows many times ſet open to purifie the ſame. Towards the end of the Cure, when the Gentleman ſhall begin to walk abroad, a bath of ſweet freſh water will be exceeding good, not to provoke ſweat, but to the intent that his body now long time heated and dryed, may thereby be cooled and moiſtened. Theſe are the chief precepts belonging to the whole Cure. In imitation whereof, may eaſily be underſtood, what is to be done, in caſe any thing elſe happen in the mean while.

The XLIV. Counſel.

Touching Hypochondriacal Melancholy.

THis Symptom, as the ſtory is related, is Hypochondriacal melancholy, which has long taken root, in that age that is moſt ſubject thereunto. Now it ariſes from burnt choler, which by little and little has a long time been collected in the patients Hypochondria, or parts about the ſmall ribs and midriff: and which nature has failed timely to void by ſtool or vomit. The which does ſo offend the ſtomachs digeſtion, that it turns the greateſt part of what is eaten, into wind, which doth much weary the patient both with belchings and ſtretchings. But withal, from the ſaid aduſt and ſcorched humour, there frequently ariſes a vapour like a miſt, and creeps up into the brain, cauſing fear, penſiveneſs, and ſundry frightments with apparitions of Hobgoblins, &c. and when it takes its courſe into the whole body, it cauſes many pains, which nevertheleſs are ſoon allayed. The Cure of the Diſeaſe which is now to follow, muſt be thus performed.

Take *Bugloſs, Borrage, Balme, Betony, Burnet, Hops, Dodder, Ceterach, Endive, each one handfull. Roots of Cichory, Polypody of the Oak, Raiſins of the ſun ſtoned, each one ounce. Of the four cooling ſeeds, each one dram. Of the cordial flowers and Epithymum, each one dram. Make a decoction to fifteen ounces. In the ſtrained liquor, infuſe three ounces of Senna, two ounces of Agarick, two drams of Ginger. Boyl them a little, and make an expreſſion, or ſqueezing out of the Liquor, and therein diſſolve one pound of white Sugar. Make a ſyrup perfectly boyled, not clarified, let him take every ſixth day two ounces, for a doſe in barley-water.*

It will be good of the ſelf-ſame ingredients to make a ſyrup which is not purgative: which let him uſe every morning faſting to prepare the humour. But if at any times his body ſhall be bound in the intermediate daies, between his purgings; it may be looſened with this Clyſter.

Take *Mallows, Violet-leaves, Pellitory of the wall, Marſh-mallows root and branch, Chamomel, Melilot, Dil, Wormwood, Origanum, each one handfull. Seeds of Annis and Line, each one ounce. Make a decoction to a pint. In the ſtrained liquor, diſſolve ſix drams of Catholicon, honey of Roſes, and of Roſemary flowers, each one ounce. Common oyl three ounces. Make a Clyſter.*

His body being thus gently purged four or five times, let him continue the use of this following Conserve.

Take *Conserve of Bugloss and violets, each one ounce. Pouder of Electuarium lætificans Galeni, one scruple; Shavings of Ivory and Harts-horn, each two scruples. Choyce pearls half a dram. White Sugar as much as shall suffice. Make of all a confection, let him take a spoonfull in the morning, and another an hour before supper.*

When the disease shall seem now a little to decline, and all the symptoms shall appear more mild, but especially towards the end of winter, baths of good sweet water, such as may be drunk, will be exceeding usefull, wherein let him sit a long time fasting, and continue them about ten or twelve daies. And let them be used at such a time as they may not provoke any manifest sweat nor heat: nor may exagitate the body, but only cool and moisten the same. Mean while, daily frictions of his whole body will be usefull, and then especially when the fits shall urge. Let his diet be wholly moistening and cooling: wherein let him altogether abstain from hot things, but especially from strong and unmixed wine: for he must drink his wine very much allayed with water, and that sparingly, because much fluctuation encreases wind and belchings. Suppings will be good, wherein cooling herbs have been boyled. Also barly Cream is convenient, and all kind of meats, which are of like faculty: let him wholly abstain from cares and business: Keep him from seriousness, exhilarate him with jests, and hunting, and taking the fresh Air.

The XLV. Counsel.

Of a distillation with Melancholy.

THis Gentleman is frequently troubled with a distillation, sometimes into his neck, otherwhiles into his shoulders and arms, sometimes into the hinder part of his back; but he is troubled with a more grievous sympton than all these, which is hypochondriacal melancholy. For since the time he has been freed from the quartan Ague, he was taken with a pain in his left Hypochondrium, and has ever since been so tormented with a disease in his spleen, that he was never able to lye upon his left side: and from hence the concoction of his stomach is offended by way of contagion. His appetite has been long time much dejected. He is much troubled with belchings, and much spittle comes out of his throat into his mouth. Hence also fancies, and dreadfull dreams, also fear and sadness, and a certain clowniſh kind of bashfulness alwaies apt to blush, and false and absurd imaginations of sad and sorrowfull things.

The Cure,

Take *roots of Grass, Parsly, Fennel, Smallage, each half an ounce. Bugloss, Borrage, Hops, Agrimony, Ceterach, Dodder, Adianthum, Maiden-hair, Hyssop, Origanum, each one handfull. Seeds of Endive, Dodder, and Mus-melons, Liquoris shaved, each two drams. Cordial flowers, Epithymum, each one pugil. Make a decoction to fifteen ounces. In the strained liquor, infuse all night leaves of Senna cleansed four ounces, white Agrick two ounces. Turbith bruised half an ounce. Ginger two drams. Let them boyl a little in the morning, and make an expression, wherein dissolve one pound of Sugar. Make a syrup perfectly boyled. Let him take once a week two ounces in water wherein Bugloss has been boyled.*

And once a month, especially when the Moon is in the last quarter to purge away the matter of the distillation, add to the foresaid dose Diaphenicon one dram and half. In the daies between, you shall strengthen all the principal parts, especially the spleen, with this Electuary.

Take *Pouder of the Electuary Lætificans Galeni, shavings of Ivory, each one dram, pouder of Diamargaritum frigidum, and Trion-Santalon each half a dram. White Sugar dissolved in Bugloss water four ounces. Make all into lozenges of three drams apiece.*

Take *Oyl of Lillies, and of Capars, Mucilage of Marsh-mallows drawn in Bugloss water, each six drams. Wax a little. Make them into a Liniment.*

Item. Take *Gum ammoniacum dissolved in strong vinegar one ounce. Arthanita and Orris*

Orris roots, each half an ounce. Plaister de Mucilaginibus, and de Meliloto, each one ounce. Make all into a plaister for his Spleen.

If the disease shall stubbornly continue, the inner vein of his left Arm must be opened, the next spring, if nothing disswade. His diet must be ordered of good and thin juice, which shall incline somewhat to coldness. For all hot things, are therefore most contrary, because they whet this same black choler bred of yellow choler over scorched, they set an edge upon it, and by encreasing the same also, do raise more grievous symptoms. Let him therefore avoid all salt things, and peppered things, and mustard, and strong wine, and unmixed wine: And let him chuse things of a contrary nature to these.

The XLVI. Counsel.

Of letting Blood in case of the Itch.

The Letter of Mr. Melinus *a Physitian, to* Mr. Fernelius, *propounding the Question.*

I Am not ignorant of the multitude of your Employments and troubles. For all that are troubled with any very grievous disease do flie to you for help, as to an *Æsculapius*, or Terrene Deity: which thing would peradventure have scared another man from writing to you. But I who know the fruitfulness of your wit, and how easie a thing it is for you to answer any question propounded in the Art of Healing, do know also, That same gentleness of your manners, which gives easie access to all in a manner: and therefore I would not suffer my self to be longer vexed with that scruple, whereof I informed you in my last Letters. Which it will be more easie for you to take out of my mind, than offer it to me to be taken out: which now I entreat you again and again, that you will be pleased to do. The former Winter I fell into an ulcerous weariness, which came of it self, which practitioners (if I mistake not) do call *Pruritus*. A while after I disburthened my liver and spleen with a gentle purge. Since that time, pushes have risen in sundry parts, very dry, and sticking very close, which being scratched off, black and thick blood came out. At last a furunculus or felon rising upon the lower part of my right Leg, as also an Herpes or tetter, I was provoked in my mind to use stronger remedies. Whereupon I opened a vein, and took away about three ounces of blood, and after the use of Whey, Prunes, Tamarinds, and such like things, I purged twice or thrice lustily, with Catholicon, Senna, Confection Hamech, sometimes adding Rhubarb. By which means and a few topicks, I was cured. Yet about eight daies after, the former blood-letting, I again opened my Basilica vein, and took away about two ounces of blood. But the Chyrurgeon which *Claudius Lavallus* Embassador from the most Christian King, had sent for to pleasure me, and the Physitians were of opinion that I should lose much blood. Their reason was this: my blood was very bad, and my age and strength were in their prime, or not much declined: moreover they daily used such a kind of blood-letting, and that with good success. But I following the mind of *Galen* in his fourth Book of preservation of Health, where he discourses of ulcerous weariness coming of its own accord, of the Itch and Scabbiness; I maintained that I was to lose very little or no blood at all; and that for revulsion sake rather than evacuation. For thus he saies. *When there is a coming short of blood, or a proceeding beyond the same, a man may boldly let blood*: which place of *Galen* I thus interpret, when the blood by under or over boyling is either crude or cholerick, then there is no danger in large evacuation thereof. But there were none of those signs in my urine, which *Galen* a little before said were arguments of crudity. Moreover, the last winter foregoing, I did eat for the most part only once a day: therefore that small crudity could not perswade me to draw much blood. Moreover my blood is not cholerick, or defiled with black choler: which is argued both by my temper and Age which is now declining, and the colour of my whole body which is yellowish lead-coloured; also my by-past labours, cares, and long studies, and therefore I ought not to bleed. For *Galen* also presently adds to the speech foregoing; *Where there is more, we must act more warily; where there is very much, in such we must not let blood at all.* And by and by after, he saies likewise: *It is good also to view the quantity: as for examples sake; if there be little*

good

good blood, and of the rest of the Juyces very much; verily, in such persons we must abstain from blood-letting. But if other Humours are little in quantity, and blood plentyfull, we may boldly let blood. This saying of *Galen*, has wonderfully afflicted me, to this very day. For when blood comes away impure, thick, black, or otherwaies faulty, most Physitians and Chyrurgeons are wont to take away a great quantity: but when it is pure and florid, they spare it: unless there be over plenitude in the veins, because daily experience does shew 'tis good to let blood in that case. And therefore either there is now another way of curing an ulcerous weariness coming of its own accord, than there was in the dayes of *Galen* (which indeed is true, if we consider what *Galen* has written of indifferent friction, that which is slow, and that which is interrupted with pauses, also of baths, anointings with Oyl, and other things of that Nature.) Or else men that are seated far from the Æquinoctial Circle can endure more blood-letting, than those that inhabit nearer the same.

But I am not ignorant that you are wholly taken up with sundry and weighty imployments: but I know withal, that if you please to bestow a quarter of an hour upon me, you may without any trouble to your self, free me from this trouble, and explain this doubtfull Question.

The Answer of Mr. Fernelius, *to the Question propounded.*

You are fallen accidentally into a subtil and hard doubt, which has tortured well-nigh all Practitioners understandings. Now this is started out of the writings of *Galen*, whereof there is so great variety, and in them so little constancy, and for the most part so many discords, that hardly any man has yet been able to understand his mind in this point. But neither he himself, if I am able to judge of the question in hand, had ever any setled and resolved judgement in his mind, as being a Man that spent all his life in study and Meditations, rather than in finding the right method of practice and exercising the same. I shall not here play the interpreter, nor endeavour to reconcile the sayings of this Author, which are diametrically opposite one to another: but what I have rooted in my mind by long experience, I shall at your request briefly open in a few propositions, which will take this scruple quite out of your mind. All plenitude of the Vessels is to be cured with blood-letting. For a Plethora which is properly so called, is only cured by this remedy: but an impure, consisting of much bad Humour, though it may be after some sort abated by purgation, yet can it not be safely nor speedily done. But immediately upon the opening of a vein, the dangers attending by reason of plenitude, are presently avoided, without any damage to the strength of the Patient. And therefore as oft as you meet with a well constituted body, with large veins swelling with much blood, you may boldly open a vein: and if the blood shall seem pure, take away the greater quantity, but if it be impure, take away the less, letting that out at several times rather than at once. A dangerous plenitude being removed, the rest of the impurity and Cacochymie may be taken away by purging. But when there is a small quantity of impure Humour in the veins, which they call *Cachochymia sine plenitudine*, a Cacochymick or badness of humours without their aboundance, it requires not blood-letting, but purging. For the latter takes away the offending bad Humour; but the former removes not only the bad humour, but all humours alike, and takes away plenitude where there was none, to the great decay of the Patients strength. But then does blood-letting most harm, when badness of juyce is contracted (as for the most part it is) through fault of the Spleen or Liver, as in the Jaundice, a Cachexia, or a Leucophlegmatia. For blood being taken away, though impure, yet there comes impurer in the place by much. This I suppose is enough to answer your question, which point nevertheless I have debated more largely in a work of mine. All that you bring out of *Galens* fourth Book *de sanitate Tuenda*, is agreeable to what I have said. Those opinions that differ, do build upon that which *Galen* saies, in his third Book *de Locis affectis*, of the parts affected. How that in Melancholy the middle vein in the left Arm is to be opened, and that good store of blood must be let out, if it be black and thick, but it must be spared and stopped if it be pure and thin, and that which he says in the 11. of his Method, that it is exceeding wholsome in all Feavers caused by a putrified humour to let blood. And because in the first Book of the Art of Physick to *Glauco*, he permits blood-letting in a quartan Ague; and in this Book of blood-letting, he cures Diseases arising

arising from a Cacochymia as well as those that spring from fulness, by blood-letting. But I have confuted these things, and established the former opinion, in a litt e Book which I call, *de Vacuandi Ratione.* I cannot enlarge, being variously taken up with business.

The XLVII. Counsel.

Containing the Cure of a Cachexia, or Ill-habit of the whole Body, for Msr. Malvenda, *Chaplain to the Emperour* Charles *the fifth.*

THere is a very great mixture of the Symptoms propounded, yet such is their order and connexion, that I conceive they are all in a manner derived out of one and the same fountain. The heavineſs of his Head, the noise of his right Eare, suffusions and darkness of his Eyes, and a Vertigo or dizineſs and swimming of his head beginning; an unability to sit constantly at his Study, are all signs and symptoms of an Head and Brain ill-affected. And the perseverance of the symptoms, and continuance of the whole Disease, do argue that in this Gentleman, it is not only by sympathie and consent of the lower parts, that his Head is affected, but by a Disease proper thereunto, and bred immediately therein: seeing it must needs be, that the Head should in time be altered by the habit and humour of the lower parts, and partake of their faults. But nevertheleſs, hard and slow digestion, frequent making of water, stomach-sickneſs, light fainting fits do belong, and are to be referred to the stomach rather, and especially the upper mouth thereof; wherein some sence also of pain is perceived, if one touch the same. Whence it is (doubtleſs) manifest, that the coats thereof are stuffed with many, and those naughty Humours. There are also no few signs of an ill constituted Liver, which being exceeding hot, has been many years disposed to breed Choler. Which sometimes breaks out with vomiting, and causes fainting fits; and getting into the mouth, it commonly causes bitterneſs: and the same humour being sometimes kept in, and putrifying, it has caused such Feavers as we have heard. By abundance of the said Choler growing thick, and of Crudities, his Liver was first obstructed; and at last all the substance thereof soaked with bad humours, and raised into a tumor, and if it continue so long without Remedy, it will turn to a Schirrhus.

I make the Liver, therefore, to be the first Fountain of his Malady, out of which being full, the naughty humor redounds in to the Spleen, Sweet-bread, Mesentery, and Stomach, and other neighbouring parts, whose swelling, which may be felt with the hand, is hereby known to proceed from plenty of humors, because he is very much purged by stool, with a very small Medicine. Now these parts being thus disposed, seeing not only the Head, but all the rest of the body is in a languishing and sickly condition; a Cachexy will come at last, and after it a Dropsie, if you take not diligent heed. These are the Evils which I foresee; but which may be nevertheleſs prevented, as all the Diseases already bred may admit of Cure in time. Now a gentle and light Cure must be applied, that by little and little, and with much time and leisure, it may pluck up what has been long in rooting. Also exceeding great care must be had of his Diet, and meats must be chosen of good juyce, such as have few Excrements, and do not much fill, but may in small quantity preserve the Body in strength, that by their use Nature may not be distracted, and called away from her concoction of bad humors Let him eat therefore such fleshes as are tender and soft, as those of young Beasts, and of Birds, which haunt the Mountains and Thickets, and not the Waters. Let them all be roasted rather than boyled, and sawced with Capars, or such like sawce. Let him refrain broths and suppings, and whatever things fill much. Also fishes, unleſs those of firm flesh; and yet their hard Roes will do no hurt. All Fruits are bad, saving Dates, Almonds, and Marmalade of Quinces: these he may use to shut up his Meals. Let him drink wine that is white, sweet, and not harsh, such as is your Rhenish wine, that is neither pitched nor brimstoned. His wine must be allayed with much pure water, that in a small quantity it may asswage his thirst, and not encrease the heat of his Liver. It will be sufficient for him to eat twice a-day, but in such rule and measure, that neither the meat burthen his stomach by the weight, nor his drink cause fluctuation

and

and belchings. For this Counsel will preserve his strength, and neither encrease it nor the bulk of his body, but rather extenuate the same, that so a portion of the vitious Humor may be withal exhausted, and the remainder prepared for future Evacuation. And 'twill be therefore good for him to endure hunger and thirst, and to omit suppers. Morning frictions and moderate exercises when he is fasting will be good, which also spend somewhat of the body, and provoke the natural heat to action. Let him sleep moderately, long after meat. This course of life must exactly be followed, and to an hair, till his body be perfectly cured. And if he shall accustome himself thereto longer, his health will be more firm and constant. Now the Cure which is to be performed by medicaments must be thus ordered. Let him frequently take Clysters, which in an Emollient and detersive Decoction, shall have half an ounce of Diacatholicon, with a fit portion of Honey and Sugar. Also the self-same day let him begin with his Clysters, and the foregoing order of life. The day after, the crude and superfluous Humors which fluctuate in the stomach, first passages and belly, shall be purged with this following Medicament.

Take *the expression of two drams and an half of choice Rhubarb infused in Cichory-water and White-wine, with half a dram of choice Cinamon: therein dissolve syrup of Mints half an ounce: Make of all a Dose; give it at six a clock in the morning.* The daies following the rest of the Humors must be concocted and prepared, and that by an Electuary rather than by a Syrup or an Apozeme. In imitation of *Galen*, who in such Diseases as these, and in the Winter, gave Pouders rather than Liquors.

Take *shavings of Ivory pondered, Aromaticum Rosatum of each two scruples. Ponder of Trionsantalon, and of the Electuary Lætificans Galeni of each half a dram. White Sugar dissolved in four ounces of Rose-water. Make all into Tables or Lozenges, weighing three drams apiece. Let him take one in the morning, and one before Supper, and continue the use thereof long, if not interrupted with other Medicines.* And in case sometimes he shall be forced to drink betwixt meals thereby to quench his thirst, seeing neither water nor Ptisan nor Beer is good for him, nothing is more excellent than Oxymel, either made by *Galens* prescription, or of a decoction of Parsly and Fennel-roots, and a little Hyssop. After eight daies use of this course of life, and of these preparatives; purge him gently the second time with the following Syrup, which we have thus accomodated to that purpose.

Take *Roots of Cichory, Sorrel, Grass, Parsley, Fennel, Capars, Polipody of the Oake, Carthamus-seeds, Raisins cleansed of each half an ounce. White Hore-hound, Agrimony, Cetterach, Maiden-hair, Bugloss, Borrage of each one handfull. Anniseed, Endive, seed of Dodder and Mus-melons of each two drams. The three Cordial flowers of each one pugil. Make a decoction to fifteen ounces. In the strained liquor infuse four ounces of Senna, white Agarick two ounces, white Ginger two scruples. Choice Cinnamon half an ounce. After a small boyling press all the Liquor out. Wherein dissolve fifteen ounces of white Sugar. Make a Syrup perfectly boyled, adding at the end of boyling the expression of an ounce of choice Rhubarb, only infused in Endive-water and White-wine. Let him take one ounce and an half at a time in barley-water.*

With this syrup he must purge every eighth day, augmenting or diminishing the Dose as need shall require. In the intermediate daies, if peradventure his belly shall be costive, 'twill be better to move the same with these Pills than a Clyster.

Take *the best Aloes, choice Rhubarb of each two drams. Aromaticum Rosatum powder one scruple: with Syrup of Mints, make all into a soft Mass. Let him take two Pills an hour before meat.*

After he has been purged the second or third time, for the more effectual preparation of the rest of the Humors, which are wont to be both more earthy and more stubborn than ordinary; besides the Electuary and Diet aforesaid, First a fomentation will be good, which mollifies, those which will soften, melt, and make fluid the said Humors, and by all means possible open the obstructions of the Bowels, preserving their strength. Now it shall be made after this manner.

Take *roots of Marsh-mallows, Cichory, Elicampane sliced of each half an ounce Red-Roses, Balaustins, Agrimony, Mints, Wormwood, Chamomel-flowers, Dil, each one handfull and an half. Anniseed, Lineseed, and Fenugreek-seed of each half an ounce. Squinanth. Cyperus, Calamus Aromaticus of each three drams. Make of all a little bag, and boyl*

boyl it in a pint of Water, adding towards the end white Wine two pints. Make a Fomentation thereof for his Stomach and Hypochondria, to be applied in the morning and before Supper with Bread and new Spunges, squeezed out and heated three or four times over.

His Belly being liquid, clean and dry, this Plaister will be good to lay on.

Take Oyntment of Marsh-mallows two ounces; Ceratum Santalinum, and Ceratum Stomachicum, of each one ounce and an half. Mix them together, and spread thereof a Plaister on Leather. Apply it after Fomentation is over.

The XLVIII. Counsel.

Touching a Cachexia in one of Burgundy.

BLear-Eyedness, dulness of smelling, store of spittle and flegm proceeding from the mouth, & swelling of the Legs towards Night are signs of extream Crudity abounding in the whole Body. Which being accompanied with the Livers heat, as appears by the heat of the Patient's Hands and Feet, it argues a Cachexy very near at hand, and peradventure a Dropsie also; which having so manifest rudiments and beginnings in his flourishing age, when he comes to decline and grow old they will bring him to his end: they must therefore be opposed with all possible care and diligence. And in the first place let his Diet be pure, and let him abstain from Inwards, and Tripes, and Feet of Beasts, and from much Fish and Cheese, and all clammy roaping meats; and for about two moneths let him use no supping things. Let him avoid glutting himself, nor let him eat so greedily as he has been accustomed. He must by all means live more temperately, and pine himself, whatever come of it, and omit his Suppers. And let his Wine be little and temper'd well with water, and let him commonly use such as is white and thin. Let him use frequent and strong exercise; which if he cannot perform, let him supply the defect thereof with a thin diet. Nor can diseases which have been long a gathering in the body be cured by diet alone, unless the use of some gentle Medicaments be added. Now these following will be most fitting for his condition.

Take Roots of Smallage, Parsly, Fennel, Capars, Polypody of the Oak, Carthamus seeds, Raisins, of each half an handful. Hyssop, Origanum, Calamint, Maiden-hair both the kinds, of each one handful. Ceterach, Hops, of each one pugil. Seeds of Annis, Endive, Dodder and Melons, and Liquoris shaven, of each two drams. Senna four ounces, Agarick two ounces, Ginger one dram. Choice Cinnamon half an ounce. Boyl them a little, then press forth the Liquor, and in the same dissolve fifteen ounces of Sugar. Make all into a Syrup perfectly boyled. Let him take once a Week two ounces mixed with a little white Wine.

In the interceding daies, when haply his Belly shall be bound, both to loosen the same and to purge and strengthen his Stomach, let him use these Pills:

Take the best Aloes two drams. Choice Rhubarb one dram. Aromaticum Rosatum half a dram. Syrup of Wormwood as much as shall suffice. Make all into a soft Mass. Let him take two Pills thereof, or four at a time one hour before Supper without Custody or observance to keep house, &c.

On the daies in which he purges not, an hour and an half before meat let him take a Table or Lozenge of *Aromaticum Rosatum*, both to resist Crudities and help the digestion of his meat.

For the fretting or eating that is in his lower gum, which is last of all described, mix Ginger pouder one scruple; Burnt Allum one dram; Honey of Roses one ounce: Herewith, as with a Liniment rub his Gum very hard twice or thrice a day.

The XLIX. Counsel.

For the Cholick and Pain in the Back-bone, in behalf of a German *Noble-man.*

AS these Pains were most grievous and hard to cure, which did so cruelly torment this Renowned Gentleman; so I perceived there was doubting touching their cause, and the place affected; about which the Renowned Physitians could not agree. For though the pains were spred far and near, yet we did think there was some primary and peculiar seat thereof whereout it brake into other parts. This controverted Question, being thereto intreated, I did briefly discuss, that the seat of the pain being known, some proper Remedies might be fitted and applied thereto. In the first place therefore, his Urines being good both in substance and colour, and like to such as are natural (save that by continual lying of the Patient they were somewhat yellowish) without any gravel or flegm, did shew that the Cause of the pain did neither belong to the Uretors, nor the Kidneys. Nor verily had the pain propounded the appearance of a Nephritick pain, nor was it ever known that a pain continued in the Kidneys three years together without the coming away of any matter. Nor could this pain be any waies referred to the Spleen, Liver or Mesentery, because these parts have little or no sence, and that very dull. But as touching the Guts, whose sense was very great, I saw some reason to doubt, especially because in the left *Hypochondrium* by the Gut *Colon*, a croaking noise was heard, as also in his whole Belly; and because the pain was unsetled, running sometimes into his right, otherwhiles into his left side, and because it got sometimes into his right stone, and for that his Belly seemed much blown up and distended. And all these Symptoms grew worse when his Belly was bound. Contrariwise, when the Wind broke out, or he went to stool, his Belly fell, and the pain ceased till new Wind was raised. These are (I confess) clear Arguments of a certain pain arising from Wind shut up and imprisoned in his Guts, which had both a fomenting and peculiar cause there, *viz.* thick, clammy, snotty flegm, sticking close to the Guts, especially the *Cæcum* and *Colon*, such as had been often observed in this Patient, to come from his Belly, either by it self or with the excrements. Being therefore by these Reasons induced, I could not but confess that one Cause of these pains was thick and clammy flegm sticking fast to the thick Guts. But this, verily, I counted the slighter and smaller cause, and only concomitant and attendant on a greater. For as this pain was of many sorts intangled, so was the seat and cause thereof manifold. For besides that pain which is like the Cholick, and comes from wind and flegm in the Guts, another and more principal springs from the part of the Back which is next the Heart, and from the Loins, out of which it is both diffused into the Muscles of the *Epigastrium* or part of the Belly above the Navil, and there is no small suspition that it reaches as far as the *Vertebræ* of the Back-bone. From this so great variety of causes, I conceived the difficulty of the Cure had risen. And therefore the pain which went along his Back and Loins, and reaching from thence for the most part into the Sides, and also into the fore parts of the Belly, and straitly binding the whole Body as it were with a girdle, did shew that all these parts were beset with the pain, and that the pain of the Belly was the cause why it could not be contracted and straitned so as to exclude the excrements. Moreover, credible it is that the cause of so far spred pains has been some cold distillation, which if not out of the Brain, yet at least out of the Head has fallen down into the Muscles of the Back and Loins: And at first on the left side; afterwards on the right. Hereupon it crept afterward by reason of the continuation of parts, into the Muscles and Membranes of the *Abdomen*. Peradventure some part thereof has also insinuated it self between the spondyles or vertebræ of the Back, as commonly it happens when these Infirmities last long. Yet I must here advise you in regard of the premisses, to see and consider whether or no the Spina be in scituation and figure according to Nature or no? whether he can freely bend himself this way and that way, and whether the parts on each side the Back-bone did feel any pain when they were touched or pressed somewhat hard? For I have had no small suspition that his Back-bone has been either dislocated or otherwise hurt, since the Gentleman our Patient, upon the strong bounding of his Horse, felt his Back-bone bent violently backwards, and prickt with a vehement pricking which struck through his whole Body.

The

The Prognostick.

Seeing there are two pains complicated, having different causes and seats, one belonging to the Guts, which may be termed the Cholick; the other to the Back-bone and Loyns: the removal of the former may truly be hoped, especially if it be single, without any Infection of the Guts themselves. And that the greatest of its cause may be the better estimated, I would have the whole region of his Belly felt, whether or no there is any preternatural hardness therein, remembring what I have seen and written, *viz.* How that many times in the Guts thick and clammy flegm does grow together and harden into the shape of a Gut, and shut up the passage to the wind and dung. The Cure of the later pain is more hard, and the event thereof is doubtful, especially if by long continuance, it shall drive it self deeper into the Back-bone. Yet it will do well to endeavour the Cure of both, and to omit nothing which according to rules of Art may rationally be thought helpful.

The Cure.

In purging out these grievous pains, diet is of no less moment than Physick, because that it consumes many superfluities which will hardly give way to Medicaments. Let therefore his diet be of good juyce, drying and attenuating, very spare; let him eat the flesh of Capons, Pidgeons, Turtles, Partridges, little Birds, young Leverets and such like, and these roasted rather than boyled. Also Sawces will do well, especially with Nutmeg, Ginger, and a little Pepper in them. Wine though it be thought to help by its heat; yet because with its Vapor and thinness it smites the Brain and Nerves, we must count it most hurtful in this case. That which is reddish, and lightly astringent must be chosen rather than that which is white, and it must be allayed with much boyled water, wherein Sage has been steeped. If the Gentleman our Patient had been so couragious to have performed all that has been said touching diet, by undergoing a Course with Guajacum, I should have had great hopes that would much have furthered the Cure, and brought it to perfection. Yet are not Sweats presently to be provoked, but a stronger Decoction must be given in the morning, and three hours before Supper, instead of an attenuating Apozeme: and another small one he must use at meals instead of Wine. If in the progress of the Cure sweat shall readily flow out, you must let it have its course, and gently provoke the same, and wipe it well off. Every seventh or eighth day, setting aside the Guajacum, he must take such a like Purge as this:

Take Stœchados, Betony, Sage, Rosemary, Epithymum, of each one pugil; Polypody of the Oak, Leaves of Senna cleansed, of each three drams. Make one decoction for a dose. In the strained Liquor infuse Agarick trochisked one dram and an half. In the expression dissolve Diaphœnicon or Diacarthamum one ounce; Syrup of Hyssop half an ounce. Make of all a potion; give it in the morning four hours before meat.

All these things are Universals, nor must any evacuation be endeavoured by blood-letting, as which will be in this case very hurtful. But the chief Cure will lie in Topicks. And in the first place to root up the Cholick pain, every day three hours after dinner, a Clyster must be administred, made after this form:

Take Flowers of Chamomel, Melilot, Dill, Rue, Origanum, Wormwood, Centaury, of each one handful. Annis-seed, Fennel-seed, Bay-berries bruised, of each two ounces; Make a Decoction; and in a pint of the strained Liquor dissolve Hiera simple, Honey of Roses, and Honey of Rosemary-flowers, of each one ounce. Oyl of Dill three ounces. Make a Clyster, give it as hath been said. Sometimes instead of Hiera simple you may dissolve therein Hiera Diacolocynthidos.

And thus by way of exchange, the use of Clysters must be augmented and continued till the gross flegm of the Guts be quite purged away which is the material cause of the Cholick, and till this pain falling down upon the Belly and Guts, shall manifestly abate. And when the Guts shall be sufficiently purged; that the vitious quality which has been long contracted in them may be removed, and strength restored, let injections be frequently made, of a pint and half of some generous red, or other astringent Wine, and that without any Water in it, and blood-warm. Wherein sometimes two drams of Castor may be dissolved, and afterwards they may be made pure, and without Castor. Let these kind of Injections be long continued, for they wil do no

hurt at all though they should continue in the Guts, and not come away. By these Remedies therefore I hope, that all the cause of the former pain will be taken away. In this time of Cure, if pains or other Symptoms shall more vehemently be troublesome, let them be asswaged with such Fomentations and other Remedies as have formerly been successfully used to that end. The Cure of the later pain may then be successfully undertaken with Topicks, when the former shall begin to asswage. Yet still continuing the Diet with Guajacum; for nothing hinders, but that the Cure of both the pains may be undertaken and endeavoured at the same time. In the first place therefore, the Sweat being wiped off, which now towards the end of the diet with Guajacum will break forth; every morning the whole region of his Back-bone, his Back and Loins must be fomented and anointed with these Remedies, which may cut and attenuate the impacted and deeply rooted Morbifick matter, and by any means prepare the same. Make therefore a Fomentation of a Decoction of Elicampane Roots, of Juniper berries and Stœchados, of Leaves of Betony, Sage, Laurel, Rue, Marjerom, Rosemary, Origanum, Calamint, Centaury the less, all which must be boyled in simple water, adding towards the end three or four Ounces of white Wine. Apply it to his Back-bone exceeding hot with a piece of Cloth or a long Spunge, which must be steeped in the said Decoction, and squeezed out; and when by frequent repetition thereof the place shall be well heated, wipe it dry and anoint it with this Oyntment:

Take Flowers of Stœchados, Rosemary, Lavender and sweet Marjerom, of each one handful. Saffron one dram. Bay-berries bruised one ounce. Pellitory of Spain, Ginger, Nutmegs, Cloves, Castoreum, of each three drams. Reduce all to pouder. Mix them and pour on eight ounces of the best Aqua-vitæ rectified, shining transparent Turpentine one pound. Put all up in a Glass Alembick, and make a Distillation with a slow fire. First receive the water, then the oyl, and keep it by it self for the use aforesaid.

If the use of a Fomentation be not easie, and it cannot all reach the pained parts, change it into a Bath to sit in, made of a like Decoction, into which all the affected parts may be plunged. When by continuation of the Fomentation and Unguent, in the mornings and before Supper, for about five or six days, the humor should be thought sufficiently attenuated, six Cupping-glasses of a middle size on each side all along his Back-bone to the end of his Loins without any Scarrification: or six great horns, which are frequently used among the *Germans*, that by their help the humor or any other matter may be forcibly pluck'd up from the lower parts, and brought into the skins top. Let not these Remedies be anointed till the pain of his Back and Loyns appear to be mitigated, and all their motion be more free and expedite. Or if peradventure their continuance be molestful and grievous, let a resolving or discussing Plaister be provided, such as may be made of the grounds of the former distillation, to which Gum Ammoniacum and Wax must be added, and incorporated in such a dose and quantity, as may seem requisite to the form of a Ceratum. These are therefore the Remedies by the administration and Methodical continuation whereof, the perfect Cure of both the pains may be hoped for, unless peradventure either his Back-bone be dislocated, or the pained parts at last corrupted by continuance of the disease. For when these things are so, there is none or very little hope of health.

The L. Counsel.

To facilitate Conception, for the Wife of the Provost of Mariemburg. *Out of the* French.

THat I may propound a Remedy for all these Maladies declared by you to me; to the end you may obtain your wished desire, I have prescribed a Syrup Purgative compounded with extraordinary Art, which you are to use eight daies before the time of the breaking out of your Courses, every other day in three doses, two Ounces or four silver spoonfuls at a time, in a like quantity of Barley water, or allayed white Wine, four hours before meat. And in the mean time you must keep house, and live soberly and temperately. And you must expect the breaking out of your Courses, and use no other means, save that you may with white Wine and water, or the use of some other opening Drink provoke the said Courses. When they are come and

and over, you must have this Confection which I send you in a readiness, and take thereof four mornings together the quantity of a Chesnut four hours before dinner, and drink a little white Wine allayed with Water after it. Which done, and having taken another dose when you go to bed, you must receive into your Womb the smoak of a Pouder which I have sent you, which you must cast upon burning coals, and sit over it so covered that it may go up into your Body as much as may be.

And these things being done, you must abstain from all other Remedies till the end of the Moneth; and then repeating the former course, a little before the time of your expected Courses, you must use the Syrup and Electuary aforesaid after the same manner; and so you shall continue doing for four moneths together, from the end of Winter to the beginning of the Spring. But if you shall not obtain your desired end, if you will certifie me touching the state of your Body, I will send you another kind of Counsel which shall be most convenient for that season. Let your Diet in the mean while be dry and of good juyce. If in the Intermediate daies your Belly shall be bound, or your Stomach sometimes oppressed, it will be good to use Pills of Rhubarb, Agarick and Aloes.

The Apozeme.

Take Sage, Marjerom, Nep, Bawm, Feaverfew, of each half an handful; Senna one ounce and an half. Boyl all to half a pint, adding towards the end Agarick half an ounce: Choice Rhubarb three drams; Cinnamon two drams. In the expressed Liquor dissolve Syrup of Maidenhair, one ounce and an half. Make a clarified Apozeme, indifferently boyled.

The Fume Pouder.

Take Nigella half an ounce. Storax, Benjamin, Florentine Orris, of each three drams. Cloves, Mastich, of each two drams. Mix them.

The Electuary.

Take Eringo Roots one ounce. Seeds of Nape, Onions and Bullus, of each three drams. Pellitory Root half a dram. Ginger one dram and an half. Roots of Bistort or Snake-weed. The Reins and Tails of the Scincus, *of each half an ounce. Syrup of Mugwort or* de Artemisia, *as much as shall suffice. Make all up into an Opiate or Electuary.*

The LI. Counsel.

For a Woman troubled with Fits of the Mother.

A Woman of full and ripe Age had for many years been without the company of a Man: by which means it came to pass, that her seed being collected and retained besides the course of Nature did putrifie, yea and attained a Malignant quality, such as both the courses retained, and any other Humors putrifying in the Womb are wont to acquire. Whereupon, filthy and malignant vapors being raised into the upper parts, caused gripings and rumbling noises in her Belly with pain; after that, subversions of her Stomach, Belchings, Hiccuppings and sundry Vomitings. But when they oppressed her Midriff and Lungs, her breath was short, with wheezings and ratling; or if the said Vapors smote her Heart, she fell into Palpitations of the Heart or swooning fits. But if the Vapor crept up into her Brain and Mind, sometimes it caused fits of the Falling-sickness, otherwhiles raving, sometimes darkness of her Eyes, and interception of her other Senses; and otherwhiles other Symptoms of her animal Faculties seized upon her.

Take Hyssop, Horehound, Nep, Bawm, Saint Johns-wort, Betony, Mugwort, Feaver-few, of each one handful; Roots of Madder and of Pæony, Misleto of the Oak, Polypody of the Oak, Carthamus seeds, of each half an ounce. Flowers of Rosemary, Stœchados, of each two pugils. Seeds of

of Paony and Lovage, of each one ounce. Parsnep seed two drams. Senna three ounces. Make a Decoction to nine ounces, adding towards the end Agarick one ounce and an half; Ginger one scruple. In the strained Liquor poured out, dissolve nine ounces of Sugar: make it into a Syrup duly boyled, and when it is boyled, add the expression of half an ounce of Choice Rhubarb infused in Betony Water. With Spicknard and Cinnamon, of each one scruple. Let her take thereof every third or fourth day.

In the intermediate daies, let her use a Decoction of *Lignum Sanctum*, and use her self to it by little and little. And at first let her use at meals a Decoction made only of three or four ounces of the Wood to four ounces of Water. You may boyl Raisins of the Sun there if you please with Sugar and Cinnamon. When three daies are over give her a stronger Decoction morning and evening two hours before Supper, with some of the ingredients of the Syrup boyled therein. Let her Diet be indifferent, of a midling Nature. Apply great Cupping-Glasses without Scarrification to the inside of her Thighs. It will be good likewise to rub her Thighs and Legs to draw the course of the Vapors downwards. Make Fomentations and Vaporations of some of those things in the Syrup, adding Penyroyal, Origanum, Calamint, Rue and Savine. Make Pessaries of *Hiera Picra*, and juyce of Mercury leaves. A little Cochy Pills may be added or Bindweed Roots or wild Cucumer, that by them the filthy superfluities of her Womb that cleave fast thereto may be drawn away. If these things shall not succeed according to our desire, let an expert Midwife at the coming of the fit put her Finger anointed with *Oleum Nardinum* or *Muscellinum* into the Neck of her Womb, that either by tickling the time she may provoke the putrified sperm to come out, or may extend the Neck, which in the Fit (as *Galen* sayes) is very much drawn upwards. If you would purge her Womb more forcibly, when her fit is over make injections of a Decoction of those Herbs which I mentioned in the Fomentation, adding Agrimony, Wormwood, or also a little Aloes. And to prevent the Fits before they come, give her a Potion of Waters of Nep, Bawm and Cichory sweetned with Sugar and Cinnamon, or a dram of Parsnep seed she may take in the said Waters, or in Feaverfew water. And seeing the greatest part of her Fits come from her Womb, make a Cataplasm of Fern, Lovage, Wormwood and Hyssop boyled and steeped in equal portions of red Wine and Water, wherewith her whole Belly may be covered, or 'twill be better to go round about her, and to bind it fast on, that it may repress the ascent of Vapors. Sweet smels must be applied to her privy part, and stinking to her Nostrils.

The LII. Counsel.

For a Woman when with Child, and in Child-bed, being sick in her Womb.

A Woman of an indifferent fleshy habit of Body, of a middle Age, having an hot Liver, a cold Stomach, was wont to be taken with Fits of the Mother, privation of her Sense and Convulsion as it were, together with pains of the Cholick. She was likewise troubled with a Semi-Tertian Ague two moneths when she was with Child. At last she was brought to bed. She could not go to stool without the help of Art: also great store of flegm came away with her stools, and sometimes of it self: She did not sweat, nor voided any Excrements of her Brain, nor did any thing come away in her Urine. The Question therefore was, What Cure was to be used, that she may not again be troubled with those Cholick and Womb Pains.

The Answer of Mſr. Fernelius.

It muſt needs be a very great cauſe which vexes the Patient with ſo many and ſuch grievous Symptoms; and I judg it to be twofold. The former is in the firſt Region of her body, *Viz.* In her Stomach, Guts, Meſentery, and hollow part of her Liver. For theſe parts are filled and obſtructed with thick Excrementitious flegm, which is the cauſe of her ſo long coſtiveneſs. For ſometimes it grows together in the Guts, eſpecially in the Colon, out of which we ſee it ſometimes drawn by force of a biting Clyſter. Hence therefore proceed the Cholick pains, which poſſeſs the whole Region of her Belly. The other cauſe is in the heat of her Liver, for it breeds much Choler: which becauſe it cannot be voided forth by the natural paſſages, becauſe of obſtructions, it flows with the blood into the whole body. And that ſome of it is ſhed into the Stomach, appears by her Vomitings, in which bitter and cholerick Excrements do ſometimes come away after the flegmatick, This Choler in a flegmatick Body breeds a Semi-tertian Ague, which ending by Sweat, leaves behind it Ulcerous or Flegmonous wearineſs. For the blood of her great or leſſer Veins, which are in the habit of her Body, is not at all purged, but is defiled with flegmatick Choler, which is the cauſe of theſe wearineſſes.

The Intention of the Cure is to purge her Body of theſe Excrements. You muſt therefore prepare the Flegm with Oxymel wherein Hyſſop, &c. is boyled, with an eighth part of Vinegar, and a fourth part of Honey. Alſo apply an extenuating and emollient Fomentation to her Belly. Let her take every day a ſharp Clyſter, wherein diſſolve *Hiera Diacolocynthidos* and *Diaphœnicon*, of each half an ounce with Honey. Sometimes give her a gentler Clyſter, to ſoften the dung and to make her Guts ſlippery. Once in a Week give her a potion made of Rhubarb, Hiera ſimple and *Diaphœnicon*. For *Diaphœnicon* is neceſſary to bring away thick and tough Flegm, and without it, Rhubarb will not avail. Let her uſe at meals thin Wine allayed with Water, and betwixt meals a Decoction of Guajacum or Wormwood, with Wine and Water. When her firſt Region ſhall be cleared, the ſecond and third muſt alſo be freed with Remedies not much unlike the former. Howbeit, I do not think it neceſſary to revel the humors out of the habit of her Body into her Belly, but that this Region is to be cleanſed by Sweating with a ſtrong Decoction of Guajacum, or other mixt Remedies. Let her Diet be dry and extenuating, wherein let her abſtain from all moiſt things. Her whole Body being well cleanſed, her Womb will be cured. But if nevertheleſs ſomewhat ſhall ſeem to remain therein, it may be removed either by a ſuffumigation, a Peſſary or other things accommodated to that end.

The LIII. Counſel.

Touching a Legitimate Birth.

COncerning a Child born on the two hundred and ſecond day after Marriage, ſeeing it was perfectly ſhaped, and likely enough to live; a doubt and queſtion has been raiſed, Whether or no it were not conceived before the time of Marriage, and ſo had fulfilled the compleat time of Nine moneths? Secondly, Whether a Child born within ſuch a compaſs of daies, is to be judged a ſeven moneths birth, and of a juſt and good Age?

To the former Queſtion, Mſr. Fernelius *anſwers.*

That the Age of a new born Child cannot by any ſigns or tokens certainly be known; and Abortive Children which come before their time are ſometimes to be ſeen compleatly formed and perfect; otherwhiles they have no Hair, Nails, Lips, nor Eye-brows, their Ears being hardly ſeparate from their Heads. Whereas I have likewiſe ſeen an Abortive Birth 40 daies old, as big as half a Finger, with all its Members diſtinct; and ſometimes I have ſeen one in the third moneth repreſent a rude and undigeſted Lump; the Cauſe whereof is, the variety of the ſeed, and the ſtrength or weakneſs of the Formative Faculty which is therein.

The

The latter Question he Answers.

That a Child born in the two hundred and second day is to be counted a seven moneths Birth. For *Hypocrates* and the Ancient Greeks, both Philosophers and Physitians, who diligently searched into this matter, were unacquainted with the *Roman* Moneths; for they measured them, as the *Hebrews* did by the course of the Moon: and a moneth consists of 29 daies and an half, which is the ordinary space betwixt two Moons. According to this Computation of the Year, which must be principally and punctually observed in the going of a Woman with Child, in the Decretory or Judicatory daies. In a word, in all Medicinal Observations, this Child, touching which the Question is moved, was born on the 25. day compleat of the seventh moneth. Nor is it necessary (that it might be counted a seven moneths Birth) for it to abide in the Mothers Womb seven moneths compleat: and seven daies over or under breaks no squares in this way of Account. For so *Ptolomæus* and other most Renowned Astrologers have delivered in their Writings, *viz.* That the forces of the Stars which govern us do not consist in a moment, but are contained within their Limits, and therein have power to work their Effects. And that a Child born in the seventh moneth will live, besides that it is celebrated by the Authority of *Hypocrates* and all Physitians, I have likewise by long Experience observed the same to be true. The reason whereof must be demanded of the Astrologers, who place the first moneth of Conception under the Dominion of *Saturn*, and the seventh under the power of the *Moon*, which bestows life and strength upon all Living Creatures.

The LIV. Counsel.

In the case of Hæmorrhoids.

THose Hæmorrhoids by you described which flow without pain are blind and inward: and I conceive none of them are to be seen outwardly. And they (seeing they haue been very long accustomed, *viz.* twelve years, to flow liberally) they ought not by any means to be quite stopped, least those Inconveniencies should follow which *Hypocrates* mentions and fears. But seeing at this time their immoderate running does weaken the body, and very much cool the Patients Liver, by which means the Jaundice, and perhaps a Cachexia does now appear and shew it self at hand; it seems not only profitable but very necessary to stop them. Yet so, that every third or fourth moneth somewhat may be suffered to run.

They may profitably be stopped in this Constitution of our Patient to me described, not by Revulsion with blood-letting from the Arm, or by Cupping-Glasses fixed to the *Hypochondria*; nor with Pouders, Electuaries or Potions which are astringent, but with these very light Remedies, which will do the deed, I question not. And therefore if any Purgation shall seem necessary, none will be fitting but what shall be made of Rhubarb.

Take Waters of Roses and Lambs-tongue Plantane, of each one ounce. Infuse therein four scruples of Rhubarb, one scruple of choice Cinnamon. In the strained Liquor dissolve choice Rhubarb poudered, two scruples; Syrup of dried Roses half an ounce. Make a Dose.

Take Plantane, Knot-grass, Red Roses, Balaustins, of each one pugil. Make a Decoction in Milk. In the strained Liquor dissolve Bole-Armenick, Bean-meal, of each one ounce and an half. Make a Clyster in form of a Pultis, which he must keep a long time: and it must be repeated twice, thrice or four times, if the first shall not sufficiently stop the Flux. If you would have it more compounded, add thereto Dragons blood.

Also 'twill be good externally to apply a Cataplasm to his Fundament of the best Bole-Armenick, which must be dissolved in Vinegar with Lambs-tongue Plantane, and the white of an Egg; or in juyce of Plantane and Knot-grass. Which things will be likewise good in a Clyster.

In

In course of Diet, 'twill be good to avoid strong Wine, and very thin; and all meats that inflame the blood. He must eat sparingly, lest his strength now much impaired should be oppressed with too much food, and that blood encrease not too fast upon him. He must avoid vehement Exercise, Anger, Sadness and Sorrow, and whatever things inflame and agitate his blood and spirits.

The LV. Counsel.

Concerning an Exulceration of the Kidneys and Urinary Passage, with a fleshy Knob growing therein.

THis Gentleman was troubled with two Diseases, which are very near of kin one to another: The one was an Exulceration of his Kidney; the other was a light Exulceration of his Yard or Urinary Passage, with a fleshy Knob growing thereto. That one or both his Kidneys were exulcerated, was known by his Urine, which was white, thick and matterish, in which the matter or quittor was seen to settle in the bottome. Also because the last Summer, after vehement Exercises and Labors, he voided bloody Urines. For when the Ulcer was bred, and that (as I conjecture) by a stone fretting his Kidney, which a few moneths before grew in his Kidney. Now the Ulcer being grown fouler, instead of blood there came quittor. The signs of the Ulceration of his Urinary passage are, that same heat and sharpness which vexed him when he made water, and in that many moneths before he had been vexed with a foul and virulent Gonorrhœa, which is wont to exulcerate this passage. And that to the Ulcer ill cured, there grew a fleshy Knob, was known by the difficulty of his making water, which came away in a stream no bigger than a very small threed, and because sometimes his Urine was quite suppressed. To cure these intangled Diseases perfectly, was no easie matter. An Ulcer of the Kidney does hardly ever heal, because it is a Spermatick part: and the fleshy Knobs which grow in those parts are with great difficulty, and very hardly cured. Yet sometimes a Purgation does good, either of Cassia alone, or sometimes with an addition of Rhubarb: The day after, two drams of washed Turpentine will be good. Also to sup in the morning a Decoction of Marsh-mallow Roots and Red-Vetches, with Honey or Butter, will cleanse the Ulcer in his Kidney. Hydromel simple will do the same, if either he drink it to quench his thirst, or take a draught at the beginning of his meals instead of Beer. I do not approve of more vehement Remedies: The fleshy Knob must be rooted up, by frequently thrusting in a Catheter, that by the roughness thereof some portion of the said Knob may be gradually worn off; for this kind of Cure is short and ready. Which nevertheless, if the Patient cannot endure, a Wax-Candle must be thrust in, which will dilate the passage, and flatten the Knob. And it may sometimes be smeared with a powder, which will both consume the Knob, and fodder up the Ulcer, such as is this following.

Take Cuttle-bone, Tutty prepared, of each two drams: burnt Harts-horn, wash'd Aloes, of each one dram: burnt Allum half a dram; Make them into a powder. Let him use it dry, or mixt into the form of an Oyntment, with Honey of Roses.

Also frequent Injections will be good, of compounded and distilled Allum-Water; such as is usual in this case.

Take Crude Allum two ounces, Juyce of Plantane and Purslane, of each a pint: Rose and Plantane-Water, of each three ounces: beat all together with the whites of three Eggs. Put them in a Glass-Alembick, and distill them with a slow fire.

In these contumacious Diseases, there needs great Diligence, Constancy of Mind, and length of time.

The LVI. Counsel.

Concerning Mattery Urine coming from the Kidneys.

THat Urine which we perceived to be made thick and white, is truly mattery: For upon setling, white, smooth and even quittor is seen in the bottom of the Urinal; which is a sign of an Imposthume or an Ulcer. Which nevertheless is neither in the Yard, nor in the Bladder, nor in the Uretors. But seeing it is without any sence of pain, we thereby gather that it is in the Kidneys alone. And from them pretty large stones, and bloody Urine have often proceeded, which did then declare that an Ulcer was caused by the grating of stones upon the Kidney. And now that which comes away is sordid and purulent: A perfect Cure is hardly to be hoped for; and diligent heed must be taken, that the quittor be nor stopt nor kept in; for by that means rebounding and flowing back into other parts, it becomes the Cause of grievous Symptoms. The best way will be gently to purge the Ulcer, and to procure a continual and free passage for the quittor. Let him therefore abstain from all vehement motion of his Body and Exercise; from salt, hot and biting things, lest the Ulcer be exasperated. It will be good for him to use Hydromel for his Drink, especially to make his first draught thereof, and sometimes instead thereof, a Decoction of Barley will be good. Afterwards let him use these following Medicaments.

Take the Pulp of Cassia Fistula ten drams, with Sugar or Electuarium Diatragacanthi Frigidi, make it into a Bolus. Let him take it on a chosen day, two hours before Dinner. Or thus,

Take Pulp of Cassia new drawn six drams, powder of Rhubarb one dram; With Sugar make them into a Bolus.

Item, *Take clear Venice Turpentine two drams and half: Wash it in water of Roses or of Winter Cherries. Let him take it the day after his purgation out of a spoon, with Syrup of Maidenhair.*

When his Belly is bound, or his Kidneys burthened; on other daies give him this Clyster.

Take of the four Emollient Herbs, Chamomel, Melilot and Dill, each one handful: Seeds of Annis, Line and Fenugreek, each half a dram; Make a decoction to a pint. In the strained Liquor, dissolve Hiera Picra simple and Diacatholicon, each five drams. Honey of Roses, red Sugar, each one ounce: Oyl of Violets three ounces. Make all into a Clyster.

When the Moon is in the wane, three or four mornings together let him take of this Decoction.

Take red Vetches three ounces, Marsh-mallow Roots one ounce, Tops of Coleworts one handful. Boyl all to half a pint; In the strained Liquor, dissolve two ounces of the best clarified Honey. Let him sup it up.

The LVII. Counsel.

For Pain in the Kidney. Out of the French.

THat you may prevent the Pain of your Kidneys, to which you have been long subject: in the first place you must avoid all gross and obstructing meats, from Swines-flesh, Beef and Venison, especially when they are salted. Also from all Fish that have no scales, and which breed in muddy waters; from Beans and Pease, and all Crusts, dough-baked Bread, Cheese, and all raw Fruits; also from black and thick Wine, and that which is rough or sweet. But you may eat of light meats, and such as are easie of Digestion, as the flesh of young Creatures rost or boyled: Let roots of Parsly or Fennel be boiled in your broths. Also sometimes, but seldomer they may be made with Capars, Asparagus and Hops. Also you may use Sallets of Burnet, Saxifrage, Garden Swines-Cresses, and other like Herbs well seasoned with Oyl and Vinegar. Drink White-Wine rather than Claret, especially which is high coloured, not strong, but

but thin and weak, and indifferently allayed with water, not neglecting the Care of your whole Body. Eat and drink soberly; for fulness is dangerous in this and other Diseases. It will be sufficient to eat thrice a day. And at Break-fast it will be good to eat oftentimes new Butter with Bread untoasted or toasted, and to sprinkle Sugar upon it, and drink White-Wine after it. If you can sometimes swallow certain bits of unsalted Butter, they will help both your Belly and Kidneys. Also Broths made of the foresaid Roots will be good; nor will it hurt you, an hour after some such kind of Food to exercise your self moderately for the space of an hour, and to do so likewise before and after Supper. 'Tis not good to sleep in the day time, nor in the night to lie on your back, nor heat them internally or externally, either with bed-cloaths or the fire.

But besides these Rules, some particuliar Medicaments will be good, and in the first place I have prescribed a powder; a spoonful whereof is to be taken two hours before Broth, either alone or in White-Wine, and that once a week, especially when you are costive. But there is nothing will do you more eminent service, than if six daies before the last Quarter of the Moon you shall take this Clyster.

Take Roots of Marsh-mallows one ounce, Roots of Elicampane half an ounce, Mallows, Violet-Leaves, Pellitory of the Wall, Beetes, Mercury-leaves, each one handful: Flowers of Chamomel, Meliiot, tops of Dill, each one pugil: Seeds of Annis, Fennel, Caraway and Cummin, each three drams: Make of all a Decoction. In a pint of the strained Liquor, dissolve Hiera simple six drams; Diaphœnicon three drams, Honey of Roses two ounces, Oyl of Chamomel and Dill, each one ounce and half; Make of all a Clyster. Take it in the morning, when you rise from bed, on the day aforesaid.

The day following a purging Potion will be good, made after this manner.

Take Pellitory-Water two ounces: Infuse therein choice Rhubarb three scruples, best Cinnamon half a dram. In the Liquor squeezed out, dissolve the Expression of two scruples of Agarick trochisked, in Betony-Water infused: Diaphœnicon one dram, Syrup of Maiden-hair half an ounce. Make all into a Potion for a Dose.

The day following take a Clyster: And the daies being over, wherein you are to rest; on the fourth, fifth and sixth daies, which will be the three last of the Moons course; you shall take every morning three or four hours before meat one dram of the Mass of Pills which I have prescribed for you, made up into five pils. Or if the bitterness be too troublesome, dissolve it in White-Wine; nor need you keep your bed therefore.

Take Choice Gentian Root one ounce, reduce it into very fine powder; of which, with Syrup of Maiden-hair, make a soft mass of Pill-stuff. Wrap it up in Leather, and keep it in a Box for the use aforesaid.

These three daies being over, which are the last of the six aforesaid, it will not be amiss, if you please to make a Decoction of Vetches and Marsh-mallows, which I formerly advised, and to drink it four or five daies together. In the mean space you must keep an exact course of Diet, according to what has been formerly said, and all the foregoing Remedies must be repeated near the ends of three moneths one after another, if you look for a perfect and compleat Cure.

The LVIII. Counsel.

For a Duke of France *troubled with the gravel in his Kidneys.*

THe voiding of Gravel in Urine, and the beginning of the stone in the Kidneys, in a constitution of body very cholerick, and the blood thereof being thick and earthy, is for the most part over scorched, ought thus to be prevented; seeing thick and clammy blood is the matter that breeds the Gravel and the heat of the Liver and Kidneys is the efficient cause by burning the said blood, and so turning the same into Gravel and Stones. He must keep a cool and moist diet, which does withall scour and moderately extenuate, without manifest heat. The flesh of Chickens, Pigeons and Veal boyled with Lettuce, Marsh-mallows, Mallows or French-barley, and the broth thereof taken in the morning is exceeding good, and sometimes Barley-cream with Sugar. And at other times he may eat flesh roasted or boyled, and steeped

Fonthan R

or dipped in the juyce of Lemons; which if it be not to be had, juyce of sour Grapes, or of Sorrel, and sometimes Vinegar may supply its place. Let his Wine be thin and weak, and very well tempred with water. For many profess they have been cured of these Infirmities, by abstaining from Wine, and drinking only water. To rub the Back and Loins in the morning, also strong Exercise, and riding on a trotting Horse dislodges the Gravel and Stones, and suffers them not to grow together in the Kidneys. Howbeit, inasmuch as Diet alone cannot sufficiently prevent this Disease, sometimes he must also take Physick, which being moderate in heat and dryness, may bring away the morbifick cause by stool, and temper the heat of the Kidneys, and bring away the Gravel by Urine with ease. Now they must be compounded after this manner.

Take Roots of Butchers-Broom, Asparagus, Grass, Marsh-mallows and Parsly, each half an ounce: Clary, Betony, Burnet, Saxafrage, Pellitory, Maiden-hair, each one handful: Seeds of Basil, Parsly of Macedonia, Gromwel, Broom, Burdock, Mountain Osier, Liquoris shaven, each two drams: Raisins stoned, Polypody of the Oak, each one ounce; make a Decoction to fifteen ounces. In the strained Liquor, infuse new Cordial Flowers, each two pugils, Senna leaves three ounces, Agarick two ounces, white Ginger two scruples. Let them boyl a little, and then press out the Liquor, and dissolve therein one pound of white Sugar; make all into a Syrup perfectly boyled. Let him take every tenth day one ounce for a dose with Barley-water, or a Decoction of Annis-seed.

Of the same simples, the purgers being left out, make another Syrup, which he must take in the mornings of the intermediate dayes mingled with Barley-water, to purge his Kidneys. I allow not the use of Turpentine, because of the heat of the Patients Liver, whereby it will be easily inflamed. If haply he shall loath the frequent use of the Syrup, instead thereof, let him use this Electuary.

Take of the four great cold Seeds cleansed, Liquoris shaven, each one scruple: Seeds of Burnet, Basil, Parsly of Macedonia, Nutmeg, each half a dram: Aromaticum Rosatum two scruples, white Sugar dissolved in Winter Cherry-water three ounces: Make all into Lozenges or Tables, weighing three drams a piece. Let him take one in the morning three hours before meat, and drink after it a little tempered Wine.

Let his Kidneys in the Summer time be cooled with this Fomentation.

Take stilled waters of Lettuce, Water-Lillies and Roses, each three ounces: Vinegar two ounces; mix them. Foment his Kidneys therewith morning and evening blood-warm.

In the Winter this following Liniment will be more convenient.

Take Oyl of Violets, Water-Lillies and Roses washed in Vinegar and Rose-water, each one ounce: Musilage of Marsh-mallows drawn in Pellitory water six drams, a little Wax: make a Liniment to smear his Kidneys morning and evening.

If peradventure his Kidney-pains shall return, give him such a Clyster as that by me prescribed. Which being come away, apply a Fomentation to the part pained, of the decoction of the bags prescribed. And if this shall not do the deed, apply a large Cupping-Glass to the part pained without scarrification. And if neither by this means the pain grows mild, let fitting Cataplasms follow and Baths to sit in, whose power to assuage pains is most effectual.

The LIX. Counsel.

For the Strangury:

THis same Strangury wherein the Patients Urine is said to come away troubled and impure, with very great pain, whether the setlings at last be matterish or snotty and flegmatick, is neither caused by the Crudity of the Stomach, nor by that flegm which has been wont to fall into his Joynts. For so thick a redundance of Excrements could never flow from the upper parts through the Kidneys (being sound) into the Urinary Passages. Seeing therefore his Kidneys are not known to be as yet diseased, it must of necessity be, that this impure matter comes either out of the Bladder, or out of the Yard and Spermatick Vessels; and that consequently either there is a stone in the Bladder, or an Ulcer in the Yard and the Neck of the Bladder. And because these Infirmities have some signs common to one as well as another, we must

must seek for proper signs to distinguish them by: nor must any peculiar cure be undertaken, till it be certainly known which of these Diseases it is. And therefore we must observe, whether the Patient feel any sence of weight in his Perinæum, or space betwixt his Cods and Fundament, which troubles him in his going? Whether he be not sometimes pained in his Fundament, with a desire to make water and go to stool? Whether his Urine come away in a full stream? Whether it be not stopped in the middle of its course? For these are sure signs of a stone, especially if the Patient have been at any time troubled with a pain in his Kidneys. But if none of these signs have appeared, you must ask him, Whether or no there comes not filthy stuff sometimes from his Yard without sense, and when he makes not water? If before or after the swelling of his Testicle, the sick man have been at any time infected with the virulent Gonorrhæa? Whether his water come away in full stream, or like a small threed as it were? If in the erection of the Yard, or when it is handled, either any pain or Tumor is perceived; for then is a filthy and Fistulous Ulcer in the Neck of the Bladder, or in the passage of the Yard it self. And that the conjecture which is taken from these signs may be searched out and confirmed by the Judgment of sence, a Catheter must be gently thrust in, that so the immediate and continent cause may be more certainly known.

The place affected being at length known, and the proper original of his Malady, peculiar Remedies must be accommodated thereunto, and such, as 'tis hoped, will do him good. And if any demur shall happen, his pain in making water must be assuaged with an emollient fomentation, or such as shall assuage pain, applied to his privy parts, and sometimes with a fomentation of lukewarm Milk. Also with an Oyntment which is of the same faculty, the part must be lenified, and by an injection of the Musilage of seeds of Flewwort and of Quinces drawn in Plantane-water. Also the Acrimony of his Urine must be mitigated with Syrup of Violets, of Marsh-mallows, of Lemons, or other coolers, and with Wine very much allayed, if the strength of his Stomach will bear it.

The L X. Councel.

For an Ulcer of the Sphincter of the Bladder. Out of the French.

THat we may apply Remedies to an inveterate Ulcer, and which has contracted a Callus, which by certain signs and by the Catheter is found to be in the bladder of the Patient, without any fleshy Knob: in the first place the part underwritten must be three or four times a day fomented with mollifying and pain-assuaging Fomentations.

Take Roots of Marsh-mallows and Lillies sliced, of each two ounces: Mallows, Violets, Pellitory, Water-Cresses, Origanum, Calamint, Wormwood, Flowers of Chamomel and Melilot, of each one handful: Line-seed and Fenugreek-seed, of each one ounce: Put them in a bag, and boyl it in Water and White-Wine. Foment therewith his Yard and Perinæum three or four times a day. After this fomentation has been continued five or six daies, omit the same two daies, and then purge his Body with Cassia and Rhubarb after this manner.

Take Cassia Fistula new pulped six drams, Rhubarb very fine powdered four scruples, with Species of Electuary of Diatragacanthum; make all into a Bolus. The day after his purgation let him take Venice-Turpentine thus prepared.

Take clear Venice-Turpentine washt in Rose and Pellitory-water two drams; Then he must return to his former Fomentations for three or four daies, or till the foresaid Ulcer be softened and assuaged.

Then with a small Syringe this Decoction underwritten must be squirted into the part affected three or four times a day.

Take Red Rose-leaves, Plantane, Barley, Wormwood, of each one handful: Centaury the less half an handful; Make a Decoction to a pint. Dissolve therein Aloes two drams, Myrrh one dram, Aristolochia half a dram. Make of all an Injection.

The Ulcer being by this means well scoured and cleansed, that it may be more and more dried, make an Injection of an Aluminous water made after this manner.

Take

Take Raw Allum four ounces, juyce of Plantane and Purslane, of each eight ounces; stir them all together, and dissolve them with the whites of three raw Eggs; and then put them in a Glass-Alembick, and still them.

And that the Ulcer may afterwards be covered with a scar, and clothed with skin, this last injection must be used.

Take Plantane-water one pound, Dissolve therein the white Trochisks of Rhasis, with Camphire half an ounce. Make thereof an injection.

Or instead of Trochisks, make it after this manner.

Take Litharge of Gold, Cerus's, Bole-Armonick, of each two ounces; with Plantane-water make an injection.

In his Diet he must abstain from Salt and spiced Meats, strong Wines, and other things which make the blood thin. In their stead let him use cooling Broths, Prunes, and other Meats which engender moderate blood. Sometimes betwixt meals, and during the time of his Cure, it will be good to drink one draught of Hydromel well boyled, or of Barley-Water.

The LXI. Counsel.

For making of Flegmatick Urine.

A Certain man did render thick Urines and troubled, wherein there setled Flegm thick and clammy. He was troubled with extream pain and heat while he made water. His Master thought, it was becaus he had a stone in his Bladder, but the Chirurgeons using their Instrument, did not perceive any stone. It did therefore follow, that it proceeded from the weakness of his Bladder. For the Cure whereof, these following Remedies were prescribed.

Take Polypody of the Oak an ounce, Roots of Ruscus or Butchers Broom, Asparagus, Grass and Fennel, of each half an ounce; Agrimony, Ceterach, Dodder, Pimpernel, Betony, Clary, Saxafrage, Wallrue, Maiden-hair, of each one handful: Seeds of Annis, Melons, Burdock, Parsly of Macedonia, Liquoris shaved, of each two drams: Make a Decoction to twenty ounces. In the strained Liquor, infuse four ounces of pickt Senna, white Agarick two ounces, Gummy Turbith half an ounce, Ginger two drams. Boyl them a little together, and strain and squeeze out the Liquor, and therein dissolve white Sugar one pound; Make a Syrup perfectly boyled. Let him take every tenth or fifteenth day an ounce and an half, or two ounces for a dose, with a little potion of Pellitory-water. Also,

Take the best Aloes half an ounce, choice Rhubarb two drams and an half, Agarick trochisked four scruples, powder of the Dukes Electuary two scruples: Make of all a soft mass with Syrup of Marsh-mallows. Let him take one dram at a time in five pils, without observance of keeping Chamber, &c.

On other daies, when his Belly is bound, or Flegm troubles him.

Take the four greater Cold seeds, Seeds of Basil, Saxafrage, Parsly of Macedonia, of each one dram: Choice Cinnamon, Nutmeg, of each half a dram; Diarrhodon Abbatis one dram; white Sugar dissolved in Pellitory and Clary-water six ounces; make of all Lozenges or Tables weighing three drams a piece. Let him take one in the morning, at least three hours before meat, on the daies in which he takes neither Syrups nor Pils. Item.

Take Roots of Marsh-mallows, Elicampane, Juniper-berries, of each one ounce: Centaury, Origanum, Wormwood, Chamomel, Melilot, Dill, of each one handful: Seeds of Annis, Fennel and Fenugreek, of each half an ounce; Make of all a bag. Let it boyl in a sufficient quantity of Water, putting thereto in conclusion a quarter as much White-Wine. Foment therewith being hot, his Share, Privities and Perinæum.

If this be not enough, let the Flegm be made thin and melted. Of the same Ingredients a Bath may be made to sit in, wherein being hot, let him sit up to the Navil.

The

The LXII. Counsel.

For involuntary letting go of the Urine, Hypochondriacal Melancholy, and Inflammation of the Leg.

THe Disease which has been largely and clearly unfolded, although by a various mixture, and unusual concourse of Symptoms, it seems to be very obscure and new; yet if we shall more deeply search into the force and nature of the signs, both will become apparent, and the cause of the Disease will be found by comparison of other Diseases. The Cause of these Symptomes is not one simple Disease, but comparing and weighing their Natures, we shall find three Diseases intertwisted. The one is an Inflammation of the Legs returning by fits. For Redness and Heat are signs of an Inflammation, which they term *Phlogosis*. Yet it cannot be counted an Erysipelas, seeing it does not possess the Skin alone, but the Flesh under the same, and the whole part swels into a great bulk. It remains therefore, that it is a Phlegmonous inflammation of the Legs: The immediate and continent cause whereof is thin and fervent blood, which offends the part not only by its redness and heat, but also by its immoderate quantity. Which being not confined to one place, it does not cause that sort of Phlegmon, which at last ends in an Imposthume; but being equally diffused all the Legs over, it causes a Phlegmonous Tumor, which Continues so long, till that fervor of the blood being repressed, it is all either manifestly or insensibly dissipated and exhaled. Now this blood flows down from the whole Body, but especially from the Bowels, and out of all the Vessels, wherein at certain periods of time it is wont to be collected and to superabound, and that by means of the natural constitution of the Patient. For seeing both his temperament and habit of Body, his Diet and course and Life do argue him to be sanguine and apt to breed much blood, it happens at certain set times, that his whole body is surcharged with blood. Which becoming troublesome and burthensome to Nature; it is either by Nature driven, or falls of his own accord out of the Veins into the Legs, being by some means or other become weak. Even as in those that are of like Constitution, it breaks out in some at the Nose, and in others by the Hemorrhoid-Veins, and in others by other waies. And the very truth is, unless in this Gentleman the Patient, this superfluity of blood did fall into his Legs, he would be in danger either of sudden choaking, or of the breaking of a Vein: seeing we sometimes hear of great quantities of blood vomited up, not without the opening or breaking of a Vein, which comes either from the Liver or other neighbouring parts and places into the Stomach. Now that this flux of blood into the Legs comes from the whole body, and all the Veins thereof, it plainly appears by such things as we are informed do happen at the beginning of the fit; *viz.* heavinesse of his whole body, a distending weariness, shortness of breath, Head-ach, working and burning of the inward parts, Anxiety of Mind; all which are Symptoms of superabundance of hot blood.

The other Disease which troubles the sick Gentleman, is Melancholy, the Companion of Inflammation, and that kind of Melancholy, as I conceive, which we call Hypochondriacal. For the pain which is wont to settle on his left side, under the short Ribs, and the Palpitation of those parts reaching as high as his left pap, Anxiety of Mind, Sadness, Solitude, variety of troublesome Dreams, dulness of Understanding in administration of Affairs, and in discoursing, with weakness of Memory: are signs which cannot be referred to any thing but black Choller, whose vapors gliding into the Heart and Brain, are wont to cause such Symptoms as these and far worse. Seeing a very great heat of his inner bowels and humors has continued so many years; it can hardly be, but that a very great quantity of yellow Choller is burnt and turned into black Choller, which being sent into the Spleen its proper receptacle, it shews the force of its Malignity.

His third Disease is the involuntary going away of his water, which happens commonly in his sleep, so that he never perceives it. Nor is this any effect of the Inflammation or Infirmities aforesaid, nor need he to fear hereafter such a painful making of water as has formerly tormented him: but the cause of this passing away of his water is the hurting of the

Sphincter

Sphincter Muscle, which closes the Neck of the Bladder: for by putting in of the Catheter, it is stretched and torn, by which occasion also much blood came away. And being thus hurt, it cannot perform its office of shutting the Bladder. And so much for the knowledge of his Diseases, and their causes. The premises therefore considered, a perfect Cure may be hoped for of all these Diseases, provided the Patient in his flourishing age wherein he is, and in the heighth of his strength be so diligent as is requisite.

The Method of Cure.

The last Disease of Involuntary making water because it is very single, and he voides no filthy matter with his Urine, it may be cured only by astringents and strengthening things. Such are the fomentation of his Privities with Roses, Balaustins, Plantane, Pomegranate-peels, and such like things boyled in Smiths-forge water. And also Plaisters of the said materials, and of metalick simples, as Litharge and Allum, Bole-Armenick and Mastich made up with Myrtle, Oyl and Vinegar. And if these things externally applied do not help, they must be injected with a Syringe, that they may touch the part affected. For so their use will be found much more effectual.

The other two infirmities because they are in some sort complicated, and the one is the effect of the other, there is in a manner one and the same Cure for both. That same inflammation of his Legs coming by fits may possibly be hindred and cured, only by observing a good Diet, and course of living. But the Melancholy infirmity requires some Cure. Therefore, to purifie his blood and whole Body, every fifth or sixth day purge him with a Syrup made of juyce of Bugloss, Borrage, Fumitory, Hops, Sorrel, and such like, adding to every pound of the juyces four ounces of Senna, and half an ounce of Cinnamon, and a pound of Sugar. The dose whereof must be two ounces tempered with Whey. If he shall be much troubled with Melancholy Symptoms, give him on the daies between his purging the like Syrup made without the Senna. Also I prescribed him an Electuary of the *Species Letificans Galeni*, *Diambra & de Gemmis* made into Lozenges, with Sugar dissolved in Bugloss-water. Use no stronger purge, nor open hereafter any Vein, unless some greater necessity shall happen. But the Hemorrhoid Veins may easily and very profitably be opened, if they happen to swell, or are fuller than ordinary, and apparent in any measure; and that either with a Lancet or Leeches, or Medicaments. Add hereunto such a Diet as may breed good, thin, moderately cold and moist juyce, namely such as all men commend in the case of Hypochondriacal Melancholy. Now the cure of the Inflammation of his Leg returning by fits, does chiefly herein consist, *viz.* That he live sparingly, and with a thin Diet pine himself with hunger and thirst, and keep his blood and humors in a moderate quantity, so as not to burthen and trouble Nature. Let him therefore use meats of good juyce, cold and moist, and of indifferent Nature, and let him eat less by half than he has been accustomed to do. Let him (if the strength of his Stomach will give leave) abstain from Wine two or three moneths. And instead thereof, let him drink either small Beer, or water seasoned with Cinnamon, or a Decoction of Guajacum. If also he procure himself to sweat, and make his body more open, I conceive it will do him very much good. In the whole course of his life, let him shun strong Wine, surfeiting and full feeding: For all the hope of his cure does consist in a cooling and spare Diet. I do not approve of their Judgment that would have him drink Asses-milk, because milk in an hot and Cholerick constitution is soon corrupted, nor does the Patient fall away in his flesh. Much less do I like of the use of Baths; because they by melting and dissolving the Humors cause fluxions: now his body is afflicted with divers defluxions already. Now that the Humors may not hereafter so readily fall into his Legs, it will be good to swath them very close with Swath-bands, or with Stockins which are with us made of Dogs-leather for the same purpose.

The LXIII. Counsel.

For the Gonorrhæa, and the Gout.

THis Gentleman is troubled with two diseases, the Joynt pain, and the Gonorrhæa. The latter is newly befallen him, being only of three moneths durance, without sharpness of Urine, without any Ulcer or difficulty in pissing. The former is more old, which did this year grievously trouble him, and six years since gave a testimony of its Intentions to visit him. 'Tis a wonder truly, that this pain at the very first coming should seize all his Joynts alike, and leave behind it stony knobs in his fingers, hand, wrist, and other places. This is a sign of a most grievous Gout to come, which will in a few years catch the whole man and bind him with fetters and manacles, unless it be in good time prevented. Which he foreseeing and fearing, does implore help, which because I cannot afford him, in this my wandering and unsetled condition of following the Court, I thought fit to commit him to your care, that you may in his Cure follow that way and method which you have sometimes seen me use. And that you may in like manner accommodate your cure to the virulent Gonorrhæa; in the first place you shall give him a Clyster, which shall have in it Hiera simple, and Diaphenicon, each half an ounce; honey of Roses and Rosemary, each one ounce, &c. The Day after purge him with a medicament of Rhubarb, and Agarick, each four scruples, infused in waters of Betony, Endive and White wine, each one ounce. In the strained liquor, dissolve Electuary of Diacarthamus one dram and half; syrup of Maiden-hair half an ounce. The third day give him two drams and an half of Turpentine, with Syrup of Maiden-hair out of a spoon, four hours before meat. The fourth day let him rest. On the fift day, he must begin the diet with Guajacum; and he must have a double decoction, the one strong of half a pound of the wood and two ounces of the bark, adding about the end of the decoction, Elicampane, Polipody of the Oak, and Carthamus seeds, each one ounce. And let him use it twice a day, three or four hours before meat. The other must be weaker, made only of the wood, which he must use at meals instead of wine. His diet must be in the mean time spare, attenuating and drying. If his belly be costive, provoke it with a Clyster. On the seventh or eighth day, let him be purged again with such a like medicament. After his purgation first of all apply topick medicines to his head, as little bags of seeds which may more effectually provoke the sweat. And when the sweat is wiped off, let him use every day Errhines, first weaker, then stronger. When the humors of his head shall seem for the most part dissipated, you shall apply such medicaments to his neck and backbone, which I know you have copies of, written down. And for the stony-knobs on his Joynts, certain plaisters which you may remember I prescribed at large for Mst. *de Chauvigne*. When by the continuance of these remedies, you have quite cured all the joynt pains and the knobs, and pluckt up the disease by the roots; in the last place his joynts must be strengthened with medicines provided to that end: of which likewise you have good store. But before the cure come to that forwardness, I hope I shall see you again. If by these remedies the Gonorrhæa shall not be quite rooted up, such things must be conveyed into his yard as will dry up the reliques thereof. The materials whereof, if need shall be, I will hereafter set down more at large. Mean while, during the cure, the immoderate heat and working of his kidneys, may be repressed by anointing the same with oyl of Lillies and Roses washed in Plantane water, or with Oxymel, Rose water, Plantane and Night-shade waters, each two ounces; Vinegar one ounce. Wherein also if necessity require, dissolve two drams of Trochisks of Camphire.

The LXIV. Counsel.

For a Rupture of the Guts. Out of the French.

TO cure the disease propounded; first the patient must keep his bed at least twenty days together, and lie upon his back, and stretch or stir his body very little, especially his legs,

nor vex his mind with wrath, or other passions, nor laugh or cough. In the mean while he must live soberly and temperately, with meates neither windy nor moist; and endeavour that his belly be neither swoln nor dryed, and to have every day a stool by nature or by art with a Clyster or suppository. First let his body be purged with the medicament here under written: which also may be repeated after fifteen or sixteen days are over.

Take of the four emollient Herbs, Origanum, Calamint, Wormwood, Chamomel, Melilot, Dil, each one handful. Seeds of Annis, Fennel, each half an ounce. Honey of Roses, and Rosemary, each one ounce. Oyl of Rue and Dil, each one ounce and half. Make of all a Clyster. Item.

Take great and middle Comfry, roots of Osmund royal, each half an handful. Leaves of Senna clensed three drams. Make a decoction for one dose; in the strained liquor dissolve choice Rhubarb poudred one dram and half, Syrup of dryed Roses six drams. Make all into a potion.

On the first four days of the Cure, let the tumor be fomented, as hot as he can endure, with a spunge indifferently moistened with this following decoction: and five or six times as hot as he can suffer, he must cover the pained part lying on his back and bind it with a bolster and cloaths between, with swath-bands, viz. in the morning, and at one a clock in the afternoon. Let the fomentation be this that follows.

Take Roots of Marsh-mallowes, Dwarf-elder, and fresh Orris, each two ounces. Mallows, Violets, Pellitory, Water-cresses, Wormwood, Origanum, Calamint, Centaury, each one handful. Seeds of Fennel, Line, and Fenugreek, each one ounce. Make of all a decoction in water sufficient to make a fomentation.

After four days you shall again foment his Rupture with the Bath which I have given you: wet with red wine and heated over the fire. And after eight days more dip the second bag in a Lie made of Smiths-forge water and Oak ashes. After which bags applied twice a day, the bolsters and swathes must be again used. Which things being performed, he may for two moneths abstain from other remedies, excepting a truss fitted to his Rupture. Also let him forbear all straining himself either on horse-back or on foot. On the fourteenth day of the Cure he shall take a quantity of this following powder out of a spoon, in the morning, and evening an hour before supper, and continue the use till he be perfectly cured.

Take of the Mirabolans Indian, and Chebulan, each one dram and half. Water Cresses, Purslane, Plantane, Sumach, each half a dram. Red Coral, Bloodstone, Amber, each one scruple. Choice Cinnamon four scruples. Sugar of Roses four ounces. Make all into a pouder.

The LXV. Counsel.

For Pains of the Hip, and other Joynts.

THis young maid is troubled with many and grievous infirmities, of all which there is one original and one fountain springing from her Head. An old œdematous swelling, which she was troubled with in her younger years, and frequent and unreasonable washing of her Head, have left a cold distemper and weakness thereof, which pepetually gathers plenty of cold excrements. By these means a cold flegmatick humor was collected and abounded of old, and fell into the kernels of her Neck like the Kings Evil, and not many years since rushing into the right side of her body, it besieged the joynts of her neck, shoulder, hip, thigh and leg. Nor does it trouble only the external parts of her body, but it has lately set upon the inner parts so great a defluxion falling upon her lungs, as caused not only a cough, but wheezing and a troublesome shortness of breath, whence it is apparent, that the cause of all her troubles is a cold and flegmatick humor, which occupies well neer all the parts of her body; and that the first original thereof is from her head. Unless her strength be much decayed, some hope there is of cure, especially now in the flowre of her age, and the approach of the spring. Many things have been by rules of art prescribed for her, wherewith she has been eased, but by reason of the length and stubbornness of the disease she can

can as yet receive no perfect Cure: and that makes me ſuſpect the fountain of her diſeaſe is not yet drawn dry. But that there is a frequent defluxion of Rheum, both into her lungs and joynts from her head, which nouriſhes this long infirmity.

The chief ſcope of the Cure muſt be, to clenſe the Head of excrements, or that ſuch as cannot be hindered from breeding, may be derived through the noſtrils, or digeſted by the power of topicks. Wherefore every tenth or twelfth day according to her ſtrength, purge her with a potion or pils, which may be able ſtrongly to draw from the diſtant parts of the body. Her hair being cut off, every morning and an hour before ſupper, fry in a frying-pan ſeeds of Aniſe, Fenel, Carway, Cumin, Bay-berries, Millet, and Salt, and put them in a little bag, and lay it on her head as hot as ſhe can endure it, untill the heat pierce inward, or the ſweat run down her face. When it is taken off cover her head with Tow heated and ſmoaked, with a perfume by you preſcribed. After this, Apophlegmatiſmes will be uſeful and Errhines, at firſt ſuch as are mild, and without Hellebore. And that her body may not be too much ſhaken by the violence of ſneezing 'twill be ſufficient to add to three ounces of juyce of Betony or ſweet Marjerom, two drams of Orris, and a dram of root of Bindweed. Let all her neck be compaſſed with a plaiſter three fingers broad, which is made of two ounces of Maſtich, and one ounce and half of the plaiſter againſt Ruptures. Let her by any means forbear lying on her back, but lying on her belly is good for her, becauſe it enclines the rheume to her noſtrils. Let her diet be drying and extenuating, avoiding all ſuppings, fiſh, and immoderate drinking; let her eat roaſted fleſh, drink very ſparingly, and endure thirſt. The uſe of all theſe remedies muſt be ſo long continued till the head of the patient be freed from heavineſs and pain, and may be on all ſides handled, without trouble to her. And when about 20 days are over that both the reliques of the diſtillation and the humors, which have fallen both into her Joynts and Lungs, may be attenuated and diſſipated, it is good to order her a diet drink of Guajacum, which does much leſs weaken the body, and is ſafer than an hot houſe. Now let the decoction be ſtrong, and boyl towards the end therein, Polipody, ſeeds of Carthamus, Sage and Hyſſop; and 'twill be very good for her, if by Vertue of the ſaid decoction ſhe may be made to ſweat in the morning and before ſupper. While this is in doing, ſhe muſt nevertheleſs perſiſt in the uſe of thoſe remedies now deſcribed. She muſt be nouriſhed with a pretty full diet, leſt her ſtrength by time and labour come to fail her. If the pains of her joynts ſhall not be aſſwaged by the foreſaid means; find out in her hip, the part where her greateſt pain is, and faſten there an indifferent great Cupping-glaſs without ſcarrification, being repeated three or four times at convenient diſtances, till the pain go away. For it plucks out the pain more ſtrongly than any plaiſter. And for her knee make vaporaries of wine or vinegar, putting therein a piece of a milſtone red hot; or with baths of the Lie of Vine branches, wherein are boyled roots of Acorus, and Elicampane, Polipody, Bayes, Thyme, Stæchados, Sage, Betony, Marjerom. The ſtoppage of her Lungs, will be opened by Oxymel Scylliticum. Oxymel ſimple, ſyrup of Hyſſop, or any other compounded cough medicines, inſtead of a Lick-pot.

The *LXVI.* Counſel.

For a Schirrous Tumor:

YOur Judgment truly agrees very well with the relation you make of the Caſe. For if at firſt there was vehement pain, without redneſs, without any pulſation or heat; and now the pain being gone the tumor is increaſed, it muſt needs be, either that an œdematous tumor is turned into an abſolute Schirrhus, or if the tumor be not very hard and reſiſting, that the fleſh has grown above meaſure, the membrane of the Muſcles being broken, and ſo there is become a Sarcoma or fleſhy tumor ſo called, void of pain. Howbeit the former opinion is more probable.

Seeing the patient has received no good by theſe excellent remedies which have been applyed, I conceive her body muſt be extenuated, and thoſe vitious humors diſſipated by a decoction of Lignum vitæ: which ſhe muſt be conſtrained to uſe with a thin and dry diet, for at leaſt 20 days. Every eighth day ſhe muſt be purged with a medicament made of Senna, Agrick,

Diaphenicon, that it may draw out the gross humors already prepared: nor must she sweat that day. On other days when her sweat is wiped off, you must apply the plaister of *Phylagrius*, or *Emplastrum filij Zachariæ*: for they are both very fitting to mollify and discuss hard Tumors. These things being continued, and not helping, apply this most effectual Cataplasme or pultis.

Take Roots of Bryony, wild Cucumer, Orris, St. Maries seale; raw, each two ounces. Roots of Marsh-mallows, of Lillies roasted under the coals, each three ounces. Seeds of Mustard, Nettles, Water-cresses, each one ounce. Beat them all together, adding fresh Goose-grease eight ounces. Oyl of sweet Almonds as much as shall suffice. Make all into a Cataplasme.

The LXVII. Counsel.

For the English Plague, or sweating-sickness; the Counsel of Fernelius, Hollerius, *and* Sylvius, *for the* English *Embassador.*

THe English Plague, which has been known but of late years, is of all other the most acute. It has got its name of the sweating sickness from its most remarkable symptom; and whether it proceed from corruption of the spirits, or humors, or both, it is doubtless an Epidemical disease: and the constitution of the Air being corrupted, either by winds, or exhalations out of the earth, or some other venemous infectious cause, it exercises its cruelty most of all (as other pestilences do) and most dangerously, upon bodies that are moist and excrementious. If therefore you would either hinder the reception of that venemous quality of the Aire, (which were most to be wished) or drive it away when received; you must diligently resist both the external cause, viz. The contraction and commistion of corrupted aire, and the preparation of the body whereby it is apt to receive the same. You shall hinder corrupted and pestilent Air, and such as is vitiated in its whole substance from being received into your body, if you keep your self far distant from all such places where the Air is infected. Or if business do require your Lordships presence in such places; the Air must be stirred and agitated with fans, and driven from you, or corrected with such things as hinder putrifaction: and the Air which is not as yet putrified, must be by the said things preserved, such are, fire in your chamber, and the whole house besides, yea, and round about the same, of dry woods, and odoriferous plants, as Sage, Rosemary, Juniper, Bays, Marjerom, Leaves of dried Thyme, Flowers, Seeds, Berries, Cloves, Nigella Romana, the seed and root of Pæony, especially the male, Schenanth, Lignum Aloes, Storax, and juice of Angelica, and trochisks made of these things, to perfume, adding thereto also Amber-greece, if you please, and Musk, and other Alexipharmaca. And be careful that this aire so studiously prepared be not defiled by mens breaths, lest there happen to be some among them that are infected with this disease.

Moreover, you shall defend your body, being of constitution somewhat hot and moist, from the infection, and render the same inconquerable, if you keep it free from putrid excrements, or such as are ready to receive putrifaction, and make it wholly perspicable, the pores thereof being kept open. Both which may be effected by a few evacuations, and a fitting course of diet. Now the Evacuations shall be such as these. Always the first day, before you go out of *Paris*, take Pulp of Cassia new drawn six drams, choyce Rhubarb not very fine poudered one dram and half. Cinnamon six grains. Take it in the morning, three hours before meat with sugar or bugloss water. The day after about six a clock in the morning take away about six ounces of blood, from your basilica veine, or if you dislike blood-letting, diminish your blood by a spare diet. And seeing our bodies are apt even of Meats not offending in quantity nor quality, to breed sometimes superfluity of excrements, 'twill be healthful for you, once or twice in a week to swallow an hour or two before meat, two or three of these pils.

Take Choyce Aloes half an ounce; the best Myrrh two drams; Saffron ten grains, Dittamus leaves, the roots of false Dittamus, wild Betony, Tormentil, Bole-Armenick, Terra Lemnia, each half a dram; with fresh oyl of sweet Almonds drawn without fire, and with syrup of Lemmons, make all into a soft mass, rowl it in Leather.

And

And athough these purges do also add strength to our principal parts, wherein are our chief faculties, whose action is our life: yet must they be armed as it were with their proper Antidotes, that they may give no place to this malignant contagion of the air. And such are these two most excellent ones, invented and approved by reason and experience.

Take Conserve of Bugloss, Borrage, Cichory, Maiden hair, each two ounces. Conserve of Roses, Citron peeles preserved, each one ounce and half; Leaves of true Dittamus, roots of false Dittamus, of wild Betony, and Tormentil, each two drams. Seeds of Carduus, of Citrons, of Sorrel, each three drams. Zedoary, Gentian, each half an ounce, old Mithridate, Treacle, each three ounces. Pouder of Diamargaritum frigidum, de Gemmis, Diarrhodon Abbatis, and Trionsantalon, each half an ounce; liquor of the decoction of two Capons, altered with Sorrel, Purslane, Scabious, Bugloss, Borrage, Marygolds, ten pints, with thirty leaves of the finest Gold. Distil it artificially in a glass Alembick over the embers, and keep it in a Glass. Take thereof every morning two hours before dinner, with Sugar and Cinnamon. And if you be taken with the sickness, you must have twice or thrice in the fit two or three ounces at a time, warmed a little. In the morning your body being disburthened, exercise all the parts thereof with gentle motions, after which if gentle sweat follow, wipe it off with soft cloaths.

And when the heat of your body is over, eat meat easy of digestion, but a little more sparingly than ordinary. Such meats are Thrushes, Quailes, Partridges, small Birds, fed Capons, Hens, Pheasants, Leverets, Rabbits, Kids, Roasted rather than boyled, with juice of soure Grapes, or juice of Sorrel, Lemons, Oranges, with plain Vinegar, or Vinegar of Roses. Or if you desire to eat of these, or such like meats boyled, let them be qualified with Purslane, Borrage and Bugloss, and let them be eaten with the foresaid spices, but so sparingly, that you must rise from table with your belly but half full. If you desire to eat fish, let them be such as after boyling have their substance short, dry, and crumbling, with plenty whereof your Country of *England* is richly furnished. Let your wine be in the summer of indifferent strength, in color either white or firy; in the winter stronger and redder, provided it be not too vaporous or hot, or need much tempering with water, which we allow not, because it moistens too much, nor yet your Country beer, which engenders a thick and melancholick juice, be it made how it can. Nor do we approve of your Ale which is like your Beer, nor of milk, which is too apt to be corrupted; nor of whey of milk turned and mingled with white wine. Cheese, though it be good in as much as drying, yet because old cheese is hot, and new is cold and crude, and apt to obstruct, it must be forborn, especially the frequent and large feeding thereon. All summer fruits dispose the body to putrifaction, Dates and Raisins we permit, nay, we enjoyn the eating of them, also dryed Figs, because they scoure the bowels, open obstructions, and resist poyson, sweet Almonds, Capars, &c. preserved Citron peels, Conserve of Roses, of Borrage, of Bugloss, of Milt-wast, of Scabious, of Cichory, Tormentil roots, wild Betony, and the like, we highly esteem, and would have them frequently used, at all hours in a manner, either before or after meats; unless they bind the belly too much. You may sometimes take two hours before break-fast, the quantity of an hazel-nut of this mixture.

Take Conserve of Roses, Borrage, Bugloss, Citron peels preserved, each one ounce. Treacle of Venice, or old Mithridate three drams. Bole Armenick, Terra Lemnia, Sigillata, each two drams. Make all into an Opiate, after a small quantity whereof, let him drink two ounces of distilled wine.

You may also take a quantity of the Philosophical Egg, which most Physitians have described. If the plague shall seize upon you unawares, it will wonderfully strengthen your nature, in the sweat it self, to drink some of your distilled water, and to take of your Electuary twice or thrice, and to suck a piece of bread steeped in wine allayed with Bugloss water: and this recreates our principal parts themselves, which are the causes of our faculties, and the faculties themselves which govern our bodies, and sooner drie the pestilent consumptive venome out of our said bodies. And therefore it makes the fit safe and short, and frees the body from those cruel symptomes, which are wont to attend this disease.

The

The LXVIII. Counsel.

Of the Elephantiasis, or Disease so called.

SEEing the learned Physitians do not agree as concerning the symptomes appearing in the face of *John Rocquiret*, some saying that he looks horribly, has Lyons eyes, eye-brows without hair, a thin beard, swollen nostrils, and deformed with many pushes within and without, with an ulcer beginning; and that his breath is short, his almonds of his Ears ulcerated, with an hoarse and obscure voice. And others say that some of these tokens are not to be seen, and that the pushes, if any be, are red. It must of necessity be, that the signs about which the renowned Physitians are at variance, are very obscure and deserving little credit, nor must we from them conclude any man to have the Morbus Elephantiasis, or disease so called; nor if all the tokens mentioned did appear must we therefore judge that it is therefore the beginning of the Elephants-Mange or Elephantiasis; especially seeing his body is well nourished, and there is no numness, swelling, or coldness of his feet or hands, which is wont presently at the very beginning to accompany the Elephantiasis. Nor in case there were the beginning of that disease, ought the patient to be therefore shut up from the society of Men, seeing neither his body as yet, nor breath do stink, nor is there any such contagion, as may infect his neighbors. Thus therefore we under written Doctors of Physick do judge of this matter in controversie, viz. that *John Rocquiret* having a suffusion of thick and melancholick blood through his skin, and deformed with dark red pushes, is not yet to be reckoned amongst such as have the Elephantiasis or Elephants-mangines, nor is to be shut up from the society of Men.

But if hereafter no course of diet or Physick can overcome the disease, so that it shall grow worse, and afford more evident signs and tokens, it will be then time enough justly to determin what is fit to be done in this case. The Cure must be undertaken in the spring. Let his diet be cooling and moistening. Let him every week be purged with an Apozem. Let him drink no wine. Let him avoid all hot and venemous medicaments, both purging and Antidotary, such as Scammoniated Medicaments, Methridate, Venice Treacle, &c. which are so far from helping the disease, that they burn the humors, and double the same.

The LXIX. Counsel.

Of the Elephantiasis beginning.

The Disease propounded.

A Gentleman of fifty years of Age, of a fleshy, but ill favoured habit of body, something like that of those which have the jaundies, his face of a blewish red, full of thick and black blood, wherein sometimes arose black or livid spots, as also in the rest of his body, having little or no sence in them. Howbeit this Gentleman is not troubled with thirst, loathing of meat, or any other more grievous symptomes. He has taken a thousand potions, and has exhausted his body by sweating in hot baths, to the prejudice of his Health. For he fears he shall have the Elephantiasis, or Elephants-mangines, whereof this seems the beginning.

Mstr. Fernelius,

Mſ. Fernelius *wrote back theſe Remedies.*

Take Roots of Sorrel, ſharp pointed docke and Elicampane, Polypody of the Oak, Seeds of Carthamus, Raiſins ſtoned of each half an ounce. Endive, Cichory, Plantane, Bugloſs, Borrage, Hops, Fumitory, Dodder: Ceterach, Chamædrys or ground Oak, Ground pine, of each one handful; Violet flowers two pugils. Make a Decoction to ſixteen ounces. In the ſtrained liquor ſteep all night Epithymum, half an ounce. Senna five drams; Agarick two ounces; Ginger, two drams. In the morning let them boyl a little and make an expreſſion of the Liquor, and therein diſſolve, of the clarified juyces of Fumitory and Plantane, of each three drams. White Sugar one pound and an half. Make of all a Syrup perfectly boyled. Let him take two ounces or two and a half at a time, in Whey, every fifth or ſixth day.

Take Conſerve of Bugloſs and Borrage flowers, of each two drams; ſhavings of Ivory and Harts-Horn, of each a ſcruple. Old Mithridate, two drams. Mix them for two doſes after his purging, three hours before meat.

After the third or fourth purging, open the inner vein of his left Arm, and take away ten ounces of blood. Afterwards, if poſſible by any means, open his Hemorrhoid veins: firſt with emollient and altering fomentations, afterwards with ſuppoſitories of Hiera ſimple with juyce of Mercury or with Gall: or if they be conſpicuous outwardly and ſwollen, apply Leeches to them. That by this means the black and Melancholy blood may flow out.

When therefore his body ſhall be diligently prepared and evacuated, the uſe of bathing will be exceeding profitable in ſweet potable water, continued many days together, in the morning faſting. But ſo that the Baths be not hot to cauſe ſweat, but only lukewarm, to moiſten his Body.

He muſt keep a cooling and moiſtening Diet; barley cream will be very good for him in a morning, eſpecially when there is no need of Medicaments. Broths alſo made of Chicken, Veal, or Mutton, with Bugloſs, Borrage, Sorrel, Lettuce and Plantane. If he leave off Wine in the Summer, it will be exceeding wholeſome for him to drink inſtead thereof Barley water, or any other drink prepared for him; If any parts in the Skin appear black, or black and blew, void of ſenſe, fix Cupping-Glaſſes thereupon and make Scarrification, and that a good depth. That the blood may flow out, and the ſence be recalled.

The LXX. Counſel.

A Letter from a certain perſon, that with a thin Diet, and a Decoction of Guajacum, did cure a Diſeaſe.

MY Diet was very ſpare, conſiſting of Raiſins and Dates, and I ſo abſtained from wine, that I cannot endure the ſmel of it, my belly is in good caſe as to going to ſtool. My morning potion makes me ſweat indifferently, mine evening potion makes me not ſweat at all. I have no ſhortneſs of breath, but my old pain always ſticks in my breaſt. And within this ſix days I have felt a new pain over againſt the old, between my ſhoulder-blades, which herein differs from the old pain, in that the new one is felt by touching, the old one only upon vehement motion. Since yeſterday I have been twice as bad as formerly; My ſtomach (which has been always naturally weak) doth continually pain me, yet without loathing of my meat, &c.

To the premiſes, Mſr. Fernelius *thus anſwers.*

You do, truly, exceeding well, and take a very good courſe to vanquiſh this long laſting and rebellious Diſeaſe; howbeit, I fear leſt your ſtrength will at laſt fail you, by reaſon of your ſo thin a Diet: you muſt ſee to preſerve them, and ſuſtain them with a little more libe-

rial

rall allowance, that they may hold out till the end of the Cure. I perceive you have new pains risen; but that is the Nature of the potion, that if any Humor did lurk silently in the body, it will at the first bring it to light, and many times exasperates the pains, which do afterwards end. And whereas a new pain vexes your Stomach, it comes from the same cause; for vitious Humors being stirred in the bowels, they break out presently into the stomach: and therefore I thought fit by any means to purge them with an accommodate Medicament, the description whereof I have sent you. The day wherein you take it abstain from your other potion, and afterward use it more liberally, that you may sweat lustily from all parts. And if the sweats will not be otherwise provoked, lay some hot thing to the Soles of your Feet.

The Counsel of *Johannes Capellanus* Senior, Renowned Physitian to the Queen Mother of the most Christian King, *Francis* the First of that Name, King of *France*.

THe Pestilence is an aiery Venome, or the Air poysoned by admixture of putrid Vapors, and qualified with a disposition most pernicious to mankind. For the Air thus affected, through necessity of respiration, does first enter into the receptacles of the Heart, and by & by the infection is by the Arteries spred into the whole body. So that both the Heart the Fountain of Life, and the spirit the next Organ of the Soul, being by this cruel contagion rendred unfit for the functions of Life, a man must needs soon come to his end, if speedy remedies be not applied. And that we may prevent so sudden a mischief, we shall first speak of the point of Diet; and then I shall prescribe medicaments both for prevention and Cure.

Seeing this Infection of the Air proceeds from watry vapors mingled and confounded therewith; such an Air must be chosen, as is far from lakes and pooles, which for want of motion do putrifie. Let the windows be set open to the East and North. For those are dry quarters, and none of those humidities come from them which moisten and infest the Air. The North-wind is especially good, which is therefore called the broom of Heaven, because it cools and tempers the boyling Air, and corrects the putrifaction thereof. You must use the wholsomest water you can get. Let your meat and drink be temperate, not only in quality, but in quantity also, so as they may not collect superfluous Humors, and may be hard to be corrupted. Such are all meats that are not of an immoderate or bad juice; some tart things, as Citrons, Barberries, Raspberries, sour Grapes-liquor, and Vinegar, wherewith your other meats are to be sawced. Let your Wine be allayed with water, wherein red hot Gold has been quenched. For there is a singular Sympathy and consent betwixt Gold and Wine, and betwixt Wine and the vital Spirit. Also avoid sleeping in the day time which hinders the body from perspiration. Grievous, sad, and troublesome perturbations of the mind must be abandoned, which destroy the natural state of our Temperament. For the mind moves the bodies bulk, as the Intelligences move the heavenly bodies, not only with local motion, bnt also with the motion of alteration, by the spirit its Organ. Also vehement exercises do the same, and weaken the forces of the body, and render them weak for action. But moderate exercises, do empty the habit of the whole body of Excrements, strengthen all the Members, and make the faculties of the Body more chearful, in the performance of their Functions.

As for Medicinal Remedies to prevent the Plague, when you awake from sleep, perfume your Chamber with Frankincense, Juniper Berries, Citron Peels dried, or leaves of Gold. For a perfume made with these things, does not only purge the Air, but also your cloaths and

and garments, do thereby carry away a quality in them, contrary to the infection. Let your mouth and hands be washed with water and a little vinegar mingled with it. It is good to carry such things about one, as have an antipathy against all deadly venomes, as the Garnet or a kind of Carbuncle so called, which though it be of small price, is counted to be of greatest vertue among precious stones, having an especial friendship to the heart, as the Smaragd to the brain, the Saphire to the Liver, Coral to the Stomach. Also an Hyacinth is carried and worn in a Ring to the same purpose, and held in the mouth. Some also hang quick-silver about their neck, which is contrary to other Poysons, by a hidden and peculiar Antipathy. Shut a bit of Spunge wet in Vinegar in a box with holes, and smell frequently thereunto. Hold a piece of dried Pomegranate rind in your mouth, or a leaf thereof, and of Bays. Also Zedoary, which *Galen* and *Paulus* do term *Arnabo*. For all these things by an occult propriety and certain invisible raies, do drive away pestilent Air; even as *Palma Christi* drives away the viper Dracontius; Polemonium drives away the Scorpion; the herb Loose-strife kills Serpents, and drives away flies. If your belly be not loose of its own accord, so that you go not to stool all the day, an hour before Supper swallow one of these Pills following.

Take Aloes, two drams; Rhubarb and Agarick, of each one scruple; Ginger and Cinnamon, of each ten grains; with Juyce of Citrons or Vinegar make all into a masse of Pil-stuff.

Aloes preserves bodies both dead and living from corruption: Rhubarb draws away flegm, Choler, and Melancholy, and Agarick does the same. Cinnamon resists Poyson, Ginger strengthens the Bowels, and quickens the sluggish lazyness of the Purgers.

When you are to go out in the morning, take the quantity of a Wall-nut of this following Electuary.

Take Bole-Armenick washt in Scabious Water, one ounce; Conserve of Water Lillies and Buglos's flowers, of each two ounces; Citron Peels preserved, and Conserve of red Roses, of each one ounce; Cinnamon, one dram; Citron seed, Pearls, Red-Coral, of each one dram; Amber, two scruples; Camphire one scruple. Mix them with the Juyce of a Citron or a Pomegranate into an Electuary.

Bole-Armenick, is a peculiar Remedy for the Plague, which is also a present help for the Lungs any way oppressed. The Arabians since *Galens* time have found by long experience that water Lillies are wonderfully good for the Plague, Buglos is a friend to the spirits so far, that wine in which it is steeped drives away sadness and cheers the drooping soul. The Peels of Citrons strengthen the stomach, and their juyce extinguishes the Feaver and removes putrifaction from the Blood. Pearls clear the Eye-sight, and dissipate sooty vapors. Amber is good for infirmities of the Brain, Heart, and Breast. Camphire does that in the body of man, which Boreas or the North wind does in the visible world: For it purges and cleanses the Air of our Bodies, and extinguishes the Pestilential Fervor and heat of the spirits. To conclude all in a word, those things that are good to use in the Plague time, must have in them these three faculties, viz. They must help Putrifaction, strengthen the spirits, and when they are dissolved and dissipated, collect and restore them; and lastly they must have a Bezoartick or Antidotary faculty, or a certain Antipathy whereby they resist Venome. And therefore as much as may be we must search out Medicaments that have these faculties. Moreover care must be taken to purge out those humors which are apt to receive the Pestilential Infection.

And to that end three or four of these Pills are to be swallowed, which are by *Paulus Ægineta* cited from *Ruffus*.

Take Ammoniack Gum, two drams; Myrrh, Aloes, of each one dram. Make them with Honey into a Mass. Ammoniacum and Myrrh do further the bringing up of Flegm, and help the faults of the Chest, which part is most subject to Pestilential injuries; and they do cause the breath to come and go easily.

There is also an Herb called Myrrhis, Mock-cheveril or sweet Cicely, which those that drink in Wine, are thereby preserved from the Plague, in their stead, these Pills following may be used.

Take Aloes, two drams; Rhubarb, Agarick, of each half a dram; Mastich, one scruple;

Zedoary, Ginger, of each ten grains; with Juyce or Syrup of the juyce of Citrons make all into a Mass.

Mastick strengthens the stomach, which has great affinity and Sympathy with the Heart.

As soon as ever a Man is taken with the Plague, because of the sudden danger (seeing it kills the patient in a days time) you must make more speed in application of Remedies. Open therefore a Vein in the Arm(provided there be no swelling in the groins or neighboring parts) so as the parties age, strength, and habit of body will permit, taking more or less blood. For by this means in the Veins primarily and in the Arteries by consent and communication the boyling of the blood is prohibited, or allayed, and the Pestilent Vapor is by the same means averted from the heart. Blood being taken away, let him take of the foresaid Antidote double the quantity prescribed for preservation, adding four grains of Camphire: and because the sickness commonly rages in the summer time, you must in that hot season add the more Camphire. And that the rest of the Humors besides blood, which are setled in the stomach, Guts and first passages, may be voided forth, give him some Pils of the second Composition, two hours before supper, if the vein was opened in the morning; or next morning if he was let blood in the Evening. And if the Patient will not away with Pills, give him this that follows.

Take *Rhubarb four scruples: Agarick two scruples: a few grains of Ginger: Mix them with half an ounce of Conserve of Bugloss, and a little Oxymel.*

But if he desire a potion, dissolve the said things in a Decoction of Tamarinds, which cools, quenches thirst, takes away loathing of meat, breaks the acrimony of choler, and resists Putrifaction. Nor must the belly be purged with sharper Medicaments, lest the pestiferous venom should be drawn back to the bowels, from whence Nature endeavours to Alienate, drive, and force the same away. And when she drives the venemous Humor into the outer parts, or parts near the principal, she must be assisted by Art. For so, the Physick and Nature mutually assisting one the other must needs drive out the Morbifick cause. To which intent Cupping-Glasses with deep Scarrification are good, also Burning, Dissection, Causticks. If the Patient be burned with a Feaver and tormented with thirst, he must not be kept too much from drink. But let his drink be such, as is very cooling, apt to quench thirst, and resist Putrifaction, as Oxymel made with sugar and allayed with much fair Water, or Syrup of the Juyce of Citrons, or Barberries, or of sour Grapes. And if the infected Humor shall have recourse to the Stomach, so as to incline to vomiting, you must provoke the Patient to vomit, with Juyce of Raddishes and Oxymel. For the Raddish resists all Poysons. This subject would require a larger discourse: but my intent is not to set down all that may be said, but such things only as are most worthy to be known.

Counsel for a Gentlemans Son troubled with divers Infirmities.

A Certain boy six years old, born in Bretain, is taken with a continual Feaver accompanied with Eruptions into the Skin. They were very many, and his whole Body, yea, the inside of his mouth seems to be but one continued Scab. His eyes are very much swelled, and do stick out as it were: and at last his right Eye has quite lost its sight, and the sight of his left Eye is become more dull, as if it were troubled with a suffusion. This dulness seems to depend upon some obstruction of the Optick Nerve, some suffusion which is yet but weak, being joyned thereto. Sometimes his Ear did run with a Sanious and quittorish matter, and the passage of an Humor from the Ears to the Nerves of the Eyes is easie.

The Obstruction hints the use of opening, and de-obstructive medicines.

If there be a suffusion; the Humor which is gathering or gathered in the Cornea Tunica, or Chrystalline Humor must be dissolved and discussed.

For prevention, the Remedies are, Diet, Evacuation, Diversion, strengthening the parts affected.

After

After meals let him take a pouder of Coriander comfits, Sugar of Roses, Pearls, and a little Cinnamon.

Take *Seeds of Annis, Fennel, Cinnamon, each one dram. Coriander seeds prepared two ounces. Sugar of Roses half a pound. Eye-bright two drams. Make all into a powder.*

In the morning when he rises let him take of this following pouder.

Take *Seeds of Fennel, Annis, and Eye-bright, each one dram. Cinnamon two scruples. Nutmeg, Mastick, each half a dram. Sugar three ounces. Make a powder to be used by its self, or with Fennel water.*

He must use often rather than strong medicines, because of his tender age.

Apophlegmatismes are good for him, but not Errhines; and grains of Mastick shut up in Raisins of the Sun.

Small Pils of Rhubarb and Agarick are commended.

When the Spring approaches, make a Syrup thereof adding Head and Eye simples.

To apply a Caustick to his left Arm will be good and to the hindermost part of his head.

Manardus advises a third issue in the confines of the foremost sutures, made with an actual Cautery of Gold or Iron.

For the stoppage of the Optick Nerve and Dimness of Sight, nothing is better than a Lie of the ashes of Vine branches, wherein Cephalick herbs and Senna have been steeped.

These things strengthen the Brain and Eyes, viz. Myrobalans Chebulan preserved, eaten in the morning, and the stones held in the mouth, Nutmeg, Comfits of Fennel-seed, Eye-bright frequently chewed, Fennel-seed steeped in Vinegar and then dryed. Add Cinnamon and Sugar, and a very useful powder may be made of the said simples. The sight of green things especially the Smaragd stone, Blew colour refreshes the wearyed eye. Contrariwise, the eyes are hurt by surfetting, New-Wine, Beans and Pease, and such like, Coleworts, Raddish, Garlick, Leeks, and other such things, Great Fishes, the sight of bright things swiftly moved. Some youth with a sweet breath having well vvasht his mouth in vvater vvherein Fennel seed and Nutmeg have been steeped an hour, must breath into the Lads eye. Also he may lick his Eye, having first chevved seeds of Fennel or Eye-Bright.

The Gals of Beasts are commended, especially of Fishes, and principally of a Skate or Thornback: of land four-footed beasts, the Gals of Lambs, Svvine, and Kids vvhich are not past sucking.

Fomentations are not much approved, because they dravv more humors than they digest, unless both the body and brain be first diligently purged. In suffusions not yet inveterate, this vvater does vvonders.

Take *Juyce of Fennel half a pound; juyce of Clary and Celandine, each an ounce. Green Eye-bright two handfuls. Vervaine, Marjerom, each one handful. Syrup of Roses four ounces. The best honey half a pound, Tutty prepared, Lignum Aloes, each two drams.*

Put all into an Alembick, and Still them vvith a slovv fire; vvith the water vvash the eye, and drop a little gently thereinto. And though his age be very tender: yet the decoction of Guajacum cannot but be good in a very vveak decoction, vvith Liquoris, Raisins, and Fennel-seed.

This counsel vvas given by *Tagaultius, Sylvius, Alkakia and Flexellius*, Famous Physitiaas, vvhen *Fernelius* vvas living.

Six Counsels of *Simon Petreus*, a most renowned Physitian of *Paris*.

The first Counsel.

To cause easie deliverance of a Woman in Labour.

IT is hard to judge of the causes of that good womans difficult labour, concerning whom you write to me. For besides that the causes of hard labour are sometimes manifest, as the over largeness of the Child, and the narrowness of the wombs neck, and the weakness both of the Child and Mother: they are sometimes so hidden and obscure, that the best Physitian cannot find them out. And sometimes it happens through a peculiar nature of the womb, that the child is not therein rightly scituate, though the woman hath not transgressed in external things, as to strait lacing of her self, violent motion of mind or body and such like. And when I seriously meditate of the causes of that same hard labour wherewith this Gentlewoman is troubled, I find it to be a peculiar nature of her Womb, whence it comes to pass, that when by the mixture of both seeds the child is shaped, it comes to have a depraved scituation. For your letters to me do not mention any external or internal manifest causes, which might bring this hard labour; unless peradventure we should blame the weakness of the child, whereby it is not able to assist the labours of the mother to bring it forth. And there is, truly, some reason to conjecture the weakness thereof: seeing you signifie in your letters, that her womb settles downwards, now when she is gone but four moneths and an half, at which time the child is not so great as to be a burthen to her. But whence this weakness of the Child should arise, I cannot easily judge, not being by you acquainted with the manners or course of life of this good Gentlewoman, whereof when you shall certifie me, I shall send you more certain advice touching this business. The premises considered I conceive this Gentlewoman should be advised to use such remedies as may strengthen her womb, and hinder it from setling downwards. To which purpose it will be good to apply *Emplastrum pro Matrice* to her loines.

Moreover her belly must be born up, and her womb strengthened by convenient swath bands fitly and duly applyed by skilful Midwives. And that the womb may bear upwards, she must use cordial Lozenges, with Amber greece, Civet, Bistort roots and Coral in them. Also tie about her neck a Nodule which may touch her Stomach, made of Powder of Sanders, Saffron, Ambergreece, and Civet, by the pleasing vapor whereof the womb may be allured upwards. And when the womb shall be stronger, and not settle so much downwards, I do very much approve the Expression of two drams of choice Rhubarb infused in Rosewater, adding half an ounce of Sugar of Roses; which she may repeat once or twice, if she find good by it, especially in her fifth and sixth months. Touching blood-letting I cannot certainly tell what to advise, her womb being so weak, and falling so much downwards. Yet if there appear the signs of blood abounding, you may take away two small poringers. As to the latter end of your letter, wherein you desire of me such remedies as may cause easie Labor, then when nature shall set her self to exclude the Child. I have always judged that emollient Clysters are of great force; and then certain Liniments and softening oyls, to anoynt her belly and loyns. To the same intent, a syrup made of Cinnamon, Saffron, and pouder of date-stones, with trochisks of mirrh is very effectual. *Galen* commends Castorium in this case, which is able to bring away the dead child. The Ancients have commended the stone Ætites or Ægle stone to facilitate womens labours, being applied to their thigh; and to hinder Abortion, being applyed above the Navil.

The second Counsel.

Of Mother-fits, to a Physitian called Gravellanus.

I Received your Letter (Most Learned *Gravellanus*) whereby you have acquainted me with a most grievous Symptom, wherewith your brothers wife is vexed, viz. Suffocation of the womb, whereof your self, this present moneth of *January*, have been an observant Eye-witness, after which a trembling of her head, and something like the falling sickness did follow. Which Disease though you have administred fitting remedies, has not yet quite left her, but is wont to trouble her by fits at uncertain distances of time. Now you conceive the original of this disease, is to be referred to her womb, in the cavity whereof some portion of corrupt seed being retained, does send ugly vapours into the upper parts, which according to the variety of parts by them afflicted, are wont to cause various symptomes. For when through the Arteries they rush into the Heart and Lungs, they cause ceasing of the pulse, and of respiration; if they possess the Coates of the Braine, they cause Convulsions, such as you have seen in this patient. I approve of this judgment of yours, touching this grievous symptom; but I conceive withal, that the depraved quality of melancholly juyce wherewith she abounds, is a concomitant Cause. For her womb and spleen are confederate to do her mischief. And therefore if you would cure her, you must bend your Care to both those parts. And in my former Letter, I briefly shewed how to correct and tame the malignity of the Melancholly juyce: I shall now only set down what may tend to free her womb from this symptom. And therefore as oft as this fit shall seize upon her, repeat those remedies which you have used, and then apply Cupping-glasses to her thighs. Let the Midwife put her hand anoynted with butter and a little Civet into the neck of her womb, and rub the same, that it being provoked by that titillation may cast forth the corrupt seed: this is the advice of *Matthew de Gradibus*, a good Author. Moreover, lay to her Navil a Plaister of Treacle and Methridate, with a little Civet. Give her sharp Clysters made of simples respecting the Womb. Open the Saphæna vein after her feet have been washed in an hot decoction.

And when this Paroxysme or fit is over, that it may not come again, her whose body must be cured by purgation, and such remedies as I have described as prevalent against melancholly juyce. Sweet smelling things must be conveyed into the Neck of her Womb, especially in the fit, which may provoke the Womb to expel the seed; nor must Cordials to recreate her spirits be forgotten or neglected.

I do very much approve of Baths to sit in, made of softening seeds and herbs, and such as respect the Womb; that the passages thereof may be drawn back.

These are the things (friend *Gravellanus*) which I conceive fit to drive away this symptom. If any new accident shall happen, as soon as you acquaint me therewith, I shall write to you again.

The third Counsel.

Concerning Hypochondriacal Melancholy, to a certain Physitian.

THis honored Gentleman, of whose Nature, and sundry symptomes, wherewith he is wont to be tormented, you have accurately written to me, seems to me troubled with Hypochondriacal Melancholly, which I conceive is quartered not only in his Hypochondria, but in his veins in general. And it is to be feared, least that at last it turn to a more grievous sort of Melancholly, of which he had some Rudiments, about twenty years since, as I am informed by you. I conceive the cause of this rooted disease to be not only an hot distemper, but a certain Cachexy or evil habit of his Liver, whereby out of meats of good juyce, it breeds bad, Cholerick and Melancholick humors, by which Hypochondriacal melancholy is fomented, and those symptoms raised, whereof he complains, as that inward bone-pain of his whole Body, but especially of his legs, which after his first sleep, he perceives to be extreamly cold unless peradventure, wheyish tumors from his head where they abound, do flow into his legs, and cause that sense of coldness. The premises considered, and the whole Order of his body (as you

you will judg) being weakned by this Contagion: he must at the beginning of the spring be diligently plied with those kind of remedies which are by you described, avoiding strong and drying Medicaments. Let him therefore frequently use two kinds of Clysters, the one of which must be purging of an emollient and carminative decoction, wherein Diacatholicon may be dissolved. The other must be fatty and oyly to moisten and make slippery his Guts, without any Purgative in it. Then let him take Diacatholicon and Pulp of Cassia, each half an ounce. And when with this Medicament his stomach is well purged: make Apozems of a decoction of simples proper to the spleen and liver, with Violets and Hops. And when he has used the said decoction for four or five days together, after eight days the weather being temperate, give him two drams of Rhubarbs infusion, with an ounce of Syrup of Violets. Concerning blood-letting, this is my judgment: I do not approve thereof, in this very lean and thin habit of body, nor at this season. But if in *April*, his Urines argue an inward heat, then it will be seasonable to let him blood, provided you take away but one small Chyrurgeons porrenger.

After his body has been prepared by these remedies and well purged, the use of Asses milk will be good for him, observing such rules as a Skilful Physitian ought to observe. In the use whereof he must so long continue, till he find himself holpen thereby. And when he shall begin to loathe the same, give him then cooling broths made of Veal or Chicken. And when the Air is temperate, and in the summer time, I very much allow your judgement, touching the frequent use of fresh water bathes, provided that sweat be not thereby caused. Nor must he omit the use of Syrup of sweet Apples, Bugloss, and Borrage, which he must use this Summer if his stomach will beare them; as also the Syrup of Apples of King *Sapor*, may be prescribed when the weather is temperate. And because there is evermore joined with the melancholy juyce a malignant quality, which bears a deadly feud to the vital spirit and noble parts of our body, they must be armed against the same with cordial Lozenges and Electuaries, in the prescription whereof, you must have respect to the stomach, which seems in this patient very weak, and distended with many winds, for the dissipation whereof you shall prescribe some convenient pouder for him to take after meals, such as is that vulgarly used, made of common Dredge pouder, with Coral, toasted Bread, and Sugar of Roses. Let his diet be of good juyce such as can hardly be used in this time of Lent, unless he eat Eggs soft boyled, and Pikes with other fishes that haunt stony places of Rivers. When Lent is over, he may freely use such meats as are fit to breed good juyce. As for the cold which he feels anights, after his first sleep he will easily avoid the same, if he shall cause two large stone bottles to be filled with boyling water and wrapped up in linnen cloaths, and laid at his feet in the bed. For by this means, the heat will come into his legs and dissipate the cold. And if this remedy shall not turn the cold, a liniment may be made of Hogs greece washed in Sage water, and mixed with Oleum Irinum and Aqua vitæ, wherewith his legs must be anointed and covered with Cotton wool.

The fourth Counsel.

Concerning a Flux of Rheume into the Lungs.

BY the relation of a most skilful Physitian, I understand that a Gentlewoman of about six and thirty years old, who has bore many children, has this three years been troubled with a Fluxion of Rheume into her Lungs, which causes her to cough, and is like sometimes to choak her, especially then when her courses begin to flow; which Fluxion, though it have continued long, yet there appear as yet no signs of her Lungs being corrupted, especially seeing she is not at all fallen away in her body, nor is there any appearance of a Feaver, nor is the strength of the natural faculty wanting in digestion and other actions thereof. But it is now to be feared, lest humors putrifying or becoming more sharp should exulcerate the Lungs. And that is most of all troublesome, that she feels a perpetual coldness in her head, of which she vehemently complains. For to stop this desluxion, most learned Physitians have appointed very many Medicaments; whereby they have provided both for the health of her whole body, as also of the parts affected, her Head and Lungs; howbeit there is as yet no good done, the same symptoms continuing, which did before trouble her: and therefore she desires remedies from me, to stop that old desluxion of Rheum into her Lungs, and to free her from these inconveniencies, she is subject unto. Which that I may do it more conveniently, we must consider the

the cause thereof, that the same being known, may by convenient remedies be opposed. I conceive the principal cause thereof to be a cold and moist distemper of the brain, which as wel from the reliques of its aliment, as from the vapors arising out of the parts beneath into the head, does breed many wheyish humors, which by the strength of the Brain are driven out into the Lungs. This cause is peradventure assisted by a distemper of the Liver being somwhat over hot, especially in a body not enjoying the benefit of transpiration, such as is the body of a very fat woman. And seeing the Lungs have along time received this defluxion, they are now thereby filled, and so a period-holding tissick is caused by fits, which come at uncertain distances of time. And that I may give advice for the old infirmity, all our endeavour ought, I conceive, to aim, that in the first place, the humor collected in the head may be hindred from falling into the Lungs; and secondly, that what is already collected in the Lungs, may by convenient remedies be well brought up by coughing and spitting. Both these intentions may be performed, if her whole body be purged this fall of the Leaf with such Pills as are good for the Head, viz. Aggregative Pills, and fine quibus, Agarick being added to them: which let her take twice a moneth, after her first sleep. But before the use of the Pills, her body must be purged with a Decoction of Senna, made in a Pectoral Decoction wherein Agarick and Rhubarb must be infused, and an ounce of Syrup of Roses added to the strained liquor. To these may be added the frequent use of Clysters; and her body being purged, open the Basilica veine of her right Arm, and take away two small porringers of blood, Let her head which sends the defluxion into her Lungs, be cured with a Cephalick Fomentation, made of a Lie of Vine branches, wherein Orris root of Florence, Calamus Aromaticus, Schenanth, Betony, Marjerom, Sage, with Senna leaves have been boyled, adding at the end of the decoction a fourth part of Red Wine. With this her head must be fomented in the morning, for the space of an hour, and then being dried it must be anointed with Nard oyl and Chymical oyl of Turpentine, with a little Aqua vitæ, a long time together, laying Cotton wool thereon, filled with Powder of Florentine Orris, Marjerom, and Sage. Which if it do no good, and the coldness continue, provide her a Plaister de Betonica of the larger composition, adding thereto Benjamin, Storax, Pitch, and hot Cephalick powders, as of Orris root, Cypress root, Marjerom, with a little Turpentine, to lay to her head, the hair being first shaven off. From these we must come to Cauteries, which must be applyed to the top of her head, avoiding the sutures, Let her in the winter continue her Cucufa and head coverings, which have been ordered by faithful Physitians. Let her nostrils continue open; and if they hap to be stopped, she must first use light Errhines or Nose-liquors, then more strong ones, which are to be refused in this sort of disease.

To strengthen her head, make an Opiate, of Conserve of Rosemary flowers, Treacle, Mithridate, preserved Citron-pills, preserved Nutmegs; mixt with conserve of Colts-foot, and Borrage, and all made up with Syrup of Stæchados into the form of an Electuary.

And her Lungs in whose windpipes very much flegme is contained, must be cured with pectoral or cough decoctions, made of the Roots of Elicampane, Florentine Orris, Dragon, with Betony, Hyssop, Savory, and other Cough medicaments invented by skilful Physitians.

Also a Lohock shall be provided of the Root of Arum or Cucko-pintle, and of Dragon roasted under the embers, whereunto being beaten, the pulp of Sebestens, Jujubes, Raisins of the Sun, with Diatragacanthum frigidum must be mixed, all being made up into a Lick-pot, with Syrup of Maiden-hair, which let her frequently take from a Liquoris stick. The pouder of Fox lungs may be added thereto. It will also be good for her with open mouth to suck in the steame of a pectoral decoction. The Other forms of Cough-medicaments prescribed by her very learned Physitians, I exceedingly approve of.

The fifth Counsel.

Touching an Imposthume in the Kidney.

BLoody Urines coming away with certain scrapings or small fragments, do shew that this good woman is diseased in her Kidney, of the pain whereof she complains in her Loins; so that I much fear an Imposthume in her Kidney, especially since she has voided Flegmatick Urines, or rather such as have a shew of Quittor in them, the whole body disburthening it self into

into the weak kidney. Which mischief, unless timely prevented, 'tis to be feared, least it bring her at last into a Consumption. Now the way to prevent the same, is to give her frequently emollient Clysters, and then boles of the pulpe of Cassia Fistula, sometimes alone, and sometimes with Rhubarb. Afterwards, when the hot weather shall be abated, open the Basilica veine of her Arm on the pained side. And when by these remedies her whole body shall be provided for; we must then think of clensing and strengthening her Kidneys. To cleanse her Kidneys, in the first place Almond milk made with Barley and Liquoris will be good, and after that the use of the Hydromel made with a large proportion of water, when the weather shall be temperate; an Opiate of Conserve of Violets and Roses, with Electuarium Diatragacanthum frigidum, Pine apple kernels hulled and steeped in Rose-water, all made up with Syrup of Marsh-mallows. To the same intent broths are good, made of cooling herbs, as Lettuce, Purslane, Violet leaves, Marsh-mallows; also Barley broths taken in the morning. The last shall be Asses milk, which she must use a monerh or two in the morning, sweetned with Sugar of Roses. Her kidneys being scoured she must use the Trochischi Gordonij with Diatragacanthum frigidum, dissolved in Hydromel. Her Kidneys must be strengthened with Unguentum Rosatum. In September when the air is temperate, let her use a decoction of China with Raisins and Liquoris, that the humors which flow from her whole body into her troubled kidney, may take their course another way. The course of life and diet prescribed by her learned and skilful Physitian must be diligently observed by her. In mentioning the Remedies to cleanse her Kidney, I have overpassed the use of Venice Turpentine, which wonderfully helps to scoure the kidneys, being taken with Diatragacanthum frigidum.

The sixth Counsel.

Touching Swellings which had the appearance of Cancerous Wenns.

SEEing these two tumors which appear at the brink of her left Arm-pit, have the shew of certain Cancerous Wenns, as you have informed me by your Letters, I conceive you ought to deal very gently with them; nor must you use strong softners or digesters, least they grow worse, but gentle ones, such as is an oyntment made of a little Diacalciteos dissolved in juyce of Plantane and Nightshade, all beaten together in a leaden Morter. Nor must you desist from that medicine till you see what good it can do.

Howbeit the use of external remedies will be then more convenient, when you have provided for the good condition of the whole body of this ingenious Damosel, which because it is tender and dry, as I understand by her Father, it must be gently handled. And therefore it must be purged with Cassia Fistula, Diacatholicon, or King *Sapors* syrup newly made half the Saffron being left out. Which let her take twice or thrice in a moneth, with Whey wherein Epithymum and Fumitory have been infused. And because her nature seems inclined to breed melancholick juyce, even of the best meats, through fault of her Livers distemper: we must fight against that juyce with a Syrup made of juice of Bugloss, Borrage, Baume, Endive, sweet Prunes, whereof let her take a mornings with boyled water. To the same intent Asses milk will be good, which let her use every morning with a little Sugar. At the approach of spring and Fal, her body being purged, let her left basilica or median veine be opened, and take two small Porringers of blood. Finally, make an Issue in her lest Arm, near the muscle Deltois. This summer time let her frequently use a Bath of sweet fresh water, to correct the drines of her body. Moreover let an opiate be made for her of Conserve of Violets, Lillies, Roses, Bugloss, Borrage, Citron peel, Confectio Alkermes, that by the use thereof the malignant force of the melancholly juyce may be amended and the patients natural strength restored.

Let all her diet and course of life tend to moistness, and moderately to cool; refusing all meats that breed melancholick juyce.

Let her use Ptisan instead of wine, or a decoction of Coriander with Raisins. And when the heat of the weather shall be more remiss, you shall order her Wine well allaid with water, which in this extremity of summers heat I do not allow.

These Counsels, being the Reliques and Monuments of my Father, I have gathered together and

and treasured up very religiously, and now (most learned Sir) I commit them to your Learning, Fidelity and Prudence, that with some commendatory mention of him, they may be published unto the World: yet so that you give all men to understand, that they were written by a man much employed, rather for the private benefit of the Sick, than to be transmitted to the Memory of Posterity. Farewel.

Your Friend, and most

respective Disciple,

SIMON PIETRE.

The Counsel of a certain most Learned Physician, touching divers infirmities of the Kidneys.

WE have communicated our minds one to another, touching Persons troubled with the Stone in our former Letters, somewhat more briefly than to satisfie either of us. And I have promised that I will briefly handle some certain Heads or Points, which, though common, are far from vulgar.

They are far, I say, from vulgar, because I know not what, for an opinion has gotten head touching the use of Diureticks, and such like things; which *Hercules* himself is not able to pluck up by the Roots. Which work is so much the harder, because some principal Women, and who are highly esteemed by the common People, do Magnifie their Diuretick powders and simples, and offer them to the Diseased freely of their own accord, so that it seems now to have the force of a Law. But as one excellently well said, *They conceive witty, Rich and wealthy Persons, and of aged experience, worthy to be believed and trusted, wherein peradventure they are mistaken: but the opinion of the vulgar people can hardly be changed, and thereunto they square all things; both those that judge and those that follow their fancy.* Wherein consists a great Error, and of very large extent, far and wide: But especially in this Disease, the foresaid Error holds. Which nevertheless is a Disease of so great consequence, that 'tis reputed the Cross and torment of Men; and wherein many times the Industry of the Physician languishing and becoming quite mute; we see in him rather a stupid blockishness, than the new invention of a profitable Remedy. And yet who does not profess the art of driving out Gravel, and of wasting the Stone. No old Wife but has her Desks and Boxes, stone-breaking and stone-forcing powders. Yet there is nothing wherein the common people are more blind and ignorant, and wherein the Industry of the Physician grows cold. But if possible, let us become wiser than others. Now certain Heads are to be by us debated: 1. Whether the vulgar use of Diureticks be safe or not? 2. What that same Snivel and Flegm is which grows in the Bladder of those troubled with the Stone, and which they void? 3. Whether it be safe to scour that flegm away by stone-breakers, or it be not better to let it alone? 4. Whether it is best to temper the sharpness of Urine or not, seeing Acrimonious Urine has certain faculties of its own; for it is of a scouring power? 5. We are to enquire what means that of *Hypocrates*, *Apalunai kai Malacunai*, to make tender and to soften? Whether it be not only intended before the use of Hellebore to avoid Convulsions: and contrariwise, whether it be not dangerous to soften and weaken the body of the Kidneys with Fomentations? 6. The last question is touching the consent of the Kidneys with the upper or lower parts: Why the left Kidneys do not so usually ake as the right? why there is not in like measure an equal Sympathy of the Kidneys, with the upper as with the lower parts, seeing they lie in the middle of the Body? And first as touching the Diureticks or Urine forcing Medicines. *Galen* confutes their opinion, who give hot and biting things promiscously to all persons troubled with the stone. For the body is to be considered, and the matter it self, and the efficient cause. If the Body be very fat, intemperate, given to Gluttony; a man must deal otherwise than he would do, if his Patients body were lean, Cholerick, full of hot and dry Heat. For a gross and fat

body, fasting, and the use of attenuating things is good: but to an hot and cholerick person fasting is not good; nay, it is dangerous, as causing more matter to be heaped up. And the use of Diureticks is very good in the others, but in these latter dangerous. And the same Author distinguishing Arthritick and Diuretick Medicaments, will have them to be Diureticks, which are of forcible heat and Acrimony, and they do dissolve, melt and separate. And both of them do the same thing to persons that have the stone as to persons diseased in their Lungs, and therefore they are forbidden to them both. But in the Diseases of the Lungs, because while they melt and separate the serous or wheyish substance, they render that which remains more stiff and hard to be brought up. Secondly, when Milk-provokers are distinguished from such things as move the Courses; the latter must be more biting and hotter, because the womb draws not to it self: contrariwise, Milk-provokers ought to be less hot, because both blood of it self goes to the Dugs, and is drawn thither: and why then do we use things so hot and biting to purge the Kidneys, seeing they have a most strong attractive faculty? It is one thing to be absolutely Diuretick, another to have the power of moving Urine, another to have the power to wast and wear the stone, or to cut the matter. Such as cut stony collections, though they cut, yet ought they not to be very hot. For too much heat contracts and renders the stone hard and compact by drying it, but does not cut the same, nor divide it. And therefore those things which dry not and moderately heat, do breed Milk; such things as heat more, and dry not very much, provoke the Courses; and both provoke Urine: as also such things as heat and dry; and they are termed Diureticks, not because they alone move Urines, but because they move nothing but Urines, neither Milk nor Courses. But sometimes Diureticks are to be used, other whiles Ureticks: and these latter, when we would lenifie, moisten and dissolve the body of the stone, but not to melt and dissolve it by taking away the thinner part, and rendring the thicker more stubborn and rebellious to work upon. For things that moisten and cool, and withall in some measure move Urine, because they correct the dryness, they remove the occasion of more contumacious concretion or growing together of the stony matter. The Author of the Book of Kidney-diseases, who ever he were, wasts the stone with things of a lukewarm temper. *For hot Urine-provokers harden the stone, but lukewarm things by little and little diminish the same, and make it not harder. For seeing the stone is gathered and compacted by over much heat, lukewarm things are good, as being contrary to those things which did breed the stone. But Diuretick and very hot things do make the stone harder: But when there is as yet no stone, or it is not great, yet Obstruction is caused by Gravel, and by thick and clammy Juyces, then you may safely administer hot things, and such as open obstructions.* Which is the Counsel of *Galen*, when he explains those two words, *Leptunai* and *Hapalunai*, to attenuate and to soften, so as *Leptunai* to attenuate, is to be referred to the Humors; *Hapalunai* to soften, is to be referred to the solid Members. Although, saies he, we do not give Hellebore, it is good that the Humors be thin, and the body of the Kidneys soft, that the Humors may easily pass through them. *For the stone will never begin to breed, if a man shall have his Humors alwaies thin, and the body of his Kidneys soft.* And that I may conclude, it is one thing to consider, the sand it self and gravel to be voided, and another to consider the stone, which either is made or in making. For the Gravel, and against Obstructions, Diureticks, and things somewhat sharp, as detergents or scourers will be good: but for the stone in making, such as hinder its encrease, as scour away the adhering Gravel, cut and attenuate the glue, and sodder the stone. But for the stone already made, such things are good as soften, and have a certain lukewarm faculty, especially that the sharp, biting and dry heat may be tempered, which is the compacter and baker of the stone. If the law of Contrariety is to be observed, a Physician must oppose what is thick by such things as attenuate; what is hard by things that soften, what is clammy and tough by things which divide and cut. Now Openers and Diaphoreticks have mixt forces; for Openers have a mixture of the powers of things which divide and make thin, and Diaphoretick of the powers of Attenuaters, Aperitives and Detergents; for so the waies being opened, and the humor attenuated, that will be scoured off which was faulty, and forced into the Skin, to be driven out by sweat and exhalation. And now for that same Snivel or Flegmatick matter which grows together in the Bladders of such as are troubled with the stone, whence comes a Flegmatick snotty Urine, And Msr. *Fernelius* reckons, that such an Urine proceeds either from an Ulcer, or a stone contained in the Bladder. It resembles starch

which

which women use about their Cloths, or rather the Musilage drawn out of seeds infused in lukewarm water. 'Tis incredible what a deal of this Musilage is voided by one that has a stone in his Bladder. Nor ceases it to breed in a Bladder with a stone, till the stone be taken out. But when the stone is taken away, its no longer voided. The Cause whereof is known to few, and requires more time and leisure to speak of. It is bred also in those who have had a malignant Gonorrhœa, whence breeds the fleshy knob in the piss-pipe. For while that which is thin is voided forth, and the thick settles to the bottom, and nature because of its thickness and the straitness of the passages cannot soften it; hence sometimes a stone is bred. Sometimes the Urine is stopped; Hence the whole bladder almost is sometimes taken up, whiles it sticks to the walls of the bladder, and there encreases: hence the Patients have a continual provocation to make water, and many are brought to their last end. The Question is, whether it be safe to scour off and cleanse away the foresaid flegmatick snivel by the use of detergent or scouring Medicaments? For in the first place, according to *Hypocrates*, it is as it were a glew, whereby the Gravel is combind and united into the form of a stone. Moreover it suppresses the Urine; and thirdly, it fils sometimes by its abundance the whole bladder, whence necessarily death must follow.

Now sometimes it is convenient to cleanse the same away, and sometimes the snivel is serviceable to asswage the pain. For it daubs and covers the stone with its clamineſs; whence its roughness is made smooth, and causes less trouble. Also it blunts the sharp corners of the stone, by daubing and clamming the same. And therefore it makes the Patients life more sweet and easeful. And haply (if my conjecture may find place) nature by an inconsiderate and fortuitous prudence doth suggest this slimy matter, that the stone may be made thereby less offensive. Nor is there any need to scoure away this flegm and musilage, which would otherwise mitigate the Patients pains. For as long as it is not in so great quantity, as to fill the cavity of the bladder, so much profit comes thereby, that the stone being daubed therewith, becomes familiar to the bladder, and by that means much less pains do happen in making water. As touching the Urine, whether or no it ought to be lenified and tempered, may be reasonably questioned: for what need have we to seek detergents and scourers from abroad, when we have an equivalent remedy at home. For the Urine does purge, scour and wash away. Yea, and some Stone-cutters after they have taken out the stone, do judiciously forbear to put any detergent and purging Medicaments into the Ulcer, because the Urine coming that way, doth by its cleansing faculty supply their place. And when in persons subject to the stone, the Urine is tempered to avoid pain, it looses so much of its cleansing faculty. But I leave this to the consideration of others. 'Tis now time to come to the last Questions concerning the proper sense of the words *Apalunai* and *Leptunein*, I have already spoke occasionally. *Hypocrates* seems to require a certain softening of the Kidneys when they are too hard, and an exact attenuation or thin making of the humors, but that principally because he speaks of an Heleborate medicament, which is useful in young bodies and old diseases, which cannot be stirred without a Lever. Now this softning of the more solid bodies is therefore procured, that the Patient may not incur the hazard of suffocation, and that there may be no great occasion of a convulsion. But *Galen* does more largely extend the sense of those words of *Hypocrates*: And though we use no Hellebore, yet he thinks the more solid body of the Kidneys ought to be loosened and mollified. But in Fomentations, bathing and softening, great caution must be used, for three inconveniencies follow. In the first place, frequent fomentations, effeminate the flesh: also, by causing weakness, it weakens the expulsive faculty especially, so that it cannot so well quit it self of what is molestful. Thirdly, though I grant there may be great occasions to use these medicaments; yet when the body of the kidneys is made effeminate and soft, they become more apt to receive Excrements from the whole body, whence a relapse is occasioned. But the Physician must use such care and providence, that when there is use of Baths and Fomentations, before he dismiss the Patient, he may again strengthen the parts which have been for a time loosened and softened: least (as *Galen* speaks) they be brought to a Rheumatick disposition, which is nothing but a facility and proneness to receive excrements flowing thereto from the whole body. But how far the use of these softeners must extend, it belongs to the prudent and discreet Physician to consider. Moreover, the last question has a certain latitude: For the matter propounded is the consent of the Kidneys, with the upper and lower parts. Why the left parts, when the left Kidney is troubled, are more vexed than the right parts are, when the right Kidney is diseased? Whether the upper and lower parts do equally sympathize with the

diseased kidney, seeing it is seated in the middest betwixt both. And in the first place, when parts are diseased, it is very good to know whether they are affected of themselves, or by sympathy with some other parts. And *Hypocrates* did not impertinently at first admonish, that the differences of the pains in the sides or breast, and other parts was to be observed; as in some, the parts behind the midriff and the shoulder blades are pained, in others the thigh is nummed; yea, and in the same part there is a difference of the pains, for one pain is dull, the other sharp, in which case the prudent consideration of the Physician is desired. For the common people, and some unskilful Physicians do frequently by mistake attribute the cause of the pain to a Catarrh, when it wholy belongs to the Kidneys, and all the cure is to be applied to them. And therefore *Hypocrates*, an excellent Teacher writes thus, *Those who being diseased in their Kidneys, have pains about the Muscles of their back-bone; if they arise about the external parts, expect an imposthume outwards, &c.* Whereupon, the most learned *Arculanus*, among signs of an imposthume in the Kidneis, especially in the coats of the said Kidneis, reckons a difficulty in bending of the back, a troublesome Cough, and that the Patient cannot easily stand or go upright. And yet many so affected have been by Physicians cured, as if they were troubled with a Catarrh, whereby they have lost all their labour. And amongst the rest, diligent attention ought to be given to what *Hypocrates* writes, touching the sundry sorts of Diseases which molest the Kidneys. In explicating whereof, he writes, that among other concomitant signs of Diseases in the Kidneys, are pains in the Breast and Thighs. Yea verily many have been cured for the Pleurisie, when as the chief cause of the Disease was the Kidney, either having a stone in it, or otherwise diseased. *Hypocrates* celebrates two humors as chief causes of Kidney-Diseases, *viz.* flegm and choller. And it is to be observed, that great care be had, least the greatness of the Kidney deceive us, especially such a greatness as some long and hidden disease has caused. For a Physician is often thereby deceived, believing that it is a tumor in the spleen, and that those pains which arise often under the bastard ribs, are from the spleen, whereas they proceed wholly from the growth of the Kidney. For dissection alone after the Patients death declares that which the Prudence of Physicians could not attain unto. And therefore in the same part there are sundry sorts of pain: In the Kidney an heavy pain, and two waies heavy; for that is truly heavy which carries with it a sence of heavinesse, and *bareia odune*, an heavy pain, is *Oxeia*, a sharp pain. For both these pains happen: The truly heavy, if the stone lie in the substance of the Kidneys; also if the substance of the Kidneys be inflamed. An acute pain, when other parts than the substance of the Kidneys are pained, as the coat incompassing the Kidneys (and it may be pained by a stone contained in the substance of the Kidneys by distention, in case the solid substance of the Kidneys be distended) the inner cavity of the Kidney, the Veins and Arteries which are terminated into the Cavity of the Kidneys, and the originals of the Uretors. This is the true Judgment of *Galen* concerning the causes of pain in the Kidney: Concerning which three occasional questions may be asked. First, whether the Kidney may be inflamed, without inflammation of other parts? *viz.* The Veins and Arteries, because he saies there is an heavy pain, that is with a sence of heavinesse joyned thereto, when the substance of the Kidneys is inflamed, which would not happen if the Veins and Arteries were inflamed: for the pain would then be acute or sharp. Secondly, whether or no when the Veins and Arteries are inflamed, the pain is acute? For it seems not. Thirdly, whether or no to make an acute pain, it be necessary that all the foresaid parts be affected together at one and the same time? *viz.* The inner cavity of the Kidney, the mouth of the Uretors, the Veins, Arteries, and also the coat it self; or that they be affected severally? of which I shall dispute no more in this place, but leave this scruple in the minds of the Readers. I come now to the nummednesse.

There was long since a prime Physician (as a mans reason and understanding is apt to mistake) who applied Remedies to one that had a numnesse in his Leg, as fearing that he would fall into the Palsie; until a more quick-sighted Physician declared the numnesse to be no beginning of the Palsie, but a sign of a disease in the Kidney of the same side: And at last the truth was discovered. I see *Galen* and the Author of the Book of Kidney-Diseases do a little vary; For thus saies *Galen*, A numnesse is caused in the Thigh, by reason of the conjunction of the Vessels resting upon the back, *viz.* The Vena Cava, and the great Artery with the Kidneys and the Thighs: for they shoot very large into the Kidneys, but into the Loins they are not inserted large. But those who conceive the Kidneys are coupled to the Thighs by the Urinary passages or membranes or nerves, or the Peritonæum, are unskilful in Anatomy.

This-

This is the opinion of the other Author; when the stone is bred in the Kidneys, that Vein is affected which descends unto the Thighs: for they are both from one branch of the Vena Cava, which nature has distributed to the lower parts. Now the vein which goes into the Thighs being filled, the Nerve or Muscle is compressed, whereupon the animal spirit does not pass unto the Thigh. Here mention is made of the Nerves, but in the other not: And one thing is to be noted, which the same Author observes, *viz.* That in the disturbance caused by a stone in the Kidney, one or other of the Testicles is drawn back, according as the right or left Kidney is affected. And how that comes to pass, they shew from Anatomy: It remains that we reason about the subversion of the stomach, and difficulty of breathing. The Kidneys (saith he) are placed besides the back-bone, behind the Guts and Stomach. Therefore a certain violent distention being made in the Kidneys by the mutualties, the disease passes to the Guts and Stomach, and thence the disorder ascending the Stomach is made sick. And now happens that same painful distention, seeing the Kidneys by reason of their solidity are not stretched. For there is a certain contrary endeavor when the vessels are stretched, and the body of the kidneys by reason of their solidity does not give way. Also they conceive, that a certain shortness of breath arises, by reason of the Midriff, which in its lower part is furnisht with the Peritonæum, a coat which appertains unto the Kidneys, and above with a Membrane, which is stretcht out before the Ribs. In that the Midriff suffers with the Kidneys, being an Instrument of free breathing, it is a cause of shortness of breath. But certain Anatomists (as nature sports her self with variety in several bodies) while they diligently follow the propagation of the Nerves, have found a remarkable part of those Nerves arising from the sixth pair, inserted into the Kidneys: which part passes through the middle of the Midriff, and reaches as far as to the Claviculæ or Chanel-bones. Hence arises difficulty of breathing, and a sort of Orthopnæa. Whereupon a Person of quality being troubled with a Disease in his Kidneys, and having withall the Orthopnæa, most men accused an hidden disease of his Lungs: others of more understanding, judged all came from his Kidneys, and that there was no fault in his Lungs. They set themselves to cure his Kidneys, and he recovered. And true is that saying of *Hypocrates*, Touching most hard and un-apparent Diseases, opinion judges rather than art. As for the consent of upper and lower parts, let us hear only *Arculanus*: There are other Symptoms, when the right Kidney is diseased, others when the left. When the right is troubled, the Liver is co-affected, and the upper parts rather than any others: if the left, the evil is communicated rather to the lower parts. Is this true? Do they differ in situation? Or are they equally placed betwixt the upper and lower parts? The Anatomists must resolve us in this particular. I shall speak of one thing by the way, which some have observed: When there is a like cause of pain in both Kidneys, more and greater troubles arise from the left Kidney diseased, than from the right, because as they say, the Gut Colon where it touches the left Kidney, is much narrower than where it touches the right Kidney. Of which, consult Anatomy. And because less serious and sporting matters are sometimes to be joyned to serious, that the less serious may somewhat lighten the labor taken to understand the more serious; I will alledg one thing from *Hypocrates*, which seems in some sort to be reckoned among Miracles. A certain Man, named *Moschens* was exceedingly given to breed stones; a little swelling broke out upon his upper Eye-lid, which was the occasion of the breaking away of his lower Diseases. From this place, it seems the swelling which rose on the eye-lid, a part far distant from the Kidney, did cure the man of the stone: Which is a kind of a monstrous thing. One Interpreter refers the cause thereof to the Brain, from whence he draws a certain original of stones, because the Brain affords a cold matter, which is the cause of the stones growing and being congealed together. Which matter when it drives not downwards, it breeds something resembling stones in the eye-lids or other bordering parts. And he brings an example from his own Father; who being troubled with the strangury and stone, causing himself to vomit, and diligently purging his Brain, he was freed from those troubles. I do not condemn the Opinions of others; every mans judgment is his own, and free. And it is better to invent some reason or other, than pass over an Authors Text unexpounded. But I expect some others will give light to that obscure place with more accurate judgment: But to discourse over-long and over accurately to an Artist, were to bring Owls to *Athens*, or Coals to *New-Castle*, according to the Proverb. *Farewel.*

FINIS.

Additions of
OBSERVATIONS
AND
HISTORIES
OF
Famous and Rare CVRES.

READer, *There is* 591 *Obſervations or Hiſtories of Famous and Rare Cures printed before theſe Additions came forth, as you may eaſily diſcern, if you look into the* 321 *Page, which ended with the* 513 *Obſervation. Thoſe following untill this Page, make up* 591.

OBSERV. I.
Of an Hectick Feaver.

592 THE Daughter of Monſieur *d' Aumelas*, General-Treaſurer of *France*, being thirteen years of Age, had been Sick eight Moneths of a lingring Feaver, which was thought to be an Hectick, becauſe in all that time it could not be cured by two moſt expert Phyſicians, who had her in hand one after another, and had given her all ſuch Remedies as are uſually preſcribed for the Green-Sickneſſe, and to open the Obſtructions of the Bowels: but the Diſeaſe brought the Patient into an extream leanneſſe and weakneſſe of her whole Body, ſo that all counted her Condition deſperate. And that the rather, becauſe ſhe was troubled with a continual Vomiting, which took her in the mornings as ſoon as ſhe awoke, and continued till Dinner-time, ſo that ſhe caſt up all the Medicaments both alterative and purgative, which were given her in the mornings. And ſo ſhe ſeemed to be paſt hope of admitting any Medicament. When at laſt being committed to my Care, having foretold, that there was ſmall hope of her; I applied my mind to two things: Firſt, That ſhe ſhould have more effectual Remedies than any had yet been uſed: Secondly, That care might be taken that ſhe ſhould not vomit her Medicaments after ſhe had taken them. Thoſe more effectual Remedies were to be fetcht from the ſhops of the Chymiſts. And for better retention, they were to be well taſted, and to be given at ſuch times as her vomiting was leaſt urgent. Being therefore informed that from noon to bed-time ſhe was not vexed with vomiting; I conceived her Medicaments were to be given in the After-noon. Firſt therefore I preſcribed her Lozenges of two drams of the Stomach-Medicament of *Poterius*, and ſix ounces of Sugar; whereof ſhe took two drams every day two hours before Supper. Having continued theſe Lozenges for eight daies, ſhe took four grains of *Aurum Diaphoreticum*, and then continued the uſe of her Stomach-Lozenges eight daies longer; which time being paſt, ſhe took the *Aurum Diaphoreticum* again; after the taking whereof, that ſame lingring Feaver which was counted an Hectick, went quite away; alſo her vomiting ceaſed. Wherefore from that time forward ſhe took her Medi-

Medicaments in the morning. She had every morning for a moneth three grains of Balſam of Peru made into Pils with Sugar, and drank a little ſtrong Wine after them. This is a rare Medicament to ſtrengthen the ſtomach and open Obſtructions. And during the moneth aforeſaid, ſhe took alſo in the evening her Stomach Lozenges, and once a week the *Aurum Diaphoreticum*, and ſo ſhe perfectly recovered.

Obſerv. 2. *A double Tertian.*

593. Monſieur *Gerard*, Councellor in the Court of Accompts, Subſidies, and Royal Exchequer, being ſixty three years of Age, had been ſick of a double Tertian five weeks, in which time many Remedies had been applied by another Phyſitian; a Vein was four times opened, he was many times purged, and many Juleps and other Medicaments were given him. And yet his Diſeaſe grew worſe and worſe, and the fits became more grievous; ſo that when I firſt came to him, I found him aſtoniſhed and ſtupified as it were with a dead ſleep, and the by-ſtanders were very much afraid of his life. Now ſo great was his weakneſs, that I conceived no evacuation was to be uſed. Wherefore the firſt day I took charge of him, I gave him this following Julep one hour before his Fit.

Take *Cichory Water three ounces; Salt of Wormwood half a dram; Spirit of Sulphur one ſcruple: mix them all into a Julep.*

On the ſecond day the ſame Remedy was repeated, which he took an hour before his fit; after which his Urines were better, and ſhewed good ſigns of digeſtion, whereas before they appeared exceeding crude. On the third day the ſame Julep was repeated the ſame hour, and the fit was very ſmall. The fourth day in the morning, he took the following Potion:

Take *Senna two drams; Salt of Tartar half a dram; Spirit of Vitriol ten grains; Cichory Water ſix ounces. Infuſe them cold all night. And in the morning let him drink the ſtrained Liquor, and order himſelf as belongs to the taking of a Purge.*

He had divers ſtools, and bore them wel. And that day his fit appeared not, nor ever after, and ſo he was perfectly cured.

Obſerv. 3. *Of a Dropſie of the Breaſt.*

594. On the twentieth day of the Moneth of *June*, in the year 1646. I was called to Mr. *Daniel Verchand*, a Citizen of *Montpelier* fifty years old, having for three moneths been troubled with a very great ſhortneſs of breath, for which he had taken many Medicaments, preſcribed by his ordinary Phyſitian, and in ſundry Conſultations with other Phyſitians, but all in vain; for I found him puffing and almoſt choakt for want of wind. I conceived that he was troubled with a Dropſie of the Breaſt, ſince he had no cough nor rattleing, nor was any thick and clammy flegm ſpit up, as is wont to happen in a true Aſthma. Moreover his Legs were ſwollen with an œdematous Tumor, and his belly began to ſwell, ſo that he ſeemed to have the Dropſie Aſcites. Moreover, for two moneths he had not lien in his bed, but was forced to ſit day and night upright in a Chair. Now I deſpairing of his Recovery, would not preſcribe any Remedies; but he earneſtly beſeeched me to give him ſome eaſe in his breathing, which was ſo extream ſhort. Wherefore, overcome with his Intreaties, endeavouring only to give him ſome refreſhment, I preſcribed him the day following a Bolus of one ſcruple of Calomelanos, with ten grains of Diagridium in Conſerve of Roſes. He was ſeven times purged by ſtool, and voided a great quantity of Serum, whereupon he was much eaſed that very day, ſo that he breathed much more freely than before. After two dayes the Remedy was iterated with like ſucceſs, and the following night he lay in his bed without any oppreſſion of his Breaſt. His ſwollen belly being fallen, I could feel his Hypochondria, and I found his Spleen great and ſchirrhous. And therefore I preſcribed opening Apozemes, with Salt of Tartar, and Spirit of Sulphur; alſo Fomentations and Liniments to be applied to his Hypochondries, with the foreſaid Purgation iterated every third day. Which things being continued fifteen dayes together, he was reduced to a much better condition, ſo that he conceived himſelf perfectly cured, yet one moneth being flipt away, all the ſymptoms returned, his belly ſwoln bigger, and two months after he died. Obſerve in this Story the exceeding great Efficacy of Calomelanos, which could give ſo much eaſe in a deadly ſickneſs.

Obſerv. 4. *A Palſey.*

595. *John Alberger* fifty years of Age, for four moneths had been troubled with a Palſey of one ſide of his body, *viz.* The right ſide, ſo that he could hardly ſpeak or pronounce his words plain. He was for a whole year troubled with this Diſeaſe, and in that while he uſed many Medicaments to little purpoſe. But I undertaking his Cure the 26 day of *June*, the year 1646. gave him a Bolus of *Bezoardicum minerale* twelve grains,

grains, with Conſerve of Roſes, which he was to take twice a day; and every fifth day one ſcruple of the ſmaller Cochie Pills with eight grains of Mercury calcined by it ſelf, without Corroſives. With which being continued for twenty daies together, he was perfectly cured

Obſerv. 5. *Bleeding at the Noſe.*

596. A ſtrong man thirty yeers of age, of a cholerick temperament, was almoſt dead with a ſtubborn bleeding at the Noſe. After many Remedies tried in vain, at laſt by the Councel of a certain Phyſitian, being removed out of his bed into the floor upon a Blancket, and all his Body being covered with Sheets wet with Oxycrate a long while, till he was taken with a ſhaking; he was then carried to Bed, and after his ſhaking he had an hot fit, upon which followed a ſweat whereby he was cured.

Obſerv. 6. *A Fit of the Mother.*

597. On the 17. of *July*, 1646. the Maid Servant of my Wife named *Ludovica Coſta*, was ſuddenly taken with a moſt grievous pain, ſo cruelly tormenting her right ſide and Loyns, that ſhe was compelled continually to cry out. She having no Feaver, I conceived that it was a Womb-fit. Wherefore I preſently gave her a Cup of Oxycrate, which ſhe vomited up after a quarter of an hour with much flegm. After her vomiting was ceaſed ſhe took another cup of Oxycrate, and her pain preſently vaniſhed, and ſhe was cured.

Obſerv. 7. *A Nephritick Pain.*

598. The 20. day of *July*, 1646. Monſieur *Jacob Lemadre*, Student of Phyſick, and my Sons School-Maſter, was taken with a very grievous Nephritick Pain. His Urines were red and bloody. Firſt a Clyſter was given him of an Emollient Decoction, with one ounce of Diaphœncon, and four of Aqua Benedicta, the which did little good. The following day he was let blood ten ounces, being full of blood. Yet the Pain continued. The third day he had again the foreſaid Clyſter, which gently purged him all day, ſo that he had eaſe by fits; and the ſame day he was wholly freed from his pain, having voided two very ſmall Stones. The foregoing Clyſter is moſt excellent againſt the Cholick and Nephritick pains, as you may ſee in the other Centuries. Obſerve here, that if the Clyſter do not perform its office at firſt, it is to be repeated again and again.

Obſerv. 8. *The Diſeaſe Cholera.*

599. The Wife of *Peter Portalon*, a Citizen of *Montpelier*, was taken with the Diſeaſe *Cholera* on the 23. of *July*, 1646. about noon, and ſhe had twenty ſtools by that time it was night, with moſt grievous pains, infeſting not only her Guts, but her Stomach, ſo that the day following ſhe was troubled with vomiting, and voided many ſharp and cholerick humors. Her Husband ſought my Advice in the evening, whiles other Remedies were providing, I adviſed them to give her a draught of Oxycratum; the operation whereof was ſo effectual, that her vomiting and looſneſs were preſently ſtopped, and no other Remedies were uſed; the Patient averring that ſhe was perfectly well.

Obſerv. 9. *A Carbuncle.*

600. The Son of *Peter Boujac* a Merchant of *Montpelier*, being four yeers old, was troubled with a Carbuncle for three daies together, and no Remedy had been uſed. I viſited him on the 22. of *July*, in the yeer 1646. Now the Carbuncle was in the middle of his forehead with a red Tumor, very black in the middle, and all his Face was much blown up. I ordered in the firſt place, that to fix the Carbuncle a Cauſtick ſhould be applied to the black part, and that they ſhould apply to the Eſchar Unguentum Baſilicon with Treacle, Oyl of Scorpions of *Mathiolus*, and the yelk of an Egg: and to lay all over the Tumor a Pultis of Lambs-tongue Plantane. At the ſame time a Clyſter was injected, and when that was voided, blood-letting was repeated, which had been celebrated in the morning, and the day before. A Veſicatory was applied to his Neck, and a Cordial Potion preſcribed, and Confectio de Hyacintho was appointed to be given in all his Broths. The day following I found the Feaver very much abated, the Inflammation of the Tumor aſſwaged, and all things mitigated; and therefore I conceived the Patient was neer recovery. In this caſe the uſe of the Veſicatory is chiefly to be obſerved, which deriving a great patt of the virulent humor, may be ſuppoſed to have performed the greateſt part of the Cure. And therefore I conceive it ought to be uſed in every Carbuncle, and to be applied to a part neer the Carbuncle. The Defenſative made of the Ointment of Bolus, which is commonly uſed in theſe Caſes, I thought not fit to apply, becauſe Repellers laid upon the Face in Inflammations thereof are very hurtful.

Obſerv. 10. *An Epilepſie.*

601. A Maid that had the Falling-Sickneſs was cured by the uſe of Oxycratum, a draught whereof ſhe took every morning, and before the fit ſhe drank pure Vinegar. The Diſeaſe being cured ſhe was taken with pains of her Limbs, which were cured by the uſe of hot Baths,

Obſerv. 11. *Spitting of Blood.*

602. *John Figuiere* a Citizen of *Montpelier* was troubled with a Spitting of Blood three yeers together, whereby at ſeveral times he voided blood in a great quantity. At laſt after many Remedies, he took for a moneth together Starch boyled in water, (and made without Chalk) like Panada, and ever after he was freed from his ſpitting of Blood.

Obſerv. 12. *A Tertian Ague.*

603. In the moneth of *Auguſt* 1646. Mſr. *William Dortomannus* a famous Advocate, ſixty yeers old, of a Cholerick Complexion, was troubled with a vehement Tertian Ague; and he was four times let Blood, and once purged in the ſpace of fourteen daies. Moreover, he uſed cooling and opening Juleps; alſo before the ſixth and ſeventh fit, a ſpecifick Medicament was given him of Salt of Wormwood half a dram, Spirit of Sulphur one ſcruple, with three ounces of Cichory Water; whereby his fits were abated. Finally, an hour before the eighth fit a Vein was opened, he having firſt taken a Decoction of Chamomel and Cream of Tartar, and the Plaiſter of *Strobelbergerus* being applied to his Wriſts. By which Remedies the expected fit was kept off, and no ſigns thereof appeared.

Obſerv. 13. *A Quartan Ague.*

604. The Daughter of Monſieur *Ducabe* of *Ponſſan* being fifteen yeers old, was troubled with the quartan Ague fourteen moneths and being brought to *Montpelier* ſhe was committed to my Care. I gave her the 22. of *Auguſt*, 16. grains of my Feaver or Ague-chaſer, and ſhe had ten ſtools and two vomits, wherewith ſhe voided at firſt four, and afterwards bitter humors. She had one fit after that, and no more.

Obſerv. 14. *The Stone in the Bladder.*

605. The moſt renowned Gentleman, Mſr. *de Burcin*, Preſident of the Parliament at *Grenoble*, in *Auguſt* 1645. was taken with a Nephritick pain, from which after ſome daies he was ſuddenly freed, although no ſtone was by him voided; whereas at other times being troubled with like pains, he was vvont to be freed by voiding of ſmall ſtones. Whereupon I conjectured that the ſtone being voided out of his Kidneys through the Uretors vvas ſtopped in his Bladder. Nor vvas I miſtaken in my Conjecture, for from that time forvvards, he felt frequent titillations about the Sphincter of his Bladder, ſharpneſs of Urine, and pains vvhich did reach to the Nut of his Yard. He uſed many Remedies all the yeer long at times, and at laſt in the moneth of *Auguſt* 1646, he voided a ſtone as big as a Hazel Nut, but in ſhape like an Olive ſtone, But it paſſed vvith ſo much difficulty through the Channel of his Yard, that it vvas fifteen hours paſſing from the mouth of the Bladder to the Root of the Nut of his Yard, vvhere finding the paſſage ſtraiter than ordinary, it could by no means paſs the ſame; and therefore vve vvere conſtrained to take it out by cutting the Nut, vvhich vvas done in the lovver part neer the frenum or bridle. The Remedies vvhich had been in the laſt place uſed, and which were chiefly thought to drive out the ſtone, were ſuch as theſe.

After Univerſal Evacuations, he took for a moneth together Pills made of the Salts of Ivy berries, and Water-creſſes, Cryſtal of Tartar and Mineral, of each a like quantity made into a maſs with Turpentine, of which he took for nine daies together the water of white Onions diſtilled with white Wine, the quantity of three ounces, to which was added the Salt drawn out of the *Caput mortuum*, and on the ninth day he voided the foreſaid Stone.

Obſerv. 15. *A Tertian Ague.*

606. Monſieur *de Crouſet*, Preſident and chief Judge in the Court of *Aides*, was taken with a double Tertian Ague, in the moneth of *Auguſt*, 1646. And that this Ague was in ſome meaſure malignant, appeared by the ſlowneſs of his Pulſe in the Fit, and the great coldneſs of his extream parts, which did not recover their heat during the whole fit. He had been twice let blood, and a laxative and cooling Ptiſan was twice given him, alſo in ſome fits he had taken fifteen drops of Spirit of Sulphur in a cup of water. He had twice taken the Julep of Cichory water, Salt of Wormwood, and Spirit of Sulphur, and *Strobelbergers* Plaiſter was laid to his wriſts.

And

And finally, the cooling Treacle Water by me deſcribed in my Chapter of the Peſtilential Feaver was given him the quantity of three ounces before the two laſt fits. By which Remedies within fifteen daies he was cured of that dangerous Diſeaſe.

Obſerv. 16. *A Tertian Ague.*

607. Monſieur *Maſſauve* General Treaſurer of *France*, in the monteh of *Auguſt*, 1647. was troubled with a double Tertian, wherein two fits were ſeen upon one and the ſame day, the following day being free. Another Phyſitian had him in hand twelve daies, the Diſeaſe growing every day worſe and worſe. Afterwards he implored my help, and had his two fits the ſame day, which laſted thirty hours. At the beginning of the next fit he took by my advice a Decoction of Chamomel and Cryſtal of Tartar, and at the ſame time he had a Vein opened, and *Strobelbergers* Plaiſter applied to his Wriſts. He had only one fit, and that a light one, and the third day after he was quite freed, taking in his two fits fifteen drops of Spirit of Sulphur, and cooling Juleps with the ſame Spirit, twice a day. Before the laſt fit ſave one he took a laxative and cooling Ptiſan; and before the laſt he drank three ounces of my cooling Treacle Water. Then alſo there was applied to his ſtomach a Pultis of Tanſey, Aromatick Pouders, and Turpentine, on a Roſe Cake, and the ſaid laſt fit was very little or none.

Obſerv. 17. *The Smal Pox.*

608. The yong Son of *N. Benoiſt* a Merchant of *Montpelier*, being twenty three moneths old, and taken with the Smal Pox, on the ſecond day of his Diſeaſe he fell into a Coma and Convulſion Fits, with ſo great weakneſs that it ſeemed he would die in a few hours. Being called to him on the 12. of *November* 1645. which was the ſecond day of the Diſeaſe, I preſently preſcribed blood-letting, and blood was taken away to the quantity of four ounces. Then was given frequently out of a Spoon a Julep made of Carduus and Scabious Water, each three ounces; Trochisks of Vipers, and *Bezoardicum Minerale*, each one ſcruple. At the ſame time he took every third hour ten grains of *Bezoardicum Minerale*, with a little Broth; which Remedies being continued two daies together, all his body was ſprinkled over with the Smal Pox, which afterwards grew to their juſt magnitude, and the Patient did well afterwards.

Obſerv. 18. *A Baſtard Pleuriſie.*

609. The Wife of Mſr. *du Cros*, Auditor in the Court of Accompts, had an Eryſipelatous Swelling in her Leg ſeven or eight daies with a continual Feaver; from both which Diſeaſes being freed by the care of her ordinary Phyſitian, ſhe went too ſoon into the cold air, whereupon ſhe fell into a pain in her ſide, with a Feaver, Cough, and ſhortneſs of breath; alſo ſome ſpittle came from her infected with blood. She was let blood twice or thrice, and others Remedies were applied, good for a Pleuriſie. I being called to adviſe on the 19. day of *November*, which was the fifth day of her Diſeaſe, I conceited that a purging Medicament was to be given her the following day, which ſeemed nevertheleſs againſt the Rules of Art and the ordinary Method; by which it is ordained that Pleuritick perſons are not to be purged before the ſeventh day. But theſe following reaſons ſeem to call for the ſaid blood-letting. 1. Becauſe the ſaid Pleuriſie did not ſeem to be a true and exquiſite Pleuriſie bred of an Inflammation of the Membrane, but rather a baſtard Pleuriſie ariſing from a thin and ſerous defluxion, or ſharp vapors ariſing from bad humours in the lower belly, and twitching the Membrane which cloths the Ribs. This was hereby collected, becauſe blood appeared only now and then in her Spittle, and that very little like a thred, which could not come in ſo ſmall a quantity from the Pleura inflamed, but rather from ſome little Vein opened by the vehemency of the Cough; or it might come from her brain, ſeeing about the ſame time ſhe had bled a little at her Noſe. Secondly, Becauſe that ſame pain of hers was not continual, but went away by fits and came again, and at the time of our Conſultations ſhe ſcarce felt any pain, alſo her Feaver was very gentle. Thirdly, Becauſe during the whole time of her latter fit, ſhe was troubled with continual watchings, though the pain of her ſide was ſometimes very much abated, even in the nights; whence it might be gathered, that thoſe intenſe watchings did proceed rather from putrifaction of Humours and an eſſential Feaver, than from a Pleuriſie. Fourthly, Becauſe the Patient all the time ſhe had the Eryſipelas, would not take the purge which her Phyſitian had appointed her, and ſo the whole maſs of bad Humors continued ſhut up in her body. She took therefore a purging Medicament the ſixth day of this latter Diſeaſe, of Senna, Rhubarb, Manna, and Syrup of Roſes compound, whereby ſhe was gently purged with happy ſucceſs: for ſhe never after felt the pain in

her ſide, nor was ſhe troubled with watchings, but only with a ſmal Feaver, appearing in the evening. Afterwards by the uſe of ſome gentle Remedies, ſhe attained her former health.

Obſerv. 19. *A Whitlow or Felon.*

610. The Wife of Mſr. *Sartræus*, Councellor in the Court of Accompts and Subſidies, being four daies troubled with a Felon or Whitlow, ſhe put her finger into a Cats Ear, and was cured in a quarter of an hour. She felt at times an heat come into her ſhoulder and Arm, and deſcending by little and little with a moſt grievous pain of the end of her finger, which heat would a little while after go away, and then come again with a like pain. And the Cat did violently ſtruggle by reaſon of the pain of her Ear, ſo that ſhe could hardly be held by two men. Hence we may collect, That there is in the Head of a Cat, a certain Magnetick faculty which ſympathizes with the qualities of a Felon or Whitlow, by means whereof it draws unto it ſelf the venome which lies hid in the Tumor.

Obſerv. 20. *A Tertian Ague.*

611. On the 27 of *October*, in the year 1646. being called to the Town of *Aimargues*, to ſee the Wife of Mſr. *Columellus* Auditor in the Court of Accompts, being twenty two yeers old, who had been troubled with a double Tertian ſeven daies together, and was once let blood, but took nothing. On the eighth day ſhe was let blood again in her left Arm, becauſe her Spleen appeared ſtretched and ſwoln. On the ninth day ſhe took an Infuſion of Senna with half a dram of Cream of Tartar, and on the ſame day *Crollius* his Ague Medicament before her fit. On the tenth day ſhe took the ſaid Ague-Medicament again, and her fit came no more.

Obſerv. 21. *Palpitation of the Heart, and inequality of the Pulſe.*

612. Mſr. *de Becharan*, Councellor in the Court of Accompts, Subſidies, and the Kings Exchequer, in the beginning of the moneth *November*, in the yeer 1646. came to me, and complained of a Palpitation of Heart which for ſome daies had troubled him. Feeling his Pulſe I found it unequal in all the kinds of Inequality, ſo that it preſently brought to my mind that ſame ſtory in *Galen* concerning *Antipater* the Phyſitian whom he conceived to have an obſtruction in in his Arteries, or a crude Tubercle. He had then no ſhortneſs of breath, and the Patient performed his wonted buſineſs, going dayly to the Court, nor would he take any Phyſick ſave on Holy-daies. I preſently preſcribed him to be let blood twice, and afterwards I purged him, and ſo he amended. Ten or twelve daies after he complained of the ſame Malady. I preſcribed for him ſundry attenuating Medicaments and Cutters which did not heat, which nevertheleſs he took not, being encombred with ſundry Affairs. At laſt in the beginning of *December*, he took his bed with ſhortneſs of breath, and ſwellings in his Legs; and then he uſed the Medicaments preſcribed, with Phlebotomy repeated, which being continued for twelve daies, and doing no good, but the Malady growing continually worſe, a Counſel of other Phyſitians was called, whoſe opinion was, that it was a Diſeaſe like that mentioned by *Galen* in his 4. *de locis Affectis*, *cap.* 8. concerning *Antipater* the Phyſitian, and ſo that it was to be oppoſed with cutting and attenuating Medicaments. Sundry forms of Medicaments were preſcribed to this intent, which it were in vain to recount, becauſe they did no good, but the Patient grew continually worſe and worſe, being extreamly ſhort winded, and no pulſe appearing in his wriſt, yet his hand being laid upon the Region of the Heart, a moſt frequent Palpitation might be felft, very weak and uneven: for the ſwelling of his Legs was ſo far encreaſed, that it came now up into his Thighs. Remedies were preſcribed like the former, to which were added Cordials internal and external. Two daies after the Patient ſeemed to be at the laſt caſt; he was extreamly ſtifled, no pulſe appeared in his wriſts, and hardly any in his Heart. The ſame day it was conceived he would die, I ordered thereupon a Cupping-glaſs to be applyed to the Region of his Heart with Scarrification, (by the help whereof *Zacutus Laſitanus*, *Obſervat.* 133. *Lib.* 1. *Praxis admirandæ*, teſtifies that he freed a certain Patient from a deſperate Palpitation of the Heart) whereupon he was better, and the following night he began to void by ſpitting exceeding black blood, thick and clottered, with a troubleſome cough, whereupon he did fetch his breath more eaſily. To help his expectoration, he frequently took Syrup of Coltsfoot with a fourth part of Oxymel ſimple, and broth of an old Cock made with Pectoral things, once or twice a day. Theſe Remedies being continued four daies together, the Patient continued in the ſame condition continually voiding thick and black blood. On the fifth day after his ſpitting of blood, which was the fourth of *January* 1647. I gave

gave him twelve drops of *Elixir Proprietatis*, with a little ſtrong Wine, by which the Patient was eaſed, and the whole night following he did ſpit up more eaſily. On the ſixth day he took the Elixir again and his Cock Broth : but he was never the better ; but his ſhortneſs of breath continually encreaſing, on the eighth day in the evening he died. His body being opened both the Ventricles of his Heart were found full of clotted blood, and diſtended, alſo his whole Lungs were full of blood ; whereupon there was a ſuffocation of Natural heat in both thoſe parts. A few daies before his death, the Procatarctick cauſe of this Diſeaſe was related to me, which the Patient had not acquainted me with, *viz.* A great fright which he had taken, when paſſing from *Arelatum* to *Montpelier*, upon the River *Rhodanus* he had like to have been caſt away with his Family. Hence we may conjecture, That by the fright his blood retired in ſo great quantity to his Heart, that it could not thereby be governed, but clottered together in the Ventricles thereof. And ſo his Heart continually laboring to diſcharge that heavy burden cauſed thoſe trembling and unequal palpitations. Alſo the blood continually aſcending through the *Vena Cava*, and finding no free paſſage to the Heart, flowed back to the Lungs and filled the ſame. Moreover, in the left Ventricle of the heart were found round Caruncles, reſembling the ſubſtance of the Lungs, the bigger of which was neer as large as an Hazel Nut, which did ſhut the paſſage of the *Arteria Aorta*, which cauſed (as I conceive) a defect of the pulſe in his Arteries. Now I ſuppoſe thoſe Caruncles were bred of ſuperfluous blood, which the great heat of the left Ventricle had baked, and changed the ſame into ſuch a like ſubſtance. A like Caruncle and much greater was found eight daies before in the right Ventricle of the Heart of a certain Soldier, who was diſſected in the Anatomical Theatre, having been killed by another Soldier. Yet he did formerly enjoy his health well, becauſe the ſaid fleſh did in part ſtick to the ſides of the Ventricle. From the Premiſes it is apparent, That blood being ſhed into ſome Cavity is now and then changed into ſuch like Caruncles by the digeſtive heat : which we may better confirm by other examples : This alone may ſerve inſtead of all, being a thing notoriouſly known, That very many women, eſpecially ſuch as are barren, whiles they have their Courſes, are frequently wont to void certain ſmal Caruncles with their Menſtrual blood. Which thing moſtly happens in ſuch as are of an hot Conſtitution, becauſe of the exceſſive heat of their Wombs, the Particles of blood are baked and changed into ſuch like Caruncles.

Obſerv. 22. *An old Venereal Pox.*

613. A certain Courtier came to *Montpelier* to be cured of the Venereal Diſeaſe, wherewith he had been troubled ſixteen yeers, with knobs in both his Legs, whereby he was ſo pained that he could not ſleep in the night. He was by me perfectly cured within a moneth, being let blood in both his Arms, purged by Apozemes, and taking a Sudorifick Diet Drink twice a day for twenty daies together, which was made of a Decoction of Guajacum and Antimony. Now he was made to ſweat by the vapor of Spirit of Wine. Every fifth day I gave him a doſe of my Antivenereal Medicament : and the Maladies in his Legs were cured by application of Veſicatories, and repeating the ſame twice or thrice, when they ceaſed to run, and became dry.

Obſerv. 23. *A ſtrange ſort of Semitertian Ague.*

614. *Johannes Gerrardus* a Citizen of *Sommedre*, with a continual flegmatick Feaver was troubled in *February*, 1647. To whom this remarkable accident did happen. On the twenty eighth day of his Diſeaſe, there were joyned to his continual Feaver the fits of a Tertian Ague, beginning with a notorious ſhaking ; which fits returned twice a day, and an intenſe Feaver continuing for many hours, they were ended with a light ſweat, his continual Feaver perpetually remaining ; ſo that this Feaver ſeems to have been a ſort of Semitertian, made of a continual Quotidian, and a fourfold intermitting Tertian. For if we call that a double Tertian which returns once every day, it is reaſonable to call that which returns twice a day a fourfold Tertian. I have elſewhere too obſerved a triple Tertian, which returned three times in two days ſpace, viz. After every ſixteen hours.

Obſerv. 24. *Inflammation of the Almonds, Throat and Tongue.*

615. In the end of *February*, 1647. the Wife of Mſr. *d' Aumelas*, General Treaſurer of *France*, was taken with the foreſaid Diſeaſe, which hindred her ſwallowing and ſpeech. The Malady continuing after ſhe had been four times let blood, and her Tongue being infected with many ſmal Ulcers ; I conceiving the Diſeaſe to ariſe from a defluxion of much and very ſharp ſerous matter,

ter, and that Purgation was neceſſary, but the Patient could not take a Medicament, ſeeing ſhe could hardly ſip a little broth, I gave her ſix grains of *Reſina Jalapii* in a ſoft Egg, whereby ſhe was gently and largely purged, and the day after ſhe began to eat and ſpeak freely.

Obſerv. 25. *A Double Tertian Ague.*

616. In the moneth of *July*, 1647. Mſr. *de Rouanel* Chief Arch-Deacon of the Cathedral Church, being thirty yeers old was ſick of a double Tertian, whoſe fits were very grievous and long laſting, attended with great unquietneſs, with extream pain of the Head, continuing after the fits were paſt, and very red Urines. After he had been let blood twice, and had taken a gentle purge, he took an hour before his fit the Potion of half a dram of Salt of Wormwood, one ſcruple of Spirit of Sulphur, and three ounces of Cichory Water. At the ſame time *Strobelberger* his Plaiſter was laid to his Wriſts, and the fit came not then, nor ever after, although red Urines and other ſigns did ſhew the Diſeaſe to be then in its vigor. The daies following the morbifick matter was voided by a light looſneſs. His Head-ach was moſt of all holpen by a new Gourd bruiſed and applyed as a Pultiſs to the ſoles of his Feet, and frequently repeated.

Obſerv. 26. *Vomiting of Blood cauſed by an Horſe-leech ſwallowed in the Patients Drink.*

617. A Countryman was troubled with vomiting of blood, which could not be ſtopped by any Remedies uſed many daies together. The Phyſitian deſiring by a vomit to bring away the blood collected in his ſtomach, which did much afflict the Patient, and cauſed a great oppreſſion in that part; he preſcribed two ounces of Oyl of ſweet Almonds, which cauſed him to vomit, and he voided clotter'd blood, and an Horſe-leech withal, which moved upon the ground. This was the unknown and ſeldome ſeen cauſe of the vomiting of blood. For the Countryman afterwards related how he drunk Water in a Brook, and ſwallowed a Horſe-leech in the Water.

Obſerv. 27. *A long flux of the Belly with a ſlow Feaver.*

618. The Daughter of Mſr. *de la Coſte* of *Piſcenum*, being eight yeers old, was troubled three moneths with a cholerick looſneſs, with a continual lingring Feaver, ſo that ſhe ſeemed to be in great danger of her life; becauſe her brother at the ſame age died of the like diſeaſe. Being ſent for to her I preſcribed theſe following Remedies.

Take *Leaves of Plantane halfe a handful: Tamarinds three drams: boyl them to four ounces. In the ſtrained Liquor infuſe one dram of choice Rhubarb, yellow Sanders one ſcruple: ſtrain it again, and add Syrup of Roman Wormwood half an ounce: Pouder of Rhubarb one ſcruple: Make a Potion, and let her drink it in the morning, and be ordered as for a Purge.*

Take Tincture of Coral new made with juyce of Lemons one pound. Let her take one ounce and half in the morning with a little Sugar of Roſes for eight daies together.

After her Tincture of Coral is done let her take the foreſaid Purging Potion again.

Take Roots of Graſs, Aſparagus, Butchers Broom, and the middle Rind of the Tamarisk, of each half an ounce: Leaves of Agrimony, Pimpernel, Ceterach, Maidenhair, of each half a handful: Shavings of Ivory, and yellow Sanders, of each one dram. Boyl them to nine ounces. To the ſtrained Liquor add Syrup of Maidenhair one ounce and half. Make of all a Julep for three morning doſes, adding to every doſe, Salt of Wormwood, and Tamarisk, of each ten grains. And when ſhe hath taken this, repeat the ſame for as many doſes more. Let her uſe for her ordinary Drink, Water wherein Steel hath been infuſed, and Rhubarb tied in a nodule.

Take Oyl of Capars, and Tamarisk, of each two ounces. Anoint all her Belly therewith hot, morning and evening.

Take Oyl of Nutmegs half an ounce: Balſom of Peru two drams: mix them. Anoint her ſtomach therewith hot, at the times aforeſaid.

Take Shavings of Ivory, and Pearls prepared, of each two drams: Salt of Wormwood, and Tamarisk, of each one dram: make all into a Pouder. Let her take ten grains thereof in all her Broths and Panada's.

With theſe Remedies ſhe grew well in the ſpace of a moneth. And falling into the ſame Diſeaſe a year after, ſhe was freed by taking the ſame Remedies again, and from that time ſhe hath been very well in health.

Obſerv. 28. *The Coma or ſleepy Diſeaſe of Children.*

619. On the 18. day of the moneth of *September*, 1647. the Son of Mſr. *du Cros*, Auditor in the Court of Accompts, being five yeers old, fat and groſs, fell ſuddenly into a ſleepy Diſeaſe, which was ſometimes followed with Convul-

Convulſion. Being called, I preſently preſcribed a Clyſter of Hiera, Diaphenicon & Aqua Benedicta, whereby he was well purged. Having voided his Clyſter I gave him half a dram of Salt of Vitriol, and provoking him to vomit with a Feather he voided much flegm, and was freed a few hours after.

Obſerv. 29. *An old Venereal Diſeaſe.*

620. A man forty yeers of age came to us from upper *Occitania* to be cured of the Venereal Diſeaſe, wherewith he had been troubled for twelve yeers. He had three remarkable knobs in his Head for many yeers, and a ſchirrhous Tumor in his left Teſticle as big as a Fiſt. He had been ſundry times tampered with, by ſweating, Diet drinks and Mercurial Medicaments, but all in vain. In the beginning of the moneth of *October*, 1647. he uſed for twenty daies together a primary decoction of Sarſa and China, and a ſecondary Decoction without ſweat; and every fifth day he took Anti-venereal Pils. Afterwards for fifteen daies he took the Decoction for an old *Lues Venerea*, made of China, Sarſaperilla, peelings of Nuts, and Antimony. In that ſpace of time the knobs in his Head were diſcuſſed by a Veſicatory Emplaiſter and the Tumor of his Stone, with a fume of Vinegar and a Plaiſter of Sulphur.

Obſerv. 30. *A Quartan Ague.*

621. The Wife of Mſr. *le Thaneur* a Writing School-Maſter, thirty yeers of age being troubled with a double Quartan Ague for three moneths; ſhe took on her well day, which was *Decemb.* 15. 1647. twenty grains of my Feaver-chaſer; was thrice gently purged, and the following Fits were like the former. On the other day of intermiſſion ſhe took twenty five grains of my ſaid Medicament, and no ſenſible effect appeared, and no evacuation followed, and after that very ſmal Fits, and in a manner none appeared, and a little while after ſhe was quite well.

Obſerv. 31. *Pain of the Teeth.*

622. On the 30*th.* of *December*, 1647. I was troubled with a moſt grievous Tooth-ach, which growing intollerable about midnight, I took a bit of Tobacco in my mouth, and gently chewed the ſame a long time together, till it cauſed me to vomit; whereby I caſt up all my Supper, and therewith much flegm, and the pain vaniſhed within two hours.

Obſerv. 32. *A Dropſie.*

623. The moſt illuſtrious Arch-Biſhop of *Abredunum*, being eighty five years old and troubled with the Dropſie Aſcites, ſent for me about the middle of *April*, 1648. Beſides a notable great Belly and ſwoln Legs, he was troubled with two grievous Symptomes, viz. unquenchable thirſt, and ſhortneſs of breath, attended with nightly diſquiets. He was frequently purged with *Mercurius Vitæ* corrected with Spirit of Salt, whereby the Wheyiſh Humors were evacuated, and the ſhortneſs of breath taken away; his thirſt was cured with Spirit of Salt, twenty drops whereof he took in the morning in Broth, and in the evening in ſome potable Water. All the Symptomes ceaſed, and his Belly aſſwaged; but becauſe through his age and the weakneſs of his Bowels, a new Recruit of water was by little and little collected; to hinder a relaſpe he was purged twice a moneth with the Remedy aforeſaid, and he took dayly Lozenges of Confectio Alkermes with *Bezoardicum Minerale*. Thus he lived three yeers after with leſſer inconvenience, and without return of the Dropſie; till at laſt his forces failing, he died in a manner without any viſible Diſeaſe.

Obſerv. 33. *A Double Tertian Ague.*

624. On the 15. of *September* in the year 1648. I was called to the moſt illuſtrious Biſhop of *Agathen*, being ſick of a Tertian Ague. Now the Ague was ſimple at firſt for eight fits, and ſoon after it was turned into a double Tertian, and he had four fits ere I came to him. He had been twice let blood, and a purging Medicament was twice given him; he did ſweat very much, ſo that he could hardly ſleep half an hour but he was fain to change his Linnen. His Urines appeared red and crude, ſo that there vvas fear of a long Diſeaſe. On the ſixteenth day, an hour before the fit, I gave him a decoction of Chamomel and Cryſtal of Tartar, and cauſed him vvithall to be let blood, the quantity of eight ounces, and that day his fit came not. On the eighteenth I gave him three grains of *Mercurius Vitæ* corrected, vvhich gently purged him: nevertheleſs the fit of a ſingle Tertian, vvhich had alſo ſhevved it ſelf on the ſeventeenth day, returned upon the nineteenth. On the tvventieth day blood letting vvas iterated, the Urines ſtill appearing red. On the tvventy one before the fit vvas given *Crollius* his Ague Medicament, and yet that fit vvas like the former. On the tvventy ſecond day vvhich vvas free from a fit, there vvas given

him

him a Bolus of half an ounce of Caſſia, Jalap half a dram, and ten grains of my Ague-Chaſer : he purged plentifully by ſtool, and once by Vomit. The fit did not return the following day. On the twenty fourth day there was given an Infuſion of Senna with Salt of Tartar and Spirit of Sulphur, whereby many cholerick and flegmatick Excrements were voided. The following day alſo the fit did not return, ſo that the day after I departed. But I warned that there was danger of a Relapſe, becauſe the Urines ſeemed but little concocted. And therefore I ordered them to repeat the Infuſion of Senna for three daies, either one after another, or every other day, that all the remainders of the Diſeaſe might be expelled. The ſame day wherein I departed the fit returned and continued three daies. But afterwards uſing opening Broths, which I had preſcribed before my departure, he grew perfectly well.

Obſerv. 34. *Aneuriſma.*

625. Mſr. *Pelet*, a Citizen of *Montpelier* fifty yeers of age, being of a black cholerick temperament, and vexed with moſt grievous Cares ; after many Symptoms arguing Hypochondriacal melancholy, he had a Tumor under his right Channel bone as big as an Egg, ſoft and of the color of the reſt of the Skin, wherein a remarkable pulſation appeared. It was judged to be an incurable Aneuriſm. When he was dead the great Artery aſcending from the Heart to the Clavicula, was found ſo diſtended that it was almoſt as big as a mans Arm, and could eaſily admit a Pullets Egg into the Cavity thereof. Moreover, its coat was become very thick and griſtly ; which notes the wonderful providence of Nature, who endeavouring to ſhun the rupture of the very much dilated Coat, had made the ſame thicker and harder. So I once ſaw a Kidney filled with twenty two Stones, grown four times as big as the other Kidney, as if Nature deſired to amplifie the ſame, that it might with leſs trouble contain the ſaid Stones.

Obſerv. 35. *A Quartan Ague.*

626. *John Verchand* a Perfumer, having been long troubled with a Quartan Ague, which after many Medicaments would not go away, he mixed in a draught of his ordinary Ptiſan a mixture of Ambergreece and Musk which he had prepared to make musked Plums, Sugar being added ; in which there were eight grains of each. And in the hot fit he took the Ptiſan at three doſes, every time agitating the Veſſel, leſt the Pouder ſhould lie at the bottom : whereupon he did ſweat plentifully ſweats ſmelling of Musk, and ſo he was perfectly cured.

Obſerv. 36. *A Malignant Tertian.*

627. A noble Matron the Wife of Mſr. *de Sumenes*, being ſick of a double Tertian, in her fits was troubled with grievous faintings, ſo that the by-ſtanders were afraid leſt ſhe ſhould go away in thoſe fits, which argued the intenſe malignity of the Diſeaſe. Being called to her I gave her twice a day in a Cordial Julep *Bezoardicum Joviale* eight grains ; and *Bezoardicum Minerale* one ſcruple in every Broth ſhe took. Within two daies the fainting fits went quite away, and the fits were paſſed over without any grievous Symptom, and in a few daies with ordinary Remedies the Patient was quite cured of her Diſeaſe.

Obſerv. 37. *A Dropſie in a Child.*

628. The Son of *William Pelboſe*, a Citizen of *Montpelier*, two yeers old, had been four moneths troubled with a Dropſie Aſcites to whom I preſcribed theſe following Medicaments.

Take Rhubarb poudered one dram. Let him take it in the morning with Broth once a week.

Take Roots of Aſparagus, Bruſcus, and Enula Campana, of each one ounce : Leaves of Agrimony, Cichory, Finger-Fern, Maiden-hair, Germander, Centaury the leſs, and the two Wormwoods, of each one handful. Boyl them to a pint. In the ſtrained Liquor diſſolve one pound of Sugar. Make all into a Syrup perfectly boyled : Whereof let him take one ounce every other morning an hour before and after he hath ſucked.

Take Lozenges of Diatrion-Santalon with a double quantity of Rhubarb two ounces. Let him take one dram in the morning on the daies he does not take the Syrup.

Take Rhubarb poudered and tied in a nodule, one ſcruple : Fountain Water one pint and half. Steep them together cold, and give him the Liquor for his ordinary drink.

Take Raiſins ſtoned three pound. Let them boyl to Pap in white Wine ; then draw them through a ſearſe, and afterwards boyl them again to the conſiſtence of an Opiate : Let him eat thereof at all times by it ſelf, or with bread at his pleaſure.

Theſe Remedies being continued two moneths together he became perfectly well.

Obſev.

Obſerv. 38. *A Falling Sickneſs.*

629. A Girl twelve yeers old was frequently taken with the Falling-Sickneſs; for the Cure whereof many Remedies were tried in vain. But being taken with a Pleuriſie ſhe was divers times let Blood, and from that time forward was never troubled with the Falling-Sickneſs. Whence we may collect that Blood-letting does much contribute to the Cure of the Falling-ſickneſs.

Obſerv. 39. *A Malignant Feaver.*

630. The moſt Illuſtrious Biſhop of *Uzetien*, being ſick of a moſt Malignant Feaver, which was twiſted of a continual Feaver and an Ague, drawing neer to the Nature of a Semitertian. On the eleventh day of the Diſeaſe he had ſo grievous a Fit, that we were very much afraid of his life. The Symptoms growing worſe and worſe, two or three hours after the beginning of the Fit I gave him of my Treacle Water made of Juyce of Lemmons and other things deſcribed in my Treatiſe of Feavers, in the Chapter of a Malignant Feaver, one ounce and half, with three ounces of Carduus Benedictus Water. And in a quarter of an hour all the Symptomes ceaſed, the Patient fell aſleep, and being awakened out of his ſleep after three hours, he was freed from his Feaver, which returned no more.

Obſerv. 40. *A Tertian Ague.*

631. The elder Son of Mſr. *de Boirargues* having been troubled with a double Tertian twenty dayes, took an hour before his Fit one ounce of our Treacle Water, with two ounces of Carduus Water, and the Fit appeared no more.

Obſerv. 41. *A Quartan Ague, Scab, and Conſumption.*

632. *Raymundus Michel*, a Citizen of *Frontinia*, being ſixty ſix years old, and troubled with a Quartan Ague, after many Remedies was at laſt cured in the middle of Winter, having taken for ſixteen daies together *Mercurius Diaphoreticus* the quantity of ſix grains, whereof he felt no ſenſible operation, but the Fits were dayly abated, ſo that in a manner they vaniſhed quite away: but it was perfectly cured by a ſmal Doſe of my Ague-chaſer. But he remained extream lean, which had almoſt brought him to a Maraſmus, with a very itching dry Scab which poſſeſſed his whole Body. I preſcribed the uſe of Aſſes Milk for forty daies, and an entire Bath for three daies, and a Bath to ſit in for twenty daies, and to be anointed after the ſame, with an Oyntment proper for the Itch, and ſo he was perfected cured.

Obſerv. 42. *A Rheumatiſmus.*

633. *Ladovicus Michel* of *Frontinia*, twenty five years old in the moneth of *September*, *1649*. fell into a Rheumatiſm, whereby all the Joynts of her Body in a manner were vexed with grievous pains, and thoſe wandring, ſo that ſometimes they ſeized upon one part, anon upon another. Now although this Diſeaſe is wont to be for the moſt part Chronical, and to laſt many moneths: yet it was taken away in the ſpace of fifteen daies, the Patient being ſeven times let Blood at the beginning, and red Poppy Water being given morning and evening. And when the pain abated, he was thrice purged with Pulvis Arthriticus every other day.

Obſerv. 43. *A Phthiſis.*

634. A Phthiſical Damoſel being reduced to an extream leanneſs, by the Counſel of her Phyſitian lived only with Raiſins which ſhe did eat with bread, and for Drink ſhe uſed a Decoction of Barley and Liquoris, and ſo within eight moneths ſhe was reſtored, and very well fattened.

Obſerv. 44. *A Dropſie.*

635. A Girl eight years old, being ſick of a Dropſie uſed Conſerve of Raiſins in all her Diet, and within two moneths ſhe was cured. Now this Conſerve was made of Raiſins boyled in white Wine unto a Pap, and forced through a Searſe and boyled again to the conſiſtency of an Opiate.

Obſerv. 45. *Suppreſſion of Urine.*

636. A certain man being troubled with ſuppreſſion of Urine two daies, was cured by this Method, He took every day a laxative Ptiſan made in a Decoction of Pellitory whereby wheyiſh humors were attracted, ſo that they could not flow into the Bladder: Alſo he frequently uſed a Bath to ſit in. After four Purgations, he took about the evening Oyl of Scorpions of *Matthiolus* one dram or two, with the ſame Decoction. This alſo is worthy of obſervation, That after he was cured his whole Face was covered over with a cruſt, which in the ſpace of fifteen daies dried and fell away. Whence we might con-

jecture that a certain virulent matter which lay hid in the Body, was driven out into his Face by the Oyl of Scorpions. And peradventure this Oyl would much help thoſe that are troubled with the Elephantiaſis.

Obſerv. 46. *A Vomiting of kin to the Diſeaſe* Cholera.

637. A certain Woman being troubled with a nightly vomiting reſembling the Diſeaſe *Cholera* was cured in a moment, by drinking a draught of Water, made very tart with Spirit of Vitriol.

Obſerv. 47. *A Fainting and other Symptoms from the Womb.*

638. Another Woman being troubled with grievous Symptomes from her Womb, was cured by the ſame Spirit mixed with Water.

Obſerv. 48. *A Baſtard Dropſie.*

639. A certain man had his Belly very much ſwollen, ſo that all men took him to be Hydropical; at laſt after he had taken a Medicament he voided ſeven Bladders long and round like Puddings, and as thick, of an hands breadth, which were full of a ſtinking Humor; and upon the voidance of theſe he was perfectly cured.

Obſerv. 49. *A Cholerick Cholick.*

640. An Apothecary of *Clermont*, who was called *Michael*, being about forty years old, told me, that having been many years vexed with Cholick pains, he could find no other Remedy but to drink Water, and ſo long as he continued the uſe thereof he was free: but as ſoon as he returned to the uſe of Wine, within two daies he was taken with his Cholick. And he deſiring to know of me the cauſe hereof; I anſwered, that this Cholick was not raiſed ſimply from Choler, but for the moſt part from Melancholy mixed with the Choler, ſince his predominant temperament was Melancholick. And ſince Melancholy is continually ſhed from the Spleen into the Stomach, by its tartneſs it infects the Wine ſo as to make it grow ſour upon the Stomach, and augment the cauſe of the Diſeaſe. But if a Cholerick Humor ſhould be the Cauſe of the Diſeaſe, it would be indeed holpen by drinking of Water, but the uſe of Wine would not ſo ſoon bring the diſeaſe, becauſe Wine does not ſo readily put on the qualities of Choler as of Melancholy, becauſe it ſooner grows ſour than bitter. It ſtrengthens my conjecture becauſe the foreſaid Apothecary when he had his Cholick Fits did vomit ſour Humors, but not bitter.

Obſerv. 50. *A Gangreen.*

641. A certain very poor Woman by reaſon of a conſiderable Fracture in her Leg with a grievous Ulcer, fell into a Gangreen which compaſſed the whole Wound, and dayly encreaſed, and infected the neighboring parts. A Chyrurgeon by my advice Fomented the Part continually for two daies with Vinegar in which the droſs of Iron had been boyled, and the Gangreen was ſtopped, and laudable Quittor began to come out of the Wound; and it was afterwards cured by the ordinary Method.

Obſerv. 51. *A Pain in the Knee proceeding from a Bruiſe.*

642. *John Cavalier* my Servant, about noon caught a blow on his Knee with a wooden Ball. He walked without pain till four a clock in the evening, at which time the Pain poſſeſſing the whole Knee was ſo grievous that he could not walk at all. Preſently I cauſed the part to be ſmeared with equal portions of Oyl of Wax, and Spirit of Wine, hot Linnen Cloths being laid thereon. At bed-time he was anointed again, and again the next morning, and within twenty four hours he was well.

Obſerv. 52. *A ſtubborn and long laſting Tumor in the Knee.*

643. Mſr. *Monts*, the Kings Letter-Carrier, for three moneths together had ſo ſtubborn a ſwelling in his Knee, that he could not by any means be rid thereof: It was many times ſoft, as if it would ſuppurate, and the Chirurgeons would have opened it but that I would not give way. After many Remedies this following Plaiſter did much good.

Take Plaiſter Diapalma one ounce: Mercury crude kill'd with Sulphur and Roman Vitriol, of each two drams: Turpentine a little. Let all be made into a Plaiſter.

The Tumor yet continued, though very much abated; and finally, this following Plaiſter perfected the Cure.

Take Gum Ammoniack and Sagapenum diſſolved in Vinegar, and then thickened again, of each two ounces: Diachylon with Gums one ounce and half. Melt all together, then add Cinnabar and burnt Braſs, of each one ounce: Orpment and Verdigreece, of each two drams. Make all into a Maſs.

Obſerv.

Obſerv. 53. *The Diſeaſe Cholera.*

644. *Petrus Manuel* a Merchant of *Montpelier*, ſeventy years old, being taken with a grievous *Cholera*, [that is, Vomiting and ſcouring,] with four Remedies chiefly he was in eight dayes cured. *Viz.* A Clyſter of Milk, *Confectio de Hyacintho*, Conſerve of Roſes, and Yelks of Eggs; an aſtringent Fomentation of his Stomach, and ſtrengthening, with Bags ſteeped in red Wine; a Julep of a Decoction of Plantane and Purſlane, with Syrup of Quinces, and *Confectio de Hyacintho* given morning and evening, and one grain of Laudanum every night diſſolved in his Julep. This Cure was counted a Miracle in ſo old a perſon.

Obſerv. 54. *A Malignant Feaver.*

645. The ninth of *Auguſt*, 1650. I was called to the Baths to Mr. *Guerinus* a Merchant of *Lions*, who was ſick there. It was the fifteenth day of the Diſeaſe, and he was held with a continual raving, and perpetual contractions of the Nerves, and ſtarting of his Members; moreover, he refuſed all Broths, and other Drinks, and he ſpit out whatever was put into his mouth by Spoon, At firſt I forced him to ſwallow his Broths by ſtopping his Noſe, and holding the Spoon long in his mouth. Afterwards I gave him twenty grains of *Bezoardicum Joviale* twice a day, and in all his Broths one ſcruple of *Bezoardicum Minerale* for two daies together with Juleps, Alexipharmicks, Epithems, and other vulgar Remedies. Alſo Veſicatories were applied to his Neck and Wriſts, and within three daies he was freed from his Feaver and all its Symptoms.

Obſerv. 55. *A Malignant Feaver.*

646. On the 14. of *Auguſt*, in the year 1650. Mſr. *d' Almeras*, Captain of a Man of War, for ſeven daies had been troubled with a continual Malignant Feaver, with ſo great weakneſs, that he could not ſtir himſelf in his Bed, or turn himſelf from one ſide to another. All ordinary Remedies were uſed to no purpoſe, no not Bezoar Stone, which he ſaid a Spaniſh Gentleman had brought from the *Indies* and given him. At laſt, on the twelfth day of the Diſeaſe when all grew worſe and worſe, and I ſaw the Patient (of whom I was exceeding tender) in danger of his Life; I gave him at nine a Clock in the evening four ounces of my Treacle Water made with juyce of Lemmons. At eleven a clock I gave him in Broth *Bezoardicum Joviale* twelve grains, and in the morning at four a clock he took the ſaid Bezoartick again. The effect of theſe Remedies was ſuch, that the Faintings which had formerly troubled him, did trouble him no more: yea, and whereas before having a looſneſs which did much weaken him as oft as he went to ſtool, that night nevertheleſs he had a plentiful ſtool, and became thereby the ſtronger. Alſo three hours after he had taken the Water and Pouder, he turned himſelf of his own accord upon his ſide and lay thereupon, whereas for many daies before he had lain upon his back immovable. In the morning his Urines appeared better digeſted, and from that time he continually amended, and in a ſhort ſpace was freed from his Feaver perfectly.

Obſerv. 56. *A Malignant Feaver.*

647. On the third day of *Septembber*, the year 1650. I was called to a Town named *Aiguemortes*, to ſee the renowned Lady *de Guy*, ſixty years of age, troubled with a Malignant Feaver, being ſomwhat of the Nature of a Semitertian. For the Fits returned every day, which did not terminate in a perfect freedom from heat, and there came with the Fits a coldneſs of the whole Body, which laſted twelve or fifteen hours, with an exceeding Languiſhment of the forces of her Body. Moreover ſhe was exceedingly weakned by a plentiful and continual looſneſs, whereby very crude humors of a gray color were voided. And this flux was of kin to a Lientery; for ſo often as ſhe took Broth or drunk, ſhe preſently voided it by Stool, but four times as much in quantity. I came on the ninth day of the Diſeaſe, and I uſed ordinary Remedies carefully and continually for two daies together, ſuch as are wont to be preſcribed for a Malignant Feaver, Looſneſs, and to ſtrengthen Nature. And when they would do no good, and the Patient grew worſe and worſe, ſo that on the ſeventh day ſhe ſeemed neer to death, and as it were in the Agony thereof; I thought to have recourſe to *Bezoardicum Joviale*, as a rare Antidote and powerful Diaphoretick, and I gave her twelve grains thereof. From that time ſhe had no more Stools, her cold Fits did not return, and within two daies ſhe loſt her Feaver, and in a while after was perfectly well.

Obſerv. 57. *A Pit in a Womans Dug.*

648. This is a rare Caſe. A Noble Matron, fifty one years of Age, being of a Cholerick and Melancholick Temperament, ten years before had been taken with a ſudden

fright through the ſudden death of her child killed by the Nurſes heedleſneſs. Hence her Courſes were wholly ſtopped, nor had ſhe them ever after. After two years there aroſe in the upper part of her left Dug, a Tumor ſomwhat hard and long, round as thick as a finger. A little afterwards there appeared in the lower part of her ſaid Dug another little round Tumor, which within four daies made a ſmal pit in the ſame part without pain, which pit grew by little and little, ſo that within two years it drew in about half the Dug, and in the bottom thereof the skin might be perceived to ſtick unto the Ribs. But in the compaſs of the ſaid bottom a certain hardneſs was perceived, which being compreſſed with the fingers did introduce a ſenſe of pain. Sometimes the Patient felt a pricking pain in all that part, but ſmal and ſeldom happening. Moreover, ſhe had an intenſe heat in the Region of her Liver, and the right ſide of her Cheſt.

A Conſultation being had, this Malady was thought to approach unto the Nature of a ſecret Cancer. For ſince there is a very great variety in the Nature of the Melancholick and black Cholerick Humor, it happens that from thoſe Humors ſundry ſorts of the ſame Diſeaſe do ariſe. Commonly the Melancholick aduſt Humor cauſing a Cancer is thick, and produces an hard Tumor, which at laſt gaining putrifaction and acrimony exulcerates the Parts, and produces an incurable Ulcer. But in this Caſe the Humor is thin, and therefore it makes a very ſmal Tumor; and moreover, that ſame Humor hath a certain Malignant and melting quality, whereby it diſſolves and conſumes the ſubſtance of the part; as we ſee ſome Salts furniſhed with a corroſive and ulcerating faculty, ſuch as thoſe are whereof Potential Cauteries are made; and ſome can diſſolve the hardeſt Bodies, of which are made Aqua-Fortis, Aqua Regia, and ſuch like Liquors as can diſſolve Metals and Stones; yea, Vinegar diſſolves Stones, and yet does not fret the Skin. So in the Microcoſm are generated Salts of like Faculties, which being mixt with the Humors, do produce wonderful effects. So in this Caſe, the Humor which is naturally expelled into the Dug, as into a ſoft and ſpungy part, does by degrees melt and conſume the ſubſtance thereof; ſo that the aforeſaid Pit grows every day bigger and bigger. This Diſeaſe was judged incurable, and that only a Palliative Cure was to be thereto applied, and that it was to be feared leſt at laſt the part ſhould be ulcerated, a greater acrimony being introduced. The Remedies preſcribed were alterers, evacuters, revellers, roborators, viz. Periodical Purgations and Blood-lettings, altering Broths, Whey, Mineral Waters, Cauſticks, Specifick Opiates, and ſuch like. Alſo Topicks to lenifie and moiſten the fierceneſs of the Humor, as a Liniment of Oyl of Roſes, Juyce of Plantane, and Nightſhade with crude Mercury; the Oyntment of green Frogs deſcribed by *Chalmetheus*, in his Chapter of the Cancer: a Liniment of Butter and Oyl of Violets with Salt of Lead, a Fomentation with Roſe-Water and Salt of Lead.

Obſerv. 58. *Pain of the Hæmorrhoids.*

649. A man threeſcore years of age, of a Melancholick aud Atrabiliary temper, was vexed with a troubleſome pain of the Hæmorrhoids, with a Tumor and Inflammation of the part, which would not give way to many Remedies. I preſcribed him a Fomentation of Roſe-Water, in ſix ounces whereof a dram of Salt of Lead was diſſolved; which Fomentation was reiterated divers times in a day. But afterwards a Cataplaſm was applied, of a white Onion roaſted under the embers, and mingled with Butter in an equal quantity. Within two daies the Inflamma was aſſwaged, and the Tumor for the moſt part diſſolved.

Obſerv. 59. *Convulſions in a Child.*

650. The 27. of *October*, 1650. when I was at *Nemours*, tending upon another Patient, the Son of Mſr. *Marguerite*, Counſellor in the Præſidial Court of *Nemours*, ten years of age, was taken with Epileptick Convulſions moſt dreadful, ſo that all the parts of his Body were cruelly ſhaken, and the fits returned ever and anon, and there was well-neer no intermiſſion. In ſo great a danger and ſo importunate a Diſeaſe, I gave him half a dram of Salt of Vitriol diſſolved in Betony-Water whereby vomiting was preſently raiſed, and the Patient voided much flegm, aud preſently the Convulſions were ſtopped. Yet after ſome hours they returned, but much ſhorter and lighter, and therefore a Purgation was given him of Diacarthamum half an ounce; Syrup of Roſes one ounce, with Betony-Water; and this was given about the evening, becauſe in the morning he had his Fits. He was purged wel in the night. Afterwards there was given to him Oyl of Amber and Spirit of Vitriol, of each five drops in Water of Betony. His fits were more light, but the night following they were ſomewhat more frequent. The next day in the morning we gave him a Potion of Carduus Water one ounce, and as much Scordium Water, Treacle Water of Bauderon

Bauderon one ounce; Salt of Carduus one ſcruple; Confectio Alkermes one dram : By help whereof all Convulſions were taken away. But leſt they ſhould come again, *Bezoardicum Joviale* was twice given him the quantity of twelve grains in eight hours time, and ſo he was quite cured. We gave him the Alexipharmical Potion, and the *Bezoardicum Joviale*, becauſe there was great ſuſpicion of malignity in the Diſeaſe; becauſe the Boy had fifteen daies before been troubled with a Quinzy, which Diſeaſe was at that time Epidemical at *Nemours*, eſpecially afflicting the Children, whereof ſome alſo died. Whence we may conjecture that the malignity remaining after that Diſeaſe in the Boys Body, during the time aforeſaid, was ſuddenly awakened; and raiſed thoſe Convulſions.

Obſerv. 60. *The Quinzie.*

651. On the 27. of *October*, 1650. Mſr. *Cheilon*, an Advocate at *Nemours*, thirty years of Age, was troubled with a grievous Quinzy for five daies, which took away his ſwallowing quite and clean; ſo that he could not take a drop of Broth, and for twenty four hours he had taken nothing, beſides Water, which did more eaſily paſs. I bad preſently give him two ounces of *Aqua Benedicta*, in the operation whereof, the Impoſthume which did lurk in his Throat and ſtopt the whole Orifice of his Gullet, was broken, and the Patient voided much Quittor with flegm and a little blood. But afterwards he took Broth without much trouble, and after a few other Remedies, grew preſently well.

Obſerv. 61. *A Double Tertian.*

652. On the 29. of *November*, 1650. while I was at *Nemours*, I was called to Mſr. *de Mirabel* ſojourning with Mſr. *Barnier* the Kings Councellor, who was troubled with a double Tertian Ague for fifteen daies, in which ſpace of time he was twice let Blood, and as many Purgations were given him, and many and opening and cooling Juleps. Nevertheleſs the Feaver continued, the Fits came ſooner, the Urines were crude and reddiſh, alſo the Patient was troubled with Nocturnal ſweats : all which threatned a long Diſeaſe, ſo that it was to be feared it might degenerate into a Quartan. I therefore ſetting upon the Cure, to remove the internal Inflammation, which was apparent from the redneſs of the Urines, and the great heat of the Fits, I let him blood again, and his Blood appearing very much burnt and corrupt, I thought good to cauſe him to Bleed the day after alſo. Afterwards to clarifie and temper his Blood, I preſcribed Juleps of temperate opening Roots, with Cichories and Capillary Plants to be continued for three daies together. After which followed the Potion of Senna, Tamarinds, Manna, and Syrup of Roſes, whereby he was ſufficiently purged. Yet the Fits continued as ſtrong as before. I gave him therefore twenty grains of my Ague-Chaſer; whereby he was ſeven times purged, only downwards, and that ſo gently that he would every where profeſs, that he never took a gentler Medicament. Now he took it at three a clock in the morning, the Fit being expected at one of the clock after Dinner, which was kept back till four in the Afternoon, and was much lighter than before. The following day the Fit returned the ſame hour, and was like the former. I gave again my Feaver-Chaſer in the ſame Doſe, and he was purged after the ſame manner, nor did his Fit come any more. The day after the Medicament he bled a pint of Blood at the Noſe, and was not weakened thereby. And this I have ſometimes obſerved in my Feaver-Chaſer, That as it endeavors to expel whatever is burdenſome to Nature, it alſo expels ſuperfluous Blood by bleeding at the Noſe : which happened in this Gentleman who was young and Sanguine, ſo that ſuperfluous Blood was in him ſtill redundant, though he had been four times let Blood. Thus he was perfectly cured, and reduced to his former health.

Obſerv. 62. *A Quartan Ague.*

653. A Dominican Friar named *Auſtin*, was troubled with a Quartan-Ague a year together, which was followed by a black Jaundice. He had uſed many Remedies againſt this Diſeaſe, according to the preſcript of ſundry Phyſitians, but all in vain. For he was of a very Melancholick Temperament & aduſt : Moreover, his left Hypochondry was hard & reſiſted the touch. I ordered him to be let Blood, to take opening and Melancholy purging Apozemes for four daies, with opening and emollient Fomentations to be applied to his Hypochondries. Afterwards I gave him twenty grains of my Feaver-Chaſer, yet the Ague remained unſhaken. After two Fits I gave twenty five grains more, & the Fits were abated. After two Fits more I gave thirty grains, and that ſame rebellious Feaver was quite chaſed away.

Obſerv. 63. *A Felon or Whitlow.*

654. In the beginning of the moneth of *March*, 1651. the eldeſt Daughter of the Baron of *Aumelaz*, General Treaſurer of *France*, had a Felon on the fore-Finger of her left Hand, which had grievouſly tormented her for the ſpace of four daies, ſo that ſhe ſlept not all night, with extream pain. I cauſed her to put her Finger into the Cats Ear, and within two hours ſhe was void of all pain. She felt her Finger drawn by Fits into the Cavity of the Ear, and ever and anon the pain ſeized upon her whole Arm, as far as to her Shoulder, and at that time the Cat cried aloud, ſo that it is probable that ſhe was affected by the Venom drawn in. For a Felon is a venemous Tumor. All her hand was ſwelled, and then the ſwelling went away, ſave on her Finger, which remained ſwoln, but void of Pain. Her finger being taken out, appeared ſuppurated, and was afterwards cured only by the Plaiſter Diapalma.

Obſerv. 64. *Immoderate flux of the Hemorrhoids.*

655. In the moneth of *April*, 1651. a noble Matron, Wife of Mſr. *Riniac*, Proctor General in the Court of Accounts, Subſidies, and the Kings Exchequer, being forty years old, had an immoderate Flux of the Hæmorrhoids, of which ſhe could not be cured by all the Remedies preſcribed by two Phyſitians one after another for eight moneths time; ſo that ſhe was brought into an extream Cachexia threatning a Dropſie, with extream weakneſs, ſo that ſhe could hardly ſtir, and a yellow Jaundicing color of her Face and whole Body. She could no longer away with Remedies, and by Purgatives which ſhe took by advice of the Phyſitians aforeſaid although gentle, her Flux was irritated. In this deſperation ſhe came to me, and implored my aſſiſtance. And I preſently preſcribed her the following Potion to be uſed four daies one after another.

Take Tamarinds half an ounce: Leaves of Plantane one handful: Citrine Myrobalans one dram. Boyl them to ſix ounces. In the ſtrained Liquor infuſe choyce Rhubarb one dram: Spicknard ten grains. After expreſſion diſſolve therein Syrup of Roſes one ounce: Pouder of Rhubarb one ſcruple. Make all into a Potion.

After the firſt taking of this Potion the Flux of Blood was ſtopped, although ſhe went five times to Stool; and in the other doſes the ſame event followed.

Afterwards I preſcribed Juleps of a Decoction of Cinquefoyl Roots and Tormentil, Leaves of Plantane, Pimpernel, and Yarrow, with Sal Prunellæ and Syrup of Pomegranates for twelve daies together, iterating the Purgation every fifth day; and all that time the flux of Hæmorrhoids never appeared.

And becauſe the Diſeaſe was rebellious and very long laſting, which being once ſtopped would after a time return again: after the foreſaid Remedies I preſcribed Salt of Iron to be taken for many daies from ſix to eight grains, and the giving of the foreſaid Potion every fifth day.

Through the uſe of theſe Medicaments the flux of Hæmorrhoids did not appear for five weeks, which being gone there returned a very troubleſome Flux, for ſhe voided abundance of very pure Blood as often as ſhe went to Stool. Being ſent for the next day I preſcribed again a purging Potion; after which ſhe had two or three Stools without any voidance of Blood.

The day after the Purge I preſcribed her a Bath of Barley, Plantane, Knotgraſs, tops of Brambles, and red Roſes, to be uſed two daies.

Afterwards the ſame Remedies were iterated for an whole moneth together; and daily the Patient got ſtrength, and the lively color of her Face was reſtored, till at laſt ſhe gained perfect Health. Yet about the end of the foreſaid moneth ſhe felt an heat in her Hypochondries, and diſquietneſs about the time of ſleeping. It was eaſie to conceive that this proceeded from Retention of Blood, which did formerly go away by the Hæmorrhoids, and which Nature could not well govern, being accuſtomed to the former evacuations, eſpecially ſince her Courſes had been ſtopped ſome years: wherefore I ordered her to bleed in her Arm, by help whereof the foreſaid Symptoms were taken away.

Obſerv. 65. *A Contuſion, Inflammation, and Excoriation of the Buttocks by long lying upon the Part.*

656. The Wife of Mſr. *de Briſſac*, being ſick of a continual Feaver, with a very troubleſome Catarrh falling dovvn upon the Lungs, vvhereupon ſhe had continually a Cough, vvhich did vehemently trouble her, eſpecially vvhen ſhe lay dovvn, ſo that ſhe vvas forced to ſit day and night in Bed. And being exceeding lean the ends of her Buttocks coming neer her Fundament, by continual compreſſion vvere bruiſed, and had the skin fretted off; after vvhich followved an Inflammation vvith an obſcure redneſs enclining

clining to black and blue. After ſome Oyntments and Plaiſters ſome daies uſed in vain by a Chyrurgeon experimented, I was made acquainted with the Caſe. I cauſed the part to be fomented with Roſe Water wherein Sugar of Lead was diſſolved, and in twenty four hours the Malady was cured,

Obſerv. 66. *A Malignant Feaver.*

657. In the moneth of *July*, 1651. Mſr. *de Deletre* Farmer of the Salt Pits, fell into a Malignant Feaver, which brought him to Convulſions and Ravings, with extream inequality of Pulſe, ſo that it ſeemed he would ſhortly die. Of ſundry things that were given him, my Treacle Water deſcribed in my Cure of a Peſtilential Feaver did him moſt good, being given the quantity of four ounces, with twelve grains of *Bezoardicum Joviale*. Whereby plentiful ſweat was cauſed, and the Patient freed as by a miracle.

Obſerv. 67. *A monſtrous Scituation of the Stomach.*

658. The Son of Mſr. *Rat*, a Citizen of *Montpelier*, twenty four years old, by temper melancholick, was troubled wel-near all the Summer with a long laſting Tertian Ague ſometimes ſimple, other whiles double, all the the Summer in a manner. But in the moneth of *September*, although he was freed from his Fits, yet was he not perfectly well, and took Antimonium from an Emperick, which perhaps was ill prepared, whereby he was exceedingly moved to vomit, but brought up nothing. So that the ſaid continual ſtraining to no purpoſe tormenting him, in ſeven or eight hours time it did bring him to deaths dore, and towards evening took him away. His Body being opened his Stomach was found in the right part of his Cheſt full of ſundry Humors; which preternatural Scituation was doubtleſs the cauſe that it could not ſufficiently dilate nor turn it ſelf ſo as to vomit, being oppreſſed by the circumference of the Ribs. Now that this Scituation was from the firſt original in the Womb, appeared by the abſence of the Lungs in that part of the Cheſt, becauſe there was only one Lobe or Lap thereof in the left ſide. It is ſtrange that this young man was not all his life time very much oppreſſed with ſhortneſs of breath, and that he conveniently exerciſed all the functions of his Body before the Diſeaſe aforeſaid; for he had been a Soldier and contracted the foreſaid Feavers in the Wars.

Obſerv. 68. *A Dropſie.*

659. A Child two years old, ſick of a Dropſie, was perfectly cured in two moneths time, by theſe following Remedies.

Take Rhubarb poudered one dram. Let him take it in the morning with Broth.

Take Roots of Aſparagus, Butchers Broom, Elicampane, of each one ounce: Leaves of Agrimony, Cichory, Finger-Fern, Maidenhair, Germander, Centaury, the two Wormwoods, of each one handful: Boyl them to a pint. Make thereof with Sugar a Syrup perfectly boyled. Let him take one ounce every other day an hour before he ſucks.

Take Lozenges of Trionſantalon with a fourfold quantity of Rhubarb four ounces. Let him take one dram every other day when he does not take the Syrup.

Take Choice Rhubarb tied up in a nodule, one ſcruple: Spring Water one pint and half. Infuſe them cold, and let him uſe the Liquor for his ordinary Drink.

Obſerv. 69. *A Bloody Flux.*

660. Mſr. *Rouſier*, a Doctor of Phyſick, and Phyſitian at *Utica*, forty years of age, for four moneths had a Cholerick Looſneſs, with flegm and blood, whereby he voided more Blood than other Humors, ſo that he was made extream lean and almoſt conſumed. Having all that time uſed many Remedies in vain; at laſt he cals me to adviſe with; and I gave him twelve grains of Horizontal Gold, whereby he was gently purged, and voided ſtore of leek-colored and ruſty Choler without any Blood. I cauſed the ſame Remedy to be twice repeated, every third day, and the ſame operation followed. Afterwards he was quite freed of his Looſneſs, and uſing nouriſhing Meats of good Juyce, he attained his former health.

Obſerv. 70. *Inability to Generate.*

661. A Gentleman thirty years of Age, having in the beginning of his youth much given himſelf to Venery, and having had a long Gonorrhea, in the height whereof he nevertheleſs uſed frequent Copulation, yea, with impure Harlots; his Genital parts being very much weakned by the cauſes aforeſaid, he became at laſt Impotent, which Impotency did not conſiſt in want of Erection, which he ſaid was ſufficient, but of Ejaculation, which ſeldom followed. Now I conceive it depended upon defect of Seed, which was bred in very ſmal quantity, becauſe of the weakneſs of his Teſticles, whoſe Natural

Natural heat vvas exhauſted and diſſolved by frequent Copulation. Peradventure alſo his *Paraſtatæ* vvere faulty, receiving but little Seed from the Stones, by reaſon of Scars remaining in them, after thoſe Ulcers which are wont to accompany thoſe long laſting Gonorrhæa's. Alſo by reaſon of the cold diſtemper introduced into thoſe weakened parts, through diſſipation of the implanted Spirit. For the Cure of this Diſeaſe I preſcribed theſe following Remedies the firſt of *April* 1652.

Take Emollient Decoction one pint and half: double Catholicon and Diaphœnicon, of each ſix drams: Honey of Roſes, Oyl of Lillies, of each two ounces. Make a Clyſter and give it at four a clock in the afternoon.

The following day let eight ounces of blood from the Baſilica Vein of the right Arm.

Take Senna half an ounce: Annis-ſeeds one dram: Roman Wormwood half a pugil: Boyl them to three ounces. In the ſtrained Liquor diſſolve Diaphœnicon three drams: Syrup of Roſes one ounce. Make a Potion, and let him take it the day after his bleeding, and be ordered accordingly.

Take Shavings of Guajacum four ounces: Fountain Water four pints. Let them ſteep twenty four hours, then boyl them till half the Liquor is conſumed, adding towards the end one ounce of Senna, Turbith, Hermodactils, of eueh three drams. Take of the ſtrained Liquor half a pint every morning for twenty daies together three hours before he eats.

Take Sarſaperilla one ounce: Fountain Water eight pints: Steep them twelve hours: Let them boyl till a quarter is waſted away. Let him uſe the ſtrained Liquor for his ordinary Drink with ſtrong Wine, during the uſe of the foreſaid Decoction: uſing the mean while Bisket made with Annis-ſeeds, Meats roaſted and not boyled, Pine-Kernels, torrified Almonds, and other dry Meats.

After the foreſaid Decoction is taken, let him for three daies together take one ounce of Turpentine well waſhed in Agrimony water.

After the uſe of theſe Remedies let him go to the Balerucan hot Baths, whoſe Water let him drink three daies together after the uſuall manner.

Afterwards let him uſe a Bath to ſit in of the ſaid Waters four daies together morning and evening, ſweating in the mornings, and in the evening let him only Bath his Teſticles, *Perinæum*, and the Region of his Share.

Still when he comes out of his Bath after the Sweat and Water is wiped off, let his Cods, *Perinæum*, and Loins be anointed with this following Oyntment.

Take Oyl of Lillies two ounces: Oyl of Nutmegs half an ounce: Oyl of Cloves one dram: Pepper, white, black and long, of each half a dram: Seeds of Rocket, Nettles, Nigella, of each ten grains: Pellitory of Spain one dram: Wax as much as will ſuffice to make all into an Oyntment.

Take Oyl of Nutmegs two ounces: Oyl of Cloves one dram: Ambergreece half a dram: Musk and Civet, of each one ſcruple. Make them into a Liniment.

After the uſe of the Baths, foment the Parts aforeſaid for fifteen or twenty daies, an hour before he goes to Bed with the following Decoction.

Take Roots of Galangal, Calamus Aromaticus, and Florentine Orris, of each one ounce: Leaves of Sage, Marjerom, and Roſemary, of each one handful: Seeds of Rocket, Watercreſſes, Nettles, Cardamoms, and Cubebs, of each three drams: Nutmegs, Cloves, Cinnamon, of each half an ounce: red Roſes one pugil: Boyl them in red Wine till a fourth part is conſumed. Let him uſe the ſtrained Liquor for a Fomentation as aforeſaid.

After the Fomentation anoint the ſaid Parts with the foreſaid Liniment.

During the uſe of the foreſaid Remedies let him take every morning half an ounce of Conſerve of Satyrion or Eryngos, or a Walnut preſerved in Sugar, or a preſerved Myrobalan, or two drams of the following Lozenges:

Take Confection of Alkermes two drams: Amber-greece one ſcruple: Musk ſix grains: Sugar diſſolved in Orange-flower and Roſe Waters ſix ounces. Make all into Lozenges.

He may uſe the foreſaid Remedies by turns, that he may not grow weary of any one.

Mean while let him uſe a Reſtorative Diet eſpecially let him frequently eat Partridges, and young Pidgeons, young Hares, and Rice boyled in Milk.

For Junkets let him uſe Piſtachios, Toadſtools, Hartichoaks, Almonds, Hazel Nuts, Dates, and Pine Kernels; alſo the Confection made of them, which is commonly called *Pineolatum*.

Let him abſtain from Fruits and raw Herbs, Fiſhes, and other cold and moiſt Aliments. Alſo from Carnal Copulation during the uſe of the foreſaid Remedies.

Obſerv. 71. *A Dropſie of the Breaſt.*

662. *John Manenty* a Citizen of *Montpelier* ſixty five yeers old, of a thick burly Body, for three moneths had been troubled with a great ſhortneſs of Breath ſo that he could ſcarcely reſt in his Bed, eſpecially in the

the nights, at what time he was chiefly troubled. He had no Cough, or very ſeldome, nor did he ſpit up any thing to ſpeak of. His face was ſomewhat ſwollen, and his belly began to ſwell, ſo that he ſeemed to encline to an Aſcites, for his Legs and feet did alſo ſwell. For his Cure was preſcribed in the beginning of *May* an univerſal Purgation for four daies, by a Flegm and Water-purging Apozeme. Afterwards a Sudorifick Diet-drink of a Decoction of Guaiacum and Sarſaperilla for twenty daies, he being made to ſweat plentifully in a Laconick Bath, made with the vapour of Spirit of Wine. And after every fourth Doſe he took a Water-purging Powder of Senna, Turbith, Hermodactils, Jalap, Scammony, and Cream of Tartar; by which Remedies he was perfectly cured.

Obſerv. 72. *A double Tertian in a Woman with Child in her ſeventh moneth.*

663. The Wife of Mſr. *Brujeys*, in the ſeventh moneth of her Gravidation, was taken with a double Tertian in the moneth of *May*, 1652. which vexed her a moneth without any ſhew of abatement, whereby ſhe was very much in danger. For daily experience ſhews that Women with Child troubled with ſuch like Agues, are very hardly cured, and many die of Abortion. She had been thrice let blood, twice purged, and many opening and cooling Juleps had been given her. Finally, being let blood an hour before her fit, and taking immediately before her bleeding a Julep of the Decoction of Chamomel and Cream of Tartar, her Ague was quite taken away. For the fit that was expected after her Blood-letting came not, nor any after.

Obſerv. 73. *A Dropſie.*

664. The VVife of a Taylor, my Neighbour, thirty years of Age, having been Cachectical all the time of her Childing, and diſordered her ſelf in her Child-bed, was taken with an acute Feaver, at the end whereof ſhe fell into a Dropſie, wherein her Belly, Thighs and Legs were much ſwelled; and being poor, I preſcribed her only this following Powder.

Take *Senna, Cream of Tartar, Jalap, of each half an ounce.* Let her take one dram in Broth every day. With this Remedy continued twenty daies ſhe was perfectly cured.

Obſerv. 74. *The Dug inflamed.*

665. A young Woman about the ninth moneth of her being with Child, was taken with a ſwelling of her left Dug, with ſtretching Redneſs and Pulſation. A Chyrurgeon being called, he preſently applied a Pultiſs of Bread-crums, whereupon the Tumor exceedingly encreaſed. I being called, preſcribed a Pultiſs of Bean-meal boyled in Oxycrate to be often changed, becauſe in a few hours it would become dry. In twelve hours the Inflammation was taken away, the Tumor very much abated, and within a few daies quite vaniſhed.

Obſerv. 75. *A Cholerick Cholick.*

666. Mſr. *de Chalanges*, Farmer of the Salt-pits, was taken with a Cholerick Cholick about the end of *January*, 1653. The Pain was very tormenting, with continual watchings, a perpetual Feaver, and frequent Hiccupping, ſo that his ordinary Phyſitian ſuſpected an Inflammation of ſome part in his lower Belly. But I being called to conſult, conceived that all theſe Symptoms did proceed from a Cholerick *Cacochymia*, moved by this reaſon chiefly, in that the pain was wandring, ſometimes poſſeſſing the lower and Hypogaſtrick part of the Belly, and other whiles the upper and Epigaſtrick part: This Opinion the event made good. For after four times letting blood, many Emollient, purging, and pain-aſſwaging Clyſters, Fomentations and Baths to ſit in, he was cured with four Purgations uſed one day after another, of a Decoction of Cichory Herbs, and Capillary Plants, tops of Mallows, and two drams of Senna, wherein was infuſed one ounce of Caſſia, and in the ſtrained Liquor was diſſolved one ounce of Syrup of Roſes. Every day he voided much Leek-coloured Choler, which had cauſed the foreſaid Symptoms.

Obſerv. 76. *Inflammation of the Almonds of the Ears.*

667. On the 21. of *May*, the year 1653. the Wife of Mſr. *Engarran*, a Councellor in the Court of Accounts, was afflicted with a moſt grievous Inflammation of the Almonds of her Ears, which was ſoon followed by an exulceration with intenſe pain. Blood-letting being celebrated, and Gargariſms of Oxycratum being uſed two daies together in vain, ſhe was cured in a day with the following Remedy.

Take *Muſtard-ſeed one dram: Vinegar of Roſes, and white Sugar of each one ounce: Water three ounces. Make all into a Gargariſm.*

Obſerv. 77. *The Dropſie in a Boy.*

668. The Son of Mſr. *John Guy* a Merchant, five years old, having been four moneths Hydropical; when other Remedies would not do, was cured perfectly with this following Syrup, uſed fifteen daies together.

Take *Roots of Elicampane one ounce: Leaves of Agrimony, Germander, Centaury, and Wormwood, of each one handfull: Boyl them to a pint. In the ſtrained Liquor diſſolve white Sugar one pound. Make all into a Syrup, whereof give him one ounce every morning two hours before meat.*

Obſerv. 78. *Hiccupping.*

669. Mſr. *Seguin* troubled with a malignant Feaver, was tormented by a moſt grievous and almoſt continual Hiccup. After many Remedies oppoſing the Feaver and malignity, four Blood-lettings, and one Purgation, many Clyſters, and many other Remedies, eſpecially ſuch as were appropriated to the Hiccup. On the twelfth day of the Diſeaſe he was purged again; his Hiccup was more frequent towards the evening, although he had been ſufficiently purged. Being called to advice, I preſcribed two grains of Laudanum, with an Emulſion of the four great cold Seeds, wherein one dram of Sal Prunellæ was diſſolved; within an hour the Hiccup went away, and came no more.

Obſerv. 79. *Impotency as to Generation.*

670. Take *Oyl of Liquid Amber one ounce; Rocket-ſeed one dram.* See the reſt in *Zacutus Luſitanus, Praxi admiranda, fol.* 233.

If theſe Pills cannot be ſo ſoon prepared, theſe following may be uſed with much benefit.

Take *Amber-greece, Musk, Lignum Aloes of each one dram and half: Shavings of Ivory, Diamoſchu dulce, Gallia Moſchata, of each half a dram: Roots of Angelica, Peony, and Carpobalſamum of each one dram: Civet as much as will ſuffice to make all into a Maſs of Pills.* Let him take a ſcruple or half a dram every night.

For a change this following Water may be ſometimes uſed.

Take *Cinnamon, Cloves, Nutmegs, Mace of each one ounce: Cubebs, long Pepper, Galangal, Zedoary, Seeds of Ammi, of Selſi, of each half an ounce; Juniper Berries one dram: generous White-wine, Roſe-water, and Marjerom-water, of each one pint. Let them ſtand in digeſtion ſix daies, and then diſtill them in Balneo Mariæ.* Let him take two ſpoonfuls morning and evening.

Finally, other things doing no good, this following Opiate may be uſed.

Take *new Satyrian Roots three ounces: new Parſnips three drams.* See the reſt in *Zacutus Luſitanus, in Praxi admiranda, fol.* 232.

Externally Fomentations and Liniments may be uſed, preſcribed before in Obſer. 69. to which alſo this following Plaiſter may be added.

Take *Maſs of Plaiſter* de Baccis Lauri, *and* de Maſtiche *of each one ounce: Gum Tacamahaca, and Caranna of each half an ounce: Roots of Biſtort and Tormentil, Nutmeg, Cloves, Ginger, and Powder of Aromaticum Roſatum of each one dram: Nutmeg half an ounce; Balſome of Peru as much as will ſuffice. Make a Maſs of Plaiſter, a part whereof may be ſpread upon Leather, and a ſquare Plaiſter made thereof to be applied to the Region of the Loyns, continually worn, and renewed every week.*

Obſerv. 80. *A long laſting Tertian Ague.*

671. The Wife of Mſr. *de Briſſac*, twenty years old, in the moneths of *July and Auguſt* was troubled with a double Tertian Ague, and that a very ſtubborn one, becauſe her body was very much weakened, ſhe having been ſeven moneths with child, and then miſcarrying. Many Remedies had been uſed in vain by her ordinary Phyſitian, many Blood-lettings and Purgations, Juleps, Medicated Broths, &c. I being ſent for, gave her an hour before her fit *Bezoardici Jovialis* twelve grains, with four ounces of Carduus Water. Her fit was kept back two hours, and was much leſſer; alſo at the end thereof ſhe had two or three ſtools, ſhe being formerly alwaies bound, ſave when ſhe took Clyſters, and ſhe voided very ſtinking Excrements. The day following the ſame Remedy was uſed, and the fit was in like manner retarded and abated, and alſo at the end thereof ſhe voided very filthy excrements, and afterward ſhe had ſome fits ſcarce diſcernable; and at laſt ſhe was by little and little quite freed.

Obſerv. 81. *Flux of the Hemorrhoids.*

672. Mſr. *Engarran*, Councellor in the Supream Court of Accounts, Subſidies, and Royal Exchequer, was troubled for five or ſix daies, whereby he voided eight or ten ounces of blood every day. After Blood-letting, cooling and thickening Juleps, and

niſhed, and he had only one light fit after he had taken the Medicament. *Calomelas Turqueti* is *Mercurius dulcis* ſix or ſeven times ſublimed, as you may ſee beneath.

Madam *Doiſſin* a Nun, in the Moneth of *March*, 1651. was freed from a Tertian Ague after four fits, by taking in the height of her fit twenty drops of Spirit of Sulphur *per Campanam*, with common Ptiſan and Syrup of ſower Cherries, or only with ſugared water, which ſhe drank twice or thrice like a Julep as her thirſt was urgent. The day following ſhe took of the *Mercurius dulcis* aforeſaid twenty grains, and Rozin of Scammony ten grains made into a Pill, which ſhe took in the skin of a preſerved Cherry, whereby ſhe was very well and gently evacuated.

We freed the moſt illuſtrious Counteſs *de Ferrieres* after the ſame manner, and by the ſame means from a like Diſeaſe in the beginning of *February* the ſame year, in the bittereſt of Winter.

We have ſeen many that had a long time uſed many Remedies in vain, cured of a ſimple and double Tertian by taking once or twice of *Rulandus* his *Aqua Benedicta*. Others by a dram of Salt of Vitriol, and many whom theſe nor other things would not help, were cured by taking the Syrup of *Pſeudoaſarum* of *Lozellus*, the quantity of one ſpoonfull. And indeed I have many times found the vertue and uſefulneſs of Vomitories above other Medicaments experimented in vain in ſundry caſes, other things being ſuitable.

Alſo letting of Blood when the Moon is in the Full, we have ſeen very helpfull in Agues, becauſe then the force of the Moon cauſes the humours to boyl, and the blood is more fluid, and is eaſilier drawn out by Phlebotomy. With which Remedy uſed at that ſeaſon, *Zacutus Luſitanus* teſtifies that he hath known many cured, and others eaſed. And I lately ſaw a Frier cured thereby, juſt before the fit of a double Tertian.

A Coſtenſian Woman threeſcore years of age, called *Luiſa Soyſon*, had been troubled five weeks with a double Tertian Ague, whoſe every other fits were fifteen or twenty hours long, and they came in the morning with a light ſhivering, which did continue long; the other fits came about noon, and ſometimes later with a remarkable ſhaking fit, nor did they laſt longer than twelve or fourteen hours. And therefore it was no ſmall ſign of divers humors putrifying in divers places; and therefore I foretold the Diſeaſe would prove long, or turn to a Quartan, becauſe the Patient did alwaies complain of a pain in her left Hypochondry. She had firſt a purging Medicament given her twice or thrice, and ſhe was once let blood, and ſhe had ever and anon a Clyſter by the procurement of an ancient Apothecary. At laſt, I being ſent for, did preſcribe four Doſes of Aperitive Roots and Herbs, cooling, and ſpecifical, adding to each Doſe Senna three drams, Syrup of Roſes one ounce, and Salt of Tartar half a dram. Whereby ſhe was well purged, but her Ague little abated thereby. But becauſe of her age and weakneſs I forbore Medicaments for a time, to give Nature ſome leiſure to recollect her forces, that I might afterward more happily purge out the humor by degrees. And ſo after ſome daies two Doſes of the Apozeme aforeſaid were given her every other day; whereupon the Ague three or four daies after vaniſhed for a day or two. But afterwards it came as fierce as before, ſo that ſometimes it ſeemed to hold her continually; and ſo ſhe lay languiſhing in bed about the Dog-daies in the year 1655. To her therefore at laſt I gave of *Riverius* his Ague-chaſer twenty grains with *Confectio de Hyacintho* in form of a Bolus, at the greateſt diſtance of her fit, wherewith ſhe had five ſtools, and bore the operation well: and in her fit ſhe twice vomited a great quantity of Leek-coloured matter, ruſt-coloured and clammy, with ſome gripes in her belly, which preceded two or three ſtools: the fit was ſhorter, and never appeared more. Now this was worthy of obſervation, that in the Operation the Patient thought ſomewhat was plucked out of her left Hypochondry; where her pain had been before; which did evidently declare that the Cauſe of the Ague there lurking was evidently oppoſed by the Medicament.

A Youth of twenty years old being ſick of a Tertian Ague in the Army of *Piemont*, took a Cup of White-wine hot, wherein he diſſolved a piece of Brimſtone as big as an Egg powdered; half an hour after he did ſweat moſt plentifully, nor did the Ague appear any more. Which Medicament he tried upon two others in this Town with like ſucceſs.

Obſerv. 84. *A Quartan Ague.*

675. A Youth of *Savoie*, twenty two years old, of a good, fleſhy and flegmatick body, had for two moneths been troubled with a Quartan Ague, who refuſing univerſal Remedies by way of Apozeme and Blood-letting, I gave him twenty grains of the foreſaid Feaver-chaſer, whereupon of a Double Quartan, it turned to a ſingle Quartan, and it being again twice given, the ſame

doſe,

Doſe, he was perfectly cured.

A Prieſt fifty years of age very Melancholick had been troubled with a Quartan Ague four Moneths. Him I cured in the midſt of Winter by giving him of the foreſaid Feaver-chaſer of *Riverius* twenty four grains; and after fifteen daies the Ague came again, and was again cured with the ſame Remedy.

The foreſaid Madam *de Doiſſin* thirty years of age, of a laudable temperament, elegant form, and ſingular wit, after ſundry Diſeaſes ariſing from ſorrow, ſhe fell into a Quartan Ague, whereof ſhe was cured after four Moneths, in the Moneth of *December*, in the year 1650. after many Remedies tried in vain, with one Doſe of the foreſaid Ague-chaſer.

My Nephew *Francis Jacoz*, twelve years of age, was troubled with a Quartan Ague after a Tertian, for ſix Moneths, in which ſpace he took many Medicaments, and the Feaver-chaſer aforeſaid, but in vain, partly becauſe of his greedy eating, and partly alſo by reaſon of the bad diſpoſition of his Bowels. At laſt with one ſpoonfull of the Syrup aforeſaid of Aſarum in common Ptiſan he was cured, plentyfull vomiting being three or four times raiſed of ſundry humors ſo ſticking to the ſides of the ſtomach and the neighbouring parts, that they could not be driven out by Purges frequently given, which did exceedingly deject his Appetite, and had already altered the colour and habit of his body; which nevertheleſs he recovered after a ſhort time, by the courſe whereof the Ague was ſo abated that he hardly felt the ſame till it went quite avvay, and he regained a good ſtomach, and a lively colour in his face.

Ny Nephevv *Bernard* being thirty years of age, vvas troubled vvith a Quartan Ague in the moneth of *October*, 1650. for three vveeks together, vvith vvant of Appetite, languiſhing, and a pale lean habit of the vvhole body. He took a little before his fit one ſpoonfull of the foreſaid Syrup of Aſarum in Broth, he vomited frequently and largely very bitter humors, vvith ſtraining for about tvvo hours. So that for the followving four daies, his mouth ſeemed to ſtink, and be bitter like ſoot, and his Ague continued, but became more light, and after ſeven daies vvent avvay upon his taking of *Mercurius dulcis* ſublimed as aforeſaid, the quantity of thirty tvvo grains, and tvventy grains of Rozin of Scammony (for he vvas hard to purge) and preſently he recovered the freſh colour of his Face and his Appetite both together, his ſtrength grovving every day more and more.

Frier *Otho* a Recollect of this City, of a ſqualid and dry Temperament, being ſick of a Quartan Ague for three moneths, vvith ſtretching and pain of his Spleen, and nightly Svveats, vvas cured in the moneth of *November*, 1651. by taking at firſt an infuſion of half a dram of Salt of Tartar vvith ſome drops of Spirit of Salt, and one dram of Senna made in ſix ounces of Fountain Water all night; vvhereby he vvas purged tvvice or thrice every day, avouching that his Appetite and ſtrength did return by little and little, and his Ague vvas lighter, vvhich aftervvard vvent avvay after ſeven daies, and being returned again, it vvas cured vvith fifteen grains of Scammony, and half a dram of *Mercurius dulcis* ſix or ſeven times ſublimed, as aforeſaid, vvhich purged him exceeding vvell and gently. He took again for three daies together the foreſaid Tartarated and Laxative Ptiſan. But becauſe he did ſvveat plentifully every night, and the pain about his Spleen vvas not quite taken avvay, and he felt a great vvearineſs in his Legs, he again took a like Doſe of the Calomelas in form of Pills to prevent a Relapſe.

A double Quartan Ague for two moneths moſt grievouſly afflicting Mſr. *Rigondin*, being of a Complexion very Melancholick, by my advice it was cured in the beginning of *November*, *Anno* 1651. with three Doſes of an Infuſion of Senna in *Riverius* his Feaver-water, and once letting him Blood, becauſe there were Indications of Blood-letting. Now this Feaver-water is nothing but Fountain-water vvith Salt of Tartar, vvhoſe vvonderfull effects vve daily find in all long laſting Feavers and Diſeaſes ariſing from obſtructions, as may more evidently appear hereafter. At the ſame time my Brother fifty years old, having tvvice relapſed into a double Tertian, becauſe he vvas troubled vvith many buſineſſes and houſhold affairs, and not vvell purged, he fell into a moſt troubleſome triple Quartan, but after four or five fits thereof, having tvvice taken the foreſaid Infuſion, and being vvell purged, he vvas freed from his Ague.

Mſr. *Gruiſard* a Coſtenſian Merchant thirty years of Age, having been troubled vvith a double Quartan tvvo moneths, took tvventy four grains of the Feaver-chaſer in Pills, and his Feaver turned to a ſimple Quartan, and that a very light one, which becoming after ſome daies more grievous by reaſon of Errors committed in Diet, and ſometimes double, other whiles triple; he having again taken the Feaver-chaſer, it grew lighter and lighter, and by little and little vaniſhed, he being ordered to keep a ſpare Diet. But being too much addicted to his Trade, to unſea-

ſonable

other internal Remedies and external uſed in vain; when the caſe was urgent, and the Patient very much weakened, I preſcribed juyce of Nettles the quantity of two ounces, clarified by a light boyling, with a little Sugar, and with this Remedy alone, the Flux was was quite ſtopped.

Friendly Reader; *Becauſe there wanted in the Writings of* Riverius *the Obſervations requiſite to make up this Century; I have therefore added theſe following, which ſometimes comprehend divers Diſeaſes of the ſame ſort under one Title, for the greater clearneſs of Inſtruction.*

Obſerv. 82. *The Dropſie.*

673. In the year, 1645. one called *Felizat*, being become Hydropical, was cured without any Phyſick, his Navel being of its own accord ſuddenly opened as he walked in the ſtreets; ſo that being returned home, he continually wet many blankets and his bed for ſome daies together, whereupon he lived well and merrily all the year after. But when the year was paſt, his belly grew again ſo great, that he went about hardly able to fetch his breath. And when the Tumor was ſo encreaſed that he was almoſt choked, and his Navil was very much raiſed; being ſtrong, he deſired me again and again that it might be opened, or elſe he would kill himſelf. Which when a Chyrurgeon had at laſt duly performed, and without pain, we ſuffered the Water preſently to run the quantity of a pint, and at night as much more: but the ſame night his parts ſetling by little and little, his ſtrength alſo failed: ſo that the day following he dyed. Whence it may appear, That the Works of Nature are not alwaies to be imitated, as may be ſeen in this Patient of twenty five years of age. For though he ſeemed to be ſtrong, becauſe he went about the Town, and could eat his meat well enough, yet we may conceive the Diſeaſe was confirmed, and that his Bowels were decayed by the former Diſeaſe.

I have heard of many Practitioners that this Operation hath with Premeditation been practiſed upon many others, but none recovered.

I have many times cured an Univerſal Dropſie ſpeedily and eaſily by Diureticks and Water-Purgers; which kind of univerſal Dropſie was not that which they call *Leucophlegmatia*, which is hardly cured, for it is the effect of flegmatick, crude and ill compacted blood, not well agglutinated to the pores of the Parts, nor aſſimilated, and therefore redundant and ſuperfluous in the whole body, through defect of the third Concoction which ought to be performed in the ſeveral parts of the body. And that herein the colour is whitiſh and milky, or black and blue, with want of appetite, and eager and continual thirſt. But theſe Symptoms did not appear in the foreſaid univerſal Dropſie, which therefore had a differing continent Cauſe, *viz.* A wheyiſh Humour ſetling within the skin, and other univerſal Membranes; whence it is by *Celſus* called the Water betwixt the Skin, which hath in a manner the ſame colour it had before; which alſo the touch confirms, for the skin being compreſſed with the finger flies back, the Water giving way of it ſelf, and returning to the place whence it was forced by the hand: but in the *Leucophlegmatia* the mark of the finger remains imprinted upon the Skin, thick blood not eaſily flowing back again to the place from whence it was forced. Moreover, the ſpeedy Cure that followed did ſhew as much, which further appears in theſe following Obſervations, which I therefore thought fit to annex.

Moreover, the manner of Solution did ſhew the difference betwixt the *Leucophlegmatia*, and the foreſaid Univerſal Tumor: ſince an abundance of ſeroſity in the whole body is much more eaſily amended than a cold and dry diſtemper of the Bowels, the Parent of crude Blood. Now the foreſaid Cure by me performed with Water-Purgers, ſeemed to me to anſwer to that ſaying of *Hypocrates* in *Coacis*, where he ſaies,; *At the beginning of a Dropſie a watery Looſeneſs without crudity ends the Diſeaſe, and Purgation by the Kidneys.* The ſame Author hath alſo ſaid, *If the water flows to the Bladder or Belly, the Diſeaſe goes away.* Whereas nevertheleſs Experience ſhews, That an Evacuation made by Urine does ſucceed better than that by a ſtool.

A Country man fifty years old, by reaſon of a Baſtard Tertian Ague which had held him ſome Moneths, fell into an univerſal Dropſie, from which we freed him with three ounces of the juyce of our Orris, and one ounce and half of Manna which was given him three times in ſeven daies. Whereupon his Belly was quite fallen, a very great quantity of wheyiſh Humors being voided by Urine and ſtool.

Another twenty ſix years of age, by reaſon of a Quartan Ague long laſting, fell into an Univerſal Tumor of his whole body, in which the skin being impreſſed by his finger flew back, with an hardneſs on the Region of his Spleen. A Chyrurgeon without any or-

der of a Phyſitian, as their manner is to do in the Country, gave him many Remedies a long time together, but all in vain, till being in a manner at the laſt caſt, he implored my help, becauſe I had once freed him from an acute Diſeaſe. Having therefore preſcribed him ſome Remedies according to Art, eſpecially Juniper Wine, he would uſe none but this laſt, being long ago weary of all Phyſick. He took therefore ſix ounces thereof every morning, whereupon his Urine did flow more plentifully and frequently, and his belly began a little to fall: which I underſtanding, and that he had laid away the other Remedies, I perſwaded him to take only a dram of powder of Senna, Cream of Tartar and Jalap every other day for twelve daies together in Broth, and proceed in the uſe of his Juniper, on thoſe daies he took not the Powder; which being finiſhed, he perfectly gained his health, and returned to his wonted labours.

Obſerv. 83. *Tertian Agues.*

Frier *Bloyſius* a Minorite at *Coſta*, having been troubled four moneths with a double Tertian, many Medicaments having been adminiſtred in vain by another Phyſitian; he was by me cured in the hard Winter, by giving him twelve grains of *Riverius* his Feaver-chaſer, whereby being gently purged only downwards, he had a worſe fit that day (as many times it is wont to happen in the uſe of this Remedy) and none afterwards. Yet after fifteen daies, by careleſneſs in his Diet, and overmuch uſe of Fruits, light fits returned, which by uſe of a light Cathartick went again away. Which in ſuch kind of Feavers and Quartans, I have frequently uſed to do, when there happened a Relapſe.

I cured a double Tertian Ague in a certain Coſtenſian Taylor, thirty years old, of a Melancholick and Flegmatick Temperament, having premiſed two purgations with fit Preparatives, and twice blood-letting, with the uſe of *Crollius* his Feaver or Ague-Medicament, of three ounces of Cichory-water, Salt of Wormwood half a dram, and Spirit of Sulphur fifteen drops. Upon the firſt Doſe whereof the aguiſh fits were abated, and by the third Doſe quite taken away: which in twenty daies had not given way to the former Remedies. And I have for twelve years laſt paſt tried this Remedy an hundred times in ſundry Feavers, and eſpecially in Tertians, and I alwaies found it ſucceſſull. Now in want of Salt of Wormwood, we have often ſubſtituted Salt of Tartar, in example of my Maſter *Riverius*, and ſometimes alſo with a decoction of Wormwood, as may be ſeen in his Obſervations.

Mſr. *de la Rivoire*, being troubled in the beginning of *Auguſt*, 1648. with a Double Tertian Ague, whoſe alternate fits did moſt grievouſly afflict him with tumblings, thirſt, head-ach, and ſhortneſs of Breath, was by me cured, premiſing a Clyſter and Blood-letting, and giving in the vigor of the fit to extinguiſh the thirſty Feaveriſh Spirits, a great draught of Fountain-water made tart with a ſufficient quantity of Spirit of Sulphur drawn out *per Campanam*, and Syrup of Lemmons: which drink very delightfull to thirſty Feaveriſh perſons, being given three or four times in two daies, all the Symptoms of the foreſaid Ague became far milder. and the fits much ſhorter: ſo that this previous preparation of the Morbifick Matter, and abatement of Symptoms thus procured, the Cure was finiſhed by the Earl of *Warwick*'s Powder, and *Crollius* his Ague Powder, given the two daies following. Now it is to be obſerved that the foreſaid Patient being thirty five years of age, was troubled with Obſtructions of both his Hypochondries, eſpecially of his Spleen, and that every year almoſt, he was ſubject to grievous and long laſting Diſeaſes, by reaſon of his heedleſs and fiery courſe of Life.

The foreſaid Gentleman being ſick of a Tertian Ague, in *July* the year following was cured with one doſe of *Crollius* his Ague-Medicament, and becauſe two Doſes were ſent, he gave the other to a Girl ten or twelve years old ſick of the ſame Diſeaſe, and ſo the Feaver vaniſhed in both of them.

Frier *Chriſtopher* a Finian of this City being fourty years of Age, of a lean and melancholick habit of Body, in the beginning of *September* fell into a Tertian Ague, which I cured, premiſing a Clyſter and Blood-letting, with one Doſe of *Corniachinus* his Powder.

At the ſame time Frier *Norbert*, about thirty five years of age, of a firm habit of body, and well fleſh'd, was troubled with the ſame Feaver, which from the degree of heat, want of Appetite, Head-ach, unquietneſs, Cacochimy, & length of the fits, I juſtly conceived would prove long and laſting. Add hereunto that in the year foregoing he was grievouſly vexed with the ſame Diſeaſe for an whole moneth, with a great weakneſs. After a Clyſter injected and Blood-letting, he took twenty grains of Calomelas of *Turquetus*, and ten grains of Scammony in the form of Pills, whereupon he was gently and plentifully purged the ſame day, and three or four times the two following daies. And ſo all the foreſaid Symptoms in a ſhort time vaniſhed,

ſonable Riding, and to humour himſelf in his Diet, he again fell into a Relapſe, and took again thirty two grains of the Feaver-chaſer, and ſo by little and little he grevv vvell again.

Andrew a Coſta, my elder Brother, a Franciſcan Frier, after an acute Feaver of many daies, and many labours, fell into a Quartan Ague, in the year 1654. vvhich he endeavoured to Maſter by many Remedies, but all in vain. At laſt I ſent him tvvo Doſes of *Riverius* his Ague-chaſer about the end of Winter, in the year 1655. and ſo he vvas quite cured of the foreſaid Feaver.

At the ſame time a Country man fourty years of age, the Farmer of Mſr. *Dumas*, a Coſtenſian Chirurgeon, being tvvo moneths troubled vvith the ſame Diſeaſe, vvith one only Doſe of the foreſaid Remedy, he vvas haply and perfectly cured.

A Woman of *Tullin* tvventy four years of age, having been for fifteen moneths troubled vvith a Quartan Ague, vvhich vvas ſometimes double: yea, and once becoming continual, it brought her to the laſt caſt, vvith a jaundice face, a dejected appetite, leaneſs of body, and a remarkable Tumor of both the Hypochondries, eſpecially of the Spleen, having little hope of recovery ſhe came to me, earneſtly deſiring help if any vvere to be had for ſo many Maladies. For her therefore in the firſt place I preſcribed the Tartarizated Laxative Ptiſan aforeſaid, in a Decoction of Hepatick and Splenetick Simples for the ſpace of eight daies, with a Fomentation and Liniment of the ſame faculties, to be applied to both the Hypochondries. And afterwards *Bontius* his Tartarean Pills made of Aloes, Gum Ammoniack, and Tartar Vitriolated for tvvelve daies, after which ſhe took again for three daies the foreſaid laxative Ptiſan. The Tumor and pain in the Region of her Spleen was much abated, her yellowiſh colour of her face vaniſhed away, her Appetite began to return, and yet her Ague was ſtill the ſame, which at laſt wholly vaniſhed upon thrice taking *Riverius* his Feaver-chaſer the day before the fit. For ſo, after ſome daies without any fear of a Relapſe ſhe returned well and cheerfull into her Native Country.

It were tedious to recount all to whom the foreſaid Feaver-chaſer was given, and either removed the Feaver, or much abated the ſame, and never hurt any one.

A Coſtenſian Taylor called *Gelas* was troubled with a Quartan Ague ſix moneths, and was freed therefrom by taking half a cup of White-wine, wherein he boyled Oranges cut in pieces, which he did every morning for ſome daies.

Many Countrey-men in theſe Quarters do cure the Quartan Ague with Powder of Germander dried taken ſome daies in Broth, eſpecially if ſome Purgatives had been uſed before; and I conceive this was not without reaſon, becauſe it is a Splenetick and Hepatick Herb, and hath a rare faculty to free the Bowels from obſtructions.

Obſerv. 85. *A Cholick Pain, and Mother fits in the Menſtrual Purgation.*

676. *Madam de St. Paul*, a Nun twenty ſeven years of age, of a laudable Temperament (as alſo of a good wit) but ſomewhat inclining to flegm, about the time of her Menſtrual Purgation, yea, in the flux it ſelf was wont to be troubled with a baſtard Cholick pain, and that exceeding fierce for tvvo or three daies, whereupon her monethly Courſes were ſometimes ſuppreſſed. We ſometimes cured both Diſeaſes with a Carminative and laxative Clyſter; and other whiles with ſome drops of Oyl of Anniſeed taken in Wine or Broth; ſo that the Cholick pain which was wont to ſtay long, was many times taken away in a moment.

The ſame Gentlewoman is many times taken with Mother-fits, with pain of her head and ſtomach; from which Diſeaſes I have many times freed her with Salt of Vitriol the quantity of half a dram, or one dram diſſolved in Fountain-Water; for it gently provokes Vomit, and all Chymiſts account it a Specifick Remedy againſt Mother-fits, alſo ſometimes with ſome grains of Laudanum according to the deſcription of *Crollius*, whereof ſhe ſaid ſhe alwaies found rare effects; yea, and from the very ſmell of Laudanum alone, for ſhe many times rowled a large Pill thereof in her hands, and ſmelt thereto.

A Widdovv fourty years of age, a Coſtenſian being long vexed night and day vvith Mother-fits, vvith a Feaver and vvatchings, ſo that ſhe ſeemed to be at deaths door, after a Clyſter or tvvo, took four grains of Laudanum, and preſently after ſhe fell a-ſleep, and all the ſymptoms vaniſhed vvith the Feaver.

Obſervation 86.

677. The Lady *de la Faſſodiere* forty years old, of an excellent habit of body and Temperament, for about tvvo years vvas troubled vvith a vvheyiſh flux of Courſes, which by fits vvas ſo plentifull, that it brought the Patient to deaths door. Being ſometimes called to her, ſhe being far from the Town, and Remedies not being at hand, and ſhe fainted through the immoderate flux, I cauſed to be given her one dram of the Powder of burnt

burnt Egg-ſhels in Broth, whereby the great flux of wheyiſh blood, was much abated in a few hours, and the Patient being by little and little reſtored with an Analeptick Diet, after a while a courſe was taken with the morbifick Cauſe.

The moſt beautifull Wife of *Claudius Vivier* a Coſtenſian, about twenty ſeven years old, after ſhe had voided a Mole of two moneths growth, fell into an immoderate Flux of Blood, which continuing three weeks, brought her in danger of her life, and cauſed her to loſe ſo much Blood and Spirits, that ſhe continually fainted away. Being ſent for, I adviſed her to take four ounces of the juyce of Nettles morning and evening for two daies together. When ſhe had twice taken the Medicament, her Flux of Blood was very much abated, and before twenty four hours were paſt, it was quite ſtopped. At the ſame time ſhe applied to the Region of her Womb a Fomentation with a Spunge dipt in Vinegar and harſh red Wine. This Medicament I have at other times uſed with like ſucceſs in theſe caſes, and *Amatus Luſitanus* in his Centuries very much commends the ſame.

Obſerv. 87. *A Dyſentery.*

678. A Countrey-man ſixty years of age, in the beginning of *Auguſt*, 1648. was troubled many daies with a moſt grievous Dyſentery, to whom, becauſe Medicaments by Art preſcribed could not ſuddenly be conveyed from the City, I cauſed a Pultiſs to be applied to his whole belly of Wormwood and red Roſes boyled in Milk, and I cauſed him to take four grains of Laudanum in the mean while. After a few hours his ſtools were not ſo frequent, his pain was aſſwaged, and the nights more quiet, ſo that he had no need of the Remedies preſcribed.

The ſelf-ſame thing in a manner happened in another Countrey-man of twenty years of Age, who being brought to deaths door with an extream Dyſenterick Flux which laſted many daies and nights, in regard of extream pains and continual watchings; having taken three grains of Laudanum towards night, he paſſed the ſame night quietly, with eaſement, and a cholerick Flux only, which vvas afterwards eaſed vvith due Remedies.

A certain Souldier of good credit cured many in the Army of Dyſenteries and Looſeneſſes with one dram of Cork powdered, which he gave in Wine or Broth; which Remedy you may ſee in the Obſervations of *Riverius*.

Obſerv. 88. *A Pleuriſie.*

679. I have ſeen many, eſpecially Women, who wanted the appropriated Remedies, and were reduced to the laſt caſt by a Pleuriſie, reſtored by the uſe of *Quercetanus* his Apple, taken once or twice in twenty four hours, by which means contrary to expectation they did either ſweat plentifully, or void much by ſpitting. I could name many in a manner deſperate, to whom I appointed this Remedy, and I alwaies found good ſucceſs therefrom. And many have related to me the like ſucceſs of this Remedy.

Obſerv. 89. *A Tumor of the Dugs.*

680. A Gentlewoman of this City newly brought to bed, being troubled with an hard ſwelling of her left Dug, and having tried many Remedies in vain for a moneth together, was cured with one dram of the Powder of thoſe Bugs called Sows, prepared and taken in Broth three daies together. I have many times ſeen the rare vertues of this Powder, and have heard relations thereof from ſuch as tried the ſame, in ſuch like Tumors proceeding from curdled Milk; alſo in Cancers of the Dugs and other parts. As it happened to a certain Religious man who had many deep Ulcers in many parts of his body, eſpecially in his Legs, of which he was cured in a ſhort time, by taking one dram of the foreſaid Powder every other day for eight daies, due Remedies having been premiſed. Moreover, this Powder being of thin parts, hath a rare opening and Diuretick faculty.

Obſerv. 90. *Tooth-ach.*

681. The Wife of Mſr. *Dumas*, a Coſtenſian Chyrurgeon, being ſeven moneths gone with child, of a Cholerick Complexion, and recovered newly of an acute Diſeaſe, was taken with ſo fierce a Tooth-ach, that all Remedies being tried in vain, ſhe lay many daies and nights without reſt crying out and weeping; having tried all Remedies, yea, cutting and burning, ſhe was almoſt brought to deſperation. So that I was fain to give her in the nights (for then her pain was moſt urgent) four grains of Laudanum; which having taken with a little *Confectio. de Hyacintho*, after a quarter of an hour ſhe fell into a quiet ſleep for ſome hours, and being awaked and void of pain, ſhe paſſed the reſt of her childing-time pleaſantly, though by reaſon of the rottenneſs and blackneſs of her Teeth, ſhe was wont continually almoſt to be troubled with the Tooth-ach.

Obſerv.

Obſerv. 91. *The Venereal Diſeaſe.*

682. Mr. *Gr.* a Coſtenſian Merchant, being troubled with the Venereal Diſeaſe for ſome moneths, was cured by me without any other Remedies, by the *Opiata Neapolitana* of *Renodæus*, to which he added every day, white Precipitate prepared with Spirit of Sulphur ten grains; and at times I gave him a doſe of *Mercurius dulcis* ſix times ſublimed twenty grains, with twelve grains of Roſin of Scammony in Pils, with the uſe of a Diet Drink of Guajacum and Sarſaperilla for twenty dayes together, whereby he was cured.

Another yong man, his Friend, troubled with the ſame Diſeaſe, was in like manner, and that ſame time cured, viz. about the Spring, 1648. and from that time I have cured many only with the uſe of the foreſaid Opiate, the *Mercurius dulcis*, and the Decoction of Sarſaperilla, uſed a long time together. They whoſe Bellies were very looſe, took half an ounce of the foreſaid Opiate only every other day. I cured a Girl fifteen months old infected with the ſaid Diſeaſe by her Nurſe, with three or four grains of the foreſaid Mercury, which ſhe took ſome dayes together in Panada or Milk ſweetened with Sugar.

Obſerv. 92. *The Conſumption of the Lungs.*

683. I have cured a Conſumption of the Lungs communicated by infection, beyond all expectation, in the beginning of *July*, 1649. with theſe following Remedies. And firſt with a Potion of Manna and Syrup of Roſes in a Pectoral Decoction. The day following two Cauſticks were applied to the hinder part of his Neck. Afterwards Broths for fifteen dayes together of China Roots, Bugloſs Leaves, Coltsfoot, Lungwort, and Corants; which at times were made Purging. Alſo the Patient continually uſed Conſerve of red Roſes, and many times towards night a Syrup ſtopping the defluxion, and ſtaying the Cough, of equal parts of Syrup of Violets, of dried Roſes, and of Poppies. Now the Patient was a Girl fifteen years of age, which had not had her Courſes, but was troubled with a ſlow Feaver for three weeks, with a continual ſtraining Cough, want of Appetite, ſhortneſs of breath. leanneſs of her whole body, and continual watchings. Which Diſeaſe ſhe had contracted of her ſiſter, who for ſome dayes had given ſuck to the moſt illuſtrious Abbot of St. *Paul*, who died of the Conſumption ſome moneths ſince: and the foreſaid woman being of a good habit of body died ſoon after of the ſame Diſeaſe.

The moſt illuſtrious Baron *N. N.* after the Camp-ſickneſs and long laſting Dyſentery fell into an Hectick Feaver neer to a Maraſmus, ſo that he was carried to *Lions*, given over by the Phyſitians there, and left to his Prognoſtick; and yet he was cured by a Country-man that had been troubled in the ſame kind with this following Remedy, viz. By a Broth taken ſome dayes together wherein red Snails being unbowelled and waſht in Roſe water, or ſome other Liquor, had been boyled, which is no ſtrange practice, nor to be diſliked: for we are wont to preſcribe Tortoiſes to repair Hectical Perſons, and other ſuch like Aliments which have a ſolid, glutinous, and leſs diſſipable ſubſtance.

Obſerv. 93. *The* Pica *and Green-ſickneſs.*

684. I cannot conceal the wonderful effects ariſing from the *Pulvis Cachecticus* of *Quercetanus*, by help whereof I have cured an innumerable company of Virgins, Widdows, and other Women ſick of the Green-ſickneſs, *Pica* or deſire to eat ſtrange things, and many times withall Cachectick, univerſal Remedies being premiſed.

I have wondred to ſee Cats troubled with the *Pica*, as I have obſerved in mine own Domeſtick Cat which did eat coals and aſhes, whereas for many dayes ſhe would hardly eat any meat: And this is the Cauſe I conceive, why ſhe never had any young ones.

Obſerv. 94. *A continual putrid Feaver.*

685. About the middle of *May*, in the year 1652. the weather having been exceeding hot for ſome dayes; and ſoon after the winds being Northernly, and ſo cold as to blaſt the tender buds of the fruits and Trees; and becoming hot again, it did indiſpoſe the bodies of People by ſuch an inequality and ſudden mutation. Which I (truly) found to my ſorrow; for in thoſe dayes being continually going into the Country to ſick People, on the twentieth day of the ſame month I fell into a moſt grievous Head-ach with a continual Feaver, unquietneſs, thirſt, and moſt troubleſom watchings, with heat, ſharp, and biting to feel to. Which having afflicted me twenty four hours, preſently after a Clyſter, I cauſed my ſelf to be let blood at my right Arm, whence iſſued ten ounces of aduſt blood, a little corrupted. Whereupon feeling little eaſe, I cauſed my ſelf to be let blood again nine hours after, the ſame day, and loſt nine ounces of blood.

which ſeemed more corrupt, and after an hour or two my Headach and Feaver began to abate, and I paſſed the following night more quietly, with a ſweet ſleep of ſome hours: on the third day the Feaver wholly diſappeared, which truly made ſhew of a longer abidance. So very true is that of *Hypocrates*, In the beginnings of Diſeaſes, if any thing be to be ſtirred, then ſtir it; and as to the iteration of Phlebotomy, when it ſeems neceſſary for evacuation, it ought to be performed the ſame day; if for revulſions ſake, on divers dayes. For when we are to vacuate, eſpecially in acute Diſeaſes, the body muſt ſuddenly be conferred into another ſtate, becauſe it many times happens that a Diſeaſe ſoon runs through its beginning, ſo that afterwards we cannot ſo conveniently uſe blood-letting.

Obſerv. 95. *A baſtard and deceitful Tumor of the Liver.*

686. Somtimes a Schirrhous Tumor poſſeſſes the Epigaſtrick Muſcles, which may indeed deceive younger perſons, unwary or unskilful Phyſitians, as we ſaw it happen to an old and famous Phyſitian, whoſe credit is not thereby leſſened; who took ſuch a like Tumor for a Schirrhus of the Liver in a Gentleman, and preſcribed the ordinary Medicaments for that Diſeaſe, but in vain, ſince there wanted only external Medicaments, and by them the Cure was perfected. But that Gentleman, although ſixty years of age, had his health very well for two years, and was of a freſh colour, which he had not born ſo long, if he had had a true Schirrhus of the Liver. Add hereunto, that the ſaid Tumor did change place as often as the Gentleman turned to his left ſide, and Mſr. *Riverius* was a witneſs hereof.

Obſerv. 96. *The ſtinging of Serpents.*

687. A Country-man being ſtung or bitten by a Serpent or Adder, had his body exceedingly ſwelled, yet he eſcaped, applying for ſome dayes together many Horſleeches every day to the wound or bite.

Thoſe who in this Country catch Adders near St. *Hilaries* Wood, when they are by them bitten, they apply nothing to the bite beſides bruiſed Garlick, the eating whereof is alſo very good in ſuch a caſe.

A certain Hunter, my Friend, when his Dogs are bitten, rubs the hurt with his ſpittle, gives them cold water to drink, and ſo they are all cured. The ſame perſon hath related to me, That the Heart of an Adder preſently given is a ſure and ſudden Remedy; and the Powder of the ſaid Heart, or of the whole Viper given in Broth or ſome other appropriated Liquor, does work the ſame effect.

My hunting Bitch being once bitten by an Adder, ſhe ſuddenly fell down upon the ground, nor could go upright, but preſently ſhe would fall down again; whereupon I ſcarrified the wound, and carried her into the next houſe and gave her a Gobbet made of Treacle and Garlick, and ſo ſhe was freed; yet her Neck where ſhe had been bitten remained for ſome dayes ſwollen.

Obſerv. 97. *Chronical and old Diſeaſes.*

688. In the curing of all old and ſtubborn Diſeaſes, I have every where learned by experience and reading, That either Waterpurgers and Sudorificks, or eſpecially ſtrong Aperitives, are very excellent; ſuch as are Salt of Tartar, Spirit of Sulphur extracted *per Campanam*, and *Mercurius dulcis* ſix times ſublimed; and ſuch things as theſe uſed for a long time together, as I have obſerved an hundred times, and have preſcribed according to the example of my Maſter, who did many times thus infuſe Salt of Tartar and Spirit of Sulphur with one dram or two drams of Senna (ſometimes with half a dram of Jallap Root) in Fountain Water alone, or in ſome appropriate Decoction, as may be ſeen in his Obſervations; and ſo I have many times cured long laſting Agues, the Quartan it ſelf, the Green-ſickneſs, Cachexia, Melancholick Diſeaſes, and ſtubborn Obſtructions of the Bowels, other Remedies proving ineffectual.

And *Riverius* did juſtly in his Obſervations call Water impregnated with Salt of Tartar *Aqua Febrifuga*, where he calls *Mercurius dulcis* ſublimed as aforeſaid by the name of *Calomelas*; which is truly a Medicament deſerving Commendations, a Purge that never does hurt being given the quantity of a ſcruple with ten grains of Rozin of Jallap, or of Scammony, the doſe of which things may be encreaſed or diminiſhed. And truly I never ſaw but good ſucceſs in the uſe of this Medicament, in innumerable caſes, and in all Ages. And the Vertues thereof can never be ſufficiently magnified by Chymiſts.

Obſerv. 98. *Practical Animadverſions concerning Malignant Feavers.*

689. In the Years, 1649. and 1650. I have counted this worthy of Obſervation, in all Malignant Feavers which did ſo range abroad as to fruſtrate all Remedies, *Viz.* That all

all who at the beginning complained of their Heart, as the People are wont to ſpeak, or who were taken with a light ſwouning or heart-burning, they did all in a manner dye. I conceive the cauſe hereof is to be referred unto a malignant quality, creeping now into the great Veſſels, and the inmoſt parts of the Body, and that the ſtomach is grievouſly affected by that ſame venomous quality, before the Remedies to oppoſe the ſame can be given.

Thoſe alſo who have an Headach long before the Feaver, and they that vomited worms in the ſtate of the Diſeaſe, died alſo, and all that ever I ſaw eſcape did ſweat much on the fifth and ſixth dayes, which to me ſeemed ſtrange, becauſe it was unuſual and beſides the Laws of Critical dayes; and therefore I conceive that all the Patients relapſed, and that three or four times, and were again judged by ſweat, beſides thoſe to whom light Catharticks were given; and whoever were taken at the beginning with a continual Feaver and ſtrong Symptoms, or have been otherwayes purged, or let blood, they did all in a manner periſh. But thoſe who about Autumn had a little Phyſick given them, they ſooner eſcaped.

This one thing I ſhall ſpeak concerning Remedies, viz. How I ſaw wonderful Experiments of *Bauderon* his Treacle Water, and of another Treacle Water leſs compounded, yea, in deſperate caſes, and in thoſe who had the purple Spots, or in whom the ſmall pox then rife, were gone in again.

A Looſneſs at the beginning was alſo in a manner deadly, unleſs there was ſomewhat hanging in the Urine, and a continuing Sediment with a good colour. They alſo ſooner eſcaped, who had blood ſparingly let, and who had no Purge given them, which was dangerous to give, and deſtroyed many.

The whole following year 1651. eſpecially in the Autumn, I found this to be moſt certainly true, which *Fernelius* ſayes of Cacochymical bodies, who need Purging, but refuſe to purge, endeavoring to refreſh themſelves with meats rather than Medicaments; They do not (ſayes he) nouriſh themſelves, but their own diſtemper. For ſo Nature being content with a little, does the better perform her Functions, nor are putrid or crude Humors collected in the ſtomach, nor do they ſlip in from elſewhere to deſtroy the actions thereof, and ſo life is prolonged and rendered more lightſom by the benefit of temperance alone, ſhe being the only guide of a healthful life, as *Hypocrates* hath ſaid, and before him *Eccleſiaſtes* with words wholly Divine; Through Gluttony (ſayes he) many have died, he that is abſtinent ſhall lengthen out his life. Now all that eſcaped from theſe Popular Feavers, were temperate, and all that relapſed (which almoſt all did) it was becauſe they did eat overmuch, although they ſeemed to eat but little, And thoſe meats of good juyce and eaſie digeſtion; which all the Patients wel-neer did confeſs, in deſpight of their Appetite.

Obſerv. 99. *The Peſtilence.*

690. A certain man that had the care of the third part of a certain City infected by the Plague committed unto him, cured all in a manner with a Vomit made of two drams of Vitriol, two ounces of Honey, and ſix ounces of Water mingled together, which he gave as ſoon as there were any ſigns of the Diſeaſe preſent or coming: ſo that hardly ten or twelve died in his Precinct, whereas in other places few eſcaped. Which does alſo further denote the vertues and neceſſity of Vomits in ſuch like caſes; as alſo ſo many Obſervations of Authors do prove, and thoſe which we obſerved in the Coſtenſian Peſtilence, in the former Edition of *Riverius* his Obſervations.

Obſerv. 100. *A Suffuſion and Cataract.*

691. A Woman thirty years of age, having been a year blind through a confirmed Suffuſion, which is commonly called a *Cataract*, recovered her ſight, after univerſal Remedies premiſed, by the help of *Aqua Ophthalmica Quercetani*, uſed a long time together, and taking Purgations betwixt whiles; but inſtead of Celandine Water, which the Author preſcribes, I ſubſtituted white Wine in imitation of my Maſter aforeſaid, by whom I have ſeen the foreſaid Water with happy ſucceſs many times preſcribed, and I have heard as much.

A Maiden of twenty years old, having been troubled many moneths with an extream pain, and great redneſs of her eyes, with continual flowing of Tears; at laſt ſhe was brought to this paſs, That ſhe could hardly hold up her eyes for a year together, and could hardly go without ſhe were led. To her ſundry Remedies of all kinds were adminiſtred, but in vain; only ſhe was cured by Setons made in her Ears by my advice, viz. in the ends of her Ears, holes were made with a triangular Bodkin red hot, and bits of the Root of *Thymelæa* were thruſt in, which were afterwards covered with *Diachylon cum Gummi* Plaiſter, renewed once or twice a day if need were, after the manner of a vulgar Seton, for divers dayes together.

Verily it is a ſtrange and incredible thing

what a quantity of ſerous Humors we have many times ſeen drop down through theſe holes; ſo that hardly ſo much would come in ten dayes from a Seton, as would ſomtimes in twenty four hours run at theſe paſſages. Nor is this good only in ſuch fluxions to the Eyes, but alſo to all other inferior parts (eſpecially the external parts) as the Breaſt, Teeth, Joynts, &c. we have often ſeen the good it hath done, and we have known many freed from an eminent Phthiſick proceeding from a thin and ſharp diſtillation, hereby. So that it is worth the while for all Practitioners of Phyſick to bring theſe Setons on the Ear into uſe, for the averſion and evacuation of all fluxions, in ſundry Diſeaſes.

Certain Obſervations of unuſual Diſeaſes, and hard to cure, with their Cures, found in a certain old Library without the Author his Name.

The PREFACE.

THe Occaſion why I have taken in hand to write of the Rare Cures of ſome Diſeaſes, which have happened in my time, is this: Becauſe in regard that daily ſome new Diſeaſes ariſe, or at leaſt attended with unheard of Symptoms, of which it is apparent that few or none have made mention. And moreover we find that many old Diſeaſes return afreſh, to find the true and proper Cure whereof many good hours are ſpent in vain, becauſe an hundred Books muſt be turned over before we can know the Diſeaſe, or how to cure the ſame; therefore we have collected ſome ſtrange flowers as it were both out of all the beſt Authors, and from our own long uſe and Experience, which every one may uſe at his pleaſure. And from hence he may learn the Cure of ſuch Diſeaſes and Symptoms as rarely happen.

Obſerv. 1. *Hiccupping.*

692. A certain German being about the age of forty years, was taken with Hiccupping, which was afterwards attended by ſtrange and almoſt incredible Symptoms. This man therefore being come from *Germany* as far as *Nemours*, for to buy Box Roots, which is a great Commodity in *Gallia Narbonenſis*, and being exceedingly inflamed by the Suns heat (for it was in the Dog dayes) being exceeding thirſty, as ſoon as he came into his Inn, he took the pail of a Draw-Wel full of cold Water, and drunk ſo largely, that in regard of the quantity and coldneſs of the Water, he fell into a Convulſion of his Stomach, which was ſo great, that by no Remedies nor courſe of Diet, for two moneths together, he could be cured, yea, the more we endeavored, the more were we fruſtrated by the Diſeaſe.

But this was chiefly to be wondred at, That as ſoon as any one did but touch the hem of his Cloak or Coat, his Hiccup being ceaſed before, it would thereupon ariſe with ſo great concuſſion of his whole body, that the very boards of his Chamber would tremble, and Dr. *Rondeletius* coming by chance to ſome Patients at *Nemours*, he was called to adviſe with Dr. *Ferrand* and other Phyſitians and Chyrurgeons that were then in that Town; and at laſt when all had ſaid their minds, why he was ſo hard to be cured, alſo by what means he might be holpen; they all agreed that the cauſe was an exceeding great diſtemper of his ſtomach, which made theſe Symptoms laſt ſo long. But as to the Remedies; They thought good he ſhould continue the uſe of Fomentations, Cataplaſms, Embroches, Cupping-glaſſes, (Purgation not being neglected) and the taking of Syrups, Opiates, and Powders, fitly to this purpoſe citing that Aphoriſm of *Hypocrates*: When a Phyſitian does all things according to Reaſon he ought to perſiſt, though the wiſhed effect do not preſently follow. But I having in vain tried all Remedies that were agreed upon by us, began to think with my ſelf that an hot Bath might change ſo great a diſtemper, and reduce the ſtomach to its natural Temper; partly, becauſe through long tarriance in the Bath, the force of the Bath might more readily penetrate into the habit of his body, whereby there might be a communication with the Member affected; partly becauſe I ſuppoſed the Medicaments would pierce the more if they were mixed with the Bath, becauſe of the greater leoſneſs of the Skin cauſed by an hot Bath; nor did my Opinion deceive me, becauſe a Bath being made of Bayes, Origanum, Mints, Wormwood, boyled in Water, he found ſo great good by ſtaying therein, that he was cured in four or five dayes. Moreover we applied a bag full of the foreſaid Herbs to the Region of his ſtomach while he was in the Bath. Nor muſt it be forgotten, That the Hiccup for two moneths ſpace did ſo vex that German, that crudity now being rooted

in

in his Stomach and Guts, his caſe ſeemed deſperate. But by the help of God, who illuſtrates the minds of men when he pleaſes, and leads us by the hand as it were to find out Remedies, he was reſtored to his former health, not without the admiration of the Doctors of *Montpelier* and *Nemours*, who had ſeen him.

Obſerv. 2. *The Phthiſis.*

693. A certain Catalonian about forty four years old, in whom blood and black Choler were the domineering Humors; having two years before (as he ſaid) been troubled with a light Pleuriſie, and neglecting the Remedies preſcribed by his Phyſitian, he had fallen into a Phthiſis or Conſumption: for having three years together ſpit blood and quittor, ſo great a leanneſs poſſeſſed him that his bones were ready (as they ſay) to come through his skin. In the mean while the Cough did ſo diſquiet him that he could hardly ſleep a wink becauſe of the great abundance of purulent matter, driven by Nature through the *Trachea Arteria*, which would boyl in his Throat, and hinder the freedom of his breath. Calling therefore the chief Phyſitians of *Avignion* to conſult with me, nothing was omitted which might ſeem neceſſary for the Recovery of his health; and when all did no good, I adviſed him to ſend to Dr. *Schironius* and Dr. *Rondeletius*, Profeſſors at *Montpelier* as to the Oracles of Phyſick (being men of cleer wits, and exerciſed by long experience in curing Diſeaſes) and to deſire them to preſcribe him ſome Remedies, if not for a perfect Cure, yet to aſſwage his Malady that he might not live ſtill ſo miſerable a life, not able to eat nor reſt, ſo that himſelf was wont to ſay, that he had rather dye than live in that condition, wherein his life was worſe than death. Thoſe Phyſitians therefore of *Montpelier*, ſeeing all things which we had preſcribed, added nothing but that he ſhould frequently eat River-Crabs boyled well in Barley Water, and alſo of Wood-Snails or Land Tortoiſes, annexing certain forms of Medicaments which they call *Pandaliones*, and ſo they ſent the Patient to a place of like Temperament with the *Tabiæ* celebrated by the Ancient Phyſitians, viz. Where there was an open Heaven, an high place, and very dry: and whereas he was now weary of his life, as having been for above four years exceedingly troubled with this Diſeaſe; he took me by the right hand, and entreated me for Gods ſake to free him from this ſhaking Diſeaſe, or by trying the moſt deſperate Remedies to rid him out of the way, I will take all the fault upon my ſelf, and free you from blame. Seeing it is your deſire (quoth I) I will experiment upon you one Remedy remaining, delivered by *Galen* that excellent Phyſitian, viz. The Smoak of Orpment Trochisks received in at the mouth. This one Remedy is remaining, whereby many in a manner deſperate have been recovered. And therefore I adviſe you to make uſe thereof, ſeeing other Remedies have been uſed in vain. I confeſs indeed this kind of Remedy is too ſtrong for your weak ſtate of body; but you ſhall uſe them in ſo ſmall a doſe as we judge may anſwer your ſtrength. At laſt therefore he began to take the fume of thoſe Trochisks being laid upon the coals, in at his mouth through a funnel, at the Evening. But he ſaid in the morning when I came to ſee him, that he would uſe them no more, becauſe he beleeved his breath would be quite ſtopped if he ſhould uſe them again. But I would not be quiet till he had tryed the ſaid Trochisks once again as before. To be brief, late in the night following, after he had ſuckt in the vapor of the ſaid Trochisks, ſo great a ſhaking fit did invade him, that not only the bed wherein he lay, but the whole floor of the Chamber ſeemed to be ſhaken as it were with an Earthquake. But he thinking himſelf to be at deaths door, ſent a Boy to call me, I was willing to go to him upon ſo urgent an occaſion, and when he beheld me coming in, Becauſe (ſayes he) I would not dye without taking my leave of you, I have ſent for you now never intending to ſend again; and alſo that you may be an eye-witneſs of my miſerable condition. But I feeling his Pulſe with my four fingers I perceived him to have a waving pulſe with ſtrength of his vital faculties, & fore-told that he would ſhortly fall into a great ſweat, which ſweat happened ſoon after ſo plentifully that his Pillows and Bed-cloths were all wringing wet, as if they had been dipped in a pond, and a while after he fell into a ſleep and deſired reſt, without any coughing or hauking. In a word, he lived more than fifteen years after this in perfect health. But I wonder in this caſe, how ſo great plenty of ſweat did flow from ſo dry a body. This happened when I was a young Practitioner of Phyſick. I related the matter to *Rondeletius* in a Letter, who wondred at the ſtrange and ſudden Cure of ſuch a Diſeaſe, and promiſed me to ſet down the ſtory of this Diſeaſe in his Commentaries.

Obſerv. 3. *A Malignant Feaver.*

694. Never more cruel Symptoms happened to any man, than thoſe which befel a certain

certain young man of *Nemours* called *Graſſet*, dwelling at *Belliquadre*, in the year 1574. He being twenty or twenty two years of age, fell into a burning Feaver, wherein he was tormented with unquenchable thirſt; his Tongue was black, his watchings perpetual from the fourth to the ninth day. He ſpet a little and unequally. Then he began to rave, with a thin Urine and rare Pulſe: On the eleventh day he ground his Teeth, was convulſed, had ſhaking fits day and night, with terrible out-cryes and yellings; his Pulſe appeared inordinate and diſturbed. On the fourteenth day his Utines were plentiful, and his ſtools not without raving, fainting, convulſions. On the ſeventeenth day many Spots and Puſhes came out all his body over, each of the bigneſs of a Bean, black and blue of color, which eating the skin and devouring the fleſh, made hollow Ulcers, as if they had been burnt with a red hot Iron; and they were as deep as a mans thumb is thick. On the twentieth day great hard Tumors brake forth under both the Ears. Then the Feaver began by little and little to abate, all which beingin a long ſpace of time cured, and the Patients ſtrength being refreſhed, he came ſafe to *Avenion*, and relateth the whole courſe of the Diſeaſe to Dr. *Philippus Guilhelmus*, how that as to the Cure, it varied not from the ordinary Method in ſuch caſes. For his Urine being viewed, and a Clyſter injected (his belly being bound) he was let blood, and his blood appeared very corrupt. Then he had Juleps to extinguiſh the Feaveriſh heat, and to hinder putrifaction. On the eighth day he took an Infuſion of Rhubarb, with *Diaprunum ſolutivum*. His Watchings were holpen by Syrup of Poppies, waſhings of his Legs, Populeon Oyntment ſmeared upon his Palms of his Hands and Soles of his Feet. But it is incredible how much his ravings were abated by the Milk of a Woman that ſuckled a Girl, mingled with juyce of Lettuce and Oyl of Roſes. His faintings were remedied by Epithemes applyed to the Region of his Heart, and mixtures Cordial. His grinding his Teeth was holpen by Oyl of Chamomel and ſweet Almonds applyed hot to his Neck and Temples, moiſt Wool being laid thereupon. The Ulcers and Puſhes remaining were cured with *Unguentum album Camphoratum*; the Tumors behind the Ears with Oyl of Chamomel and Lillies. Afterwards when we perceived that they enclined to ſuppuration (for the hardneſs of the matter would not admit of diſcuſſion) we are forced to paſs to the uſe of Plaiſters of Mucilages, Emollient Herbs, *Diachylon magnum*, and others ſuch like. But after he came to *Avenion* and the Tumors broke, we left the reſt of the Cure to the Induſtry of Dr. *Philippus Guilhelmus*.

Obſerv. 4. *A Malignant Feaver with a deep ſleep.*

695. The Sickneſs of the Wife of Mſr. *Former*, a Lawyer at *Nemours*, is worth recording, who after her Husbands recovery of a malignant burning Feaver attended by all manner of cruel Symptoms, viz. A Baſtard Phrenzy, grinding of the Teeth, unquiet tumbling and toſſing, unquenchable thirſt; fell into a continual Feaver by reaſon of watchings ſo many nights about her Huſband, faſting, care of her Children, and her houſhold occaſions: and ſhe continued ſixty dayes with one continual heat without any kind of intermiſſion, as it were aſtoniſhed with her eyes winking; nor did any Criſis in the mean time appear during the whole courſe of her Diſeaſe, till the ſixtieth day, wherein ſhe only voided white and froathy ſpittle without any Cough (ſo that ſhe filled a Baſon that held twelve pounds with Liquor) which being abundantly voided at her mouth, ſhe returned freed from her Feaver to her ſelf, avouching that ſhe had felt no pain nor trouble from her Diſeaſe, and ſhe could hardly be perſwaded that ſhe had been grievous ſick, and in great danger of death. Mean while, you are to underſtand, that nothing was omitted that might any wayes belong to the true Cure of the Diſeaſe. For we began with blood-letting (for this Woman was young and plethorick) and ſo we proceeded to Clyſters, Cupping-glaſſes, and ſuch things as hinder ſleep.

Obſerv. 5. *A Wound by Gun-ſhot in the Bladder.*

696. I am afraid I ſhall be accuſed of vanity for relating a thing unheard of and uncredible, but yet true: But credible Perſons as well excellent Phyſitians as expert Chyrurgeons, not to ſpeak of Gentlemen and other conſiderable perſons, who were preſent at the Cure, will free me from all ſuſpition of Forgery. At what time therefore the Inhabitants of *Nemours* with white Frocks on their backs, paſſing the River *Rhodanus*, put to flight thoſe that had ſecretly entred the Town of *Bellicadre*; one of thoſe that fled, being wounded with a Bullet which went in at the paſſage of his Yard, and pierced through his Bladder, and the right ſide of *Os Sacrum*, ſo that his Urine came out at the back part of the Wound, the Urinary Paſſages being hurt only by an excoriation

coriation as it were; he was perfectly cured by the Chirurgeons of *Taraſcon* with my aſſiſtance, viz. *Antonius Fortunatus* and *Johannes Bonnetus*, and which is ſtrange, only by trivial Medicaments, ſuch as were at hand. Three things therefore in this caſe may cauſe admiration in all that are skilled in Phyſick. Firſt, how the Bullet got into the Paſſage of the Yard, without hurting the Yard, only excoriating the Paſſage. Secondly, by what reaſon or propriety of Nature the wounded Bladder, which is wont to reject all Remedies, came to be cured. Thirdly, how this was done without any ſecret Remedies, only with ſuch ordinary things as were at hand; whereas many times in other wounds not ſo mortal, we are forced to uſe exotick and precious Remedies, and yet cannot perform the Cure. For at the beginning the Chirurgeons uſed the common Defenſative, which they laid about the Wound, and then they applied a Tent ſmeared with Baſilicon and the Yolk of an Egg, after that, Oyntment of Roſin; and then Fleſh-breeders and things to cauſe the Scar: whereby he was ſo happily cured that he yet lives at *Arles*, his name being *Borian*. All the chief men of *Taraſcon* ſaw this wonderful Wound, with Dr. *Philippus Guilhelmus* and *Bertrandus Vanius*, who with me did ſearch the Wound with an Inſtrument, and after curious Inquiſition found it to be as we have ſaid.

Obſerv. 6. *A Tumor in the Leg.*

697. I muſt not paſs over in ſilence a ſtrange kind of Diſeaſe, viz. A Tumor in the inner part of the right Leg of the noble and vertuous Gentlewoman Madam *Deledignam*, being then a Widdow. She therefore having a ſwelling in that part like a Phlegmon was ſo tormented night and day, though *Rondeletius*, who with me was called to the Cure, applied ſundry Pain-aſſwaging Medicaments, that ſhe ſeemed paſt hope. For the more we endeavoured to ſoften the Tumor, the more it ſeemed to ſtrive againſt our endeavors; and yet ſhe was never free from her pain. Wherefore we were compelled to open the Tumor with a Cauſtick Medicament, that the Humor therein contained, though crude (as we conceived) and which cauſed the pain, might have a paſſage forth. When therefore we ſuppoſed the Cauſtick had done its work, undoing the Swathebands, we found no humor within the ſame, nor did we ſee any wheyiſh Humor come forth. Yea, and (which is the greateſt wonder) the Wound gaping wide, we ſaw the fleſh beneath the ſame not at all diminiſhed nor altered; and we judged that there was no other cauſe of ſo great a Tumor and pain, but Wind. And all the Phyſitians we could meet with, ſaid they never ſaw nor read of ſuch a Tumor, both becauſe wind ſhould raiſe ſo great pains, as to cauſe faintings and continual watchings; and becauſe nothing was found within the Wound, differing from the Natural Conſtitution of the part. After the Tumor was opened, and the wind diſſipated, all the Symptoms vaniſhed, and ſhe was afterward as well as if ſhe had never ailed any thing.

Obſerv. 7. *A Palſie of the Tongue.*

698. I am many times moved to wonder at the works of Nature; for upon the Diſſection of Bodies, ſuch wonderful things are found as we ſhould not beleive did we not ſee them with our Eyes, ſuch as happened whiles I was at *Nemours* to *Robert Barriere*, for all his life time in a manner a perpetual diſtillation falling down upon the Nerves ordained to move his Tongue, did ſo hinder his ſpeech as to cauſe a troubleſom ſtammering, which could never be by any means cured; whereupon at laſt the fluxion was ſo augmented, that he ſuddenly died thereof. His Friends therefore who were preſent at his death, deſired me to cauſe him to be opened, that the Cauſe of the Diſeaſe being known, it might be for time to come better cured. His Skul therefore being in the firſt place opened, and the outer parts of the Brain being on each ſide leiſurely removed, a bladder appeared to us made of a ſtrong compacted Membrane, containing therein a wheyiſh Humor, which having in the bottom a ſmall hole, did alwayes ſupply new matter to the Nerves of the Tongue. Wherefore, ſince this ſerous Humor could not by any Medicaments, or any policy be diſcuſſed, both in regard of the plenty thereof, and of the thickneſs of the bladder, which kept off the force of the Medicaments; we ſaid with one conſent, that the ſaid Diſeaſe could admit no Cure. But who, I beſeech you, would have thought, that a bladder bred within the ſubſtance of the Brain, full of wheyiſh Liquor, had been the cauſe of ſo pernicious a Diſtillation.

Obſerv. 8. *A Syncope from the Spleen.*

699. A ſtout Gentleman, Mſr. *Egminius* of *Taraſcon*, was troubled with a certain kind of Diſeaſe, which I ſuppoſe hath been known or heard of by few. For he related to me, that as ſoon as he lay upon his left ſide he preſently fell into a fainting fit, ſo that he was hardly recovered therefrom, all

his forces were ſo decayed: but otherwiſe he felt no pain nor inconvenience, nor did he for that cauſe eat the leſs meat, yea, he ſaid he could do all his buſineſs he was wont to do in his perfect health. Thinking therefore ſeriouſly with my ſelf, and muſing what the reaſon ſhould be that ſo cruel a Symptom ſhould ſeize upon him without any manifeſt Cauſe, and ſhould leave him almoſt dead: I began to conceive, that a melancholick humor, having ſome malignant quality, ſent a venemous vapor from his Spleen to his Heart, which was the Cauſe of ſo malignant a Symptom: nor did my opinion deceive me. For having appointed him a convenient Diet, and purged his whole body of the Melancholick Humor, and given him a Medicament of purpoſe to open the obſtructions of his Spleen; and finally, having ſtrengthened his Heart both by Epithemes and Cordial mixtures, he was perfectly freed from ſo deadly a Symptom.

Obſerv. 9. *An Epidemical Diſeaſe called the* Coqueluche.

700. In the year 1557. in the moneth of *July*, a little before the Land-flood which laid waſt all the Fields of *Nemours*, and the whole City almoſt, there was riſe an Epidemical Diſeaſe (called *Coqueluche*) which ſpared no man, ſo fierce and cruel, that it killed very many, ſome on the fourth day, others on the ſeventh, or on the fourteenth at the furtheſt. They were taken with a Cough, ſoreneſs and inflammation of their Throats, and a continual Feaver. The Patients were troubled with a continual Headach which was vehement, nor could any ſleep for the Cough, which was ſo fierce that it made them hoarſe again. Alſo they had a continual ſharp pain of their Kidneys and Loyns, which cauſed that few were able to go, and a perpetual poſe would hardly ſuffer them to draw in air at their Noſtrils. But thoſe that eſcaped ſo great a Plague, after blood-letting and Pectoral Medicaments, were freed by a ſtinking ſweat which proceeded (Nature being ſtrong) from their whole body: but thoſe who being waſted with the Feaver and faſting, could not endure the ſweat, they periſhed apace. Wherefore the chief intent of the Cure conſiſted herein, That univerſal Remedies being given without delay (although they needed only a gentle Purgation) their Appetites might be revoked, and way made through their Throats to receive in the meat. For Purgation, Manna, Caſſia fiſtula, and Rhubarb with a Decoction of Pectoral Herbs did ſuffice. Stronger Medicaments were avoided as moſt dangerous.

Obſerv. 10. *An Epidemick Feaver.*

701. An Epidemical Diſeaſe not unlike the former, raged in the year 1580. the greateſt part of the Summer, after an innumerable company of Inſects came out of the Ground, in the moneths of *April* and *May*, which came in ſo great multitudes, that all the wayes and paths were filled, whereupon, not long after, at *Arles*, *Avenion*, and *Bellicadre*, and in other places not far from theſe, ſo great a Peſtilence raged, that very few could eſcape the ſame. But to return to the buſineſs in hand, The foreſaid Diſeaſe killed many, but if Remedies were ſpeedily applied the firſt dayes, all in a manner eſcaped. It began with a Feaver and a Cough together, which was followed with a pain of the Head and Loyns; mean while the Feaver did intermit ſome dayes, coming again, and growing ſtill hotter and hotter, it brought them to their Graves. Some had no reſpite. Some raged with Frenzies, ſome died languiſhing of a Phthiſis; but if they were taken in hand betimes, as hath been ſaid, they all in a manner recovered within a few dayes. Nor was the Cure different from that lately deſcribed, for the things that did greateſt good were Pectoral Medicaments, and gentle Purgations (not forgetting blood-letting eſpecially) cooling Clyſters, Cupping-glaſſes, Cordial Opiates and frequent Epithemes; finally, by a good Diet appointed them, they attained their perfect health.

Obſerv. 11. *Swallowing hindered.*

702. Mſr. *Bonius* a moſt renowned Lawyer of *Nemours*, was troubled with a moſt grievous pain of the Stomach with extream difficulty in ſwallowing, and a continual Feaver attending the ſame; and whereas before my coming Purging Medicaments had been preſcribed, and they had done no good, becauſe they could not deſcend to the bottom of the Stomach: as ſoon as I came to him, and had diligently handled his belly and Hypochondries, I found a renitency and diſtenſion in all thoſe parts, and alſo an inward rumbling which broke forth at his mouth by frequent belchings, which was the cauſe that neither any Broth nor meat could deſcend to the bottom of his ſtomach, viz. the meat being born up and kept aloft by the abundance of wind. And therefore ſince there was danger, leſt the body for want of eating ſhould be conſumed, ſeeing he had abſtained from meat now four or five dayes. I was intended to direct all the ſcope of the Cure to this intent, viz. To diſcuſs ſo great a quantity of

Wind.

Winds. And therefore a Clyſter having been firſt injected, I cauſed to be applied to his Stomach and Hypochondries hot Fomentations of a Decoction of Wormwood, Mints, Chamomel flowers, Melilot, Cummin ſeed, Fennel ſeed, and ſuch like things; alſo I cauſed thoſe parts to be anointed with Oyl of Nard and Chamomel hot, whereupon he grew better, began to ſwallow, and to conceive good hopes of recovery of his health, whereas before, as one deſperate, he thought only of dying. Then at laſt I ordered a Cupping-glaſs to be applyed to his Stomach with much flame, whereby the winds were ſo powerfully digeſted, that afterwards he could ſwallow Broths, and all manner of meats, and thereupon the Feaver was chiefly extinguiſhed by a plentiful voidance of Urine. But to avoid a relapſe I adviſed him to purge again.

Obſerv. 12. *A Malignant Feaver with Puſhes.*

703. The ordinary Judg at *Nemours* called *Blanus*, was troubled with a Tertian Ague that held him with moſt fierce fits. Dr. *Vegratius* was his Phyſician, being an ancient man. The Patient therefore in one fit, being troubled with ſo vehement and malignant Symptoms, that he fell into a ſwoun, viz. Becauſe bleviſh ſpots were ſuddenly broke out all his body over: And being unwilling to omit any thing that might contribute to his health, he ſent for me to meet with Dr. *Vegratius*, and as ſoon as I came to him, he complained of an intollerable burning cauſed by the Purples, with a weakneſs of his forces, and beſeeched me to give him ſudden help being in ſo great danger. And I well conſidering the ſpots which ſtill ſeemed to come forth, and feeling his Pulſe, bid him be of good cheer as to his eſcape, and taking Mſr. *Vegratius* by the right hand, we went into a remote Chamber to conſult what was fit to be done. He having related all things which he had preſcribed, he asked me what I conceived was to be done: I taking the word out of his mouth expreſt my ſelf to be of opinion that he ſhould be let blood with all ſpeed, or elſe he would come into great danger of his life: but he was againſt it, ſaying that it was to be feared leſt the malignant humor being diſperſed through the skin (the common way of purging the whole body) ſhould ſtrike in again, and ſeize upon ſome principal part. I preſſed to have it done, for according to *Montanus*, *Avicenna*, *Aetius*, *Rondeletius*, and many others, I ſaid that might be upon their firſt coming forth, whiles Nature was expelling the vitious matter; but when the matter is for ſome dayes ſetled in the Skin it wil not be revoked within the body again. Wherefore he at laſt came to be of my mind, and I told the Patient with a chearful countenance, that he ſhould be recovered before we departed, if he would ſuffer himſelf to be let blood; and he anſwered, that he would endure any thing to be freed from ſo great evils. The *Saphena* therefore not being viſible, we cauſed the common Vein of the right Arm to be opened, which being done, that came to paſs which I had foretold, for before we left him his burning was abated, and that cruel Symptom was aſſwaged which cauſed his fear. Whereupon it cannot be expreſt how he extolled the Art of Phyſick, and us his Phyſitians, for ſo great benefits conferred upon him. Hereupon we made haſt to expel the reliques of the Feaver, which in a ſhort time we did, by Gods aſſiſtance.

Obſerv. 13. *Worms.*

704. I ſaw two Virgins, the Daughters of Mſr. *Fezander*, a Notary at *Nemours*, whereof the one was ſeven years of age, the other not above nine, who in the ſpace of half a year died both of them of a moſt grievous pain of their whole belly, which could not by any Remedies be aſſwaged, as Clyſters, Flegm-purging Potions, Wind-diſcuſſers, and Worm-killers. The elder therefore being dead, when we opened her body to find out the hidden cauſe of her death; Worms were found in her lower belly, which had pierced through her Guts, eſpecially the Colon. Six moneths after, the other ſiſter being dead with like pains, and opened, we ſaw not only the Guts gnawn and eaten through by Worms, but alſo the Heart and Liver gnawn and deep hollowed by the ſaid Worms; which thing cauſed no ſmall amazement in all the By-ſtanders, queſtioning which way the Worms ſhould get from the Guts to the Liver and Heart, ſince in thoſe parts there was ſcarce any ſuch aliment as they deſired, nor was there any matter fit to breed Worms, although one was of opinion that they came of putrifaction bred in thoſe parts: moreover, they had no ready way, but full ſtops, turnings and windings. Wherefore we could only vvonder at the Works of nature, not being able to find out the Cauſe. And when we departed we preſcribed for the Girls that yet remained alive both Powders of Scordium and white Dittamus, and Worm-killing and expelling Oyntments, whereby we prevented the generating of ſuch like Worms for the time to come.

Obſerv.

Obſerv. 14. *A Tumor of the Oeſophagus.*

705. A Tumor ſometimes breeds in the *Oeſophagus* or Gullet, which will not let a man ſwallow his meat, and the Patient is wont to grow weak by faſting; The Cure whereof (not to ſpeak of the way to know it) is very troubleſom to the moſt able Phyſitians. Thus with happy ſucceſs I began the ſame. Firſt appointing the Patients Diet, and having uſed univerſal Remedies, that is Blood-letting (eſpecially when there was a Feaver or ſuſpition of Inflammation) alſo Purgation, and revulſion by Cupping-Glaſſes, this following Lick-pot we found good.

Take *Conſerve of Roſes, of great Comfry, of each half an ounce; Conſerve of Violets two drams; Oriental Bole-Armenick one dram and half; Mucilage of Quince ſeeds extracted with half an ounce of Roſe Water; with Syrup of Quinces make a Lick-pot, and let the Patient frequently lick thereof.* And externally apply to his Neck ſuch an Oyntment as this following.

Take *Greaſe collected from Sheeps Wool, the Marrow of a Leg of Beef, Hens Greaſe, Gooſe and Ducks Greaſe, of each half an ounce, Mucilage of Marſh-mallow ſeed and Line ſeed, of each ſix drams: Oyl of Water-lillies two ounces: Saffron ten graines: white Wax as much as will ſuffice. Make an Unguent waſhed in Barley Water or Water-lilly Water.* Anoint his Neck three or four times in a day or night with this Oyntment, and lay thereon moiſt or greaſie Wool.

Obſerv. 15.

706. I come now to a certain filthy Scab of the Mouth with Ulcers of the Lips, which did put me to much trouble to diſcuſs the ſame; but at laſt the Scab gave way to theſe following Remedies, and the Ulcers being healed never brake forth again. For they were ſo ill conditioned, that they ſeemed to reject all endeavor of Cure. Wherefore after univerſal Remedies, I uſed theſe following Topicks.

Take *the Tendrels of Vines, Leaves of Plantane, Woodbine, Thiſtles, of each one handful: red Roſes, Barley, Lentils, of each one pugil. Make of all a Decoction to a pint. In the ſtrained Liquor diſſolve juyce of Pomegranates and Diamorum, of each two ounces.* With this Decoction we did bid the mouth ſhould frequently be waſhed; and I cauſed the following Medicament to be ſmeared upon the Lips.

Take *Powder of red and white Coral burnt and waſhed, Harts-horn burnt and waſhed, of each two ounces: Bark of Bugula one dram and half: With Pomatum and Syrup of dried Roſes make all into a Liniment.* I am alſo wont for want of Pomatum to diſſolve the Powders in white Wax melted, and freſh Goats greaſe.

Obſerv. 16. *A Rupture.*

707. Beyond the expectation of many I cured a Rupture of the Guts and Call, by theſe following Medicaments, without any help of the Chirurgeons hand. And that is moſt remarkable whereof I cured a certain German School-maſter at *Avenion*, in the year 1545. who had a Rupture in his Guts ten years together, which put him to very great pains when the wind was in the South. I cauſed him therefore to keep his bed a moneth together, and hold his Legs as cloſe together as he could; that he ſhould keep a drying diet, unleſs at the beginning of his meals he did eat ſomewhat boyled in Water and Sugar to keep his belly open; that he ſhould eat no raw, windy meats, nor hard to digeſt, ſave the feet of Swine, Kids, and Rams. And he uſed theſe following Medicaments.

Take *Terra Sigillata, great Comfry Roots, Bole-Armenick, of each two drams: Burnt Harts horn one dram.* Let him take every morning for fourteen or fifteen dayes together, one dram and half, or two drams thereof, in Capon Broth.

Take *Dragons Blood, Mummy, Maſtich, Frankincenſe, Comfrey Roots, Bole-Armenick, red Snails, an Hedgehog powdered, of each one ounce. Incorporate all with Turpentine, and make thereof a Plaiſter to be applied to the Groyns.*

But you are to take notice that univerſal Remedies muſt go before, according as the Nature of the Diſeaſe ſhall require.

Obſerv. 17. *A dead Child.*

708. I was ſent for to a Gentlewoman, who was grievouſly troubled with a continual Feaver, and when ſhe had been ſix moneths with child, her fruit was ſtifled in the womb through the vehemency of the Feaver, which ſince by many and ſundry Remedies it could not be driven out, at laſt with a Potion of Myrrh, Chryſocolla, and Hippocras, and by applying to her belly a Pultis of Coloquintida, Pennyroyal, Savine, Mugwort, Feaverfew, Cats-mint, after great ſtraining of the Patient, the dead Child came away, to the great praiſe of our Art; for the Gentlewoman being in extream danger of her life, voiding the Child at laſt, ſhe was freed from a moſt

a moſt violent Feaver; howbeit ſix or ſeven moneths ago ſhe fell ſick of a moſt acute Diſeaſe and died.

Obſerv. 18. *Kings-Evil Swellings.*

709. Theſe Swellings are a frequent Diſeaſe, and hard to cure. The Daughter of Mſr. *Claverius*, Preſident of *Nemours*, was troubled therewith in her life time. Wherefore having been by many Phyſitians and ſundry Medicaments vexed, and being never the better, but her Diſeaſe growing worſe and worſe, her Neck was eaten with a ſcurvy putrid humor. At laſt I being ſent for, and having preſcribed fitting Purgatives, I cauſed the *Emplaſtrum Cheradicum* deſcribed by *Aetius* to be applyed thereto, after the Sanies was well preſt out and wiped away. Every third day I cauſed a new Plaiſter to be laid on (the Ulcers being firſt clenſed, as hath been ſaid) and this Plaiſter being four or five times repeated ſhe was quite cured. And if the Kings-Evil Swellings are not ulcerated, I am wont to ſoften their hardneſs with the Powder of *Lapis Pyrites*, and *Diachylon Ireatum*, and then to open the Skin with a red hot Iron, or a Cauſtick Medicament, and with my fingers to preſs out the filth contained within; and laſtly, I lay on the *Emplaſtrum Cheradicum* aforeſaid for three dayes (which muſt alwayes be obſerved) and this I repeat ſo often till I ſee the Cure performed.

Obſerv. 19. *A Double Tertian.*

710. Mſr. *de Rancoigne*, Commander of the Garriſon at *Bellicadre*, was wont every year in *France* to be troubled with a double Tertian Ague, for the ſpace of two or three moneths. He being come into *Narbon* with our friend *Protomachus*, was taken a little after with the ſame kind of Diſeaſe, and ſent for me to viſit him. Being very ſad, ſuppoſing that (as had been uſual) he ſhould be long vexed with this Ague, he deſired me if I had any ſafe Remedy for a double Tertian, I would for his ſake make uſe thereof. I told him by Gods help I would anſwer his deſire if he would be adviſed by me. Having therefore given him a Clyſter the ſame day, and the day after the Urines appearing at firſt ſomewhat crude, following the Counſel of *Avicenna*, after the ſecond or third fit, when the Urines were more coloured, I cauſed the Baſilica Vein of his right Arm to be opened, and ſix or ſeven ounces of blood to be taken away. Mean while he uſed Preparative Juleps in the mornings, which being hardly finiſhed, the Patient wondred that the following fit was little or none, and that afterwards there was no ſign of his Ague. Wherefore being extreamly glad that he was cured in ſo ſhort a time, he perſwaded others of his fellow Soldiers that were troubled with the ſame Diſeaſe (now it was in the height of Summer) to commit themſelves to my care, who were all cured in the ſame manner.

Obſerv. 20. *A Sciatica Pain.*

711. That honeſt and good Soul *Antonius Clemens* of *Bellicadre*, was vexed with ſo vehement a Sciatica, that he was compelled to ſeek help of the Phyſitians of *Montpelier* eſpecially of Mſr. *de Fegnes*, a Doctor of Phyſick, who at that time had gotten himſelf a great name for his rare dexterity in the Cure of Diſeaſes. He could not aſſwage that bitter pain, neither by opening the Sciatica Vein, nor by Purging Pills, nor Diet Drinks, Cataplaſms, Stoves, Plaiſters, or Cupping-glaſſes, but it grew every day worſe and worſe, ſo that the Patient deſpaired of his life, But I upon the Irruption of the Proteſtants into *Nemours*, at the Iron Grates which received Fountain Water, flying by chance to *Bellicadre*, he ſent for me to viſit him. Having heard what Mſr. *de Fegnes* had done, I cauſed Cantharides and old Leven to be applied to the pained place, whereupon bliſters ariſing, and being opened, ſo great a quantity of wheyiſh liquor was voided, that deſired eaſe followed thereupon, nor did the Pain trouble the man any more afterwards. Yet when the Sores cauſed by the Cantharides were healed up, I bid him for a time to apply to the part formerly pained a Plaiſter of Diachylon and Melilot Plaiſter, adding a little raw Sulphur, and a like quantity of ſeeds of Water-Creſſes and of Wild-Creſſes, or Sciatica-Creſſes.

Obſerv. 21. *A Sordid Ulcer.*

712. It is not long ſince that the Earl of *Tanten*, a man moſt renowned for Nobility and excellency of body and Mind, lately dead of an Ulcer in his Lungs, was troubled with an ill conditioned Ulcer in his left Leg, which could not be by any means healed up. He being exceedingly ſtudious of Antiquity, and ſending for me to interpret a certain Inſcription upon an old Coin: after many diſcourſes of this and that, he intreated me if I had any thing that would heal the Ulcer in his Leg, that I would impart the ſame unto him, for he had tried this and that, and nothing would do, ſo that he thought it was incurable. Now I could not deny my help

and advice to ſuch a man as he; wherefore if you will (ſaid I) be adviſed by me you will ſhortly be reſtored to your health. And therefore I began, after univerſal Remedies and a convenient diet preſcribed, to appoint him this following Liniment, whereby in twelve or fifteen dayes the Ulcer was quite cured. Mean while I would have him uſe this following Syrup at times for fifteen dayes to hinder the Ulcer from breaking forth again.

Take *Shavings of Guajacum half a pound*; *infuſe them in twelve pints of the Water of* Rhodanus, *then boyl half away*; *at the concluſion add Polypody of the Oak four ounces*, *Carthamus ſeeds three ounces*, *Turbith one ounce*, *Agarick half an ounce*, *Cinquefoyl Roots four drams. To the ſtrained Liquor add Honey of Roſes, and red Sugar, of each one pound: Clarifie the Liquor, and Aromatize it with half an ounce of red Sanders. Make it into a Syrup half boyled.* Hereof he took five or ſix ounces once in three or four dayes. When it did not work ſufficiently I added Senna. The Ulcer was frequently waſhed with Allum Water. The form of the Liniment was this following.

Take *Hogs Greaſe three ounces*; *Goats Greaſe two ounces*; *Henbane Leaves roaſted under the Embers and well beaten with the Greaſes one handful*; *Lead burnt and waſht, Antimony, red Lead, of each two drams. Mix them in a Leaden Mortar, and make all into a Liniment, adding a little Opium when the pain is more than ordinary.* Afterwards when it was long ere a Scar would be drawn over, I cauſed a Plate of Lead to be ſteeped in Vinegar three dayes, and then dried and powdered very fine, and ſprinkled upon the Ulcer, and another whole Plate to be laid over the ſame; and ſo I attained my deſire, to my great Commendations, not to ſpeak of the Reward which I received.

Obſerv. 22. *A Caruncle in the Yard.*

713. A certain Auguſtine Friar called *Ambroſius*, having a bit of fleſh growing in the Neck of his Bladder, was exceedingly tormented vvhen he made vvater, and ſought help of many to take the ſame away, for the Diſeaſe had taken root novv theſe five years, and his pains grovving daily more and more, though he uſed povvder of Savine vvhich he conveyed in with a Wax Candle, and other Medicaments which he had got here and there; by chance he met me, being almoſt mad vvith pain: I cannot (quoth he) bide long in a place, and I am ready to make away my ſelf, ſo grievous is the pain wherewith I am tormented. I, moved with Commiſeration, endeavoured vvith gentle vvords to aſſvvage his diſtempered mind, and told him there was hope of his Cure, provided he would keep a good diet, and follow my directions, which (his pain being a little aſſvvaged) he promiſed to do. I adviſed him therefore to wear a Leaden tent or wire in his Urinary paſſage continually, endeavouring by little and little to cauſe it gently to paſs into the neck of his bladder; and that he ſhould begin with a ſmall wire or plummet, and ſo ariſe to a greater, till the paſſage into his bladder was open, and that he was to continue the uſe hereof a long time together. He therefore keeping (as I bad him) a Leaden plummet in his Urinary paſſage day and night, told me he felt ſo much good thereby in the ſpace of fifteen dayes, that he could make water freely and without pain; and the paſſage of his Urine vvas ſo open, that he needed no longer any Medicaments to cauſe him make vvater.

Obſerv. 23. *A Semitertian Ague.*

714. I vvas called to the Cure of a Semitertian of Mſr. *de Rage*, Treaſurer of *Nemours*, vvith Dr. *Ferrandus*, and Dr. *Caſtellanus*. And vvhen vve came into Conſultation, Dr. *Caſtellanus* asked me in the firſt place, vvhat I thought of the Patients Diſeaſe, becauſe I vvas the firſt that had viſited him? I anſvvered ingeniouſly, That he vvas troubled vvith a true Semitertian, and that therefore he ſtood in need of the beſt and moſt ſpeedy Remedies. For every third day the Ague came vvith ſhaking, and after the Sweat which followed the Ague, he was not quite free from Feaveriſh heat. Mſr. *Ferrandus* did eagerly oppoſe my Opinion, being of a diſpoſition apt for contradiction; and he ſaid that a vacancy from Feaveriſhneſs might be perceived betvvixt the tvvo fits, and therefore it vvas only a notable baſtard Tertain. On the other ſide I reſolutely affirmed, That there lay ſecretly concealed a continual Quotidian; and I added, That if the Feaver or Ague vvere a Baſtard one, that it would not cauſe ſo great watchings, nor faintings; and moreover, that a Semitertian comes in the Autumn oftner than at any other time in the year, at what time our Patient was taken ill; and finally, That this Diſeaſe chiefly ſeized upon great Feeders, ſuch as this Patient vvas; and I cited the Teſtimonies not only of the moſt excellent Phyſitians, but alſo of Martial.

'Tis not well ſaid that our Tongilius
With Semitertian Ague vexed is,
Whoſe abſtinence from meat and drink is
know.

And

And again in the end of his Epigram.

All his Phyſitians bid Tongilius *bathe :*
O Fools to think a Feaver's his Diſeaſe,
Whiles it is Gluttony.

Yet Mſr. *Caſtellanus* having queſtioned us, and heard both our opinions, took part with Dr. *Ferrandus*, and turning himſelf to me, added theſe words: It ought not to ſeem ſtrange (quoth he) that a certain ſmall Feaver follows the Tertian Ague; for this being a Baſtard Tertian hath very much thick flegm mingled with the choler, in which reſpect the fumes ariſing therefrom do continue the longer; pertinently alledging that example of *Galen* in his Book of the difference of Feavers, concerning green Wood which is hard to kindle, and when the flame goes out, for a long time a thick ſmoak ariſes, which does not happen in dry Wood; and therefore (ſayes he) ſince the way of Cure is not much different in a Semitertian and a Baſtard Tertian, let us reſolve preſently to let blood. Moreover, though all theſe things were done, and Epithemes were applied to ſtrengthen the Heart, and many other Remedies adminiſtred according to Art, the Patient died three or four dayes after. And when Mſr. *Caſtellanus* heard of his death, he changed his Opinion, and ſaid that a true Semitertian had killed the Patient; yet Dr. *Ferrandus* would not bate an hairs bredth of his former Perſwaſion.

Obſerv. 24. *A Polypus.*

715. The Wife of a Scrivener of *Urgen*, was deformed by a Polypus, and ſhe was troubled becauſe the Chyrurgeons contended with the Phyſitians that it could hardly be cured without cutting. Coming therefore to me, after I had appointed her a convenient Diet, and preſcribed a Purgation, I cauſed *Vigo* his Medicament to be applied to the original of the Nerves, and that the Polypus ſhould be anointed with this following Oyntment:

Take *Pomegranate Rinds, green Galls, of each one dram and half; tops of Savine dried and powdered two drams; Chalcitis or red Vitriol burned one dram and half; Allum burnt, and Hermodactyls, of each four ſcruples.* This with Egyptiacum Oyntment was applied to the Polypus. Mean while that this was uſed, the neighbouring places were anointed with the Oyntment of Bolus, or of Litharge with Juyces, to ſtop the influx of Humors. Then,

Take *Lead burnt and waſhed one dram and half; Rind of a long Gourd burnt one dram; Antimony, and Lapis Calaminaris diligently waſhed, of each four ſcruples; Shels of River or Sea Crabs one dram and half; Tutty prepared two drams; Juyce of Plantane and Nightſhade clarified, of each one ounce and half; Oyl of Roſes Omphacine four ounces. Work them together a long time in a Leaden Mortar with a Leaden Peſtle, adding Juyce of Pomegranates one ounce and half.* The place was now and then waſhed with Allum Water, and without the hand of the Chirurgeon the Polypus was ſoon rooted out.

Obſerv. 25. *Puſtules of the Face.*

716. Some Diſeaſes we meet with, which though they are neglected as of ſmall moment, and Phyſitians are ſeldom conſulted for their Cure; yet in regard of their troubleſomneſs and pertinaciouſneſs, they are not to be contemned. It many times falls out as it did lately in a certain woman, who could not by any Remedies take away the redneſs and Pimples of her Face like thoſe rubies that enrich the Noſes of Toſs-pots, whereby ſhe was deformed; although ſhe had had the advice of famous Phyſitians to that intent. I preſcribed her a cooling and moiſtening Diet, opened her Liver Vein, cauſed her to take three days together a purging Opiate to void aduſt Humors, encreaſing the doſe thereof by little and little, and then I made her waſh her face with this following Water.

Take *Tops of Myrtles, Rinds of Pomegranates, Leaves of wild Olive Tree, Finger-fern, Plantane, Morellus which is a ſort of Nightſhade, Tendrels of the Vine, of each four handfuls: Sour Grapes with their ſtalks two pound: Cut them. Sprinkle them with Vinegar, and ſtill them, reſerving the diſtilled Water for your uſe.*

Take *of the foreſaid Water four ounces: burnt Allum two drams: whites of Eggs well beaten one ounce,* Apply them to the Face when ſhe goes to bed, and let her often waſh her Face with the foreſaid Water. Afterwards,

Take *Tutty prepared, burnt Ceruſs, of each two ounces: Litharge one ounce: Juyce of Plantane, the foreſaid diſtilled Water, of each a ſufficient quantity, Oyl of Myrtles two ounces: Oyl of Yolks of Eggs one ounce. Incorporate them together, and bring them to the form of* Unguentum Nutritum, *add Calcitis three drams: Allum two drams: Sulphur one dram: Juyce of Citrons one ounce and half.* Apply it at nights, and in the morning waſh her face with the foreſtilled Water. If it had not gone away with theſe Medicaments, I had added one ounce of Quick-ſilver or more; but the redneſs and pimples all vaniſhing, there was no more to do.

Obſerv.

Obſerv. 26. *The Diſeaſe Cholera.*

717. In the Year (if I miſtake not) 1564. before the Plague brake out in *Nemours*, there was rife the Diſeaſe called *Cholera*, killing many in four dayes ſpace. Yet thoſe that ſought help at firſt, were all in a manner cured by this following Method. In the firſt place, When I conceived the Patients had ſufficiently vomited, that they might not be over-weakened, I gave them Marmalade of Quinces aromatized if the Feaver were not very intenſe, but if it were intenſe I gave them ſimple Marmalade morning and evening two hours before meat in a ſilver ſpoon, and forbad them to uſe any Drink, although the Patients were tormented with an unquenchable thirſt, becauſe Drink did encreaſe their vomiting and looſneſs, whereupon death followed unavoidably. I cured the Numbneſs and Convulſions of their Legs with Oyl of Chamomel hot; and to help the Vomiting and looſneſs, I applied Embroches of Oyl of Nard, of Maſtich, and of Quinces, wherewith their whole bellies were anointed, and then I ſprinkled thereon Powders of Coriander prepared, of Roſes, of Maſtich, of Mints dried, of Citron peels dried, Lignum Aloes, Laudanum, Nutmeg, the two Corals, and ſuch like. Alſo they took an Opiate of Conſerve of Roſes, Myrobalans preſerved, Powder of Pearls, red Coral, and Ivory, with Syrup of Quinces, and our Corans. Sometimes if the Patients were ſtrong, I gave them at the beginning of the Diſeaſe Rhubarb in the ſubſtance, not neglecting Cordial Epithems. The ſame kinds of Medicaments I uſed in Children which were waſted with this kind of flux, or the melting flux ſo called, eſpecially in the Summer time, I adviſed ſometimes Clyſters partly ſtrengthening, partly nouriſhing, and all in a manner recovered through the mercy of God.

Obſerv. 27. *Pain of the Hæmorrhoids, and falling down of the Fundament.*

718. A certain man of the County of *Venayſſin*, was tormented with a grievous pain of his Hæmorrhoids, which would not give way to any uſual Pain-aſſwagers, viz. Fomentations of Mallows, the Hemorrhoidal Herb, flowers of *Tapſus Barbatus*, Chamomel, Oyntments of Butter, new Suet, Hens-greaſe, Oyl of Line-ſeed, and a thouſand ſuch like. Wherefore his Appetite being loſt, and not being able to ſleep, his forces were much impaired. Nor could the end of the Clyſter-pipe enter his Fundament, the Hemorrhoidal Veins had ſo ſwoln the neighboring parts. And therefore it was that he had no ſtool in eight dayes time, although he had twice taken Caſſia new drawn. But at laſt being adviſed by a certain learned German that went that way, having reiterated many Fomentations of emollient things, I cauſed an Oyntment to be made of the juyce of Herb Two-penny and freſh Butter, wherewith I anointed Tents, and put them in leiſurely, and ſo aſſwaged the pain. Whereupon the Patient preſently fell aſleep, and his Appetite was reſtored. The ſame Patient a little after had his Fundament fallen out, which was cured with this Remedy, and never fell out again.

Take Oyl of Maſtich a ſufficient quantity: Boyl therein eight Beetles (Bugs or Flies ſo called) and then anoint his Fundament with this Oyl, and ſprinkle thereon the Powder of Egg-ſhels, out of which Chicken have been hatched. The ſame German told me that alſo the juyce of Herb Purple or Mothmurren, does wonderfully mitigate all the pains of the Hemorrhoids.

Obſerv. 28. *The melting Feaver.*

719. Mſr. *Richerius* the Kings Counſellor at *Nemours*, was taken with a ſudden and moſt grievous pain in the lower part of his Back betwixt the Kidneys, as he was buſily imployed in his Garden, which was near his Houſe; and being not able to ſtand for pain, but fain to keep his bed, he began to be Feaveriſh, and yet was oppreſſed with no thirſt, becauſe the Feaver was not very violent; moreover, his head did not ake at all, and he ſlept well enough. The day following his whole body was wet with Sweat, which was not procured by any Medicaments, but brake out of its own accord, whereby the pain of his back was allayed. But from that day forward he did ſweat much more plentifully; ſo that a man would have thought it came out of ſome Springs ſcituate in ſeveral parts of his body. And this held till the ninth day, for it could not be ſuppreſſed by any Powders made to ſtop immoderate ſweating, no nor by frequent fanning of the cold air upon the Patient, nor by throwing aſide the coverlids and blankets, nor by opening the Windows, that the wind might have free paſſage into the Chamber; but his forces decaying by little and little, whiles he was ſpeaking and ordering the Affairs of his Houſe, he was prevented by ſudden death, no other ſymptoms being joyned with the ſweat. Now although we uſed both Clyſters and Purgative Medicaments, that we might recal the Motion of Nature

Nature from the Centre to the Circumference, back again from the Circumference to the Centre : yet all our Remedies were in vain, nor could we ever free the Patient from this ſo great flux of ſweat. Not to ſpeak of the Diet we appointed him of ſolid and clammy meats, leſt by eating meats moiſt, ſubtile, and much nouriſhing, they ſhould alſo ſpeedily paſs through the Skin as *Hypocrates* ſayes. And therefore all Phyſitians were joyntly of opinion that this was that kind of Feaver which *Galen* calls *Elodes* or *Typhodes*. For in that kind of Feaver ſayes he, the Patients are little or nothing holpen by ſweat, and for that cauſe it is reckoned to be for the moſt part mortal. Obſerve that the ſweat came not hot till the very laſt day, and then it came exceeding cold.

Obſerv. 29. *A Palſie.*

720. I cannot paſs over in oblivion the compleat Palſey of a Gentlewoman, the Mother of Mſr. *Favers* of *Nemonrs* a Lawyer, my moſt dearly reſpected Friend; which Gentlewoman was then about ſixty four years of age. Who a little before the ſetting of the *Pleiades* or Seven Stars, fell ſuddenly in the evening into a Palſie of her right ſide; ſo that ſhe could neither diſtinctly ſpeak, nor had ſhe the power of ſenſe or motion in her Limbs on that ſide. Moreover ſhe was exceedingly heavy in her head, and enclined to ſleep. Now becauſe her belly was bound, a Clyſter was preſently injected, partly of Emollient, and partly of Cephalick Herbs: in the ſtraining whereof was diſſolved the *Hiera picra* of *Nicolaus* with Diaphœnicon, Oyl of Chamomel, and *Mel Anthoſutum*, or Honey of Roſemary flowers, which ſhe voided after an hour with much dung and flegmatick Excrements. At midnight I cauſed her to ſwallow ſeven Pils of *Pilulæ Fœtidæ* and *Cochiæ*, with three grains of Trochisks of Alhandal made up with Syrup of *Stœchados*, which about morning brought forth ſo great a quantity of thick and clammy flegm, that the heavineſs of her head and ſleep ſeemed in much meaſure to be abated. On the third day ſhe took an Apozeme made of Galangal Roots, Calamus Aromaticus, Betony, Bawm, Chamepitys, Sage, Hyſop, and others of this ſort, with Oxymel of Squils, whereof ſhe took four doſes for the four enſuing mornings; after which having taken again the foreſaid Pills ſhe was ſomewhat better. Yet ſhe was not able to ſtir ſo much as her little finger on the ſide affected. After theſe things were done, certain ſnotty excrements of her Brain were voided at her Noſtrils and Mouth by the uſe of Errhines and Apophlegmatiſms; but three dayes after ſhe uſed a Diet Drink of Guajacum morning and evening, whoſe ſtrained Liquor was aromatized with Powder of Nutmeg (whereof ſhe alwayes held a bit under her Tongue) and ſometimes with *Diamoſcha dulce*. And having drunk this Drink with the ſecond Decoction for the ſpace of twenty five dayes, her palſied Members had recovered ſome ſenſe, and could ſtir a little, obſcurely. But after ſhe had uſed Stoves to procure ſweat, wherein many red hot ſtones were quenched in a Decoction of Bay-leaves, Lavender, Baſtard Spike, flowers of the two ſorts of Stœchados, Chamomel, Maiden-hair; ſweat was provoked, and ſhe was anointed with hot Oyntments of Martiatum, Opopanax, Oyl of Caſtoreum, of the Peppers, Oyl of Foxes, and other ſuch like, all over her Back-bone and the Members affected, ſhe totally recovered her health. Not to ſpeak how I appointed her to keep a drying Diet all the courſe of the Diſeaſe. By this Method I have cured many that could not ſpeak nor ſtir their Limbs.

Obſerv. 30. *Hypochondriacal Melancholy.*

721. This Diſeaſe is not very frequent, but yet hard to cure, whoſe malice is hardly diſcovered in the continuance, and therefore the common people for the moſt part mock thoſe that are troubled therewith, ſaying that they do ill pretend themſelves to be ſick, ſeeing they can eat and drink, and follow their buſineſs like perſons in health. And yet they are ſundry wayes vexed, both becauſe they cannot ſleep a nights, and their Ears are deafned with ringings and noiſes proceeding from vapors ariſing from their Stomachs and Hypochondries; many are frighted, have tremblings of their Hearts; ſome mutter to themſelves as if they were diſtracted, and being weary of their lives, deviſe many wayes to deſtroy themſelves; ſome are troubled with murmurings and rumblings from their Hypochondries with much and frequent ſpittings; ſome feel an heat in thoſe parts, as if they were inflamed. In a word, they are vexed with ſuch a Concourſe of bad Symptoms, that the moſt exerciſed Phyſitians have enough to do to vanquiſh their obſtinacy. Now this Diſeaſe is by moſt renowned Phyſitians called Hypochondriacal Melancholly, wherewith a certain learned Franciſcan Fryar named *Pilris* was long vexed, though otherwiſe of a good habit of body and flouriſhing age. And by this means he was many times forced to leave the Pulpit wherein he preached, being taken

taken with a ſudden trembling of heart and darkneſs of his ſight. Now he had been troubled (as he ſaid) vvith vvel-nigh all the foreſaid Symptoms for three or four years, and found no good by all the Remedies preſcribed by the Phyſitians of *Tolouſe* and *Montpelier*. Wherefore he exceedingly intreated me to add my Advice to the reſt, although I might differ from them in opinion. I anſvvered (having ſeen and examined ſome ſheets of Paper) that I vvas wholly of their mind; and yet I ſhould very vvillingly appoint for him ſuch things as by long experience, not only in others, but in my ſelf alſo when I was a youth, I had happily made uſe of. For it might fall out (ſaid I) that among ſo many and ſo conſiderable Remedies lately practiſed, they might do good, eſpecially ſince my ſelf being troubled with the ſame diſeaſe, I had been through Gods goodneſs long ſince cured. Wherefore giving ear to my words he took courage, and perſvvaded himſelf that by my help he ſhould be freed from ſo great afflictions. Nor was this perſvvaſion of his in vain, for by the uſe of the Remedies by me preſcribed in the ſpace of two moneths he recovered his wiſhed health. Wherefore I preſcribed him a convenient Diet, enclining a little to a cold and moiſt temperament, ſuch as are Broths of Capons fleſh, of Wether Mutton, and Kids fleſh, made with Borrage and a little Lettuce; alſo fat Partridges, Thruſhes and Quails, and other ſuch like Birds moderately roaſted, with ſmall Wine allayed with ſtore of cleer Water void of taſt, and Claret Wine. But I forbad him the uſe of all kinds of Cheeſe, and of all ſuch things as breed thick blood and melancholly, and willed him to baniſh all paſſions of his mind which might induce ſadneſs and fear. Alſo I bad him to uſe this following Clyſter twice a week, though he were not Coſtive.

Take *Broth of a Wethers Guts, as much as will ſuffice; boyl therein Mallows, Bears Claw, Borrage, of each one handful; the three Cordial flowers and Chamomel flowers, of each one pugil: Raiſins ſtoned twenty pair; In one pint and half of the ſtrained Liquor diſſolve Caſſia with Sugar and Catholicon, of each ſix drams; Oyl of Violets three ounces; red Sugar one ounce. Mix all into a Clyſter.* Alſo I cauſed him to take a quantity of this following Purgative Electuary every eighth day.

Take *Pulp of Raiſins and Seleſtens, of each one ounce: Caſſia new drawn and Catholicon of each one ounce and half: With Syrup of Violets make all into a ſoft Electuary, whereof let him take ten drams, or at moſt one ounce and half at five a clock in the morning, in a ſtrained Decoction of Bugloſs, red Vetches, Raiſins, Liquoris, and Cordial flowers.* Alſo ſometimes I cauſed him to take the Pulp of Caſſia alone, the quantity of an ounce rouled in Sugar. Nor would I allow him to uſe ſtrong Purgations, leſt the morbifick matter being exagitated, ſhould rage more and more, becauſe when it is overmnch provoked, it rages more violently, and the vapors thereof aſcending into the head, cauſe watchings and ringings in the Ears, alſo the Palpitations of the Heart are thereby made more troubleſom; ſo that it would be an hard matter to aſſvvage the fierceneſs of the Symptoms. Three or four dayes after he had taken the Electuary, I preſcribed him an Apozeme of Endive, Borrage, Maidenhair, Raiſins, Liquoris, which he was to take as to day, and to repeat his purging Electuary to morrow, after the repetition whereof he was much better, viz. a good part of the aduſt and melancholick humor being by little and little purged forth. And a few dayes after I cauſed him to enter into a bath of fair freſh Water luke-warm in the morning faſting, and after he had been at ſtool, wherein he was to abide an hour and half without ſweating. In the Bath were boyled Mallows, Violet Leaves, a few Leaves of Lettuce (for the beginning of Summer was at hand) and Borrage. Now this Bath was continued five or ſix dayes. Whenever he was bound, the foreſaid Clyſter was given him. And theſe things being done he was much amended; viz. his ſleep returned, his trembling of Heart was allayed, and finally the abſurd Imaginations troubling his mind were extinguiſhed. And whereas there remained ſome ſinging in his Ears, Oyl of Aſſes, Cucumer with a little Caſtoreum being dropt into his Ears, the winds were diſcuſſed. Now to remove the reliques of the Symptoms, he took half an ounce of this following Cordial Electuary, whereby he was totally cured of his dangerous Infirmities.

Take *Conſerve of Violets, Borrage, Bugloſs, Finger-fern, of each one ounce and half: Raiſins of the Sun ſtoned one ounce: Citron peels preſerved three drams: Confectio Alkermes two drams: Powder of Oriental Pearls one dram. With Syrup of Apples ſimple, make all into an Opiate.* Finally, I adviſed him to frequent the company of pleaſant perſons. I forgot to tell you, how after Purgation his left Hypochondry was fomented with a Decoction of Mallows, Tamarisk, Chamomel flowers, Germander, Capar Roots, Finger-fern, Agnus Caſtus, Harts-tongue, Smiths Forge-water being added thereto, for his Spleen did ſeem to ſwell.

Obſerv.

Obſerv. 31. *Mother-fits.*

722. Women are frequently troubled with Suffocations of the Womb, vvhich endanger their lives; eſpecially ſuch as have their Courſes by any means ſtopped, or for modeſty and Honours ſake live a ſingle life without the company of Men. From which fits ſome are hardly recovered, and others can by no Art be reſtored to their former health. Wherefore I ſhall willingly take the pains to ſet down ſome of the möſt effectual Remedies againſt this dangerous and prepoſterous Diſeaſe, wherewith I have reſtored ſome to health when they were almoſt dead. In the firſt place therefore, after Clyſters, to void the excrements and wind, with ſuch things in them as reſpect the Womb, ſuch as Mugwort, Feaverfew, Catsmint, Stœchados, Chamomel, Anniſeeds, Cummin-ſeeds, Fennel-ſeeds, Bay-berries, with *Hiera Nicolai*, Diacatholicon, Oyl of Rue, and ſuch like things; not omitting afterwards to apply Cupping-glaſſes to their Bellies, to warm the lower parts by rubbings to put ſtinking things to their Noſes, and to burn or ſmear ſweet things beneath, as *Gallia moſchata*, Benjamin, Storax: the day following I give them Pills of *Hiera Nicolai* or *Ruffi*, if their ſtrength will give way. But if the Symptome is ſo urgent that we cannot ſtay for the working of Pills, a Plaiſter muſt be applied to the Navil, of Aſphaltum, or Oyl of Jeat muſt be anointed thereupon in a ſmall quantity. Then a Potion muſt be given of a Decoction of Mugwort, wherein choice Camphire divers times ſet on fire hath been quenched. But if this will not raiſe them out of their fits, they muſt be forced to open their mouths, and if their Jaws be ſo faſt cloſed (as many times it happens) that there is no entrance for any Drink, they muſt be opened with a piece of Wood, or an Iron Inſtrument made for that purpoſe, and one dram of Powder of Bean-Trefoyl with Mugwort Water muſt be powred in; for I have by this Remedy raiſed many that were half dead. Finally, when the fit is over, if ſtoppage of the Courſes cauſed the fits, they muſt be provoked by letting Blood in the Saphena Vein, and by ſuch Medicaments as provoke the Courſes, given at the time when they were accuſtomed to come. Some Women wear inſtead of an Amulet about their Necks, Quick-ſilver incloſed betwixt the ſhells of an Hazel-Nut, to free themſelves from this ſo grievous a Malady.

Obſerv. 32. *An Ulcer with Worms in it.*

723. A certain Gentleman of *Urgen* of a good Family, being troubled with an ill-conditioned Ulcer in his Leg, I know not whether through neglect or bad handling, it was become ſo putrified, that it crawled with an innumerable company of Worms, ſo that no Remedies that we could deviſe would kill or rid them away, but encreaſing every day more and more, and eating the fleſh under them, they cauſed intollerable pains. I forbear to relate how the juyce of Centaury, Wormwood, Arſemart, yea Lime and Verdigreaſe, and a thouſand other things were uſed, but to no purpoſe: And therefore I thought there needed the hand of the Famous Chirurgeon *Chiron* inſtead of mine, both to remove the Worms that ſtuck cloſe to the fleſh, alſo to extirpate and heal up that ſame prodigious Ulcer. Wherefore thinking with my ſelf what was to be done againſt thoſe abominable Worms, it came ſuddenly into my mind, how a Shepheards Dog bitten by a Wolf in his Thigh and troubled with ſuch Worms, having ſome Agrimony tied about his Neck, the Worms (whereof the Ulcer was full) fell away in abundance. Seeing therefore the good ſucceſs which followed the uſe of that Herb, I judged by the Rule of Analogie, it might work the ſame effect in this man as in the Dog, although I knew the temper of the Dog was different from the mans temper. In Imitation therefore of the ancient Phyſitians, I reſolved to transfer the uſe of this Remedy to the man; nor did this experiment fail my expectation; for partly by putting the juyce thereof into the Ulcer, and partly by wearing the Herb about his Neck, I ſaw the Worms fall away by cluſters, not without the extream admiration of the Chirurgeons and Friends of the Patient who ſtood by; ſince not by any manifeſt quality, but by I know not what hidden propriety (no bitter, biting, or ſower things, having done any good) it chaſed away ſo great a Plague. Wherefore the Ulcer being diligently cleanſed (as was fitting) and fleſh being reſtored with fleſh-breeding Medicaments, and the skin hardened with Scar-breeders, the man ſhortly recovered, and afterwards uſed the ſame Medicament, eſpecially in Cattel troubled in like manner, which (as he hath told me) alwaies took effect.

Obſerv. 33. *A Dropſie from an hot Diſtemper.*

724. A Gentlewoman of *Nemours* being

grievouſly troubled with the Dropſie *Aſcites*, though ſhe kept a good Diet, and drunk very little, yet her belly and her thighs alſo grew ſo great, that ſhe could neither fetch breath nor go. And whereas a few daies before ſhe had taken Apozemes, Opiates, and certain Decoctions preſcribed by Dr. *Schironius*, after which her belly and legs abated a little of their ſwelling: yet falling again into her fault of drinking, her ſwellings encreaſed, and her ſhortneſs of breath was augmented. Wherefore all things being related to me in order which had been done to her, having ſeen her water which was red, I judged that her Liver was not only troubled with an hot diſtemper, but that alſo there appeared ſome beginnings of an Inflammation, which occaſioned ſo hard a ſwelling in her right Hypochondry. Having therefore given and applied ſuch things as correct an hot diſtemper of the Liver, I cauſed a Cataplaſm to be laid to the Region of her Liver, charging her by any means to drink no kind of Liquor, becauſe her thirſt was but thereby encreaſed, according to that of *Ovid*.

Water the more you drink, the more you may.

The Cataplaſm was this:

Take *Crums of Meſline-Bread one pound; Dates cleanſed from their skins and ſtones, twelve pair; Figs, Raiſins with their ſtones of each ten pair. Boyl them in Water and Vinegar till they grow ſoft. Then force them through an Hair-Searſe: add to them Schænanth, Myrtle, Spike, Sanders white and red, Red Roſes of each two drams; Oyl of bitter Almonds, of Nard and Wormwood of each three ounces. Make all into a Pultiſs, and apply it to the Region of the Liver luke-warm in the morning three hours before dinner.* When this Pultiſs or Plaiſter if you will, had been applied ſix or ſeven daies, both the Tumor began by little and little to abate, and all the Symptoms to be aſſwaged. Which being done, I ſet my ſelf to diſcuſs the wheyiſh Humour, to which end I uſed a Pultiſs made of ſcrapings of Leather newly prepared with Lime, boyled only in water to a Gelly; for they have an excellent faculty both to expel wind, and to draw out the wateriſh humour, as I found by experience in this woman; for after the third or fourth anointing (her Liver being fenced with Oyntment of Roſes, and *Ceratum Santalinum*) her belly was wholly fallen, and ſo by the frequent uſe of an Opiate made of Conſerve of Flowers of Tamarisk, Cichory, Finger-fern, Maiden-hair of each one ounce; Preſerved Citron-peels, Conſerve of Smallage-Roots, of each half an ounce; Powder of Triaſantalon two drams; Trochisks Diarrhodon, *de Eupatorio* of each one dram, ſhe recovered her deſired health.

Obſerv. 34. *Eryſipelas, Herpes, and Lichen.*

725. Madam *de Colias* the Wife of Mſr. *Albenaſius* a Judge at *Nemours*, many times whiles ſhe was in her conſiſtent age, was troubled with a true Eryſipelas which poſſeſſed her whole face; but when ſhe grew in years, at the time when the Eryſipelas was wont to come, her whole face was diſfigured with a kind of St. *Anthonies* Fire. Moreover, this St. *Anthonies* Fire did trouble the Phyſitians very much, for neither by Blood-letting (for the Woman was plethorick) nor by purgation, nor by external Remedies could the Ulceration be ſtopped. But after the uſe of ſeveral Oyntments one after another, with this following ſhe was at laſt perfectly cured.

Take *Oyntment of Litharge one ounce: Quick-ſilver killed with juyce of Lemons half an ounce: Tutty prepared three drams: Cerus and Lapis Calaminaris of each two drams: Roſe-water and Vinegar of Roſes of each one ounce and half. Work them all together in a Leaden Mortar with a Leaden Peſtle.* After her St. *Anthonies* Fire was cured, ſhe complained to me of certain Tetters which came every year of courſe, and took ſuch rooting that they could not be got away under ſix moneths ſpace. This following Liniment did take away the ſaid Tetters in the ſpace of three or four daies.

Take *Liquid Storax, Oyl of Roſes compleat, of each half an ounce: Stir them and work them together in a Mortar, till they be very well mixed, and with them ſmear the Tetters morning and evening.* Alſo the Water of Turnſole or Wart-wort, the Herb ſo called, is very good againſt Tetters.

Obſerv. 35. *Chops of the Dugs, and Rankneſs of the Armpits.*

726. A certain Gentlewoman of *Nemours*, after ſhe was brought to bed, was alwaies troubled with an extream pain in her Nipples, by reaſon of certain Ulcers which could not be dried neither with Oyntments nor with Lotions, much leſs could the pain be aſſwaged. Asking my advice therefore what courſe ſhe ſhould take againſt ſo troubleſome a Malady, I adviſed her that hereafter when ſhe was with child, a moneth before her lying down, ſhe ſhould frequently waſh her Nipples with the diſtilled Water of Red Poppies, which having done, the next time ſhe was with child of a Boy, ſhe had none of

thoſe

thoſe of Ulcers afterwards, and this Remedy many Women in the like caſe did afterwards uſe to their great profit. Now as ſhe was ſhewing me her Nipples, a rank ſmell proceeded from her Armpits, whereupon ſhe earneſtly intreated me, that if there were any thing that could take away this grievous ſtinking ſmell (which makes men loath Women) that I would acquaint her therewith. Whereupon anointing her Armpits by my Advice with an Oyntment made of Powder of Lithardge of Gold, and Vinegar of Roſes, the ſtinking ſmell was quite ſuppreſſed.

Obſerv. 36. *A fierce Catarrh, a ſore Mouth, and danger of a Phthiſis.*

727. A certain Woman of *Urgen* was ſo vexed day and night all the Winter long with a thin and ſharp diſtillation to her Breaſt, that being perpetually vexed with coughing and hawking, ſhe vvas forced to ſit continually; nor vvould her diſtillation give vvay to Evacuations, Revulſions, and Diverſions by Cupping-glaſſes; hence proceeded loſs of Appetite, vvant of Sleep, crudity of her Stomach, vvhich made her ſo lean that ſhe vvas in danger of a Conſumption. Wherefore the followving Electuary having reduced her Sleep, and a Plaiſter being applied to the Coronal Suture of her head made of Ammoniacum, Frankincenſe, maſtich, nutmeg & nigella ſeeds toſted; her Cough vvas allayed, and her Appetite reſtored by little and little, ſo that ſhe gained her former health. Novv the Opiate or Electuary vvas thus made.

Take *old Conſerve of Roſes half an ounce*; *Diacodion with Sapa two drams*; *Powder of Diatragacanthum one ſcruple. Make thereof an Opiate to be held betwixt the great Teeth and the Cheeks when ſhe lies down to ſleep.* And becauſe this ſharp diſtillation raiſed ſores in her mouth, for their Cure ſhe uſed this followving Remedy by me preſcribed.

Take *Thiſtle Leaves, Woodbine or Honeyſuckle Leaves of each one handfull*; *whole Barley one pugil. Make of all a Decoction to eight ounces. In the ſtrained Liquor diſſolve juyce of Pomegranates that are ſweet-ſower two ounces*; *mix them.* With this Decoction ſhe frequently waſhed her mouth, and in a ſhort ſpace of time, the Ulcers which did abound therein were healed. But a few daies after the Diſeaſe getting head again, I was forced to ſmear the Cruſts of the Ulcers with Oyl of Mercury, whereupon they ſoon fell away, nor did any ſign of them appear afterwards.

Obſerv. 37. *Sower Belchings.*

728. A Councellor of the Kings named *Chef de bien*, the adopted Son of Mir. *Chef de bien* his Majeſties Treaſurer, was at *Montpelier* for a long time troubled with ſower Belchings, and having there uſed many Medicaments internal and external to no purpoſe, yea, finding himſelf daily to grow lean, becauſe he had no appetite, and the nouriſhment was daily drawn away from his body: at laſt he bethought himſelf to go to ſome other place for change of Air, and ſo he went ſpeedily to *Urgen*, whither being come, and meeting me accidentally, he told me the occaſion of his coming; whereupon I willed him to be of good cheer, and not to deſpair of his Recovery (for he was perſvvaded that he ſhould hardly ever be perfectly cured) for his Diſeaſe was not ſo hard to cure, but that he might be freed at the expence of an half peny. And whereas at firſt he gave little credit to my words, I perſvvaded him at laſt to ſvvallow five or ſix vvhole Pepper Corns in the morning faſting five hours before Dinner. Which having done for three or four daies one after another, he was not troubled with any ſhadow of ſower belchings, and whereas before his appetite to meat was exceedingly dejected, his ſtomach was hereby ſo ſtrengthened, that he did afterwards eat his meat luſtily, whereby his whole body was refreſhed, and the conſumed ſubſtance thereof was repaired.

The End of the Fourth Century *of the* Obſervations *of* Riverius, *with the Additional Obſervations.*

A Physical Dictionary,

Expounding such words, as being terms of Art, or otherwise derived from the Greek and Latin, are dark to the English Reader.

This Dictionary is of use in the Reading of all other Books of this Nature in the English Tongue.

A

A Pophlegmatisms, Medicines drawing flegm out of the Head.

Agarick trochiscated, See the *London Dispensatory* in English.

Apozeme, A Medicine made of the Broth of divers Herbs, and other Ingredients; unto which sometimes certain Syrups are added.

Animal Faculties, The Powers of Hearing, Seeing, Smelling, Tasting, Feeling; of Imagination, Understanding, Memory, Will, Going, Standing, and all Voluntary Motion.

Aranea Tunica, The Cobweb-Coat, or Tunicles.

Abdomen, The Belly, or Paunch.

Apoplectick Water, Good for the Apoplexy.

Autumn, Harvest, the Fall of the Leaf.

Actual Heat, Is Heat that may be felt by the hand, such as is in Fire, and all things heated thereby; or in the Body of one in a Feaver: It is opposed to *Potential Heat*, viz. That cannot be felt by the Hand, as the Heat in Pepper, in Mustard-seed, in a Flint, in unslaked Lime: and the contrary of *Actual Cold*.

Affected, Troubled, Diseased: *an Affect*, a Disease, Trouble, Disorder.

Aquæ Acidulæ, the Spaw Waters, like those of *Epsam*, *Barnet*, and *Tunbridge* with us.

Absurdities, Unreasonable Things.

Acrimony, Sharpness, such as in Mustard, Pepper, and in divers Humors of the Body which cause sickness.

Ascent, Going up.

Apply, lay on.

Actually Cold, see *Actually Heat*.

Augment, Encrease.

Accidentally, by hap, by chance, upon occasion.

Adventitious, not Natural, but springing from external Causes.

Attracting, drawing together, or causing.

Attracts, draws to.

Accident, something that happens upon a Disease; *vide* Symptome.

Adstriction, binding together, shutting up.

Antecedent Cause, foregoing Cause is opposed to the Conjunct Cause. Abundance of Flegm in the Body is the Antecedent Cause of the Optick Nerves being stopped by Flegm; but the Flegm in the said Nerves, is the Conjunct Cause, &c. of other Diseases.

Articulate Voice, a distinct Voice, such as that of Mankind, termed Speech.

Abstergent, cleansing away filth.

Access, addition, joyning to, help, or company.

Afflux, flowing to.

Astringents, Medicines that bind together, and straiten the Pores and Passages of the Body.

Astriction, binding, knitting together.

Anodines, Medicines which assuage pain.

Anastomosis, an opening of the mouths of Veins, by which means Blood issues.

Astringe, bind, fasten, close.

Acute, sharp, violent, a Disease is termed Acute, when it quickly changeth to health or death.

Adustion, burning; *Adust*, burned. Blood is said to be adust, when by reason of extraordinary heat, the thinner parts are evaporated, and the thicker remain dreggy and black, as if they were burnt.

Asthmatical, troubled with shortness of breath.

Attest, Witness, declare.

Aneurism, a swelling caused by a dilation of the Arteries external Coat, the internal being broken.

Axungia, Grease.

Atrophy, want of nourishment, when the body pines away.

Attenuating Medicaments, are such as make thick Humors thin.

Axiom, or *Theoreme*, an acknowledged, undoubted Truth.

Adjacent, lying neer, bordering upon.

Aromatized, spiced, perfumed.

Anus, the Fundament.

Astringe, to bind.

Atomes, small Moats hardly visible, and that cannot admit of any division.

Adverse, contrary to, of a contrary Nature.

Augment, is the time of a Disease, while it grows still more vehement, untill it comes to its height, which is called the state of the Disease, and then the Augment ceases, because the Disease is now at a stand, and encreaseth no more.

Alteratives, are such Medicines as only change the qualities of the Body and its Humors, by heating, cooling, moistening, drying, &c. they are opposed to such as do cause Vomiting, Purging, Sweating, Transpiration, &c.

Adjuncts,

Adjuncts of a Disease, are qualities, dispositions, Symptoms annexed thereunto.

Aliments, are what ever is taken into the Body to nourish the same, as all kinds of Meat and Drink.

Adjuvant Causes, are such as serve and assist the principal Cause; so is the Taylors Boy an adjuvant Cause assistant to his Master, the principal Cause of a Garment. So in Diseases, whatever assists the Primary Cause, is termed an Adjuvant Cause.

Alexipharmical things, are such as resist Plague, Poyson, and all venemous Diseases.

B

Balneum Mariæ; the manner of stilling or digesting, when the Glass containing the Ingredient stands in a Vessel of Water with Fire made under it.

Bolus, a Morsel, a Medicine to be taken from a Knifes point.

Bellilucanæ Thermæ, hot Baths in *France* so called from the place where they are.

Breathing of a Vein, Blood-letting, properly if but little Blood be taken away.

Bronchia, the hollow grisly Pipes that spread themselves through the Body of the Lungs, being Branches of the Wezand or Wind-pipe.

C

Caruncle, a little bit of Flesh that grows and sticks out on any part of the Body.

Catarrh, a Defluxion or Distillation of Humors from the Brain into any part of the Body, especially the Lungs, causing Coughs.

Condense, to make thick.

Contention, Digestion in the Stomach, &c.

Cataphora, a deep Sleep.

Cupping-glass, is that which Physitians use to draw out blood with Scarrifying of the Skin, Glasses fastened with lighted Tow or Flax.

Catalepsis, Congelation or stiffness of the Body.

*Caustick*s, are Medicines which burn the Skin and Flesh to make Issues, &c.

Coronal Suture, the Seam which runs through the Crown of the Head, where the two sides of the Skull close.

Crude, Raw, undigested, so Meat not well boyled or roasted is Crude, and Blood and other Humours not well digested by the Stomach, Liver, &c. are called Crude.

Conjunctiva, a Coat of the Eye, so called because it sticks fast unto the Eye, and keeps it in its place.

Actual *Cautery*, is burning with a red hot Iron.

Congelation, freezing together, stiffness with Cold.

Constipation, stopping up.

Cholick, pain and griping of the Gut *Colon*; and because the pain proceeding from the Stone, is very like thereunto, it is called the Stone-Cholick.

Cerates, Medicines made of Wax and other Materials, stiffer than an Oyntment, and softer than a Plaister, to be applied to divers parts.

Cephalick, or *Capital Opiate*, Head Electuary.

Cephalick Pills, Head-Pills.

Cephalick Plaister, Head-Plaister.

Collyrium, an Eye-salve.

Convulsion, a drawing together, a shrinking together.

Contracted, drawn together.

Cornea, a Coat of the Eye like the Horn of a Lanthorn. See *Vestingus* in English.

Chyrurgeon, Surgeon.

Circumvolution, turning round like a wheel or whirl-wind.

Compression, thrusting or squeezing together.

Contusion, Bruising, a Bruise.

Cold seeds, See the English Dispensatory.

Compress, thrust together, squeeze.

Condense, thicken, condensing, thickening; *Condensation*, a thickening.

Coarctation, a straitening, thrusting together.

Contraction, drawing together, shrinking up, &c.

Contracted, drawn together.

Confirmed, a Disease is said to be confirmed when it is perfect, setled, and hath taken root.

Couched with a Needle, that is, taken away with a Needle, or pressed down with a Needle.

Centre, is properly the middle point within a Circle, from whence all Lines drawn to the Circumference are equal; it is taken figuratively for the middle of any thing.

Continuity, the oneness, the joyning together without interruption.

Compact, firmly united, well thrust and crowded together. So Gold, Lead, and other Mettals are said to be compact, compared to Cork, Spunge, and light Wood which are not compact, but hollow and porous.

Concocted, an Humor is said to be concocted when it is either turned into good Blood, as sweet Flegm is wont to be, or when it is separated from the Mass of Blood, and made fit for expulsion.

Concoction, a boyling, or boyling together: when the meat in the Stomach is changed into a substance like Almond Cream; that change is called Concoction.

Cataplasm, a Pultis.

Cavity, hollowness.

Crisis, by bleeding at the Nose, or by Vomit, page 57. that is a breaking away of the Disease by Natures Conquest of the Cause, which she drives forth by the Nose or Mouth.

Crystalline Humor, a part of the Eye which resembles a little Cake of Crystal; if you open a Calves Eye carefully, you may take it out whole.

Conns, is a Geometrical Figure, representing a Sugar-loaf, or an Extinguisher, which Philosophers

loſophers make uſe of when they teach how the Eye perceives its Object.

Connatural, which is bred with a Man; as he that is born with one Eye, or but two Fingers: ſuch a Diſeaſe is termed Connatural.

Convex, bunching out like the back-ſide of a Buckler or Platter.

Conjunct cauſe of a Diſeaſe, is the immediate Cauſe; ſo Flegm ſtopping the Optick Nerves; is the Conjunct cauſe of Blindneſs; whereas taking of cold, ſwimming in cold water, eating flegmatick meats, ſleeping after Dinner, were the remote, or far diſtant Cauſes, &c.

Conſtriction, a drawing together, a ſtraitening.

Congeſtion, a gathering together, or heaping up.

Cumulation, the ſame with Congeſtion. Theſe words are oppoſed to defluxion. When a part is diſeaſed by an Humor ſent from another part, it is termed Defluxion; when the Humor is firſt gathered in the part it ſelf, by reaſon of its own proper weakneſs, it is termed Congeſtion or Cumulation.

Conjoyned Matter, ſee *Conjunct Cauſe*.

Corroding, biting, gnawing, eating.

Conſolidation, cloſing up of a Sore or Wound, &c.

Carus, foulneſs, rottenneſs, corruption of a Bone.

Cicatrize, to bring to a Scar, to cloſe up a wound or ſore.

Commiſſura, the mold of the Head, where the parts of the Skull are united.

Cavous, hollow.

Critical Evacuations by bleeding, ſtool, &c. are ſuch as Nature procures to drive out her vanquiſh'd Enemie; and are means and tokens of Recovery. Symptomatical Evacuations are ſuch as proceed from the vehemency of the Diſeaſe, before Nature hath maſtered the offending Humor, and they prove bad tokens.

Calcine, to burn to Aſhes in a Crucible, &c.

Corrode, eat, fret; *Corroding*, eating, fretting.

Cronical, long laſting.

Cacochymical, abounding with evil Humors.

Critical day, See day of Judgement.

Corroſion, a fretting, eating aſunder.

Conjugation, a pair of Nerves is ſo called.

Cardialgia, Heat-burning.

Crudities, Rawneſs, indigeſtion.

Chylus, a Liquor like a Poſſet, into which all meats are changed in the Stomach, if the digeſtion be good.

Cydoniatum, Conſerve of Quinces, or Marmalade.

Cardiogmos, Heart-burning.

Carminating Medicines, are ſuch as do break Wind.

Conſtringe, draw together.

Carminative, expelling Wind.

Chalibeat Vinegar, and *Chalibeate Water*, are ſuch as have ſteel quenched in them.

Carabe, Amber.

Cronical Diſeaſes, ſuch as uſually laſt very long, as Quartan Agues, Stone, Dropſie, &c.

Cryſtal of Tartar, Cream of Tartar.

Conſiſtence, Body, or Subſtance.

Catheter, an hollow Silver Inſtrument to thruſt into the Bladder when the Urine is ſtopt by a ſtone, to thruſt back the ſtone, and let out the Urine.

Complication of Diſeaſes, when divers Diſeaſes are in the body at the ſame time, eſpecially if they depend one upon another.

Coalition, healing up, growing together of a Wound or Ulcer, or any part that ought to be open, as of the Privity in ſome Girl.

Coincide, is to happen together at one and the ſame time.

Cachectical Perſons, are ſuch as have their whole Bodies blown up with a ſoft and moiſt ſwelling, with the colour of the Face white, or lead-coloured. Alſo their Legs eſpecially ſwell, and their Face is bloated.

Co-indicants, are divers things in a Diſeaſe or Patient, which plead for one and the ſame Remedies. So in a putrid Feaver, the perſon being full bodied, and the ſeaſon warm, alſo the perſon luſty and young: the Feaver, the fulneſs of blood in the Patient, his Ague and ſtrength, and Seaſon of the Year, are Coindicants that he muſt be let Blood.

Contra-indicants, are divers conſiderations that diſſwade a Remedy: As when in a putrid Feaver, old Age, Winter-Seaſon, Weakneſs, are Contra-dicents that diſſwade from Blood-letting, which the Feaver ſimply conſidered doth indicate or perſwade and hint out.

Coction of Humors, is their being ſeparated from the Maſs of good Blood, and fitted for expuiſion: as when thin Humors are moderately thickened, and tough clammy Humors are cut and divided. This coction of Humors is known by the Urine, when it hath a light, even and ſmooth ſetling, &c.

Cauſa ſine qua non, the Cauſe without which a thing cannot be, though it be not the principal Cauſe thereof: So a Taylors Shop-board is a Cauſe *ſine qua non*, without which a Garment cannot be made, though himſelf and the ſtuff, the ſhape and the end be principal Cauſes.

Commemorative, bringing to remembrance what is paſt.

Cicatrize, is to bring unto a Scar, which is done when Wounds and Ulcers are healed up.

Contumacy, ſtubbornneſs, rebellion.

D

Diureticks, Provokers of Urine.

Diagnoſis, the knowledge of a Diſeaſe.

Diſtillation, a flowing down of thin Humors from the Brain into ſeveral parts.

Decoction,

Decoction, the Liquor vvherein things are boyled, the Broth of Herbs, and other Medicaments.

Diagnoſticks; the Signs to know what Diſeaſe a Patient hath.

Defluxion, the ſame with Diſtillation; alſo a running together of Humors into any part, cauſing pain or ſwelling, &c.

Delirium, Dotage, raving, talking idly, in time of ſickneſs eſpecially.

Diarrhœa, a ſimple looſeneſs without Inflammation of the Guts, any extream pain, or voiding of Blood.

Diaphœnicon, ſee the *London Diſpenſatory* in Engliſh.

Diacatholicon, *Diacarthamum*, ſee the Diſpenſatory.

Diet, this ſignifies in many places a Diet-drink.

Diminiſhed, Leſſened.

Diminution, Leſſening.

Diſcuſs, diſpel inviſibly, as a Plaiſter that makes a ſwelling goe away without breaking, is ſaid to diſcuſs the ſame, becauſe the matter of the ſwelling is not ſeen to come away, but is turned into ſteems and vapours, and partly drinks up the ſubſtance of the Plaiſter, and ſo vaniſheth inviſibly.

Declination of a Diſeaſe is the breaking of the Diſeaſe, when it begins to tend to health, which is known by the Symptoms growing more gentle.

Diverting Medicines, which turn aſide the Humor cauſing the Diſeaſe, ſo that it flows not into the part offended.

Diſlocation, putting out of its place.

Derived, turned away from.

Diffuſe, ſpread abroad.

Diſſipated, ſcattered abroad.

Demonſtrated, clearly proved from undeniable Arguments.

Depravations, marrings, ſpoylings, hurtings.

Depreſſed, made flat or hollow, dented in.

Diſtemper, any exceſs of the four firſt qualities, Heat, Cold, Moiſture, Dryneſs. There are reckoned four ſimple or ſingle diſtempers, viz. a Hot, a Cold, a Moiſt, a Dry, and four compound, viz. Hot and Moiſt, Hot and Dry, Cold and Moiſt, Cold and Dry.

Dilated, widened.

Dilation, widening.

Debility, weakneſs.

Diſtortion, writhing, wreſting, crooking.

Diſſipating, ſpread abroad, driving away.

Derivations, drawing an offenſive Humor from the part diſeaſed, to ſome other part neer it.

Digeſtives, Medicines which prepare evil Humors for to be driven out by Nature.

Diſſolved, melted, conſumed away. It is uſed of ſwellings that are brought down by Oyntments or Plaiſters, and in other caſes when the Humor cauſing the Diſeaſe is inviſibly driven away.

The *Drum* mentioned in page 96. is a pretty little hollovv bone in the Ear covered with a thin Skin like a Drum, which being beaten upon by another little bone like a Mallet, doth cauſe ſounds to be heard in the Ear. See *Veſlingus* his Anatomy in Engliſh.

Diapedeſis, is an iſſuing of the blood through the Pores of the Veins.

The *Day of Judgement* or *Critical Day*, is that day in Feavers eſpecially wherein it appears, on vvhich ſide ſentence is given, vvhether on the Plantiffs, viz. the Diſeaſe; or on Natures, the Defendant; ſo that by ſome Evacuation, or ſvvelling, or other great mutation to the better or vvorſe, it appears vvhether the Patient is like to recover or not.

Diſtenſion, Stretching.

Depraved, marred, ſpoyled.

Dilation, vvidening, opening.

Diaphragma, the Midriff.

Dyſpnœa, ſhortneſs of breath.

Dyſentery, a Bloody-Flux.

Diagrydiates, Medicines that have Scammony or Diagrydium in them.

Diſſolution of Natural Heat, a decay of Natural Heat.

Diaphoretick Sweats, vvhich are cauſed by Nature oppreſſed vvith a malignant Humor, and forcibly driving the ſame out by Svveat.

Dung-gate, the Arſe-hole.

Diſtillations by deſcent, are vvhen the Liquor vvhich comes from the Materials ſtilled doth not riſe up above the ſaid Materials, as in ordinary diſtillation, but falls dovvn under the Materials ſtilled, vvhich are therefore laid upon a Grate, that the bottom of the Veſſel may be empty and free to receive the diſtilled Liquor.

E

EXcrement, the Dregs of Digeſtion in the Body voided by Dung, Urine, and Svveat.

Evacuation, an emptying or voiding forth, purging.

Epiſpaſtick, a Plaiſter to dravv a Bliſter, called alſo a Veſicatory, or any ſtrong dravving Plaiſter.

Errhines, Medicinal Liquors to be ſnuft up the Noſtrils to purge the Brain.

Empyema, Empyems, a corrupt matter betvveen the breaſt and the lungs follovving a Pleuriſie.

Eryſipelas, *Oedematoſum*, a certain ſvvelling ariſing from choler and flegm.

Elephantiaſis, a leaprous Diſeaſe vvhich make the Patients Skin like the Hide of an Elephant.

Electuary, See the *London Diſpenſatory*.

Expulſion, driving forth, as of Excrements, Dung, Urine, Svveat, &c.

Expell

Expell, to drive forth.
Eruption, breaking forth.
Extinguished, quenched, put out.
Emunctuaries, or *Emunctories*, certain vvaies and passages that Nature finds to drive ill Humors into, from the principal parts, as certain Kernels behind the Ears, and in the Groins, under the Arm-pits, &c. vvhere risings happen in time of Pestilence, &c.
Essentially springing P. 11. that is primarily and principally, not accidentally or occasionally.
Ebullition, boyling and vvorking of the Blood in the Veins, like nevv Wine in a Cask.
Extension, stretching out.
Extenuation, Leanness, Consumption of flesh.
Extenuating, making thin.
Expulsive faculty, the povver of our body vvhich drives forth Dung, Urine, Svveat, Vapors, &c. every part partakes of this Ability or Faculty.
Eminent, neer at hand, approaching.
Erysipelas, a swelling caused by choler. *Erysipelas Phlegmonodes*, or *Phlegmon Erysipelatodes*. Is a swelling caused by Inflammation of Choler and Blood.
Emulsions, Almond Milks, and Milks made of cool Seeds, &c.
Electuaries, Medicines made up of Conserves of Flowers or Herbs, to which is added some sweet Spicy Powder for the most part, and so with Syrup it is made up in the form of Mithridate or Treacle.
Epithemes, are Medicines applied in Bags, commonly upon the Heart or Stomach, Liver or Spleen, &c. Certain convenient Powders being put in a Bag, or between two cloths, and so wet in Wine, or other convenient Liquor, are laid upon the Stomach, Heart, &c.
Essential to the Disease, that is of the very being or substance, so that without that, the Disease could not be. So Heat is Essential to a Feaver.
Excrements, dregs and refuse of our meat and drink after Concoction, voided by Dung, Urine, Sweat, and invisibly through the Pores.
Excrementitious, of or belonging to Excrements, impure, preternatural Humors are so called.
Extenuate, make thin.
Expressed, squeezed out.
Epidemical, common to a whole Nation. So the Plague, Small Pox, Looseness, Sweating-sickness, &c. when they are rife all over a Nation or Countrey at one time, they are called Epidemical Diseases.
Elixir Proprietatis, A Medicine invented by *Paracelsus*. Take of the best Aloes, Myrrh and Saffron, of each half an ounce: Powder them, and put them into a Glass. Then take Muscadine made tart with Oyl of Sulphur, and pour upon the powder till the liquor stand four fingers above the powder: Let them stand and digest in a warm place. Then pour off the Liquor, and put on more, till all the Colour and vertue be drawn out from the Powder. At last still the setlings with a gentle fire, and pour that which comes away to the former Liquor, and let all stand and digest a moneth in a warm place close stopped. The name signifies such a Quintessence as hath a special propriety of agreement with mans Nature, whereby it comforts and restores the same in all kind of weakness.
Emollient, Medicines that soften.
Eroded, eaten asunder, eaten up.
Extraction, pulling out.
Exquisite, perfect, in an high degree.
Escharoticks, see Causticks potential.
Embrochated, moistened, bedewed, bathed.
Erosion, fretting, eating.
Eclegma, see Lambitive.
Extream parts, the Arms and Legs.
Emplastick diet, consists of such meats as are of a clammy substance, viz. Calves head and Feer, Sheeps-trotters, all Feet of Beasts, Tripes, Jellyes, &c.
Excreta and *Retenta*, things voided out of the body, things retained, or kept in.
Eradicate, pluck up by the Roots.
Exasperated, pained, vexed, molested.
Equivocal, Signs of a Disease, are such as are common to it and other Diseases.
The Efficient Cause, is the working or making Cause, so a Taylor is the Efficient of a Garment; the Material Cause is the Stuff a thing is made of, which the Efficient works upon; so the Cloth or Silk is the Material Cause of of the Garment. The formal Cause, the shape that makes it a Coat or Cloak, or Doublet, the Final Cause is the end why it was made, viz. to hide nakedness, keep off Sun and Cold, and to adorn the Body.
Emulgent Veins, which bring the wheyish Excrement of the Blood unto the Kidneys where it becomes Urine, and is passed by the Uretors into the Piss-bladder.
Evaporation, a steeming out of Vapors.
Egress, coming forth.
Evaporated, steemed away, as Water that spends away in boyling.
Evacuators, Medicines which empty out evil Humors, either by Vomit, Purges, &c.
Exhalations, Vapors drawn up by the Sun out of the Earth and Waters.
Eventilated, Fanned, purged as Corn by fanning. So Exercise is said to eventilate or fan the body, because the motion opens the Pores, and drives many Vapors out.
Eneorema, that which hangs like a clowd in Urines, especially when the Disease is breaking away.
Emollient Decoctions, a softening moistening

Decoction, made for Clyſters to ſoften and moiſten the hardened Excrements of the Guts.

An *Eſchara* or *Eſchar*, is the Core that falls off from a part that hath had a Cauſtick applied thereto.

F

Fumigations, Perfumes and other things burnt to qualifie the Air in a ſick Mans Chamber.

Fracture, breaking, as fracture of the Skull or Arm, &c.

Fomentation, when linnen Cloaths or Spunges are dipped in ſome Liquor, and applied to the diſeaſed part, and after renewed.

Functions of the Brain, the Abilities of the Brain, to Hear, See, Imagine, Underſtand, Remember, &c.

Frictions, Rubbings.

Furor Uterinus, Womb-madneſs; when Women are mad by reaſon of a diſorder in the Womb. See the Chapter of that Diſeaſe.

A *Flux of Humors*, flowing of Humors.

Febris Catarrhalis, a Feaver cauſed by Rheume falling from the Head.

Fabrick, Frame, making up, compoſition.

Frontal Vein, Forehead Vein.

Fortified, ſtrengthened.

Fiſtula, an hollow, deep, but narrow Ulcer that will not be cloſed up.

A pair of *Forceps*, a ſmall Inſtrument like a pair of Tongs to draw forth any thing out of the Ears, &c.

Fluid, apt to run and flow like Water and other Liquor.

Filtration, ſtraining through a brown Paper, or by means of a piece of cloath hanging out of one Veſſel into another.

Filter, to ſtrain as aforeſaid.

Fermentation, the working of Humors as new drink works in the Barrel.

A *Feaver Symptomatical*, is a Feaver cauſed by ſome other foregoing Diſeaſe; in reſpect of which Diſeaſe the Feaver is but a Symptom or Accident.

A *Flatulent* and *Pituitous Cholick*, is a Cholick cauſed by wind and flegm.

Formicans Pulſus, a weak, feeble, quick Pulſe that feels under the fingers like creeping Piſmires, from whence it is named.

Form, ſee Efficient Cauſe.

Fluxive, apt to flow and run like Water and other Liquors.

Friable, is crumbly, ſhort, like coſtly Cake-bread, Pye-cruſt, Puff-paſte, &c. So Fiſhes that have a ſhort crumbly ſubſtance, not clammy or ſlimy, ſuch as Soals, Smelts, Trouts and are ſaid to be fryable in compariſon of Eels, Carps, Tenches, &c.

G

Gum Animi, Indian Amber.

Gargariſms, that is Medicines to Gargle in the Throat to waſh ſore Throats.

de Guttera, a powder uſed in the falling-ſickneſs and Convulſions of Children by the French. It is deſcribed page 32. at the bottom.

Going about, by fits.

Generating, breeding, begetting.

Glandules, Kernels, ſuch as are about the Throat, and are called the Almonds of the Ears, and ſuch as the Sweet-bread, &c.

Gate-Vein, Vena Porta. See *Veſlingus* Anatomy in Engliſh.

Generous Wine, ſtrong Wine, as rich Canary, Muskadine, &c.

Glutinations, clammineſs like Gum about the corners of the Eyes.

Glutinators, things which glue and cloſe up broken Veins, &c.

Glutinous, clammy like Glue.

A *Gangrene*, is a corruption of a part tending to the utter deading thereof.

H

Hypochondria, the parts beneath the Ribs.

Hemiplegia, the Palſie poſſeſſing one ſide.

Hydrelæum, a Bath and Oyntment; that is, of Water and Oyl beaten together.

Hippocras Bag, a Bag of Wool ſhaped like an Extinguiſher, through which Hippocras and divers Medicines are ſtrained.

Hereditary, from Father or Mother to Son or Daughter.

Hydromel, Honey and Water, Mead, Methe-glin.

Hemorrhoids, Veins of the Fundament, to which Leeches are applied.

Head-Herbs, Roſemary, Betony, Sage, Lavender, ſweet Marjerom, Hyſop, Balm, Cowſlips, Roſes, Violets, Lettuce, Borrage, Bugloſs, &c.

Habit of Body, is the whole bulk and ſubſtance thereof.

Humidity, Moiſture.

Holy Fire, a red Inflammation, St. *Anthonies* Fire, the Roſe.

Hemorrhagies, breaking forth of Blood from any part of the Body.

Hyſterical Fits, Fits of the Mother, Womb-ſickneſs.

Hermetical Phyſitians and *Hermets*, Chymiſts, ſuch as trade with Furnaces, Pots and Glaſſes, to draw Spirits, Oyls, Waters; to make Salts, Quinteſſences, &c. called ſo from *Hermes Triſmegiſtus*, an old Egyptian Philoſopher who is thought to have been a Chymiſt.

Horrors, Shiverings.

I

Infuſe, that is ſteep.

Inflammation, great Heat.

Indication, is an hinting to the Phyſitian what he is to do. So extream heat is ſaid to give indication

dication of cooling; extream fulneſs of blood gives indication of Blood-letting; want of a Womans Courſes gives indication of Blood-letting, &c.

Jugular Veins, that is the Throat Veins. See *Veſlingus* Anatomy in Engliſh.

Inſenſible Paſſages, which cannot be ſeen nor felt by reaſon of their ſmalneſs.

Influence, flowing in.

Inherent, ſticking faſt within, ſeated and abiding within.

Inordinate, diſorderly, unnatural and unfitting.

Internal and External Sences, the Internal are, Common Sence, Imagination, Underſtanding, Memory: the External are, Seeing, Hearing, Smelling, Taſting, Feeling.

Intercepted, ſtopped in the middle way.

Internally and Externally, inwardly and outwardly.

Juleps, pleaſant Drinks made of diſtilled Waters, or the broth of Barley and other convenient things, and ſweetened with Syrups or Sugar; given chiefly in Feavers to cool and quench Thirſt.

Infuſion, a ſtrained Liquor wherein Medicaments have been ſteeped either hot or cold.

Incraſſate, thicken.

Incraſſating, thickening.

Inſenſible, not to be perceived by the outward Sences of Seeing, Hearing, Smelling, &c.

Illumination, enlightening.

Influx, flowing into.

Inverſion, turning the inſide out.

Intermiſſion, ceaſing, leaving off.

Inveterate, old, of long continuance, rooted.

Inclination, that is, by holding the Veſſel on the one ſide, and ſo powring the clear from the ſetlings: this is called to clarifie by Inclination, in oppoſition to clarifying with the white of an Egg by boyling or any other way.

The *Iris*, a party-colour'd round Circle in the ſight of the Eye like a Rainbow, from whence it hath its name.

Incarnate, to breed fleſh.

Irritation, provocation, ſtirring up.

Involuntary Tears, which are not ſhed by force of ſorrow working upon the mind, but by force of a bodily Diſeaſe.

The day of *Indication*, is that day in a Feaver on which may be collected what will betide upon the following Critical day. So the fourth day doth hint what is like to happen on the ſeventh, and the eleventh hints what is like to happen upon the fourteenth, and the ſeventeenth what will happen upon the twenty one, and the twenty four what will betide upon the twenty eight. Therefore the fourth, eleventh, ſeventeenth, twenty four, are called daies of Indication, or telling and declaring.

Judged, ſee *Day of Judgement*.

Infirm, weak.

Inſipid, Taſtleſs.

Inciſing Medicaments, are ſuch as cut and divide tough flegm and other clammy humors whereby they become fit for expulſion; ſuch is Oxymel, &c.

Inteſtines, the Guts.

Intenſion and Remiſſion, increaſe and decreaſe, growing ſtronger or weaker.

Injection, is a medicinal Liquor caſt with a fitting Inſtrument into the Womb, Bladder or Fundament when there is foreneſs of Hemorrhoids, &c.

Inſerted, faſtened or planted into.

Inſpiſſate Juyce, is Juyce of ſome Herb boyled till it be thick as Honey.

Illuſtrated, made clear and manifeſt.

Invaſions of the Gout, fits of the Gout, or of Agues may be called Invaſions of the ſaid Diſeaſes.

Intenſe, vehement, ſtrong.

Indicate, declare, point out.

Impacted, wedged in, thruſt far in.

Irrigations, moiſtenings, ſprinklings, waterings.

Intervention, coming between, happening together with.

Intermediate, coming between.

Intermitting Pulſe, is that which holds up a while, and then beats again, and then ſtops, and then beats again, which is a ſign of great weakneſs.

Incoctibility, an unaptneſs to be corrected or digeſted, or an impoſſibility thereof.

L

Lenitive, a gentle, refreſhing, cordial Medicine.

Ligatures, or ſtrings wherewith the Joynts of Bones and the Griſtles are compact and bound together.

Lozenges, the ſame with Tablets, being the form of a Medicine made up.

Luxation, is when one Joynt is looſened from another.

Liniment, Oyntment.

Ligatures, bindings of ſeveral parts to draw the Blood and Humors from the part diſeaſed to the parts bound, by reaſon of the pain of binding which muſt be very hard and ſtraight.

Looſneſs of continuitie, ſeparating and dividing of things cloſed and united. So a wound is termed a looſening of Continuitie, becauſe it ſeparates thoſe parts of the ſkin and fleſh which were formerly united together.

Laxe, looſe, ſlack as an unbended Bow-ſtring.

Livid, black and blew.

A Lambitive or *Lohoch*, is a Medicine to be lickt from a Liquoris-ſtick, and to be ſwallowed ſoftly down, being chiefly ordained for the Lungs.

Iron-water, Water wherein Iron hath been quenched. Smiths forge-water.

Laxative, which makes the belly loose.
Livid, black and blew, Lead-coloured.

M

MEninges, or films of the Brain, coats that cover the Brain.
Masticatories, that is Medicines to be chewed to bring away Rheume.
Meseraick Veins, little Veins that are thought to carry chile from the stomach to the Liver. See *Vestingus Anat.* in English.
Malignity, venemous or poysonfull quality of certain humors and diseases which make them very dangerous, and for the most part deadly.
Matter, or *Quittor*, snotty kind of filth which comes out of Imposthumes when they break, and out of Ulcers when they are in a good way of Cure.
Magistral Syrup, is such an one as is invented by a Physitian for his Patient, in opposition to those Syrups commonly kept in shops.
Matrix, Womb.
Membrana, skin or coat of the Arteries, Veins, &c. *Membranes*, skins or coats.
Mortification, a deading of any part of the body.
Malign, venemous, poysonfull. see Malignity.
Mother, the Womb in Women is so called.
Mitigation, abatement, lessening, growing mild.
The Medium, is that through which we see, as principally the Air, which we look through upon objects; also the Water and Glass, Horn, or what ever is clear & may be seen through, may be termed a medium of sight.
Mammillary passages, or *productions*, certain little knobby bunchings out of the Nerves, which serve for smelling, resembling Teats, called therefore Teat-like productions. see the English *Anatomy*.
Malax, soften. To Malax a lump of Pilstuff, is to soften it, that it may work up into Pills the better.
Mercurial Purges, Purges made of Quick-silver, Chymically prepared, such as *Mercurius dulcis*, some kind of Precipitate, *Mercurius vitæ*, &c.
Macerate, steep.
Mesenterie, the skin which knits the Guts together, and runs all along among them, embossed with Fat. See *Vestingus* his *Anatomy* in English.
Membranous, of the Nature of Skin or Parchment.
Morbifical, or *Morbifick matter*, is that which is the principal cause of any Disease.
Minorative purgation, is gentle purgation, such as takes away only a part of the matter of a Disease: it is opposed to Eradicative purgation, which is strong, and pulls the whole matter offending up by the Roots as it were.

N

NUtrition, Nourishment.
Narcotick Medicines, stupifying Medicines, that dull the sence of feeling, and cause profound sleep.
Nitre, Salt Peter, as some hold; but *Matthiolus* conceives the true Nitre is rarely found in these daies.
Natural Functions, actions of the Stomach, Liver, Spleen, Gall, Kidneys, in concocting the meat, making blood, and separating and expelling the Excrements.
Nauseousness, sickness of the Stomach enclining to vomit.
Nidorous, smelling of burnt fat, or scorched Roast-meat, or fryed Oyl.
Noxious, hurtfull.
Nausiosis of the Veins, is when the Veins are sick of bad blood, and do as it were spew it out into the habit of the body, from whence comes Scurvy-spots, Morphew, Scabs, &c.
Neotericks, are late Writers in Physick, or any other Art, so called in opposition to the Antient Authors.

O

ORgans, peculiar parts of the Body fitted for some notable service of the Spirit, such as the Eye to see, the Ear to hear, the Nose to smell, the Skin to feel, the Lungs to breath, Stomach to digest.
Os Sacrum, the great bone whereon the Ridge-bone resteth.
Opisthotones, a Convulsion so named when the Body is drawn backwards.
Oval form, that is shape of an Egg.
Original, beginning, foundation.
Oedema, a swelling caused by flegm, which is soft and whitish, and has little heat or pain with it.
Obstruction, stopping.
Opiate, signifies an Electuary, properly it is put for Venice Treacle, Mithridate, Diascordium, &c. which have Opium in them: from whence the name is derived. But secondarily, it signifies any Electuary or Antidote made up in such a body as Treacle, &c. though it have no Opiate in it.
Orifice, the hole that is made by a Chyrurgeon when he lets Blood. Also the mouth or passage into the Womb or Stomach, &c.
Opticks, a part of Natural Philosophy (though falsly reckoned for a branch of the Mathematicks) opening all the Mysteries of sight, and the reasons of the Deceptions, or mistakes thereof, and teaching to make augmenting Glasses, Multiplying Glasses, Perspective Glasses, Burning Glasses, &c.
Oblique, slanting, athwart, crooked.
Obnoxious, liable, or subject unto.

Ophthalmy, an Inflammation of the Eyes, causing soreneſs and redneſs.

Os cribosum, the bony Sieve, a bone full of ſmall holes, like a Sieve or Colender, placed above the Noſe, through which ſnot and ſnivel is drained from the brain.

Occult, hidden, unknown.

Oxycrate, Vinegar and water mingled together.

Organical Diſeaſe. See *Similar Diſeaſes*.

The *Syſtole* or *Diaſtole* of the Pulſe: are the double motion thereof. For when the Artery is extended by the blood iſſuing out of the Heart, and ſmites the finger of him that feels the Pulſe; that motion is called Diaſtole, or a widening and ſtretching of the Arterie: but when the Arterie falls, contracts ſelf, and ſinks from under a Mans finger, that motion is called *Syſtole*, a contraction.

Oxyrrhodine, Vinegar of Roſes, and Medicines made principally thereof.

P

Prognoſis, the foreknowledge of Diſeaſes.

Plethora, a too great fulneſs of good blood in the body.

Paraliſis, the Palſie.

Paraphegia, Paraliſis, Palſie.

Peripneumonia, an Inflammation of the Lungs, or Lights.

Pericranium, the skin which compaſſeth the Scull.

A Pugil of Herbs, viz. as much as is taken up between the thumb and three fingers.

Phyſical Regiment, is the right ordering of a Patient having taken a Purge, or other ſtrong Medicament. As to keep the Patient warm, to give poſſet or thin broth after every ſtool; not ſuffer him to read, or her to ſew or hold down the head, or to be ſad, or to ſleep, eſpecially after a Vomit, &c.

Phrenſie, raging, madneſs joyned with a Feaver. See Chap. 11. Book 1.

Prognoſtick, foretelling. A Prognoſtick ſign is a ſign foretelling what will become of the Diſeaſe and Patient.

Privation, loſs.

Plethorick, full of blood, too full of blood.

Pores, little holes in the skin, through which vapors and ſweat come out. Sometimes they are viſible upon the Arm or Leg, being ſwelled and cloſed with cold; reſembling a Gooſe skin for roughneſs.

Preternaturally, otherwiſe than the Courſe of Nature requires.

Perſpicuous, clear, that may be ſeen through as Glaſs, fair water, &c.

Peritonæum, the inner coat of the Belly which covers the Guts: See the Engliſh *Anatomy*.

Poplar Oyntment in the ſhops called *Populeon*. See the Engliſh *Diſpenſatory*.

Potential coldneſs, that is coldneſs in operation, though not to the feeling. So a draught of Whey in which cooling Herbs hath been boyled, being drunk down warm from the fire; it is ſaid to be actually hot, becauſe it is ſo to the hand and palate; but Potentially cold, becauſe it afterward cools the Stomach, Liver, &c.

Pulſation, beating of the Arteries in any part of the Body.

Precede, go before.

Preparing of humors, is the qualifying of them, ſo as that they may be fit for expreſſion which preparation conſiſts in ſeparating them from the maſs of good Blood, in making them thick, if they be too thin and ſharp; in cutting them and making them thin, if they be too thick and clammy.

Phlebotomy, Blood-letting.

Preternatural, beſide the intent or cuſtome of Nature, vide Preternaturally.

Propriety, a pain by propriety, is when the cauſe of the pain is in the part pained, ſo when the Head-ach comes from the Humors in the Head, it is called a pain by propriety; when it comes from Humors in the Stomach, or any other part that ſends up Vapors; it is called Head-ach by conſent. And the like may be ſaid of other ſymptoms or accidents.

Pyramis, is a Geometrical Figure broad and angular at the bottom, and growing leſs and leſs towards the top till it come to a point. The Sepulchers of the Egyptian Kings were made in this form, and therefore called *Pyramides*. Naturaliſts do make uſe of this Figure to ſhew how the Eye receives the repreſentations of viſible objects.

Pupil of the Eye, is the middlemoſt round circle which we commonly call *the ſight of the Eye*, and which in Cats is ſeen to widen and contract it ſelf.

Pulſe, Beans, Peaſe, Haſtivers, French-peaſe, &c. called ſo becauſe they are gathered by pulling, and not by mowing down, as corn.

Probable, likely, poſſible.

Profound, deep.

Producing, breeding, cauſing.

Peccant Humor, the Humor offending, cauſing the Diſeaſe.

A Phlegmon, is an Inflammation or ſwelling cauſed by blood. If no other Humor be adjoyned, it is a true Phlegmon. If choler be joyned, it is called a *Phlegmon Eriſipelous*; if flegm, *ædematous*; if melancholy, *Scirrhous*.

Paroxyſme, the fit of an Ague, of the Mother, or any Diſeaſe that comes by fits.

Perforated, bored thorough.

Putrid, rotten, filthy, ſtinking.

Pupula, a puſtule, puſh, or whelk.

Ponderous, weighty.

Periſtaltick,

Periſtaltick motion of the Guts, is whereby the Guts do contract and purſe themſelves together above the Excrements, and ſo ſqueeze them out.

Pomum curtipendulum, an Apple ſo called.

Pubes, the hairy Hillock above the privities in Men and Women. The word ſignifies Ripeneſs, becauſe that hair being grown out, teſtifies the parties to be fit to engender.

Perineum, the ſpace which runs like a ridge between the privities and fundament in Men and Women.

Præpoſterous, unnatural, undue, unfitting.

Perturbation of the Eyes, a troubled, drowſie, frighted look of the Eyes.

Procatarctick Cauſes, primary, firſt working and occaſional Cauſes. So in a Feaver, the next immediate Cauſe is putrified choler, &c. but the firſt working and occaſional cauſes, were the Patients taking cold by ſwimming in the cold water, whereby the pores became ſhut, and the Matter of the Diſeaſe was retained in the Body. So the Procatarctick Cauſe of worms in Children is their greedy eating of Fruit; but the immediate Cauſe is putrid Humors occaſioned by thoſe Fruits, out of which Humors the worms breed.

Precipitated, thrown head-long, forcibly caſt down.

Palliative Cure, is when a Diſeaſe is not taken away, but only mitigated and made more mild, ſo that the Patient may have as much eaſe as poſſible. Or if the Diſeaſe deform the Body, a palliative Cure does hide as much as may be that deformity. So an Eye being thruſt out, cannot be properly cured; but it may admit of a palliative Cure, in aſſwaging the pain and other Symptoms, and by putting into the place thereof a Glaſs or other Artificial Eye.

Potent, Powerfull.

Perſpirable, the Body is ſaid to be Perſpirable when the inviſible pores or holes in the skin are kept open, ſo that the Vapors ariſing from evil Humors may freely breath out. See Tranſpiration.

Pernicious, deadly, cauſing death and deſtruction.

Protraction, is a lengthening out of a Diſeaſe, and making the ſame to laſt long.

Pharmaceutick Remedies, whatſoever kind of Medicines are made by the Apothecary.

Prepoſterous, diſorderly, undue, unfit, the Cart before the Horſe.

Quittor, ſee Matter.

R

Repletion, over-much fulneſs of Blood or Humors.

Reſolution, weakening or diſſolving the ſtrength of a part, as when it is Palſied, &c.

Revulſion, drawing back of Blood or Humors from the part affected.

Repelling, Medicines which draw back the Humor from the part affected; *Repellers*, the ſame.

Relaxing, ſlacking, as the ſtring of a Bow when the Bow is unbent, is ſaid to be relaxed or ſlacked.

To *Revel*, to draw back Humors from the part diſeaſed.

Remitted, leſſened, abated.

Reſtriction, exception, limitation.

Ruption, breaking, or tearing aſunder.

Reliques, remainders of an Humor after ſolemn purging, bleeding, &c.

Retraction, drawing back.

Radical moiſture, the fundamental Juyce of the Body which nouriſhes and preſerves the Natural heat, as the Oyl in a Lamp preſerves and feeds the flame.

Revelled, drawn back; *Revulſives*, Remedies to draw back the Humor from the diſeaſed part.

Repelled, driven away.

Retentive faculty, the power in our body and its parts to hold faſt its nutriment and whatever is agreeable thereunto.

Rough Artery or *Aſpera Arteria*, is the Windpipe or Weſand, which is rough on the outſide with circles and griſtly rings.

Reduced, brought back again.

Refractions, breaking of the Repreſentations of viſible objects, a term uſed by the Writers of Opticks, or the Art of ſeeing.

Recruited, repaired, reſtored, made up, a military term.

Reſolving Medicaments, are ſuch as looſen and ſcatter evil Humors which are gathered and combined together in ſome diſeaſed parts of the body.

Repercuſſives, Medicines which drive back the Humors from a diſeaſed part.

Relaxation, looſeneſs.

Refrigerating, cooling.

Reſpiration, breathing.

Reflux, flowing back again.

Recipient part, is that part which receives the Humor offending.

S

Suppoſitory, that which is put into the Fundament to cauſe ſolubleneſs.

Sudorifick, that is cauſing ſweat.

Subeth, a deep ſleep.

Scarrification, is a cutting of the skin that it may bleed into a Cupping-glaſs.

Superficies, the out-ſide of any thing.

Stuphes, Stoves or Hot-houſes to ſweat in.

Spiritus acouſticos, is that portion of the ſpirit which in the Ears diſcerneth ſounds.

Strangulation, choaking.

Sternon, the breast-bone; see *Vesslingus* Anatomie in English.
Sphincther, is the Muscle of the Arse.
Stupor, dulness.
Spasmus, Cramp or Convulsion.
A Scruple is twenty grains, or the weight of so many barley-corns.
Sternutatories, Medicines to snuff into the nose to provoke sneezing.
Stupifying, taking away the sence of feeling, benumming.
Stupid, that is benummed, besotted, hath no feeling or sence, blockish.
Symptoms, evil dispositions of the Body which depend upon and accompany a Disease; as Heat, Thirst, Head-ach, want of Sleep, Stomach-sickness, Faintings, Swounings, &c.
Sympathie, Fellow-feeling, a Disease is said to come by sympathie, when the principal cause is in some other part, with which the part offended hath a fellow-feeling. So pains of the Head caused by evil Humors in the Stomach, are said to come by sympathy. And sickness of the Stomach caused by the Stone in the Kidneys, is a disease of the Stomach by sympathy.
Nerves, Sinews, certain strings carrying the faculty of Motion and Sence from the Brain into all parts of the Body; see *Vesslingus* Anatomie in English.
Scorbut, the Scurvie.
Steeled, in which steel hath been quenched or infused.
Scorbutick persons, that are troubled with the Scurvie.
Spinal, of or belonging to the Back-bone.
Serous matter, wheyish, like whey.
Sutures, seams of the Head where the parts of the skull are joyned together,
Species of the Objects, representations of things seen. For the visible things themselves do not enter into the eyes, but certain images and figures of them.
Scituation, place or posture.
Species retained in the Mind, the shapes and patterns of things seen or heard, &c.
State of the Disease, is when it is at the higheft, and does neither increase nor decrease.
Saphena, a Vein of the foot which is usually opened in Women; see *Vesslingus* Anatomy in English.
Sal prunellæ, Salt-peter purified with Brimstone, clean white Salt-peter is as good for use, only the Chymists love to mend, *Magnificate*, and many times take great pains to little purpose.
Sphacelus, deadness of any part, when the flesh and bone are dead; *Sphacelation* signifies the same.
Superfluous, over-much, unnecessary, &c.
Speculum Oris, an Instrument wherewith the Mouth and Throat is kept open, that the parts diseased may be seen and dealt with.
Schirrhus, an hard swelling without pain.
Suppurated, an Imposthume is said to be suppurated when it gathers matter & enclines to break.
Suppuration, a collection of matter in an Imposthume.
Suppression, stoppage.
Solution of continuitie, a dividing of such parts as were naturally united; so every Wound and Sore is called a *Solution of continuitie*, &c.
Stuphes, Tow or Cotton-wool.
Sealed Earth, Terra sigillata, it is a kind of Medicinal Earth brought out of the *Straits*, and sealed in little flat cakes to avoid Imposture: the Seal is wont to be the Great Turks badge, viz. the Half-Moon.
Sparadrap, a Searcloath.
Sediment, the setlings and dregs of Urine or any other Liquor.
Suppression, stopping.
Sincere Excrements, are such as are pure and unmixed, as choler, alone, &c.
Sudorificks, Medicines causing Sweat.
Suffocating, choaking, *Suffocation*, a choaking.
Subject, a Logical term, it signifies any thing that hath somewhat adjoyned and annexed to it. So the body is the subject of sickness & health, of beauty and deformity. The Head is the subject of pains, and other parts are the subject of other accidents. The Soul is the subject of Virtues & Vices, of Happiness & Misery, &c.
Suffusion, a shedding abroad of Humours; as when an Humor is shed abroad in the Eye and hinders the sight, it is called a *Suffusion*.
A Seton is an hole made in the skin, and a skein of Silk or Yarn, or such like drawn through and kept in, which being removed daily, causes the matter and humor to come away.
Sulphurous & Bituminous Bathes, that is hot Baths like those of *Bath* in Somersetshire, whose heat and vertue springs from a tincture of Brimstone and Bitumen which they bring out of the Earth.
Suppuration, is when a swelling comes to gather head, breed matter, and is ready to break.
Specifick quality, a peculiar hidden property, not springing from the first qualities.
Similar Diseases, are such as befall the substance of the Body, not considered as formed into any organ or limb or part; and they are all kind of distempers. Organick Diseases are such as are proper to the Organs and Instruments of the Body, viz. what-ever mar their Fabrick; Common Diseases, are such as are liable both to the Similary and Organick parts, viz. Solution of Unity.

T

Tablets, are the same with Lozenges; they are Medicines made up in flat four-squar'd Cakes with acuted angles.
Torpor, numbness.

Transpiration,

Transpiration, the passage of the vapors through the pores of the skin of the whole body invisibly, only causing a smell according to the Humors, in some more, in some less, in some offensive, in others not so.

Tumor, swelling.

Tincture, the vertue or strength of any thing drawn forth by steeping the same in spirit of Wine, Vinegar, or any piercing liquor, the said Liquor containing the vertue and oftentimes the colour of that which was steeped in it, is called the Tincture thereof.

Tile-tree, a Linden-tree, there grow two on *Newington-green*, they bear sweet blossoms.

Trepan, an Instrument made to bore an hole in the skull.

Turgent, swelling, working, moving too and fro, spoken of the humors of the body when they are in a combustion and full of motion.

Tacamahacca, a sweet Gum. See the *London Dispensatory* in English.

Translation, carrying of an humor from one part to another.

Tunicles, little coats or skins of which the Eye is partly made up. See the English Anatomie.

Terminated, ended.

Topical Medicines, such as are outwardly applied to the part affected, or the part which sends the humor &c.

Transparentness, such a clearness as is in Glass, Horn, the Air, fair Water, or any other thing which we can see through.

Troches or *Trochiskes*, Medicines made up in the form of little flat Bowls, whence they have their Name.

Tunica retiformis, the net-like Coat or Tunicle.

Thorax, the Chest.

Trebble Quantity, thrice so much.

Tartarous matter, congealed hard matter like the hardened Lees of Wine which are called Tartar.

Transpire, breath through.

V

Vertigo, a swimming in the Head.

Vesicatories, a Medicine applied to the skin to cause a Blister.

Vertebræ, the turning bones of the whole back.

Ventricles of the Brain, certain hollownesses of the Brain.

Venenosity, poysonfulness.

Vapors, Steams ascending into the head like the steams we see mounting from a mess of hot Broth or Meat, &c,

Vital function, faculty of the Heart causing Life, Pulse-beating, and Breathing.

Visive Nerve, the seeing Nerve. The Sinew wherewith the objects of sight are carried into the Brain, to the Imagination or Common Sence. See *Vesslingus* Anatomie.

Vaporous matter, steeming reaking matter. See Vapors.

Ulcerated, having an Ulcer or running Sore.

Visor, or *Visive* Spirits, the Spirit wherewith we see.

Universal Evacuation, is a general purging of the whole body all at once.

Vitrious Humor, a moisture like a Molten-Glass which goes into the making up of the Eye. See *Vesslingus* Anatomie in English; and cup up an eye of a Calf, Sheep, &c.

Uvea Tunica, a coat of the Eye resembling the skin of a Grape, from whence it is named. See *Vesslingus* Anatomie in English.

Voluntary faculty, that power of our Body which works according as we please; as the power of going, running, speaking, &c. whereas the powers of beating in the Pulse, of digesting in the Stomach and Liver, of making blood, flesh, fat, &c. do not work according to our wills. The former we can exercise or suspend & moderate them as we please, but the latter not; which are therefore termed involuntary.

Uvula, or *Columella*, the Palate of the mouth.

A *Vehicle*, that which serves to carry.

Vermicular, Worm-like. The Pulse is so called when it is weak, and lifts it self unequally, sometimes more, sometimes less; like the creeping of a Catterpillar.

Ureters, certain long pipes or passages which bring the Urine from the Kidney to the Bladder. See *Vesslingus* Anatomie in English.

Viscous, cleaving and roaping like Birdlime.

Vicissitude, the following of one thing upon the neck of another.

Venery, Letchery, the immoderate exercise or doating upon such acts as tend to Generation.

W

Wild Poppies, red-Poppies which grow among Corn, called likewise Corn-Rose.

Watry Humor, a certain liquor like water which goes into the composition of the Eye. See *Vesslingus* Anatomie in English.

Water-gate, the Privities in Women.

Z

Zacutus Lusitanus, a Famous Physitian; a Jew that practised at *Amsterdam* in *Holland*. He has wrote divers excellent Treatises of Physick sutable to the Principles of *Hypocrates* and *Galen*.

FINIS.

AN ALPHABETICAL TABLE OF DISEASES.

READER, *For thy ease in finding any Particular mentioned in this Table, Observe that there is in this Book two Tomes, And the Second Tome begins after Page,* 645.

A

Page

Of the Apoplexy. 9
Large bleeding good in an Apoplexy, *shewed by a Story.* 12
In the Apoplexy *the Jugular Veins are opened, and how.* ibid.
For the Apoplexy, Galen *his Plaister.* 12
Purgations for an Apoplexy. 12
Cupping-Glasses applied to the Head, good in an Apoplexy. 13
Aqua Benedicta Rulandi, good in an Apoplexy 13
Aqua Cœlestis *and* Apoplectick *Water, good in sleepy Diseases.* 14
A rare Apoplectick *Water.* 15
An excellent Apoplectick *Balsom.* ibid.
Arteries *of the Temples opened.* 60
An Apozeme *in the Gutta Serena.* 64
The Asthma *or shortness of Breath.* 146
Causes of the Asthma *or shortness of Breath.* 146, 147.
The Bastard Asthma *unknown to most Physitians what it is.* 147
The Bastard Asthma *is immediately holpen by bleeding.* ibid.
An Asthma *arising from flatulent matter.* 147, 148
The Asthma *and its several kinds how to know.* 148
The Asthma *wh at Prognosticks it affords.* ibid.
The Cure of the Asthma *in the Fit and out of the Fit.* ibid.
In the Asthma *Vomits are very good.* ibid.
Aqua Benedicta Rulandi, *good in the* Asthma. ibid.
In the Asthma *sharp Clysters are good* 149
For the Asthma *Saffron is good, and how.* ibid.
Want of Appetite. ibid.
Causes of Appetite *wanting.* ibid.
Signs of the Causes of want of Appetite. 250,
Prognosticks concerning want of Appetite. 250 251
Cure of Want of Appetite. 251
An Electuary for want of Appetite. 251
An Oyntment for the Stomach in want of Appetite. 251
Pills for want of Appetite. 251
An Apozeme to dissolve slimy Flegm causing want of Appetite. 252
A Stomach strengthening Syrup and Electuary for want of Appetite. ibid.
A Claret Water and Pena *his Syrup of Wormwood for want of* Appetite. ibid.
Lozenges for want of Appetite. ibid.
A digestive Pouder to help the Appetite. 253
Liniments, Fomentations Plaisters to help the Appetite. 253 and 254
The Dogs Appetite. 254
Abortion *or miscarriage of Women with Child.* 512
Causes of Abortion. 512,513
Signs of Abortion. 513
Prognosticks of Abortion. 514
How to preserve Women from Abortion. 515
Sundry remedies and Medicaments against Abortion. 516, 517
Of the After-birth *retained.* 521
Signs of the After-birth *retained.* 522
Medicaments to drive out the After-birth. ibid.
Acute *Diseases of Women in Child-bed.* 527
Causes of Acute *Diseases in Child-bed Women* 527,528
Prognosticks of the said Diseases. 528
The Cure of such Diseases. 528,529, 530
Of Arthritick pains *an Observation.* 14 Tom. 2
Of prevention of Abortion. 34 Tom. 2
Symptoms after Abortion. 38 Tom. 2
After-birth *retained.* 60 Tom. 2
Arthritick *pains.* 82 Tom. 2
Aneurisma *Cured.* 228 Tom. 2
The After-birth *retained.* 274,275 Tom. 2

B

BRains *cold and moist distemper.* 7
Brain *how over cooled and moistned.* ibid.
